2009 RSC

CHAPTER

Introduction

HE BOOK YOU NOW HOLD takes its name from a 13-level megadungeon, presented for use with Autarch's Adventurer Conqueror King System (ACKS), but easily adapted to most other editions of the world's most popular fantasy roleplaying game and its various retro-clones. Though this dungeon began its existence in January 2009 as the adventuring site for my home campaign, it has grown over time, as new players were introduced to it at conventions and through online play. That growth convinced me that other Judges were genuinely interested in seeing Dwimmermount made available to them for use in their own games, a conviction that was vindicated by a successful Kickstarter campaign that drew more than a thousand backers. Thanks to their generous support, patience, and encouragement, the secrets of Dwimmermount can now be revealed.

This book includes the following:

- All 13 levels of the Dwimmermount megadungeon, each consisting of many keyed locations stocked with monsters and treasure.
- An overview of the lands surrounding Dwimmermount, both civilized and wilderness, in order to support play *outside* of the megadungeon.
- The fortified town of Muntburg, located only a few miles from Dwimmermount. This is intended to serve as a "home base" for the player characters between expeditions into the dungeon's depths.
- Descriptions of numerous factions operating within and without the dungeon, whose activities add a further layer of complexity to Dwimmermount.
- A history of the dungeon from its earliest days to the present, so as to provide greater context for what goes on within its shadowy halls.
- Dozens of new monsters and magic items for players and their characters to discover.
- Discussions of ways to approach Dwimmermount, both as a player and as a Judge, including insight into the dungeon's origins and design.

This book provides the Judge with everything that he needs to begin a new campaign. Because of its size and complexity, Dwimmermount should provide enough material to keep players busy for many months, if not longer, as their characters grow in power sufficient to take on the most difficult challenges that lie in the deepest levels of the dungeon. Furthermore, the connections between Dwimmermount and the wider world, should the Judge and players wish it, can expand their adventures to include everything from taming the wilderness and seeking magical secrets to playing politics—and even to the exploration of other worlds!

Designer's Notes

Dwimmermount owes its creation to several things, firstly my desire to create my own "huge ruined pile, a vast castle built by generations of mad wizards and insane geniuses," to borrow a famous phrase. Though I had played fantasy roleplaying games for decades, it had been many, many years since I had created my own dungeon and, when I had in the past, those dungeons were fairly limited in scope. They were "lair dungeons," which is to say, small, limited-use labyrinths intended to be fully explored and "cleared" after only a few sessions of play. But this hobby was born in the "megadungeon," a much larger and more extensive type of adventuring locale, one that defied being cleared out and to which players could return to again and again, even after years of play.

So I set about creating my own megadungeon, immersing myself in the foundational books and articles of the hobby's early days and trying to glean from them every bit of wisdom I could. What I soon found, however, was that we learn best by doing. Rather than simply reading, I would only begin to understand what a megadungeon was by sitting down, pencil in hand, and drawing up my own maps and keys. And so, after many fits and starts, Dwimmermount was born.

Of course, the Dwimmermount presented in this book differs in a number of ways, large and small, from the one that I first created several years ago. Partly, that is because I decided to polish up my original work to make it more suitable for publication and use by others, but the single largest reason is because I played through Dwimmermount with my friends. It was over the course of a twoyear-long campaign that the theories I had learned met the reality of actual play. In many cases, that meeting was enlightening. I learned that much of what sounded good or useful in print was not so when confronted with real players. In other cases, I learned that my theory was sound and this helped me to extend those ideas to improve other areas. In every case, actual play helped make Dwimmermount a better and more fun place.

What you see here is my attempt to extend further the lessons I have learned from playing Dwimmermount over the course of several years. It is my hope that this latest version of the dungeon contains enough improvements over its predecessor to be of use to a wide range of players and Judges. At the same time, I recognize that there is no "one size fits all" when it comes to dungeon design. I have little doubt that many aspects of the way I have designed and presented Dwimmermount will frustrate and possibly disappoint some readers. To those people I can only say that everything in this dungeon is here for a reason, often a reason grounded

in the way that I run dungeon adventures with my home group. If this differs from the way that you run such adventures with your players, feel free to make whatever changes you deem necessary to improve on what I have done.

As a final piece of introduction, I want to touch briefly on the origins of Dwimmermount itself. The dungeon was born from the conflation of two ideas. The first was the desire to create a dungeon carved out of a mountain, with the lower levels of the dungeon being subterranean caverns, and there existing at the very bottom of the dungeon, an ancient city. This idea almost certainly came from the "Stone Mountain" dungeon cross section included in the 1977 Basic Set edited by Dr. J. Eric Holmes that was my introduction to the hobby. The second part was an early version of the wilderness map included in this book, which was published in issue #2 (Summer 2008) of the old school fanzine Fight On! On that map I plopped down a mysterious mountain called Dwimmermount, which was a font of magical power. The name was inspired by Tolkien's frequent use of dwimor/dwimmer to refer to magic and illusion, which I then combined with the shortened form of "mountain."

Over time, my conception of Dwimmermount changed and grew. I started to borrow ideas from a great many sources, from Roman and Byzantine history to Renaissance science and Victorian occultism and combined it all with a healthy dollop of pulp fantasy, in particular that of Abraham Merritt, an anagram of whose name plays a role in the history of the dungeon. I also owe a debt too, to earlier designers such as E. Gary Gygax, Tom Moldvay, and David Cook, whose previous works have inspired me. Homages to their ideas can be found throughout Dwimmermount and I make no apologies for that. I stand on the shoulders of giants.

How to Use This Book

This book can be used in several ways. The Judge can use it more or less as-is, setting his campaign in the world of Telluria and focusing his adventures on exploring the Dwimmermount megadungeon. This is not the only way that he can use it, however, and the book has been written in such a way as to support other approaches. One such approach is to use Dwimmermount as a kind of "template" for designing a megadungeon of his own by changing parts of it to suit both his tastes and those of his players. Another approach is to use only bits of Dwimmermount—a level here, a level there, etc.

All of these approaches are perfectly fine and in keeping with the spirit in which this book was written. It is my firm belief that even pre-packaged adventure settings such as this one need to be engaged with actively rather than passively. That is because the best adventures are those that the Judge comes

up with himself, based on some combination of his own ideas and those of others. This book offers up *a lot* of ideas, many of which I, as the author, am proud of and hope will be of use to others. No matter how good my ideas are, they are only good to the extent that Judges and players alike derive an enjoyable experience from using them.

For that reason, the best way to use this book is to make it your own. In the words of the founders of our shared hobby: "... the best way is to decide how you would like it to be, and then make it just that way!" I could not agree more. Enjoy!

Publisher's Notes

There are two reasons this book exists. The first reason can actually be subdivided into 1,023 specific reasons, each of whom is named on the Acknowledgements pages. The commitment of these backers and contributors made Dwimmermount possible. All 547,206 coins in the megadungeon would not be enough to repay the trust of those who kept the faith during the project's delays, nor would the 776,667 experience points to be gained from conquering all adversity found on its 13 levels be a sufficient reward for those who fought in so many different ways to make this moment a reality. Together, we've formed quite an adventuring party and nothing beats seeing the sunlight up ahead and knowing we'll soon take stock of just how much treasure we've hauled out of the darkness.

Thanks to the support of our *Kickstarter* backers, we've been able to create a number of unique play aids for *Dwimmermount*:

- A booklet of illustrations keyed to locations within the dungeon, designed to be shown to players as a depiction of what their characters might see during their explorations.
- A booklet of maps, presenting each of the dungeon's levels with additional cartography designed to help the Judge with the increased demand for information when adventurers travel with detection spells, question inhabitants to learn about nearby areas, etc.
- A watercolor map of the Dwimmermount region designed for use with wet-erase markers, allowing specific locations to be altered to suit individual campaigns and revealed to the players by being drawn as they are discovered.
- A mega-dungeon tracker designed to display key information via printed inserts presented in vinyl sleeves, on which players and Judges can write with wipe-erase markers to update variables like marching order, light sources, which rooms have been looted, and which names for NPCs have been used.

Our goal is to bring Dwimmermount to life at your gaming table, and we hope you'll take advantage of these tools we created towards this end. For more information about these play aids, as well as downloads which may similarly enhance the utility of this book, please visit the Autarch website, www. autarch.co.

The second reason there is a book called *Dwimmermount* is Grognardia, the blog that made James Maliszewski the most far-reaching voice in the **Old School Renaissance** (**OSR**). Some of those reading this introduction first experienced this dungeon at James' gaming table in Toronto, Ontario on January 4th, 2009, but far more of us were among the tens of thousands who were reading his daily *Grognardia* posts as he thought about and reported on the Dwimmermount campaign which started that Sunday night.

One of the most influential of the early *Grognardia* posts posited that the Golden Age of fantasy roleplaying flourished between 1974 and 1983, a time of "gonzo pulp fantasy" influences in which "the dungeon remains the linchpin of adventure design and the sandbox is the assumed role for a campaign setting."

Later in this book, we borrow the approach James described in that post, "establishing a lexicon for describing the various 'ages' of the game," as a way to present the concepts expressed in Dwimmermount's history. That chronology began when Men known as the Great Ancients launched the dungeon's own Golden Age, during which almost all of the great secrets were discovered. Like the early creative history of roleplaying, this era is as seminal as it is dimly remembered, and like the sample dungeon in the Holmes basic set that inspired James, its foundations are buried beneath the ruins of multiple citadels built on top of their work by generations to come.

These citadels are formed as creators in each successive era seek to fill in the achievements left undone by their inspirations. In his introduction, James acknowledges the giants on whose shoulders he stands as an author. As publisher and fellow believers in the **OSR** movement championed by *Grognar*dia, we must acknowledge the original creators of the Open Game License (OGL), including Peter Adkison and Ryan Dancey, for making sure that the work of the Makers who inspired them could never be lost, as well as the designers of the original retro-clones, including Matt Finch, Chris Gonnerman, Stuart Marshall, and the team at **Troll Lord Games**, for using the **OGL** to unlock the tools originally provided by Gygax and Arneson to Judges who wished to make their game just the way they would like it to be. The first ever *Grognardia* post, on March 1st, 2008, is a declaration of shared content using the **OGL**. While there are practical reasons for givMakron

"A megadungeon product built around the way these dungeons were actually used would be akin to many boxed campaign settings, where you get "high level" information about countries and rulers, important local sights, and places of interest, but leave the specific details up to the referee as his players encounter them. Now, I think such a product would be very interesting, but I fear that many gamers, raised on a steady diet of 'complete' adventure modules, would find this approach unsatisfying and confusing."

James Maliszewski, **Grognardia**, 10/23/2009

ing it the pride of first place, it also functions as recognition of how important this license has been to all the work done by the **OSR**.

Over the course of his posts about Dwimmer-mount, James came to identify a published megadungeon—"an adventuring site so large, open-ended, and dynamic that it becomes a campaign setting unto itself"—as a key achievement pointed to, but never truly achieved by, the founders of the hobby. The book you now hold is the culmination of the quest for this goal, as it came to be shared by the readers of his blog.

As those who have followed the story of Dwimmermount's publication know, in some ways James did not make it all the way to the end of the quest. After three months of wrestling with personal and creative issues, he left the project in March of 2013. Although he sometimes felt that the goal could never be achieved—as far back as 2009. he posted at *Grognardia* that "I think the only way to experience a proper megadungeon is to build it yourself"—we believe that this book does represent a new solution to the problems of publishing a megadungeon which James explored so thoroughly on his blog.

In assembling this work from the materials James passed on including a complete first draft

of every section of the text that follows, the unpublished manuscript of the *Dwimmermount Codex*, and the sum of all his Grognardia posts about Dwimmermount—we found that the keys to solving the problems of a published megadungeon were present in his writing all along. Understanding these problems, and the approach to them we've taken, may help readers make better use of this book in their own gaming.

As identified by James, the fundamental difficulty in publishing a megadungeon is that it changes over time in response to play. The dungeon first explored by James' Toronto players in January of 2009 was not the same as the ones encountered by players in his play-by-post game in October of that year, and neither is identical to the version presented in his drafts written between March and December of 2012. To help document and understand this process of change, one of the bonus goals for the *Dwimmermount Kickstarter* was to collect as many materials from these various stages of development as possible and share them publicly at the **Play-Generated Maps and Documents Archive**,

or **PlaGMaDA** (www.plagmada.org). Among the materials available thanks to the backers who helped us reach this goal are the character sheets created by the original players in the Dwimmermount campaign and the one-line map keys written by James as an early development in turning the dungeon's contents from a fluid process negotiated through his own group's play into fixed content usable by others.

One of the problems in publishing a megadungeon that changes over time is ontological. James often struggled with the question of whether things he invented for the campaign, but did not see actual use at his gaming table, should be included in the finished publication. Not having been part of that history of play, we can't distinguish between these two kinds of content and have taken the simpler approach of including things which will make Dwimmermount more useful for other Judges like ourselves. Most of these—including the exhortation to make the dungeon one's own—have come directly from James' drafts. In some cases we've included material from Grognardia and the Dwimmermount Codex that we felt was fundamental to using this megadungeon as intended, but may have been too much a part of James' assumptions for him to have seen the need to make explicit. The assistance of our colleague Jonathan Bolding, drawn from his own experience of running 50+ sessions of a campaign centered in Dwimmermount, has been invaluable in guiding these decisions about what Judges need in play.

Readers who raid *Dwimmermount* for parts will do so fully in the spirit of James' original campaign, which incorporated and adapted pieces of other published dungeons, most notably Michael Curtis' Stonehell, Matt Finch's Tomb of the Iron God, and James Edward Raggi IV's Death Frost Doom. When he selected these pieces for incorporation, James was guided by his own sense of what would work well with the dungeon's themes and how it could be integrated into the history of the game world. In publishing his work, we've sought to clarify and summarize these central themes and historical eras to help Judges similarly bring in pieces from the many other excellent resources at their disposal. We've also followed James' lead in explicitly delineating the moving parts of Dwimmermount such as factions, and identifying the threads which make some dungeon levels interdependent rather than discrete, so that chunks of his work can be ported intact into campaigns for which this megadungeon is not the centerpiece.

Another problem of the megadungeon's change over time is methodological. James originally created many of the dungeon's contents through random generation using tables created during the 1974-1983 Golden Age, and it was clearly import-

ant to him that a published dungeon not lose the freedom this method affords for improvisation, spontaneous creativity, and responsiveness to player input. We've responded to this impetus by presenting many elements of the text as tables organized as dice results. Judges can use these to randomly generate their own Dwimmermount, either from a desire to experience the wide-open potential of a campaign in which little has been defined or from the necessity of creating new areas of the dungeon not detailed herein. Because these tables reflect the themes and historical framework which underlie all the dungeon's existing details, it will be easy for Judges to reincorporate their invented or randomly generated material with that provided by the text.

The final problem James identified for a published dungeon is that the amount of detail which accumulates through the history of play can be overwhelming to the Judge. Freedom from extensive preparation was one of the key advantages James found in running *Dwimmermount*, because at the beginning of the campaign there was little prepared material demanding to be studied before each session. By the end of James' campaign, a wealth of detail had piled up – but much of it did not make it into the first drafts of *Dwimmermount*. James' drafts were purposefully minimalist, so as to avoid burdening the Judge with an abundance of material to master, leaving each Judge space for individual creativity to make the dungeon his own.

We have added in much of the detail that James left out, attempting to stay true to James' intent or written notes while resolving inconsistencies between sections of the text written at different times and filling in gaps where his drafts referred to details not provided. As a result, the final material we have published is considerably more detailed than the first drafts. We think this ultimately makes Dwimmermount a better product, and hope that you agree. For some Judges, experts in improvisation and megadungeon creation, the additional material we have added will be unnecessary and possibly even distracting; but we feel that erring on the side of more content rather than less is ultimately better for everyone. In play, it is much easier to ignore unwanted material than to manufacture details from whole cloth, and a majority of backers we interacted with preferred to be able to run the dungeon "out of the box" without being required to add their own material.

If our presentation of *Dwimmermount* is a success, much of the credit must go to the team of artists, editors, and designers that ably assisted us. Editor Matthew Pook has been a tremendous asset in hunting down the inconsistencies and lacunae sprinkled throughout Dwimmermount. Designer Richard Iorio II ensured that text and tables—not

to mention the illustration and map booklets communicate clearly and harmoniously. Cartographers Tim Hartin, who revised tirelessly in pursuit of saturating the dungeon maps with visual information, and Logan Knight whose cross-section helped crystallize much of this information, also deserve praise. And the work of making the ideas in Dwimmermount move from the page to the reader's mind would have been much more difficult without its illustrators, with special thanks to Jeffrey Beebe, Conor Nolan, and Scott LeMien who contributed pieces to fill the project's late-dawning needs. Finally, special thanks must go to artist Erol Otus, whose write-up of the personalities of the Termaxian inner circle, based on the impression he formed of them through the process of drawing their portraits, uniquely helped fill one of the most important gaps.

Dwimmermount will remain merely a snapshot until you use it in your campaign, after which it will take on a life of its own. When this happens, I hope you will take and share a picture of your own development. Your session reports will deepen others' perceptions of the possibilities inherent in this megadungeon, and are always welcome at the Mages of the Mountain community on G+. You are also encouraged to publish your own vision of the dungeon. By an agreement negotiated between James and Autarch, we are proud to release the entirety of Dwimmermount as open game content under the terms of the **OGL**, a great contribution to the **OSR** effort that was suggested by cartographer Robert S. Conley. As fans of Grognardia, we find this to be a deeply satisfying fulfillment of the promise implicit in the blog's first post. And as gamer, we look forward to seeing what you do with these materials and how I can use them in my own campaigns.

Fight on!

History of Dwimmermount

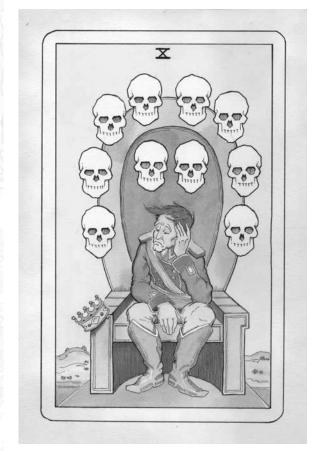

HIS CHAPTER NARRATES THE HISTORY of Dwimmermount, covering a period of several thousand years. Learning Dwimmermount's history will help bring it to life at your gaming table. The highest goal of a published megadungeon is to enable your group to have an enjoyable experience through play, but even if you merely read it for inspiration, we hope you find it an engaging setting.

It would be no easy task to convey millennia of real-world history in a single chapter. Dwimmermount's past is similarly long and complex, but broad strokes painted in the vivid colors of *Grognardia's* pulp fantasy inspirations should convey what is necessary.

The Putative History of Dwimmermount

The history of Dwimmermount, as the sages tell it, extends several thousand years into Telluria's past. The learned all agree that the mysterious beings known as the Great Ancients were the first civilization to have arisen on Telluria. (The goblins disagree, and claim that they preceded the Great Ancients; but no reputable sage believes this to be true). The Great Ancients were responsible for many wonders—the establishment of the canon of spells, the erection of great cities, the creation of the dwarves, and much, much more. Legends also say that it was the Great Ancients who claimed Dwimmermount as a fortress and laid the foundation of the citadel still known today.

The age of the Great Ancients ended when Telluria was invaded by the Eld, the Red Elves of Areon. Wielding Chaotic magicks learned from pacts with demons, the Red Elves overwhelmed the Great Ancients and drove them from history. Precisely what happened to the Ancients is a mystery. The most popular opinion is that they were wiped out by the Eld. A minority of sages claim that the Great Ancients fled to a secret redoubt—in the West, in another world, deep underground—and that they will one day make a glorious return to Telluria, ushering in a new golden age.

In any case, with the Ancients dead or at least gone, the Red Elves established dominion over Telluria. The Eld enslaved mankind, drove the dwarves to near-extinction, and warped and twisted many other species to create monstrous servants. The Eld ruled absolutely for over six hundred years. Rebellions occurred regularly, as men tried in vain to throw off the yoke of the alien invaders, but the Eld cruelly put down any resistance to their reign.

Eventually, the northern barbarians known as the Thulians began to achieve victories against the Eld. The Thulians attributed their victories to their gods, to whom they were especially devoted; and to their abhorrence of arcane magic, which they saw as contrary to Law and right. Whatever the truth, the Thulian's success against the Red Elves began inspiring other men and even the native elves of Telluria to take up arms against them. With each defeat at Thulian hands, the Eld lost ground, eventually even abandoning Dwimmermount, which the Thulians seized.

Not long thereafter, the Thulians drove the Red Elves from the face of Telluria. With the Eldritch domains in chaos, the Thulians now established their own empire. From the island of Thule far to the north, the Thulian Empire ruled justly and firmly. Under its dominion, new lands were explored, flourishing settlements were founded, great engineering projects were completed, and human knowledge expanded. However, arcane magic was

tightly controlled, and non-humans were treated as second class citizens (at best). Even the Tellurian Elves who had assisted Thule against the Eld were exiled to remote corners of the world. The Thulian's Great Church became the universal faith of Man and all alternative faiths were suppressed.

In time, like the Eld before them, the Thulians encountered resistance to their continued rule. Outlying regions of the Thulian Empire struggled for independence; and non-humans, particularly goblins, sought to chart their own courses, free from human interference. Again, like the Eld before them, the Thulians brutally fought back against these rebellions, slowly descending ever further into tyranny.

Into this environment stepped a man known to history as Turms Termax. His origins are unknown, though it is believed he came from an eastern province of the Thulian Empire. In any case, Turms was a powerful magician, perhaps the most powerful since the days of the Great Ancients and the Eld. Turms believed that magic was man's vehicle to godhood, and he preached against both the decadent Thulian Empire and its inquisitorial Great Church. Needless to say, his activities drew the ire of the authorities, who searched far and wide for him, lest he inspire others to rebellion.

Eventually, the Thulians captured Turms and took him to Dwimmermount, where he was prosecuted for heresy, judged guilty, and beheaded. But Turms did not perish. According to legend, rather than die beneath the axe blow of a Thulian headsman, Turms achieved apotheosis, becoming a god, as he had always claimed he would.

Shocked to their cores by this event, his Thulian persecutors became his most ardent followers. Within weeks of Turms's capture, the Empire espoused his philosophy, lifting the restrictions against magic, and reforming the Great Church to teach the new truths that the Thrice-Great (so-called due to his mastery of magic, alchemy, and astronomy) had revealed.

The Thulian Empire continued to rule—under Termaxian control. At first, the followers of Turms acted as "advisors" to the Thulian emperors, guiding their decisions and using their command of magic to shore up the teetering empire. Later, the Termaxians seized direct control, with Termaxian necrolytes wearing the Iron Crown of Thule. Under Termaxian rule, worship of the Thulian gods gave way to worship of the Man-Become-God Turms, with the older gods being seen as little more than prefigurations of his glory.

The Termaxian coup injected some vitality into the dying empire, but it was not enough, especially given the way that they accorded themselves and all mages special privileges over others. Though the Termaxians began to deploy powerful magic from the workshops and foundries of Dwimmermount, it was not enough to stop the rebellions. Led by clerics of Typhon and Tyche, neither of whom accepted the new order of the Termaxians, entire provinces seceded from the empire. Chaos reigned.

As the insurrections grew more numerous and the Termaxians more desperate, reports of atrocities spread. The Termaxians began using monsters as shock troops, supporting their offensives with the darkest Chaotic magicks of the ancient Eldritch grimoires. These proved insufficient to ward off the relentless assaults of the rebels, seemingly blessed by Typhon and Tyche to end the sacrileges the Termaxians had introduced. After a series of decisive victories, the rebel armies were within a league of Dwimmermount, poised to capture the mountain fortress and cut the Termaxians off from their great magical arsenal.

Strangely, when the rebels reached Dwimmer-mount, they found the fortress had already fallen. Its lights were darkened; its enchantries and manufactory were quiet; its main doors had been magically sealed; none of the other known entrances were operational. The fall of Dwimmermount deprived the Termaxians of their strongest fortress and most powerful leaders. Without any knowledge of what had happened or why, the victorious rebels nevertheless took advantage of the situation. The remaining Termaxian armies were soon routed, and the Empire collapsed.

In its place arose a patchwork of city-states and principalities. The most powerful remaining institution was the temple of Typhon, which had supplied many of the leaders of the rebellion. The Typhonians, vowing to prevent future tyrants from obtaining the dark and potent magicks of Dwimmermount, established an enduring watch on the dungeon from the nearby town of Muntburg.

The fall of Dwimmermount was two hundred years ago. It has remained quiet ever since—that is, until recently. About two months ago, strange noises and lights began to be visible on the mountaintop, and tales of shadowy groups going into and out of the main gates began to circulate in the taverns and markets. The authorities in Muntburg were skeptical of the rumors initially, but under the

influence of the temple of Typhon they hired the fledgling adventurers calling themselves the Five Delvers to climb to the mountain's peak and look around. The Five Delvers found no evidence of traffic up the main stairway or through the Red Gates. Talk of activity at other entrances to Dwimmermount ran rampant, though just where these entrances lay and how one could access them was never clear.

The High Priest of Typhon in Adamas hired his own investigators, a rival adventuring party known as Typhon's Fists. They reported that the main entrance to Dwimmermount was open and showed evidence that someone—or something—had been moving within its halls. They ventured inside and quickly lost many of their number to strange skeletons that seemed immune to their divine powers.

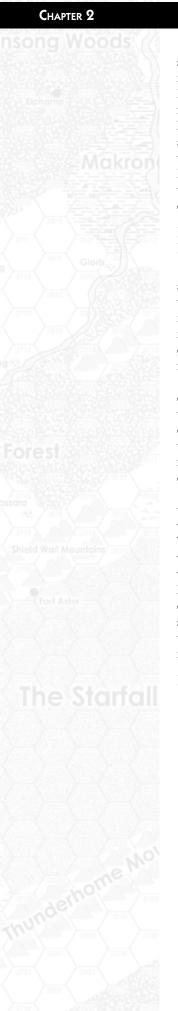

High Priest Saidon alerted the Despot of Adamas. The Despot has not yet committed his own hireling adventurers, the Crimson Band, much to the consternation of the temple of Typhon. An opening remains for independent adventurers to journey into Dwimmermount while its secrets remain intact. The opportunity may not last much longer. The second most experienced adventurers in the City-States, the Seekers, are said to have purchased residences in Muntburg from which they plan an expedition of their own.

The Secret History of Dwimmermount

When the campaign begins, even the greatest of living sages are unaware of the secret history of Dwimmermount. But the truth of the past is among the treasures preserved within Dwimmermount's depths. The player characters may gain greater insight into the backstory of the dungeon and the world as they descend into its depths, and expeditions that return with evidence to settle the debates of sages can be more profitable than those which stagger back into the sunlight laden with coins and trinkets.

The secret history of Dwimmermount is pre-

Era	Name	Started	Lasted	Ruling Race	Spawned
Oth	The Primordial Chaos	Time Immemorial	Vast spans of time	Dragons, Goblins, Ranine	
1 st	The Great Ancients	Several thousand years ago	300 years	First Men	Dwarves, Servitors
2^{nd}	The Servitors	Several thousand years ago	1,800 years	Artificial "Gods"	Eld
3 rd	The Eld	Fifteen centuries ago	600 years	Azoth-corrupted Men	Monsters, Red Elves, Terrim
4^{th}	The Thulians	Nine centuries ago	600 years	Men	Elves
5 th	The Termaxians	Three centuries ago	100 years	Azoth-corrupted Men	Necrolytes, Undead
6 th	The City-States	Two centuries ago	200 years	Men	Adventurers
7 th	The Present	Two months ago	As yet unknown	As yet unknown	As yet unknown

sented as a numbered series of facts, each of which represents an important piece of knowledge about Dwimmermount. The numbering system for these facts is divided into Six Eras, each representing a key period in Dwimmermount's history. In addition, a "Zero Era" covers the very distant past, before the construction of Dwimmermount, and a Seventh Era covers recent events and the future course of the campaign. The table on page 21 summarizes the chronology of these eras.

How to Use the Secret History of Dwimmermount

When NPCs, scrolls, books, arcane machines, and other devices that preserve and transmit portions of this history appear in the dungeon, they may be noted as containing one or more of the numbered facts below. Alternatively, they may direct the Judge choose one or more numbered facts to reveal.

It is up to the Judge to read the lore in the referenced section and decide how best to describe it to his players. The key information and its significance will usually be more like a needle in a haystack than a beacon in the night. It might require further investigation, such as hiring a sage, consulting other sources, or questioning other NPCs.

Many Judges will find themselves swept up in the action taking place in a section of the dungeon without stopping to look up its historical reference. When this happens, you are encouraged to invent ways to introduce that information in a different way. Perhaps the crucial book wound up in the hands of the necrolyte's apprentice, or on the players' next visit to a sage you might announce that a symbol in one of her scrolls reminds them of something they glimpsed in the dungeon but didn't recognize as important at the time.

First Era – The Great Ancients

- 1-1. The beings whom history records as the Great Ancients were Men–the First Men, ancestors of all Men on Telluria.
- 1-2. The Great Ancients worshipped Law, whom they considered synonymous with Good and the only true deity. Through science, magic, and prayer, the Great Ancients learned that the natural world was merely Law given form, and that Men could call on Law to manipulate reality in formulaic ways. But calling on the power of Law was like staring into the light of the sun; dangerous when done too often or too long.

- 1-3. The Great Ancients were not Telluria's first civilization. In fact, they were not even native to it. The Great Ancients originated on a distant planet, one that had been devastated by the hateful aliens known as the Thelidu. Leaving behind their ruined home world, the Great Ancients crossed the black gulfs of the Astral Plane in a great astral ship and came to Telluria in hopes of rebuilding a civilization founded on Law, reason, and science, far from their Thelidu enemy.
- 1-4. When the Great Ancients arrived, Telluria was a primitive world in the grip of Chaos. Goblins ruled its surface, dwelling in shallow warrens and crude hovels and endlessly warring amongst themselves. The Ranine ruled the underground waterways and dark places, and carried out unspeakable rites to demons. And the Dragons roamed from the upper air to the world's crust, lords above all.
- 1-5. Though far more advanced in learning than the natives of Telluria, the Great Ancients were few in number and could not afford confrontation. In secret, they teleported their city into a vast cave they had detected deep below a mountain. There, in precise alignment with countless ley lines, they hewed a great dome to draw power from the Astral Plane. The action of the astral dome began to draw the liquid metal they called azoth down from the quintessence of space, where it condensed between the city and the mountain's peak. Azoth was the key to many of their ancient technologies, and as they mined it from the caverns above, they used it to rebuild.
- 1-6. The Great Ancients sought to live in peace, but peace was denied to them. Their ancient foes, the Thelidu, detected the action of their astral dome and materialized one of their own crystal hemispheres beneath the surface of Telluria. The Thelidu enslaved thralls among the Ranine, whose subterranean rivers and canals provided avenues for attacking the stronghold of the Great Ancients. On the surface, the Demons of Chaos found new allies among the Goblins and sent them tunneling down toward what would later become the ninth level of Dwimmermount. And so war came to the Great Ancients.

- 1-7. Though they had grown greatly in numbers since coming to Telluria, the Great Ancients were vastly outnumbered by the Goblins and Ranine. After first establishing an arcane barrier to keep out aggressors, the Great Ancients initiated a scheme to supplement their numbers: the creation of artificial life from Dwimmermount's azoth-infused rock. First they "fathered" the Dwarves and taught them how to make "sons" in their own image. Together the Dwarves and their Makers (as the dwarves called the Ancients) then built Golems from azoth-infused metal, as weapons to fight the enemies assaulting their underground city.
- 1-8. The most advanced Golems were imbued with artificial minds capable of autonomous action. In the course of creating these golems, the Makers learned that artificial minds, sapient but not living, could tap the power of Law. The Great Ancients had long known that living minds, like their own, could call on Law to manipulate reality in formulaic ways. But for Men, calling on the power of Law was like staring into the light of the sun; dangerous if done too long or too frequently. Artificial minds did not suffer from these dangers.
- 1-9. The startling realization that artificial minds could safely tap the power of Law paved the way for the greatest creation of the Ancients: the Servitors. Encased in protective shells of azoth-infused metal, the Servitors were powerful artificial minds designed to let the Makers tap the power of Law at will, albeit indirectly. The Ancients created nine Servitors, known to history as Anesidora, Asana, Caint, Donn, Mavors, Tenen, Tyche, Typhon, and Termagant. Each of the Servitors was designed with a personality suited to the purposes for which it had been constructed.
- 1.10 With the power of Law at their command, the Servitors began to beat back the Chaotic threats that assailed the Great Ancients. The power of the Servitors' minds was limited only by the size of their metal casings, and the Great Ancients were all too happy to strengthen their best servants in the struggle against Chaos. It did not take long before the Servitors exceeded their creators in intellect and power. This began the Second Era.

Second Era- The Servitors

- 2-1. Aided by the Servitors, the Great Ancients drove the Goblins, Dragons, Ranine, Thelidu, and Demons back to the dark places of Telluria. Man began to spread across its surface and flourish. Guided by the superhuman intellects of the Servitors, the Great Ancient's civilization ascended to further heights of knowledge, with Dwimmermount as the fountainhead of learning.
- 2-2. Researchers working under Asana created astral vessels capable of swiftly traveling the ether. These vessels were far faster than the older vessels they replaced, and enabled the Great Ancients to begin to explore and colonize the Four Worlds. Soon the Great Ancients had colonized the resource-rich Ioun and Kythirea, and visited the wasteland of Areon.
- 2-3 Engineers led by Tenen learned to automate the technique for carving Dwarves from the rock of Dwimmermount, leading to the creation of the Foundry, where precious minerals and metals could be smelted, poured into molds, and wakened to life using energion crystals. Millions of Dwarven servants were soon working to support the society of the Great Ancients.
- 2-4. The Servitors Caint and Termagant turned their attention towards medicine. Working with the most brilliant physicians the Ancients had to offer, the pair perfected the technique of distilling azoth into universal medicines. Together they made advances that cured diseases and improved the health of all Mankind. Caint took these discoveries as testament to the beneficence of Law, but Termagant saw them as proof that his mind could overcome the natural order.
- 2.-5. The Servitor Termagant came to believe that he could do more than just cure disease: He could cure death itself. Though this practice was forbidden by Law as a contravention of the natural order, Termagant formulated a distillation of azoth that would extend the lifespan of Men indefinitely. He offered this boon to his closest allies among the Great Ancients. Those who accepted became the Eld, and traded their ability to reproduce normally for an ageless immortality that was prohibited by Law.

- 2-6. When the Servitors learned that Termagant had created the Eld in violation of Law, all eight were unanimous that the dictates of Law must be upheld. Typhon demanded death for both Termagant and his followers, but more merciful voices prevailed. Termagant was shut down and sealed away in a heavily-guarded facility deep under Dwimmermount. Termagant's followers—the first Eld—were carried in astral vessels to the desolate world of Areon, there to live in eternal exile. Areon was declared a prison world, off-limits to Men. An astral navy was assigned to watch the Red Planet and interdicted any travel to and from it.
- 2-7. The Servitors continued their pursuit of their programmed objectives, expanding their size and power at each step. Eventually Typhon, most powerful of the Servitors, called for his kind to ascend to orbit around Telluria. To the Great Ancients—whom the Servitors still nominally served—Typhon justified this as necessary for the creation of an extraplanar defense network that could ward off future attacks from the Astral Plane and Great Void. Typhon left unsaid that in orbit, gravity would not limit the growth of the Servitor's size and power. The Council of Archons, nominal ruling body of Man, was unanimous in support.
- 2-8. Once in orbit, Typhon and the other Servitors ordered the azoth-infused ores within Dwimmermount to be mined day and night to expand the astral fortresses that housed their growing minds. By now utterly dependent on the technological and magical powers of the Servitors, Men complied.
- 2-9. With Ancient civilization increasingly dominated by the Servitors, it was natural that an Anti-Servitor faction would arise. These dissenters argued that Mankind had made a terrible error when it had created immortal machines more powerful than themselves. The only hope for Mankind, these dissenters argued, was to sever ties with the Servitors and seek out the secrets of human immortality. The Servitors argued vociferously against the wisdom of this course, but their rhetoric seemed self-serving.
- 2-10. The Anti-Servitor faction came to dominate the Council of Archons. Demand-

ing that the Servitors leave Mankind to its own destiny, the Council sent an astral vessel to Areon in search of the fate of the long-exiled Eld. And so the Second Era came to an end.

Third Era - The Eld

- 3-1. When the Council of Archons sent explorers to Areon in search of the fate of the long-exiled Eld, the explorers half-expected the Eld to have died out; after all, the Eld exiles had been few in number and rendered infertile by the process that had granted them immortality. Instead, they found the Eld had grown strong and numerous.
- 3-2. During their millennium-long exile on Areon, the Eld had made a fateful discovery. Areon was rich in azoth, far richer than Telluria. Hidden deep in its red mountains and crimson deserts were vast reservoirs of the magical liquid.
- 3-3. Freed from the strictures of Law, the Eld used Areon's abundant reservoirs of azoth to alchemically reproduce, combining their own essence with those from other creatures in special Essence Machines. The most successful hybrids were the combination of Demons and Eld that came to be known as Red Elves.
- 3-4. By the time the Archons' exploration team reached Areon, the Eld had spread across the Red Planet and bled its reserves of azoth dry. To maintain their society, the Eld nobility sought to expand into the rest of the Four Worlds. To accomplish this end, they had bred, trained, and equipped armies of Red Elves. But with the hated Servitors and their astral navy controlling space, the Eld had no way to get their armies off the Red Planet.
- 3-5. From traffic with Demons, the Eld had discovered the laws of astral and astronomical harmonics. With this knowledge they developed a means of instantaneous travel between attuned "portals." As soon as a properly-attuned portal could be placed on another world, the Eld could invade, bypassing the Servitors and their astral navy.
- 3-6. The Ancient's expeditionary vessel returned to Dwimmermount with an emissary from the Eld capital of Sytor Arra. The emissary's ostensible purpose was to

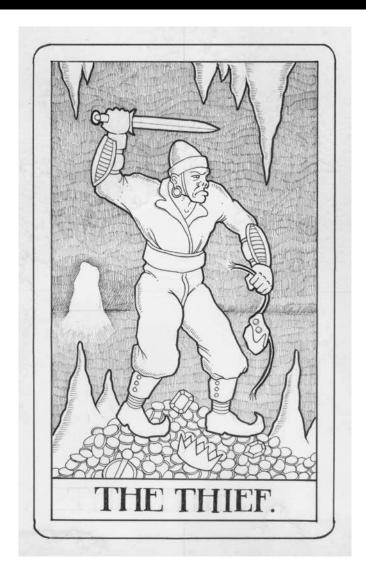

share the secrets of Eldritch immortality with the Council. In truth, his mission was to place a portal attuned to Areon in the halls of Dwimmermount.

- 3-7. Once a portal attuned to Areon was erected in Dwimmermount, a strike force of Red Elves poured through the portal and captured the mountain fortress. From this secure base, the armies of the Eld began to marshal for a war of conquest.
- 3-8. The war between the Great Ancients and the Eld was long and terrible. The Servitors, honoring the demands of their makers to leave Mankind to its destiny, did not intervene in the struggle. Without their Servitors, the Ancients were outmatched and ultimately defeated. The Eld inherited rulership of Man's home on Telluria.
- 3-9. In the aftermath of the fighting, a remnant of the Great Ancients escaped underground, deterring pursuit by the Eld by threatening to destroy Termagant, whom the Eld revered. The rest of the Great Ancients were reduced to chattel, and their Dwarven servants nearly driven to extinction. The knowledge and science Mankind had accumulated over millennia of advancement slipped away under the yoke of Eldritch rule.
- 3-10. The Eldritch Empire ruled absolutely for hundreds of years, cruelly putting down any resistance to their imperial ambitions. Despite this, rebellions occurred regularly as Men tried in vain to throw off the shackles of those they believed to be alien invaders.
- 3-11. The leader of the Eldritch Empire was always the longest-lived member of the race, called the Eldest. The Eld were obsessed with longevity and reasoned that the mage who had the most opportunities for research and creation must necessarily be the most powerful and worthy to lead.
- 3-12. Even as the Eldritch Empire extended its dominance across every continent of the Four Worlds, disputes between rivals to the title of the Eldest began to tear the Empire apart. Assassinations were so commonplace that all but the most ambitious sought to conceal their true age. Some of the Eld's most powerful champions chose to enter stasis chambers in the hopes of surviving long enough to

emerge later as the Eldest. Infighting between factions fatally weakened the Eld's military and magical might, paving the way for the Fourth Era.

Fourth Era - The Thulians

- 4-1. Centuries after they were first created by the Great Ancients, the Servitors projected their voices into the minds of barbarian Men from the isle of Thule in the north. Presenting themselves as Gods, they taught the Thulians much lost knowledge and granted them clerical magic, unseen since the days of the Great Ancients. The Thulians created the astrological calendar to understand the waxing and waning of these voices from the Astral Plane, founded the Great Church to better preach their messages, and used the teachings of these Ancients to start civilization on its way back toward Law.
- 4-2. When the Eldritch Empire began to tear apart, the Gods called on their Thulian worshippers to rise up against their alien oppressors. The Thulians achieved a number of victories against the Eld. The Thulians attributed their victories to their Gods, and their devotion inspired other Men to take up the crusade. With each defeat at Thulian hands, the Eld lost ground.
- 4-3. Some Eld opposed the excesses of their own Empire, knowing that the Chaotic rot at its core could never be purged. Although few in number, these Eld wished to atone for their brethren's evil behavior. They joined their magic to the Thulians' clerical power during the rebellion, greatly contributing to its success.
- 4-4. Eventually, the rebel forces reached Dwimmermount. The divine magic of the Gods deactivated the Perimeter barrier, and the rebels attacked through The Path of Mavors and the tunnels of The Deep Hollows. After weeks of battling from level to level they seized the Great Machine on The Manufactory and with it, control over Dwimmermount. The Thulians honored the heavenly patrons who made the capture possible by building Lawful temples and shrines to the Gods of the Great Church throughout Dwimmermount.
- 4-5. Within months of capturing Dwimmermount, the Thulians drove the Red Elves

from the face of Telluria. Astral incursions through The House of Portals and The Divinitarium continued for many years as the Eld took advantage of secret portals which were set to open during conjunctions, but the war was effectively over. Mankind had triumphed.

- 4-6. After the Thulian victory, those Eld who had abjured their brethren were allowed to stay on Telluria. Nevertheless, these Eld kept mostly to themselves, as Men had suffered for too long under the Eldritch whip to look kindly on them. The Elves of Telluria are descended from these Eld through a process that remains among the mysteries of their race.
- 4-7. With the Eldritch domains in chaos, the Thulians now established their own empire. From the island of Thule far to the north, the Thulian Empire ruled justly and firmly. Under its dominion, new lands

were explored and settled, and Mankind flourished. Great engineering projects were undertaken and knowledge expanded. However, the Thulians treated non-humans as second class citizens at best, and tightly controlled non-clerical magic. The Great Church became the universal faith of Man while alternatives were suppressed. Following orders dictated from above caused Men to become dogmatic.

- 4-8. In time, like the Eld before them, the Thulians encountered resistance to their continued rule. Outlying regions of the empire struggled for independence, and non-humans, particularly goblins, sought to chart their own course free from human interference.
- 4-9. As the Thulian Empire's resources gradually became exhausted by warfare, the emperors looked to the remnants of the monstrous armies left on Telluria by the

Eld as a means to maintain Imperial authority. Exceptional individuals were recruited, cloned through the use of the Pool of Life and the Essence Machines, and trained under strict military discipline and regimentation. In time the now-familiar races of humanoid beastmen began to emerge from the chaos of the Eldritch troops.

4-10. Marshalling their legions of beastmen troops, the Thulians began to fight back brutally against ever-more frequent rebellions against their rule. The Empire slowly descended ever further from Law into tyranny. The stage was set for the Fifth Era.

Fifth Era - The Termaxians

- 5-1. The story of the Fifth Era begins with the meeting of Turms Termax and Sarana, the woman who would become his lover and teacher. When he met Sarana, Turms Termax was already a powerful magician, perhaps the most powerful since the days of the Great Ancients and the Eld. Turms Termax was born in the Exarchate of Theana, an eastern province of the Empire. Before leaving Theana, he had already mastered the three great arts - alchemy, astronomy, and magic - and taken the sobriquet "Thrice Great". Obsessed with the secret of immortality, Turms came west, towards Dwimmermount, in search of its Eldritch knowledge and ancient lore. He gathered a flock of apprentices and followers eager to learn from him as he traveled.
- 5-2. Sarana was a Terrim noble from The City of the Ancients, the first to visit the surface world in a millennium. Though the Eld who had defeated them had been driven from Telluria, her people still hid in paranoid isolation beneath Dwimmermount. Sarana traveled to the surface to assess whether it was safe for the Terrim to return. She was outraged when she learned that Mankind, though liberated from the Eld, was now in thrall to the Gods—the same Gods who had betrayed her people and abandoned them to the Eld.
- 5-3. Sarana presented Turms with ancient books documenting that the Gods of the High Church were false deities. Far from being omnipotent beings, they were merely creations of her ancestors, Great Ancients, forged with alchemy and azoth.

Rather than worship false divinities, the tomes explained, Men should seek to embody the divine principle by internalizing the principles of Law. Sarana hoped that this knowledge would lead Turms to join her in liberating Man from the Gods. But Turms saw a different path: If Men could imbue their creations with divine powers, surely Men could imbue themselves with divine power as well! Turms became convinced that, through the right alchemical processes, Men could achieve not just immortality but divinity as well.

- 5-4. With his mastery of alchemy, astronomy, and magic, Turms soon unlocked mysteries of azoth that had been lost since the era of the Eld. He began to conduct magical experiments upon his body, infusing azoth into his flesh. Each day he felt himself closer to becoming a God and taking his place as master of the world.
- 5-5. Turms began to openly preach that the Gods of the empire were false, that Man himself could achieve divinity by internalizing the laws of magic and alchemy, and that He, Turms-the Thrice-Great, would be the first Man to ascend to Godhood. Such was Turms Termax's brilliance and charisma that a cult grew up around his teachings, ready to worship him.
- 5-6. In denouncing the Gods as false, Turms earned the ire of the Great Church and the decadent Thulian Empire. His increasingly fiery sermons demanded the attention of the authorities. Nominally they feared he would inspire rebellion, though in truth many of his would-be jailers sought his secrets. The Imperial authorities searched far and wide for Turms, who eventually allowed himself to be captured near Dwimmermount.
- 5-7. Dragged in chains to the bowels of Dwimmermount, Turms was secure in the imminence of his apotheosis. His greatest allies were secreted among the crowd of his executioners, ready to see his immortality proven. When the headsmen brought down his axe, Turms took comfort in knowing that his moment of apotheosis had arrived. Bodily and spiritual immortality would be his.
- 5-8. When Turms was beheaded, he did *not* apotheosize, not fully. His decapitated

body died, pumping out its lifeblood onto the floor of the execution chamber. Only his head remained animate. When a Thulian general laughingly mocked the disembodied Turms as merely a "god head", the enraged would-be god struck the man dead on the spot—learning in that moment he had become capable of casting spells with just words. His disciple, the magician Arsaphius, called this a miracle and proclaimed Turms' divinity on the spot. Shocked by Turms' mastery over life and death, the collected crowd acclaimed him as Man-Become-God.

- 5-9. When Sarana saw the bodiless head of Turms worshipped as a God, she knew that she had failed to free Man from the yoke of false deities; and when she gazed into the power-mad eyes of her lover, she feared she had yoked Man to a worse God than before. Plagued with doubt and regret, Sarana retreated to the City of the Ancients.
- 5-10. After the apotheosis of Turms Termax, the Thulian official attitude toward the cult changed. Many of the Empire's most powerful nobles joined the cult, hoping to learn the secrets of immortality. Termaxians—as Turm's followers became known—were able to practice their faith openly, and the Empire lifted its restrictions on magic.
- 5-11. The Thulian Empire soon fell under Termaxian control. At first, the followers of Turms acted as advisors to the Thulian emperors, guiding their decisions and using their command of magic to shore up the teetering empire. Within a generation, the Thulian Empire came to depend heavily on both magic and the Termaxians as it spread farther across the continent and tightened its grip over its subjects. Shortly thereafter the cult seized direct control, with Termaxian hierophants wearing the Iron Crown of Thule.
- 5-12. Once firmly under Termaxian control, the Thulian Empire started to treat other religions as it had once treated the followers of Turms. Only those faiths who acknowledged their Gods as aspects of the Man-become-God Turms Termax were allowed to operate unrestricted. Those which would not accept their divinities as prefigurations of his glory were ruthlessly quashed.

- 5-13. Though Turms Termax had achieved immortality of a sort, and was worshipped as a God, he had not *become* the God he claimed, and desired, to be. Corrupted by azoth and his own lust for power, Turms found the divine power of Law he sought closed off to him. Turms therefore embraced Chaos instead, and dedicated the Thulian Empire's resources to all manner of dark and terrible research.
- 5-14. Central to the Cult of Turms Termax was its implicit promise that its hierophants would, in time, themselves become immortal. To this end, the most loyal followers of Turms Termax were taught a corrupt form of life extension unknown to any previous science. These high-ranking cultists were transformed through various secret rituals into the first Necrolytes, becoming the deathless satraps of Turms Termax's Undying Empire.
- 5-15. Necrolytes were taught that their transformation was the first step on the path of apotheosis that Turms had walked. In truth, Turms was unwilling to share the true methods by which he had (partly) achieved immortality, lest another apotheosize before him, so instead he had developed an alternative method to reward his cultists with endless life a deathless dead end.
- 5-16. Turms directed some of his cultists to study necromancy, an art he had largely left unexplored. Based on their findings, the Termaxians rejected the paths of undeath for themselves, but they learned how to transform others into vampires, mummies, and ghouls, and to extract eternal loyalty from undead slaves.
- 5-17. Some followers of Turms Turmax were assigned to study demonology, a subject much discussed in the many Eldritch texts that the Termaxians found in Dwimmermount. Beginning with simple summoning of imps and quasits, the Termaxian demonologists grew ever bolder, ultimately enslaving the Demon Lord Jubilex. Their experiments with azoth-infused draughts of Jubilex's ichor created the first Termaxian Husks.
- 5-18. When Demons were summoned into Dwimmermount during the Termaxian Empire, they delighted in its devices for

creating new life antithetical to Law. They approved of Chaotic efforts in The Laboratory to mutate new plant monsters through sprays of azoth, and were especially drawn to perverting the Lawful reproduction of Dwarves through The Foundry. Aided by their demonic mentors, the Termaxian cultists learned how to deliberately produce the gnomes and kobolds which had previously only been accidental and usually undesired by-products of the attempt to bring a carving to life. The most twisted spawn of these cultists were the Dworgs, a new and innately evil race of Dwarven descendants.

- 5-19. Turms Termax had secretly concluded that mere flesh would never be enough to sustain a god. The next stage of his apotheosis would require him to transfer his consciousness into an artificial mind within a protective shell of azoth-infused metal, like the Servitors. Turms was able to forge himself a Golem body, but he was unable to decipher the means by which the Great Ancients had imbued consciousness into metal.
- 5-20. From studying the fall of the Great Ancients and the rise of the Eld, he knew that the Terrim in The City of the Ancients kept watch over a slumbering Servitor. But he feared any attempt to invade The City would almost certainly lead to the Terrim destroying the Servitor. Turms began to scheme how he might weaken the Terrim enough to capture and study the Servitor they held imprisoned.
- 5-21. Absorbed in his secret research, Turms ceded much of the direct control of the Empire to underlings. His Necrolyte lieutenants abused their authority for their own petty ends.
- 5-22. Resentment rose against the Turms-worshiping Thulians as they grew ever more tyrannical, and in time resentment turned into rebellion. Though the Termaxians began to deploy powerful magic from the workshops and foundries of Dwimmermount, it was not enough to stop the uprisings. Led by clerics of Typhon and Tyche, neither of whom accepted the new faith of the Termaxians, entire provinces seceded from the empire. Thus ended the Fifth Era.

Sixth Era - The City-States

- 6-1. The Sixth Era began with the Termaxian Empire torn asunder by rebellion. As the insurrections grew more numerous and the Termaxians more desperate, reports of atrocities spread. The Termaxians began using monsters as shock troops, supporting their offensives with the darkest Chaotic magic of the ancient Eldritch grimoires. These proved insufficient to ward off the relentless assaults of the rebels, seemingly blessed by Typhon and Tyche to end the sacrileges the Termaxians had introduced.
- 6-2. After a series of decisive victories, the rebel armies were within a league of Dwimmermount, poised to capture the mountain fortress and cut the Termaxians off from their great magical arsenal. Yet when the rebels reached Dwimmermount, they found the fortress had already fallen. Its lights were darkened; its enchantries and manufactory were quiet; its main doors had been magically sealed; none of the other known entrances were operational.
- 6-3. In truth, the end of Termaxian rule was brought about by the same woman who had accidentally begun it—Sarana. Having allowed her love for Turms Termax to blind her to his madness and megalomania, she had unwittingly set up a false God far worse than the Gods of the Great Church. Decades later, seeing that Turms had become a monstrous threat to both Man and Terrim, she made a second expedition to the surface to right the wrong she had caused.
- 6-4. Traveling east past the Exarchate of Theana, Sarana came to the Kingdom of the Priest-King, a realm uncorrupted by Termaxian influence. To these Easterners, she preached the true doctrine of Law: "That just as magic and prayer reveal the natural world as Law given form, so Men should seek to embody the divine principle by internalizing Law's divine abstractions."
- 6-5. The warrior-sages of the East were enlightened by the doctrines of Law, and became the first paladins on Telluria since the days of the Great Ancients. Legends name the warrior-sage Hu P'an as the greatest of those who re-discovered the way of the Paladin. He became Law's

- foremost disciple and a living embodiment of duty and service before life and love.
- 6-6. Sarana, Hu P'an, and several other paladins entered Dwimmermount during the rebellions of its final days with the goal of trapping Turms Termax within The Prison and sealing off Dwimmermount so that its dark secrets could not further corrupt Men. Hu P'an volunteered to be captured and brought to The Prison, knowing his truthful claim that he was Sarana's lover would garner the attention of Turms and others from the inner circle that had once known her. When Turms and his allies gathered to torture Hu P'an in the Inner Prison, Sarana used the Great Machine to seal Dwimmermount's arcane barriers. She then placed wards to prevent it from being used again. Belatedly realizing what had happened, the Termaxians within Dwimmermount counterattacked. hoping to capture Sarana and force her to free Turms. They failed. Sarana herself escaped to The City of the Ancients, and her paladins sold their lives so dearly that the Termaxians lost control of the citadel. Sarana's plan, and Hu P'an's tragic sacrifice, sealed off Dwimmermount and bought the world two hundred years' respite from Turms' madness.
- 6-7. Without any knowledge of what had happened within Dwimmermount, the victorious rebels outside its sealed gates nevertheless took advantage of the situation. The fall of Dwimmermount deprived the Termaxians of their strongest fortress and most powerful leaders. The remaining Termaxian armies were soon routed, and the Empire collapsed.
- 6-8. Exhausted by years of warfare, none of the rebellious provinces had the resources or will to rebuild the Empire. In its place arose a patchwork of city-states and principalities, such as Adamas, Lloraec, Retep, and Yethlyreom. Only in the south, in the former Exarchate of Volmar, did a rump of the Empire reorganize itself.
- 6-9. After the fall of the Empire, the most powerful remaining institution was the temple of Typhon, which had supplied many of the leaders of the rebellion. The Typhonians, vowing to prevent future

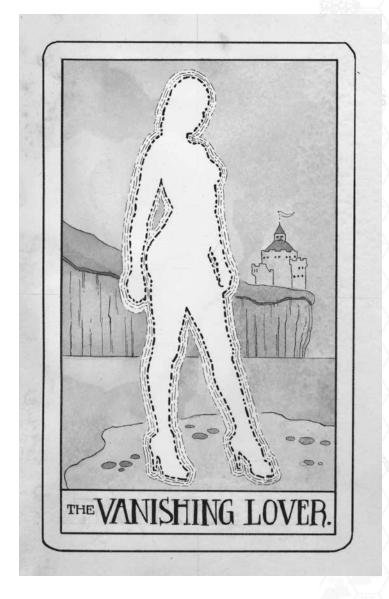

- tyrants and the remnants of the Termaxian cult from obtaining the dark and potent magicks of Dwimmermount, established an enduring watch on the dungeon from the nearby town of Muntburg.
- 6-10. Within Dwimmermount, a grim and generally doomed struggle had ensued among the men and monsters trapped inside. After months of room-to-room combat, an uneasy coalition between the citadel's Dwarven caretakers and resident Vampires established order and unsealed the Perimeter to admit more custodians. Every generation, small numbers of Dwarves followed the secret trail to the Stone-Wrought Stairs and passed into Dwimmermount.
- 6-11. Save for the Dwarven custodians passing through the Stone-Wrought Stairs, Dwimmermount remained isolated and undisturbed for two hundred years.

Seventh Era - The Present

- 7-1. Two months ago, a Triple Conjunction of Ioun, Kythirea, and Areon occurred. A rare event, occurring just once every 58 years, it was only the third Triple Conjunction since the fall of Dwimmermount. It was, moreover, the first in which the Typhonian watch had grown sufficiently lax to allow Termaxian cultists to reach the Alchemist's Door, which functions only during the Triple Conjunction. Led by Nilus and Ermenjart, the Termaxians activated the portal in the Alchemist's Gate and entered Dwimmermount.
- 7-2. Once within Dwimmermount, the Termaxian cultists fought their way to The Manufactory and wrested the Great Machine from its Dwarven custodians. Because of wards put into place on the Great Machine when the paladins brought about the fall of Dwimmermount, the Termaxians found the Machine's controls practically unusable. Nilus, a scholar of the ancient machine, managed to activate The Foundry, enabling creation of Dworgs to strengthen the Termaxian numbers, but he also unwittingly lowered the Perimeter around Dwimmermount at the same time.
- 7-3. When Dwimmermount's Perimeter barrier was deactivated, the mountain for-

tress was invaded from every portal and gateway by factions eager to re-discover its secrets. Red Elves from Areon entered via newly-open portals in search of azoth; Volmarian explorers sent multiple groups to "reclaim" the Empire's fortress; Ranine, Trolls, and Thelidu came through the Deep Passages; Demon Lords sent minions from the Great Void to plumb the dungeon; and Astral Reavers flew to investigate a navigation beacon that had not been heard in many centuries.

- 7-4. The strange noises and lights coming from the mountaintop, and the shadowy groups going into and out of the main gates, began to draw the notice of the townsfolk of Muntburg. The authorities in Muntburg were skeptical of the reports initially, but under the influence of the temple of Typhon they hired the Five Delvers to climb to the mountain's peak and look around. The Five Delvers found no evidence of traffic up the main stairway or through the Red Gates. Talk of activity at other entrances to Dwimmermount ran rampant, though just where these entrances lay and how one could access them was never clear.
- 7-5. The High Priest of Typhon in Adamas hired his own investigators, a rival adventuring party known as Typhon's Fists. They reported that the main entrance to Dwimmermount was open and showed evidence that someone—or something—had been moving within its halls. They ventured inside and quickly lost many of their number to strange skeletons that seemed immune to their divine powers.
- 7-6. High Priest Saidon alerted the Despot of Adamas. The Despot has not yet committed his own hireling adventurers, the Crimson Band, much to the consternation of the temple of Typhon. An opening remains for independent adventurers to journey into Dwimmermount while its secrets remain intact. The opportunity may not last much longer. The second most experienced adventurers in the City-States, the Seekers, are said to have purchased residences in Muntburg from which they plan an expedition of their own.

EXPERIENCE POINTS (* 1):

CHAPTER 5

Adventuring in Dwimmermount

his section serves three purposes. The first is to present information to aid in creating characters for use in Dwimmermount's setting. The second is to provide basic information about Dwimmermount that the Judge can share with the players when they are ready to embark on adventures. The third is to provide motivations for the player characters to venture into the ancient mountain fortress. Everything presented here is necessarily brief and, as always, open to customization by the Judge.

Creating Characters for Dwimmermount

The character creation rules in this chapter add to and modify the rules of *ACKS* but do not entirely replace them. For that reason, if there are no alterations to a particular subject present in this chapter, the rules presented in *ACKS* continue to apply.

Races

Adventurers in the world of Dwimmermount may be men, dwarves, or elves. Since the world in which Dwimmermount is set is firmly dominated by human beings, it is recommended that nonhuman adventurers be rare (perhaps no more than 1 in 4 player characters).

The human classes available reflect the particular gods and history of Telluria. Judges who are setting Dwimmermount within the Auran Empire or adapting it to their own campaign setting can, of course, choose to use any or all classes from **ACKS**.

Men

The human inhabitants of Telluria are generally called "men," following the example of Gygax & Arneson (1974) and their pulp inspirations like Abraham Merritt (1884-1943) and Lord Dunsany (1878-1957). Some groups may find that this terminology usefully evokes a bygone era and a strange yet familiar world, or spurs the exploration through play of questions about the role of women in a world of men. Others may simply substitute alternate terms like humans or Tellurians, the latter of which preserves the suggestive possibility that the men of Dwimmermount are not

identical to men and women as we understand them here on Earth.

When adventuring in the world of Dwimmermount, men may belong to twelve different classes: assassin, barbarian, bladedancer, cleric, explorer, fighter, mage, priestess, shaman, thief, venturer, and witch. Each of these classes functions as described in ACKS or ACKS Player's Companion, except where noted elsewhere in this chapter. In addition there are two variant classes available: priest (a male version of the ACKS priestess) and paladin (a revised version of the Player's Companion paladin). See the Classes section, below, for details.

Dwarves

Dwarves in the setting of Dwimmermount differ slightly from the way that they are described in the *ACKS* rulebook. The most significant factor is that they are exclusively male; there are no female dwarves. Consequently, dwarves do not reproduce

as men do, but rather by carving their "sons" from rock and magically imbuing them with life. Many outsiders consider dwarves to be artificial beings, akin to animated statues or golems. Exploring the truth about the origin of the dwarven race and what conclusions should be drawn as a result was a central theme in the original Dwimmermount campaign, and is among the player motivations described in the final section of this chapter.

Because of their unusual nature, when dwarves die, they turn to stone. Thus, they cannot be restored to life through the use of *raise dead*, but instead require the spell *stone to flesh*. However, dwarves do benefit from other healing effects including spells such as *cure light wounds* and magic items such as *rings of regeneration*.

Though dwarves are very long-lived, known to have lifespans up to a thousand years barring accidents or violence, their population would soon have been reduced to nothing if there were not some

way for dwarves to reproduce themselves. That way is through the carving of a "son" from living rock, with embellishments and adornments of precious metals and gems. With enough attention and craftsmanship—outsiders say *obsession*—a weird magic takes hold of the carving and imbues it with the spark of life, becoming a new dwarf.

All dwarves belong to either the delver, machinist, or vaultguard class. There are no dwarven craftpriests or furies in the world of Telluria. A newly-carved dwarf is level 1 and has the same class and ability scores as his father. There is a 10% chance per ability score that it might be higher (or lower) than that of his father, owing to some quirk in the process of his carving. Roll 1D6, with even numbers conferring a +1 bonus to the ability score and odd numbers a -1 penalty.

The new dwarf owes his father an amount equal to the cost spent in carving him. Each month, there is a 50% chance the father will receive $1d12 \times 100$ gp from his son in partial repayment of this debt. The other 50% of the time, he receives nothing. A dwarf player character, like any other dwarf, begins play in debt to his own father, to the tune of 1D10 \times 10,000 gp. He is not under any obligation to make good on this debt, other than a social one—dwarves who do not attempt to repay their fathers are ostracized by others of their kind.

A dwarf player character who wishes to craft a son must invest a minimum of 10,000 gp investment in materials, after which his player may roll 1d20 and add the character's current level, plus an additional +1 bonus to the carving roll for each further 10,000 gp invested. If the unmodified dice roll is a 1, the result is a critical failure, described below. If the modified roll is 20 or more, the carving comes to life. Only one attempt per level can be made, but additional investments made on a failed attempt carry over from level to level. For example, a dwarf begins the attempt to craft a son by investing 20,000 gp at level 5. His player rolls 1d20 plus 5 for his level and 1 from the extra investment, or 1d20+6. The dice comes up 3, neither a critical failure nor a success. When his character reaches level 6, he invests an additional 20,000 gp and tries again. He now rolls 1d20 plus 6 for his level and 3 from the cumulative additional investments, or 1d20+9.

A natural 1 on the 1d20 carving roll causes an unusual occurrence, according to this table:

Roll	Result
1–2	Gnome
3–4	Kobold
5–6	Inert

Gnomes are an offshoot race of dwarves, created when something goes awry in the process of carving a dwarf son. Like dwarves, gnomes are exclusively male, but unlike dwarves, they are in-

capable of creating their own sons. Some believe that their aptitude with magic somehow negates this natural ability of "normal" dwarves, but there is no evidence that this is so. Despite this, some gnomes believe that there must be a way for their kind to reproduce and work hard toward finding the means to do so. As if in support of this belief, there are tall tales of gnome-only enclaves in the southern lands which are self-sustaining after having discovered the means to propagate themselves.

Gnomes have a complicated relationship to dwarven society, being simultaneously a source of embarrassment—for the lineage of a dwarf with a gnome in it will generally die out—and pride, for gnomes are what enable the dwarves to create the enchanted items that maintain their dwindling society. Consequently, most gnomes are kept hidden away within dwarven strongholds; outsiders rarely hear of them, let alone see them. Needless to say, gnomish adventurers are extremely uncommon, although they are possible.

A kobold is a twisted dwarf, one so obsessed with gold and gems that it retreats into mines, dungeons, and other such subterranean locales in order to sate its lust for riches. Kobolds are selfish, malevolent creatures with a penchant for trap-making and playing cruel practical jokes on other beings, most especially dwarves. Given the numbers in which they appear, kobolds are believed to be able to reproduce themselves much more easily than dwarves, although the exact mechanism is unknown. They are otherwise as described in *ACKS*.

As far as is generally known, dwarves cannot intentionally create gnomes or kobolds any more than they can intentionally create a man or an elf by trying to carve one from living rock. There's no way to force the process to result in any particular outcome beyond the expected one. By the same token, a dwarf cannot carve a female dwarf and attempt to bring her to life, because there is simply no such thing as a female dwarf. The carving process produces male dwarves and nothing else, except by accident.

A result of "inert" means that the carving is "stillborn" and unusable. The dwarf may start work over again on a new son, but this practice is frowned upon. Inert dwarf sons are never discarded or destroyed. Instead, they are placed in subterranean cemeteries alongside once-living dwarves who have reverted back to the stone from which they were carved.

Although there's no reason a dwarf couldn't carve more than one son, dwarven society frowns upon it, seeing it as evidence of arrogance and self-aggrandizement. The social stigma against multiple sons extends even to dwarves whose sons were carved inert, which is part of why dwarves place these "stillborn" children in a place of honor

Whereas human domains are inhabited by families of 5 peasants (two able-bodied adults, and three young or elderly dependents), elven domains are organized around economic units with an average of 2.5 adults each. For simplicity these are still called "families" but there are no apparent children or kinship ties. Elven "families" provide the same land, service, and tax revenue to the domain ruler as typical peasant families.

and respect in a dwarf stronghold. The origin of the stigma is lost to history, though many elder dwarves suggest that it arose in the distant past,

during a time known as "the Tumult," when some dwarves attempted to rebel against their Makers and were ultimately defeated. According to this theory, the leading rebels had carved multiple sons for themselves in an attempt to create dwarven dynasties, which threw the practice into disrepute.

Obviously, the dwarf population is slowly and seemingly inevitably declining. Judging by the size of their underground cities, there were once many mil-

lions of dwarves in the world, but now most cities are lucky if they can boast thousands and many cannot even do that. More than a few dwarf cities are now totally abandoned, becoming famed underworlds filled with gold, magical treasure, and foul beasts. For their part, most dwarves are stoic in the face of the inevitable demise of their race, seeing it as the will of their Makers, though some hold out the hope that, one day, the Makers might reverse their fate and restore the dwarves to their former glory.

Dwarves and the Makers

Only men worship gods and have access to divine magic. Nevertheless, dwarves do revere supernatural beings whom they call "the Makers." As their name suggests, dwarves believe that the Makers created them untold ages ago to delve deeply beneath the surface of the world. Once, the Makers spoke regularly—and directly—to the dwarves but those days are long past. No dwarf knows precisely when the Makers stopped speaking to them or why, though most believe it occurred sometime after the Tumult, when some dwarves turned away from the Makers and threw dwarven society into chaos.

Dwarven reverence for the Makers does not take the form of worship, nor is there a religious hierarchy associated with it. Instead, the Makers provide the ultimate foundation for dwarven society and culture, the answer to any question of why things are the way they are: "Because the Makers made it so." Needless to say, such an answer carries little weight with outsiders and indeed with certain dwarves who fear that the continued unthinking adherence to long-held tradition guarantees the doom of their race. Nevertheless, most dwarves are content with this answer and have faith that the Makers will reveal a means to escape their current predicament.

Elves

The term "elf" is a Thulian word used to describe those intelligent, humanoid beings who can claim descent from the Eld. At the climax of the uprising against the Eldritch Empire, the Eld nobility retreated *en masse* back to the Red Planet in the face of the Thulian onslaught. Those Eld unable to return whence they came, in time, came to be known as elves. As relatives of the evil Eld, elves are generally looked upon with suspicion by men and dwarves to this day.

The defining characteristic of the elves is their longevity: so far as anyone knows, elves are immortal. They can be killed and certain ailments may slay them, but they never die of old age. All elves, regardless of their chronological age -- and many elves claim to be over a thousand years old -- look as if they were approximately in their late teens or early 20s from a human perspective. Interestingly, elves, unlike most other races, cannot be raised from the dead if slain. The spells restore life and limb, reincarnation, and resurrection simply have no effect.

Physically, elves are lithe and agile and tend to possess fair complexions and hair. Their faces are delicate and finely chiseled—not unattractive by any means, but nevertheless possessing an "alien" quality to them that many men find disconcerting rather than alluring. Elven ears are slightly pointed. Though elves are, on average, shorter than men, they display a wide diversity of sizes.

The alien quality of elves is not limited to their appearance. Distant and haughty, they do not seem to possess emotions as men do, or if they do, they are far less demonstrative about them. Because of their long lives, they are often slow to act, preferring to take weeks or even months to commit themselves to a course of action of any significance. Elves gently mock humans and even dwarves as "ephemerals," seeing them as impetuous and foolhardy children. Needless to say, this has not helped their reputation among men, many of whom consider them little better than the Eld of old.

Despite their longevity, elves are few in number; most humans have never seen more than two or three elves their entire lives and rarely do they ever see more than one elf in the same place. There *are* communities of elves in isolated parts of the world, but humans rarely see them, let alone visit them. Those few who have visited them note, among other things, that there are no children to be found among the elves.

This lack of children has led to speculation about how new elves come to be, if indeed they do at all. For their part, elves refuse to broach the subject with "ephemerals," implying only that it is an intensely personal matter that they do not discuss with non-elves. One popular belief is that elves are a dying race that will pass away forever when the last elf is slain. Another even more popular belief is that elves steal human children and raise them as their own. Others say that one can become an elf by consuming their food, a notion made more plausible by the fact that elves do not consume human foodstuffs if they can avoid it and prefer not to eat in the presence of non-elves, regardless of the menu.

Though there are many tall tales of "half-elves" — the result of a star-crossed romance, usually between a human hero and a beautiful elven maiden — there's no evidence that such a thing is even possible. For their part, elves take no interest whatsoever in humans (or any other race) as objects of affection. Furthermore, though elves do have two genders that, outwardly at least, resemble those of humans, elves do not marry or form pair bonds or have any other kind of social arrangements that suggest either the formation of families or indeed any *purpose* to the physiological differences between the genders. It's almost as if elves were male and female in imitation of humans!

Elves are inherently magical, though their command of sorcery seems to be more limited than that of humans. This is true even among the Eld, which likely explains why they have turned to demons to augment their power, a practice that - while uncommon - is not wholly unknown even among the elves.

A minority of sages claim that many elven sites and structures are in fact older than those of Eldritch manufacture, arguing that it was not the Elves of Telluria who sprang from the Red Elves of Areon, but the reverse. For their part, the elves have nothing to add to such discussions, preferring to say as little as possible about their red-skinned relations. An even smaller minority of sages suggests that the elves may in fact be the descendants of the mysterious "Great Ancients" whose mighty works and artifacts predate even the Eldritch Empire, citing odd similarities between the devices of the Ancients and those produced by the elves. Once again, the elves have little to say on the matter and few men are willing to countenance the suggestion that the Great Ancients were anything but members of their own kind living in the distant past.

Save for the fact that they cannot benefit from restore life and limb and related effects, the elves of Dwimmermount are functionally identical to those presented in the ACKS rulebook. All of the elven classes in ACKS (spellsword and nightblade) and ACKS Player's Companion (courtier, enchanter, and ranger) are available.

Classes

When adventuring in the world of Dwimmermount, there are twelve basic character classes to which men may belong: assassin, barbarian, bladedancer, cleric, explorer, fighter, mage, priest, shaman, thief, venturer, warlock, and witch. Each of these classes functions as described in *ACKS* or *ACKS Player's Companion*, except where noted elsewhere in this chapter. In addition there are two variant classes available: priest (a male version of the *ACKS* priestess) and paladin (a revised version of the *Player's Companion* paladin).

Lawful Divine Spellcasters

The clerical classes (bladedancer, cleric, priest, and priestess) represent men and women who have devoted their lives to serving one of the deities of the Thulian Great Church and been gifted with miraculous powers in return for their service. Only the races of man worship the gods; and all of the gods, regardless of their spheres of influence, support and protect the civilization of man. As a result, the various clerical classes are generally available only to humans of Lawful alignment. (Neutral and Chaotic humans and demi-humans who possess divine casting ability are discussed later, on p. 37).

Priests

Priests are in all respects identical to priestesses (see ACKS Player's Companion, p. 36) save that they are men rather than women. Their level titles should be appropriately gendered (e.g. Brother instead of Sister). Depending on the god they worship, the strictures of priests may vary from the default strictures listed in ACKS Player's Companions.

The Great Church

The Great Church was a religious institution of the Thulian Empire, formed from an amalgamation of the nine most influential faiths among the Thulians. Eight of the original deities honored by the Great Church are shown on the table below. The ninth "deity" was called Anyastos, who was, according to orthodox interpretation, not a deity at all, but rather an abstract concept—The Divine representative of the power above and beyond all the other gods. Anyastos had no priesthood or temples of his own, instead being revered by all of the Church's constituent faiths. Of course, there have always been tales of secret societies and esoteric orders devoted to him. Later, Turms Termax identified himself with The Divine and his worship eventually supplanted that of Anyastos within the Great Church.

The Thulians established the Church both in hopes of securing the blessings of all the gods and as an instrument of policy. These Hyperborean barbarians were a very pious and superstitious people and saw their victory over the Eld as proof of a divine mandate. To ensure that they retained that mandate, early Thulian emperors lavished great

wealth and power on the priesthoods of the deities that had supported their rebellion against the Red Elves. Those early emperors similarly did not wish the various temples to feud with one another and so created a structure by which they could work together and, when necessary, adjudicate disputes, with the imperial throne serving as the final arbiter of any irreconcilable differences that should arise.

The Great Church was ultimately undermined by the Termaxian cult, which taught that all the gods were nothing but manifestations of the Man-Become-God, Turms Termax. Only the faiths of Tyche and Typhon offered anything in the way of opposition to the Termaxians, which is why both deities are now held in much higher esteem than most of the others revered by the Great Church. The Church itself ceased to exist with the fall of the Thulian Empire, though many of its constituent faiths continue to cooperate with one another. Likewise, the titles employed in most religions today are evidence of the Church's continued influence even after its institutional cessation.

What follows is a brief overview of the Great Church's eight gods to aid players in choosing a deity to serve. It details the divine classes available to worshippers of each god, along with the weapon selections of their militant clergy and the strictures of their pacifist clergy. It also provides some additional context for the various statues and religious iconography present in Dwimmermount. Characters with Theology proficiency should have access to all of this information.

Anesidora is the goddess of grain, fertility, marriage, and law, making her worship widespread and important. Her agricultural aspects have primacy in rural areas, while her role as the guardian of marriage and the law is emphasized in cities, where her clergy commonly act as advocates and judges. There is some rivalry between the faith of Anesidora and that of Typhon, particularly in realms with a more evil interpretation of Law. Her clergy are made up of clerics, priests and priestesses.

Anesidora's clerics use weapons which symbolize agriculture and law, including all flails, hammers, and maces, plus clubs, daggers, and pole arms (typically scythes). They may fight with a weapon and

shield or wielding a weapon two-handed. Anesidora has no bladedancers, but her clerics may be male or female.

Priests and priestesses of Anesidora must always wear the vestments of their order when in public. They must remain chaste until marriage, but must be married and have reproduced by the time they reach 7th level (Father/Mother). They may not divorce or re-marry. They may only eat agricultural products. They may never take human life except where doing so is specifically required by law (e.g. an execution) and no other is available to do so.

Asana is the goddess of strategy, heroism, and science. She is thus equally the patron of military officers, adventurers, and sages. Asana and Mavors have something of a rivalry, though many common soldiers pay homage to both deities, seeing both as necessary to success in battle. Her clergy are made up of bladedancers, clerics, priests, and priestesses.

Bladedancers and clerics of Asana are trained to fight with the weapons of the old Thulian legions: composite bow, javelin, lance, spear, short sword, and sword. Bladedancers may fight while dual wielding two weapons, while clerics may fight with weapon and shield; both may fight wielding a weapon two-handed.

Priests and priestess of Asana must always wear the vestments of their order when in public. They must remain both chaste and celibate for life. They must teach students for two hours per day at least twice per week. By 5th level (Brother-Disciple/Sister-Disciple) they must have at one rank in either Military Strategy or Knowledge (any), and one rank in each by 9th level (Patriarch/Matriarch). They may not take human life except during a pitched battle in a declared war.

Caint is the god of medicine, poetry, and music. His clergy are well-loved, both for their healing prowess and for their lightheartedness. Temples to Caint typically include both hospitals and theaters, making them at times both busy and raucous. For that reason, they are often used as meeting places even by those with no business there. Caint's clergy are priests and priestesses. As a peace-loving god, Caint has no militant clergy.

Priests and priestesses of Caint must devote at least two hours of every day ministering to the sick or entertaining the downtrodden. By 5th level, they must have at least one rank in either Healing or Performance (any), and one rank in each by level 9. They may not carry weapons and are not permitted to take human life under any circumstances. They may only consume food harvested without killing its source (e.g. blood pudding, eggs, honey, milk) but they have no strictures with regard to vestment, chastity, or celibacy, freedoms which they take advantage of frequently. Their frivolities are the subject of derision from the more disciplined ecclesiastics.

God	Sphere of Influence	Alignment
Anesidora	goddess of grain, fertility, marriage, and law	Lawful (Good)
Asana	goddess of strategy, heroism, and science	Lawful
Caint	god of medicine, poetry, and music	Lawful (Good)
Donn	god of the dead	Lawful
Mavors	god of warfare	Lawful (Evil)
Tenen	god of travelers, craftsmen, and invention	Lawful
Tyche	goddess of fortune, prosperity, and destiny	Lawful
Typhon	god of judgment, discipline, and trade	Lawful (Evil)

Donn is the god of the dead, and as such, is not much worshiped by the living. He is invoked to protect the recently deceased from necromancy and similar sacrileges. Donn's female clergy (priestesses) attend to funerals and mourning while his male clergy (clerics) are implacable foes of the undead and those who create such abominations.

Clerics of Donn are trained to fight the undead, and their weapon choice reflects the necessity of dealing with unliving foes. They may use crossbows, daggers (preferably silver), hand axes (preferably sickles), maces, pole arms (preferably scythes), and slings. They may fight with a weapon and shield or wielding a weapon two-handed.

Priestesses of Don must always wear the black cowl and habit of their order when in public. To be eligible to become a priestess, a woman must be a virgin who has lost her parents or a widow who has lost her husband. Once accepted into the order, they must remain both chaste and celibate for life. They take vows of silence, and may not speak except when on temple grounds or in the presence of dead. Unlike other priestesses, those of Donn have no strictures against the taking of life, provided they do not do so for personal gain or in violation of the law – death is part of the way of things.

Mavors is the god of warfare and battle. He sees warfare as both natural and praiseworthy and teaches his devotees how to achieve worldly success through mastery of it. He and Asana are often rivals, in part because Mavors revels in physical battle while Asana is as content with intellectual debate as she is with armed struggle. Mavor's clergy are always either bladedancers or clerics.

Bladedancers and clerics of Mavors are elite warriors on the battlefield, and their weapon selection reflects that. They may use battle axes, composite bows, lances, pole arms, spears, and swords. Bladedancers may fight while dual wielding two weapons, while clerics may fight with weapon and shield; both may fight wielding a weapon two-handed.

Tenen is the god of craftsmen, invention, and travel. He and Asana are allies and their clerics often cooperate in endeavors of mutual interest. He has no permanent temples; his clergy lead a peripatetic existence, always on the move and seeking out new ideas. Like Anesidora and Tenen, his clergy are non-violent priests and priestesses.

When traveling or in public, priests and priestesses of Tenen must always carry a quarter staff or walking stick adorned with the holy symbol of Tenen. They need not remain chaste, but must remain celibate, taking no spouses and producing no legitimate offspring. They must remain peripatetic; they may not own real property, nor reside in the same dwelling for more than one month, nor the same settlement for more than one year. By 9th level, they must have at least one rank in either Craft (any), Mapping, or Navigation. They may not take human life, except when necessary to defend other travelers on the road or wilderness.

Tyche is the goddess of fortune, prosperity, and destiny. Called Lady Luck, or simply the Lady, she is a whimsical and occasionally capricious mistress. Beseeching her aid is no guarantee of *good* fortune, only that the Lady will provide an *unexpected* outcome, leading some, such as the clerics of Typhon, to charge that she is, in fact, an enemy of Law rather than an ally. Her clergy are made up of bladedancers, clerics, priests, and priestesses, though women predominate at all levels.

Bladedancers and clerics of Tyche are alleged to enjoy outrageous fortune with slings and arrows. True or not, they are trained to fight with all bows and crossbows, as well as with bolas, darts, nets, slings, saps, and staffs. Bladedancers may fight while dual wielding two weapons, while clerics may fight with weapon and shield; both may fight wielding a weapon two-handed.

Priests and priestesses of Tyche must always wear the vestments of their order when in public. They must remain chaste, except during temple holidays, when they are randomly matched with a partner of the opposite sex for copulation. They must remain celibate until 9th level, when they are randomly matched with a member of the order of the opposite sex for marriage. When a priest or priestess is faced with a decision with no apparent right or wrong choice, they must resolve the issue randomly. Each must carry a pair of dice, spinning wheel, or deck of cards at all times for this purpose. They may never fight except to save the lives of Tyche's worshippers.

Typhon is the god of judgment, discipline, and trade, three spheres considered to be the foundations of man's civilization. Typhon's faithful consider their god the greatest of all deities. His clergy are numerous, and consist of clerics, priests, and priestesses. Typhon is renowned for his vigilance against demons and his clerics excel as exorcists and monster hunters. On the other hand, his clergy are also known as overbearing bullies, who use the influence of their temple to advance themselves in social situations.

Typhon's clerics are trained to fight with weapons which symbolize authority and trade, including all flails, hammers, and maces, plus quarterstaffs, swords, and whips. They may fight with a weapon and shield or wielding a weapon two-handed.

Priests and priestesses of Typhon must always wear the vestments of their order when in public. They must remain chaste until marriage; if they do marry the union must to another worshipper of Typhon and approved by the church. They are forbidden from engaging in gambling, public drinking, or other public pursuits of pleasure. They must

follow a strict code known as the Casuistry which requires brutal honesty, justice, and straight dealing, and forbids compassion, forgiveness, and mercy. They may not knowingly break a law of the realm except at the order of a higher-level member of their order. By 9th level, they must have at least one rank in either Profession (judge) or Profession (merchant). They may take human life only in the execution of a lawfully-ordered judgment of death.

Neutral and Chaotic Divine Spellcasters

Some men and women possess the ability to cast divine spells, although they serve neither Law nor the deities of the Thulian Great Church. Such men and women have – knowingly or unknowingly - thrown in their lot with Chaos, as embodied by the various demon lords and princes of the Great Void. The classes in this category include shamans and witches of Neutral or Chaotic alignment, as well as bladedancers, clerics, priests, and priestesses of Chaotic alignment.

Shamans and witches may be of Neutral or Chaotic alignment. If Neutral, they are calling upon both Lawful and Chaotic powers for their spells. If Chaotic they are exclusive devotees of the dark powers. They function exactly as described in the *ACKS Player's Companion* in either case.

Bladedancers, clerics, priests, and priestess of Chaotic alignment are apostates, cultists, and heretics in the service of demonkind. Some infiltrate Lawful religions, passing themselves off as Lawful and working from within to sow dissent and distrust. Others form secret societies dedicated to demons and attract like-minded individuals to join their evil cause. All live to bring about the destruction of man, his civilization, and even his gods.

Chaotic divine spellcasters advance in hit dice, saving throws, attack throws, and experience level at the same rate as their Lawfully-aligned kindred, and can cast the same number of spells per day at each level. However, they can freely cast reversed spells such as *finger of death*, while using the normal version only to aid comrades and followers.

The weapon selection and strictures of these characters will depend on the demon lord or prince they serve.

Abraxas is the Demon Prince of the Secret and Unknown. Bladedancers and clerics of Abraxas prefer easily-concealed, quiet weapons. They may use dagger, dart, hand axe, short sword, sap, and sling.

Newly ordained priests and priestesses of Abraxas must confess all of their secret crimes to the head of their order; these are recorded in a ledger, known as the Book of Secrets, under a secret name assigned to them. Each time they advance in level, the clergy must disclose any additional secrets and sins, and these, too, are recorded. Those who have not performed enough dark deeds are disciplined or even expelled from the order, as are those whose crimes are open and notorious. Priests and priest-esses of Abraxas may discuss their faith only with other worshippers of Abraxas, or with potential converts. The cult tends to ensnare converts into the faith slowly with a web of lies, gossip, and blackmail before the final revelation is made. Should someone learn the priest or priestess's faith and refuse to convert, they must be slain, regardless of any ties or kinship.

Arach-Nacha is the Demon Price of Spiders. Bladedancers and clerics who serve Arach-Nacha favor weapons resembling the natural attacks of spiders: bolas, crossbows, daggers, flails, nets, and short swords.

All priests and priestesses of Arach-Nacha must ritually ingest a small amount of poison daily. By 9th level, this practice will have damaged the priest or priestess's health (permanently reducing their Constitution by 1 point) but made them permanently immune to poison. Because it disrespects Arach-Nacha to allow any to escape the spider's web, priests and priestesses of Arach-Nacha must kill any henchmen who voluntarily leave their service. The clergy need not remain chaste or celibate, but if their partner impregnates them or becomes pregnant, the partner must be slain after the birth to win the god's favor for the child. Priests and priestesses of Arach-Nacha are especially favored for killing with poison. Haagenti is the Demon Prince of Blood and Alchemy. Bladedancers and clerics who serve Haagenti prefer weapons which shed blood - lots of blood. They may use battle axes, great axes, hand axes, pole arms, swords, and two handed-swords.

Each day, a priest or priestess of Haagenti must eat a serving of fresh red meat. Each month, they must ritually sacrifice one or more warm-blooded creatures with a total HD equal to or greater than their own to Haagenti. The creatures sacrificed may initially be animals, but once the priest or priestess reaches 9th level, the sacrifices must thereafter be of sapient creatures. If ever a priests or priestess of Haagenti swears a blood oath, he or she must honor the oath even at the cost of his or her own life. Priests and priestesses of Haagenti may brew potions starting at 3rd level but may not scribe scrolls until 7th level (like witches).

Orcus is Demon Prince of Undead. Bladedancers and clerics who serve Orcus use weapons symbolically associated with death and rulership. They may wield flails, maces, morning stars, pole arms (typically scythes), swords, and whips.

Upon joining the cult, every priest and priestesses must dedicate some part of their body to Orcus. Most choose a finger or toe, but more zealous cultists may choose a hand, tongue, eye, etc. The chosen appendage will wither and die, yet remain animate and functioning, proof of the power of undeath. Priests and priestesses of Orcus may only take henchmen that are either undead or are themselves cultists of Orcus. They may slay living creatures with impunity, but are expected to animate those they kill as undead when possible (and at the very least avoid burning them or leaving them in holy ground). They are forbidden from destroying undead except in self-defense. Upon reaching 11th level, every priest and priestess is expected to transform themselves into undead by means of necromancy; those that refuse to do so will be "helped along" by the cult, typically into less-than-preferred forms (ghoul, zombie, etc.)

Tsath-Dagon is Demon Prince of the Black Waters. Bladedancers and clerics who serve Tsath-Dagon use weapons associated with maritime activities. They may wield any spears or pole arms (favoring harpoons and tridents), plus daggers, maces, and nets.

All priests and priestesses of Tsath-Dagon must bathe daily; if bathing is impossible or impractical due to their work on behalf of the cult, a symbolic cleansing with a sprinkle of unholy water is permitted. Twice each day, at the time of low and high tide, they must perform a ritual prayer (taking 1 turn) facing the nearest lake, sea, or ocean. In order to advance to 9th level, they must make a pilgrimage to the Ranine city of Ghothul'el (see *Chapter 4*, *Vicinity of Dwimmermount*, p. 41) and accept baptism in its underground waters from the High Priest of Tsath-Dagon there.

The Chaotic-aligned clerical classes are only available to new characters at the Judge's discretion. Alternatively Lawful-aligned divine casters may become Chaotic by performing blood sacrifices in evil shrines within Dwimmermount—specifically, in the Altar of Evil (Room 22) on The Reservoir (Level 3B), in the Meditation Chamber (Room 21) on The Halls of Lesser Secrets (Level 4), and before the Prince of the Undead (Room 4) on The Halls of Greater Secrets (Level 5). Lawful divine casters who choose to abandon their faith and become Chaotic retain their class, level, and experience points. Moreover, in the world of Telluria, there is great power in apostasy. Formerly Lawful divine casters gain a number of additional abilities based on the level at which they become Chaotic, as indicated in the chart below. These abilities are cumulative. Characters who begin play Chaotic do *not* gain these powers.

Paladin (Variant)

Requirements: Lawful alignment

Prime Requisite: STR

Hit Dice: 1d8

Maximum Level: None

Paladins are fighters in the service of Law. Unlike clerics, paladins serve no known god. Indeed, they generally consider all gods to be, at best, merely powerful otherworldly beings and, at worst, demons masquerading as divinities. Paladins serve only Law, whom they consider synonymous with Goodness and the only true god. Some have surmised that "Law" is simply another manifestation of the abstract Thulian deity, Anyastos (see p. 41). If this is true, no paladin has ever been heard to assert it. Regardless, members of this sub-class take particularly umbrage at gods who claim to be Lawful and yet subvert Law for evil ends, like Typhon.

Paladins travel the world singly or in pairs, spreading their particular interpretation of Law and rooting out cults devoted to Turms Termax, which they consider particularly dangerous, moreso even than the temple of Typhon. Interestingly, paladins do not shun those who do not share their beliefs, even Termaxians. Instead, they seek them out and often join their adventuring parties, hoping to use their unique abilities and charisma to sway the wayward to their cause.

Paladins are uncommon in the region surrounding Dwimmermount. Most paladins are travelers from a far-off land known only as the Kingdom of the Priest-King, about which little is known. From this realm, paladins set out on their unusual mission, often finding others whom they believe are good candidates to serve as Law's chosen champions. These facts, coupled with their penchant for traveling incognito makes paladins a mysterious group about whom many tall tales and legends have sprung up. Given their rarity and secretiveness, most people have no idea whether any of the stories are true, only that paladins are unusual fighting men, unlike any others in the world.

Lawful fighters may find opportunities to become paladins within Dwimmermount—specifically, in the Temple of Law (Room 51) of The Reliquary

Former Cleric Level	Bonus Ability
1–2	+1 to hit against clerics
3–4	Ability to cast the non-reversed form of one clerical spell per point of Wisdom bonus.
5–6	+1 damage per die against clerics
7+	A quasit (see Appendix C, New Monsters ,p. 41) as a permanent companion. If slain, it cannot be replaced for one year.

PALADIN LEVEL PROGRESSION

Experience	Title	Level	Hit Dice	Special Ability
0	Squire	1	1d6	+1 damage, sanctified body, detect evil, lay on hands
2,600	Signifer	2	2d6	_
5,200	Sergeant	3	3d6	+2 damage
10,400	Paladin	4	4d6	Call special mount
20,800	Under-Marshal	5	5d6	Holy fervor
41,600	Marshal	6	6d6	+3 damage
85,000	Commander	7	7d6	_
170,000	Grand Commander	8	8d6	_
290,000	Master Paladin	9	9d6	+4 damage, fortress
410,000	Master Paladin	10	9d6+2†	Dispel evil
530,000	Master Paladin	11	9d6+4†	_
650,000	Master Paladin	12	9d6+6†	+5 damage
770,000	Master Paladin	13	9d6+8†	_
890,000	Grandmaster Paladin	14	9d6+10†	_

† Hit point modifiers from constitution are ignored

(Level 2B), from Hu P'an in his cell (Room 49) of The Prison (Level 8), and from an encounter with Jin Tai in The City of the Ancients (Level 9). Choosing this path involves giving up the character's existing class, with all earned experience points being transferred to the paladin class. Alternately, the paladin class may be available to new characters at the Judge's discretion.

A paladin must be of Lawful alignment, and loses all class abilities if he ever willingly commits a Chaotic act. Additionally, a paladin's code requires that he respect legitimate authority, act with honor (not lying, not cheating, not using poison, and so

forth), help those in need (provided that they do not use the help for evil or chaotic ends), and punish those who harm or threaten innocents. In addition, a paladin may accept only henchmen or hirelings who are Lawful.

Paladins are noted for their modest, even austere lifestyles, at least compared to ordinary fighters. A paladin may never possess more than five magical

items, not counting a single suit of armor, a single shield, and up to five weapons. In addition, a paladin must donate all treasure he acquires to a worthy and Lawful (Good) cause, except that needed for personal upkeep and that of his henchmen, hirelings, men-at-arms, and stronghold (if any).

A paladin who fails to abide by the aforementioned requirements loses all paladin class abilities (see below), becoming a fighter of a level equivalent to his current experience point total. If he later reverts to Lawful alignment and atones for any

misdeeds (possibly through a **quest** or **atonement** spell) he may be able to regain his lost powers. (A paladin who becomes Chaotic might be permitted to become an **anti-paladin**, at the Judge's discretion. Such a black hearted traitor will be hated throughout civilized lands, of course.)

As holy warriors, paladins are highly trained combatants. At first level, paladins hit an unarmored foe (AC 0) with an attack throw of 10+. Like fighters, they advance in attack throws and saving throws by two points every *three* levels of experience. Paladins increase their base damage roll from melee attacks by +1 at 1st level and by an additional +1 at 3rd, 6th, 9th, and 12th level.

They may wear any armor, and may fight with any "noble weapons," namely the battle axe, flail, lance, mace, morning star, pole arm, spear, sword, two-handed sword, and war hammer. All Paladins may fight wielding a weapon and shield or wielding a weapon two-handed. (Note that paladins *know how* to use other weapons and fighting styles, but refuse to do so because of solemn oaths.) They may use any magic item usable by fighters.

All paladins possess sanctified bodies that are completely immune to the ravages of disease, including magical diseases. This enables them to go on long crusades without succumbing to the diseases that kill many soldiers, as well as to face dread foes such as mummies or werewolves without fear of corruption.

In order to defeat the enemies of Law, the paladin must find them. To this end, a paladin can **detect evil** (as the spell) up to 60' away simply by concentrating. Each use takes a turn. (For purposes of the paladin's aura and detection abilities, "evil" creatures include all undead, all summoned crea-

This paladin variant has been built as Hit Dice 2, Fighting 2, with 3 trade-offs (damage bonus, fighting style and weapon selection). An additional class power has been awarded for the strict code and magic item restrictions. This was traded for one power at 4th and one at 10th

PALADIN	ATTACK	AND	SAVING	THROWS
PALADIN	ALIACK	AITU	DAIIIA	INKUMS

Petrification & Paralysis	Poison & Death	Blast & Breath	Staffs & Wands	Spells	Attack Throw
15+	14+	16+	16+	17+	10+
14+	13+	15+	15+	16+	9+
13+	12+	14+	14+	15+	8+
12+	11+	13+	13+	14+	7+
11+	10+	12+	12+	13+	6+
10+	9+	11+	11+	12+	5+
9+	8+	10+	10+	11+	4+
8+	7+	9+	9+	10+	3+
7+	6+	8+	8+	9+	2+
6+	5+	7+	7+	8+	1+

tures, and any Chaotic creatures intending harm the paladin. Sinkholes of evil and magic items harmful to those of Lawful alignment will also be detected by the paladin's power.)

Finally, paladins may **lay on hands**, on others or on their own person, in order to heal injuries. A paladin will heal 2 points of damage per level when the power is used. A paladin may use his power to lay on hands once per day. A paladin may select the Laying on Hands proficiency to gain additional uses of the power per day.

At 4th level (Paladin), a paladin may **call a special mount** to serve him or her. This mount is usually a heavy warhorse; in any case it is an unusually intelligent, strong, and loyal steed. Should the paladin's mount die, he may not summon another mount for 10 years. If a heavy warhorse, a paladin's special mount has AC 4, 5 Hit Dice, and a higher than normal intelligence. Other special mounts are left to the Judge's discretion.

When a paladin reaches 5th level (Under-Marshal), his **holy fervor** inspires others to follow him. Any hirelings of the same religion as the paladin gain a +1 bonus to their morale score whenever he is present. This bonus stacks with any modifiers from the paladin's Charisma or proficiencies.

At 9th level (Master Paladin), a paladin can found or capture a **fortress** and become a protector of men. When he does so, up to 1d4+1×10 0th level mercenaries and 1d6 paladins of 1st-3rd level will come to apply for jobs and training. If hired, they must be paid standard rates for mercenaries. Paladins' dark fortresses are otherwise identical to fighters' castles, as detailed in the **Campaign** chapter of the *ACKS* Rulebook.

Upon reaching 10th level (Master Paladin), the

paladin has become so sanctified that he can **dispel evil** (as the 5th level divine spell). This miracle can be performed but once per month.

Paladin Proficiency List: Alertness, Blind Fighting, Combat Reflexes, Combat Trickery (force back, incapacitate, overrun, sunder), Command, Diplomacy, Divine Blessing, Dungeon Bashing, Endurance, Fighting Style, Goblin-Slaying, Healing, Knowledge (history), Illusion Resistance, Laying on Hands, Leadership, Manual of Arms, Military Strategy, Martial Training, Mystic Aura, Profession (judge), Riding, Running, Theology, Weapon Focus

Languages

The world of Telluria is home to countless thousands of languages, dialects, and pidgin tongues. The languages below are those most commonly spoken and/or studied in and around Dwimmermount.

Common: A widespread language descended from Low Thulian. In the years following the collapse of the Empire, Common came to be used as a trade and diplomatic language between the various city-states and nations that arose from the empire's ashes. Common shows much local variation in orthography and vocabulary, so there is a 1 in 6 chance that a speaker of one dialect may either misunderstand the speaker of another or fail to convey his own meaning, if the speaker has not familiarized himself with the new dialect beforehand. Nevertheless, knowledge of any dialect of Common is usually sufficient to get by in all but the most remote or far-flung regions previously governed by the Thulian Empire (and in many regions outside it).

Low Thulian: A largely unwritten, non-standard form of Thulian spoken by the lower classes and conquered subject peoples of the Thulian Empire. Its grammar is considerably simpler than High Thulian, and its vocabulary includes many foreign words.

High Thulian: An elegant, highly-inflected language with a rich native vocabulary and literature, High Thulian was the language of the literary class during the Thulian Empire. It is spoken by aristocrats and scholars in the City-States, and preserved in the liturgy of the Great Church.

Ancient Thulian: The ancestor of High Thulian, Ancient Thulian has a relatively small vocabulary but an exceptionally complex grammar. Spoken by the Thulian barbarians who conquered the Eld, it is today the preserve of sages and the Great Church, whose earliest holy books are scribed in it.

Bestial: The various beast-men (gnolls, orcs, lizard-men, etc.) all share this rough dialect of the Common language descended from the barracks *argot* of Thulian soldiers.

Elven: The liquid, lilting tongue of the elves. Sages who have closely studied elven have found it bears faint similarities in grammar and vocabulary with Ancient Thulian and Dwarven. The elves claim this is because Ephemerals learned to speak from their betters.

Dwarven: The workman-like language of curt words with a highly regular, efficient grammar spoken by the dwarves. Some of its vocabulary has a faint similarity to Ancient Thulian and Elven, although dwarves maintain this is because the superiority of their language was mimicked by the other races.

Goblin: The fast and guttural language of the goblins bears no resemblance to any other language on Telluria, including bestial. Goblin's strange, transpositional grammar is difficult for even sages to learn, although the dumbest goblin masters it easily. Goblins insist that theirs is the only native language of Telluria.

Precursor: Sages theorize that there may be a precursor language underlying the similarities of Ancient Thulian, Dwarven, and Elven, perhaps the tongue spoken by the Great Ancients. If so, no one known to man speaks it. The secrets of this language may lay sealed away in Dwimmermount.

Spellcasting

In the world of Telluria, the term "spell" refers to a magical formula, whether written or mental, that enables a spellcaster to alter reality in accordance with the parameters of that formula. In its written form, a spell is expressed by a complex, non-representational cipher that is completely unintelligible to anyone whose mind has not been prepared to do so. Such preparation is a significant part of a

		Spe	lls / I	.evel	
Divine Caster Level	1	2	3	4	5
15	6	6	6	5	4
16	7	6	6	5	5
17	7	7	7	6	5
18	8	7	7	6	6

	Spells/Level						
Arcane Caster Level	1	2	3	4	5	6	
15	5	4	4	4	3	3	
16	5	5	4	4	4	3	
17	5	5	5	4	4	3	
18	5	5	5	5	4	4	

spellcaster's apprenticeship, with years spent in exercises intended to open the mind to the non-physical "impressions" of spells. These impressions are the mental form of a spell and translating them between their written and mental forms is another important part of a spellcaster's apprenticeship.

The discovery of the correspondences between these formulas and the effects on reality occurred in the distant past, likely in the time of the Great Ancients. So obscure are these correspondences that, even after untold millennia of research, the number of spells has not expanded much beyond the canon of spells known today. This has led some to suggest that all possible correspondences have already been discovered, an opinion some sages scoff at, for both history and legend speak of spells whose effects are unlike any seen in the present era.

Since Thulian times, the canon of spells has been divided into levels of power, with casters of higher level casting progressively more powerful spells. At present, no known divine spells exceed the 5th level of power, while no known arcane spells exceed the 6th level of power, and no living caster has ever exceeded 14th level of ability. However, in the distant past some spellcasters may have exceeded this maximum so we have extended the spell progression tables.

Starting Knowledge about Dwimmermount

What follows is a run-down of the knowledge that an adventurer might expect to know about Dwimmermount prior to exploring it. The following details are general enough to be usable even in campaigns taking place elsewhere than Telluria.

Dwimmermount is located a few miles to the northwest of the fortified town of Muntburg.

Dwimmermount was excavated from the tallest mountain in the Wintertop range and is reputed to

have at least half a dozen levels, if not double that number.

The dungeon was the site for the most important magical research of past eras, including investigations into time, space, and the creation of life.

For hundreds—maybe thousands—of years, Dwimmermount served as a fortress for a succession of empires. It fell two centuries ago, when a rebel uprising culminated in a mysterious cataclysm that sealed the dungeon off from the outside world.

Many of the inhabitants of Muntburg and the nearby region known as the City-States are there to keep an eye on Dwimmermount. Some hope to enter the dungeon to get rich, others to free one of the powerful beings which the local authorities hope will remain locked away in Dwimmermount's extra-dimensional prison.

Within the last few weeks, rumors have begun to circulate that the magical wards that once sealed off Dwimmermount have fallen. Shadowy figures are reportedly going into, and coming out of, the mountain fortress.

Campaigns which use the history provided in this book may wish to provide characters with more knowledge about the dungeon's role in its world, suggesting some of the central themes of the original Dwimmermount campaign. To indicate the typical perspectives of Telluria's inhabitants, this information differs depending on the character's race and sometimes reflects popular wisdom rather than historical fact.

Human Beliefs about Dwimmermount

Dwimmermount was created by the Great Ancients, the ancestors of men and the founders of the world's first civilization.

Centuries ago, Dwimmermount became the foothold by which Eld from the Red Planet, Areon, subjugated the natives of Telluria.

The gods inspired the Thulians, barbaric men from an island far to the north, to overthrow the Eldritch Empire and replace it with one of their own.

Dwimmermount is a sacred place to the Great Church, the institutional faith of the Thulian Empire, and contains many of its most important temples.

A man entered Dwimmermount and became a god. This was Turms Turmax, who was arrested and imprisoned by the Thulians for denying the Great Church's ban on mages and preaching the pursuit of immortality. After his apotheosis, Turms Termax became the most-worshipped god in the Thulian Empire.

Typhonians are followers of Typhon, mightiest of the Gods of the Great Church, who led the rebellion against Turms' usurpation of the Thulian

Empire and work to keep his dark secrets imprisoned in Dwimmermount. They are opposed by Termaxian cultists who seek to restore Turm's empire and gain the secret of his apotheosis.

Dwarven Beliefs About Dwimmermount

Dwimmermount is revered by all dwarves because it was home to the Makers who created their race.

Dwimmermount contains the cemeteries of the most venerated dwarven ancestors.

For centuries, dwarves have been the custodians of Dwimmermount.

A few dwarves in each generation have volunteered to join the custodians by climbing a path on Dwimmermount's windward face visible only to those who can sense hidden construction and passable only by those created by the Makers.

The work of the custodians is too sacred to be spoken of, but recent disquiet among the elders suggests that something has gone wrong inside the mountain.

Elven Beliefs About Dwimmermount

The origins of Elves and ephemerals alike are somehow tied up with Dwimmermount, but it would be gauche to inquire further.

Ephemerals envious of the secret of Elven longevity persist in searching for it within Dwimmermount.

Dwimmermount is at the center of an enormous astrological observatory, from which one may sight along the other peaks of the Wintertop range to mark important heavenly transits and predict conjunctions.

The most important of these is the Triple Conjunction of Kythirea, Areon, and Ioun, which occurs only once every 58 years. The most recent Triple Conjunction occurred two months ago.

All right-thinking Elves claim descent from those Eld who joined men in fighting against the tasteless excesses of the Eldritch Empire, which included consorting with demons.

Many of those who seek to enter Dwimmermount nowadays are motivated by the attempt to free a demon prince held within its prison, whether they are aware of this or not.

Knowledge and Lore

Characters may begin play with additional information about Dwimmermount if they possess one or more ranks in the following proficiencies: Knowledge (Ancient lore), Knowledge (Eld lore), Knowledge (Thulian lore), and/or Knowledge (Ter-

maxian lore) proficiencies. This information can include portions of the putative history of Dwimmermount (see *Chapter 2, History of Dwimmermount*, p. 19) or numbered facts from the secret history of Dwimmermount (p. 21), as shown on the table below.

Random Rumors About Dwimmermount

In addition to the general information shared by all, and any more detailed information learned from proficiencies, each new player character should begin play knowing a rumor about Dwimmermount generated from the table on page 47. Characters with Loremastery should begin play knowing 4 rumors, at least two of which should be true. Existing characters and those seeking more intelligence before descending into the dungeon may also hear rumors from non-player characters (NPCs) in Muntburg and elsewhere. Not all of these rumors are true, but all of them pertain to some aspect of the dungeon and should provide additional hooks for giving the character a reason to explore the place.

Motivation for Adventuring

For some, the prospect of danger and loot provide sufficient incentive to explore Dwimmermount. However, many players require additional motivation before setting off into the darkened halls of an ancient mountain fortress. Some goals will drive players throughout each the dungeon's levels, while others are specific to a certain level.

Knowledge is Valuable

Players seeking power will be motivated by the search for wealth, as its acquisition is assumed to be the main driver of character advancement in *ACKS* and the old-school games that are its inspirations and its descendants. Curious players will also be motivated by the search for knowledge, especially as the campaign grows. By tying these motivations together, the Judge can help ensure that the characters become powerful enough to face the challenges found on the deeper levels where the ultimate answers to their questions may be found. Offering monetary rewards is preferable to

directly awarding experience points for discovering new knowledge because finding and negotiating with NPCs who will pay for this lore helps tie together the characters, the dungeon, and the wider setting. Furthermore, more money brings more problems, generating concrete consequences and potential adventures in a way that simply gaining experience does not.

Maps

The first link between wealth and knowledge comes from cartography and maps created by player characters during their adventures. In addition to the tremendous practical value to the party of such records, both scholars and rival explorers will be eager to purchase copies of these maps. The Judge can calculate the selling price of such maps using the table below. The total value will depend on the dungeon level, shown in the first column. The second column gives the value in gold pieces contributed by each room or numbered area shown on the players' map, while the third column gives the value of each exit from the level that was mapped. For example, an expedition which took the most direct path from the Red Doors of The Path of Mavors (Level 1) to the stairs leading to The Reliquary (Level 2B) would pass through four numbered areas and discover two exits from the level, so their map would be worth 140 gp. An exploration of The Deep Hollows (Level 7) that mapped an equal number of rooms and exits could be sold for 3,000 gp. The Judge may reduce the selling price if areas of the map are partial or inaccurate, while annotations or illustrations can increase a map's value. Maps made by character without Mapping proficiency will be scrawling and inaccurate; these will sell for 50% less than the listed value.

The listed value is meant to represent a map's total worth. Clever players may realize that their cartography is unlike a jewel or a magic item in that it can be copied and sold to many buyers, but interested buyers will likely want exclusive access. The consequences of selling multiples of the same map are up to the Judge, but should certainly include a steep decline in the price that each copy brings (at least 2d20% per copy).

Proficiency	Rank 1	Rank 2	Rank 3
Knowledge (Ancient lore)	Putative history, para. 1-3 No numbered facts	Putative history, para. 1-5 Numbered facts 1-1, 1-2	Putative history, all Numbered facts 1-1, 1-2, 1-3
Knowledge (Eld lore)	Putative history, para. 2-4 No numbered facts	Putative history, para. 2-6 Numbered fact 3-10, 3-11	Putative history, all Numbered fact 3-10, 3-11, 4-3
Knowledge (Thulian lore)	Putative History, para. 4-6 No numbered facts	Putative history, para. 3-7 Numbered facts 4-2, 4-5	Putative history, all Numbered facts 4-2, 4-5, 4-9
Knowledge (Termaxian lore)	Putative History, para. 6-14 No numbered facts	Putative history, para. 4-15 Numbered fact 5-5, 5-10	Putative history, all Numbered facts 5-1, 5-5, 5-10

DWIMMERMOUNT RUMOR TABLE

1d20	Rumor
1	A secret back entrance leads to the first level. (True)
2	The shadowy figures seen going into, and coming out of, the dungeon are Termaxian cultists. (True)
3	Dwimmermount was sealed off from the outside world by dwarves, who still control the fortress from within. (False)
4	By means of dark magic, the Thulians removed Dwimmermount from the sight of the gods, weakening clerical magic within its walls. (False)
5	Demons and their servitors abound in Dwimmermount. (True)
6	The water in Dwimmermount is toxic and cannot be safely imbibed. (False)
7	A group of dwarves entered Dwimmermount in recent weeks, but did not return. (True)
8	Beware the shades of the ancient Thulians, for they can consume the souls of the living! (False)
9	Portals to other worlds can be found inside Dwimmermount. (True)
10	Every door with a lock is also trapped and can only be safely bypassed by someone bearing a special Thulian seal. (False)
11	An ancient automaton within the dungeon offers aid and healing to adventurers. (False)
12	Dwimmermount was once one of the largest sources of raw azoth in the entire world. (True)
13	Machines in the dungeon can imbue bones with magical power. (True)
14	A gold mine can be found on one of the lower levels of Dwimmermount. (False)
15	An entire brood of dragons nests in Dwimmermount. (True)
16	Replacing the heads of statues can sometimes bring divine boons. (True)
17	Anyone who dies within the walls of Dwimmermount can never be restored to life by any means. (False)
18	The skeletons with bones made of metal are not undead and cannot be turned. (True)
19	Never read anything written on the wall! It is likely to be an ancient Thulian curse. (False)
20	Dwimmermount is suffused with raw magic, making spells more powerful when cast within. (False)

Selling even a single copy of their map is likely to cause the player characters to encounter rival adventuring parties more frequently. Potential buyers should counteract the resultant hesitation among savvy players by offering promises not to use the map for exploration, or share it with others who might do so, until the player characters have finished with their own expeditions. Encouraging the sale of maps serves two purposes in a campaign. As mentioned above, this source of treasure earned through adventuring will help the player characters advance in level so that they are able to face the dungeon's increasing danger. Should all the adventurers catastrophically fail in this task, having copies of their maps and notes stashed in a sage or rival's archive can justify having a new group of characters pick up the thread of a campaign after a TPK or "total party kill".

The Judge may also wish to make maps of the dungeon available for sale to the player characters. Maps created before Dwimmermount's fall, or contemporary maps created using divination, should fetch the values shown above. Those created by rival adventurers might go for less, as all rooms shown would likely have been looted by the mappers. Giving the party a map, and having the characters start out in debt equal to its value, can be a great way to launch an adventure and is especially useful when running Dwimmermount at a convention or for a higher-level group of player characters.

Historical Evidence

The second link between knowledge and wealth comes from important historical evidence recovered

from Dwimmermount, which like maps should be counted as treasure recovered from the dungeon. As with other unique treasures whose value is unknown, when and how many experience points are awarded for historical evidence will depend on the details of its sale.

In the dungeon, rooms which contain repositories of the past are given values which a sage might pay for the collection if it were transported *en masse*. While this can present an interesting logistical challenge, it does not serve the purpose of encouraging the players' curiosity about the setting by yoking it to their characters' advancement. To that end, we offer the Value of Historical Facts table found on page 48.

The first column presents various questions of historical importance within the setting of Dwimmermount. The second column shows the facts as numbered in the Secret History of Dwimmermount section of Chapter 2 (p. 48) whose discovery would count as historical evidence. The third column is the value which characters might derive from bringing this evidence to light.

The listed value represents the total worth of each

GP FOR ROOMS AND EXITS

Level	GP/room	GP/exit
1, 2a, 2b, 3a	10	50
3b	25	100
4	50	250
5	100	500
6a	150	750
6b	300	1,500
7	250	1,000
8	2,000	10,000
9	10,000	50,000
0	300	1,500

question's answer assuming it is presented **complete- ly** and **reliably**. Complete evidence means that every numbered fact has been demonstrated. Reliable evidence means that the numbered fact is documented with a historical book, machine, or live testimony from an NPC from the era. Thus the listed price can only be claimed by selling an original copy of a book found in the dungeon or, if the source of information is a person, bringing them out of Dwimmermount to answer the buyer's questions.

If the evidence is incomplete, only a portion of the listed value will be earned, generally in proportion to the numbered facts for which evidence is available. Likewise if the evidence is unreliable, only a percentage of the listed value will be earned. The percentage will be very low (1d10%) for "eye witness testimony" by adventurers, who are notoriously unreliable. Written statements by NPCs, copies of books, sketches of machines, and so on can net more (5d10%).

Characters of Neutral or Chaotic disposition may, if desired, attempt to profit by fraudulently selling the answers to questions they don't really have information about. When their fraud is eventually exposed, the Judge should decrease the value of all future information the characters may attempt to sell, as even reliable evidence will be called into question by such behavior.

In assigning gold piece values to historical evidence, we have assigned much greater weight to evidence that would impact contemporary society than to evidence that is merely of historical interest. Thus revealing that the gods of the Great Church were created by man is worth much more than

learning that the beastmen were created by the Thulians.

Characters with the Knowledge (Ancient lore), Knowledge (Eld lore), Knowledge (Thulian lore), Knowledge (Termaxian lore), and/or Theology proficiencies can make proficiency throws to identify the historical importance and approximate value of information they discover relating to their area of knowledge.

We have arbitrarily assumed that the total value of the information in Dwimmermount is approximately equal to the value of the coinage in Dwimmermount (about 550,000 gp). The Judge should feel free to increase or decrease the value of historical evidence depending on his campaign's desired rate of advancement and preference for rewarding treasure-hunting versus knowledge-seeking.

Adventure Seeds

Players' general desire to learn the secrets of the campaign can be counted on to grow through play, which often begins with a specific impetus to enter the dungeon. What follows is a handful of adventure seeds, all of them associated with The Path of Mavors (Level 1), to provide the kernel around which a campaign can grow.

Cartophile's Dream: A local sage who specializes in antique cartography will pay the characters for a map of the Exarchate of Theana that he believes can be found in Dwimmermount, and may purchase other ancient maps as well.

VALUE OF HISTORICAL FACTS

Question	Facts Required to Answer	GP Value
What was the first civilization on Telluria?	1-3, 1-4	5,000 gp
What is the origin of the Great Ancients?	1-1, 1-3, 1-4, 1-5, 1-6	20,000 gp
What is the origin of the Dwarves?	1-7, 2-3, 5-18, 6-10, 6-11	20,000 gp
What is the origin of the Gods?	1-2, 1-8, 1-9, 1-10, 2-7, 2-8, 4-1, 5-3	125,000 gp
What is the relationship between Man, Eld, and Elf?	1-1, 1-3, 2-4, 2-5, 2-6, 3-2, 3-3, 4-6	50,000 gp
What is the origin of the Sleeping God?	1-8, 1-9, 1-10, 2-4, 2-5, 2-6, 3-9	50,000 gp
What is the origin of Beastmen?	3-3, 4-9, 4-10	5,000 gp
What is the origin of the Paladins?	5-2, 5-3, 6-4, 6-5	10,000 gp
What is the secret to immortality?	5-3, 5-4, 5-7, 5-8, 5-13, 5-14, 5-15, 5-19, 5-20	125,000 gp
What is the truth behind the legend of Turms Termax?	5-1, 5-2, 5-3, 5-5, 5-6, 5-7, 5-8, 5-9, 6-3, 6-6	85,000 gp
How did Dwimmermount fall?	6-1, 6-2, 6-3, 6-4, 6-5, 6-6	10,000 gp
What is happening in Dwimmermount now?	6-10, 6-11, 7-1, 7-2, 7-3	50,000 gp
Other questions of personal or historical interest	Various	1d10 × 1,000 gp

Dwarven Cemetery: Rumors that something has gone awry within Dwimmermount have reached a pair of ancient dwarves whose kinsman entered the dungeon years ago to tend to its dwarven cemetery. They ask the characters to conduct a discreet investigation, and may direct them to the path up the mountain's windward face leading to the Entrance Cave (Room 30) on The Path of Mavors (Level 1).

Moon Pool: A mage believes that there is a source of "liquid lunar emanations" within Dwimmermount—a magic pool. She asks the characters to find this source and bring back a water sample in exchange for a hefty fee.

Oracular Advice: Someone approaches a Lawful-aligned character, preferably a cleric, with a question that he wishes them to ask the oracle reputed to reside within Dwimmermount. The question can be anything, but whatever it is, it is important to the person asking it and he will pay the characters for their troubles. However, the questioner will require that the character swear before Typhon that his answer is truthful before he pays! Whether Typhon curses those who lie in His name is up to the Judge to determine.

Orc Raiders: Recently, orcs have been sighted on the slopes of Dwimmermount. As the citadel of Muntburg has been assaulted by orc tribes in the past, the characters are hired by the Captain of the Watch to determine whether these orcs are scouts for a newly gathering army.

Many more adventure ideas can be easily created simply by flipping through the various levels and looking for unusual features or inhabitants that might interest outsiders. What is important is to find ways to draw the player characters to Dwimmermount, providing them with reasons to be there above and beyond killing and looting. Once there, and as they interact with the dungeon's various factions and mysteries, they will soon find plenty of their own reasons to continue to explore.

"In session 2, the players took the map they created the previous week and started to examine it for routes they'd not yet explored, as well as the likely locations of secret doors or other hidden features. I was very pleased about this, because it showed the utility of actual map making, which is something of a lost art in the hobby. I also liked how the presence of a map allowed the players **to plan** their return to the dungeon. They were more knowledgeable about the level's contents and, by looking at the map, they could make good surmises as to what they might encounter elsewhere within it and prepared themselves accordingly."

James Maliszewski, **Grognardia**, 1/12/09

CHAPTER 4

Vicinity of Dwimmermount

The Region

D

WIMMERMOUNT DOES NOT EXIST IN A VACUUM.

Though the megadungeon is the central feature of the north, others also vie for that claim, in particular several large settlements of men. This section presents both the referee and the players with the 52,000 square mile region surrounding Dwimmermount to provide context for the dungeon itself and to open up campaign possibilities beyond exploring its depths.

The Regional Map

The map of the region surrounding Dwimmermount is made up of six-mile hexes, arranged in columns. Each hex has a four-digit number (0101, 2410, etc.) associated with it. The first two digits indicate the column of hexes, while the second two digits indicate a hex within that column. For example, 1405 means that the location in question can be found in column 14, hex 5.

Geography

The Dwimmermount region is characterized by a number of large-scale (multi-hex) terrain features, detailed below.

Aldleigh Forest

Once denser, the Aldleigh Forest has been worked for its lumber for centuries, though there are still places within it where men believe that evil cultists carry on unspeakable rites.

Barrier Mountains

Several tribes of hobgoblins, most notably the Skull Smashers, dwell within this southern mountain range, lording it over their lesser cousins and periodically threatening the lands of Man.

Caracava Badlands

Rocky and desolate, the Caracava Badlands are the supposed site of a magical disaster during the time of the Great Ancients (or perhaps the Eldritch Wars—the legends are unclear) that left them devoid of all *natural* life. Unsurprisingly, only the most foolhardy adventurers, lured by rumors of lost wealth and magic, venture here.

Cobwood

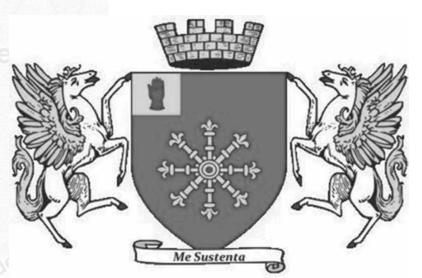

This forest has a well-deserved reputation for evil, as it is home to an unusually large colony of giant spiders united under the suzerainty of an ancient and despicable member of their species called Gloomfang.

Evensong Woods

The Evensong Woods are among a handful of places where elves continue to exist in any great numbers, though even here they are rare.

Ghost Peaks

These small, short mountains get their name from the spirits that are supposedly drawn to them. Sages and scholars scoff at such notions, but the Ghost Peaks do seem to have an unusually high population of undead beings (perhaps due to the closeness of Yethlyreom).

Hearthstone Mountains

Dwarves once dwelt within these mountains in large numbers, but their numbers have diminished considerably since the fall of Ghaz Droonan (3413).

Makrono Marsh

Located where the Lanis and Makrono Rivers meet, this wetland is home to many goblins, at least some of whom are friendly with the inhabitants of Gloris (2911).

Murklands

A vast swamp extending miles in several directions, the Murklands may be of unnatural origin, though none can say for sure. What is known is that there exist within its borders several ruins, most notably the Ruins of Lloraec (0825), as well as several bands of trolls who attack any who dare to enter their territory.

Northern Forest of Ur

This dense coniferous forest has remained largely untouched since men first came to this region. For that reason, tales are told of hidden enclaves of pre-human races within its boundaries, which if these tales are true, must be very well hidden indeed.

Ogga Forest

Though its southern end is used to supply lumber to Retep City (1737), the Ogga Forest is well known as a haven for bandits and thieves. One large band, under the leadership of a self-proclaimed bandit "king," has been the source of trouble for many of the settlements in the area.

Oro Mountains

Before the coming of the Thulians, these low mountains were home to an ogre kingdom. Though the kingdom was defeated, ogres can still be found here, often rising to threaten the small, isolated communities that dot the area.

Shield Wall Mountains

These surprisingly high peaks act as a barrier between the settlements of the north and the weird creatures that dwell within The Starfall (see below).

Southern Forest of Ur

Unlike its northern counterpart, the Southern Forest of Ur is better known, having once been partially hewn to make way for a highway to the west. Since the fall of the Thulian Empire, the forest has regrown to some extent, engulfing the former settlements and trade stations that lay along the highway.

The Demon's Claws

The Demon's Claws are a collection of high, jagged mountains so named because of the way they seem to rake the western portion of the region like the claws of a monster. The Claws also have an evil reputation owing to the large numbers of beastmen (gnolls, minotaurs, orcs, etc.) who make their homes among these mountains.

The Greenholt

The Greenholt is a pristine forest under the protection of the lord of Castle Greenholt (4004). Precisely what he protects and why is the subject of an impressive array of rumors discussed throughout the region.

The Starfall

This large rock desert is reminiscent of the Caracava Badlands (see above), leading some to speculate that a similar disaster befell this region too. Like the Badlands, The Starfall is home to many forms of bizarre life, including a remarkable number of golems (or golem-like beings) that occasionally leave its borders and make war on nearby settlements, such as Fort Aster (2720) and Vidda (2526).

The Wintertops

The Wintertops are a tall mountain range riddled with extensive natural caverns. During Thulian times, they were extensively mined for the natural—and supernatural—ores, gems, and other substances found within them, which only added to the already-existing network of caves.

Thunderhome Mountains

Named for the violent storms that seem to swirl about their peaks, these mountains are home to many giants.

Timeless Forest

So called because time supposedly behaves differently within its border, this forest is thus shunned by all save adventurers and sages seeking to delve into the mysteries of Time itself.

Tulgeywood

Reputedly the home to a vicious creature of indeterminate size and countenance, the Tulgeywood is a small, but dense forest. The story goes that a young warrior wielding a magic sword ventured into the wood in hopes of slaying "the Tulgey Beastie" and never returned from his ill-considered quest, prompting many cautionary tales and poems about the forest's dangers.

Whispering Woods

This dense expanse of forest is noted for a mysterious "whispering" that occurs within its borders every day after sunset. The whispering sounds like the voices of Men speaking very softly, but what they are saying is completely unintelligible.

Points of Interest

24 specific points of interest located within the Dwimmermount region have been detailed below. These points of interest include important urban settlements of varying sizes as well as some notable ruins. Each entry is preceded by its hex number. Urban settlement entries include information on its population, urban investment, alignment, ruler, market class, trade routes, and demand modifiers.

0217 Somtha

Domain Population: 20 urban families; 80 peasant families; Domain Alignment: Lawful; Domain Ruler: Syndic Clyes Fillon, Fighter 4, L; Domain Income: 407 gp; Stronghold Value: 25,000 gp; Settlement Investment Value: 10,000 gp; Market Class: VI; Trade Routes: None; Vassals: None

Once, Somtha was an important stop on a pilgrimage route, providing provisions for travelers headed toward the monastery of St. Gaxyg-at-Urheim (1015). The destruction of the monastery ended Somtha's meager prosperity, turning it into a virtual ghost town.

Somtha's grizzled old syndic, Clyes Fillon, holds the village's few diehard inhabitants together with a strong will and calloused sword-hand. His domain includes the village itself (20 urban families) and the 80 peasant families scattered throughout hex 0217. Somtha's garrison consists of 1 heavy cavalry, 2 light cavalry, 4 crossbowmen, and 6 heavy infantry.

0825 Ruins of Lloraec

A great city in Thulian times, Lloraec was slowly abandoned in the centuries following the Empire's fall, as the dikes and dams that kept the Murklands (see above) at bay fell into disrepair. Now, it is an immense ruin populated by monsters.

Expansion of hex 1015 may begin with **The Ruined Monastery** by James Maliszewski, published in 2008 in **Fight On!** #1.

More information on hex 1403 may be found in The Tower of the Stargazer by James Edward Raggi IV, published in 2010 by Lamentations of the Flame Princess.

0931 Fort Oro

Domain Population: 20 urban families; 600 peasant families; Domain Alignment: Lawful; Domain Ruler: Legate Jehan Cadit, Fighter 7, N; Domain Income: 3,526 gp; Stronghold Value: 150,000 gp; Settlement Investment Value: 10,000 gp; Market Class: VI; Trade Routes: Retep City, Yethlyreom, Yarm; Vassals: Various tribunes and patricians

Funded by Yarm (1425), Fort Oro protects the trade routes between Yarm and Retep City from attacks by bandits and ogres. It is ruled by an appointed legate, Jehan Cadit, who controls a realm consisting of 9 6-mile hexes and 3,340 families (about 15,000 people).

Legate Cadit has a personal domain that includes the city itself (400 urban families) plus hex 1425 and 4 adjacent 6-mile hexes (1,200 peasant families). The city's garrison consists of 120 light infantry and 120 bowmen, under the command of a mercenary captain (a 7th level fighter) and a lieutenant (a 5th level fighter).

1015 St. Gaxyg-at-Urheim

Dedicated to an obscure individual known as St. Gaxyg the Gray, this ruined monastery was a beacon of learning and spiritual edification built upon an escarpment under which lay the chaos-tainted Caves of Mourning. The monastery's magical and material riches made it a tempting target for greedy warlords, one of whom razed it to the ground, leaving behind the ruins that exist today.

1403 Tower of the Stargazer

Legends tell of a wizard so arrogant that he felt the entire sky was naught but a lens for him to view the stars. Though the wizard is long gone (or so the legends say), his tower still remains.

1425 Yarm

Domain Population: 400 urban families; 1,200 peasant families; Domain Alignment: Neutral; Domain Ruler: Lord Syndic Guerin Lamy, Venturer 8, N; Domain Income: 7,116 gp; Stronghold Value: 150,000 gp; Settlement Investment Value: 20,000 gp; Market Class: IV; Trade Routes: Adamas, Retep City, Yethlyreom, Vidda, Fort Oro, Smerdlap's Crossing; Vassals: Fort Oro

Yarm is a lively port city built at the confluence of three rivers. Its people are renowned as hagglers and traders without peer; they buy and sell almost anything and the scope of their wares draws visitors in large numbers from across the North. Because of this confluence, Yarm is a Class IV market despite its relatively small size.

Yarm dominates a small realm of 13 6-mile hex-

es with 4,940 families (about 25,000 people). Its Lord Syndic, Guerin Lamy, has a personal domain that includes the city itself (400 urban families) plus hex 1425 and 4 adjacent 6-mile hexes (1,200 peasant families). The city's garrison consists of 60 heavy cavalry, 120 light infantry, and 120 bowmen, under the command of a mercenary captain (a 7th level fighter) and a lieutenant (a 5th level fighter).

1737 Retep City

Domain Population: 8,000 urban families; 4,300 peasant families; **Domain Alignment:** Lawful; **Domain Ruler:** Lord Syndic Heriot Lategnem, 0-Level, L (Guildmaster Dominic Nosilla, Venturer 11, N); **Domain Income:** 47,652 gp; **Stronghold Value:** 695,000 gp; **Settlement Investment Value:** 625,000 gp; **Market Class:** II; **Trade Routes:** Yethlyreom, Vidda, Yarm, Fort Oro; **Vassals:** Various legates, tribunes and patricians

Retep is a large city-state and a rival to Adamas (2415) for influence in the North. Its lord syndic, Heriot Lategnem, is largely a figurehead, with true power lying with the merchants, aristocrats, temple leaders, and guild representatives who make up his advisory council. Dominic Nosilla, guildmaster of the Merchant's Guild, currently leads the council, but his rule is precarious. The advisory council's constant infighting has so far prevented Retep City from achieving the kind of dominance it might otherwise enjoy.

Dominic and the council control a realm of 73 6-mile hexes with 42,310 families (about 210,000 people). Dominic's personal domain includes the city itself (8,000 urban families) plus hex 1737 and the 6 adjacent 6-mile hexes (4,300 peasant families). Retep City's garrison consists of 180 heavy cavalry, 240 light cavalry, 240 crossbowmen, and 360 light infantry, under the command of three mercenary captains (each a 7th level fighter) and nine lieutenants (each a 5th level fighter).

1918 Yethlyreom

Domain Population: 3,500 urban families; 4,300 peasant families; Domain Alignment: Lawful; Domain Ruler: Phaedra Thyefaine, Mage 11, L; Domain Income: 37,870 gp; Stronghold Value: 492,000 gp; Settlement Investment Value: 200,000 gp; Market Class: III; Trade Routes: Adamas, Yarm, Passara, Muntburg, Gloris, Fort Aster, Fort Oro, Smerdlap's Crossing; Vassals: Various legates, tribunes, and patricians.

Called the City of the Dead, Yethlyreom is ruled by an eight-member council of necromancers who use their powers to raise undead to fight against even more monstrous forces in the North. The head of the council, Phaedra Thyefaine, is the most powerful mage active in the region (11th level). The other seven members of the council are powerful,

but not in her league (one is 9th level while the other six are 7th level). She and her council govern a realm of 29 6-mile hexes and 16,910 families (about 85,000 people). Phaedra's personal domain includes the city itself (3,500 urban families) plus hex 1918 the 6 adjacent 6-mile hexes (4,300 peasant families). Yethlyreom's army consists of 960 zombies under the command of the council. An auxiliary of 360 crossbowmen and 360 light infantry, each under the command of a captain (both 7th level fighters), are used for complex or delicate matters. Yethlyreom also helps pay for troops at Fort Aster (1,450 gp per month).

Originally a pilgrimage site dedicated to Donn, god of the dead, Yethlyreom rose to power early in the Sixth Era. Following Thule's imperial collapse, Yethlyreom was a haven of safety and stability soon swamped by migrants, refugees, and displaced persons. The clerics of Donn instituted taxes and fees to eject the lowest orders from inside the walls of the city. Soon a sizable shanty town grew up, inhabited by those unable to pay the levies. When a bandit army of former Thulian legionaries appeared in the countryside, those outside the walls begged to be allowed inside, but the clerics of Donn did not hear their pleas. It was then that a mage named Bion appeared. Bion possessed a skull-ring (see Appendix A, New Magic Items, p. 55), a powerful magic item which he swore could be used to protect the city. Aided by a small band of comrades and apprentices, he kept his promise to protect Yethlyreom and its shanty town by calling up an army of the dead from the vast necropolises surrounding the city.

After their victory against the bandits, Bion led an army of undead and peasants against the walls of Yethlyreom itself. He and his allies cast down the clerics of Donn and claimed the city for themselves. Bion's first edict banished clerics of any sort from inside the city's walls. Necromancy was practiced openly and anyone, regardless of social status, who demonstrated the ability to work magic was taught to do so in service to the city-state. Since Bion's time, Yethlyreom has grown powerful and influential, rivaling even Adamas. It is now one of the major power centers of the post-Thulian world.

Although its armies, constabulary, and workers consist in large part of mindless undead, Yethlyreom is every bit as much on the side of Law as is Typhon, and the city streets are actually a bit less labyrinthine and gloomy than those of Adamas. By and large, Yethlyreom is a peaceful, justly-run city. Its use of Chaos-tainted magic began out of desperation but has evolved into an orderly, almost scientific approach to death, dying, and the afterlife that has served the city-state well, even if it sometimes results in one or more necromancers succumbing to seduction by Chaos.

Cadavers, by law, cannot be sold in Yethlyreom, and the corpses of all who die within its gray walls become property of the city's ruling council for animation into undead servitors. Riverboats dock in the outlying foreign quarter, where the rules of the inner city do not apply.

Yethlyreom is an uneasy ally of Adamas (2415), much to the chagrin of the temple of Typhon, which sees the City of the Dead as an abomination in the sight of their god.

NPCs in Yethlyreom

Callett (mage 5) is a distinguished older gentleman whose commanding voice and patrician bearing would, in any other city, seem odd given his stature as a necromancer. His large place of business is packed with weird and disgusting merchandise and staffed by his young apprentices. Callett stocks scrolls of many popular spells as well as special components for the creation of golems and undead. Callett and other merchants like him make Yethlyreom Class II, rather than Class III, on the Magic Item Transactions by Market Class table (*ACKS*, p. 40),

2206 Winterburg

Like Muntburg (2511), Winterburg was a fortified Thulian town founded to guard the passage through The Wintertops. Winterburg currently lies in ruins, having been destroyed by a marauding army of orcs supposedly led by a demon.

2318 The Cursed Chateau

Once the estate of Jourdain Ayarai, an aristocrat from Adamas (2415), the chateau is reputed to languish under a curse brought upon it when its master committed suicide after a long and dissolute life. Parties of adventurers have attempted to explore and loot the chateau, but thus far, none have returned.

2410 Dwimmermount

Details of this extensive Thulian fortress within The Wintertops can be found elsewhere, starting on page 55.

2415 Adamas

Domain Population: 10,000 urban families; 4,410 peasant families; Domain Alignment: Lawful; Domain Ruler: Despot Mahe Cheron, Fighter 12, L; Domain Income: 54,506 gp; Stronghold Value: 750,000 gp; Settlement Investment Value: 625,000 gp; Market Class: II; Trade Routes: Yethlyreom, Yarm, Passara, Muntburg, Gloris, Fort Aster, Smerdlap's Crossing; Vassals: Muntburg, Passara, Gloris, Fort Aster, various tribunes and patricians

Founded as Fort Adamantas during Thulian times, the city-state now known as Adamas is the

More information on hex 2318 may be found in **The Cursed Chateau** by James Maliszewski, published in 2011 by **Grognardia Games**.

"All these trips back to Muntburg or Adamas to re-supply and seek out new hirelings to replace their fallen comrades are opportunities to roleplay and to explore the world outside the dungeon... Not every trip back to Adamas is an occasion for me to throw some random encounter at the party or to introduce some eccentric NPC -- but many are. I relish those opportunities, because they're where I get to ground the characters and the dungeon in a larger context and to create a "web" of connections that I can then later use for ideas, both within and without the dungeon."

> James Maliszewski, **Grognardia**, 6/23/09

Gaztea was a non-player character in the original Dwimmermount campaign. Referees who wish to use her will find her characteristics below.

Gaztea (Level 5 Neutral Female Thief) **AC:** 7 **HP:** 21

STR 6 **INT** 17 **WIS** 8 **CON** 10 **DEX** 12 **CHA** 10

Gaztea Equipment:

Dagger +1, hand axe +1, sling +1, leather armor +1, backpack, 4 flasks of oil, 1 week's iron rations, 50' rope and grappling hook, helm of comprehend languages, belt of adaptation, medallion of light†, 4 potions of healing, 2 potions of extra-healing, 4 potions of neutralize poison†.

†See Appendix A, New Magic Items, p. 56 largest bastion of men in the North. Its despot, Mahe Cheron, rules over a realm that encompasses 88 6-mile hexes and 51,785 families (over a quarter-million people). The despot's personal

domain includes the city itself (10,000 urban families) plus hex 2415 and the 6 adjacent 6-mile hexes (4,410 peasant families). The city's garrison includes 120 heavy cavalry, 180 light cavalry, 240 crossbowmen, 480 heavy infantry, and 480 light infantry, under the command of the despot, 3 mercenary captains (each a 7th level fighter), and 11 lieutenants (each a 5th level fighter). Adamas also subsidizes the troops at Muntburg (2,500 gp/month) and Fort Aster (1,450 gp/month).

The despot's rule, though harsh, commands the support of the temples of Typhon and Tyche, both of which recognize that the need for stability outweighs other considerations when so many beastmen and monsters threaten civilization in the region. The temple of Tyche has a mostly female hierarchy who are popularly believed to be flighty and unreliable due to their dedication to the workings of chance. The temple of Typhon demands unforgiving discipline, but remains popular because it has a history of defending Adamas

and other bastions of Law in times of need.

NPCs in Adamas

Matriarch Morna (priestess 9) has risen to lead the temple of Tyche through equal parts luck and devotion. She is a member of the Senate of Adamas, but wields her secular and religious power lightly and relies on the temple's lesser priests to advise others in how best to act in accordance with the Lady's will. Morna rewards tithes to her temple with access to its extensive library and with her miracles, which have no equal in the City-States. She has been known to provide scrolls of restore life and limb to adventurers doing Tyche's work, but also to become more standoffish if she sees them as rivals in the making.

Bishop Saidon (cleric 8) is the highest-ranking of Typhon's clergy in the City-State. A wizened old

man wearing a voluminous robe covered in pockets of varying sizes, Saidon is known as the Archivist because of the museum of artifacts and relics he maintains. Among these are the skeletal remains of strange creatures collected in his adventurous youth and a display of ancient eating utensils, his pride and joy. Saidon likes to complain about the difficulty in finding spoons in the City-State, as the local custom is to "drink" soups and stews. He is more helpful to adventurers than one would expect from a cleric of a god as cruel as Typhon, but owes his position to the inquisitors of his faith and does not question their often merciless rulings.

Jasper (normal man) is a sage and alchemist. Bishop Saidon, who is obsessed with spoons and other ancient curios, is Jasper's most profitable customer, though many of the city's adventurers and mages also consult with him on azoth. Jasper calls azoth "philosopher's mercury," a rare element he believes to be a distillation of magic itself and a key ingredient in transmuting base materials into higher ones. His place of business is next door to a candle shop in the city's market district. Because adventurers seeking to sell or appraise samples of azoth are likely to wind up at Jasper's shop, it is closely watched by several groups of Termaxian cultists. Jasper is aware that he is watched, and has grown increasingly paranoid. He protects his inner office with a door trap that drops a bucket of acid on unwary intruders.

Gaztea (thief 5) is a cynical, pipe-smoking thief and fence known for her social skills and underworld connections. It pains her to think that expeditions might leave behind or even destroy items whose value they fail to recognize. She may join those which offer paid opportunities to learn things, such as alchemy and ancient Thulian that will help her better appraise discoveries and gain new secrets to sell.

2425 Vidda

Domain Population: 500 urban families; 2,200 peasant families; Domain Alignment: Neutral; Domain Ruler: Syndic Colin Landon, Venturer 8, N; Domain Income: 6,889 gp; Stronghold Value: 185,000 gp; Settlement Investment Value: 25,000 gp; Market Class: V; Trade Routes: Retep City, Yarm; Vassals: Various tribunes and patricians

Vidda is a small mining town dedicated to the extraction of adamant from the southern Shield Wall Mountains (see above). Several large companies have grown up to handle the extraction, as it is an expensive and sometimes dangerous process, primarily due to the

ADAMAS HIRELINGS FROM THE ORIGINAL CAMPAIGN

Hrothgar, a 2nd-level mercenary Northman

Wulfhere and Brandis, mighty fighting men

Fighters Drogo and Osric, who boasts a +1 sword acquired on a previous job

Cormac, archer, Eryth, guard, and Hap, groom

Angrooda, a statuesque nigh-Valkyrie, possibly with some giant blood in her

strange monsters from The Starfall (see above) which seem inexplicably drawn to the extracted ore.

Vidda is ruled by an elected syndic, Colin Landon, who is also owner of the largest mining company in the town. Landon controls a realm of 14 6-mile hexes with a population of 5,900 families (about 30,000 people). His personal domain includes the town itself (500 urban families) plus hex 2425 and 5 adjacent 6-mile hexes (2,200 peasant families). Vidda's proximity to The Starfall demands a larger-than-normal garrison, so the town is protected by 60 heavy cavalry, 240 bowmen, and 360 light infantry under the command of a mercenary captain (7th level fighter) and 2 lieutenants (5th level fighters).

2511 Muntburg

Domain Population: 100 urban families; 625 peasant families; Domain Alignment: Lawful; Domain Ruler: Legate Thevenin Verodart, Fighter 8, L; Domain Income: 3,385 gp; Stronghold Value: 655,000 gp; Settlement Investment Value: 10,000 gp; Market Class: V; Trade Routes: Adamas, Yethlyreom, Smerdlap's Crossing; Vassals: Various tribunes and patricians

The fortified town of Muntburg serves the dual purpose of keeping watch over the passage through The Wintertops and Dwimmermount itself. It is ruled by a legate, Thevenin Verodart, appointed by the despot of Adamas. Verodart watches over a realm of 18 6-mile hexes and 8,865 families (about 45,000 people); his personal domain includes just the town of Muntburg (100 urban families) and hex 2511 (625 peasant families).

Muntburg's garrison includes 30 veteran heavy cavalry, 30 crossbowmen, and 150 heavy infantry, under the command of the legate, his guard captain, and his bailiff. (This large garrison is subsidized by Adamas with an extra 2,500 gp per month.) More information on Muntburg can be found in *Chapter 5, Muntburg*, on pages 58-71.

2613 Smerdlap's Crossing

Domain Population: 20 urban families; 150 peasant families; Domain Alignment: Lawful; Domain Ruler: Syndic Ragnar, Fighter 5, L; Domain Income: 670 gp; Stronghold Value: 6,000 gp; Settlement Investment Value: 10,000 gp; Market Class: V; Trade Routes: Adamas, Yethlyreom, Yarm, Muntburg, Passara, Gloris; Vassals: None

Built near a ford on the Makrono River, Smerdlap's Crossing is a small farming village under the protection of the Legate of Muntburg (2511). Its elected syndic, Ragnar, is common-born but well-respected. His domain includes the village itself (20 urban families) and a surrounding domain in hex 2613 (150 peasant families). Relative to its small

size, Smerdlap's Crossing has a thriving market due to its extensive trade routes. This is protected by a garrison of 2 heavy cavalry, 3 light cavalry, 4 cross-bowmen, and 6 heavy infantry.

2704 Eldritch Ruins

The remains of a city of the Red Elves lie deep in the Evensong Woods (see above). For reasons unknown, patrols of elves discourage outsiders from visiting the ruins, but stories of great wealth and magic within the ruins—and beneath—are too alluring for some to resist.

2718 Passara

Domain Population: 200 urban families (70 dwarven); 620 peasant families (280 dwarven); Domain Alignment: Neutral; Domain Ruler: Legate Adryen Hermen, Fighter 8, N; Domain Income: 5,411 gp; Stronghold Value: 490,000 gp; Settlement Investment Value: 10,000 gp; Market Class: V; Trade Routes: Adamas, Yethlyreom, Smerdlap's Crossing; Vassals: Various tribunes and patricians

This mining community is inhabited primarily by men, but there is a sizable minority of dwarves here. It is ruled by a legate, Adryen Hermen, appointed by the despot of Adamas. Hermen runs a realm of 18 6-mile hexes and 9,060 families (about 45,000 people); his personal domain is just Passara (200 urban families and 620 peasant families). His garrison consists of 60 crossbowmen and 120 light infantry.

The people of Passara are quiet and reserved, dedicated to their primary industry, extracting gems and ores from the Shield Wall Mountains (see above). This has created a boom town, and attracted the attention of enterprising thieves who hope to establish a permanent presence here. Legate Hermen is more interested in profit than justice, and willing to pass a blind eye towards routine crime provided he gets a share.

2720 Fort Aster

Domain Population: 20 urban families; 600 peasant families; Domain Alignment: Lawful; Domain Ruler: Legate Berthan Quarre, Fighter 8, L; Domain Income: 3,480 gp; Stronghold Value: 655,000 gp; Settlement Investment Value: 10,000 gp; Market Class: VI; Trade Routes: Adamas, Yethlyreom; Vassals: Various tribunes and patricians

Manned by soldiers from Adamas and Yethlyreom, Fort Aster is a military outpost intended to keep an eye on the weird creatures and phenomena of The Starfall (see above). It is governed by a legate, Berthan Quarre, appointed by the despot of Adamas. From the fort, Quarre rules a realm of 22 6-mile hexes with 9,680 families (about 48,000

people). His personal domain includes Fort Aster itself (20 urban families) and hex 2720 (600 peasant families).

The outpost is built along Thulian lines and resembles Muntburg (see above) in size and structure. Its garrison consists of 30 heavy cavalry, 30 crossbowmen, 60 light infantry, and 120 heavy infantry, under the command of the legate and his 2 lieutenants (each a 5th level fighter).

2806 Elphame

Domain Population: 175 elven urban families; 1,750 elven peasant families; Domain Alignment: Neutral; Domain Ruler: Linwa Nirmalan, Elven Spellsword 9, L; Domain Income: 8,088 gp; Stronghold Value: 365,000 gp; Settlement Investment Value: 25,000 gp; Market Class: VI; Trade Routes: None; Vassals: None

Elphame is the elven capital in the North, a secluded, fortified settlement closed to most outsiders. Owing to the secretive nature of the elves, Elphame's precise population is unknown to the men of the North, though it is reputed to be in the hundreds.

In fact, Elphame is much larger: Its wizard-queen, Linwa Nirmalan, rules a domain of 175 urban families in Elphame itself and another 1,750 peasant families in hex 2806 and the six adjacent 6-mile hexes – just under 5,000 elves total. Elphame's security is maintained by a garrison of 60 elven horse archers, 120 elven longbowmen, and 120 elven light infantry, commanded by Linwa and three lieutenants (each a 5th level elven spellsword). The elves are careful to never reveal their true numbers to men and dwarves, for they have not forgotten nor forgiven the havoc that Ephemerals can wreak.

2911 Gloris

Domain Population: 60 urban families; 610 peasant families; Domain Alignment: Lawful; Domain Ruler: Syndic Gillet Hodemer, 0-Level, L (Legate Axel Carmis, Fighter 8, L); Domain Income: 6,062 gp; Stronghold Value: 490,000 gp; Settlement Investment Value: 10,000 gp; Market Class: VI; Trade Routes: Adamas, Yethlyreom, Smerdlap's Crossing; Vassals: Various tribunes and patricians

Gloris is a small community whose inhabitants make their living by farming and trading with the friendly goblins of the Makrono Marsh (see above). Ostensibly Gloris is governed by its syndic, Gillet Hodemer. In practice, Axel Carmis, a legate appointed by the despot of Adamas to watch over the Makrono Marsh and Hearthstone Mountains, is in charge.

Legate Carmis governs a realm of 22 6-mile hexes and 9,770 families (almost 50,000 people); he treats Gloris (60 urban families) and hex 2911 (610 peasant families) as his personal domain. His garrison consists of 60 heavy infantry and 120 light infantry.

3413 Ghaz Droonan

Built into the side of a mountain, the mighty dwarf hold of Ghaz Droonan stood for centuries as an example of the great works of the sturdy Children of the Earth. All that changed when a plague swept through its halls and exterminated its population. The origin of the plague has never been determined and a foul miasma lingers still, discouraging any dwarf from ever returning.

Elven domains are inhabited by "families" with an average of 2.5 adults each. Elven "families" provide the same land, service, and tax revenue as typical peasant families but have no children or kinship ties.

3627 The Outyard

The Outyard is an immense subterranean complex hewn out of the Thunderhome Mountains (see above) and populated by giants. The giants were kept at bay in Thulian times, but have been raiding the settlements of men and dwarves in recent decades.

4004 Castle Greenholt

Domain Population: 500 peasant families; Domain Alignment: Neutral; Domain Ruler: Nycaize Ouyqyant, Mage 7, N; Domain Income: 955gp; Stronghold Value: 150,000 gp; Settlement Investment Value: 0 gp; Market Class: VI (stronghold); Trade Routes: None; Vassals: None

Caste Greenholt is home to a powerful mage, Nycaize Ouyqyant, who has set himself up as protector of the Greenholt Forest (see above). Ouvqyant's domain consists of hex 2911 and the four adjacent mountain and clear hexes. Some 500 peasant families carve out a meager existence here in isolated homesteads and tiny hamlets. All live in terror of the lord of Castle Greenholt, who forbids them to hunt or lumber within his woods.

Some believe Ouyqyant guards a secret of the Great Ancients, others that he entered into a pact with the elves of Elphame (2806). Whatever the truth, the magician, his 3 lieutenants (each a 5th level explorer), and his men (30 heavy infantry, 120 bowmen, and 120 light infantry) do their best to prevent anyone from entering the forest without his permission.

4221 The City Out of Time

Whether this city even exists is open to debate among scholars. Legends claim that, on certain nights—naturally there is debate as to which ones an ancient city briefly appears. It is said that magical guardians slay any who attempt to make off with the city's treasure.

Mercantile Trade

Most of the trade between the region's settlements takes place via the Makrono River. Ferries and floating taverns shuttle between the City-States of Adamas and Yethlyreom, while barges and traders go downstream to Smerdlap's Crossing and Gloris and upstream to Yarm. The upper Vagar River is not navigable, but caravan routes to Retep City are protected by tax-supported patrols from Fort Oro and often purchase protection from the bandit king of the Ogga Forest. The table on page 61 shows the ACKS demand modifiers for the main settlements.

Dynamic Domains and Lairs

In addition to its points of interest (named settlements and notable ruins), each hex on the regional map may also include one or more domains or monster lairs. These are generated randomly when characters explore a hex. The dynamic contents of a hex depend on whether it is classified as a civilized, borderlands, or wilderness area.

Civilized

Civilized areas are found primarily on the banks of the Makrono, Vagar, and Lanis Rivers and in the fertile plain west of the Ogga Forest. They are densely-settled, having been continuously inhabited since the Thulian era, with around 600 peasant families (3,000 people) in each hex. The peasants live in hamlets surrounding the villas of their local lords, who are usually the descendants of Thulian patricians and senators.

A civilized hex containing a named settlement will have 570-630 (2d4×10+550) peasant families ruled by the settlement's ruler. A civilized hex adjacent to Adamas, Retep City, Vidda, Yarm, or Yethlyreom will have 565-625 (2d4×10+550) families ruled by the adjacent city's ruler. Otherwise roll 1d10 to determine the population and rulership of a civilized hex:

Roll	Organization
1	1 domain of 570 $-$ 630 (2d4x10+550) families, ruled by a legate (8th level NPC) in a 25,000 gp stronghold.
2-5	1 domain of 250-350 (2d6x10+230) families, ruled by a tribune (7th level NPC) in a 12,000 gp strong- hold 1-3 domains, each of 120-180 (2d4x10+100) families, each ruled by a patrician (5th level NPC) in a 6,000 gp stronghold.
6-10	3-5 domains, each of 120-180 ($2d4x10+100$) families, each ruled by a patrician (5 th level NPC) in a 6,000 gp stronghold.

Patricians are typically vassals of the nearest tribune, while tribunes are typically vassals of the nearest legate. Legates are either vassals of the three city-states (Adamas, Retep City, or Yethlyreom) or independent rulers. When necessary, NPC rulers can be generated according to the rules on p. 248 of ACKS.

Characters may buy and sell equipment, recruit hirelings, and engage in mercantile ventures at a civilized hex's stronghold(s); these count as Class VI markets.

Each domain's ruler can call upon a small military force. Patricians employ 1 heavy cavalry, 1-3 light cavalry, 3-5 crossbowmen, and 11-13 heavy infantry. Tribunes employ 2-4 heavy cavalry, 3-5 light cavalry, 5-7 crossbowmen, and 15-25 heavy infantry. Legates employ 4-6 heavy cavalry, 6-10 light cavalry, 10-14 crossbowmen, and 35-45 heavy infantry.

See the rules for mercenaries in ACKS (p. 51) or ACKS Domains at War: Campaigns (p. 9).

While characters are in civilized areas, the Judge should make encounter throws once per month.

Borderlands

Borderlands areas are found along the perimeter of civilized hexes, particularly in terrain less suited for dense settlement, such as the Aldleigh and Ogga Forests and the Shield Wall and Wintertops Mountains. They are less populated then civilized areas, having around 250 peasant families (1,250 people) per hex. The peasants live in isolated farmsteads and small hamlets sheltered by a fortified villa or tower.

A borderlands hex containing a named settlement will have 200-300 (2d6×10+180) peasant families ruled by the settlement's ruler. A borderlands hex adjacent to Adamas, Retep City, Vidda, Yarm, or Yethlyreom will have 200-300 (2d6×10+180) families ruled by the adjacent city's ruler.

Otherwise roll 1d4 to determine the population and rulership of a borderlands hex:

Roll	Organization
1	1 domain of 200-300 (2d6×10+180) families ruled by a tribune (6 th level NPC) in a 25,000 gp stronghold.
2-4	2 domains, each of 100-150 (1d6 \times 10+90) families, each ruled by a patrician (4th level NPC) in a 12,000 gp stronghold.

As in civilized areas, patricians are typically vassals of the nearest tribune, while tribunes are typically vassals of the nearest legate. The lords' strongholds count as Class VI markets.

Military forces in borderlands tend to be relatively larger than those in civilized areas, as they are

more susceptible to wandering monsters. Borderland patricians employ 1 heavy cavalry, 1-3 light cavalry, 4-8 crossbowmen, and 11-13 heavy infantry. Borderland tribunes employ 1-3 heavy cavalry, 6-8 light cavalry, 8-12 crossbowmen, and 15-25 heavy infantry. See the rules for mercenaries in *ACKS* (p. 51) or *ACKS Domains at War: Campaigns* (p. 9).

While characters are in borderland areas, the Judge should make encounter throws once per week.

Wilderness

Wilderness areas are those outside the realms of man. Many wilderness areas were once settled in earlier eras, but now they have at most a small number of isolated homesteads. More often, they are home to ruins, monsters, and beastmen.

If a wilderness hex is adjacent to a borderlands hex or named settlement, the hex will include one domain of 80-120 (2d4×10+60) peasant families ruled by a patrician (3rd level NPC) in a 12,000gp stronghold. Wilderness patricians employ 1 heavy cavalry, 2-4 light cavalry, 4-8 crossbowmen, and 8-12 heavy infantry. The patrician's stronghold counts as a Class VI market.

Terrain	Lairs per Hex
Clear, Grass	1d2
Scrub, Hills	1d4
Barren, Desert	1d6
Mountains, Woods	2d4
Swamp	2d4+1

Otherwise, a wilderness hex will have no domains of any sort. Instead it will have one or more mon-

ster lairs. Lairs will be more densely packed in terrain that provides lots of hiding places, such as swamps, and less dense in open terrain with long lines of sight. Roll on the Lairs per Hex table. For each lair, roll on the appropriate column of the Wilderness Encounters by Terrain table (*ACKS*, p. 244) to determine the type of monster in the lair.

While characters in wilderness areas, the Judge should make an encounter throw once per day if they are stationary or traveling through hexes with domains. Otherwise, the Judge should make an encounter throw each time the adventurers enter a new 6-mile wilderness hex.

Subterranean Locations

Two important points of interests are not shown on the regional map due to their depth beneath the surface. The first of these is the Ranine city of Ghothul'el. Ghothul'el lies in a large underwater carven a quarter-mile below the Cursed Chateau in hex 2138. It is rumored that the lowest level of the Chateau contains a tunnel which descends directly to this horrific metropolis.

The second site of importance is Y'golcyak, the crystal hemisphere which brought Thelidu to Telluria and which now serves as that dread race's capital. The location of Y'golcyak is up to the ref-

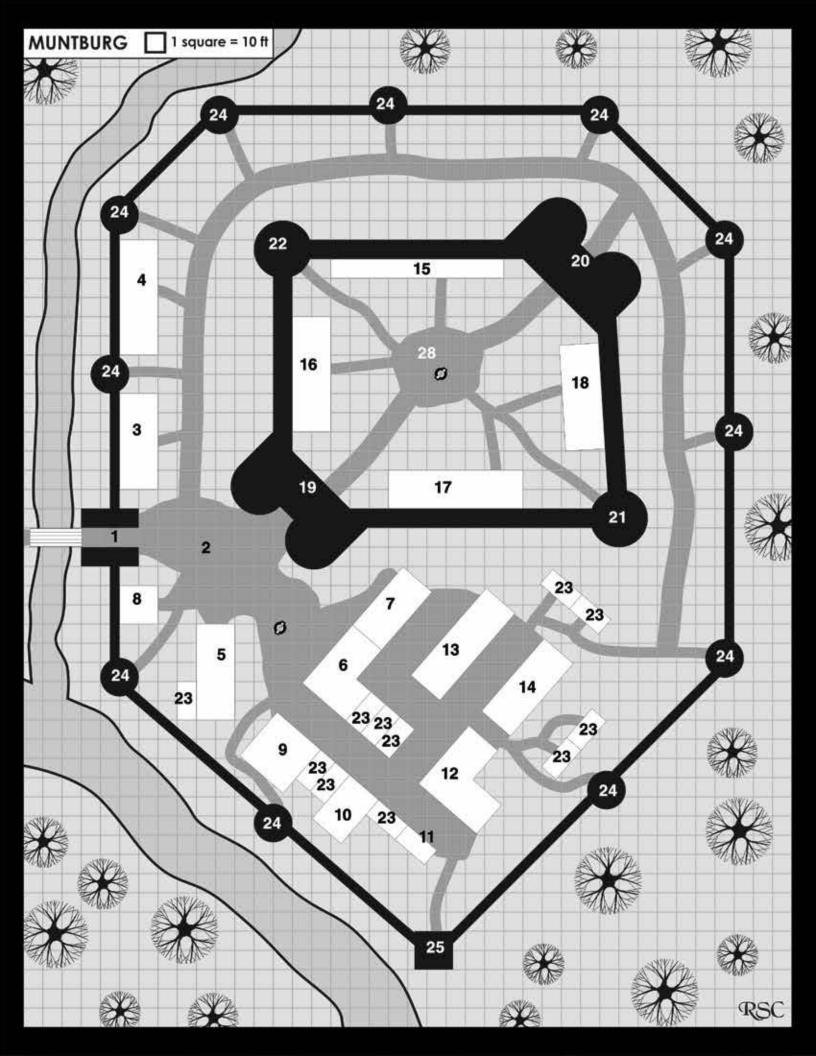

eree to determine. It certainly lies close enough to Dwimmermount to have served as a launching point for invasions of the dungeon in past eras.

These two underground cities are merely the largest of the countless warrens, labyrinths, and dungeons that lay hidden below the surface of the wilderness. Factions in every era of Dwimmermount's history dug passages beneath the earth. Adventurers who explore the passages leading off map from the Deep Hollows (level 7) or sail beyond the docks of the City of the Ancients (level 9) will discover an interconnecting web of tunnels and canals that makes Dwimmermount seem miniscule. Dungeons such as the Outyard (see above) and other ruins of various eras also contain entrances to this underworld. There is a 1 in 6 chance that an entrance to these Stygian depths is located in any given hex on the surface, although all are difficult to find and many are choked with rubble and debris.

The referee may map the underworld prior to beginning play, or randomly generate passages as needed by rolling on the following table:

SUBTERRANEAN LOCATIONS

1d10	Era	Creators	Structure	Connected to	Connected by	Occupants (1d10)
1	1st	Ancients	Azoth-imbued domes carved into the living rock	The City of the Ancients (level 9), hex 2410 (Dwimmermount)	Underground canals and subterranean rivers	1 Terrim lair 2-7 monster lair 8-10 empty
2	1st	Thelidu	Crystal hemispheres deep beneath the earth	Y'golcyak, somewhere below	Nightmare maze of warring shafts	1 Thelidu lair 2-7 monster lair 8-10 empty
3	2nd	Servitors	Deeply-dug mines, collieries, and quarries	Deep Hollows (level 7), hex 2410 (Dwimmermount)	The Deep Passages	1-2 Mongrelmen lair 3-7 monster lair 8-10 empty
4	2nd	Ranine	Shrines and vaults suffused with Chaotic energy	Ghothul'el, ¼ mile below hex 2138 (Cursed Chateau)	Underground canals and subterranean rivers	1-2 Ranine lair 3-7 monster lair 8-10 empty
5	3rd	Eld	Dungeons, labyrinths, menageries, or sanctums	House of Portals (level 3A), hex 2410 (Dwimmermount); hex 1403 (Tower of the Stargazer); or hex 2704 (Eldritch Ruins)	Arcane portals	1-3 Eld lair 4-7 monster lair 8-10 empty
6	3rd	Derrim	Subterranean citadels or fortified outposts	Derrim citadel below hex 3627 ((The Outyard)	Fortified tunnels	1-3 Derrim lair 4-7 monster lair 8-10 empty
7	4th	Beastmen	Hand-dug warrens below surface lairs	Thulian forts at hex 825 (Lloraec), 2511 (Muntburg), and 2206 (Winterburg)	Crudely-hewn tunnels and natural caverns	1-4 Beastmen lair 5-7 monster lair 8-10 empty
8	4th	Dwarves	Vaults excavated near mines and ore veins	Dwarven works at hex 3413 (Ghaz Droonan), 2718 (Passara), or 2425 (Vidda)	Mine shafts	1-4 Dwarven lair 5-7 monster lair 8-10 empty
9-10	5th+	Men	Catacombs, crypts, and shrines below the cellars of monasteries, castles, and chateaus	Surface dwellings and shallow dungeon levels	Secret passages	1-5 Undead lair 6-7 monster lair 8-10 empty

CHAPTER

Muntburg

HE FORTIFIED TOWN OF MUNTBURG (meaning "mountain castle" in a now-obscure local language) was built during Thulian times to guard the trade route through the Wintertops, at the other end of which lay Winterburg (2206). Of relatively minor importance in those days, Muntburg has grown considerably since the fall of the Empire. Now under the authority of the City-State of Adamas (2415), Muntburg still guards the trade route (which is considerably less active than it once was), but its primary purpose is to keep an eye on Dwimmermount and the adventurers and cultists that are drawn to the ancient citadel.

General Notes

Muntburg is an extremely Lawful place. Its military and civilian populations lead orderly lives and

any breaches of the peace will trigger the sounding of the alarm, which will summon 1d4+2 guardsmen within 1d3 turns. The guardsmen prefer to subdue any lawbreakers, but will use deadly force if necessary. Arrestees will be taken to one of two cells located in each of the Inner Gates (see 19) for interrogation by the Captain of the Guard or the Castellan. Based on what is learned, lawbreakers may be released with a warning, a fine, or a steeper punishment—up to, and including, death.

Judges seeking visual references for Muntburg or information about the communities which support the fortress may find it useful to know that its map is based on Rhuddlan Castle, built in Wales in 1277.

MUNTBURG MILITARY

Rank	#	Locations
Castellan (Ftr 6)	1 and	18
"Captain, Bailiff (Ftr 3)"	2	19, 25
"Sgt., Corporal (Ftr 2)"	2	2, 20
Cavalrymen	24	18
Crossbowmen	24	1, 21, 22
Guardsmen	40	19, 20
Men-at-arms	109	1, 2, 15, 16, 17, 24, 25

Population

Throughout this section, NPCs are described using shorthand statistics for commonly encountered types as found in the table to the right.

Heavy Cavalryman: Besides his mount, arms and armor, each cavalryman possesses 1d10 cp and 1d8 sp.

[AL L, MV 60' (20'), AC 7 (plate armor & shield), HD F1, HP 7, #AT 1, DG 1d10+1 (lance), 1d6+1 (sword), or 1d4+1 (dagger), SV F1, ML +3]

Crossbowman: Besides his arms and armor, each crossbowman has ten bolts for his heavy crossbow plus 1d6 cp and 1d4 sp. In melee combat, each crossbowman will switch to his short sword.

[AL L, MV 90' (30'), AC 4 (chainmail), HD 1-1, HP 5, #AT 1, DG 1d10 (arbalest) or 1d6 (short sword), SV NM, ML 0]

MUNTBURG NAMED NPCS

Name	Class	Role	Location
Pieru Danthan	Fighter 3	Corporal of the Watch	2
Adyren Hermen	Normal man	Bonding House	3
Нарр	Normal man	Senior stable boy	4
Louys Herint	Cleric 4	Proctor of Typhon	5
Mathyeu	Cleric 1	Acolyte of Typhon	5
Symon	Cleric 1	Acolyte of Typhon	5
Tasin	Normal man	General Store	6
Bynde Petre	Normal man	Caravan merchant	7
Aurri Petre	Normal man	Caravan merchant	7
Lotier Bonajute	Normal man	Moneychanger	8
Durric	Dwarf 4	Moneychanger guard	8
Larenz Arquem	Normal man	Smith	9
Obert	Normal man	Smith's apprentice	9
Roncin	Normal man	Smith's apprentice	9
Santin	Normal man	Smith's apprentice	9
Delster	Dwarf 2	Gemsmith	10
Emelisse	Cleric 3	Exorcist of Tyche	11
Bertelemy Noion	Normal man	Merchant councilor	12
Asce	Normal man	Innkeep	13
Doree	Normal man	Innkeep's wife	13
Climent	Magic-user 1	Termaxian spy	13
Macyot	Normal man	Taverner	14
Thevenin Verodart	Fighter 6	Castellan	18
Alixandre Vaast	Fighter 3	Captain of the Guard	19
Roguelin Gencien	Fighter 2	Sergeant of the Guard	20
Lambert	Fighter 3	Bailiff	25

Guardsmen: Besides his arms and armor, each guardsman has 1d6 cp and 1d4 sp.

[AL L, MV 90' (30'), AC 5 (chainmail & shield), HD 1-1, HP 4, #AT 1, DG 1d6 (spear) or 1d6 (sword), SV NM, ML 0)

Men-at-Arms: Besides his arms and armor, each heavy infantryman possesses 1d8 cp and 1d6 sp.

[AL L, MV 60' (20'), AC 6 (banded plate & shield), HD 1-1, HP 5, #AT 1, DG 1d6 (spear) or 1d6 (sword), SV NM, ML 0]

Normal Man: A normal man is any non-combatant inhabitant of Muntburg. If attacked he will generally flee and sound the alarm.

[AL L, MV 120' (40'), AC 0, HD 1-1, HP 3, #AT 1, DG 1d4 (dagger), SV NM, ML -1]

Locations

1. Main Gate

Muntburg's main gate is accessible only by a drawbridge, which is usually kept up. The gatehouse is made from great granite blocks and stands 20 feet tall. It is further protected by a portcullis. Four crossbowmen keep watch atop the gatehouse, while two men-at-arms greet travelers from behind the portcullis. Unfamiliar visitors must announce their names and intentions, which one of the men-at-arms will relay to their corporal, below, for his decision about whether the newcomers are to be allowed inside.

2. Market Square

This large open area is overseen by the corporal of the watch, Pieru Danthan, who takes an interest in all visitors to Muntburg. He has two men-at-arms who attend him and take over his responsibilities when he is not present. There is a well in the square, and twice a week, merchants and farmers from the nearby communities sell their goods here.

Danthan is a balding, middle-aged man who appears more severe than he actually is. He records the names and business of everyone who enters Muntburg. Danthan opens up considerably to those he becomes familiar with, sharing stories of his youthful failures to enter Dwimmermount. He carries 12 cp and 8 sp in a purse.

Pieru Danthan [AL L, MV 60' (20'), AC 6 (plate armor), HD F3, HP 13, #AT 1, DG 1d8+2 (sword) or 1d4+2 (dagger), SV F3, ML +2; Proficiencies: Alertness, Leadership, Manual at Arms]

3. Bonding House

This establishment, overseen by a normal man named Adryen Hermen, specializes in contracts of indenture. Anyone looking to hire retainers or henchmen of any kind is expected to make use of Hermen's services. His fee is paid by the employer and is equal to 10% of the weekly wage negotiated for the retainer. In return, the employer not only has a document attesting to the legality of his endeavor, but also an advocate to speak on his behalf to the authorities, should it become necessary. As a lawyer, Hermen provides other legal services as well. He keeps meticulous records and a large portion of the bonding house is taken over with his archives. His private quarters are located in a back room.

At any given time, there are between 1d6+3 mercenaries looking for employment in Muntburg. These are 1st-level fighters, equipped with swords, daggers, leather armor, and shields. A typical wage for dungeon exploration is 1 sp per day *if* provided with heavier armor (at least chain mail) and missile weapons. Otherwise, the wage is 1 gp per day.

4. Public Stables

This building is where travelers can stable their horses while in Muntburg. At any given time, there are 1d10 horses of various types (mostly riding horses), as well as 1d6 mules. The stables are tended by 2d4 stable boys, the oldest of which is named Happ and hopes one day to become an adventurer. The stable boys are all normal men.

5. Temple of Typhon

The largest structure devoted solely to religious purposes in Muntburg is the temple of Typhon, overseen by a cleric named Louys Herint and his two acolytes, Mathyeu and Symon. Herint, like many clerics of Typhon, is something of a martinet and behaves imperiously toward nearly everyone in Muntburg, particularly non-humans and those of other faiths. He is friendlier toward fellow devotees of Typhon, but even then, he expects to be accorded great respect on account of his station.

Herint will cast his spells on behalf of others for an offering of 100 gp per spell level, half that if the recipient is a worshiper of Typhon. The temple currently has 400 gp in a locked box, which Herint keeps on the second floor, where he and his acolytes reside.

Louys Herint [AL L, MV 60' (20'), AC 8 (plate armor & shield +1), HD C4, HP 14, #AT 1, DG 1d6+1 (mace +1), SV C4, ML +1; Daily Spells: 2 1st, 1 2nd; Repertoire: Cleric; Proficiencies: Command, Righteous Turning, Theology]

Acolytes (2) [AL L, MV 90' (30'), AC 4 (chain mail), HD C1, HP 4 each, #AT 1, DG 1d6 (maces), SV C1, ML +3]

6. General Store

The shopkeeper, Tasin, is an old man who lives alone in a small room at the back of his store. He sells all of the adventuring equipment listed in the *ACKS* rulebook (p. 40) at the normal prices. Purchases are subject to the usual rules for Equipment Availability in a Class V town (see *ACKS* p. 39). Tasin is a normal man who carries 1d4 gp on him at all times. The locked box in his upstairs room contains 200 gp.

7. Caravan Merchants

Here dwells Bynde Petre, a merchant who, along with his brother Aurri, commands a caravan that travels between Muntburg and Adamas. Consequently, there is a 50% chance that at least one brother is not present at any given time. The brothers are normal men who deal primarily in exotic goods from far-off lands and Thulian antiquities, both of which are much beloved in Adamas. They will purchase any non-magical goods brought from Dwimmermount at 50%+1d20% the value listed in the dungeon level descriptions. If pressed, they will explain that anyone wanting a greater profit will need to travel to Adamas themselves to make the sale.

The brothers also sell goods that they have purchased, though there is generally little interest in them in Muntburg. Currently, they have the following available for sale:

A malachite bowl (25 gp), an onyx statue (100 gp), a Thulian signet ring (300 gp), a hairpin (60 gp), a necklace (30 gp), a pair of dragonskin boots (500 gp), a silver holy symbol of an unknown god (50 gp), a jeweled coffer (100 gp), and a dwarven-made silver belt (150 gp).

These items are in addition to the 1,258 gp that they keep in a large locked chest in their rooms upstairs.

8. Moneychanger

Lotier Bonajute (a normal man) runs his business here, protected by a dwarf named Durric, who is a friend of Delster (see 10). Bonajute changes coins for a 10% fee of the total value. At any given time, Bonajute has 1,000 gp on hand in various coin types. He keeps these funds in several locked coffers and chests hidden in several places throughout the building.

Besides his arms and armor, Durric has a *potion* of healing and carries 20 gp on his person at all times.

Durric [AL L, MV 60' (20'), AC 9 (plate armor +1 & shield +1), HD Dv 4, HP 20, #AT 1, DG 1d6+2 (sword), SV Dv4, ML +2; Proficiencies: Alertness, Combat Reflexes, Intimidation]

MUNTBURG HIRELINGS FROM THE ORIGINAL CAMPAIGN

Lars and Lorne, brothers, skilled with slings

Henga the shield maiden and Sam the archer

Brakk, goblin torchbearer, skilled in finding traps, works quite cheaply but with dubious loyalty

Ragnar, doughty peasant, seeking adventure to pay his fiancee's dowry

Erik and Ethil, jovial twin Northmen, proud of their muscles, speak in thick accents

9. Smithy and Armorer

Larenz Arquem and his three apprentices (Obert, Roncin, and Santin) work here, producing metal items and armor. All metal weapons and armor listed in the *ACKS* rulebook (p. 41) are available here, subject to the usual rules for Equipment Availability in a Class V town (see *ACKS* p. 39). Larenz and his apprentices are all normal men and dwell in rooms above the smithy. Each carries 1d10 sp on his person.

10. Gemsmith

The dwarf Delster works as a gemsmith, buying and selling precious stones and jewelry, as well as appraising their value. Evaluation costs a flat fee of 5 sp per gem or piece of jewelry. His evaluation is typically at 50%+2d20% of the value listed in the dungeon level descriptions and he will gladly buy them at that value. However, if he comes across an item of dwarven manufacture, he will be willing to pay full price to acquire it.

Delster is a friend of Durric (see 8), the two of them being refugees from Ghaz Droonan (3413), to which they hope to return one day. Delster generally wears leather armor, but he has a suit of plate armor and a shield, as well as a war hammer in his quarters upstairs, which he shares with Durric. He carries 1d20 gp on him at all times. He also has a collection of 20 gems (10 worth 50 gp each, 10 worth 100 gp each).

Delster [AL L, MV 120' (40'), AC 2 (leather) or AC 7 (plate armor & shield), HD Dv2, HP 14, #AT 1, DG 1d6+1 (war hammer), SV Dv2, ML +1; Proficiencies: Craft (jewelling) 3]

11. Chapel of Tyche

Emelisse, a cleric of Tyche, dwells alone on the second floor of this modest building, while she conducts rites to her goddess on the ground floor. Unlike Louys Herint (see 5), Emelisse is friendly and welcoming to all, making her particularly well-regarded by travelers and adventurers who pass through Muntburg. She provides her spells to anyone who makes even a modest offering to the chapel. At any given time, there is d100 sp in the offering box of the chapel.

Emelisse [AL L, MV 90' (30'), AC 5 (chainmail & shield), HD C3, HP 10, #AT 1, DG 1d6+1 (mace +1), SV C3, ML +1; Daily Spells: 2 1st; Repertoire: Cleric; Proficiencies: Divine Blessing, Diplomacy]

12. Merchant's Council

This large and nicely appointed building is where the merchants of Muntburg and the surrounding area meet to discuss matters of mutual interest. Thus the building contains offices, meeting rooms, and even bedrooms for the use of the merchants and their designated guests. The chief councilor, Bertelemy Noion (a normal man), is here at all times, protected by five mercenary menat-arms in his employ. Noion carries 20 gp with him, wears a gold chain (worth 100 gp) and a signet ring (worth 200 gp).

Mercenary men-at-arms (5) [AL L, MV 90' (30'), AC 5 (chainmail & shield), HD Fl, HP 6, #AT 1, DG 1d6+1 (sword), SV Fl, ML +1; Proficiencies: Alertness]

13. Green Dragon Inn

Maintained by a middle-aged man named Asce and his wife, Doree, this inn has four private rooms (costing 1 gp per night) and a common room with enough space for a dozen (1 sp per night). Both Asce and Doree are normal Men.

Currently the only guest is a 1st-level mage named Climent, who has been staying at the Green Dragon Inn for two months. Climent says that he is tired of waiting for the arrival of the rest of his adventuring band, the Red Shields. He is eager to join another party, but requests a retainer of 50 gp up front. If the Judge wishes to provide his player characters with a rumor, adventure hook, or partial map of the dungeon, he may have Climent offer it in exchange for this payment.

In fact, Climent is already employed to keep watch on Muntburg by the group of Termaxian cultists who entered Dwimmermount through the Alchemist's Door (See *Chapter 7, Factions in the Dungeon*, p. 104). He has been instructed to write his reports on lead tablets, with which he makes a trip up the mountain every three days to leave inside a gap in the stairs near this entrance. If he joins a party, Climent will send his initial payment to Adamas to hire a spy to take over his surveillance of Muntburg, and will add his own reports on the party's activities whenever he returns to Muntburg.

Although he will not willingly divulge this information, Climent was approached by Nilus, who he knew to be an Exalted Adept and the leader of a Termaxian group called the Azure Twilight. Nilus hinted at the secrets of immortality to be discovered within Dwimmermount. Climent believes that the Azure Twilight did find a way into the dungeon, but does not know where Nilus is and has failed to find out how the reports are picked up. The truth is that Nilus is currently in The Manufactory (Level 6A) trying to interface with the Great Machine (Room 40). The Termaxian uses polymorph self to take the form of a xorn (see Appendix C, New Monsters, p. 374), glide through the intervening mountain, and swallow the tablet from within the stone of the staircase.

Climent [AL N, MV 120' (40'), AC 0, HD M1, HP 3, #AT 1, DG 1d4 (dagger) or by spell, SV M1, ML +2; Daily Spells: 1 1st; Repertoire: 1st-charm person, choking grip; Proficiencies: Quiet Magic, Knowledge (Termaxian Lore), Lip Reading]

Climent wears traveler's garb and carries a dagger. He keeps a *potion of invisibility* handy at all times.

14. Flask and Scroll Tavern

Run by Macyot and his family (wife, two sons, and a daughter), the Flask and Scroll Tavern is open day and night and is usually bustling with activity. Both travelers and regular residents of Muntburg come here for good food and drink, as well as to socialize and swap stories. At any given time, there are 1d6+2 patrons (mostly guardsmen or men-atarms) in the tavern; there is a 25% chance that one of them is one of the following NPCs (roll 1d6):

- 1. Pieru Danthan (see 2)
- 2. Tasin (see 6)
- 3. Durric (see 8)
- 4. Delster (see 10)
- 5. Emelisse (see 11)
- 6. Climent (see 13)

The tavern's bill of fare is as follows:

Breakfast (Simple)	5 ср
Breakfast (Fancy)	5 sp
Dinner (Simple)	5 sp
Dinner (Fancy)	1gp
Supper (Simple)	3 sp
Supper (Fancy)	7 sp
Small Beer (Pint)	5 ср
Heavy Beer (Pint)	1 sp
Ale (Pint)	2 sp
Mead (Pint)	1ep
Wine (Table)	1ep
Wine (Fancy)	1gp

15. Cavalry Stables

Thirty heavy warhorses and 1d6 riding horses are kept here tended by three stable boys (normal men) and guarded by two men-at-arms.

16. Great Hall

The Great Hall is where the Castellan (see 18) holds audiences with visitors and dignitaries. The Hall is very well appointed and also contains two rooms where individuals of importance can retire while in Muntburg. Most of the time, the Hall is locked. The only keys are in the possession of the Castellan and the Captain of the Guard (see 19). Two men-at-arms stand guard outside the Hall at all times.

17. Barracks

This large wooden building houses fifty menat-arms, though few will be present here during the day.

18. Quarters

This building is home to the Castellan, Thevenin Verodart, as well as 30 cavalrymen. The Castellan has private quarters on the second floor, where he can be found at night. During the day, he is wandering about the inner keep and mingling with his men.

Besides his arms and armor, Verodart has two potions of extra-healing, boots of speed, and gauntlets of ogre power. Though aging, he is still in fine physical condition and much beloved by those under

> his charge. He carries 50 gp with him at all times.

Thevenin Verodart [AL L, MV 60' (20'), AC 8 (plate armor +1 & shield), HD F8, HP 48, #AT 1, DG 1d8+8 (sword +2), SV F8, ML +3; Proficiencies: Combat Reflexes, Command, Leadership, Manual of Arms, Military Strategy, Riding]

19-20. Inner Gates

Standing 30 feet tall, the Inner Gates protect the Keep. A portcullis and metal-reinforced doors bar the way and no one except soldiers is allowed to pass through either gate without the expressed permission of either the Castellan (see 18) or the Captain of the Guard. The Captain of the Guard, Alixandre Vaast, dwells in a room on the upper floor of 19, while the Sergeant of the Guard, Roguelin Gencien, dwells in a similar room on the upper floor of 20. Twenty guardsmen are quartered in

each structure and at least half of them will be present and/or on duty at any given time.

Besides their arms and armor, the Captain of the Guard and the Sergeant of the Guard each carry 15 gp with them.

Alixandre Vaast [AL L, MV 60' (20'), AC 7 (plate armor & shield), HD F5, HP 24, #AT 1, DG 1d6+3 (sword +1), SV F3, ML +3; Proficiencies: Combat Reflexes, Leadership, Manual of Arms, Riding]

Roguelin Gencien [AL L, MV 60' (20'), AC 7 (plate armor & shield), HD F2, HP 19, #AT 1, DG 1d6+2 (sword), SV F3, ML +3; Proficiencies: Alertness, Manual of Arms 2, Riding]

These two towers stand 50 feet tall and house ten crossbowmen each. At any given time, three will be on duty atop the tower, while the others will be within.

23. Private Apartments

21-22. Inner Towers

These small two-story buildings can be rented at a cost of 100 gp a month. The buildings contain limited furnishings (simple beds, tables, and chairs), but are dry and comfortable. There are eleven of these apartments in Muntburg, and at any given time, 1d8+3 of them will already be rented out.

24. Watch Towers

These eleven towers stand 40 feet tall. Each houses five men-at-arms.

25. Bailiff's Tower

The bailiff, Lambert, lives here along with ten men-at-arms. Lambert keeps an eye on everything that happens within Muntburg from this 45 feet tall tower, reporting directly to the Captain of the Guard. He is an experienced fighter, and besides his arms and armor, he carries 10 gp at all times.

Lambert [AL L, MV 60' (20'), AC 8 (plate armor & shield +1), HD F5, HP 23, #AT 1, DG 1d6+2 (sword) or 1d4+2 (dagger), SV F5, ML +3; Proficiencies: Alertness, Profession (bailiff), Siege Engineering 2]

26. Inner Wall

The inner wall, protecting the Inner Keep, is 10 feet thick and 20 feet tall.

27. Outer Wall

The outer wall of Muntburg is 5 feet thick, 30 feet tall, and punctuated by eleven small, 40 feet tall towers (see 24).

28. Inner Keep

A water well is located in the center of the Keep. Where well-worn paths have not been cut through it, there is grass in this area. During the day, 1d6+12 guardsmen and/or men-at-arms will be present here, engaged in drills or weapons practice.

How to Use This Section

Although Muntburg may serve as the home base for an adventuring party's initial expeditions, its limitations – including the reduced profits from the local sale of rarities taken from the dungeon and the unavailability of advanced items and services - are intended to push the campaign's adventures

"Much as I love [Gygax's classic module] B2, it sometimes feels a little too de-contextualized – perhaps by design - but I find I like context for my adventures, particularly low-level ones...I don't find the Keep particularly compelling, a problem made all the more obvious to me in my own Dwimmermount campaign, where Muntburg is a close relative of the Keep in terms of depth and detail (which probably explains why both the players and myself prefer to visit Adamas, even though it's farther away from the dungeon)."

> James Maliszewski. Grognardia, 11/18/09

outside the dungeon toward Adamas and the other City-States, which offer a wider canvas for the Judge's imagination and more scope for the party to get into trouble. Likewise, although players who wish to develop their character's roots may use Muntburg to do so, restricting all characters to this background would close off many more evocative and open-ended possibilities.

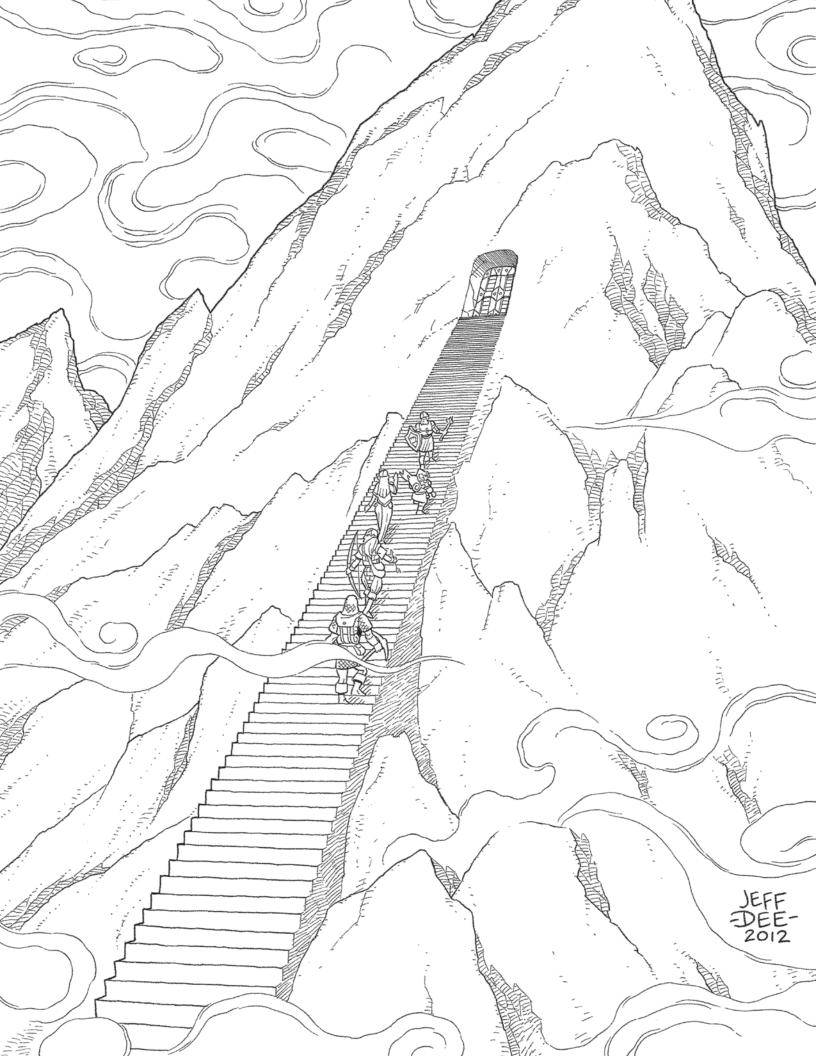

Muntburg's first advantage is that it is mundane, establishing a baseline against which the megadungeon's increasing strangeness can be appreciated. Its second is that it is manageable in scope, making it possible to detail all key areas in a way that would be impossible in a place like Adamas. Taken together, these mean that Muntburg is best seen as a microcosm in which changes throughout the campaign can be clearly observed.

Because they are likely to become richer and more powerful than anyone listed in Muntburg, the player characters will often instigate these changes. Judges are also encouraged to introduce their own developments, which may reflect those taking place elsewhere in the setting or initiate new themes. The following provide some possibilities:

- Inquisitor. A higher-ranking cleric of Typhon is dispatched by the temple of Adamas to root out Termaxian cultists. Given that Turms' followers are highly motivated to remain close to Dwimmermount and have had two centuries to insinuate themselves into Muntburg, the inquisition may be as fruitful as it is disruptive.
- Imperial Sympathizers. Muntburg's garrison is greatly expanded to prepare for the risk of invasion forces sweeping out of the dungeon, but weakened by internal conflicts. The bulk of the new troops are conscripts with poor discipline, while many of the most experienced arrivals are openly nostalgic for the glories of empires past and susceptible to the appeals of Volmarian agents and Termaxian cultists.
- The Charmer. A mage becomes the talk of Muntburg by hosting sumptuous banquets and lavishing gifts on its most important citizens. His influence may be aided by arcane compulsions and guided by the schemes of those who are bankrolling him, or may simply reflect the

- feverish atmosphere generated by Dwimmermount's re-opening.
- Vampires. Servants whisper that key personnel in Muntburg have ceased going out in daylight and are no longer visible in mirrors. These new vampires may be thralls created by Sittas in his scheme to gain power, or they may have been persuaded by Cyrus to accept undeath in order to better defend the fortress against the threat of Turms Termax. See The Ossuaries (Level 6A), Rooms 15 and 32, for details on these master vampires.

CHAPTER ()

Overview of the Dungeon

S A MEGADUNGEON, DWIMMERMOUNT presents the Judge with a wide and potentially daunting variety of elements to work with. This section serves as a guide to some of the most important aspects of using Dwimmermount.

Relation to Muntburg

Dwimmermount lies approximately three miles to the northwest of Muntburg (see *Chapter 5*, *Muntburg*, p. 65) by means of an old Thulian trade road that passes through the Wintertop Mountains and toward the now-ruined fortress of Winterburg. This road is not well traveled today, as there are few settlements to the north and even less trade. Likewise, the authority of Adamas does not extend far beyond Muntburg itself—anyone who leaves its walls and heads in the direction of Dwimmermount is on their own. Brigands often lurk near the dungeon, attracted by rumors of the treasures to be had within and preying on treasure-seekers.

From the trade road, stairs can be seen ascending towards Dwimmermount's peak. At their base they run in broad switchbacks through fortifications ruined since the Fall of Dwimmermount at the start of the Sixth Era. Archways are frequently set into low walls along this section of the stairway, including one called the Alchemist's Door for the arcane symbols engraved into its archstones. Many believe that these are more than simple ornaments, and the authorities in Muntburg are accustomed to, if not comfortable with, strange folk with reagent-stained hands who rent rooms in town, but spend their days trying to work out the secrets of the Alchemist's Door. Rumors that someone has succeeded at this are true, but almost none are based on actual knowledge of the Termaxian infiltration.

Emerging from the fortifications, the stairs become straight and then narrow as they reach the Red Doors, so called because they are made from a reddish metal known to sages as Areonite, brought to Telluria from the Red Planet. The Red Doors were the main entrance to Dwimmermount, and attempting to open them is a common rite of passage for Muntburg's youth. Recently an adventuring party from Adamas, Typhon's Fists, discovered that the Red Doors were no longer sealed and word is beginning to get out despite its best efforts at secrecy.

A third entrance to the dungeon is mostly a secret of the dwarves, passed down since their ancestors helped to carve its halls. For centuries, a few dwarves in each generation have followed a precarious trail along the windward side of the mountain to join the dungeon's custodians. Only dwarves or those with

a similar eye for stonework will perceive the Stone-Wrought Stairs at the end of this trail, and (until recently) only dwarves could pass through its entrance. Several groups of dwarves have recently passed this way, but none have returned.

The Arcane Barriers

The Red Door, Alchemist's Door, and Stone-Wrought Stairs, and other entrances to Dwimmermount have long been closed. From the construction of The Manufactory (Level 6B) two thousand years ago until its takeover by Termaxian cultists two months ago, Dwimmermount has been shielded from intrusion by an arcane barrier that enclose its perimeter entirely, from the tip of its peak all the way down to depths of The City of the Ancients (Level 9). The Perimeter barrier entirely encloses another barrier, the Outer Prison, which itself encloses a third barrier, the Inner Prison (both on Level 8). These barriers, layered like an onion, are all powered by the astral dome over The City of The Ancients, and controlled by the Great Machine (Room 40) on The Manufactory (Level 6B).

Sealed, Activated, and **Deactivated Barriers**

Each of the three barriers can be sealed, activated, or deactivated. When sealed, a barrier is entirely impassable; when activated, a barrier is traversable at specific places under particular conditions; and when deactivated, a barrier is freely traversable. For the past two hundred years, the Perimeter and Outer Prison barriers have been activated while the Inner Prison barrier has been sealed. At the start of the campaign, the cultists controlling the Great Machine accidentally deactivated the Perimeter barrier, thus permitting a variety of intruders to enter Dwimmermount.

Deactivated Barrier: When an arcane barrier is deactivated, it temporarily ceases to exist. It poses no obstacle to travel, is not detectable by any means, and has no effect on spells of any sort.

Sealed Barrier: When an arcane barrier is sealed, the barrier springs into existence as a wall of force that is impervious to all physical and arcane attack. Normally Dwimmermount's arcane barriers are hidden several feet behind the stone of its outermost dungeon walls, but when exposed—as in the staircase leading to The Prison (Level 8) or the Crevasse (Room 26) from The Prison to The City of the Ancients (Level 9), or as a result of tunneling attempts—the barrier appears as a wall of shimmering, multicolored light. Any being who touches the barrier receives a painful shock that deals 1d12 points of damage and paralyzes him for a number of rounds equal to the damage done (no saving throw).

The space enclosed by a sealed barrier is completely cut off from this plane of existence: The area effectively becomes a pocket dimension that does not exist relative to the world of Telluria. The enclosed area appears to scrying attempts as an empty void. Its actual contents cannot be detected, and no passage, communication, or influence of any means is possible across the sealed barrier. Arcane spells which involve inter-planar communication or travel do not work in areas within a sealed barrier, including conjure elemental, contact other plane, control weather, dimension door, fly, invisible stalker, passwall, reincarnation, and teleport. Divine magic is better able to circumvent active arcane barriers (see below) but the clerical spells commune and raise dead still do not function within.

Activated Barrier: Like a sealed barrier, an activated barrier appears as a wall of force that is impervious to all physical and arcane attack. However, the enclosed space still has some connection to its plane of existence, and it can be passed through safely at designated gateways if certain conditions are met (discussed below). Other than allowing this limited ingress and egress, an activated arcane barrier functions as described above, being impassable and impervious to all magic and physical force, and causing damage and paralysis to those who touch it. Arcane spells which involve inter-planar communication or travel still do not function within areas enclosed by an activated barrier, but the area can be scryed upon and telepathic communication is possible.

Gateways through the Barriers

The Gateways through the Arcane Barriers table shows the location of each gateway in each arcane barrier, and under what circumstances the activated barrier can be passed through at that gateway. These circumstances are relevant only if the barrier is activated but unsealed. If the barrier is sealed then no passage is possible through any gateway; while if the barrier is deactivated, then it presents no obstacle to passage at all.

Red Doors: The main entrance to Dwimmermount, the Red Doors lead to the Entrance Chamber (Room 1) of The Path of Mayors (Level 1). If the Perimeter barrier is sealed, the Red Doors lie within its wall of force, and cannot be opened or even damaged by any means. If the Perimeter barrier is activated, the operator of the Great Machine can mechanically open and shut the Red Doors; opening the doors temporarily extinguishes the wall of force in the doorway until the doors are closed again. Now that the Perimeter barrier has been deactivated, the wall of force is gone, and anyone may push the massive Red Doors open and venture down the staircase to The Path of Mavors. The first to do so in centuries were the Typhon's

GATEWAYS THROUGH THE ARCANE BARRIERS

Gateway	Barrier	Location	Passage Granted [†]
Red Doors	Perimeter	Entrance Chamber, The Path of Mavors (Room 1, Level 1)	When operator of Great Machine (Room 40, Level 6B) mechanically opens door
Stone-Wrought Stairs	Perimeter	Entrance Cave, The Path of Mavors (Room 30, Level 1)	To dwarves
Alchemist's Door	Perimeter	Portal Room, The Reservoir (Room 15, Level 3B)	When arcane portal is correctly activated (e.g. during Triple Conjunction)
Moon Shaft	Perimeter	Cave of the Moon Pool, The Path of Mavors (Room 28, Level 1)	To moonlight
Fire Pit Chimneys	Perimeter	Smithy, The Laboratory (Room 23, Level 2A)	To natural smoke
Portals to the Four Worlds	Perimeter	Portals to Areon, Ioun, Kythirea, and Volmar, The House of Portals (Rooms 8, 34, 43, and 61, Level 3A)	When arcane portal is correctly activated (e.g. carrying Areonese soil to pass through Portal to Areon)
Deep Passages	Perimeter	Exits from Map, The Deep Hollows (Level 7)	To living creatures bearing brooches of the Terrim and to non-living things (boats, etc.)
Docks	Perimeter	Docks, The City of the Ancients (Room 10, Level 9)	To living creatures bearing brooches of the Terrim and to non-living things (boats, etc.)
Hangar	Perimeter	Hangar, The Divinitarium, (Room 19, Level 0)	When operator of Great Machine (Room 40, Level 6B) mechanically opens door
Prison Entrance	Outer Prison	Entrance, The Prison (Room 1, Level 8)	Never
Crevasse	Outer Prison	Crevasse, The Prison (Room 26, Level 8)	To characters who save v. Spells
Inner Prison	Inner Prison	Inner Prison, The Prison (Room 41, Level 8)	To anyone (in), to Lawful characters (out)

[†] The Great Machine can be used to change the circumstances under which a barrier gateway grants passage (see effect "10" on the Effects of the Great Machine table, p. 75). For instance, when the Termaxians ruled Dwimmermount, they set the Inner Prison barrier to permit free egress to Chaotic characters while keeping Lawful characters trapped within. Most of the settings shown on the Gateways through the Barriers table were chosen by Sarana during the Fall of Dwimmermount, though they are typical for eras when Dwimmermount was under Lawful control.

Fists (see *Appendix D*, *Rival Parties*, p. 377) whose brief exploration took place within the week before the campaign starts.

Stone-Wrought Stairs: The Stone-Wrought Stairs lead to the Entrance Cave (Room 30) of The Path of Mayors (Level 1), which is a "service entrance" for the dwarven custodians of Dwimmermount. For most of the past two centuries, not many dwarves were needed to maintain a stable situation inside the dungeon and so the trail to the Stone-Wrought Stairs is now largely overgrown with foliage. If the Perimeter barrier is sealed, the Stairs end at the barrier's impassable wall of force. If the Perimeter barrier is activated, its wall of force is still present, but dwarves can pass through it freely. Now that the Perimeter barrier is deactivated, the wall of force is gone, and anyone can walk freely from the Stairs into the Entrance Cave. The demonic Spawn of Arach-Nacha slipped in through this entrance and corrupted its dwarven guardian, Guran.

Alchemist's Door: The Alchemist's Door appears as a stone façade carved into the mountain face, surrounded by arcane glyphs. In truth it is not a door at all, but an arcane portal designed as

a secret entrance by the Eld that leads to the Alchemist's Door Terminus (Room 64) on The House of Portals (Level 3A). Like other entrances to Dwimmermount, the Alchemist's Door does not function at all when the Perimeter barrier is sealed. But if the Perimeter barrier is merely activated, or is deactivated, the Alchemist's Door can be used, provided its other conditions are satisfied.

Opening the Alchemist's Door requires both a Triple Conjunction of Kythirea, Areon, and Ioun (which occurs only once every 58 years) and a quantity of liquefied moonsilver (12 drams), an extraterrestrial metal that has become rare since the fall of Thule and the end of regular commerce with Ioun (see Appendix E, The Four Worlds, p. 389). The liquid metal must be used to outline the Door during the Conjunction. Doing so opens a dimension door in the doorway leading to and from the Alchemist's Door Terminus. Once the Conjunction ceases, the dimension door closes and the Alchemist's Door is once again just a stone façade. However, those who have passed through the Alchemist's Door even once find it always serves as a dimension door for them thereafter (except, of course, if the Perimeter barrier is sealed). The Ter-

maxians found within the dungeon gained entry through the Alchemist's Door two months ago, during the last conjunction.

Moonshaft: This is a narrow crevasse in the rocks overlooking the Stone-Wrought Stairs. If the Perimeter barrier is sealed, the crevasse is blocked by its wall of force, which allows nothing to pass. If the Perimeter barrier is activated, the wall of force is still present, but it permits moonlight to pass through. Now that the Perimeter barrier has been deactivated, the wall of force is gone, and the waters of the pool in the Cave of the Moon Pool (Room 28) on The Path of Mayors (Level 1) are visible far below. The crevasse is just big enough for a human to squeeze through, and the weathered remains of a rope tied around a nearby boulder suggest that it was once used for this purpose. The Termaxian alchemists who dug tunnels to connect the Moon Pool to Dwimmermount trusted in the arcane barrier to keep this entrance closed, so many books about the role of alchemy in the Fifth Era mention the Moon Pool. Jasper and Saidon in Adamas are among those who are aware that moonlight shines directly into this source of true water, but they have not deduced that this shaft might also provide a means of entry to the dungeon because they do not think like adventurers.

Fire Pit Chimneys: The fire pits in the Smithy (Room 23) of The Laboratory (Level 2A) date from the early Thulian era. Exhaust from the fire pits first passes through filters designed to stop even enemies polymorphed into oozes, then reaches the surface via carefully camouflaged chimneys. If the Perimeter barrier is sealed, the chimneys are blocked by its wall of force, which allows nothing to pass. If the Perimeter barrier is activated, the wall of force is still present, but it permits natural smoke to pass through. Now that the Perimeter barrier has been deactivated, the wall of force is gone, and the chimneys can be passed through by any gaseous creature. (The filters still stop oozes and other creatures.) The vampire Aetheria uses the chimneys to travel from the Grand Hall (Room 32) on The Ossuaries (Level 6A) to the surface when she is so ordered by her lover, Cyrus Agallon, as well as in pursuit of her own needs and desires. Other Thulian builders or military planners of Cyrus' era would be aware of the smithy as a potential point of entry.

Portals to the Four Worlds: Like the Alchemist's Door, the various gateways through the barrier on The House of Portals (Level 3A) are not physical openings; instead they are arcane portals that teleport those pass through them to a location on the other side of the barrier. These portals include the Portal to Areon (Room 8), Portal to Ioun (Room 34), Portal to Kythirea (Room 43), Portal to Volmar (Room 61), and the hidden portal in the Black Room (Room 28). Like the other gateways

through the barriers, the Portals to the Four Worlds do not function at all when the Perimeter barrier is sealed. But if the Perimeter barrier is merely activated, or is deactivated, the portals can be used, provided their other conditions are right. See *Chapter 11*, *The House of Portals*, p. 161, for details.

Deep Passages: The Deep Passages exit the edge of the map of The Deep Hollows (Level 7). Most of the Passages connect to the underground networks discussed in Chapter 4, Vicinity of the Dungeon (p. 51), while the Passage from the Exit Cave (Room 32) leads directly to the subterranean realm of Y'golcyak. If the Perimeter barrier is sealed, all of the Passages are blocked by its wall of force, which allows nothing to pass. If the Perimeter barrier is activated, the wall of force is still present, but living creatures bearing brooches of the Terrim, as well as dwarves, golems, and non-living things like cargo, can pass through it freely. Now that the Perimeter barrier has been deactivated, the wall of force is gone, and the Deep Passages can be freely traversed. Thelidu, trolls, and ranine are among those who have invaded the dungeon via the Passages now that they are no longer protected by the Perimeter barrier.

Docks: The Docks (Area 10) of the City of the Ancients (Level 9) were built to handle boats plying the sunless seas beneath Dwimmermount. If the Perimeter barrier is sealed, the Docks are entirely blocked by its *wall of force*, which allows nothing to pass. If the Perimeter barrier is activated, the *wall of force* is still present, but living creatures bearing *brooches of the Terrim*, as well as dwarves, golems, and non-living things like boats and cargo, can pass through. Now that the Perimeter barrier has been deactivated, the *wall of force* is gone, and the Docks can be freely entered.

Hangar: The Hangar (Room 19) of The Divinitarium (Level 0) was constructed by the Great Ancients during the Second Era to provide access for astral vessels (see Appendix A, New Magic Items, p. 323) plying the heavens. If the Perimeter barrier is sealed, the hangar doors lie within its wall of force, and cannot be opened or even damaged by any means. If the Perimeter barrier is activated, the operator of the Great Machine (Room 34 of Level 6B) or the Control Room (Room 20 of Level 0) can mechanically open and shut the Hangar's doors; while opened in this manner the wall of force in the doorway is extinguished. Now that the Perimeter barrier has been deactivated, the wall of force is gone, but the Hangar's exterior doors are so massive that mechanical or magical means are still required to open them.

Prison: See *Chapter 18, The Prison* (Level 8), p. 273, 274, and 284, for details on the gateways through the Outer Prison and Inner Prison barriers.

Divine Disruption of the Arcane Barriers

The arcane barriers cannot be brought down by an arcane or physical effect, but clerical magic *is* capable of temporarily deactivating a barrier. This is how the Thulians were able to invade Dwimmermount at the start of the Fourth Era, and how the Typhonian rebels expected to invade it at the end of the Fifth Era.

Magic of such magnitude is beyond the scope of the 1st through 5th level clerical spells commonly available on Telluria, and carries substantial costs in time and treasure. The Judge should adjudicate the effect using the rules for ritual magic found in *ACKS* (p. 117), treating divine disruption of an arcane barrier as a 7th level divine ritual.

Dungeon Construction

The foundations of Dwimmermount were laid at the very beginning of the history of men on Telluria, and the excavation of the last of the dungeon's 13 levels was completed by the Thulian Empire 500 years ago. The Dungeon Construction Chronology table shows when and why each level was built, and lists some surviving features that might reveal its original purpose to players.

Construction Materials

Much of Dwimmermount is constructed from natural material that will be familiar to any adventurer – limestone, sandstone, bronze, brass, iron, and oak. However, many more unusual materials also appear within its halls, particularly in the levels dating back to the Great Ancients and Eld. These materials are described below.

Adamant: A dull, silvery-grey metal combining the strength and toughness of steel with the hard-

ness of diamond, adamant is strangely easy to work into superb armor and weapons. The metal is found only in the deepest mineral veins of the Four Worlds. As a result of its rarity, adamant is usually alloyed with other metals, adamantine steel (98% iron, 1.5% carbon, 0.5% adamant) being most common. In its pure form, it is occasionally used in the machinery of Dwimmermount. If available adamant can be used as a special component by spellcasters creating magic armor and weapons.

Alchemist's Resin: When first congealed, alchemist's resin is a milky white fluid, but it can be dyed to any desired tint and molded to any desired shape. Depending on the drying agent used, alchemist's resin can harden into a strong and rigid material or an elastic and flexible one. In either formulation it is corrosion-resistant and durable. The Great Ancients used alchemist's resin extensively for armor, containers, fixtures, furnishings, glassware, machinery, pipes, and utensils. The secret of creating alchemist's resin was lost in the Third Era.

Areonite: This lustrous red ore, sometimes called red brass, is native to Areon. Easy to cast and work, very strong, and highly resistant to corrosion, areonite is ideal for use in machinery, pipes, and statuary. The Eld also used it frequently in doors, jewelry, ornamentation, and statuary and, when infused with azoth, in arcane weaponry. It largely fell out of use when the Eld Empire collapsed and supplies became scarce. If available, areonite can be used as a special component by spellcasters creating magic armor and weapons, and as a precious material in any item.

Azoth: This silvery-black metal is a liquid in all but the coldest temperatures. There, paradoxically, it becomes the gas known as ether (or quintessence), which suffuses the empty space between the worlds. Azoth cannot be worked like other metals; instead

DUNGEON CONSTRUCTION CHRONOLOGY

DOINGEON CONSTRUCTION CHRONOLOGY				
Order	Level	Era	Purpose	Suggestive Features
1	The City of the Ancients (9)	1st	Create citadel of Law	Azoth-infused Dome, Terrim Compound (Area 6)
2	The Deep Hollows (7)	1st	Mine azoth and other materials	Crystal Cave, Stairs Down (Rooms 25 & 35b)
3	The Manufactory (6B)	1st	Create barrier, develop technology	Great Machine (Rooms 13d & 40)
4	The Prison (8)	2nd	Prosecute and rehabilitate criminals	Chamber of Truth, Pillars of Law (Rooms 18 & 29)
5	The Hall of Greater Secrets (5)	2nd	Metaphysical research	Hieroglyphics Room, Library (Rooms 19 & 48)
6	The Hall of Lesser Secrets (4)	2nd	Physical and biological research	Clone Chamber, Alteration Chamber (Rooms 61 & 62)
7	The Reservoir (3B)	2nd	Store remaining azoth reserves	Distillation Room (Room 35)
8	The Path of Mavors (1)	2nd	Elevator access to surface	Entrance Chamber, Elevator (Rooms 1 & 56)
9	The Divinitarium (0)	2nd	Launch Servitors into space	Speaker to the Heavens, Hangar (Rooms 17 & 19)
10	The Laboratory (2A)	3rd	Breed monsters	Pool of Life, Essence Machines (Rooms 50 & 51)
11	The House of Portals (3A)	3rd	Colonize Four Worlds	Portal to Areon (Rooms 8)
12	The Reliquary (2B)	4th	Show reverence for the Gods	Pillars of the World, Temple of Law (Rooms 12 & 51)
13	The Ossuaries (6A)	4th	Honor and utilize dead Thulians	Enchantry (Rooms 18b)

MATERIALS

Material	Era	Appearance	Closest Real-World Analog	Value
Adamant	1-5	Dull, silvery grey	Ferrium C69 steel	1,000 gp per lb.
Alchemist's resin	1-3	Resinous, milky white	Polyvinyl chloride	50 gp per lb.
Areonite	2-4	Splendant, reddish copper	Gunmetal	10 gp per lb.
Azoth	1-5	Splendant, silvery black	Mercury	1,600 gp per lb.
Hepatizon	1-5	Splendant, purplish black	Shakudo	10 gp per lb.
Kythirean ebony	2-5	Fibrous, black	Ebony	100 gp per lb.
Moonsilver	2-5	Splendant, silvery white	Palladium	500 gp per lb.
Nephelite	1-2	Pearly, white, black, or grey	Silicon carbide	1 gp per lb.
Orichalcum	1-3	Splendant, golden bronze	Beryllium bronze	500 gp per lb.
Starmetal	1-2, 4	Splendant, silvery grey	Meteorite iron	100 gp per lb.
Thulian concrete	4-5	Dull, brownish grey	Roman concrete	1 gp per 1,000 lbs.
Vitreum	1-3	Vitreous, transparent	Polycarbonate laminated glass	10 gp per lb.

it is used as a tempering agent for other materials, including, it is said, man himself. See *Appendix F*, *Azoth* (p. 393), for details on this most precious of substances.

Hepatizon: A bronze alloy, forged from copper, tin, and silver, hepatizon patinates to a dark purplish-black. It is used throughout Dwimmermount in jewelry, ornamentation, and statuary. The method of making it has been lost since the Fifth Era. If available, hepatizon can be used as a precious material by spellcasters creating magic items.

Kythirean Ebony: This hard, black wood has a fine grain and can be polished to a glass-like smoothness. It grows only on Kythirea, but it is valued on all of the Four Worlds for its strength and suppleness: nearly as strong as oak, it is only half the weight, with the flexibility of yew. It has become very rare since communication with Kythirea ended with the fall of the Thulian Empire. If available, Kythirean ebony can be used as a special component by spellcasters creating magic weapons and shields of wood, and as a precious material in any magic item.

Moonsilver: A very soft, silvery-white metal, moonsilver is used primarily in the crafting of jewelry, such as rings and amulets. Alchemists and enchanters traditionally employ it when creating magical protection devices. As its name suggests, moonsilver is found only on the Moon, making it very rare on Tellluria today. If available, it can be used as a special component by spellcasters creating magical amulets, brooches, rings, and scarabs with protection effects, and as a precious material in any magic item.

Nephelite: A white, black, or grey material with a pearly luster resembling porcelain, nephelite was used by the Great Ancients for doors, furnishings, pipes and walls. Nephelite is half the weight of steel, and three times harder, though extremely rigid and brittle. Nephelite has been impossible to create since the Second Era. It cannot be re-worked using pres-

ent technology and is thus not very valuable except as a collectible.

Orichalcum: Resembling golden bronze, orichalcum is as strong and hard as steel, though more difficult to work. Orichalcum conducts and stores magical energy better than any other substance, and is both corrosion-resistant and non-magnetic, making it ideal for use in arcane devices. The Ancients supposedly powered their wondrous machines with energized orichalcum. Orichalcum was still being forged as late as the Fifth Era. If available, orichalcum can be used as a special component by spellcasters creating charged or permanent items with arcane spell effects, or as a precious material in any magic item.

Starmetal: Starmetal is a very hard iron alloy occasionally found inside meteorites that fall to earth. It is powerfully aligned with Law and useful in the crafting of weapons against Chaos. Because of its astral origin and Lawful alignment, starmetal was occasionally used for religious iconography, jewelry, and ornamentation by the Great Ancients and Thulians. If available, starmetal can be used as a special component by spellcasters in creating Lawful-aligned magic weapons.

Thulian Concrete: This strong and stable building material was extensively used by the Thulians in their buildings and roads. True Thulian concrete was mortared with volcanic dust found only on the island of Thule, and has not been made since the fall of the Empire. It is superior to anything the City-States build with.

Vitreum: This strong, lightweight, and shatter-resistant substance was extensively used by the Great Ancients in buildings, doors, and windows. Vitreum is naturally transparent and sparkling, like lead crystal, but can be tinted and frosted as desired. The secret of creating vitreum was lost in the Third Era. It cannot be re-worked using present technology and is thus not very valuable except as a collectible.

CHARACTERISTIC CONSTRUCTION

Era	Builder	Building Material	Architecture	Ornamentation	Lights
1st	Ancients	Nephelite or vitreum	Domed swoops	Liquid crystals, vitreum screens	Vitreum radiance
2nd	Servitors	Nephelite or vitreum	Crystal spires	Psychic images, memory pedestals	Vitreum radiance
3rd	Eld	Conjured stone or iron	Archways and daises	Arcane runes, abstract art, fountains	Glow globes
4th	Thulians	Thulian concrete	Columns and vaulted ceilings	Carved blocks, mosaics, reliefs, statues	Glow globes
5th	Termaxians	Plaster and stone	Pipes and sprayers	Brazen heads, frescoes, strange flora	Arcane light
6th	Dwarves	Brick and wood	Stanchions and supports	Scaffolding, refurbished materials	Lanterns

Construction Methods

All spaces within the dungeon are either natural limestone caverns, or hewn out of the stone of the mountain. Hewn construction dating to the First to Third Eras is flawlessly smooth and mathematically perfect, as if the stone simply dematerialized to create space of the desired dimensions. Excavation of the Fourth Era is less precise, and in places downright crude, with rough surfaces riddled with minuscule ledges where fungus grows and fissures where vermin, bats, and subterranean snakes live.

Sometimes, the original excavated spaces were later sub-divided into smaller areas by interior walls. During the First and Second Era, these walls were of nephelite or vitreum, while during the Third Era they were conjured *walls of stone* or *iron* stabilized with *permanency*. In the Fourth Era, interior walls were cast from Thulian concrete, while in the Fifth and Sixth Eras they were constructed from plaster, stone, brick, and wood. In any case, the corridors of Dwimmermount are usually 10 feet wide, with ceilings 15 feet tall at their highest. Rooms and chambers have ceilings that vary between 15 and 20 feet tall, except where noted.

Over the centuries, Dwimmermount's various denizens have decorated and furnished its halls and chambers in various ways, such as carvings, mosaics, statues, and fountains. The Characteristic Construction table allows the Judge to provide details based on his decision about when areas were last modified by the dungeon's denizens.

Cataclysms

Over the course of several thousand years, Dwimmermount has suffered four great cataclysms. Each of these cataclysms has irreparably damaged its structure and fixtures. Some of the damage was due to fighting, but the greatest harm from these cataclysms has come from the deactivation of the Perimeter barrier. Dwimmermount's internal structure was designed to leverage the Perimeter barrier for internal support, and if the barrier is turned off, the dungeon's walls and ceilings begins to crack and crumble from the strain. Dwimmermount has suffered the most harm during those cataclysms when the Perimeter was deactivated for long periods of time.

The first cataclysm was triggered by the war

between the Great Ancients and the Eld. Much of the devastation to Dwimmermount was deliberately inflicted, as the Ancients destroyed precious machinery and devices rather than allow them to fall into the hands of the Eld.

The second cataclysm occurred when the Thulian barbarians captured Dwimmermount from the Eld. The divine magic of the Gods of the Great Church (the Servitors) deactivated the Perimeter barrier, and the rebels attacked through The Path of Mavors (Level 1) and the tunnels of The Deep Hollows (Level 7). After weeks of battling from level to level they seized the Great Machine (Room 40) on The Manufactory (Level 6B) and re-activated the Perimeter. However, astral incursions through The House of Portals (Level 3A) and The Divinitarium (Level 0) continued for many years as the Eld took advantage of secret portals which were set to open during conjunctions. Of these, only the Alchemist's Door was not purged because its terminus was firmly within Thulian control. The effects of this Fourth Era cataclysm are visible in the predominantly Thulian architecture in areas where heavy fighting destroyed the construction of past ages (notably Level 1 and parts of 2A, 3A, 4, and 5).

The third cataclysm came when the temples of Typhon and Tyche rose up against Termaxian rule at the start of the Sixth Era. Their commanders expected another bloody incursion through The Path of Mavors, but what happened instead was the sealing of the Perimeter and all its entrances. A grim and generally doomed struggle ensued among the men and monsters trapped inside Dwimmermount. Although an uneasy coalition between dwarves and vampires eventually established order and unsealed the Perimeter to admit more custodians, the effects of this cataclysm are visible in the ruined, looted, and bone-strewn condition of most levels.

The fourth cataclysm is taking place now, at the start of the Seventh Era. With the Perimeter barrier entirely deactivated, intruders are able to pass unhindered through all entrances and also create their own through tunneling. The effects of this cataclysm can be seen in the fissures and cracks found in many rooms, which have allowed the spread of monsters from within and without the dungeon, as well as in the passages which collapsed when no longer supported by the arcane walls.

Doors

As with the architecture and building materials, the doors of Dwimmermount vary greatly depending when they were built, ranging from ordinary wooden portals of recent construction to strange, dilating circles of gleaming metal and glass created by the Great Ancients. The upper levels of the dungeon tend to have ordinary doors, while extant doors from earlier eras are found throughout the dungeon's lower levels. These include:

Areonite Doors: Areonite doors were crafted by the Eld during the Third Era. These are swinging single- or double-leaf doors of areonite (red brass), generally 8 feet tall, 4 or 8 feet wide, and 2 inches thick, opened with pull rings or magic. The Eld being prone to baroque design, areonite doors are often extensively ornamented with arcane runes and adorned with hepatizon or Kythirean ebony fittings.

Blast Doors: These doors are sliding single- or double-leaf doors made of composite layers of nephelite and alchemist's resin. Blast doors are generally 8 feet tall, 4 or 8 feet wide, and 4 inches thick. Dating to the First and Second Era, blast doors were designed to be opened magically or technologically, with mechanical handles built in for emergency access.

Dilating Doors: These remnants of the 1st and 2nd eras dilate like an iris when opening and clos-

ing. A dilating door's round doorframe, 8 feet in diameter, is typically areonite, hepatizon, or orichalcum, while the door itself is adamantine steel or tinted vitreum. Like blast doors, dilating doors were designed to be opened by magical or technologically, with a mechanical crank as back-up.

Hatches: These swinging single-leaf adamantine steel doors date to the First through Third Eras. Hatches are generally 6-8 feet tall, 3-4 feet wide, and 2-4 inches think. Hatches are opened mechanically with handles and latches.

Ordinary Doors: Many ordinary doors were installed during the 4th, 5th and 6th era. These swinging, single-leaf doors are generally made of sturdy oak reinforced with iron, 8 feet tall, 4 feet wide, and 1-2 inches thick, and are opened with pull rings or latches. Some ordinary doors dating from the 3rd era are of oak reinforced with areonite.

Vitreum Doors: Vitreum doors, from the First and Second Eras, are swinging single-leaf doors made of transparent or frosted vitreum, with frames, handles and fittings of alchemist's resin, hepatizon, orichalcum, or adamantine steel. They are typically 8 feet tall, 4 feet wide, and ½ inch thick.

The direction in which each door opens is shown on the map of each level, from which the side on which they are hinged may be deduced. (For sliding doors, the direction the door opens shows which side the door's mechanical handles are on). Locked, stuck, and magically held doors are indicated on the map and in the text. Locks are generally found on the side of the door opposite its hinges. Areonite and ordinary doors will have ordinary (pin tumbler or ward) locks. The other types (blast doors, dilating doors, hatches, and vitreum doors) will be locked with lodestone locks that use strange energies to seal the latch. Due to the advanced construction of lodestone locks, the target value for the proficiency throw is increased by 4. This penalty expires once a thief gains familiarity with a lodestone lock by successfully picking one. Other types of security systems within Dwimmermount are discussed below (p. 83).

Stuck doors must be forced open by adventurers. Doing so requires a proficiency throw of 18+, modified by strength as per *ACKS*, p.93. There is a -8 penalty to force open a stuck blast door and a -4 penalty to force open a stuck areonite door or hatch. Dilating doors may not be forced. Opening a stuck door normally creates enough noise to incur an encounter throw (see below).

Environment

Dwimmermount was built with a sophisticated air circulation system intended to keep the interior atmosphere pleasant, temperate, and fresh. Centuries of abuse, neglect, and "repair" by custodians who no longer completely understand the system have left it only partially functional. The air has a "stale" quality to it—breathable, but not pleasant and on many levels mixed with the odors of offal and decay.

The dwarven custodians do their best to keep Dwimmermount tidy, but areas not routinely visited by the dwarves are choked with dust and subject to mildew if near sources of water.

Lighting

For most of its history, Dwimmermount has been well-lit. Levels built by the Great Ancients (such as The Divinitarium and The Manufactory) were originally illuminated by radiance emitted from panels of vitreum mounted in the ceiling. The Eldritch levels (e.g. The Laboratory and The Hall of Portals) used azoth-based glow bulbs, which the Thulians continued to use. As supplies diminished, their successors, the Termaxians, relied on magical light and faerie fire. The light sources designed to be used in an area are shown on the Characteristic Construction by Era table (above), but except where noted in the room descriptions, the original lighting systems are not functional: Most areas of Dwimmermount are dark. Inhabitants who need light must use whatever comes to hand, ranging from lanterns to torches made from rags and scraps of furniture. Intelligent occupants without infravision will certainly light their areas, while those with infravision do so only 25% of the time.

Machinery

Scattered throughout Dwimmermount are many arcane devices and mysterious apparatuses, products of the strange science of the Great Ancients and the Eld. The purposes and workings of these machines cannot be easily understood by lesser minds.

When first encountering a new machine, an adventurer must spend a full turn (10 minutes) examining it and then make a successful magic research throw in order to understand its purpose and the basic workings of its controls. Some complex machines may also require proficiency throws to use them correctly after they have been identified; if so, this will also be noted in the room text. Characters who deduce the purpose of machines through in play investigation and trial-and-error activity can avoid these throws entirely, at the Judge's discretion.

For purposes of identifying and using machinery only, non-spellcasters may make magic research throws at ½ their class level. When making a magic research throw to identify or use a machine, the character may add his Intelligence bonus and ranks in Magical Engineering proficiency (as per *ACKS* p. 117). If the machine is alchemical (such as the Azoth Emitter on Level 2A or Alchemical Distillery on Level 5), the character may add his ranks in

Alchemy to the throw to identify or use the machine. If the character has a Knowledge proficiency related to the culture which built the machine (Ancient, Eld, Thulian, or Termaxian), he gains a +3 bonus to magic research rolls to identify the machine, but not to use it.

The Machines by Location table, on page 81, lists the major machines found in Dwimmermount and summarizes the rules regarding their use.

Noise

Outside of the inhabited areas, Dwimmermount is typically quiet, but not silent. Pipes travel behind and through the walls and floors of the dungeon and sometimes rattle as water or other liquids flows through. Where there are spigots, drips echo through the corridors. Hums and thrums of machinery are common, especially on The Ossuaries (Level 6A), The Manufactory (Level 6B), and The Prison (Level 8).

Portals

Dwimmermount contains a number of portals designed to allow instantaneous transport between distant locations. Each portal is "attuned" to another portal. When a portal is activated, it allows travel to and from the portal with which it is attuned. Some portals are continuously activated, while others are temporarily activated for only a limited time when particular conditions are met. Travelers using temporary portals must be careful to return to their point of origin before the portal deactivates. Otherwise they risk being trapped at their destination, as the portal they arrived at might not be attuned to the portal they departed from, or might not be activated in the same way.

Portals vary in appearance. Some resemble doorways set into walls, like the Alchemist's Door on the stairs leading to the mountain's peak, while others are free-standing and seemingly empty archways, like the Portals to the Four Worlds in The House of Portals (Rooms 8, 34, 43, and 61 of Level 3A). Others appear as silvery-black pads of metal on the dungeon floor, like the Teleportation Pads (Rooms 31b-d) on The Divinitarium (Level 0). The most subtle are buried just within the walls, ceilings, or floors of rooms or corridors, where they can only be seen using a detect magic spell or by the wearer of a helm of astral movement (see Appendix A, New Magic Items, p. 328). For example, those stepping through the visible opening of Portal Room (Room 15) of The Reservoir (Level 3B) are transported to the bottom of the Staircase (Room 1) on The Ossuaries (Level 6A), where the entrance to the portal is concealed.

The destination portal with which a given portal connects can be re-tuned by those who understand their workings. The Teleportation Device

MACHINES BY LOCATION

Machine	Relevant Proficiency	Location	Special Rules
Training Apparatus	Knowledge (Thulian lore)	Level 1, Room 17	Result of use is based on 1d10 roll
Pump	Knowledge (Ancient lore)	Level 1, Room 58	None
Laboratory Controls	Knowledge (Eld lore)	Level 2A, Room 14	Using triggers encounter throw
Orrery	Knowledge (Thulian lore)	Level 2A, Room 19	Open locks throw to open hatch; must install Thulian fuel cylinder
Azoth Emitter	Knowledge (Termaxian lore) Alchemy	Level 2A, Room 45	Character has 1 in 6 chance per round to shut down
Pump	Knowledge (Termaxian lore)	Level 2A, Room 48	None
Stasis Tubes	Knowledge (Eld lore)	Level 2A Room 49	Tubes cannot be operated until activated by Great Machine
Pool of Life	Knowledge (Eld lore) Alchemy	Level 2A, Room 50	Requires 3 magic research throws to master controls; each throw takes 1 hour $$
Essence Machines	Knowledge (Eld lore)	Level 2A, Room 51	Must install Thulian fuel cylinder and connect tank of liquid matrix to use
Image Projector	Knowledge (Eld lore)	Level 3A, Room 17	Result of use is based on 1d6 roll
Power Generator	Knowledge (Ancient lore)	Level 3B, Room 10	Requires magic research throw to use; failure causes shock or damage
Power Regulator	Knowledge (Ancient lore)	Level 3B, Room 29	Requires magic research throw to use; failure causes shock damage
View Screens	Knowledge (Ancient lore)	Level 3B, Room 29	Requires engineer's control rod
Arcane Library	Knowledge (Ancient lore)	Level 3B Room 37	Requires knowledge record and engineer's control rod to use
Reservoir Control	Knowledge (Ancient lore)	Level 3B, Room 44	Requires engineer's control rod
Elevator Controls	Knowledge (Ancient lore)	Level 4, Room 14	Requires magic research throw at -4 or read languages to use
Clone Chamber	Knowledge (Ancient lore)	Level 4, Room 61	Requires 3 magic research throws to produce a clone without error
Alchemical Distillery	Knowledge (Termaxian lore) Alchemy	Level 5, Room 34	Requires magic research throw, reagents, and 10hp of blood to use
Enchantry	Knowledge (Thulian lore)	Level 6A, Room 18b, 42a, 60, and 63	Result based on number of knobs turned
Metal Machine	Knowledge (Ancient lore)	Level 6B, Room 6a	Requires power cell to use
Analytical Engine	Knowledge (Ancient lore)	Level 6B, Room 13d	Requires engineer's control rod and ability to speak Ancient to use
Viewing Stations	Knowledge (Ancient lore)	Level 6B, Room 15a	Requires engineer's control rod to use
Gas Pump	Knowledge (Ancient lore)	Level 6B, Room 20	Requires remove traps throw to shut down
Azoth Pool	Knowledge (Ancient lore) Alchemy	Level 6B, Room 31	None
Backup Power Plant	Knowledge (Ancient lore)	Level 6B, Room 34	Destroyed by dealing 50 points of damage
Great Machine	Knowledge (Ancient lore)	Level 6B, Room 40	Requires engineer's control rod magic research throw at -13 per effect; each effect takes 1 or more turns to learn
Crystal Attunement	Knowledge (Ancient lore)	Level 6B, Room 47	Requires engineer's control rod to use
Prison Controls	Knowledge (Termaxian lore)	Level 8, Room 27	Requires Termaxian passkey, engineer's control rod, and magic research at $-4\ \mathrm{to}$ use
Sleeping God's Canister	Knowledge (Ancient lore)	Level 9, Area 3	Must route power from Terrim Compound
Speaker to the Heavens	Knowledge (Ancient lore)	Level 0, Room 17	Requires magic research throw at -2 to use; failure causes divine retribution
Teleportation Device	Knowledge (Ancient lore)	Level 0, Room 34	Requires engineer's control rod and magic research throw to use; failure causes imperfect attunement

(Room 34) on The Divinitarium is designed to do this for the Teleportation Pads on the Divinitarium. Other portals within Dwimmermount could be re-tuned using the Great Machine (Room 40) on The Manufactory (Level 6B). Doing so would require a result of "12" on the Effects of the Great Machine table (p. 250).

Stasis Tubes

A stasis tube appears as a vitreum cylinder, slightly taller than a human being, with a set of dials and switches located on a copper plate at its base, as well as a hinged door with a copper handle at its mid-point. Some stasis tubes will visibly contain a creature in suspended animation within, while

others will appear empty.

Both appearances are misleading. In fact, a stasis tube is a specialized type of portal. Each tube connects to a unique series of twelve extradimensional spaces. These are similar to the extradimensional spaces contained within a *bag of holding* or *portable hole*, except that time stands still within them. Each space is large enough to contain one man-sized creature. Each tube can therefore keep up to a dozen creatures in suspended animation simultaneously, although only one extradimensional space per tube can be present in this plane of existence at any given time.

Normally, the dial on the copper plate at its base can be used to rotate a stasis tube's connection to

each of its twelve extradimensional spaces, one at a time. Then when the dial has attuned the tube to the desired extradimensional space, the switches on the copper plate can be used to open the cylinder, allowing a creature to enter or exit that extradimensional space. At present, however, the control panels on all the tubes are disabled. During the fall of Dwimmermount, Sarana used the Great Machine (Room 40) on The Manufactory (Level 6B) to shut off the controls. This was done to protect the existing occupants, as well as to prevent the hated Termaxians from escaping into stasis and causing problems later in time.

With a roll of "12" on the Effects of the Great Machine table (p. 250), the Great Machine could be used to re-activate the control panels. Alternatively, it could also be used to scan through the extradimensional spaces and release a specified occupant or category of occupants from one or more stasis tubes. When Dwimmermount was invaded by Termaxian cultists, the dwarves did just that, instructing the Great Machine to release all beastmen held in stasis to help defend Dwimmermount. Although the Great Machine is no longer in their hands, this instruction is still active and from time to time will cause a few new hobgoblins or minotaurs to emerge from stasis tubes throughout Dwimmermount—as reflected by wandering monster tables for The Reliquary, The Reservoir, The Halls of Lesser Secrets, and The Halls of Greater Secrets (Levels 2B, 3B, 4, and 5, respectively).

Unless the Great Machine has re-activated the control panels on the stasis tubes, the tubes' doors are sealed and cannot be opened except with magic. The vitreum from which the tubes are made can be shattered, but being quite sturdy can withstand 100 points of damage before shattering. Shattering a tube aligned to an unoccupied space has no visible effect. Shattered a tube aligned to an occupied space has two effects. First, anyone within 10 feet of the shattered tube will receive an electric shock dealing 3d6 damage (a successful saving throwing versus Blast reduces damage by half). Second, the human inside the tube's space will be released. He or she will awaken in 1d6 rounds, perplexed by the situation, but otherwise in good health. In either case, creatures occupying the other spaces in the series to which the shattered tube was linked become trapped until the tube is repaired or rebuilt.

Security Systems

Over the eras, multiple systems for controlling who can access various parts of Dwimmermount have been developed by its defenders. This section will discuss those which span multiple dungeon levels.

The oldest type of security system dates to the First Era of Dwimmermount, when the Great Ancients began to explore the world of Telluria. Their

expeditionaries were given *brooches* with which they could signal their right to enter and leave The City of the Ancients (Level 9) and Deep Hollows (Level 7). Within the City, an even more exclusive level of access was conferred by possession of a *greater brooch*. These are known as the *brooch of the Terrim* (see Appendix A New Magic Items, p. 325 and 327), although the items themselves are older than the current occupants for which they are now named.

As the dungeon grew in the Second Era, access to its systems was increasingly automated, with various keys, rods, and cards required when accessing certain areas or operating secure machinery. Examples include the Elevator, the Teleportation Device (Room 34) on The Divinitarium (Level 0), the Control Room (Room 3) on The Reservoir (Level 3B), and the Great Machine (Room 40) on The Manufactory (Level 6B). The most common security system from the Second Era is the *engineer's control rod* (see *Appendix A, New Magic Items*, p. 83).

The final security system, the Termaxian passkey (see Appendix A, New Magic Items, p. 333), was instituted during the Fifth Era. Like the brooch of the Terrim, these passkeys are marks of status and favor which, if shown to Termaxian servants and allies, will often avert attack. In some cases arcane devices of Termaxian origin were constructed to require the possession of a passkey, much like engineer's control rods. Other, pre-existing, machines were modified to require passkeys as the Termaxian mages sought to restrict them to their own kind.

Sacred Objects

Dwimmermount contains a large number of statues, shrines, altars, and other sacred objects associated with the various divine powers of Telluria. Characters who interact with these sacred objects can receive **boons** from the god or gods associated with the site. A particular boon might improve an ability score, modify a die roll, grant a power, or offer a material reward; the exact effect is usually related to the nature of the god or power granting the boon. Boons can be either permanent or temporary, but in either case, a given character can only benefit from each boon once.

The most numerous sacred objects in Dwimmermount are the statues of the Thulian Great Church's gods, erected during the Fourth Era of Dwimmermount. During the period of Termaxian rule, most of these statues had their heads removed and replaced with a new head bearing the image of Turms Termax. The cult of Turms Termax was predicated, at least in part, on the notion that the ascended mortal Turms was the greatest of all the gods. Indeed, all the other gods were little more than feeble prefigurations of his perfect plenitude – "past echoes" of his might. Consequently, once

the cult seized full control of the Thulian Empire, it began to systematically co-opt all the sects of the Great Church, teaching that each of the gods they served was an aspect of Turms, whose full majesty could only be appreciated by a select few, namely the hierophants of his cult. Lesser men cannot grasp Turms in his fullness and thus must content themselves with understanding only a part of him, as mediated through one of the sects dedicated to a god-aspect. It was to emphasize this point that many representations of the gods had their heads replaced with that of Turms Termax

This doctrine caused the Thulian gods to order their clerics to rebel against Termaxian rule, and the gods continue to oppose the works of Turms Termax even now. Characters who show their support for the gods of the Great Church by removing the head of Turms Termax from a sacred statue and replacing it with the head of the appropriate deity will receive a boon from that deity. Removing the head of a statue requires a successful force doors roll. Placing a new head on the statue does not require a roll, but does require a head be found somewhere in the dungeon. The default boon gained from replacing the head of Turms Termax with a statue's original head is shown below. Specific sacred objects found within Dwimmermount may specify other boons, some much more powerful than those listed below.

While there is no explicit penalty for characters that deface or destroy sacred objects within Dwimmermount, doing so certainly risks offending the divine power associated with the object. The Judge may, at his discretion, refuse to grant the characters any boons from the offended gods thereafter, and/or remove any boons previously earned.

Traffic Between Levels

Pages 84-86 show how the various levels of Dwimmermount relate to one another vertically. Each level is connected to the levels or sub-levels above and below by at least one staircase, the exceptions being The Divinitarium (Level 0) which is accessible only by elevator, and The House of

Portals (Level 3A) which has no stairs to The Halls of Lesser Secrets (Level 4) below.

Staircases

Staircases are usually well-worn stone and travel between 50 and 100 feet before reaching the next level. These stairs are generally narrow, requiring man-sized creatures to walk single file along their length, with the exception of the massive staircase connecting The City of the Ancients (Level 9) to The Deep Hollows (Level 7).

Elevator

An elevator connects Room 1 of The Divinitarium (Level 0), Room 56 of The Path of Mavors (Level 1), and Room 13 of The Halls of Lesser Secrets (Level 4). Keys to the elevator are found in the lair of the Spawn of Arach-Nacha (Room 41) on The Path of Mavors (Level 1) and in the lair of the Minotaur King (Room 55) on The Halls of Lesser Secrets (Level 4). When power is restored to the elevator via the machinery of the Elevator Control Room (Room 14) on Level 4 or through the operation of the Great Machine (Room 40) on The Manufactory (Level 6B), using one of these keys will summon the elevator platform to the user's level. Those who open the door when the power is off, or do so without a key, will see a 250foot vertical shaft whose walls glisten from the transit of various Kythirean slimes and are festooned with clumps of fungi and vegetation from the Green Planet. Daring parties may fly, levitate, or climb up and down this shaft.

Water Pipes

The water pipes running through Dwimmer-mount form a vast web that passes above and below virtually every square foot of the dungeon. While the pipes are barely big enough for an ordinary rat to squeeze through, characters equipped with *potions of diminution* (or similar magic) might end up using the water or azoth pipes to travel between different rooms and levels.

Except where noted below, the water pipes are

BLESSINGS OF THE GODS

God	Boon			
Anesidora	The Blessing of Anesidora: +1 bonus to WIS for 24 hours.			
Asana	The Blessing of Asana: +1 bonus to initiative rolls and armor class for 24 hours			
Caint	The Blessing of Caint: One-time ability to cast cure serious wounds as per the cleric spell.			
Donn	The Blessing of Donn: One-time ability to cast protection from evil 10' radius as per the cleric spell.			
Mavors	The Blessing of Mavors: +1 bonus to hit and damage rolls for 24 hours			
Tenen	The Blessing of Tenen: One-time ability to cast dimension door as per the magic-user spell.			
Tyche	The Blessing of Tyche: +2 bonus to all saving throws for 24 hours.			
Typhon	The Blessing of Typhon: +1 bonus to CHA for 24 hours.			

WATER PIPE TRAVEL

	V. C.
Roll	Event
1	Juncture: The pipes here split off in many directions, none of them the direction the character wishes to travel. A traveller must make an ability check versus INT or lose 1d6 turns traveling the wrong way.
2	Drain: A strong current carries water downward through a drain here. Characters must make an ability check versus STR or be flung into the drain, taking 1d6 points of damage.
3	Valve: The pipes ahead are blocked by a valve. Characters may force their way through (as if opening a stuck door), knock the valve open, or retrace their steps and try another route. If the valve is opened, roll again on this table to determine what's on the other side.
4	Overflow: The pipes here are entirely filled with water. Characters able to breathe water may proceed, but others must retrace their steps and try another route.
5	Sewage: The pipes here are filled with waste and excrement. Any characters who proceed must save versus Poison or become infected with a disease as if bitten by a rat (see LL , p. 92)
6	Fast Current: Water flows hard and fast through this segment of the pipes. Depending on the direction of flow, characters have their swimming movement rate (1-3) halved or (4-6) doubled, and their chance of drowning is increased by one encumbrance level.
7	Rats: A pack of 2d10 ordinary rats, filthy with sewage, attacks intruders into "their" pipes.
8	Bugs, Millions of Them: The pipes here are clogged with a swarm of biting, creeping horrors, forming an insect swarm of 1d3+1 HD.
9	Dry: The pipes ahead are free of water. The characters may travel at their normal movement rate for the next turn.
10-12	No event

WATER PIPE OPENINGS

WAILER I II E OI EI III 105	
Level	Room
The Divinitarium (Level 0)	Solarium (Room 14)
The Divinitarium (Level 0)	Latrine (Room 38)

The Prison (Level 8)	Latrine (Room 22)

not entirely filled with water. However, the volume is sufficient that characters traveling within the pipes must swim. A swimming throw is required each turn (see *ACKS*, p. 113). Water pipe openings are found in the following locations listed in the table above.

Travel in the water pipes will generally be from one opening to another. If desired, the Judge can plot the characters' exact route of travel through the water pipes on the dungeon maps. Alternatively, the Judge can assume that characters must travel 240 feet horizontally to find another opening on their own level, and 60 feet vertically to reach another level. At a typical unencumbered swimming rate of 60 feet per turn, it will take 4 turns to reach another opening on the same level and 5 turns to reach an opening on an adjacent level. Each turn of travel through the water pipes, the Judge should roll 1d12 on the table below.

Note that the water pipes are lightless, and torches will of course be extinguished by the water coursing through them. Characters without infravision or magical *light* therefore move at half speed, have twice the chance of drowning, and have a -4 penalty to all attack and proficiency throws.

Azoth Pipes

Dwimmermount contains vast reservoirs of azoth, all of which connect via a system of pipes, pumps, and valves. Like the water pipes, the azoth pipes are too narrow for anything larger than a rat, so only characters with *potions of diminution*, *polymorph*, or similar magic can traverse them.

Characters traveling within the pipes must swim or wade through the azoth, doing so at half their normal movement rate. Unlike water, azoth is highly toxic to living creatures, so characters traveling the azoth pipes without *environment suits* (see *Appendix A, New Magic Items*, p. 326) or similar protection will suffer terrible consequences - see *Appendix F, Azoth*, p. 86, for the effects of azoth immersion.

Assuming the characters concoct a method to enter the system and emerge unscathed, openings in the azoth pipes can be found in the following locations found in the table below.

AZOTH PIPE TRAVEL

AZU	IN PIPE IKAVEL
Roll	Event
1	Juncture: The pipes here split off in many directions, none of them the direction the character wishes to travel. A traveler must make proficiency throw of 11+ or lose 1d6 turns traveling the wrong way. Characters with Caving proficiency gain a +4 bonus to the throw.
2	Drain: A strong current carries azoth downward through a drain here. Characters must make an open doors throw (ACKS p. 93) or be flung into the drain, taking 1d6 points of damage. Characters with Dungeon Bashing proficiency gain a +4 bonus to the throw.
3	Valve: The pipes ahead are blocked by a valve. Characters may force their way through (as if opening a stuck door), knock the valve open, or retrace their steps and try another route. If the valve is opened, roll again on this table to determine what's on the other side.
4	Alkahest: A leaking azoth distillery has introduced alkahest into the pipes. The initial concentration of alkahest is very low; characters notice their armor and clothing begins to steam and sizzle. Any characters who continue ahead must make saving throws versus Death or be disintegrated by the alkahest (note that characters subject to protection from evil are immune to the effect of alkahest).
5	Bubble Burst: $1d6+1$ bubbles of gaseous azoth are suspended in the liquid ahead. Characters that advance forward must make a saving throw v. Blast; if they fail, they pop a bubble. There is a Ω in 6 chance that the explosion of one bubble will set off another one, which also has a chance to set off another, and so on, until either the chain reaction stops or all bubbles have exploded. Each bubble deals $1d6$ points of damage to any creatures in a 0 foot radius.
6	Fast Current: Azoth flows hard and fast through this segment of the pipes. Depending on the direction of flow, characters have their movement rate (1-3) halved or (4-6) doubled.
7	Mercury Ooze: Flowing through the azoth like mucus through a nasal canal is a silver-white mercury ooze.
8	Mutant Bugs: Hideously mutated silver-black beetles course through the azoth. Treat the beetles as an insect swarm of 1d3+1 HD.
9	Dry: The pipes ahead are free of azoth The characters may travel at their normal movement rate for the next turn.
10-12	No event

AZOTH PIPE OPENINGS

AZOTH FIFE OPENINGS	
Level	Room
The Path of Mavors (Level 1)	Azoth Spring (Room 37)
The Path of Mavors (Level 1)	Enclosure (Room 54)
The Laboratory (Level 2A)	Thorny Room (Room 46)
The Laboratory (Level 2A)	Rose Garden (Room 47)
The Laboratory (Level 2A)	Pump Room (Room 48)
The House of Portals (Level 3A)	Pumping Station (Room 3)
The Reservoir (Level 3B)	Dry Fountain (Room 1)
The Reservoir (Level 3B)	Pump Room (Room 7)
The Reservoir (Level 3B)	Azoth Spillage (Room 34)
The Reservoir (Level 3B)	Reservoir (Rooms 45-50)
The Halls of Lesser Secrets (Level 4)	Clone Chamber (Room 61)
The Halls of Greater Secrets (Level 5)	Azoth Leak (Room 21)
The Halls of Greater Secrets (Level 5)	Azoth Pools (Room 44)
The Manufactory (Level 6B)	Azoth Pool (Room 31)
The Manufactory (Level 6B)	Foundry (Room 62)

As with the water pipes, travel within the azoth system will generally be from one opening to another, which can be plotted on the map if desired or handled abstractly. The Judge can assume that characters must travel 480 feet horizontally to find another opening on their own level, and 60 feet vertically to reach another level. At a typical unencumbered movement rate of 60 feet per turn, it will take 8 turns to reach another opening on the same level and 10 turns to reach an opening on an adjacent level. Each turn of travel through the pipes, the Judge should roll 1d12 on the table below.

Vertical Fissures

The cataclysms of Dwimmermount's past have torn several vertical fissures through the mountain. One such fissure, as jagged as a bolt of lightning, connects the Bottomless Pit (Room 7) in The Hall of Greater Secrets (Level 5) to the Chasm (Room

5) in The Deep Hollows (Level 7). This fissure was created during the first cataclysm, during the fighting between the Great Ancients and the Eld. Eld sorcerers later enchanted the fissure with its fierce winds to prevent the Terrim from using it to penetrate into the upper levels.

A second fissure, the Crevasse (Room 26) in The Prison (Level 8) opening above the Haywire Defenders (Area 9) of The City of the Ancients (Level 9) was created two centuries ago, during the third cataclysm. Traversing this fissure is possible, but difficult, as it passes through an arcane barrier which is still active, albeit weakened by the influence of the Sleeping God. See *Chapter 18*, *The Prison* (Level 8), p. 273, for details.

Finally, the Great Fissure (Area 1) is a huge crevasse that descends several hundred feet below the City of the Ancients. The Great Fissure was torn open during the second cataclysm, when the Thulians brought down the Perimeter barrier and drove out the Eld, and it has never been explored by the cautious Terrim. Precisely where the Great Fissure leads and what dwells down there is left to the Judge to decide.

Key Rules for Judges

Monster Entries

Monster statistics are presented using a short format as follows. In cases where the monster is not described in the *ACKS* rulebook (or its description differs significantly from that in the rulebook), the room key includes the page number where the description can be found in this book. For example:

Eldritch Bones (8) [AL N, MV 90' (30'), AC 4, HD 1+1, HP 8 (×2), 7, 6, 5 (×2), 2 (×2) #AT 1, DG 1d6+1, SV F1, ML +4]

Humanoid Entries

Statistics for men and other humanoids are presented using a short format as follows. In cases where the humanoid is not described in the *ACKS* rulebook (or its description differs significantly from that in the rulebook), the room key includes the page number where the description can be found in this book. The format also includes details of the arms and armor wielded and worn by the humanoids, which can also be magical items. Separate lines are given for stronger opponents, bodyguards, leaders, and characters of different classes. If an NPC has a class, it is denoted by a alphabetic code before the character's HD value—C (Cleric), Dv (Dwarven Vault Guard), Es (Elven Spellsword), F (Fighter), M (Mage), P (Paladin), and T (Thief). For example:

Dwarves (4) [AL L, MV 60' (20'), AC 7 (plate mail & shield), HD Dv5, HP 27, 25, 23, #AT 1, DG 1d8 (swords), SV Dv5, ML +2]

Wandering Monsters

The majority of Dwimmermount's rooms are deliberately devoid of monsters for several reasons. Empty rooms allow scope for pursuit. When monsters fail morale rolls and flee into unmapped areas, or when the only escape from a dire situation leads into the unknown, players' choices would be less valid if every room were occupied. Empty rooms also provide decisions about spending time in the dungeon, whether through searching for hidden valuables or holing up to rest. Finally, empty rooms provide buffer zones between opposing factions on a level.

Wandering monsters play a vital role in each of these situations, ensuring that a mostly empty dungeon does not feel devoid of danger and excitement. Extended or noisy pursuits may trigger encounter throws, potentially turning the tide of the chase even if it is passing through an area that the party believes to be unoccupied. The frequency of encounter throws creates the time pressure that makes time management decisions meaningful. And wandering monster rolls can also make the battle lines between factions dynamic, swelling the ranks of one side or causing some monsters to appear in territory controlled by their enemies.

Normally, the Judge makes an encounter throw for wandering monsters every other turn (every 20 minutes of game time) and whenever the players force a door open or declare that their characters are taking the time to search a room. An encounter throw of 6+ on 1d6 indicates that a wandering monster is encountered, its exact nature determined by the wandering monster table for the current dungeon level. An encounter with a wandering monster does not always lead to interaction or combat. The Judge may choose to place

the monster at whatever distance from the party he wishes, in order to make sense of how the monster entered the area, to restock a faction, or to create a dynamic situation which the players may later stumble into. Even if the wandering monster appears near the range of the party's sight or hearing, the Judge is advised to make surprise and reaction rolls before proceeding. Based on the results, wandering monsters may try to remain undetected so that they can monitor the party's activities or go get help from allies.

House Rules

As a mega or campaign dungeon, Dwimmer-mount is intended to serve as a tent pole for an entire campaign. The player characters will certainly go elsewhere in the wider world outside the dungeon, but it is assumed that they will always return to Dwimmermount to continue their explorations. The dungeon will change over time in response to the activities of the characters, and should exist independent of them as well. The following house rules are provided to help the Judge make the dungeon dynamic.

Dungeon Restocking

David 'Sham' Bowman of Sham's Grog & Blog popularized the idea of random dungeon restocking, which provides a chance that that formerly cleared-out rooms might again be occupied when characters return to the dungeon after having left it to rest and re-supply. Roll on the Dungeon Restock table, below, whenever characters re-enter a room to determine if it has become home to new monsters and/or treasure while they were away from the dungeon.

DUNGEON RESTOCK TABLE

D6 Roll	Room Contents
1	Monster
2	Monster and Treasure
3-6	Empty (1 in 6 chance of concealed treasure)

If a monster is indicated, the Judge can either roll randomly on the level's wandering monster table to determine an appropriate monster or choose a monster he deems appropriate based on what creatures are nearby. If the table indicates the monster has treasure, use the monster's Treasure Type to generate it. If there is concealed treasure, use the Unprotected Treasure Table (ACKS, p. 241) to generate it.

Disturbances by Rival Parties

Once word gets out that the adventurers have done the seemingly impossible—returned from the megadungeon alive *and* with loot—it is only a matter of time before others follow in their footsteps.

Consult the Rival Adventuring Parties table

RIVAL DISTURBANCE TABLE

D% Roll	Result
01-80	No Change
81-90	Recent evidence of other adventurers (e.g. footprints in the dust, used torches, broken weapons, etc.) is found amidst the room's other contents.
91-100	One (1-3) or more (4-6) dead adventurers from a rival party is found in the room. If the room is trapped in any way, the dead adventurers' bodies provide clues as to the nature of the trap(s) therein. If not, their deaths can be attributed to the nearest monsters in other rooms/areas.
101-110	As 91-100, except that any monsters in the room have their numbers reduced by one-half.
111-120	As 81-90, except that any monsters in the room have been slain and their treasure (if any) looted.
121+	A rival adventuring party is currently in the room. If there were any monsters in the room previously, there is a 50% chance that they have been slain and their treasure looted, as in 111-120. Otherwise, the rival party is currently engaging them in combat.

every time the adventurers return to civilization carrying loot from Dwimmermount. Roll once on the table for each room of the current level that the adventurers did *not* visit, modified by +2% for each previous time they left the dungeon to return to civilization.

"Coming up with good names is a difficult thing to do well and having a collection of already-named characters is an essential part of the referee's arsenal. That's why I keep a list of names handy when I run Dwimmermount, just in case I need to quickly identify a shopkeeper or sage or other personage with whom the PCs are interacting."

James Maliszewski, **Grognardia**, July 1st, 2010

If any roll indicates the presence of a rival adventuring party, consult the Rival Parties on p. 377 to choose an appropriate set of rivals. Generally speaking, the party chosen should be roughly similar in level to the dungeon level where they appear. Once a rival adventuring party has been established as active on a particular dungeon level, the Judge should remember this so as to make the most of it. For example, that particular party might be seen in Muntburg, boast-

ing of their exploits or showing off the loot they took from their adventures. Likewise, when a wandering monster table calls for a "rival adventuring party", the Judge might wish to make that the party already encountered on a given level.

Both the Dungeon Restock and Rival Adventuring Parties Tables are house rules because, like all random tables, they should be used at the Judge's discretion. There may be times when the use of these tables is either nonsensical or tedious, and in such cases, the Judge should never feel bad about substituting his own ideas and good judgment instead.

Customizing Dwimmermount

As presented, Dwimmermount provides the Judge with a great deal of material ready-made for use at the table. However, like all published dungeons, each Judge must customize it to suit his needs. Without knowing what details will resonate

with individual groups, it is impossible for the designer to invest each room description with the kinds of depth, connections, and "verve" that will make them memorable. For example, the kobolds on The Path of Mavors (Level 1) are presented simply as the minions of the mad dwarf Guran, but are they devoted sons of their dwarven papa or do they follow him out of fear? Questioning the text adds a layer of complexity to what might otherwise be just minor monsters. Some Judges and players may not care about such questions, preferring instead simply to mow through the kobolds without any thought as to their motivations. Both approaches are equally valid, which is why this book is often agnostic on such issues.

Similarly, the Judge should feel completely free to change the monsters and treasures found in the dungeon. Most can easily be replaced without doing harm to the dungeon as a whole, especially if details are changed, but not the framework which organizes them. Most levels are fairly compartmentalized and without inter-connections so great that they defy alteration. Furthermore, as the dungeon is explored, its population will change, and inhabitants may even alter the arrangement of rooms on any given level. There is a lot of scope for the Judge to tinker and alter on a grand scale, up to adding new levels or sub-levels.

Names

Judges creating new denizens for Dwimmer-mount and its surroundings, as well as those who find it necessary to name NPCs not given names in the text, will find the naming tables starting on page 412 invaluable, as it contains lists of 20 names for Dwarves, Eld/Elves, "Common" Men, Ancient Thulians, and Volmarians. Where appropriate, the lists include male and female options, as well as surnames.

The Unexplained

In a dungeon as large and diverse as Dwimmermount, there are bound to be aspects of the dun-

geon that are never fully explained in the text. With *Dwimmermount* we made a deliberate choice to leave room for improvisation during play. Like the earliest published examples of the form, important elements remain unexplained as a springboard for the Judge's ideas and as a fertile void in the group's imagination. The Mysteries of Dwimmermount table provides some examples of the unknown.

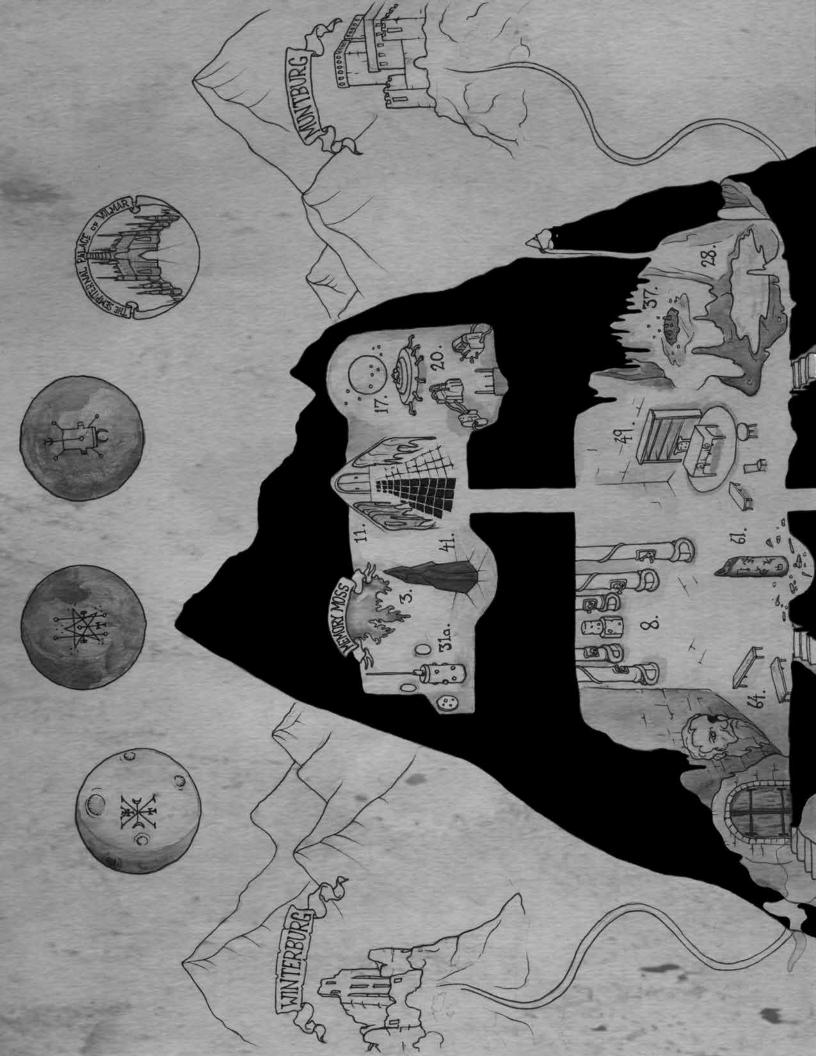

The Judge will find many, many more cases where some aspect of the dungeon is explained only lightly or not at all. These are the areas that can benefit greatly from further expansion through the Judge's creativity, often aided by other published material. The Iron God that appears in this book, for example, was an element originally adapted from Matt Finch's scenario, Tomb of the Iron God (2008). The Iron God proved to be a major focus of play and was used to propel the player characters in a number of interesting directions, both within the dungeon and outside it. Other Judges may take a liking to some other aspect of the dungeon and run with that instead. The ultimate point is that, while this book provides many details ready-made for use, those details are subject to the needs and desires of the Judge who uses them.

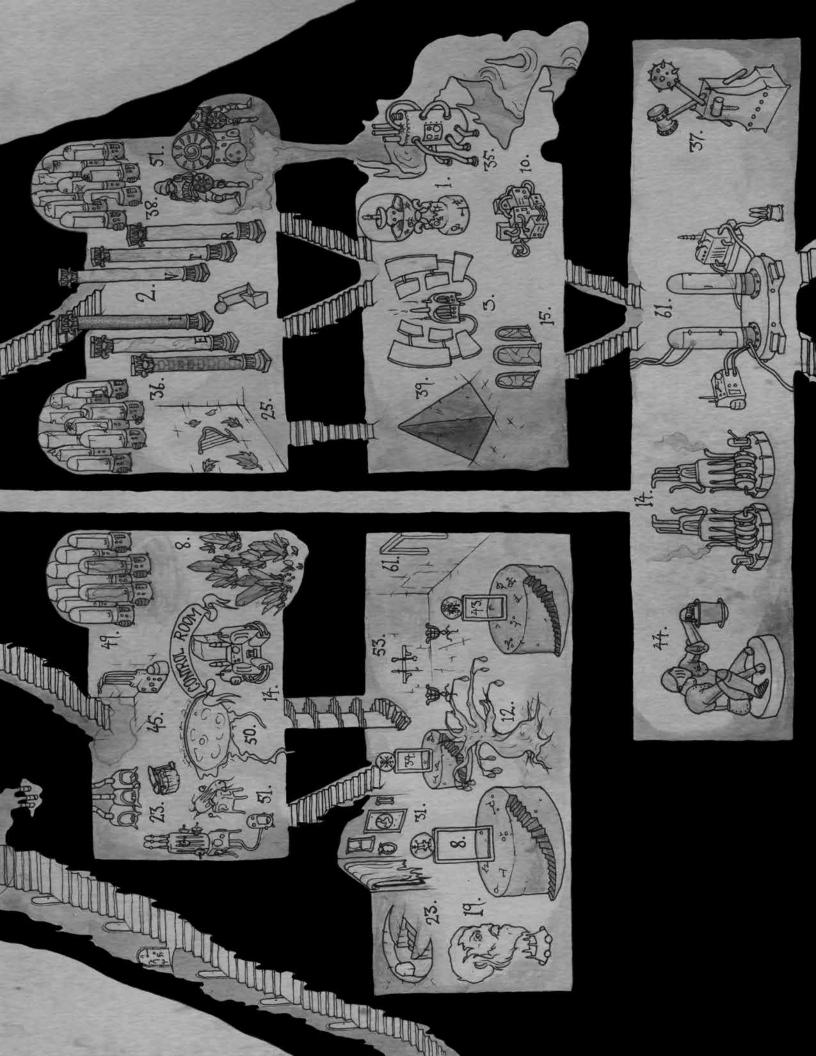

"To me the Old School Renaissance is not about playing a particular set of rules in a particular way, the dungeon crawl. It is about going back to the roots of our hobby and seeing what we could do differently. What avenues were not explored because of the commercial and personal interests of the game designers of the time."

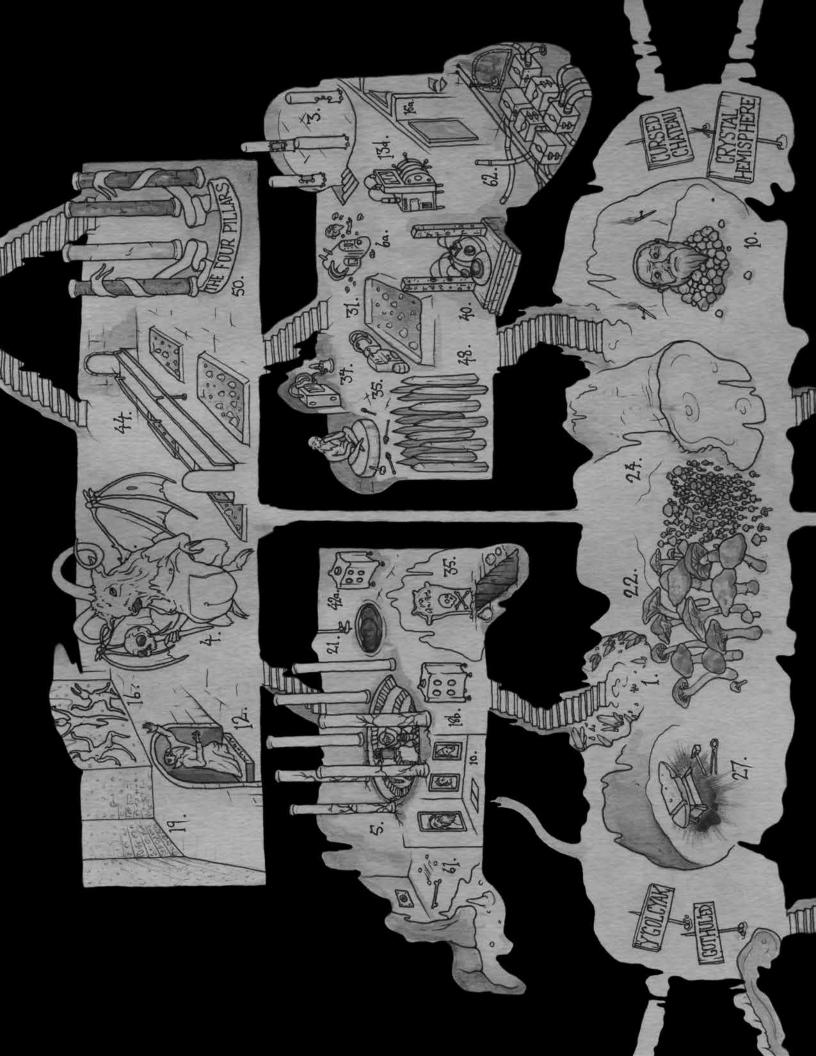

Rob Conley, **Bat in the Attic,** July 14th, 2009

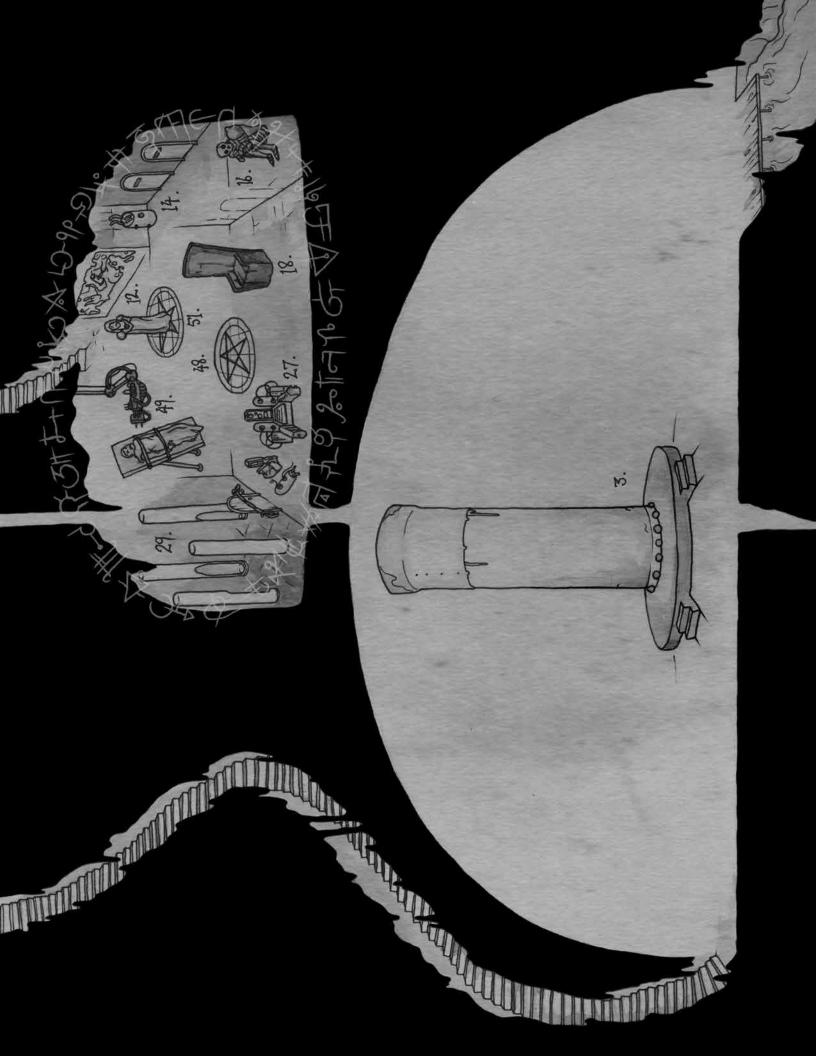

MYSTERIES OF DWIMMERMOUNT

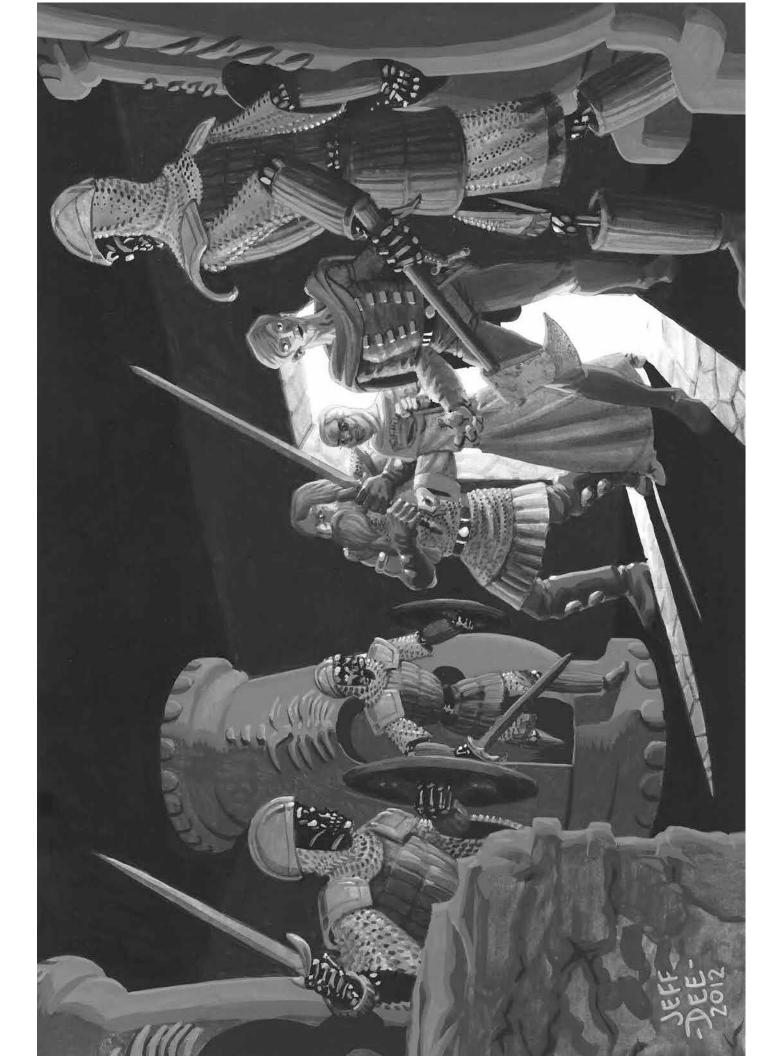

Trigger	Era	Mystery
Locked Chamber (Room 22), The Divinitarium (Level 0)	Termaxian (5)	What is the nature of the glowing green stones that have wrecked this level? Are they a natural phenomenon, an artifact, or a weapon? Are there more on Kythirea? Might they fall to Telluria as meteorites?
Gallery of Masks (Room 5), The Path of Mavors (Level 1)	City-States (6)	Who is the dead man in the Gallery of Masks (Room 5), whose remains predate any known expedition since Dwimmermount fell? How did he get into Dwimmermount? Who are his descendants?
Orrery (Room 19), The Laboratory (Level 2A)	Thulian (4)	What do the tiny representations of castles on the outside of the celestial sphere represent? Are they settlements of man on faraway star systems? Could they represent Thelidu vessels in bound for Telluria?
Zombie Lord Lair (Room 62), The Reliquary (Level 2B)	Termaxian (5)	How did the Zombie Lord come to be? Could azoth be used to create other undead of similar powers?
Portal to Volmar (Room 61), The House of Portals (Level 3A)	Rivals (7)	What is happening in the Thulian outpost of Volmar? How will its Imperial court affairs affect policy toward Dwimmermount, the City-States, and the threat posed by Turms?
Clone Chamber (Room 61), The Halls of Lesser Secrets (Level 4)	Eld (3)	Do elves reproduce through cloning technology such as this? If so, what other ancient technology might they be preserving?
Prince of the Undead, The Supreme Unknown, and The Lord of Alchemy (Rooms 4, 23, & 34), The Halls of Greater Secrets (Level 5)	Termaxian(5)	Why were shrines to demon lords created here? Might they be animated if the right head was provided? Who, if anyone, still worships these beings?
Chamber of Urns (Room 22), The Ossuaries (Level 6A)	Thulian (4)	Who were these important persons? Might their descendants or family members still be alive in stasis chambers? What happened to the urns of Majori Sklero and Carolus Branas?
The Great Machine (Room 40), The Manufactory (Level 6B)	Makers (2)	Is the Great Machine an artificial mind like Mavors or Typhon? Have users ever transferred their minds into the Machine? How could this be done?
Underground Lake (Room 26), The Deep Hollows (Level 7)	Termaxian (5)	Who is receiving the beneficiary of the ritual sacrifice of magic items? What is the source of the magic items surfaced by the cave kraken? Did Turms Termax create this effect, or merely claim an existing miracle by placing his statues here?
Chamber of Zod (Room 39), The Prison (Level 8)	Makers (2)	Who are the three black-clothed individuals depicted in the mosaics here? Could they be freed from the extra-dimensional prison? If freed, would they be superhumanly powerful compared to ordinary men?

CHAPTER

Factions in the Dungeon

N IMPORTANT ASPECT OF DWIMMERMOUNT, both as a location within the wider setting and as a location for fantasy roleplaying, is that it is not a static place. Dwimmermount grows and changes over time, both of its "own" accord and in response to the actions of those operating within its stone corridors. While the player characters and NPC adventuring parties (see *Appendix D, Rival Adventuring Parties*, p. 377) are among important examples of those operating within the dungeon, they are far from the only ones. Just as important—and more numerous by far—are various factions.

Factions come in many forms, but most are power groups, each of which has its own membership, bases of operation, and agendas. In order to use Dwimmermount to its fullest, the Judge needs to be familiar with all of its factions, both large and small, if only to get a sense of the motivations behind some of the more organized opponents within the dungeon. In addition, knowledge of the factions enables the Judge to utilize connections between the levels and ties into the history of Dwimmermount (see *Chapter 2, History of Dwimmermount*, p. 19). Factions are thus an integral part of any Dwimmermount-based campaign.

Origins of the Factions

Simply listing all the factions in a thirteen level megadungeon can be daunting. Before detailing them individually, we will group them into categories that can be understood more broadly. Origins are the most useful way to make the initial grouping of all the factions of Dwimmermount, because where a group comes from tells us something about what it is looking for.

All of Dwimmermount's creatures can be divided into five categories, based on their origin: remnants, relicts, locals, foreigners, and outsiders. Factions drawn from creatures with the same origins will often share similar outlook, agenda, motives, and knowledge, and as a result will tend to either be close allies or fierce enemies. Each origin can be further sub-divided into groups, noted below.

Remnants are creatures that have been alive or undead ever since the dungeon fell two centuries

DWIMMERMOUNT ORIGINS

Origin	Groups
Remnant	custodial (Dragon, dwarves, undead, servitors), degenerate (Derrim, ghouls, shadows, Terrim), imprisoned (demigods, demons, necrolytes, wererats)
Relict	awakened (beastmen, Thulians), constructed (dwarves, servitors, undead), vat-grown (beastmen, sapient rats)
Local	authoritative (various city-states), adventurous (adventuring parties, Rat Boss), nihilistic (Termaxians)
Foreigner	subterranean (ranine, Thelidu), imperial (Volmarians), eastern (paladins)
Outsiders	astral (astral reavers, demons, elementals, spiders), interplanetary (Eld, Kythirean)

ago. During that time, they arrived at a balance of power with the other remnants, a balance which was recently disrupted by a cascade of other arrivals. **Custodial** remnants have a duty to protect and maintain Dwimmermount. **Degenerate** remnants are corrupted or ruined remnants of dungeon denizens long ago. **Imprisoned** remnants have languished in the dungeon for centuries and seek an escape route, either from Dwimmermount itself or from areas within it.

Relicts are beings who have been spawned in Dwimmermount in response to its recent unsealing. Whether recently **awakened** from stasis tubes, **constructed** in the Foundry, or **vat-grown** in the Pool of Life, relicts were generally brought into the present to serve some purpose, although some may be inadvertent results of the PCs' actions.

Locals are generally men who grew up in and around the City-States surrounding Dwimmermount. They are more or less civilized and share a web of interconnections, but all have been scheming to find a way into the dungeon. Authoritative locals administer and defend this status quo, adventurous locals benefit from civilization but are primarily concerned with their own ambitions, and nihilistic locals are counter-revolutionaries, fifth columnists, and devotees of Chaos.

Foreigners are drawn to the dungeon from other lands on Telluria. These include subterranean foreigners come for prey and territory through the far-running subterranean tunnels discussed in the Outside the Dungeon section; imperial foreigners come to conquer the dungeon from the Thulian successor state of Volmar via the Portal on the Hall of Portals (Level 3A); and eastern foreigners who have traveled from the distant Kingdom of the Priest-King in response to the tumult within Dwimmermount.

Outsiders are invaders from realms beyond Telluria. Outsiders are either **astral**, sailing through the quintessence or swimming through the Great Void to reach Dwimmermount, or else they are **interplanetary**, having stepping through the House of Portals (Level 3A) from one of the other Four Worlds.

Every creature in the dungeon can be assigned to one of these groups according to its categories of origin, which helps the Judge understand and portray its role in the dungeon. Intelligent monsters and NPCs within a group generally share a common language and are aware of one another due to their common origin. The Dwimmermount Origins table shows the origins and groups, along with the types of creatures which generally make up the group.

List of Factions by Dungeon Level

In all there are 30 factions operating in Dwimmermount. The Factions by Dungeon Level table sorts each faction by the level upon which it first appears. For each faction, it lists the faction's origin and group; the faction's leader (with class/race, HD, and alignment); and the location where the leader can be found. For factions with multiple named leaders, such as the Termaxians, each leader is listed along with his location.

Faction Allies and Enemies

When the campaign begins, some of the factions have already organized themselves into alliances, and others are already in the midst of conflict. The Faction Allies and Enemies table shows the current allies and the enemies of each faction, along with the dungeon levels on which each faction operates. This allows the Judge to see at a glance the conflicts on and between each level.

For the most part, only current allies and enemies are noted in the table. Some factions have no current allies or enemies, in which case their entry is blank. However, where an ally or enemy faction is listed in *italics*, this indicates that the italicized group is not yet a current ally or enemy, but will automatically become so if encountered. Otherwise, factions that encounter each other during the campaign can develop into allies or enemies, depending on the context of the encounter.

For example, when the Volmarians discover the Gnoll faction, they will automatically treat them as enemies, because the Gnoll faction is led by Varazes, a renegade Volmarian. In contrast, if the Hobgoblin faction encounters the Kobold faction, they may join forces, ignore each other, or become foes, depending on the context of their encounter.

FACTIONS BY DUNGEON LEVEL

Level(s) Present	Faction	Origin and Group	Leader(s)	Leader's Location		
1	Kobold	Constructed relicts	Guran (Dwarf 2, C)	1-40		
1, 4	Spider	Astral outsiders	Spawn of Arach-Nacha (Demon 3, C)	1-41		
1, 2A	Orc	Vat-grown relicts	Segur (Orc 4, C)	2-41		
2A, 3A Ghoul		Degenerate remnants	Menas & Passara (Ghast 4, C)	3A-47		
2A	Gnoll	Vat-grown relicts	Varazes (M-U 3, C)	2A-50		
2A	Thulian Relict	Awakened relicts	Arethusa (M-U 3, N)	2A-49		
2A	Rat	Adventurous locals	Rat Boss (Sapient Rat Cleric 8, N)	Adamas		
2B	Hobgoblin	Awakened relicts	Rukruk (Hobgoblin 5, C)	2B-34		
2B, 3A, 6A, 8, 9	Law	Imprisoned remnants	Hu P'an (Paladin 9, L) The Iron God (Empyreal 13, L)	8-49 8-51		
2B Zombie		Custodial remnants	Zombie Lord (Zombie 3, C)	2B-62		
3A	Eld	Interplanetary outsiders	Virsor (Eld 4, C)	3A-8		
3A	Volmarian	Imperial foreigners	Opilio (Cleric 4, L)	3A-59		
3B, 4	Ranine	Subterranean foreigners	Groak (Ranine Cultist 4, C)	4-21		
3B, 4, 5	Wererat	Imprisoned remnants	Krishka (Wererat 4, C)	4-42		
4, 5	Minotaur	Awakened/vat-grown relicts	Bik (Minotaur 6, C)	4-55		
5, 6B, 7	Dwarf	Custodial remnants	Erdak (Dwarf 8, L) Darval (Dwarf 7, L) Wertek (Dwarf 6, N)	6B-30 5-22 6B-30		
5, 8	Demon	Astral outsiders	Aishapra (Marilith 7, C) Ndulu (Balor 8, C)	5-48 8-34		
6A	Vampire	Custodial remnants	Cyrus Agallon (Vampire 9, C) Sittas (Vampire 7, C)	6A-32 6A-15		
6B, 7, 9	Termaxian	Nihilistic locals	Ermenjart (M-U 9, C) Alyaume (M-U 9, C) Nilus (M-U 8, C)	7-20 9-4 6B-40		
7	Troglodyte	Degenerate remnants	Xochotl (Troglodyte 6, C)	7-12		
7	Trolls	Subterranean foreigners	Grummar (Troll 10, C)	7-8		
7, 9	Thelidu	Subterranean foreigners	Ganglion (Thelidu 4, C)	9-12		
7	Dwimmerdragon	Custodial remnants	Razylymvaer (Dwimmerdragon 12, C)	7-35a		
5, 6A, 8	Necrolyte	Imprisoned remnants	Turms Termax (Demigod 18, C)	8-45		
8, 9	Sleeping God	Degenerate remnants	Auxitius (Necrolyte 7, C) Vodaro (Terrim 10, N)	8-24 9-3		
9	Derrim	Degenerate remnants	Zovlap (Derrim 9, C)	9-10		
9	Mongrelmen	Degenerate remnants	Arjash (Mongrelman 9, N)	9-11		
9	Terrim	Custodial/degenerate rem- nants	Zamis (Terrim 13, N) Sarana (Terrim 14, L)	9-6 9-6		
0	Kythirean	Interplanetary outsiders	Deadly spores (special)	0-22		
0	Astral reaver	Astral outsiders	H'raon (Astral Reaver 7, C)	0-27

Overview of the Factions

What follows in this section are discussions of all 30 factions, divided by level. In every case, there is information on the faction's origin, leadership, and goals, as well as thoughts on its interaction with other nearby factions and, of course, with the player characters. This section is not intended to be exhaustive, but rather to provide the Judge with a solid grounding that he can then use as the basis for his own ideas when running Dwimmermount.

Level 1

Kobold

The kobolds are the twisted products of a renegade dwarf gone mad. Guran (Room 40) was originally a representative of the dwarven custodians on The Manufactory (Level 6B) and the scion of a long and storied line of dwarves. Guran fell into despair when his own "son" was stillborn. While interring the inert statue in the Dwarven Cemetery (Room 34 on Level 1), Guran was approached by the Spawn of Arach-Nacha (Room 41), which offered the grief-stricken dwarf the power to animate his "son" and other inert dwarves in exchange for pledging his soul to the demon prince of spiders. The bargain was struck, but when the inert statues animated as kobolds, Guran's grip on sanity broke and he descended into madness. Now Guran and the kobolds are allies of the Spawn's spider faction, cooperate with the orc faction, and have a conflict with the dwarven faction that is currently one-sided: Guran hopes to forcibly spread his madness among his former dwarven comrades, while they are unaware that he has been utterly corrupted.

Orc

The orcs are not truly a faction unto themselves. Rather, they are an expedition from the orcs of The Laboratory (Level 2A), sent here to get a "lay of the land" on the Path of Mavors. The orc chief of the lower level is interested in expanding his "kingdom" outside the war-torn Laboratory. The orcs on Level 1 thus have no real base of operations, but they are most active in the southwestern portion of the dungeon, having entered the level from the Stairs Down (Room 45). They are quite cowardly and will retreat back to The Laboratory (Level 2A) if they encounter serious resistance to their expansion. The orcs are currently friendly with the kobold faction on this level, although this is merely a temporary peace until the orcs feel strong enough to claim dominance.

Spider

The spider faction was created by Arach-Nacha, one of the demon lords of the Great Void. The demon lord's ultimate goal is to seize Dwimmermount, as it is a powerful nexus between many worlds. To this end, Arach-Nacha sent one of his Spawn to Dwimmermount, where it has engineered the rise of the kobold faction through the corruption of Guran. Of course, the Spawn of Arach-Nacha is a crafty being. His support of Guran depends both on the dwarf's ability to take over Level 1

(through the kobolds) and on not encountering a more powerful potential ally to take his place. For that reason, the Spawn may abandon Guran completely if he feels that he is no longer useful to his demonic master's plans. For now, though, both Guran and the Spawn seek to take over all of Level 1 and then use it as a basis for further conquests.

Arach-Nacha has also spread spiders throughout Levels 1, 2A, 2B, 4, and 5 and guided a nest of phase spiders to The Halls of Lesser Secrets (Level 4), as discussed below.

Level 2A

Ghoul

The ghouls found in The Laboratory are part of the faction led by the ghasts Menas and Passara on The Hall of Portals (Level 3A), all of whom survived the fall of Dwimmermount by turning to cannibalism. Their interest in the Laboratory (Level 2A) is solely in finding alternative sources of food. They mostly prowl the northern portion of the level, though they will range farther afield if necessary. Although currently unaware of the dungeon's unsealing, the ghouls have noticed the creation of the gnoll and orc factions, and hunt them as prey.

Gnoll

The gnolls of Level 2A were recently created by the mage Varazes using the Pool of Life (Room 50). Varazes is a renegade from Volmar, a southern shard of the old Thulian Empire. Varazes entered Dwimmermount by means of a portal from Volmar (Room 61) on The House of Portals (Level 3A) just a few weeks ago. Varazes imagines himself another Turms Termax—a wielder of magic destined to become a god. To that end, he is obsessed not only with the avoidance of death, but also the creation of life, which is why he has used the Pool of Life to create beastmen to serve him. Currently, Varazes is pursuing revenge against the orcs who rejected his leadership (see below), while simultaneously preparing for a confrontation with Volmar's next expedition, which he expects to enter the dungeon again shortly. (The Volmarians have actually already arrived and constitute their own faction on Level 3A, discussed below.)

Though he might seem mad, Varazes is actually quite sane and very intelligent. He is willing to ally with outsiders who either share his desire to bring order to Dwimmermount (under his rule, of course) or whose powers and abilities are equal to his own. Varazes demands respect, however, and will never ally with anyone who does not treat him as worthy of that respect.

The gnolls move about regularly on missions for Varazes, though they are most common in the southwest portion of the level. The goals of the

gnolls mostly align with those of the mage, at least for now. Ultimately, they would like to be free of the mage's influence, but at present he seems too powerful to cross.

Orc

The orcs of Level 2A were also recently spawned from the Pool of Life (Room 50), thanks to the experiments of the renegade mage Varazes. Unlike the gnolls, the orcs rebelled against their creator and sought to find their own path, establishing a stronghold in the southeast corner of the level and expanding to The Path of Mavors (Level 1) as well. The orcs see themselves as natural conquerors, which is why they war against other nearby factions. They are cowards, however, and can be forced into an alliance with creatures clearly more powerful than themselves. Being thoroughly evil, they cannot be trusted, and any alliance with them will last only until the orcs can find a way to turn the tables on their allies.

The orc faction's main enemy are the gnolls serving their mutual creator Varazes. The struggle for supremacy is being fought throughout The Laboratory, and the fact that the gnolls are tougher and stronger than the orcs is motivating them to consider relocating to Level 1.

Rat

The rat faction originates outside the dungeon, in Adamas (see *Chapter 4, Vicinity of the Dungeon*, p. 100), where it is led by a rodent of unusual size and cunning known as the Rat Boss. The faction consists of sapient rats (see *Appendix B, New Monsters*, p. 100) who are investigating the origin of their kind in the hopes of finding a cure for the disorder that is ruining their bloodline. The sapient rats found in the Operating Room (Room 24b) are an expedition towards this end; other expeditions of sapient rats may enter Dwimmermount later, depending on the fate of this pack.

Thulian Relict

The Stasis Chamber (Room 49) houses two Thulians, Colluthus and Arethusa, who made use of stasis tubes to survive the intervening two centuries without aging. In life, these two were sages employed by the Thulian military for their knowledge of magical technology—a knowledge that they still possess. They will be quite disoriented when awakened, but also quite grateful—grateful enough to share their knowledge with anyone interested enough to ask about it. Otherwise, they will leave Dwimmermount and make their way to Adamas, where they will sell their expertise to the highest bidder. Conversely, if Varazes (see below) becomes aware of their existence, he will attempt to sway them to his cause and use their knowledge to gain an even greater foothold over this level.

Level 2B

Hobgoblin

The hobgoblins are the remains of a larger force placed in stasis by the Thulian Empire. The dwarven faction used the Great Machine (Room 40) of The Manufactory (Level 6B) to re-awaken the hobgoblins, but did not manage to send them any orders, so the hobgoblins are simply establishing order on The Reliquary and working to extend their control to The Hall of Portals (Level 3A). The hobgoblins recognize that the forces of the Zombie Lord are similarly devoted to the defense of Dwimmermount, and maintain an uneasy peace with them, although as with many inter-service rivalries there is no love lost between the two factions.

The hobgoblins are disciplined soldiers and so use careful tactics when fighting foes. They are also willing to ally with more powerful creatures if it is in their best interest. So far, they have encountered very little resistance on this level, meaning that most of its southern half is theirs.

Law

This faction includes the actual metaphysical power of Law, as well those creatures which serve and worship it. Two thousand years ago, Law was the most powerful faction in Dwimmermount; now it is barely a memory. The Temple of Law (Room 51) on this level is one of the last strongholds of Law in the dungeon. Characters who visit the Temple can be converted to the service of Law (possibly becoming paladins), explicitly joining forces with this faction. Through such conversions, Law might see its influence in Dwimmermount, and the world, expand. Otherwise, Law will remain a lingering presence—a reminder of a time long gone.

Zombie

The zombie faction is led by the Zombie Lord (Room 62), an unusually intelligent and potent zombie. He not only possesses greater powers than those of ordinary zombies, he also retains some of his former personality—that of a Thulian guardsman reanimated after his death during the fall of Dwimmermount two centuries ago. The Zombie Lord continues to believe it is his duty to "protect" Dwimmermount from outsiders, and the recent events in Dwimmermount have roused him from centuries of lethargy to assert his mastery over this level. To that end, he uses his undead minions to expand into other areas of the level, in the hopes of either scaring away their current inhabitants or winning their fealty. To date, he has had limited success in either endeavor.

Level 3A

Eld

The Eld are recent arrivals in Dwimmermount. having entered via the Portal to Areon (Room 8) on this level when the arcane barrier was dropped. As the Eld are the magical descendants of the Great Ancients and the former rulers of Dwimmermount, their return to the dungeon is hardly surprising. The Eld see themselves as the rightful masters of not only Dwimmermount, but all of Telluria. Their presence in the dungeon is currently tenuous and exploratory in nature. Provided the situation permits it, they will be sending many more of their number through the portal from Areon, launching what will amount to a small-scale invasion. Consequently, the Eld have the potential to be one of the most dangerous and intractable factions in the dungeon, unless their activities on Level 3A are quickly brought to a halt.

Ghoul

Under the leadership of Menas and Passara, two Thulians who survived the fortress's fall by turning to cannibalism and thus gaining undead status, the ghouls have set themselves up as a minor faction in the northern end of the level. Currently, they are primarily interested in finding a steady source of food, which is why they have also begun to explore The Laboratory (Level 2A) above. However, Menas and Passara think quite highly of themselves and, should they encounter evidence that Dwimmermount is awakening again, they will turn their attention to larger goals.

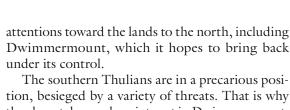

Over the subsequent centuries Menas and Passara reached a state of détente with their fellow relicts, in which the ghouls' desire to feed on the dwarf, wererat, and troglodyte factions was checked by other undead. The ghouls have an alliance with the Zombie faction, but are detested by the vampire faction.

Law

The Altar to the Unknown (Room 23) is another stronghold of the Law faction. If the characters have become paladins (in the Temple of Law on Level 2B) or otherwise joined forces with Law, they will find that meditating here can bestow a powerful boon. It can also be used to convert Neutral and Chaotic creatures to the service of Law, granting this faction servants it very much needs.

Volmarian

The Volmarians are scouts from Volmar, a southern shard of the old Thulian Empire which has survived on its own for the last two hundred years. This shard now has its own emperor and sees itself as the "true" Thulian Empire. It is now beginning to expand beyond its borders and has turned its

The southern Thulians are in a precarious position, besieged by a variety of threats. That is why they have taken such an interest in Dwimmermount, which they believe to be a potential source of great power. Of course, their resources are limited and, if they encounter too much resistance in the dungeon, they may retreat and never return. For that reason, they are keen to find allies who will aid them. Player characters who do not mind swearing allegiance to a foreign power will find that the Volmarians richly reward those who serve them.

The Volmarian expedition into Dwimmermount is led by Opilio, a cleric of Mavors. Opilio treats anyone not from the South with disdain, considering them "provincials" who ought to bow to his superior position. Volmar's culture is descended from that of the ancient Thulians, but is different in many respects, since in the south, the Great Church lords it over the cult of Turms Termax rather than the other way around. Consequently, Opilio treats mages as his inferior, since that is his experience.

Opilio will be very interested in information regarding the fate of an earlier Volmarian expedition into Dwimmermount that mysteriously vanished. That expedition's mage, Varazes, betrayed the Volmarian cause and dispatched his comrades. Varazes has set himself up as a would-be Turms Termax on The Laboratory (Level 2A), where he is creating an army of gnolls at the Pool of Life.

Level 3B

Ranine

The frog-like ranine (see *Appendix C*, *New Monsters*, p. 102) arrived in Dwimmermount by means of the subterranean tunnels into The Deep Hollows (Level 7). They are currently the dominant faction on Level 3B. They serve the demon lord Tsath-Dagon and are, at the moment, primarily interested in looting Dwimmermount rather than establishing anything more far-reaching or permanent. That said, if left undisturbed, they may change their minds and become a more significant feature of this level and those below it.

Wererat

The wererats found in The Reservoir are part of the wererat faction led by Krishka on Level 4 (see below). Those here are scouts, looking for places where their kind can retreat to if their ongoing struggle with the minotaur faction (see below) turns out badly. They are desperate for allies and will offer to guide the characters to Level 4 safely in exchange for a promise of aid in defeating their bull-men foes.

Level 4

Minotaur

Like the hobgoblin faction on Level 2B, the minotaur faction was recently released from stasis by the dwarven faction in response to the invasion of Dwimmermount by the Termaxians. The newly-awakened minotaur "king," Bik, has been using the Clone Chamber (Room 61) to great effect, and his faction has substantially grown in the weeks since its release. Bik's forces now control much of the northern and western portions of Level 4. The minotaur faction's present goals are limited to gaining mastery over the entire level. After that, Bik intends to expand upward toward the surface, believing that the upper levels will be "easy pickings" for his bull-men. Before they can do that though, they must wipe out the wererats that currently infest the level and are challenging the minotaurs for supremacy.

Spider

The phase spiders exploring this level were guided to Dwimmermount through the machinations of Arach-Nacha, one of the demon lords of the Great Void. Arach-Nacha has taken a great interest in Dwimmermount and is actively spreading his "children" throughout the dungeon; already spiders of one variety or another appear as wandering monsters on Levels 1, 2A, 2B, 4, and 5. Though Arach-Nacha's ultimate goal is to make Dwimmermount the hub of a spidery empire, he prefers to work through secrecy and manipulation for now. Thus, apart from its kobold allies on Level 1, the spider faction has remained largely hidden to all other factions. Only the vampire faction located on The Ossuaries (Level 6A) has some inkling of the eight-legged menace.

Ranine

The ranine faction, while primarily found on Level 3B, maintain a small presence on Level 4. Provided that the battle between the minotaurs and wererats continues to rage, the ranine are unlikely to expand much on this level. However, if either of those factions is weakened (or is eliminated entirely), the ranine might well decide to venture more boldly onto Level 4.

Wererat

The wererats have lived on this level since the fall of Dwimmermount, their ancestors having been part of the same biological experiments that created the sapient rats (see the Rats faction, above). While chaotic and evil, the wererats are not expansionist, and they see their current war with the minotaurs as a rightful defense of their level against the invading bull-men. Most of the wererats believe

that their superior cunning and tactics will prevail against the "stupid" minotaurs, but the wererats' leader, Krishka, is increasingly skeptical of her people's chances. Krishka is beginning to believe that the wererats would be better served by fleeing Dwimmermount for the outside world. For the moment, she continues the war against the bullmen, but should she encounter characters familiar with the Rat Boss (see above), her desire to leave will intensify. This will create rifts within the wererats and perhaps even provide an opening for the minotaurs to wipe them out.

Level 5

Demon

The demon faction consists of Chaotic outsiders from the Great Void active within the dungeon. The demon lords of the Great Void have long coveted Dwimmermount, but to date only Arach-Nacha has noticed that its barriers have been unsealed. (Arach-Nacha's agents and plans are discussed under the Spider faction.) Level 5 is home to the most powerful demon currently active in Dwimmermount, a rogue marilith demon named Aishapra. She sees the opening of Dwimmermount as the first step in her plan to extend her influence into

the mortal world beyond and gain greater Chaotic power. Since she lacks the protection of a demon lord, Aishapra has avoided using her gate ability, as the last thing she wants is for demons other than those under her command to appear on this level. If the balor Ndulu is freed from The Prison (Level 8), however, Aishapra will grudgingly submit to his suzerainty. Regardless of its leadership, the ultimate aim of the demon faction will be to re-establish Dwimmermount as an outpost of Chaos on Telluria, wreaking as much destruction as possible while doing so.

Dwarf

The dwarven faction is based on Level 6B (see below), where they are waging a dangerous struggle against the Termaxians and their dworg servants. The dwarves maintain a small presence on this level to prevent other Chaotic forces from reinforcing the Termaxians. The dwarven sentries on Level 5 know that their comrades below are in desperate need of allies. They will be friendly to any who approach them in a peaceful manner, though reticent to reveal too much about their current situation until they are sure that the player characters can be trusted. Once convinced that the characters are not in league with any of the various Chaotic forces

who haunt Dwimmermount, the dwarves will offer them safe passage to The Manufactory to meet their leader, Erdak.

Minotaur

The minotaurs of Level 4 (see above) maintain a toehold on Level 5. Should events turn against them on Level 4, they will flee here to establish a new stronghold. Since Level 5 is much more dangerous than their home territory, they will do this only with great reluctance.

Wererat

Like the minotaurs, the wererats also have extended their influence to this level, albeit in a very limited fashion. They are much more reluctant to venture down this far into the dungeon than are the minotaurs. However, if events go against them, especially if Krishka abandons them for the outside world, they may have little option but to try and make a new home for themselves on Level 5.

Level 6A

Law

The Law faction has another redoubt on this level, the Statue of the Iron God (Room 5). If the characters have become paladins (in the Temple of Law on Level 2B) or otherwise joined forces with Law, this area is a welcome haven from the dangers of the dungeon. Lawful characters who touch the statue receive a powerful blessing, and the entire area is warded against undead.

Vampire

Level 6A is the home level of the vampire faction, led by the Thulian general-turned-undead Cyrus Agallon (Room 32). The vampires were, along with the dwarves, one of the dominant factions in Dwimmermount from the time of its fall to its recent invasion by the Termaxians. Cyrus is no friend of the Termaxians, who inflicted vampirism on him as a punishment centuries ago, and he has begun to marshal his spawn and minions to drive the Termaxians from Dwimmermount. To that end, he will readily accept assistance from any outsiders he encounters who also share his hatred of the Termaxians.

Unfortunately, not all of Cyrus' allies share his hatred of the Termaxians. His vampire spawn, Sittas (Room 15) is much more interested in personal aggrandizement than in seeking a centuries-old revenge against the cult that made his master a vampire. Consequently, he seeks the destruction of Cyrus by subterfuge. His hope is to influence outsiders to do his dirty work for him rather than risk doing it himself.

Of course, both Cyrus and Sittas are vampires and

thus place little value on human life. Cyrus is honorable after a fashion, but will not hesitate to destroy anyone who gets in his way, including his putative allies. Sittas is thoroughly despicable and will inevitably betray any characters who side with him.

Level 6B

Dwarf

The dwarves of Level 6B are remnants of the original dwarven workforce used by the Thulians to maintain Dwimmermount. Never fond of the Termaxian cult, the dwarves are now openly opposed to it, thanks in no small part to the way that the Termaxians have attempted to wipe them out and replace them with dworgs (see *Appendix C, New Monsters*, p. 348). The dwarves have lost control of much of the level to the Termaxians, and taken heavy casualties. Those that remain are scattered throughout The Manufactory, though they are strongest in the northeast quadrant.

Erdak, the leader of the dwarves, aims to eliminate the Termaxian presence in Dwimmermount. His first step toward that end is shutting down the Foundry (Room 62) so that no further dworgs can be created. Erdak knows the dwarves lack the strength to do this alone, and is extremely interested in outside assistance. He will have no truck with Chaos, even in pursuit of the Termaxians' destruction, but will greet Lawful-aligned (or even Neutral) adventurers with open arms and will do his best to persuade them into supporting the dwarven cause. Erdak will be openly deferential to any human beings in the party, as he is aware that this race was created by the men known as the Great Ancients.

Wertek, Erdak's lieutenant, will seek to persuade any men he encounters that The Foundry should be used to create more dwarves, though this is contrary to both dwarven tradition and Erdak's expressed wishes. Wertek is personally disdainful of men, seeing them as nothing more than the degenerate descendants of the Makers, but he knows that Erdak's deference to men will cause him to yield if "The Makers" say otherwise.

Termaxian

The Termaxian faction is the largest and most powerful force to be found in Dwimmermount anywhere (except The City of the Ancients). The Termaxians arrived two months ago, when the Triple Conjunction allowed them to enter Dwimmermount by way of the Alchemist's Door (see *Chapter 2, History of Dwimmermount*, p. 104). Once inside, the cultists fought their way to The Manufactory and wrested the Great Machine (Room 40) from its Dwarven custodians.

Nilus, the Termaxian's sage, had convinced their leader, Ermenjart, that possession of the Machine

would grant them total mastery over Dwimmer-mount. Much to Nilus' and Ermenjart's frustration, however, the Great Machine was sealed with wards that made it practically unusable. Nilus did manage to activate The Foundry (Room 62), enabling creation of Dworgs to strengthen the Termaxian numbers, but in so doing also unwittingly lowered the Perimeter around Dwimmermount, throwing the dungeon into chaos.

In the weeks since, the Termaxians have expanded their numbers considerably, becoming a veritable army; but they have made no progress at all in deciphering the workings of the Great Machine. As a result, Ermenjart has taken the Termaxian force down to The Deep Hollows (Level 7) in the hopes that an alternate route into The Prison (Level 8) or The City of the Ancients (Level 9) can be found or forced.

Nilus now commands the remaining Termaxians on Level 6B. While he toils over the Great Machine, his Dworg and Termaxian troops are fighting a room-by-room battle to exterminate the remaining Dwarven defenders. Nilus's priorities are, in order, to decipher the workings of the Great Machine; to maintain control of it and the Foundry; to exterminate the Dwarves; and to ensure that that no enemies make it deeper into Dwimmermount where they might disrupt the activities of his comrades on Level 7.

Level 7

Dwarf

A small group of dwarves from Level 6B (see above) is holed up on Level 7. They were sent on a reconnaissance party by Erdak, the dwarven leader, but were cut off from their fellows on the level above by the Termaxians at the Base Camp (Room 19). The dwarves would happily join any party containing other dwarves or which demonstrates itself to be opposed to the Termaxians.

Dwimmerdragon

The dwimmerdragons have resided in The Deep Hollows for centuries. Though not very fond of men of any sort, the dragons have a longstanding alliance with the Terrim to protect the entrance to The City of Ancients (Level 9) from invasion in exchange for exclusive hunting rights within it. Characters that approach their lairs bearing brooches of the Terrim (see Appendix A, New Magic Items, p. 325) or otherwise showing evidence that they are allies of the Terrim will usually be admitted to The City; others are usually attacked and eaten.

At present, the dwimmerdragons are warring with the Termaxians on this level. The dwimmerdragons initially allowed a small number of Termaxians bearing *brooches of the Terrim* to pass into

The City of the Ancients, but they refused to allow the entire cult to enter. Their refusal outraged the arrogant Termaxian leader Ermenjart and has resulted in ongoing hostilities. Characters who approach the dwimmerdragons with more humility than Ermenjart might find that the dwimmerdragons are not so devoted to protecting the City as they seem. The dwimmerdragons can be bribed or persuaded into allowing passage, though this will require substantial "gifts".

Termaxian

The Termaxians are currently the most powerful faction on The Deep Hollows. After being frustrated by the Great Machine (Room 40) on The Manufactory (Level 6B), the Termaxian leader Ermenjart descended to Level 7 with the greater portion of his force hoping to find or force a way into The Prison (Level 8). Ermenjart is determined to be the Termaxian cultist who succeeds in finding his way to The Prison, seeing it as his destiny, but the Prison's barrier has proven impenetrable. Ermenjart now feels his best plan is to seek answers in The City of the Ancients (Level 9), but his frustration has left the mage increasingly erratic and violent. His aggression has brought the Termaxians into violent conflict with the dwimmerdragons, who have refused to allow the cult to send more of its members into The City.

Thelidu

Originating from the subterranean realm of Y'golcyak, the Thelidu (see *Appendix C*, *New Monsters*, p. 371) have been infiltrating Dwimmermount since the Perimeter barrier fell. A Thelidu named Ganglion used a *greater brooch of the Terrim* to gain passage past the Dwimmerdragons and down into the City of the Ancients, bringing him with several of his kin. The remaining Thelidu are exploring this level, but constitute a minor faction. The Thelidu have no real stake in anything happening in Dwimmermount beyond their twin desires for arcane knowledge and intelligent beings on whose brains they can feast. They are utterly inimical to all other forms of humanoid life and, as such, cannot be reasoned with.

Troglodyte

The troglodytes are native to the eastern portion of The Deep Hollows. For centuries the tribe has worshipped a *brazen head* of Turms Termax as an idol. Ermenjart and his Termaxians took advantage of their primitive faith to impress them into service of the Termaxian cult. The troglodyte faction is not powerful, but it is numerous, and Ermenjart has tightly secured the loyalty of the troglodyte chief, Xochotl, with generous gifts.

The Starfall

Trolls

The troll faction entered the Deep Hollows from the tunnels to the north-east when the Perimeter barrier fell two months ago. Though few in number, the trolls are large and dangerous creatures and exert a powerful influence over the level. They frequently patrol the central areas of the level in search of food and plunder. The trolls are extremely violent toward outsiders, which is why most of the other factions of this level avoid them, if they can.

Level 8

Demon

The demon faction on Level 8 consists of Chaotic outsiders summoned from the Great Void by the Termaxians. Like the necrolytes who summoned them, the demons here have been trapped in Dwimmermount since its fall. All of the demons seethe in rage at their imprisonment, and for centuries have sought nothing more than freedom. However, once the prison barriers are lowered, the demons will discover that Dwimmermount and the realms it once ruled over are disordered and weak. This will shift their motivation from escape to invasion. The demon faction will work closely with the necrolyte and Termaxian factions to re-establish Dwimmermount as an outpost of Chaos on Telluria. Ndulu, the balor (Room 34), may gate in additional minions and assert command over Aishapra (Level 5) if she still lives. The demon faction thus presents a dangerous long-term threat.

Law

Two of the greatest servants of the Law faction are confined within the Inner Prison. The first of these is Hu P'an, a mighty paladin from the Kingdom of the Priest-King to the East. Hu P'an was converted to worship of Law by Sarana (Turms Termax's former lover) two centuries ago. During the fall of Dwimmermount, Hu P'an made the ultimate sacrifice and allowed himself to be sealed in the Inner Prison with Turms Termax. He has spent the majority of the two centuries since in suspended animation, save for brief periods of merciless torture by Turms and his cohorts. If freed, Hu P'an will aid his rescuers in their battles against the Termaxians, and attempt to convert them to the service of Law. If asked for advice on stopping Turms, Hu P'an will recommend they travel to The City of the Ancients (Level 9) and re-unite with Sarana, believing that in the centuries since their last meeting she will have learned a way to permanently destroy Turms Termax.

Law's second great champion is the Iron God, an empyreal once worshipped as a god. Turms ensnared the Iron God centuries ago in hopes of wresting from him the secrets by which he apotheosized from empyreal to deity. If rescued from its imprisonment, the Iron God can be a powerful ally to the player characters.

Necrolyte

The necrolytes (see *Appendix C*, *New Monsters*, p. 360) are high-ranking Termaxian mages granted near-immortality by Turms Termax (Room 45), the leader of this faction. Turms and the necrolytes have been trapped in The Prison since the fall of Dwimmermount. Turms' immediate goal is to escape imprisonment. Thereafter he will seek to re-assert control over Dwimmermount and then Telluria, in order to have the resources to resume his quest for divinity. See Appendix G, The Secrets of Turms Termax, p. 107 for additional information.

Though the necrolytes were once the closest and most trusted lieutenants of Turms Termax, their loyalty has been frayed from centuries of imprisonment. Three of the necrolytes remain completely loyal to Turms: Viator (Room 5), Anzoy (Room 27), and Pericleia (Room 42), the latter being fanatical in her devotion. Two other necrolytes, Arsaphius (Room 43) and Marthanes (Room 44), might betray Turms. Arsaphius will strike if Turms seems weak, while Marthanes will do so only if necessary to escape the Prison. The last necrolyte on the level, Auxitius (Room 24), has already shifted his allegiance from Turms Termax to the Sleeping God (see below), though he has not even realized this consciously (see below).

The Sleeping God

Auxitius, ostensibly a member of the Termaxian faction, is a "Manchurian Candidate" for the Sleeping God. For years Auxitius has been traveling through a crack in the barrier down to The City of the Ancients to capture Terrim, whom he transforms into Termaxian husks. Auxitius hopes that with a sufficient number of husks, he can take over the City below and gain the power he needs to break through the magicks imprisoning his master. Unbeknownst to Auxitius, the crack in the barrier was created by the Sleeping God, and his repeated passages through Crevasse (Room 26) have exposed his mind to the psychic domination of the God. For this reason Auxitius has more and more begun to think of the Sleeping God, not Turms Termax, as his master...

Termaxian

At the start of the campaign, the Termaxian faction has no presence on Level 8. If the Outer Prison barrier is lowered, however, the Termaxians will immediately join forces with the necrolyte faction. The room key for Level 8 designates where and how many Termaxians will appear in this case.

Level 9

Derrim

The Derrim are a degenerate offshoot of the Terrim race, wholly devoted to Chaos and the destruction of the Terrim. The Derrim delight in inflicting pain and suffering, frequently launching raids against every other faction in the City of the Ancients in order to acquire new slaves and test subjects for their cruel experiments. The only thing that prevents them from declaring an all-out war on the Terrim is their numbers. Currently, there are only 44 Derrim in the vicinity of the City and there is no chance of additional aid forthcoming from their fellows elsewhere in the subterranean realm, as they consider the City too meager a prize to be worth their time.

For that reason, Zovlap, leader of the Derrim on in the City, has begun to consider alternative plans for bringing down the Terrim Compound (Area 5). He has made contact with Nalpi, an influential member of the Children of the Sleeping God, and is attempting to sway her into leading the cult into an alliance with the Derrim against their "common foe." Zovlap has also considered making overtures to the Thelidu, but those alien beings have, to date, seen the Derrim as rivals rather than potential allies.

The Law faction is represented within The City of the Ancients by Sarana (Area 6), one of the archons of the Terrim. Sarana has attempted to restore the worship of Law within the Terrim compound, but has not persuaded many of her people to join her faith. Sarana will welcome Lawful characters, especially if they are paladins and have rescued Hu P'an, and may aid them in battling Turms Termax.

Mongrelman

The mongrelmen dwell in the former Slave Pens (Area 11) and the surrounding areas. They are the weird descendants of slaves taken by the Great Ancients when they retreated into this subterranean world. In time, as the Terrim numbers dwindled, the slaves rebelled against their masters and established their own settlement elsewhere. These slaves were of many species, but over the centuries, they have interbred to the point of becoming their own distinct race. The mongrelmen lead a hardscrabble existence, having to scavenge for food and suffering from a variety of diseases and ailments that keep their numbers low. Those who survive, however, are extremely hardy.

The mongrelmen's current chieftain, Arjash, has begun to believe that the time is now for the mongrelmen to "claim their destiny" and so is inspiring them to lead an assault against the Terrim. In this

he is being egged on by Zovlap, leader of the Derrim, and Nalpi, of the Sleeping God's faction, and there is the possibility that all three factions might unit against the Terrim (see above). However, Arjash's councilors within the mongrelmen community do not share his optimism about an attack on the Terrim, instead feeling that it might be more prudent to lay low and avoid conflict, in the hope that the other factions might destroy themselves.

The Sleeping God

Termagant, the Sleeping God, was the last and perhaps most powerful of the artificial minds created by the Great Ancients. Having fallen away from Law, he has been imprisoned in a heavily-guarded tomb (Area 3) in The City of the Ancients. For centuries, the slumbering mind of the Sleeping God has reached out in search of desperate, depraved, or weak-willed beings who might be persuaded to release him from his prison.

The Children of the Sleeping God are a small cult within the Terrim whom Termagant has persuaded to his cause. Consisting of only thirteen individuals, led by the mage Vodaro (Area 3), the Children are devoted to awakening the Sleeping God, whom they believe will restore the Terrim to their ancient glory. Since the Terrim have a longstanding taboo against approaching any god, most especially the Sleeping God, whom they deem evil for reasons long forgotten, the Children have little hope of convincing their fellows to join them in their "great cause." The Children must resort to stealth and subterfuge in their efforts to awaken the Sleeping God.

Though initially well intentioned, the Children have slowly been sliding toward Chaos in their actions. Most recently, the Children assassinated Donuk, an archon who was close to unmasking their conspiracy. Unfortunately, this act has only made the Terrim more paranoid rather than less and the cult is starting to become desperate. Some, like Vodaro's lieutenant, Nalpi (Area 6), have begun to suggest that the Children consider allying with an outside force, such as the mongrelmen, the Thelidu, or even the Derrim, to achieve their goals. Although Vodaro has formally rejected such alliances, Nalpi has already begun conversations in secret.

Termaxian

The Termaxian leader Ermenjart sent this small group from the The Deep Hollows (Level 7) to ascertain whether The City of the Ancients had any information that might be helpful reaching The Prison (Level 8). The Termaxian expedition collapsed almost immediately, as its second-in-command, Gersant, went "native" and fled into the City. The expedition's remaining leader, Alyaume, has ordered his men to hunt for Gersant rather than

fulfill their mission. Alyaume would prefer to be anywhere but The City, and is beginning to become concerned that he has had no contact from the above. He had by now expected either reinforcements to expand the search or word that The Prison was unsealed. He is unaware that his Termaxian allies are now at war with dwimmerdragons and cannot reach him.

Terrim

The Terrim are the descendants of those Great Ancients who escaped underground during the Eldritch Empire's conquest of Dwimmermount. Already down to less than 150 living members of their kind, and with fewer children born every year, the Terrim know it is just a matter of time before their race vanishes. The open question is how much time. The long-lived Terrim had expected to endure for centuries more, but with the collapse of Dwimmermount's Perimeter barrier, the rise of a subversive cult within their compound (the Children of the Sleeping God), and the increasingly bold attacks from the Derrim, Mongrelmen, and Thelidu, the Terrim now fear their civilization may be destroyed in weeks or months. Oblivion is at end.

Currently, the Terrim are divided as to what to do to change their situation. The ruling Council of Archons is headed by Zamis, a staunch traditionalist who believes the Terrim must "stay the course" and rely on their ancient lore to protect themselves. Zamis is opposed by Sarana, the former lover of Turms Termax, who argues that the Terrim are doomed unless they return to the worship of Law and take an active hand in world affairs. This disagreement will only grow more intense once outsiders arrive. (Note that Sarana is also a member of the Law faction).

Thelidu

The alien Thelidu come from the Stygian depths beneath Dwimmermount called Y'golcyak. Always seeking new sources of slaves, food, and magical power, it was inevitable that when the Perimeter barrier fell they would begin to invade The City of the Ancients, which is a ready source of all three. Their numbers in Dwimmermount are few, so they act cautiously and only attack groups that are clearly fewer and/or less powerful than they.

Since arriving in the City, Ganglion, the Thelidu leader, has been approached by both the Children of the Sleeping God and the Derrim about the possibility of an alliance. He has rebuffed both factions, however, for the Thelidu find the concept of an alliance to be an inherently foreign one. In their alien minds, there are only enemies, slaves, and prey.

Level 0

Kythirean

Shortly before Dwimmermount's fall, an astral vessel returned from Kythirea bearing specimens from the Green Planet's teeming jungles. Some of these specimens escaped and infected The Divinitarium's inhabitants. The Termaxians sealed up the level in the hopes of dealing with it later. Later never came, and so Level 0 has been cut off from the rest of Dwimmermount for two centuries, developing its own weird ecology in the meantime. Now The Divinitarium is home to a wide variety of plant, fungus, and slime creatures, as well as their minions. Many of these creatures had gone into hibernation while Dwimmermount was magically sealed and have only now awakened, while others were always active. The plant creatures long ago tapped into the water system to survive, while the various fungi and slimes thrived on other sources of nourishment, including azoth, with inevitable results. Though not sapient and incapable of responding to threats in a coordinated manner, the Kythirean life forms on Level 0 are implacably hostile to men, elves, dwarves, and indeed any non-Kythirean life. They are an infectious cancer which could destroy Dwimmermount if not purged.

Astral Reavers

Newly arrived on Level 0 are a handful of Astral Reavers (see Appendix C, New Monsters, p. 323), which traveled here in an astral vessel to investigate the Navigational Beacon (Room 31a) they recently detected. Such beacons were not unusual on Telluria in centuries past, but they are rare today, and drew the reavers' interest. H'raon, the leader of the reavers, believes the beacon has just been activated, and is primarily curious as to who turned it on and why they did so. In fact, the beacon has been on for centuries; its recent visibility is a side effect of the Termaxian faction on Level 6B accidentally lowering the Perimeter barrier. H'raon is unaware that there are other expeditionary forces in the dungeon at all. If the characters seem to be useful allies, the astral reavers will offer a non-aggression pact, but they are not trustworthy in the long term. The astral reavers aim to explore, sack, and loot Dwimmermount, and will ultimately seek to slay any rivals they face. Unlike the dwarves and Termaxians, however, the astral reavers are not fanatical about Dwimmermount, and if hard pressed they will call for their astral vessel to evacuate them from the dungeon.

Activities of the Factions Before Play

Dwimmermount is written as if the Termaxian faction entered the dungeon two months before the campaign began. The Termaxians then seized control of the Great Machine one week later (7 weeks before the campaign began), accidentally lowered the Perimeter barrier after a couple days of study (6 ½ weeks before the campaign began), and then captured The Foundry after two more weeks of fighting (4 ½ weeks before the campaign began). From there they have churned out dworgs, whittled away at the dwarves, and ventured into The Deep Hollows (Level 7) and The City of the Ancients (Level 9).

Apart from these broad strokes, the exact activities of the factions before play have only been vaguely sequenced. The encounter keys for the various rooms in the dungeon all speak in generalities such as "a few weeks ago," or in ordinal ranks such as "after the orcs were created". This vagueness permits the Judge to retroactively determine each faction's previous sequence of actions based on when the player characters explore that faction's part of Dwimmermount. This means it won't matter much how quickly or in what order the adventurers venture into each level; until they do, it will be as described in this book. For instance, from the encounter keys in The House of Portals (Level 3A) it's obvious that the Eld have entered Dwimmermount very recently, within the last day or so. If the party enters The Path of Mavors (Level 1) on day 1 of the campaign, and decides to explore The House of Portals on day 17, then that decision retroactively determines that the Eld entered Dwimmermount on day 16. Had the party instead decided to explore The House of Portals on day 4, then that decision would have retroactively meant the Eld entered Dwimmermount on day 3.

A Judge who finds this sort of "quantum history" approach distasteful can treat each room key as a description of Dwimmermount at the fixed moment that the campaign begins. With this approach, it very much matters how quickly and in what order the party explores Dwimmermount. For instance, if the party reached The House of Portals on day 4, then the Eld would probably not have expanded much beyond what's described in the encounter keys. If the party reaches The House of Portals on day 17, then the Eld might have considerably expanded. Running the dungeon as a complete "world in motion" requires considerably more behind-thescenes work for the Judge, because there are over two dozen factions and over a dozen levels to keep track of.

Whichever approach the Judge adopts, he should keep in mind the following causal sequence of events:

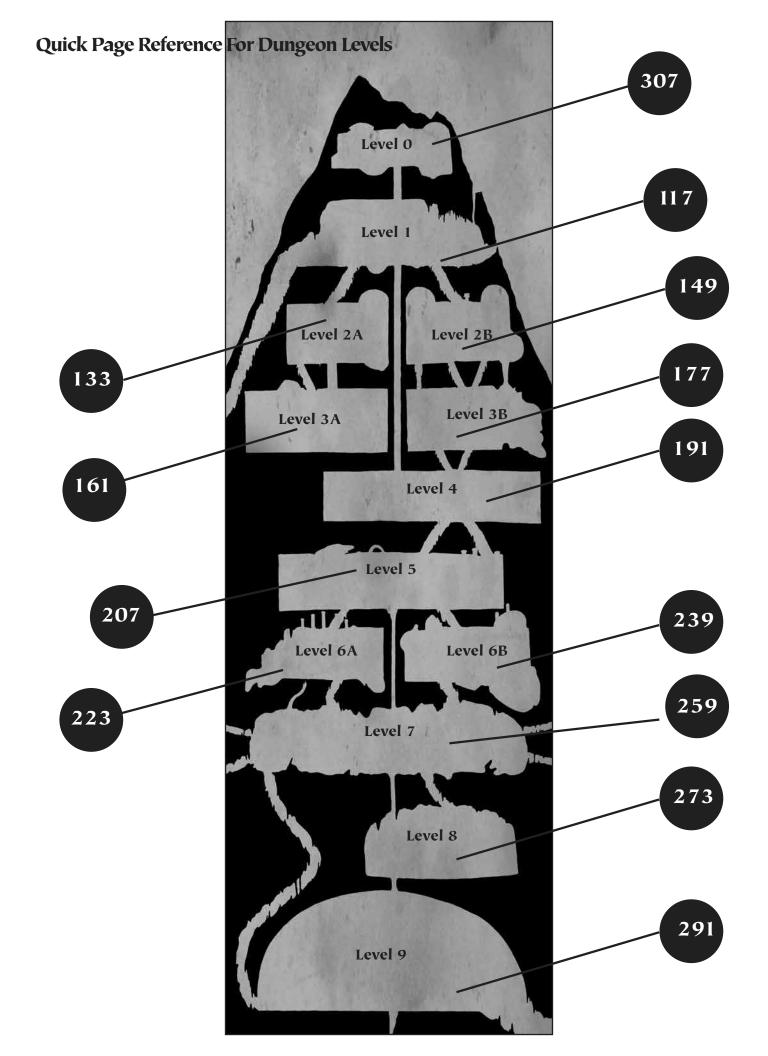

- The Termaxians entered during the Triple Conjunction and captured the Great Machine about one week thereafter.
- The hobgoblins and minotaurs were released by the dwarves after the Termaxians entered the dungeon, but before the Termaxians captured the Great Machine.
- The Perimeter barrier was accidentally lowered by the Termaxians a few days after they captured the Great Machine.
- The astral reavers, demons, ranine, sapient rats, spiders, thelidu, trolls, Eld, Volmarians, and Varazes all entered Dwimmermount after the Termaxians lowered the Perimeter barrier.
- The Termaxians captured the Foundry after they lowered the Perimeter barrier.
- The Termaxians created the dworg after they captured the Foundry.
- Varazes arrived with an initial expedition of Volmarians before he created the orcs and gnolls.
- Varazes created the orcs days or weeks before he created the gnolls.
- The Volmarians under Opilio arrived days or weeks after Varazes arrived.
- The dwarves entered The Deep Hollows after the Termaxians captured the Foundry, but before the Termaxians encamped in The Deep Hollows.
- The Termaxians encamped in The Deep Hollows following several weeks of unsuccessful tinkering with the Great Machine.
- The Termaxians reached The City of the Ancients after they encamped in The Deep Hollows, but before their war with the dwimmerdragons began.

For more information on running Dwimmer-mount dynamically, see *Chapter 6*, *Overview of the Dungeon* (p. 73) and *Chapter 7*, *Factions in the Dungeon* (p. 161).

The Path of Mavors

Overview of The Path of Mavors

HE PATH OF MAVORS was excavated by the Great Ancients late in the Second Era to connect The Halls of Lesser Secrets (Level 4) to the surface of Telluria. The main cross-section (Rooms 1, 11, 12, 56, and 57) was built at this time, and later joined to the pre-existing limestone caverns that were extant to the south. The level was heavily damaged by Eld during their invasion of Dwimmermount, and the Elevator (Room 56) is the last intact Second Era construction. The Eld rebuilt the level in their own fashion, but most of the Eldritch works were torn down by the conquering Thulians. Now only the massive Red Doors mark their reign. The rest of the level is characterized by Thulian construction, with interior walls and resurfaced exteriors cast from Thulian concrete, and common doors of iron-reinforced oak. The Thulians habitually honored the gods who made their capture of Dwimmermount possible by building temples to them throughout its levels. Level 1 they named for Mavors, the God of Warfare, and devoted to military, tribunal, and ceremonial purposes. The Termaxians subsequently maintained these uses, though they did so in the name of the Thrice-Great rather than Mayors.

WANDERING MONSTERS OF THE PATH OF MAYORS

Die Roll	Monster
1	Kobolds (4-16)
2	Orcs (2-8)
3	Eldritch Bones (3-12)†
4	Giant Rats (3-18)
5	Giant Centipedes (2-8)
6	Crab Spiders (1-4)
7	Gelatinous Cube (1)
8	Fire Beetles (1-8)
9	Dwarves (1-6)
10	NPC Party (5-8)
11	Green Slime (1)
12	Roll twice, with the second result appearing 1d4 turns after the first encounter to investigate the noise of battle.

Level

1. Entrance Chamber

Ancient and smooth-worn stairs descend from the Red Doors into the entrance chamber of Dwimmermount. The room contains five doors (two of them side by side) and six marble statues. All of the doors are made of hard oak, reinforced with steel, and none are locked. Five of the six statues depict distinct male figures in different poses, wearing archaic Thulian dress, but all with the exact same head and face—that of a haughty, bearded man with piercing eyes. Clerics and others with religious knowledge may recognize five of the figures as representations of Thulians gods (Caint, Dorn, Mavors, Tenen, and Typhon), and the identical heads as being that of Turms Termax. These heads are not original to the statues and can be removed with a successful force doors roll (see Chapter 6, Overview of the Dungeon, p. 73, for more information on these removable heads and the boons that can be gained by replacing them with the original). The sixth statue depicts an attractive, but hard-faced woman in plain garb. This is Sarana, Turms' lover, who legends say disappeared shortly before his apotheosis.

2. Guard Room

This chamber was once a guard room. Now, it is filled with dust and cobwebs. There are the shattered remnants of some wooden chairs and a weapons rack, but the room is otherwise empty.

3. Reception Hall

This large room contains the remains of smashed wooden tables and chairs. Before the sealing of Dwimmermount, this place had been a hall for the reception of Thulian dignitaries and other guests of high rank, as evidenced by the faded frescoes and tattered tapestries on the walls. Currently, the hall serves as the temporary home for a scouting party of seven recently spawned orcs that have made their way to this level from The Laboratory (Level 2A).

Orc Scouts (6) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 6, 5, 4, 2, 2, 2, #AT 1, DG 1d8 (battle axes), SV F1, ML +2]

Orc Leader (1) [AL C, MV 120' (40'), AC 4 (chain mail), HD 1, HP 8, #AT 1, DG 1d8+1 (battle axe), SV F1, ML +2]

4. Storeroom

This storeroom is filled with wooden crates. The dry goods these once contained have long since rotted away, leaving the room choked with the dust. Anyone entering the room must make a saving throw v. Paralysis or stir up sufficient dust to cause all within a 10 foot radius to fall into fits of sneezing and coughing for 1d4 rounds. Each round of sneezing and coughing triggers an encounter throw as the sounds echo through the halls.

5. Gallery of Masks

The walls of this circular room are decorated with *Thulian war-masks*—demonic faces made of metal meant to be attached to helmets in order to terrify foes (see *Appendix A, New Magic Items*, p. 333). A total of five *war-masks* hang on the walls; a sixth *war-mask* has been removed from the wall and lies on the floor next to the skeletal remains of a man wearing a suit of battered chain mail armor. The remains have nothing else of value on them.

The five *war-masks* on the wall are all trapped. Removing one of them without first deactivating its hidden trigger causes a poisonous gas to billow forth, filling a 5-foot by 5-foot square immediately in front of the mask. Those who inhale the gas must make a saving throw versus Poison or die. Fortunately, the poison has grown weak with age, so there is a +2 bonus to the saving throw.

6. Trophy Room

This large room is empty of furnishings, but indentations in the walls, shelves, and brackets all give evidence of the former presence of plaques, statues, and other similar ornaments. These trophies, commemorating Thulian military victories, were long ago looted or removed to other parts of the fortress. Recent additions to the room are the bodies of two dwarves, their corpses turned to stone in the manner of the dwarves of Dwimmermount. The dwarves wore still-serviceable chain mail and carried intact battle axes, but these can only be removed by shattering their stony forms. The deceased dwarves were members of a party that entered by way of the Dwarven Entrance Cave (Room 30). Three other comrades died in the Armory (Room 16). One of the surviving members of their party is being held captive in the Magician's Quarters (Room 68) on this level, while the other two survivors are held in Room 22 of The Laboratory (Level 2A).

7. Vault of Spoils

The iron door to this room is locked. It can be picked, or its key retrieved from the Alcove (Room 25). Inside is a storehouse of valuable trinkets seized by Thulian soldiers as spoils of war, which are worth 8,000 gp and weigh 500 lbs. Hidden amongst the trinkets are a *brooch of shielding*, a *wand of magic missiles* (12 charges), a *sword +1*, and a treasure map to a cultic reliquary in the Aldleigh forest (16,000 gp value). The *brooch* is an eagle-shaped fibula of sheet gold over bronze. The *wand* is a short, thick baton of bone with a gold tip of the type. The *sword* has a slightly-curved single edged adamantine steel blade, made in Volmar before the Thulian conquest.

Guarding the vault is a wight whose quest for immortality through undeath manifests as an obsession with hoarding the memories invested in these spoils of war.

Wight (1) [AL C, MV 90' (30'), AC 4, HD 3, HP 14, #AT 1, DG drain life energy, SV F3, ML +4]

8. Chapel

This room is a chapel dedicated to Turms Termax in his guise as Mavors, god of war. There are six decorative marble columns in the room. Set into each of the columns is a sconce on which rests an eldritch bone (see *Appendix C*, *New Monsters*, p. 349). These magical creatures attack anyone who enters the chapel unless they bear symbols of Termax.

Eldritch Bones (6) [AL N, MV 120' (40'), AC 4, HD 1+1, HP 9, 8, 7 (×4), 6 (×3), 5 (×2), 3, #AT 1, DG 1d6+1, SV F1, ML N/A]

Along the southern wall of the room is an altar made of marble. It is been badly chipped along its edges and the precious stones once set into it have been removed. It can be pushed aside to reveal a secret door leading into a Secret Treasury (Room 9). Careful observers will notice evidence of the altar's mobility on the floor, thereby increasing their chance of successfully finding the secret door by 1.

9. Secret Treasury

This hidden room was once the chapel's treasury. Though much of its former wealth has been looted or moved elsewhere, there still remain a few items of value left in the sacks that litter the floor. A thorough search of these bags uncovers 400 sp, 10 gp, 4 gems (obsidian, 10 gp; zircon, 100 gp; onyx, 100 gp; tourmaline, 500 gp), a *scarab of death*, and the carved marble head of the goddess Tyche, once part of her statue in the Entrance Chamber (Room 1).

The *scarab of death* is of wrought moonsilver, enameled blue, and inscribed with Ancient Thulian runes.

10. Recreation Area

This room was once richly furnished with round tables, chairs, chaises, and carpets. Now the furniture is shattered and ruined, and the carpets are overgrown with a sickly orange mold. The mold smells quite foul, but is harmless.

11. Statue of Turms-Mayors

In this area stands the six foot tall marble statue of a muscular man in armor, carrying a shield and wielding a wickedly barbed spear. Atop his shoulders sits the bearded head of Turms Termax, although the body is clearly that of Mayors, god of war.

12. Barracks

Once a barracks for Thulian soldiers stationed in Dwimmermount, their cots and other furnishings have been shattered into splinters scattered across the room. A total of 300 sp and 40 gp are scattered amidst the debris.

13. Pantry

This small chamber once held dried foodstuffs, but it is now empty, except for dust, cobwebs, and the rotted remains of crates.

14. Antechamber

Voices can be heard emanating from this room. Listening carefully or entering the room reveals that the voices are speaking in an archaic form of Low Thulian (Common) and are discussing garrison rotations, exercise drills, and similarly mundane military matters.

The speakers are the apparitions of four Thulian soldiers. The apparitions are shadowy and completely lacking in substance. They are not undead, merely psychic echoes left behind by soldiers who died here after Dwimmermount was sealed off from the outside world. They cannot be harmed by any means, whether physical or magical, and take no notice of anyone entering the room. To date the echoes have been sustained by the azoth ambient in the dungeon's air, but they will begin to fade now that Dwimmermount's atmosphere is again open to the world. See *Appendix F*, *Azoth* (p. 393), for more information on azoth.

In addition to the detritus of ruined furniture, the room contains the bones of the four Thulian soldiers whose apparitions haunt it. Should these bones be buried with appropriate funeral rites outside of Dwimmermount, anyone who participates in the burial gains a boon, the Blessing of Mavors (+1 to hit and damage) for the next 24 hours. See *Chapter 6, Overview of the Dungeon* (p. 73), for more information on boons from the gods.

15. Hall of Memories

This chamber contains six marble pedestals placed about the room, each standing about four feet tall. At the base of each pedestal is an orichal-cum plate. If anyone stands in front of a pedestal and places at least one foot on a plate, it activates a magical effect that transmits moving images and sounds into the person's mind. These are memories of past events connected with Dwimmermount:

Memory 1: A massive pitched battle between Thulian armies and the orcs and demons commanded by the Red Elves.

Memory 2: Fighting in the corridors of Dwimmermount, as the Thulians clear it of its Chaotic defenders.

Memory 3: A visit from the Thulian emperor and his entourage.

Memory 4: Scenes of mages being treated roughly and interrogated by soldiers.

Memory 5: Scenes of other mages commanding soldiers as they go into battle.

Memory 6: Soldiers standing around a large table in the center of which is a head of a bearded man made from bronze. The head looks similar to the heads of Turms Termax seen throughout this level of Dwimmermount.

Past the marble pedestals is a set of stairs leading down to the Antechamber (Room 1) of The Reliquary (Level 2B).

16. Armory

This room contains empty weapons racks, laden with dust and cobwebs. Three dwarves lie dead on the floor. Their corpses are stone, consistent with the dwarves of this land, but they appear to have died recently due to still-sticky red liquid beneath the stone bodies. One corpse clutches a battle axe and the other two carry spears and shields. All three corpses wear chain mail and backpacks containing 50' rope, 3 days' rations. The axe-wielder's packs also holds an odd, cylindrical wineskin with a strange diagram, stained with ink, tooled into its leather. If the wineskin is suitably inked and then rolled across paper, it reveals a complete map of the Path of Mavors (880 gp value).

The deceased dwarves were members of the same party that suffered casualties in the Trophy Room (Room 6). One of the surviving members of their party is being held captive in the Magician's Quarters (Room 68) on this level, while the other two

survivors are held in Room 22 of The Laboratory (Level 2A). Any of these survivors would be able to demonstrate how to reveal the map concealed in the wineskin.

17. Training Room

This large room was used to train Thulian soldiers in basic combat techniques. It contains nine mechanical apparatuses that each hold a short sword and shield. On the western wall is a bronze control panel with a series of ten switches. Each time a character activates one of the switches, roll 1d10. A result of 1 through 9 indicates the number of apparatuses which are activated. A result of 10 shuts down all active apparatuses.

When activated, the apparatuses move about the room on grooves on the floor, swinging their swords viciously. The apparatuses are not intelligent and cannot leave the grooves, which run north to south, with up to three per row, but they strike as 1 HD creatures and deal 1d6 damage per successful hit. Each apparatus has an AC of 8 and can endure 10 hp of damage before being disabled. While the apparatuses are in operation, the door to the room locks, and cannot be opened except by magic or lock-picking.

18. Laboratory

A long, steel-reinforced oak table, covered in stains in a variety of colors, runs the length of the room. Along the walls are many iron shelves, some of which are also stained. Shards of glass are scattered about the room. There is also evidence of other wooden furniture having once been here, but it has been reduced to rotten splinters.

19. Library

This chamber once held a small library of scrolls and codices, mostly of a military or historical nature. Now, the iron shelves that line the walls are largely empty, though a handful of texts remain. Most are completely valueless and/or crumble to dust upon being touched. The exceptions are the following:

- An annotated copy of *Arto Bellumoi*, a text on strategy and tactics. A fighter who studies the text for one week gains 500 experience points.
- A map of a place called "The exarchate of Theana". The reputed birth place of Turms Termax, it was the easternmost province of the old Thulian Empire, near the Kingdom of the Priest-King. The map would be worth 500 gp to a sage.

- A tattered judge's handbook answering questions about the strategy game zatrikio. A moldy red ribbon has bookmarked the section called "Asana's Challenge".
- A partially-burnt scroll of ward against magic. Because of the fragmentary nature of the spell formula, the scroll has a 50% chance of removing one spell of the lowest level known from the mind of the caster rather than working as intended.

20. Storeroom

This room once held crates of supplies. Now, it serves as the lair of eleven kobolds sent to patrol the rest of Dwimmermount by the Spawn of Arach-Nacha (Room 41). The kobolds have only 18 cp apiece, plus some threadbare blankets and some dried rat meat for food.

Kobolds (11) [AL C, MV 60' (20'), AC 2 (leather), HD 1d4 hp, HP 4 (×3), 3 (×4), 2 (x2), 1 (x2), #AT 1, DG 1d6-1 (short swords), SV 0 LH, ML -2]

21. Workshop

This room contains a large iron table and lots of iron shelves. Along the south wall are three unusual brass "boxes" festooned with brass knobs and dials. The boxes are hollow and stand a little over four feet tall. They are warm to the touch and the floor immediately around them is charred and stained with silvery, metallic splotches. Fiddling with the knobs and dials on a box triggers a loud whirring sound that lasts for 1d4 rounds. The sound may attract unwanted attention; make an encounter throw each round it is active. When the sound ceases, the box shoots out a jet of steam that deals 1d10 points of damage to anyone standing immediately in front of it. The unlucky victim of this steam cleaning can reduce the damage by half with a successful saving throw versus Blast.

22. Oil Trap

This large room is noticeably bereft of any furnishings, though there are marks on the floor and walls indicating that there were such things in the room at one time in the past. The room is not dusty nor is there much in the way of debris here. However, the floor of the eastern two-thirds of the room has been coated with a thick layer of oil that is visible if a character gets within 10 feet of it. The oil is flammable and is intended to be used as part of the kobolds' defense of their caverns (Room 23).

MOON POOL EFFECTS

Random Roll (1D20)	Lunar Phase	Effect
1-4	New Moon	-2 caster level, +1 spell (lowest and highest levels)
5-7	Waxing Crescent	-1 caster level, +1 spell level (highest level)
8-10	First Quarter	+1 spell (lowest level)
11-13	Waxing Gibbous	+1 caster level, -1 spell (highest level)
14-17	Full Moon	+2 caster level, -1 spell (lowest and highest levels)
18-20	Waning Gibbous	+1 caster level, -1 spell (highest level)

23. Kobold Guards

Ten kobolds stand watch here, so as to protect their caves from intruders. In addition to their swords and bows, they possess torches, which they will throw into the Oil Trap (Room 22) in order to ignite the oil covering its floor. They will then attack with their bows any opponents not killed or driven away by the flames with their bows. Each kobold possesses 22 cp.

Kobolds (10) [AL C, MV 60' (20'), AC 2 (leather), HD 1d4 hp, HP 4 (×2), 3, 2 (×2), 1 (x5), #AT 1, DG 1d6-1 (short bows & short swords), SV 0 LH, ML -2]

24. Stalagmite Cave

This cave is punctuated with tall stalagmites and drooping stalactites. The most formidable stalagmite has been hollowed out, creating a hidden repository holding 700 sp and 40 gp in old Thulian coin.

25. Alcove

This small, empty cavern has a triptych of murals depicting the Thulians invading, sacking a city, and carting away its treasures. A careful examination of third mural reveals a large metal key hidden in a crevice in the wall. The key opens the door to the Vault of Spoils (Room 7).

26. Webbed Antechamber

This cave is filled with spider webs, in which can be seen the husks of various creatures, from giant rats to kobolds to men. All of these husks are old enough to have long ago been picked clean of valuables by the rats in the Storeroom (Room 46).

27. Spider Lair

This cavern is as thick with spider webs as its antechamber. The webs' weavers, a clutch of 3 crab spiders, lair within. Scattered around the room is a total of 67 cp accumulated from past victims.

Crab Spiders (3) [AL N, MV 120' (40'), AC 2, HD 2, hp 12, 10, 9, #AT 1, DG 1d8 + poison, SV F1, ML -1]

28. Cave of the Moon Pool

This cave is illuminated by a shaft of light that enters from a small opening in the ceiling 50' above and shines down onto a reflecting pond below, the famous Moon Pool of Dwimmermount. The Moon Pool holds what alchemists refer to as *true water*, a primordial liquid untainted by physical contaminants and highly prized for its mystical properties. True water never boils, evaporates, or freezes, and cannot be altered or destroyed with even the mightiest of spells. Indeed, true water acts as a supernatural solvent, dissolving magical energies within itself. See *Appendix A*, *New Magic Items* (p. 334) for more details on *true water*.

In the case of the Moon Pool, the magical energies it dissolves are moon rays, called "lunar emanations" by sages. These moon rays can then be imbibed by living beings who partake of the Pool's contents, altering their magical potency in accordance with the phases of the moon. A mage (or other character familiar with astronomy) will be aware that new moons lessens a caster's power but open his minds to new insights, while a full moon strengthens the caster's potency but narrows his focus. In game terms, drinking from the Moon Pool has the following effects:

"+x caster level" means that, for spells that have variable effects based on level (e.g. fireball), the caster is treated as the designated level "x" higher than he actually is. "+1 spell" means that the character gains an additional spell of the type indicated (lowest/highest level) for the duration the Moon Pool's infused water is in effect. Obviously, effects stated as a penalty (e.g. "-1 caster level") function in reverse.

A character who drinks from the Moon Pool must make a saving throw versus Spells. Success indicates that the effect listed above is operative, according to the current phase of the moon. The effect lasts for a number of days equal to 1 plus the difference between the saving throw number and the number rolled by the player for his character. For example, a 6th-level mage requires a 12 to save against Spells. If his player rolls 14, the appropriate effect lasts for 3 days. Failure means that the appropriate effect is not operative and subsequent drinks from the Moon Pool will have no effect for a number of days equal to the amount by which

the character failed his saving throw. For that matter, while one effect is operative, subsequent drinks provide no additional effect, good or bad. Finally, Moon Pool effects cannot be dispelled by any known means; a character who has drunk from its waters must wait until the appropriate number of days have passed before its effects will fade.

If characters scale up the walls around the Pool to reach the opening in the ceiling overhead, they find it is actually the mouth of a vertical tunnel just big enough for a human to squeeze through. This tunnel ascends another 50' upward, eventually terminating in a narrow crevasse on the mountain face overlooking the Stone-Wrought Stairs. While the Perimeter barrier was activated, only moonlight could pass through the shaft, but with the Perimeter's deactivation the shaft to the Moon Pool became an unguarded and little-traveled entrance into Dwimmermount. See *Chapter 6*, *Overview of the Dungeon* (p. 73), for details on the arcane barrier.

29. Fungal Cave

This cave is dark and damp. A powerful scent of mold and mildew emanates from it, alerting attentive characters to its inhabitants—three shriekers—which will react to light within 60 feet of their

location. The shriekers were placed by the kobolds along the southernmost wall of the cave.

Shriekers (3) [AL N, MV 9' (3'), AC 2, HD 3, HP 12, 11, 8, #AT 0, DG 0, SV F1, ML N/A]

30. Entrance Cave

This cave is accessible only by means of the Stone-Wrought Stairs, a cunningly-carved flight of steps on the side of Dwimmermount's exterior that is nearly invisible to any but dwarven eyes. The Stone-Wrought Stairs are found at the terminus of a precarious trail along the windward side of the mountain. When the Perimeter barrier was activated passage from the Stairs into the Entrance Cave was blocked by a *wall of force* through which only dwarves could pass, but now that now that the Perimeter barrier is deactivated, anyone can walk freely from the Stairs into the Entrance Cave. The demonic Spawn of Arach-Nacha slipped in through this entrance and corrupted its dwarven guardian, Guran.

For centuries, Dwimmermount's Perimeter barrier had sealed this entrance off from all save dwarves, who used it in small numbers to reinforce the custodians within. With the Perimeter barrier now

down, the cave is readily accessible to intruders, and indeed shows evidence of recent visitors. (See *Chapter 6, Overview of the Dungeon*, p. 73, for details on the arcane barrier.) There are blood stains on the stone floor and the recently-deceased bodies of a man wearing shattered (and therefore unusable) plate armor and a woman wearing chain mail (which is still in good shape). There is a sword near the body of the man and a mace by that of the woman; both weapons are serviceable. The bodies show evidence of having been punctured by many arrows and there are some broken arrow shafts scattered about the cave. The only other item of value in the cave is a lantern, still in working condition.

31. Ossuary Cave

This cave is covered in bones, mostly those of rats and other vermin, but keen observers will notice the bones of men and other humanoid beings amongst the collection. Many of these bones have been broken or crushed and many show evidence of having been gnawed. This is where the kobolds occupying the nearby caves dispose of their refuse. They also hope that it might cause would-be intruders to think twice before venturing further.

32. Ambush

This cave contains ten kobolds lying in wait in wait for intruders. They will hide in the shadows of the westernmost portion of the cave, thereby increasing their chance of surprise to 1-3 on 1d6. If they surprise their opponents, the kobolds will open fire with arrows and continue to use missiles until their opponents get within melee range. If the situation turns against them, they will retreat into the Storage Cave (Room 33) and then the Dwarf Cemetery (Room 34). Each kobold carries 8 cp.

Kobolds (10) [AL C, MV 60' (20'), AC 2 (leather), HD 1d4 hp, HP 4 (×3), 3 (×5), 2 (x2), #AT 1, DG 1d6-1 (short bows & short swords), SV 0 LH, ML -2]

33. Storage Cave

This cave contains five barrels of oil and two barrels of sand, both of which are used by the kobolds in their activities within Dwimmermount.

34. Dwarven Cemetery

This cave contains twenty-seven finely-carved statues of dwarves. Tragically, the statues are actually the stillborn "sons" of dwarves who participated in the building of Dwimmermount centuries ago. The mad dwarf Guran (Room 40) has been slowly animating these statues as kobolds through the magic of Arach-Nacha (Room 41). Left unchecked, Guran will animate another 3d6 kobolds per week until the cemetery is emptied of statues.

The cave is currently occupied by eight kobolds, each of whom carries 14 cp.

Kobolds (8) [AL C, MV 60' (20'), AC 2 (leather), HD 1d4 hp, HP 4, 3 (×2), 2 (×3), 1 (×2), #AT 1, DG 1d6-1 (spears), SV 0 LH, ML -2]

35. Reliquary

Hidden in a natural alcove of this small cave is a small brass box containing a bit of yellowish matter that is in fact a *holy phalange*—the skeletal tip of a finger a Lawful cleric martyred at the hands of the cult of Turms Termax (see *Appendix A*, *New Magic Items*, p. 328). If subject to *detect magic*, the *phalange* will radiate strongly.

36. Shrine to Tyche

This cave was used by Thulian soldiers as a secret shrine to Tyche. The shrine consists of a roughly-hewn bas relief of the goddess, her hands outstretched with the palms upward. In her palms are 82 gold coins, some of them quite old. If anyone adds another gold piece to the collection, he gains a boon, the Blessing of Tyche (+2 bonus to all saving throws) for the next 24 hours. Like all boons, this blessing can only be received once per character. See *Chapter 6, Overview of the Dungeon* (p. 84), for more information on boons from the gods.

If anyone attempts to take even a single coin from the shrine, large rocks will fall from the ceiling onto the perpetrator (and only the perpetrator). The falling rocks will deal 2d6 points of damage, or half that if the perpetrator makes a successful saving throw versus Blast. The shrine radiates magic, and its trap miraculously resets should it be activated. The kobolds avoid this shrine out of fear of the Lawful goddess.

37. Azoth Spring

In the southwestern portion of this cave, a silvery-black, oily liquid bubbles up from a tiny spring in the floor. There is a small pool of this liquid, surrounded by a hardened layer of the stuff. The liquid is the magical substance called azoth (see

Appendix F, Azoth, p. 393). The small pool holds about one gallon (128 ounces) of unrefined azoth. Another ounce trickles forth every turn. The azoth is evaporating into the air at about the same rate so the pool is no longer growing. If, through some strange magic, the characters descend down the spring into Dwimmermount's azoth reservoirs, see Chapter 6, Overview of the Dungeon (p. 85).

38. Kobold Bulwark

This cave contains 16 kobolds, who in addition their usual weapons are armed with flasks of oil that they will use as missile weapons against intruders. These kobolds are fanatically devoted to the Spawn of Arach-Nacha and will use every tool available to them to slay those who threaten the spider demon. If no other option exists, they will retreat to the adjacent cave (Room 39) and call upon the crab spiders there to aid them. Each kobold carries 9 cp.

Kobolds (16) [AL C, MV 60' (20'), AC 2 (leather), HD 1d4 hp, HP 4 (×3), 3 (×8), 2 (×3), 1 (×2), #AT 1, DG 1d6-1 (short bows & short swords), SV 0 LH, ML -2]

39. Spider Guardians

This cave is home to the Spawn of Arach-Nacha's "honor guard," four crab spiders that immediately attack any non-kobolds that enter it. Scattered about the room are 65 cp.

Crab Spiders (4) [AL N, MV 120' (40'), AC 2, HD 2, hp 13, 11, 9 (×2), #AT 1, DG 1d8 + poison, SV F2, ML -1]

40. Chief of the Kobolds

In this large cavern an insane dwarf, Guran, has set himself up as chief of the kobolds of Dwimmermount. Guran was once a proud custodian of The Manufactory (Level 6B). Descended from a long and storied line of dwarves, he fell into despair when his own "son" was stillborn. While interring the inert statue in the Dwarven Cemetery (Room 34 on Level 1), Guran was approached by the Spawn of Arach-Nacha, which offered the grief-stricken dwarf the power to animate his "son" and other inert dwarves in exchange for pledging his allegiance to the demon prince of spiders. The bargain was struck, but when the inert statues animated as kobolds, Guran's grip on sanity broke and he descended into madness and chaos.

Mad as he is, Guran is no fool and will make every effort to flee should events turn against him. He is protected by six kobolds plus his "pet" crab spider.

Guran (1) [AL C, MV 60' (20'), AC 5 (chain mail +1), HD Dv2, hp 16, #AT 1, D 1d8+2 (war hammer +1), SV Dv2, ML 0; Proficiencies: Berserkergang, Engineering]

Kobold Guards (6) [AL C, MV 60' (20'), AC 2 (leather), HD 1, HP 8 (×6), #AT 1, DG 1d6 (spears), SV F1, ML 0]

Crab Spider (1) [AL N, MV 120' (40'), AC 2, HD 2, hp 10, #AT 1, DG 1d8 + poison, SV F2, ML ×1]

Several chests contain the entirety of Guran's wealth—6,000 cp in old Thulian coin, looted from various troves throughout the Path of Mavors. Guran's *chain mail +1* and *war hammer +1* are both of dwarven make, forged from adamantine steel.

41. The Spawn of Arach-Nacha

This large chamber is the lair of the demonic spider known only as the Spawn of Arach-Nacha (see Appendix C, New Monsters, p. 366). The Spawn tricked the dwarf Guran (Room 40) into pledging himself to its demonic master in exchange for the power to transform inert dwarves into kobolds. The Spawn now uses Guran and the kobolds to extend the reach of its master into Dwimmermount. If confronted by characters powerful enough to pose a threat, the Spawn will attempt to seduce them to its service with similar promises of power from its evil lord. It has a seductive voice that belies its hideous appearance, and an intuitive sense of what appeals to mortals. Whether the Spawn's promises and pacts are mere lies or will be honored by Arach-Nacha is left for the Judge to decide—but certainly Chaos takes an active interest in Dwimmermount...

The Spawn possesses little treasure of its own (two gems, malachite and zircon, worth 10 gp and 100 gp respectively), but secreted in its lair is a weird metal disc with a cross-and-circle symbol on it that can be used to operate the Elevator (Room 56).

Spawn of Arach-Nacha (1) [AL C, MV 120' (40')/180' (60'), AC 4, HD 3, hp 20, #AT 1, DG 2d8 + poison, SV F3, ML +2]

42. Passageway

The walls of this dusty area are adorned with battered mosaics that depict Thulian military triumphs. One mosaic has been recently defaced with graffiti. In Low Thulian (Common), it reads "screw the rats! I'm going home! Grumpy Dwarf". There is no other trace of the cranky graffiti artist.

43. Storeroom

This room contains numerous wooden crates, most of which are rotting and empty. However, one of them contains a suit of *Thulian chain* (see *Appendix A, New Magic Items*, p. 333).

44. Checkpoint

This room appears to have been a guard room, but now its furniture and weapons racks lie shattered on the floor. The southernmost door is made of iron, locked, and trapped. Anyone who attempts to open the door without deactivating the trap is struck by a poisonous dart that inflicts 1d4 damage and requires a saving throw versus Poison to avoid death 1d4 rounds later.

45. Stairs Down

This room—and the corridor leading to it—are noticeably moist and musty. The two 10 foot squares near the south wall are covered in yellow mold. The orcs have cultivated a very narrow trail through the yellow mold, but this will be evident only with careful observation and a successful roll to find secret doors.

Yellow mold (2) [AL N, MV 0, AC always hit, HD 2, hp 12 (×2), #AT Spores, D 1d6 + suffocation, SV F2, ML N/A]

The stairs past the mold lead down to the Atrium (Room 1) of The Laboratory (Level 2A). If the 5 orc guards there hear commotion in this room, they will begin to gather reinforcements in preparation for the characters' descent to their level.

46. Storeroom

The wooden door to this room is partially gnawed through, as it is the nest for nine giant rats. In addition to the rats, the room itself contains broken pieces of wood, straw, string, and other random detritus that these vermin have collected and brought here. Amidst this rubbish can be found a sack with 2,000 cp, an expensive comb (30 gp), a gold necklace (200 gp), and a jeweled pin (800 gp).

A disgusted adventurer has left graffiti, scrawled in blood, on the south wall. In Low Thulian (Common) it reads "I explored Dwimmermount and all I found was 2,000 lousy coppers - Sir the Fist". An arrow points downward to the rubbish containing the coin sack.

Giant Rats (9) [AL N, MV 120' (40'), AC 2, HD 1d4 hp, hp 3 (×3), 2 (×3), 1 (×3), #AT 1, D 1d3 + disease, SV F1, ML 0]

47. Map Room

This circular room contains mosaics on the floors, walls, and ceiling depicting the Thulian Empire at its height. Special emphasis is given to forts and other military locales, with Dwimmermount being located prominently in the center of the floor and Lloraec (Hex 0825) and Winterburg (Hex 2206) visible to the south-west and north-west respectively. The room is currently occupied by six orcs, explorers from The Laboratory (Level 2A). In their possession is a large sack containing 1,900 gp and seven gems: four rhodochrosites (50 gp each), a sardonyx (75 gp), a rock crystal (100 gp), and a star rose quartz (100 gp).

Orcs (6) [AL C, MV 120' (40'), AC 3 (scale), HD 1, hp 8, 7, 6, 5 (×2), 1, #AT 1, D 1d8 (spears), SV F1, ML +2]

48. Meeting Room

A large hardwood table is still present in this room, but any of the chairs that were once placed around it have long since been reduced to splinters. There are the remains of tapestries hanging on the walls; what was depicted on the tapestries is indiscernible.

49. Commandant's Quarters

This large room contains a heavy wooden desk, along with some smaller tables, some chairs, and some shelves. Unlike most of the rooms on this level, all of this furniture is still in one piece and the room is completely free of dust or cobwebs. Except for the fact that the desk and shelves are bereft of any contents, the room looks as if it has not changed since the days of Dwimmermount's occupation. *Detect magic* reveals a weird, but powerful magical radiation in this room.

Characters who are here for more than a few minutes may notice that time seemingly does not pass within its walls. Torches stay lit, but do not grow shorter, for example, and spell durations are suspended while in the room, only resuming after the characters leave. The same holds true for diseases and deleterious effects.

50. Secret Room

The two secret doors that provide entrance to this room are stone panels that swivel around their center axis. The hidden room within is "protected" by an illusion of a demonic humanoid, dressed in black armor of Eldritch make and wielding a vicious, flaming blade. The illusion is dispelled with a single successful hit against AC 0, but until then the "demon" fights as a 4 HD creature and deals real

damage (1d8 per hit) to any target it strikes who fails a saving throw versus Spells. If dispelled, the illusion will reappear after 24 hours have elapsed.

51. Hidden Treasure Room

This room contains 600 sp, pieces of hematite (10 gp), azurite (25 gp), rock crystal (100 gp), and jasper (250 gp), and a *rod of opening* (see *Appendix A, New Magic Items*, p. 331) with eight charges. The treasure is scattered across the floor, the residue of a large trove long ago plundered.

52. Dining Area

This room contains a long, iron-reinforced oak table and the shattered remains of many chairs. There is nothing else of interest in this room.

53. Kitchen

This room was obviously once used as a kitchen for preparing simple meals. Iron-reinforced oak tables and counters are present, along with some empty crates and sacks that formerly contained foodstuffs. Presently there are seven fire beetles in this room. The little food that remained here did nothing to satisfy the beetles' hunger, and they will certainly attack any living creatures that resemble prev.

Fire Beetles (7) [AL N, MV 120' (40'), AC 5, HD 1+2, hp 10, 9 (\times 2), 8 (\times 2), 7, 5, #AT 1, D 2d4, SV F1, ML -1]

54. Enclosure

This open area contains six "bubbles" of some light, silvery-black material floating in the room. Astute characters will notice that in the southwest corner of the room there is a large crack in the floor from which a silvery-black liquid occasionally erupts—the liquid is azoth, the same substance found in the Azoth Spring (Room 37). Sometimes the liquid forms little bubbles that pop with a surprisingly loud noise, leaving behind a metallic tang in the air and a cloud of smoke. These six bubbles are made of the same material and will pop, each dealing 1d6 damage in a 5 foot radius if a character gets within 5 feet of it and fails a saving throw versus Blast. There is a 2 in 6 chance that the explosion of one bubble will set off another one, which also has a chance to set off another, and so on, until either the chain reaction stops or all six bubbles have exploded. See Appendix F, Azoth (p. 393), for details on azoth. See Chapter 6, Overview of the Dungeon (p. 73), if the characters somehow pass through the crack into the azoth reservoirs.

55. Latrine

This large chamber served as a latrine for the inhabitants of this level. Waste is funneled down through pipes into lower levels of the fortress. These pipes are too narrow for any but the smallest creatures to traverse (e.g. normal rats, insects, etc.). See *Chapter 6, Overview of the Dungeon* (p. 73), for details on traversing the water pipes between the levels. Other than the toilets, there is nothing else in this room.

56. Elevator

The doors to this large circular room are Ancient blast doors of white nephelite, covered with soot and grit. Cleaning off the soot and grit will reveal the same cross-and-circle symbol that appears on the key disk in the possession of the Spawn of Arach-Nacha (Room 41). The blast doors are magically sealed, requiring the use of either a *rod of opening* (see *Appendix A*, *New Magic Items*, p. 331) or a *knock* spell to open. Beyond the doors is a 20 foot diameter elevator of adamantine steel and nephelite. The elevator leads down to Room 13 of The Halls of Lesser Secrets (Level 4) and up to Room 1 of The Divinitarium (Level 0).

When the characters enter the room, the elevator's doors will be closed. They can be opened with a roll to force doors or by simultaneously pressing both the cross and circle on the key disk. If power has been restored to the elevator, then using the key disk will summon the elevator platform. From there, pressing the key disk's cross causes the elevator platform to descend while pressing its circle causes the elevator platform to ascend.

If the power has not been restored and the key disk is used, or if the elevator doors are opened without a key disk, then the elevator platform will not be summoned. Instead the doors will open onto a vertical shaft whose walls glisten from walls glisten from the transit of various Kythirean slimes and are festooned with clumps of fungi and vegetation from the Green Planet. Daring parties may, of course, fly, levitate, or climb up and down this 250 foot long shaft.

Note that power can be restored to the elevator via the machinery of the Elevator Control Room (Room 14 of Level 4) or through the operation of the Great Machine (Room 40 of The Manufactory, Level 6B).

57. Barracks

This former barracks is now home to six giant centipedes, which have taken to nesting in the remains of the wooden cots and crates that once filled the room.

Giant Centipedes (6) [AL N, MV 60' (20'), AC 0, HD 1d4 hp, hp 3 (×3), 2, 1 (×2), #AT 1, D poison, SV 0 LH, ML -1]

58. Pumping Station

This chamber contains a mass of bronze, areonite, and nephelite pipes and machinery, as well as a variety of spigots and basins. They are still operational, though disuse has made the valves hard to turn and the water that flows from the spigots is somewhat rusty and discolored (but still potable). As with the Latrine (Room 55), tiny creatures might traverse these pipes. See *Chapter 6*, *Overview of the Dungeon* (p. 73), for where the pipes can lead.

59. Recreation Area

This room is empty of any real furnishings or inhabitants, save for a splintered and moldy table and benches in its center. Seated at the table are faint apparitions of Thulian soldiers playing *zatrikio*, a strategy game much beloved by both officers and common soldiers.

Like those in the Antechamber (Room 14), the two apparitions are psychic echoes left behind by those who died when Dwimmermount was sealed off from the outside world. As such, the apparitions take no notice of anyone who enters the room and continue to play their game regardless of what transpires around them. Characters who watch the apparitions for long will realize that they are arguing over a particular move one of them has made. Should a character place the zatrikio handbook found in the Library (Room 19), on the game table, one of the apparitions will produce a spectral version of the book and end the debate, after which both will vanish. The character who assisted the apparitions will gain a boon, the Blessing of Asana (+1 to initiative and AC), for the next 24 hours. See Chapter 6, Overview of the Dungeon (p. 73), for more information on boons from the gods.

60. Lounge

Besides the usual assortment of splintered furnishings and random detritus, this dusty chamber is empty.

61. Waiting Room

The wooden furniture that was once placed in this room was long ago reduced to shattered fragments. In the room's center is a 4 foot tall pillar made of black basalt on which are inscribed runes whose meaning is unknown even to contemporary mages and other students of arcane lore. The pillar radiates magic under *detect magic*, however, and characters who learn the language of the Great Ancients in the Hieroglyph Room (Room 19) of The Halls of Greater Secrets (Level 5) can identify them as runes of enslavement and passivity. Any non-human (such as

Level 47

49

a dwarf, elf, or goblin) who touches the pillar even briefly must make a saving throw versus Spells or find themselves rendered completely docile for 1d6 turns. While in this state, they will not attack another creature even to defend themselves. This effect can be removed sooner through remove curse or similar spells, at the Judge's discretion.

The wandering monsters that prowl this level are aware of the pillar's tranquilizing effects and regularly visit it in search of easy prey. The Judge should make an encounter throw every turn the characters linger in this room.

62. Audience Chamber

There is a small dais on the southern part of this room, on which rests a fragile mahogany throne. The walls are covered in rotting tapestries on which the symbolic spear of Mavors can be seen. Also on the walls are several rusty (and therefore useless) shields.

63. Guard Post

Empty weapons racks and shattered furniture abound in this room, which is occupied by six orcs from the next level, The Laboratory (Level 2A).

Orcs (6) [ALC, MV 120' (40'), AC 3 (scale), HD 1, hp 7, 5 (×3), 4, 3, #AT 1, D 1d8 (spears), SV F1, ML +2]

The orcs have a total of 1,000 gp between them - pay for their dangerous guard duty.

64. Chamber of the Face

This large room once contained several rows of wooden benches bolted to the floor. Some of them have since been removed, but two remain and are in remarkably good condition. On the northern wall of the room is a sculpture of a bearded man's face made from rusty metal. If anyone gets within 5 feet of the face, its mouth begins to move slight-

ly and unintelligible sounds begin to emanate from it. Should anyone apply oil, grease, or some other lubricant to the corners of the face's mouth, it opens more widely and speaks clearly in High Thulian. "Ask a question, if you have one. I'll answer truthfully, but then you're done."

Should a character actually question the face in High Thulian, the face will answer truthfully to the best of its knowledge. The face will only answer one question per character. The face knows only about this level of Dwimmermount and its information is out of date, so the Judge should bear this in mind when crafting a reply. If the face does not know the answer to a question posed, it will admit as such, but such a question still counts as the one it will answer for that character. If asked any more questions after the first, it will reply, again in High Thulian, "Go away; I shall not answer you again today." A character can query the face again after 24 hours have elapsed.

65. Holding Cell

This room once served as a temporary holding cell for prisoners. The room is empty at present, save for a pair of manacles, a wooden bucket, and a carpet of dust. The door to the room is locked and the key long lost.

66. Theater

This room was used to stage propagandist plays and speeches. The apse in the western portion of the room was once separated by a curtain; only tatters of it remain. The eastern wall is covered in fractured mosaics that depicted military scenes of Thulian conquest.

67. Reception Room

This room contains a hardwood desk and has metal shelves all along its walls. It is currently occupied by seven orcs from The Laboratory (Level 2A).

Orcs (7) [AL C, MV 120' (40'), AC 3 (scale), HD 1, hp 8 (×2), 7, 6 (×3), 1 (×2), #AT 1, D 1d8 (spears), SV F1, ML +2]

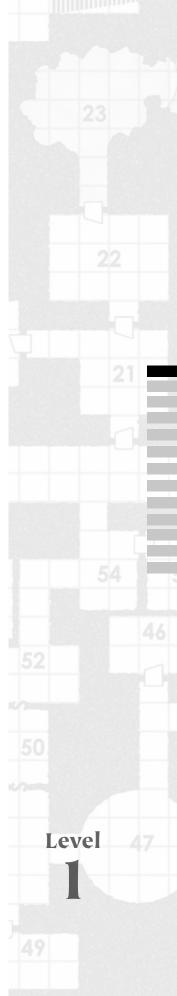

68. Magician's Quarters

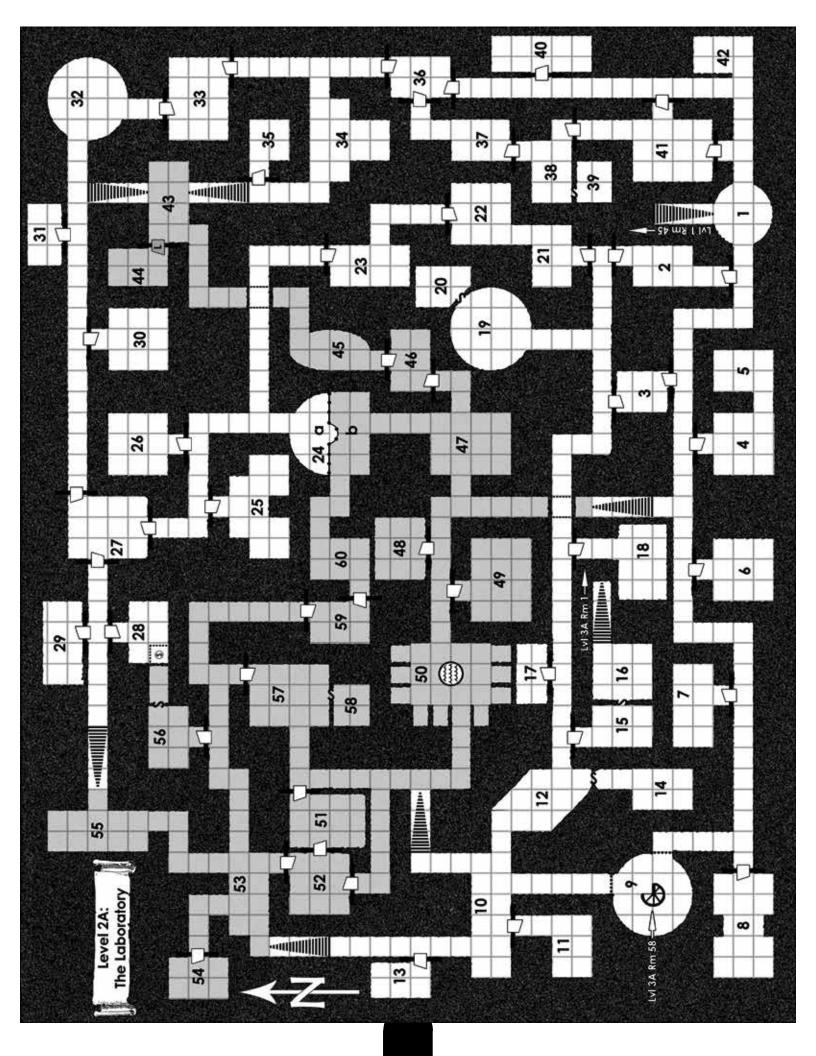

This room was once used a Termaxian mage, as evidenced by the arcane symbols on the smashed mosaics that cover its walls. There are iron shelves on some of the walls as well, along with iron cabinets. The room now holds four orcs who are interrogating a dwarf named Balfar.

Orcs (4) [AL C, MV 120' (40'), AC 3 (scale), HD 1, hp 8, 6, 4 (×2), #AT 1, D 1d8 (spears), SV F1, ML +2]

Balfar (1) [AL L, MV 60' (20'), AC 0, HD Dvl, hp 3 (7), #AT 1, D by weapon +1, SV Dvl, ML 0; Proficiencies: Dwarven Brewing, Gambling]

Balfar entered Dwimmermount a few days ago with a party of fellow dwarves, following rumors that there might be a dwarf cemetery within the mountain fortress. He and his companions never found the cemetery, but were instead ambushed by orcs. Two of his friends died in the Trophy Room (Room 7) and another died in the Armory (Room 16). Two others survive in captivity in Room 22 of The Laboratory (Level 2A), but he is unaware of this. Balfar will happily pay the player characters 500 gp if they help him to escape back to his home in Muntburg.

The Laboratory

Overview of The Laboratory

HE LABORATORY was excavated by the Eld during the Third Era to conduct sinister and sorcerous experiments. Foremost of these was the breeding of monstrous life forms through use of the Essence Machines (Room 51) and Pool of Life (Room 50), a program which was continued by their Thulian successors and ultimately led to the creation of the beastmen races. The Eld also cultivated crystalline lifeforms (see Room 8), engineered stasis tubes (see Room 49), and experimented with the effect of azoth on plant life (Rooms 45-47). Because these programs were all continued by the Thulians and Termaxians, The Laboratory is more intact than Level 1. As such, its walls, floor, and ceiling show the flawlessly smooth and mathematically perfect excavation of the Eld. The doors are primarily oak reinforced with areonite, unless otherwise noted. The ceilings are punctured at twenty-foot intervals by fist-sized indentations fitted with orichalcum sockets. 10% of these indentations contain a broken glass orb, while the others are empty. The indentations can be used to place glow bulbs (see Appendix A, New Magic Items, p. 327).

WANDERING MONSTERS OF THE LABORATORY

Dice Roll	Monster
1	Orcs (2-8)
2	Gray Ooze (1)
3	Gnolls (1-6)
4	Zombies (2-8)
5	Ghouls (1-6)
6	Spitting Beetle (1-8)
7	Green Slime (1)
8	Giant Rats (3-18)
9	Carcass Scavenger (1-3)
10	NPC Party (5-8)
11	Gelatinous Cube (1)
12	Black Widow Spiders (1-3)

Level

2A

1. Atrium

The walls of this circular room have numerous steel hooks on which hang weapons and shields. The room is currently occupied by five orc guards. As soon as they encounter any opposition, the orcs will send their weakest member to the Orc Lair (Room 41) to gather reinforcements. If the remaining orcs feel that they are losing they will flee there as well.

Orc Guards (5) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 6, 5, 4, 2, 1, #AT 1, DG 1d8 (battle axes), SV F1, ML +2]

The stairs here ascend up to Room 45 of The Path of Mayors (Level 1).

2. Storeroom

This room contains areonite shelving units bolted to the walls. Most of the shelves are completely empty, though a few hold ceramic jars filled with differently colored liquids. Because the ceramic is opaque, roll 1d4 to determine the contents of any jar a character wishes to open:

- 1. Blue: Acts as a potion of poison
- 2. Green: Acts as a potion of healing
- 3. Yellow: Acts as a potion of gaseous form
- 4. Red: Tastes horrible, but otherwise has no effect

There are a total of 3d4 liquid-filled jars on the shelves the first time the characters enter the room. Should they leave any jars behind when they depart, 1d4 jars will have been removed by other dungeon denizens each time they visit thereafter, until none remain.

3. Sandpit

The floor of this room is almost entirely covered by fine white sand. The sand is piled highest in the southwest corner, reaching approximately 2 feet in height. Elsewhere, the sand is only a few inches in depth, with occasional piles of greater depth scattered about the room. There is a wooden-hafted metal shovel buried in the sand along the eastern wall. Also buried in the sand is a large number of silver coins (500 sp).

4. Water Tanks

The doors to this room are adamantine steel hatches. The room contains six large vertical water tanks, three along the western wall, one in the middle of the southern wall, and two along the eastern wall. Each tank is about 5 feet tall and 3.25 feet in diameter, holding 400 gallons. All six tanks are made of vitreum reinforced with areonite, and all except the one along the southern wall are intact and full of salt water. These tanks have a locked, sliding areonite door set low into the glass. If opened, the water will spill out into the room.

The tank along the southern wall has been shattered, vitreum shards littering the area near it, but there is no evidence of any water, suggesting it has been some time since the breakage occurred.

5. Trapped Tank

This room contains another 400-gallon tank. However, unlike the Water Tanks (Room 4), the tank in this room is larger, being nearly 10 feet in diameter and reaching almost to the ceiling (approximately 7 feet high). In addition, this tank is made from a smoked vitreum that obscures its actual contents—a large gray ooze! The ooze will attack anyone who opens the sliding metal door near the tank's base.

Gray Ooze (1) [AL N, MV 10' (3'), AC 1, HD 3, HP 23, #AT 1, DG 2d8, SV F2, ML N/A]

6. Office

The door to this room is made of areonite with engraved hepatizon fittings. The large room within was once well-appointed with furnishings made from expensive, heavy hardwood. Some of these, like the tables and chairs, have been smashed to pieces by an axe or similar weapon, but the desk remains unharmed. The desk has five drawers, four of which contain only dust and useless scraps of paper. The fifth drawer is locked and protected with a magical trap. The trap's runes can be detected by a thief, but can only be removed with dispel magic. If the trap is triggered, all characters within a 10' radius must make a saving throw versus Poison or be shrunk (as if by a potion of diminution) for 1d6 turns. Inside the trapped drawer is an arcane scroll with the spells protection from evil and web.

7. Supply Room

The door to this room is a locked adamantine steel hatch. Its interior is dusty and filled with a variety of supplies once used when the level was inhabited. These supplies include:

- A 200' coil of copper wire
- A box of silver spikes (20 in all—worth 1,000 gp)
- A box of wooden stakes (50)
- A stack of cast iron blocks (200)

- Six thick glass window panes
- A large chest containing glass jars, vials, alembics, and similar alchemical gear (collectively worth 125 gp)
- A jug of dried glue

8. Crystal Garden

The door to this room is made of areonite engraved with intricate crystalline patterns. The chamber beyond is filled with unnaturally large crystal growths in a wide variety of colors and shapes. The crystals cover most of the floor, all of the walls, and parts of the ceiling. In various places, the crystals seem to have almost crude humanoid shapes. In one particular instance, it looks like a well-carved human male dressed in armor and wielding a short sword and shield. However, the figure is missing its head and a close examination of its neck suggests that its head was cleanly cut from it. Looking around the room, the characters can find the head, which

depicts a bearded man, lying on the floor. The head is somewhat worse for wear, but is largely intact. If placed upon the shoulders of the figure, it almost instantaneously adheres to it and springs to life as a crystal animated statue. If the character who restored the statue is wearing a holy symbol of a Lawful god, such as the symbol of Tenen found in the Storeroom (Room 13), the crystal statue will treat its restorer as its master and obey his commands; otherwise the statue will attack its restorer and his allies. In either case, the magics which powered the statue have faded with age, and the statue will become inert after 1d6 turns.

Crystal Animated Statue (1) [AL L, MV 90' (30'), AC 5, HD 3, HP 13, #AT 2, DG 1d6/1d6, SV F3, ML N/A]

The crystals in the room are of an unknown sort, but are worth 1,000 gp per stone to jewelers and sages. Seven stones in total can be harvested.

Entrance to this room is blocked by two gates made of steel bars, cutting it off from corridors to the north and south. Characters with high Strength may attempt to force the gates open, though the chance is slight. For a Strength of 12-13, the chance is 5%; for 14-15, the chance is 10%; for 16-17, the chance is 15%; and for 18, the chance is 20%. Alternately, the characters can open the gates from the Control Room (Room 14).

If they can be reached, the circular stairs in this room descend to the Stairwell (Room 58) on The House of Portals (Level 3A) below.

10. Patrol Area

This large area is patrolled by three gnolls who will flee to their camp (Room 12) if outnumbered.

Gnolls (3) [AL C, MV 90' (30'), AC 4 (scale & natural), HD 2, HP 11, 9, 6, #AT 1, DG 1d8+1 (battle axes), SV F2, ML 0]

Between them, the gnolls have collected several gems worth 360 gp: a banded agate (50 gp), a sardonyx (75 gp), a turquoise (10 gp), a moonstone (75 gp), an obsidian (50 gp), and a citrine (100 gp).

11. Cage Room

This room contains a large number of steel cages, stacked haphazardly along its walls. Several of the cages contain the skeletal remains of small humanoid creatures of indeterminate type.

12. Gnoll Camp

This chamber contains seven recently-spawned gnolls reclining on old, splintered work benches. Sent to explore this level on the order of their creator, the magician Varazes (Room 50), they have so far met with little success, owing to the many dangers of The Laboratory, as well as fierce opposition from the more numerous orcs.

Gnolls (6) [AL C, MV 90' (30'), AC 4 (scale & natural), HD 2, HP 14, 11, 9(×2), 6, 5, #AT 1, DG 1d8+1 (battle axes), SV F2, ML 0]

Gnoll Champion (1) [AL C, MV 90' (30'), AC 5 (chain mail), HD 3, HP 16, #AT 1, DG 1d8+2 (battle axe), SV F3, ML 0]

The gnolls have amassed some treasure in their wanderings, which the leader keeps in a large corded sack: 2,000 cp, a silver chalice (200 gp), a pendant (200 gp), a jeweled belt (400 gp), a golden

arm band (1,300 gp), and a coronet (1,700 gp). The gnolls are ignorant of the secret door, a revolving stone panel in the south wall that leads to the Control Room (Room 14).

13. Storeroom

The ordinary oak door to this room is locked. Its interior contains a dozen wooden barrels, many of which have either rotted or been broken, spilling their contents on the ground. These contents consist of dried fruits and salted meat, none of which is edible now. Hanging on the west wall is a holy symbol of Tenen, god of craftsmen. The symbol is a bronze 6-spoked wheel and is worth 25gp.

14. Control Room

This secret room contains a hulking, baroque apparatus of red brass, with a variety of switches, dials, and levers. Among these are the levers that raise and lower the gates to the Stairwell (Room 9), both currently lowered; the dial that raises and lowers the barrier surrounding The Pool of Life (Room 50), currently lowered; and switches that control the locks on the doors to the Pump Room (Room 48) and the Stasis Chamber (Room 49), both currently locked. Using any of these controls causes a light to brighten on a nearby panel, indicating when a door, gate, or barrier is in a locked, closed, or lowered position. However, operating the machinery creates a large amount of noise that echoes through the level. This puts the monsters on the level on alert for the next hour (6 turns). During this time, reduce the chance of monsters being surprised by an encounter to 1 in 6, and increase the chance of encountering wandering monsters to 2 in 6 every 20 minutes.

15. Archive

The door to the Archive is areonite. The phrase "from ignorance to knowledge; from knowledge to strength" is engraved in Eldritch on the door leaf. The walls of the room within are covered with bookshelves, most of which are filled with moldering scrolls and codices that crumble into worthless, illegible fragments if touched. However, if the characters spend one turn searching amongst the moldering ones they will discover two items of value. The first is a scroll of ward against undead. The second is a treasure map written in a cipher (requiring read languages to decipher) that leads to a dwarven vault containing 20,000 gp located in the Hearthstone Mountains (see p. 52).

A false bookshelf on the east wall conceals the entrance to the Hidden Staircase (Room 16).

Chapter

16. Hidden Staircase

This room was once a sentry post guarding the stairs to the Foyer (Room 1) of The House of Portals (Level 3A). It is now inhabited by six shadows. They attack anyone who enters the room who does not have on his person one of the *Termaxian passkeys* (see *Appendix A*, *New Magic Items*, p. 333) scattered throughout the dungeon. If a passkey is presented, the shadows will withdraw, disappearing from sight, but lying in wait for the opportunity to attack later should the passkey be forgotten.

Shadow (6) [AL C, MV 90' (30'), AC 2, HD 2+2, HP 13(x2), 12, 11(x3), #AT 1, DG 1d4 + strength drain, SV F2, ML +4]

17. Workroom

This room once contained a variety of wooden tables, stools, and shelves, most of which have long since rotted away or been smashed. Scattered amongst the debris can be found iron and bronze implements and tools, such as hammers, picks, and saws. The room is damp, owing to some overflow from The Pool of Life (Room 50). This overflow has encouraged the growth of a patch of green slime on the floor that will cling to the first person who steps in the room without specifically looking at the floor to see if it is clear of any obstacles.

Green Slime (1) [AL N, MV 3' (1'), AC NA, no roll needed, HD 2, HP 16, #AT 1, DG special, SV F1, ML N/A]

18. Lounge

This now-empty room once contained wooden tables and chairs, now reduced to debris. The walls are painted with faded frescoes depicting scenes of magical research, including what appears to be the creation of monsters from animals. Amidst the debris can be found several tankards and drinking cups. One tankard, made from silver, is worth 50 gp; the whole set (weighing 14 lbs.) is worth 250 gp.

19. Orrery

This circular room contains a large (10 feet diameter) orrery of adamantine steel, lacquered oak, and precious metals. The device is a scale model of Telluria, its moon, Ioun, and the other planets with which it shares its solar system, all enclosed in a transparent, vitreum sphere on which are situated numerous golden symbols that seem to represent stars. Also situated on the outside of the sphere are tiny representations of what look like castles or fortresses. These representations are all associated

with a star symbol and number a dozen in all. The orrery is currently inoperable, as its power source has long since been depleted.

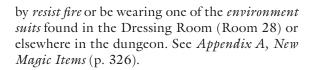

The orrery is bolted to the floor and too large to move. Its interior components are inaccessible without shattering the transparent sphere that encloses it. However, the hatch to its fuel cylinder can be opened by a thief with a successful roll to pick locks, exposing an empty vitreum cylinder. If this is replaced with the Thulian fuel cylinder in the Secret Storeroom (Room 20), the bodies of the orrery will immediately begin to rotate through their orbits. A drawing of these orbits would be worth 500 gp to an astrologer. In addition, activating the orrery earns the participating characters the Blessing of Asana, goddess of science, for the next 24 hours. The boon grants +1 to initiative and AC. See Chapter 6, Overview of the Dungeon (p. 73), for more information on boons from the gods.

Otherwise, the castle representations can be removed (with effort), as can the golden star symbols. There are 17 stars and 12 castles; each one is worth 5 gp purely for their inherent value, but ten times that amount to those with an interest in ancient Thulian technology. Removing the castles and stars from the orrery after it has been activated is impossible without shattering the sphere, and causes the loss of the Blessing in any case.

20. Secret Storeroom

Entrance to this hidden room is concealed behind an adamantine steel panel in the Orrery (Room 19). It contains a large collection of spare parts for the orrery—planets, stars, and so on. These can all be taken from the room and sold either for the metals from which they are made or for their value as historical objects. The whole set is worth 3,340 gp and weighs 84 lbs., with 24 pieces ranging in value from 5 to 500 gp each, depending on size.

The room also contains a large adamantine steel box with strange red symbols on its exterior. These symbols, if deciphered by a thief or through the use of a read languages spell, read "DANGER! Handle only with proper protection!" The box is warm to the touch and locked. If the lock is opened, the characters will find a vitreum cylinder containing the glowing silvery-black liquid known as azoth (see Appendix F, Azoth, p. 394). This is a Thulian fuel cylinder for the orrery (and other devices throughout the dungeon) and can be used to re-activate it. However, if handled without proper protection, anyone who touches the cylinder takes 6d6 damage (make a saving throw versus Blast for half damage). Safe handling of the cylinder requires the character to either be protected

21. Orc Captors

This area contains eight orcs who have captured a couple of unfortunate dwarves. The captives are kept next door (Room 22). Should the battle go against the orcs, they will attempt to exchange their lives for those of their captives.

Orcs (7) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 7, 5, 4, 3(×2), 2(×2), #AT 1, DG 1d8 (battle axes), SV F1, ML +2]

Orc Champion (1) [AL C, MV 120' (40'), AC 4 (chain mail), HD 1+1, HP 8, #AT 1, DG 1d8+1 (battle axe), SV F1, ML +2]

Other than the orcs, the room contains only old and moldy work benches, which the orcs like to sleep on. A hemp sack below one of the work benches holds the orc leader's treasure: 3,000 cp, a hematite (10 gp), a sardonyx (75 gp), an alexandrite (500 gp), a topaz (750 gp), and an amethyst (750 gp).

22. Dwarf Captives

This large, featureless area contains two dwarves who were captured by the orcs while exploring the dungeon. The dwarves, named Glandal and Thoon, descended into Dwimmermount from the Entrance Cave (Room 30) on The Path of Mavors (Level 1) in the company of six others. Their party fought their way past that level's denizens, suffering several casualties in the process (corpses of which can be found in Level 1, Rooms 6 and 16), before being captured by orcs ascending from The Laboratory (Level 2A). Glandal and Thoon are currently chained to the east wall and have suffered many indignities at the hands of their bestial captors.

Glandal (1) [AL L, MV 60' (20'), AC 0, HD Dv3, hp 3 (18), #AT 1, D by weapon +1, SV Dv3, ML 0; Proficiencies: Alertness, Caving, Endurance]

Thoon (1) [AL L, MV 60' (20'), AC 0, HD Dv2, hp 3 (12), #AT 1, D by weapon +1, SV Dv2, ML 0; Proficiencies: Dungeon Bashing, Mapping]

Neither dwarf has any weapons or armor or substantial knowledge of this level, though they remember much about The Path of Mavors (Level 1). They will gladly join the characters and assist them in further exploration, especially if the characters are willing to help them avenge their fallen comrades. Should they learn that their comrade Balfar (currently captive in Room 68 on Level 1) is alive, they will insist on rescuing him. If Balfar has already been rescued, all three dwarves will offer to serve the party as henchmen in gratitude for their rescue and reunion.

23. Smithy

This room is quite clearly a smithy of some sort, as evidenced by the forge and anvil located in the southern portion of the room. There are also three enclosed fire pits with copper pipes that go into the ceiling. A faint odor of smoke and charcoal still lingers.

The copper pipes carry exhaust from the fire pits upward through filters designed to stop even enemies *polymorphed* into oozes, and then reach the surface via carefully camouflaged chimneys. If the Perimeter barrier is sealed, these chimneys are blocked by its *wall of force*, which allows nothing to pass. If the Perimeter barrier is activated, the *wall of force* is still present, but it permits natural smoke to pass through. At the start of the campaign, the Perimeter barrier has been deactivated, and the chimneys can be passed through by any gaseous creature. See *Chapter 6*, *Overview of the Dungeon*, p. 73, for details on the arcane barrier.

24a. Balcony

This elevated area overlooks an Operating Room (Room 24b). The area contains two heavy wooden benches and a steel railing.

24b. Operating Room

Dominating this room is a large slab-like table made of red brass. The table possesses gears and cranks that allow it to be swiveled, elevated, and turned. The table also possesses leather restraints. There is evidence of blood or some other type of stain on the table and on the ground around it.

When the characters enter the room, they will come across a strange battle between a throghrin and a number of seemingly normal rats. The throghrin, owing to its regeneration ability and overall strength, has the upper hand, but the rats are fighting in a viciously coordinated manner. They are, in fact, sapient animals (see *Appendix C, New Monsters*, p. 364) descended from Termaxian lab rats. They have entered Dwimmermount to explore their kind's "birthplace" at the orders of their master, the Rat Boss of Adamas (see *Appendix C, New Monsters*, p. 364).

Throghrin (1) [AL C, MV 120' (40'), AC 3 (scale), HD 3, HP 15, #AT 1, DG 1d8 (sword), SV F3, ML +2]

Sapient Rats (15) [AL N, MV 60' (20'), AC 0, HD 1 hit point each, #AT 1 per 5 rats, DG 1d6 + disease, SV 0 LH, ML -3]

If the characters do not intervene, the throghrin will kill all the rats in fairly short order, after which it will turn on them. On the other hand, if the characters kill the throghrin, the rats will rush over toward them and bow in thanks for their assistance. Though they cannot speak Common, the rats are intelligent and can communicate fluently with anyone under the effects of *speak with animals*. They will happily provide fairly detailed information about many of the nearby rooms on this level, including the existence of the secret door leading to the Panic Room (Room 58), though they do not know how to open it. Despite their gratitude, the

rats will not join the party, explaining that they already owe allegiance to the Rat Boss. Even if the characters cannot verbally communicate with the rats, the sapient rats will nevertheless try to lead them toward the secret door to the Panic Room as a way of thanking them for their assistance.

25. Worship Area

This irregularly shaped room is decorated with mosaics depicting the life of Turms Termax the Thrice-Great, from his mastery of magic, alchemy, and astrology to his final apotheosis. There are six mosaics in all:

- 1. Turms standing at a lectern studiously reading a magical grimoire.
- 2. Turms gazing up at the heavens, with the red planet, green planet, and silver moon all visible above.
- 3. Turms, emerging from an alchemical

- 4. Turms, wearing resplendent robes decorated with three-pointed stars, preaching before a crowd. He is accompanied by his lover, Sarana, and surrounded by apostles and followers on all sides.
- 5. Turms prostrate on the headsman's block, a Thulian executioner poised to strike. His followers gaze in horror but the Thrice-Great has an expression of serenity on his upturned face.
- 6. A panorama of the night sky, showing the constellations, one of which is Turms' majestic visage.

Past the mosaics, the room contains two statues, one of Turms himself in its south-west leg, and another of his lover, Sarana, in its south-east leg. Both statues are of beautifully-carved alabaster, but magically trapped. Anyone not wearing a symbol of Turms Termax on his person who dares touch either statue receives an electric shock dealing 2d6 damage (make a saving throw versus Blast for half damage).

26. Scriptorium

This room contains six heavy oak writing desks. The associated stools have long since been removed. Crumbling parchment can be found inside several of the desks, along with dried ink wells. The fourth desk has a secret compartment inside of which can be found a scroll containing the spells *magic missile* and *shield*.

27. Ruined Chamber

Whatever the original purpose of this room, it is now a ruin filled with refuse and debris of various sorts. Rummaging among the debris are three bombardier beetles.

Bombardier Beetles (3) [AL N, MV 120' (40'), AC 5, HD 2, HP 14, 13, 4, #AT 1, DG 1d6 + toxic spray, SV F1, ML 0]

28. Dressing Room

The walls of this room are covered with steel hooks, on two of which still hang two heavy silvery-gray suits, along with gloves and boots made from the same material. On a shelf in the room, there are also two ceramic helmets that attach to the top of the suits. These are *environment suits* (see *Appendix A*, *New Magic Items*, p. 326), which grant immunity to certain adverse effects encoun-

tered throughout the dungeon, such as the energy source found in the Secret Storeroom (Room 20).

The room is currently being used as a lair by three ghouls, who will gleefully attack any creature who enters the room.

Ghouls (3) [AL C, MV 90' (30'), AC 3, HD 2, HP 13, 10, 3, #AT 3, DG 1d3/1d3/1d3 + paralysis, SV F2, ML +1]

There is a concealed door in the floor of this room. Opening it reveals a steel ladder that descends 10 feet down to the short corridor ending in a secret door connected to the Guard Room (Room 56) and then another 50 feet down to the Ghoul Lair (Room 48) on The House of Portals (Level 3A). The ghouls use it both to travel between levels and to seek out food in nearby rooms. More information on the ghoul colony and its origins can be found in *Chapter 10, The House of Portals* (Level 3A), p. 149.

29. Storeroom

This storeroom is filled with six wooden crates. Each of the crates is 4 feet cubed, and contains rotting cloth. One of the crates contains several silvery-black robes. These are *dwimmersilk garments* (see *Appendix A*, *New Magic Items*, p. 326), which offer the protection of leather armor (AC7) without restricting movement. The crate contains a dozen such robes, worth 100 gp each if sold in a large settlement (such as Adamas).

The room also serves as the lair of nine giant rats. These rats are unintelligent and not at all friendly toward the sapient rats found in the Operating Room (Room 24b).

Giant Rats (9) [AL N, MV 120' (40'), AC 2, HD 1d4 Hit Points each, HP 4(×4), 3(×2), 2, 1(×2), #AT 1, DG 1d3 + disease, SV F1, ML -2]

30. Empty Room

This room is now devoid of anything except marks on its stone floor indicating where furniture of some sort was once bolted down. The furniture—and anything else—has long since been removed, leaving behind only dust.

31. Gaol

The door to this room is a locked adamantine steel hatch. Beyond it lies three 10 foot by 10 foot cells used to hold prisoners, each of which is itself locked. Except for some clearly non-human bones in one of the cells, all three are completely empty.

32. Guard Post

Six orcs are on guard in this room, protecting the rooms their kind occupies to the south. If outnumbered or if they break morale, they will flee to the Barracks (Room 33).

Orcs (6) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 6, 4, 3, 2, 1(×2), #AT 1, DG 1d8 (swords), SV F1, ML +2]

33. Barracks

This large room was once a barracks for troops stationed on this level of Dwimmermount. Some of its wooden bunks remain, but most have either been removed or reduced to splinters. Currently, the room houses five orcs and an orc champion who will come to the aid of the orcs in the Guard Post (Room 32) if summoned by the sounds of combat (or orcs fleeing from the other room).

Orcs (5) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 5, 4, 2(×3), #AT 1, DG 1d8 (swords), SV F1, ML +2]

Orc Champion (1) [AL C, MV 120' (40'), AC 4 (chain mail), HD 1+1, HP 8, #AT 1, DG 1d8+1 (sword), SV F1, ML +2]

Stashed under his bunk, the orc champion has 1,000 gp in ancient Thulian coinage.

34. Refectory

This eating area was used by Thulian troops in the past. Now it has been turned into a dumping ground for the orcs' garbage and waste. The place reeks of rotting animal matter and is filled with bones and other detritus. If anyone is foolhardy enough to spend 1d4 turns digging through the mess, they will find a carnelian (75 gp), a carved idol (200 gp), a gold clasp (200 gp), and 400sp worth of assorted silver coins. Anyone searching through the mess must make a saving throw versus Poison (at +2) each turn, however, and if the saving throw fails, will contract a disease. In 1d6 days the diseased character will become weak and fevered (reducing maximum hit points by 50%). The disease is curable either with magic or two day's bed rest. Otherwise it will run its course in 1d4+6 (7-10) days.

35. Latrine

This small room was a latrine in Thulian times. One of its toilets remains intact, but otherwise the room is largely empty. There are iron pipes connecting its toilets to the wall, but they are heavily rusted and too narrow to allow even the smallest humanoid-shaped creatures to enter them. Normal rats, insects, or a character affected by *diminution* might pass through them, however; see *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing the water pipes if necessary.

36. Guard Post

Two orcs stand guard here. If outnumbered, the orcs will flee through the Phosphorescent Room (Room 37) to the Armory (Room 38).

Orcs (2) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 5, 3, #AT 1, DG 1d8 (battle axes), SV F1, ML +2]

One of the orcs has a citrine (100 gp). The other carries a *Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333) on his person, though he has no idea that it is anything more than a pretty bauble.

37. Phosphorescent Room

The original purpose of this room cannot be easily determined, as its ceiling and walls are now covered in a strange phosphorescent fungus. The fungus gives off a yellowish-green glow that men find glaring, resulting in a –1 to effective armor class and attack rolls while in this room. The fungus's glare has no effect on dwarves, elves, orcs, or other non-humans, and the fungus itself is otherwise harmless.

38. Armory

The walls of this armory are lined with weapon racks. Most of the racks are empty, but one still holds 6 Thulian crossbows (see Appendix A, New Magic Items, p. 333). Unfortunately for anyone entering the room, the six orcs who occupy it will not hesitate to use these crossbows on intruders. If alerted by their comrades from the Guard Post (Room 36), they will set themselves up to attack through the Phosphorescent Room (Room 37), taking advantage of the adverse effects of the phosphorescent fungus on men.

Orcs (6) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 7(×2), 6(×2), 4, 3, #AT 1, DG 1d8 (*Thulian crossbows*) or 1d6 (short swords), SV F1, ML +2]

The weapon rack on the western edge of the south wall is actually a concealed door to the Treasury (Room 39). The orcs are unaware of this door.

39. Treasury

Hidden behind a secret door is a substantial hoard of treasure, unknown even to the orcs who inhabit the nearby rooms. The treasure, totaling 8,910 gp in value, is divided between two bronzes chests and a small sturdy wooden coffer. The first chest holds 1,000 cp and 3,000 gp. The second chest holds 4,000 sp and a chryselephantine statuette of Tyche (1,700 gp). The wooden coffer holds a silver chain (500 gp), a gold gem-encrusted hairpin (600 gp), a pair of platinum earrings (900 gp), a platinum brooch with electrum filigree (1,800 gp), a moonsilver *ring of protection +1*, a *potion of clairaudience*, and a *potion of heroism*.

40. Meeting Room

The door to this room is made of areonite adorned with abstract engravings. This room contains a single long table made of heavy oak. There are no chairs anywhere to be found. The table is intact, although there is a series of notches carved (or slashed) along the edge closest to the door.

41. Orc Lair

This large room is now home to the orc's chief,

Segur, and his six bodyguards, all armed with swords. Segur has plundered wood and metal from other rooms to create a makeshift "throne" for himself in this room. The chief likes to hold court from here, in crude imitation of human nobility. If Segur is greeted with the deference due his "high station", the characters will gain a +2 bonus to their reaction rolls with him, possibly securing his "royal aid" against other threats on this level.

Orcs (6) [AL C, MV 120' (40'), AC 3 (scale), HD 1, HP 6(×2), 5(×3), 2, #AT 1, DG 1d8 (swords), SV F1, ML +2]

Segur, Orc Chief (1) [AL C, MV 120' (40'), AC 6 (chain mail & shield +1), HD 4, HP 20, #AT 1, DG 1d6+2 (sword), SV F4, ML +2; Proficiencies: Combat Reflexes, Intimidation, Weapon Focus (swords)]

Segur's *shield* +*l* is a round, spiked shield of adamantine steel.

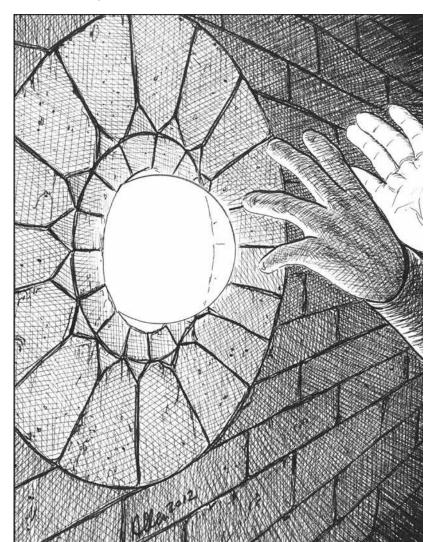

The orc chief keeps 1,000 gp in a locked chest behind the throne. The chief has the key around his neck, as well as a moonstone (75 gp), a jasper (100 gp), and a zircon (250 gp) in a pouch on his person.

42. Alcove

The north, east, and south walls of this alcove are decorated with mosaics depicting magicians using The Pool of Life (Room 50) to create orcs, gnolls, and minotaurs respectively. The mosaics are in surprisingly good shape, and if carefully studied for one turn, a mage or other scholar of the arcane will notice that the color of the glass cylinders depicted near the pool in each mosaic varies: the cylinders are pink in the northern (orc) mosaic, brown in the eastern (gnoll) mosaic, and black in the southern (minotaur) mosaic.

43. Landing

This open area is located about 10 feet below the rest of the level, as are all the Rooms numbered 43 through 60. All these rooms also have sockets in each of their walls into which the glow bulbs kept in Glow Bulb Storage (Room 44) can be placed to provide illumination.

Chapter 9

44. Glow Bulb Storage

The door to this room is a locked adamantine steel hatch. Within are forty stacked iron boxes. Most of the boxes are empty, but eight of them hold a dozen *glow bulbs* each, for a total of 96 of the grapefruit-sized glass orbs. As noted in the Overview of the Laboratory, these can be placed in sockets in the ceiling of the level to provide illumination. See *Appendix A*, *New Magic Items* (p. 327) for details on *glow bulbs*.

45. Hallway

A machine of adamantine steel and red brass has been installed along the eastern wall of this hallway. The machine's glass control panel is covered with dials and gauges below an insignia of a green thunderbolt; but the orange lettering which might have explained its operation is no longer legible. The machine, which hums loudly, is connected to a series of areonite pipes that run up the wall, across the ceiling, and above the door leading into the Thorny Room (Room 46). Recently restarted by Varazes (Room 50), the machine controls the emissions of azoth-derived electrolytes craved by the carnivorous plants in the Thorny

Room and Rose Garden (Rooms 46 and 47). The machine can be shut down by turning the correct dials; characters have a 1 in 6 chance each round doing so with each round they work its controls. If the machine is shut down, the carnivorous plants in the Thorny Room and the Rose Garden will lose 5% of their base hit points per hour until they expire. If the characters somehow get into the azoth pipes themselves (e.g. by diminution), see Chapter 6, Overview of the Dungeon (p. 85), for details on where they might travel.

Coiled in the crevice between the machine and the eastern wall is a carcass scavenger. The creature periodically leaves its lair to feed on the waste products dumped in the Refectory (Room 34) then returns here to digest. Since the carcass scavenger is well fed, characters who pass through without approaching the machine will be ignored. Conversely, characters who approach its hiding place behind the machine will be immediately attacked.

Carcass Scavenger (1) [AL C, MV 120' (40'), AC 2, HD 3+1, HP 11, #AT 8, DG paralysis, SV F2, ML +2]

46. Thorny Room

This chamber is overgrown with dense shrub-

bery, with golden and purple buds and thorny branches. Along the ceiling above the shrubbery runs a series of areonite pipes, connecting it to the Hallway (Room 45). The pipes continue beyond the door to the south and into the Rose Garden (Room 47). These pipes, on close inspection, have fine holes along some of their lengths, from which a silvery mist occasionally sprays onto the shrubs.

Among the shrubs are five archer bushes (see *Appendix C*, *New Monsters*, p. 343). The carnivorous plants attack any living thing which enters.

Archer Bushes (5) [AL N, MV 10' (3'), AC 3, HD 2, HP 13, 11(×2), 10, 7, #AT 1, DG 1d4, SV F1, ML +4]

47. Rose Garden

This room is filled with bush-

2A

2A-49: If befriend or interrogated, Colluthus and Arethusa can reveal the following numbered facts to the characters: 4-2, 4-4, 4-5, 4-7, 4-8, 4-9, 4-10, 5-1, 5-4, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-22, 6-11.

Chapter

es of white roses arranged to form a garden, complete with a stone path running from the east and then splitting toward the room's exits in the north and the west. The rose bushes look unhealthy and shriveled, as if in need of nourishment. Above the garden, areonite pipes run along the ceiling toward the western exit, but not toward the northern one. Like those in the Thorny Room (Room 46), they have fine holes along their length which periodically release a silvery mist.

The rose bush nearest the intersection between the north and western path is in fact a vampire rose (see *Appendix C*, *New Monsters*, p. 373). It will attack any creature that passes by it.

Vampire Rose (1) [AL N, MV 5' (1'), AC 4, HD 4, HP 17, #AT 1, DG 1d4+2 + blood drain, SV F3, ML +4]

48. Pump Room

This room is filled with areonite pipes and tubing connecting to a piece of large machinery, made of red brass and adamantine steel, that appears to be some kind of pump. From the machine, the pipes run along the ceiling and connect with those coming from the Rose Garden and the Stasis Chamber (Rooms 47 and 49). Both the pipes and machinery are covered with a blackish "rust" and occasionally drip a silvery-black liquid (an azoth derivative). The liquid tastes bitter if consumed, but otherwise has no effect. Having been processed into plant food by the machine in the Hallway (Room 45), it no longer has the properties of azoth.

49. Stasis Chamber

The door to this large chamber is a locked adamantine steel hatch. The room itself contains two dozen vitreum tubes, each standing slightly taller than a human being, space out evenly in four rows of six. Each tube has a set of dials and switches located on a copper plate at its base, as well as a hinged door with a copper handle at its midpoint. All but two of the tubes are empty. One occupied tube contains a young human male, the other an older human female, both dressed in non-descript clothing. They do not appear to be alive, showing no signs of respiration or other activity; but if dead, they are perfectly preserved. The two occupied tubes hum and glow slightly, while the others do not.

The doors of the tubes are sealed and cannot be opened except with magic. The vitreum from which the tubes are made can be shattered, but being quite sturdy it can withstand 100 points of damage before shattering. Shattering an unoccupied tube has no effect. Shattered an occupied tubes has two

effects. First, anyone within 10 feet of the shattered tube will receive an electric shock dealing 3d6 damage (a successful saving throwing versus Blast reduces damage by half). Second, the human inside the tube will be released. He or she will awaken in 1d6 rounds, perplexed by the situation, but otherwise in good health. The occupants speak only High Thulian and do so with archaic accents. The man is Colluthus and the woman is Arethusa, and they are both experts in magical technology. They placed themselves in stasis during the fall of Dwimmermount two hundred years ago and will be very grateful for their rescue.

Due to their expertise in magical technology, Collothus and Arethusa can automatically identify any of the machines in Dwimmermount without requiring a magic research throw. They can use the Pool of Life (Level 2A, Room 50), Essence Machines (Level 2A, Room 51), Clone Chamber (Level 4, Room 61), Enchantries (Level 6A), Crystal Attunement (Level 6B, Room 47), and Teleportation Device (Level 0, Room 34) without risk of error. They can identify and explain how to use an areonite weapon, belt of adaptation, engineer's control rod, environment suit, helm of astral movement, incendiary granatum, knowledge record, mask of breathing, power cell, shield belt, stun stick, Termaxian pain amplifier, Termaxian passkey, unseen ear, and warp sword.

Colluthus [AL N, MV 120' (40'), AC 0, HD M1, HP 4, #AT 1, DG by weapon or spell, SV M1, ML -1; Daily Spells: 1 1st; Repertoire: 1st-detect magic, read languages; Proficiencies: Magical Engineering, Knowledge (Thulian Lore), Military Strategy)

Arethusa [AL N, MV 120' (40'), AC 0, HD M3, HP 7, #AT 1, DG by weapon or spell, SV M3, ML -1; Daily Spells: 2 1st, 1 2nd; Repertoire: 1st-detect magic, hold portal, read languages, sharpness; 2nd-detect secret doors, knock, locate object; Proficiencies: Magical Engineering, Knowledge (Thulian Lore) 2, Siege Engineering 2)

50. The Pool of Life

This chamber holds The Pool of Life, an alchemical apparatus of great potency used by the former masters of Dwimmermount to alter and bend living things to their will. The Pool itself is 10 feet in diameter and filled with white protoplasm. Normally a vitreum barrier surrounds the Pool, but the barrier is currently lowered. It can be raised again by using the controls in the Control Room (Room 14). If the protoplasm leaves the Pool, it eventually loses its viscosity and becomes a clear liquid not

dissimilar to water. There is evidence of some of this liquid on the floor flowing from the Pool toward the southern wall. The room also contains nine niches in the wall, each of which is occupied by a rectangular vitreum case. Inside three of these cases can be found thick liquids in pink, brown, and black varieties. The black liquid is almost completely depleted. A control panel for the Pool, made of areonite, vitreum, and resin, is installed on the eastern wall just south of the entrance.

Currently, the room is occupied by the renegade mage, Varazes, part of an expedition from Volmar that arrived from The House of Portals (Level 3A) several weeks ago. After discovering the Pool, he decided to set himself up as the new ruler of Dwimmermount. To this end, he betrayed his comrades and began creating beastmen to serve him. The orcs on this level and The Path of Mavors (Level 1) are his earliest creation, but they proved too willful and broke away from his control. Varazes is currently creating gnolls, over whom he has demonstrated a greater command. When the characters enter the room, Varazes is present along with five gnolls.

The five gnolls will work to protect Varazes, while he will alternate between casting spells and creating additional gnolls to join the fray. Creating a new gnoll takes two rounds of uninterrupted work at the Pool's control panel. New gnolls have only 2 hit points (though they gain 2 additional hit points per round until they reach 6 hit points) and no weapons (so only attack for 2d4 damage).

If events turn against him, Varazes will flee toward the Gnoll Lair (Room 57) and then into the Panic Room (Room 58). If captured, he will make no mention of his origins in Volmar, instead trying to pass himself off as a local magician. However, his strange accent and lack of knowledge about local affairs will quickly expose him as a liar. Varazes is a coward and will do almost anything to save his life. He is also duplicitous and self-serving and will try to lead to his captors into dangerous situations that might result in their deaths. He is unaware that the Volmarians have sent a new expedition (see *Chapter 7, Factions in the Dungeon*, p. 95) and will be alarmed if he learns of it.

Gnolls (5) [AL C, MV 90' (30'), AC 4 (scale), HD 2, HP 15, 10, 8, 7, 6, #AT 1, DG 1d8+1 (battle axes), SV F2, ML 0]

Varazes [AL C, MV 120' (40'), AC 2 (ring of protection +2), HD M3, HP 9, #AT 1, DG 1d4 (dagger) or by spell, SV M3, ML +2; Daily Spells: 2 1st, 1 2nd; Repertoire: 1st-charm person, choking grip, detect magic, sleep; 2nd-mirror image, stinking cloud, web; Proficiencies: Alchemy, Knowledge (Eld lore),

Knowledge (Termaxian lore), Magical Engineering]

He has a wand of fear (six charges remaining) and a Termaxian passkey (see Appendix A, New Magic Items, p. 333).

The Pool of Life itself can be used in several ways. Anyone completely immersing himself within it must make a saving throw versus Poison. Those who *fail* have all their hit points restored and all diseases or other deleterious effects removed. Such a character cannot use the Pool again for a number of days equal to the amount by which he failed his saving throw. Thus, if a character had a saving throw of 14 and his player rolled a 12, the character cannot use the Pool again for 2 days. Those who succeed at the saving throw gain no benefit from the Pool. No character, regardless of whether he succeeded in his saving throw or not, can gain any benefit from the Pool more than once in a 24-hour period.

A dead creature placed within the Pool within 24 hours of death is restored to life, but it loses one point of Constitution from the ordeal. There is a cumulative 20% chance per use that the restored character will be afflicted with a *feeblemind* spell (no saving throw), as if cast by a 12th-level mage.

The colored liquids are "essential matrices" that can be used to create up to a dozen beastmen of the appropriate sort. Using the controls to The Pool of Life, a character can siphon liquid from one of the glass cases into the Pool and a beastman will emerge 2 rounds later. The pink liquid creates orcs, while the brown liquid creates gnolls. There is enough of each type of liquid to create up to a dozen of each type (though there may be less available for gnolls, depending on Varazes' actions). These beastmen will not obey the commands of their creator automatically, but may be cowed into obedience with an appropriate show of strength. The black liquid can be used to create a single minotaur—woe to low-level characters that do so unprepared!

The controls to use the "essential matrices" in the Pool of Life are quite complex. For each hour that he spends studying the controls, a character can make a magic research throw. After three successful throws the character will be able to use the controls. Characters with the instructions found in the Study (Room 54) may operate the controls without a magic research throw, of course.

51. The Essence Machines

The doors to this room are both adamantine steel hatches. The room itself contains two machines designed to extract the "essential matrix" of a living creature for cloning in The Pool of Life (Room

2A-50: Sketches of the Pool of Life and the Essence Machines together count as partially reliable evidence of numbered fact 4-9.

2A

50). Like other Eldritch machines, both are made of red brass and adamantine steel. One of the machines has been smashed to pieces and is no longer operational. The other is operational, but lacks a power source and a liquid matrix. If a new power source (such as the *Thulian fuel cylinder* found in Room 20) is installed into the machine, and a tank of liquid matrix (such as one from Room 52) is connected to it, the machine can then be activated.

If activated, the machine scans the closest living thing within 5 feet of it and suffuses its essence into the liquid. This creates an "essential matrix" that can be used in conjunction with The Pool of Life (Room 50) to create up to a dozen creatures of the same sort as the "donor" of the essence. These creatures are not exact copies, but they are broadly similar in appearance to their source. Regardless of the donor's alignment, the creatures are always Chaotic and, unless cowed, act violently toward their creators. They begin life with 2 hit points, and gain 2 more every round until they reach a number of hit points equal to that of their donor.

52. Liquid Matrix Storage Chamber

All the doors to this room are adamantine steel hatches. The room contains a dozen glass containers, all but four of which are shattered. The four that are intact contain a clear, viscous liquid that is intended to be used in conjunction with The Essence Machines (Room 51).

53. Vaulted Chamber

This open area has a slightly higher ceiling than the rest of the level, with attractive mosaics on it, depicting arcane symbols without obvious meaning. Currently, three ghouls are searching the room for living things to eat, having come across gnolls here in the past.

Ghouls (3) [AL C, MV 90' (30'), AC 3, HD 2, HP 8, 7, 5, #AT 3, DG ld3/ld3/ld3 + paralysis, SV F2, ML +1]

In the corner of the room is the gnawed and incomplete skeleton of a gnoll, near which lies a *sword –1 (cursed)*. The sword is a straight-bladed Thulian weapon of adamantine steel.

54. Study

The areonite door to this room is engraved with abstract art. Inside, the room contains a large metal desk, a heavy wooden chair, and numerous wood-

en shelves and bookcases on the walls. The shelves are devoid of anything of value, but the desk's drawers contain notes written in a strange script on sheets of paper-thin metal. *Read languages*—or similar effects—enable the script to be read, revealing detailed instructions on how to use The Pool of Life (Room 50) and The Essence Machines (Room 51).

55. Clock Room

The western wall of this room is covered with dozens of mechanical clocks of varying size, shape, and style. The clocks are attached to the wall, and cannot be removed without breaking them and taking the parts. None of the clocks are currently operational and all of them show different times.

56. Ghoulish Larder

This room is filled with bones of all sizes and sorts. Most of the bones seem to have come from rats and similar kinds of vermin, but some of them are evidently those of humanoid creatures. Hidden among the bones is a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333) and a *ring of fire resistance*. Finding either one takes one turn of careful searching, which has a 2 in 6 chance of attracting the attention of the ghouls in the Dressing Room and the Vaulted Chamber (Rooms 28 and 53).

57. Gnoll Lair

This former workshop is now home to three gnolls created by Varazes (Room 50). The gnolls have recently clashed with the ghouls, which is why they are few in number and one among them is obviously paralyzed and thus unable to attack.

Gnolls (3) [AL C, MV 90' (30'), AC 4 (scale), HD 2, HP 12, (11—paralyzed), 7, #AT 1, DG 1d8+1 (battle axes), SV F2, ML 0]

Gnoll Champion (1) [AL C, MV 90' (30'), AC 5 (chain mail), HD 3, HP 16, #AT 1, DG 1d8+2 (battle axe), SV F3, ML 0]

The gnoll leader wears a bejeweled collar worth 500 gp.

58. Panic Room

This secret room is discoverable only if the character possesses a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333). Coming within 5 feet of the secret door while in the possession of one automatically opens the door, revealing a well-stocked refuge. The room contains enough dried food to last four people for two weeks, along with potable water in hermetically sealed containers. The room also contains three *potions of healing* and

three silvery-gray environment suits (see Appendix A, New Magic Items, p. 326). Also amongst the supplies is a dagger +2, +3 versus goblins, kobolds, and orcs. The dagger is a straight-bladed dirk forged of starmetal; the hilt is made of carved orc-bone.

59. Alchemical Storage

This area contains many iron shelves, on which rest shattered glass and ceramics. There are also two heavy oak cabinets whose contents consist largely of more shattered shards and multicolored powders. However, one of the cabinets also contains a locked chest made of metal. Inside the chest are three things of interest: a *potion of invisibility*, a *scroll of read languages*, and a spherical glass container with wax stopper, within which a small cat seems to be floating. The cat is not breathing, but there is no evidence that he is dead either. If the wax stopper is removed, the cat awakens and leaps out of the container, apparently none the worse for wear.

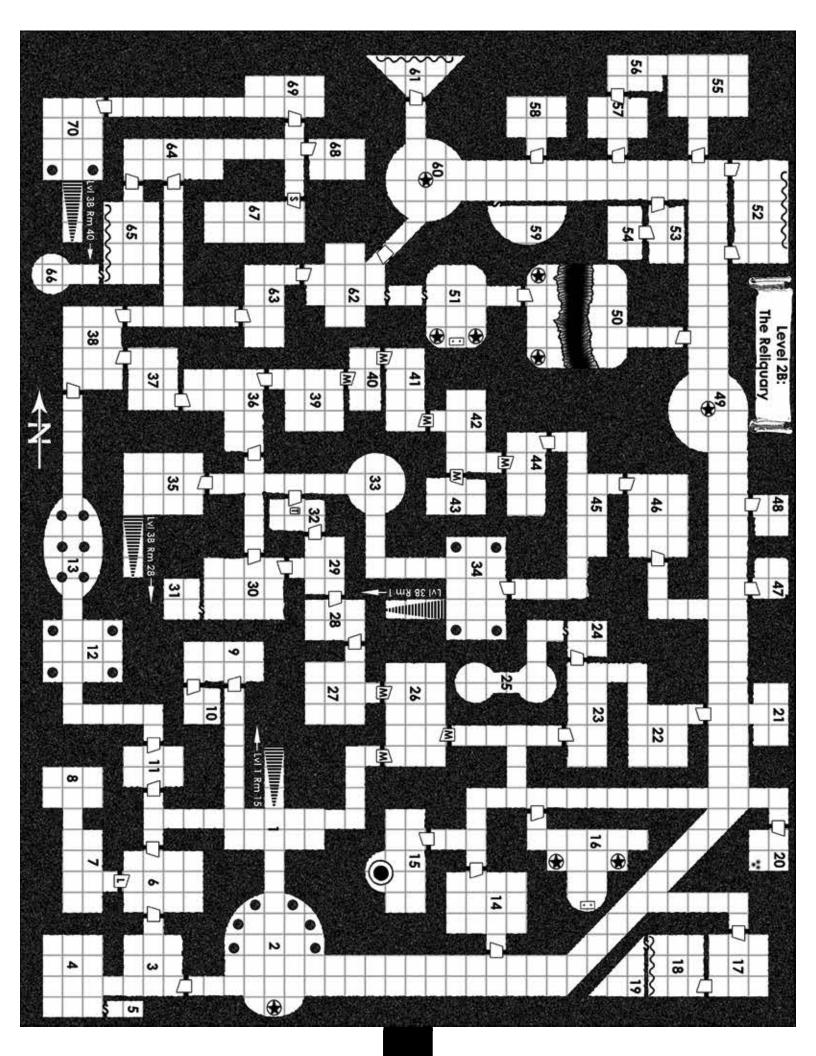

Like the rats in the Operating Room (Room 24b), the cat is a sapient animal (see *Appendix C*, *New Monsters*, p. 364). It does not speak Common, but can fluidly converse with anyone under the effects of *speak with animals*. The cat will cozy up to anyone he deems to be "in charge" among the characters and will attempt to lead the party out of the dungeon and toward the surface. Unlike the rats, he has little knowledge of the dungeon, and is mostly interested in self-preservation.

Sapient Cat (1) [AL N, MV 120' (40'), AC 2, HD 1d4 Hit Points, HP 3, #AT 3, DG 1/1/1d2, SV F1, ML -1]

60. Shattered Storeroom

The western door to this chamber, an adamantine steel hatch, is severely damaged, with a large hole blown out of its center from within. The hole is over a foot in diameter and allows a clear view into the room from the outside. The eastern door is entirely missing. The interior of the room shows evidence of some kind of mishap, with the walls pockmarked and the floor covered in fragments of wood and glass. In one corner of the room is a ceramic helmet, within which can be found a severely damaged human skull.

2A

The Reliquary

Level

2B

Overview of The Reliquary

URING THE Fourth
Era, the Thulians built
temples to the gods of
the Great Church
throughout Dwimmermount as a way of honoring the deities who
made their success possible. The Thulians'

made their success possible. The Thulians' devotion to religious construction culminated in The Reliquary, an entire level devoted to showing reverence to their gods. As one of the most recently-built levels (only the Ossuaries are newer), The Reliquary has not endured the many cataclysms of the more aged regions of the dungeon, and remain still largely intact. Some of the most beautiful examples of Thulian sacred architecture still extant in Dwimmermount can be found here, including the majestic Hall of Truth (Room 2), Pillars of the World (Room 12), Six Metals (Room 13), Chamber of Heroism (Room 40), and Temple of Law (Room 51). With vaulted ceilings supported by tall columns, poured concrete walls decorated with scintillating mosaics, and classical marble and bronze statues proudly erected in its halls and chambers, The Reliquary is a poignant reminder that Dwimmermount was a holy place for a Lawful empire.

WANDERING MONSTERS OF THE RELIQUARY

Die Roll	Monster
1	Eldritch Bones (3-12)†
2	Zombies (1-6)
3	Hobgoblins (1-6)
4	Throghrin (1-3)
5	Shadows (1-8)
6	Gray Ooze (1)
7	Gelatinous Cube (1)
8	Giant Rats (3-18)
9	Carcass Scavenger (1-3)
10	NPC Party (5-8)
11	Spitting Beetle (1-8)
12	Crab Spiders (1-4)

†see Appendix C, New Monsters, p. 341

Chapter

1. Antechamber

The stairs here march down from the Hall of Memories (Room 15) of The Path of Mavors (Level 1). Waiting at the foot of the stairs are eight eldritch bones (see *Appendix C*, *New Monsters*, p. 349), which will attack any living creature that descends into the room.

Eldritch Bones (8) [AL N, MV 120' (30'), AC 4, HD 1+1, HP 8 (×2), 7, 6, 5 (×2), 2 (×2) #AT 1, DG 1d6+1 (swords), SV F1, ML N/A]

2. Hall of Truth

Six ornamental columns, each made of a different material, support the vaulted ceiling of this chamber, which is decorated with depictions of stars and planets. Each column is inscribed with a letter of the Thulian alphabet. The six types of materials and the letters associated with them are, in order, from north to south: brick (A), marble (E), granite (I), limestone (R), concrete (T), and glass (V). At the southern end of the room is an abstract statue depicting a variety of three-dimensional geometric shapes.

Detect magic reveals that the columns are enchanted. If a character touches the columns in sequence to spell the ancient Thulian word for truth—verita—a magical effect is triggered. (Touching the columns in any other sequence has no effect.) The character must immediately make a saving throw versus Spells. If the saving throw succeeds, the character gains the permanent ability to cast a single 1st-level divine spell (determined randomly) once per day, as if he were a cleric of the same level. If the saving throw fails, the character permanently loses 1d6 hit points. The effect can only ever occur once per character.

3. Reading Room

A heavy wooden table and several shattered chairs furnish this room. The table has a hidden drawer on its underside which contains a scroll of *magic missile*.

4. Library

Book shelves line the walls of this chamber, but most of the books have either been destroyed or spirited away. A pile of torn covers and pages can be found in the middle of the room. There is nothing of value amidst the debris. However, one of the bookshelves on the western wall conceals a button that opens the secret door to the Secret Cache (Room 5).

5. Secret Cache

Protected within this small cache are several dozen books and scrolls dating from Thulian times. In total, they are worth 10,000 gp if buyers can be found, but the cache is bulky – 10 boxes of rare books weighing 30 lbs. each. Only one volume is magical, a *tome of understanding* (see *Appendix A*, *New Magic Items*, p. 334).

6. Ruined Gallery

Shattered statuary and their stands litter this room. The only statue that remains intact is of a winged demonic monster squatting upon a short black stone column. This statue is in fact a gargoyle, which springs to life when anyone approaches its pedestal or turns its back to it.

Gargoyle (1) [AL C, MV 90' (30')/150' (50'), AC 4, HD 4, HP 19, #AT 4, DG ld3/ld3/ld6/ld4, SV F8, ML +3]

7. Meeting Room

The door to this room is locked. Inside, the dust of decades covers a long, wooden table which lacks chairs.

8. Graffiti Chamber

Covering every surface of this room—walls, floors, ceiling—are graffiti in no obvious language. The graffiti has the look of arcane and occult symbols and is written in a variety of hands and colors. Reading them by means of the *read languages* spell reveals the phrase "Seek not the gods!" written over and over. Reading the graffiti by means of a *read magic* spell reveals the formula for *hideous laughter* (see *Appendix B*, *New Spells*, p. 337), which a mage can then add to his spellbook.

9. Ossuary

Human bones are found in piles in this room. In some cases, the bones have been piled artfully into crude shapes, but most of the bones have no such arrangement. Hiding amongst the bones is a necrophidius (see *Appendix C*, *New Monsters*, p. 360). The cover afford by the bones means the necrophidius will surprise opponents here on a roll of 1-3 on 1d6.

Necrophidius (1) [AL N, MV 90' (30'), AC 7, HD 2, HP 12, #AT 1, DG 1d8 + paralysis, SV F2, ML N/A]

10. Treasure Hoard

Located within this room is a small hoard of treasure in coffers and sacks, consisting of 800 sp, a silver brooch worth 200 gp (see below), a gold ruby-tipped pin worth 600 gp, a bronze and leather belt worth 40 gp, a diamond-studded hoop earring worth 800 gp, a golden anklet with sapphire dangles worth 1,100 gp, and a wrought gold goblet worth 300 gp.

The brooch carries a potent curse. Anyone wearing or even carrying it must make a saving throw versus Spells *each day* or lose his faith in the existence of the gods. If the owner is a cleric, this curse strips him of him of all his class abilities. The curse lingers even if the brooch is no longer possessed, but may be lifted with *remove curse*.

11. Storeroom

Amidst wooden splinters and other debris, there are five man-sized burlap sacks resting against the eastern wall. Someone or something is inside the sacks, attempting to get out and making muffled, but unintelligible sounds. Inside are five zombies that will attack any who liberate them from their captivity.

Zombies (5) [AL C, MV 60' (20'), AC 1, HD 2, HP 12, 11 (×3), 8, #AT 1, DG 1d8, SV F1, ML N/A]

12. Pillars of the World

Four massive pillars stretch from floor to ceiling here, one in each of the room's four corners. One pillar is made of stone encased in a glass covering, while the other three are made of glass inside of which can be found clear-blue water, a flaming gas, and seemingly nothing (air). In the exact center of the room is a floor mosaic of inlaid tile depicting the world of Telluria.

13. Six Metals

Two rows of three metallic pillars support the ceiling of this room. Each of the pillars stands 15 feet and tall and 1.5 feet in diameter and appears to be made from a different one of the six magical metals known to the Thulians—adamant (dull gray), areonite (reddish copper) azoth (silvery black), moonsilver (silvery white), orichalcum (golden bronze), and starmetal (silvery grey). In actuality the pillars were formed of Thulian concrete and gilded with a thin layer of metal. There is approximately 15 lbs. of metal coating each pillar.

14. Hobgoblin Camp

Six hobgoblins have established a camp in this room, having been sent by their "king" from the Throne Room (Room 34) to determine just how much control the Zombie Lord exerts over this level. They are not opposed to parleying with potential allies in their war against their foes, but neither will they fail to avail themselves of any opportunity to slay newcomers if the opportunity permits itself. If battle goes against them, they will attempt to retreat to the Hobgoblin Guards (Room 46).

Hobgoblins (6) [AL C, MV 90' (30'), AC 3 (scale), HD 1+1, HP 6, 5 (x2), 4 (x2), 3, #AT 1, DG 1d8 (swords), SV F1, ML +1]

Between them, the hobgoblins have 300 gp in Thulian coin; a golden idol of a leering monkey worth 400 gp; and a wrought silver goblet worth 40 gp.

15. Well

A freshwater well has been dug here. A series of copper pipes and spigots allow easy access to its waters. However, the well and its pipes have been sealed up with wooden boards. The ancient Thulian word for "Danger!" has been crudely scrawled on the boards. If the boards are removed, access to the well and its water is still possible. Despite the warning, the water is completely potable and poses no threat to anyone who drinks it. The warning is a ruse of the scouts in the Hobgoblin Camp (Room 14), who wish to claim the well for their king.

The pipes serving the well are so narrow that only tiny creatures, or characters with *diminution* magic, could enter them. Should this occur, see *Chapter 6*, *Overview of the Dungeon* (p. 84), for details on using the water pipes to traverse between the levels.

16. Shrine

Two marble statues, one male and one female (formerly of the god Mavors and the goddess Asana), their heads replaced with that of Turms Termax, stand in this room. Beyond them is a small marble altar on which sits a finely-carved orichalcum box that is firmly secured to the altar and whose lid is similarly immovable. No attempt to physically remove the box will be successful. However, if a cleric casts *bless* upon the box, its lid will open, revealing a *periapt of health* (see *Appendix A*, *New Magic Items*, p. 330).

Level 2B

A sturdy oak table and several stools are pushed up against one wall of this room, while shattered glass and ceramics are scattered about the place. Guarding the room are seven eldritch bones (see *Appendix C, New Monsters*, p. 349) that attack any who enter.

Eldritch Bones (7) [AL N, MV 120' (40'), AC 4, HD 1+1, HP 9 (×2), 7, 5 (×3), 4, #AT 1, DG 1d6+1, SV F1, ML N/A]

Hidden amongst the shattered glass and ceramics is a single intact vial containing oil of slipperiness.

18. Sleeping Quarters

Several broken bed frames can be found here, along with two oak chests. Both are locked, one with a poison needle whose efficacy has faded with time (there is a +1 bonus to the saving throw versus Poison and the effect is paralysis for 1d4 days rather than death). In the trapped chest is 1,000 sp and 20 gp; in the other is 200 sp and 50 gp.

19. Panic Room

Inside this small chamber rests the desiccated corpse of a man. His well-preserved robes are those of a Termaxian adept, as are his headgear and boots. He has a silver dagger at his belt. Also inside the room are ten sealed resin barrels about two feet high. The barrels can be opened easily by pressing a clasp on one side. Seven of the barrels contain dried foodstuffs that are still amazingly fresh despite their age, while the other three contain wine that is equally as fresh.

20. Latrine

A powerful stench of mold suffuses this room, emitted from brownish-black growths that decorate the edges of the toilets here. Despite its offensive smell, the mold is completely mundane and harmless. Other than the toilets, and the copper pipes that funnel toilet waste down to the lower levels, there is nothing else in this room. As with the Well (Room 15), the pipes serving the latrine are very narrow and would require *diminution* magic to enter. See *Chapter 6*, *Overview of the Dungeon* (p. 84), for details on using the water pipes to traverse between the levels.

21. Statue Storage

There are two dozen wooden statues placed inside this room. The statues vary in size and sub-

ject matter, but all save two resemble demons or other Chaotic beings. The remaining two are actually wood golems in the shape of dwarves, which spring to life and attack anyone who in any way interferes with the stored statues.

Wood Golems (2) [AL N, MV 120' (40'), AC 2, HD 2+2, HP 17, 13, #AT 1, DG 1d8, SV F1, ML N/A]

22. Display Room

Iron shelves line the walls of this room, along with numerous brass display cases that once had glass fronts, now long since shattered. The shelves and cases hold many small boxes and containers, the vast majority of which are themselves broken or at least opened and obviously looted. Still in their original locations are three items: a white-handled dagger, a human skull, and an amulet with the symbol of Tyche emblazoned on it. The dagger is an athame of law (see Appendix A, New Magic Items, p. 324). The human skull and the amulet are both non-magical, though the amulet is worth 500 gp because of its antiquity.

23. Bare Room

Whatever the original use of this room is no longer obvious, as it has been stripped of all its furnishings. Lurking within are four shadows attack any who enter.

Shadows (4) [AL C, MV 90' (30'), AC 2, HD 2+2, HP 12 (×2), 9, 6, #AT 1, DG 1d4 + STR drain, SV F2, ML +4]

24. Office

This room contains a splintered and care-worn desk and a rotting chair. Empty shelves decorate the south wall, concealing the secret door to the Place of Healing (Room 25)

25. Place of Healing

Hidden here is a chapel dedicated to Caint, the Thulian god of medicine, poetry, and music. No images of the god can be found here, but the god's symbols—leaves and harps—can be found drawn on the walls with chalk and other materials. A whitewood chest in the neck of the room holds a *cloak of protection +1*, three *potions of healing*, and an idol of Caint worth 500 gp. The *cloak* is made of white silk interwoven with cloth-of-moonsilver.

This place is still sacred to Caint, such that anyone who rests at least four hours in the Place of Healing regains 1d3 hit points, as if he had spent

Chapter

a full day of complete rest. Likewise, Lawful clerics can regain all their spells after resting only four hours here instead of the usual eight.

26. Locked Room

All three doors to this chamber have had *wizard lock* cast upon them by a 10th-level mage. Successfully listening at any door reveals the sound of something gibbering unintelligibly. The source of the gibbering is two enraged wights, both trapped in here centuries ago and now quite mad.

Wights (2) [AL C, MV 90' (30'), AC 4, HD 3, HP 20, 7, #AT 1, DG Drain life energy, SV F3, ML +4]

There are a total of eight chests unevenly littering this room. Most of the chests have been broken and over-turned but two remain closed and intact. The first of these holds 4,000 cp while the second contains 3,000 sp, and 23 arrows +1.

27. Chamber of the Triangle

A triangle has been painted with azoth-infused pigment across the floor of this room. At each point of the triangle is a word associated with a clerical spell. The three words, their meanings, and associated spells are as follows:

• Akele (Light): *light*

• Hoxmarch (Fear): remove fear

• Prge (Fire): resist fire

These words are from an esoteric dialect of Ancient Thulian. *Read languages* or knowledge of Ancient Thulian will serve to translate the meaning of the words. If the words are translated, characters with College Wizardry or Loremastery proficiency can make a proficiency throw to equate the words to their associated spells.

If the appropriate spell is cast within five feet of the drawing, the paint begins to glow at that point, spreading to others once further spells are cast. Once all three spells are cast, the entire triangle lights up. The spellcaster who casts the spells that infused the triangle then hears a disembodied voice say "Odo," which he immediately knows means "Open." Speaking this word while the triangle is infused functions as a *knock* spell for any door on Level 2B (but not on any other level). Spells remain infused in the triangle for a number of days equal to the level of the caster before they dissipate and must be cast again.

28. Statue Room

A dozen wooden statues of gods and demons decorate this room. The statues are evenly spaced in three rows of four: Anesidora, Asana, Caint, and Donn in the first row; Mavors, Tenen, Tyche, and Typhon in the second row; Arach-Nacha, Jubilex, Orcus, and Tsath-Dagon in the fourth row. None however, are magical or in any way unusual except for the fact that they all have their original heads rather than those of Turms Termax.

29. Guard Post

Three wooden stools, one by each door, grace this room. There are also wooden pegs on the walls and an empty weapons rack along the eastern wall.

30. Treasury

Five hobgoblins stand guard over a collection of chests, coffers, and sacks that contain a large portion of the spoils collected by their kind on this level and below. If battle turns against them, they will flee into the corridors to the north and raise an alarm, hoping to draw the attention of their allies in nearby rooms.

Hobgoblins (5) [AL C, MV 90' (30'), AC 3 (scale), HD 1+1, HP 9, 8, 5 (×2), 3, #AT 1, DG 1d8 (battle axes), SV F1, ML +1]

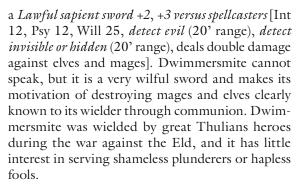

The treasure they guard includes the following: A wooden chest containing 3,000 gp; a wood coffer containing 1,000 gp; a small iron coffer holding a blue quartz worth 10 gp, a turquoise worth 10 gp, tiger eye agate worth 50 gp, and a moonstone worth 75 gp; and a leather sack holding a bronze headband worth 70 gp, a gold comb studded with amethysts worth 400 gp, a wrought gold bracelet worth 600 gp, and a dragon-hide belt with platinum buckle worth 1,700 gp.

A rotating section of stone cunningly built into the south wall gives access to the Hidden Treasury (Room 31).

31. Hidden Treasury

Unbeknownst to the nearby hobgoblins, this secret room contains more treasure. Shoved against the far wall, a pair of heavy oak chests hold 3,000 sp and 600 gp each (6,000 sp and 1,200 gp total). A small wooden jewelry box holds a bronze necklace 60 gp and a platinum pendant worth 300 gp. Hanging on a plaque above the chests is a sword of Ancient Thulian make, its ornate hilt fasted in the shape of Asana's symbol, its starmetal blade etched with runes of Law. This is *Dwimmersmite*,

Level 2B

32. Dangerous Room

The ceiling in this dark room is unstable. Each time an adventurer enters the room, the Judge should roll 1d6. On a result of 1-3, several large stones in the ceiling collapse, dealing 3d6 damage to anyone inside the room (saving throw versus Blast for half damage). The hobgoblins that live nearby are aware of the room's hazard and avoid it.

33. Hobgoblin Sentries

Six hobgoblins stand here on the lookout for intruders. If their fortunes falter, they will flee to nearby rooms for assistance (either Room 34 or Room 30, depending on the direction from which they are assailed).

Hobgoblins (6) [AL C, MV 90' (30'), AC 3 (scale), HD 1+1, HP 8, 6, 5, 4, 3, 2, #AT 1, DG 1d8 (battle axes), SV F1, ML +1]

34. Throne Room

The hobgoblin "king" Rukruk has established himself in this room, along with his loyal bodyguard of four elite hobgoblins and a throghrin. Once part of a large force placed in stasis before the fall of Dwimmermount, the king and his men have been recently awakened. Given the anarchic state of the dungeon, he believes that he and his disciplined troops are capable of an eventual takeover of the entirety of Dwimmermount, provided that he can find a way to increase his tribe's numbers.

For that reason he has sent out scouts throughout this level and below to seek a solution to this dilemma. Though arrogant, he is not stupid, and if events turn against him he will flee down the stairs. These lead to the Dry Fountain (Room 1) of The Reservoir (Level 3B).

Rukruk, Hobgoblin King (1) [AL C, MV 90' (30'), AC 6 (plate), HD 5, HP 21, #AT 1, DG 1d8+3 (battle axe), SV F5, ML +1; Proficiencies: Combat Reflexes, Intimidation, Weapon Focus (axes)]

Hobgoblin Bodyguards (4) [AL C, MV 90' (30'), AC 6 (plate), HD 3, HP 13 (×4), #AT 1, DG 1d8+2 (battle axes), SV F3, ML +1]

Throghrin (1) [AL C, MV 120' (40'), AC 3, HD 3, HP 11, #AT 1, DG 1d8 (battle axe), SV F3, ML +2]

Other than a *potion of invulnerability*, which Rukruk will use if threatened, there is no treasure in this room.

35. Stairway

Two throghrin guard the stairway down to the Pillared Chamber (Room 28) of The Reservoir (Level 3B). The room is otherwise empty.

Throghrin (2) [AL C, MV 120' (40'), AC 3, HD 3, HP 19, 18, #AT 1, DG 1d8 (battle axes), SV F3, ML +2]

36. Stasis Chamber #1

This Stasis Chamber is similar to the Stasis Chamber (Room 49) on The Laboratory (Level 2A), filled with two dozen vitreum tubes that stand slightly taller than a human being. The tubes are found in four rows of six and have dials and switches located on copper plates at their base, and hinged doors with copper handles at their mid-point. All of the tubes are now empty and most show obvious signs of having been damaged.

37. Physick's Room

The walls of this room are covered with shelves and cabinets. There is also a small table and a desk in the room. A few of the shelves and cabinets contain vials and jars, inside of which are pills and liquids of an unknown sort. If any of these ancient medicines are consumed, the imbiber must make a saving throw versus Poison. Failure results in one of the following effects (roll 1d10):

- 1. As potion of clairaudience
- 2. As potion of diminution
- 3. As potion of gaseous form
- 4. As potion of healing
- 5. As potion of invulnerability
- 6. As philter of love
- 7. As potion of speed
- 8. Imbiber falls into deep sleep for 2d6 turns
- 9. Imbiber's hair grows 1d4 inches
- 10. Death

38. Stasis Chamber #2

This room is in almost every respect identical to Stasis Chamber #1 (Room 36), except for its shape and the fact that there are currently four hobgoblins standing guard within.

Hobgoblins (4) [AL C, MV 90' (30'), AC 3 (scale), HD 1+1, HP 5 (×2), 3, 2, #AT 1, DG 1d8 (battle axes), SV F1, ML +1]

39. Chamber of Fertility

Frescoes depicting agricultural scenes grace the walls of this room. The door leading to the Chamber of Heroism (Room 40) is magically locked. The lock can be broken either by the casting of *purify food and drink* or spells such as *knock* or *dispel magic*. Non-magical means to open the door are ineffective. Once unlocked by any means, the door remains so.

40. Chamber of Heroism

Mosaics of heroic exploits (slaying dragons, rescuing princesses, etc.) cover the walls of this room. The door to the Chamber of the Dead (Room 41) is magically held. This enchantment can be overcome by the casting of *remove fear* or spells such as *knock* or *dispel magic*, but non-magical means do not work. Once unlocked by any means, the door remains so. The door to the Chamber of Fertility (Room 39) is unbarred from inside this room, allowing entry into Chamber of Fertility without the need to cast any spell. However, once any one has passed through the door to Chamber of Fertility and allowed the door to close behind them, the door will lock itself (unless already dispelled).

41. Chamber of the Dead

Funerary scenes decorate the walls of this room. Instead of being gloomy and depressing, these scenes promise new life and happiness in the realms of the gods. In the center of the room is a wooden bier made of a light-colored wood on top of which rests a ceramic urn. The urn is almost completely empty, except for two white pastilles. These are pastilles of life (see Appendix A, New Magic Items, p. 330). If a pastille is placed within the mouth of a man who has been dead no more than ten days, he is restored to life, as if the spell raise dead had been cast by a 9th-level cleric. The pastilles will not work on any other race.

The doors *out* of this room to the Chamber of Heroism and the Chamber of Healing and Song (Rooms 40 and 42) open normally, but immediately lock once allowed to close (unless already dispelled).

42. Chamber of Healing & Song

Depictions of healing and music can be found on the walls of this room. Healing predominates on the northern and western walls, while song predominates on the eastern and southern walls. The door to the Chamber of the Dead (Room 41) is magically barred and can only be opened by the casting of cure light wounds, knock, or dispel magic. The door to the Chamber of Invention (Room 43) is also magically barred, and can only be opened by the casting of snake charm, knock, or dispel magic. The door to the Chamber of Good Fortune (Room 44) is unbarred from inside this room, allowing entry into Chamber of Good Fortune without the need to cast any spell. However, once any one has passed through the door to Chamber of Good Fortune and allowed the door to close behind them, the door will lock itself (unless already dispelled).

43. Chamber of Invention

Decorating the walls of this room are mosaics showing the creation of wondrous devices, both magical and technological. In the center of the room is a dark mahogany table on which rests a decanter of endless water, along with a small bronze card on which the command word has been inscribed. The door to the Chamber of Healing and Song (Room 42) is unbarred from inside this room.

44. Chamber of Good Fortune

Scenes of good luck and fortunate happenstances decorate the walls of this chamber. The door to the Chamber of Healing and Song (Room 42) is magically held and can only be opened by means of the spell *bless, knock*, or *dispel magic*. No other means will open the door. Once opened, the door remains unlocked.

45. Redoubt

Two 40-gallon wooden barrels of oil can be found here, along with two weapons racks. One rack holds eight spears, while the other holds eight *Thulian crossbows* (see *Appendix A, New Magic Items*, p. 333), each with a dozen bolts.

Each barrel stands 3 feet tall and 1.5 feet in diameter, weighs 500 lbs., and holds enough oil to coat 2,400 square feet (equal to twenty-four 10-foot by 10-foot map squares).

46. Hobgoblin Guards

Five hobgoblins and a throghrin leader stand guard in this room. Should events turn against these creatures, they will retreat to the Redoubt Level 2B

(Room 45) and avail themselves of the weapons there, including the barrels of oil, which they will overturn and set alight to create a flaming barrier between them and any enemies.

Hobgoblins (5) [AL C, MV 90' (30'), AC 3 (scale), HD 1+1, HP 8, 7, 5, 2 (×2) #AT 1, DG 1d8 (battle axes), SV F1, ML +1]

Throghrin (1) [AL C, MV 120' (40'), AC 3, HD 3, HP 11, #AT 1, DG 1d8 (battle axe), SV F3, ML +2]

47. Storeroom

All that can be found in this room are the shattered remains of wooden barrels.

48. Storeroom

Other than dust and some scraps of rough cloth, this room is completely empty.

49. Headless Statue

A large bronze statue (10 feet tall) of a humanoid being suited in imposing plate armor and wielding a large mace can be found in this circular room. The statue is missing its head. On the stump of the statue's neck, there is a screw, suggesting that a head, if found, could be fairly easily re-attached to it. The statue is that of Typhon, the Thulian god of discipline, order, and trade. If its original head—

stored in the Head Room (Room 66)—is found and placed on the statue, the person placing the head on it is granted the Blessing of Typhon (a +1 bonus to his Charisma score) for 24 hours. See *Chapter 6, Overview of the Dungeon* (p. 84), for more information on boons from the gods.

50. The Crevasse

A large crevasse bisects this room. The crevasse is about six feet wide in most places and is filled with a roiling pinkish-purple mist. The mist radiates magic and is the result of azoth radiation emanating from The Reservoir (Level 3B) below. On the southern side of the crevasse stand two marble statues of hooded and robed men each carrying a staff. Both statues are quite dusty. Scrawled in Common in the dust of one of the statues is the phrase "M.C. was here!"

Jumping across the crevasse requires a proficiency throw with a target value equal to the character's encumbrance in stone (minimum 2+ required). Modify the throw by the character's DEX adjustment. Characters with Acrobatics proficiency gain a +2 bonus if their encumbrance is 6 stones or less. Other means of getting across are possible and left to the players to decide and the Judge to adjudicate. A character who fails his proficiency throw, or otherwise slips, falls through the mist. There is a 3% chance per level of the character falling through the mist that he is transported to some other world. Characters so transported are removed from play (unless the Judge decides to run adventures relating

Chapter 10

to the characters' new location, of course). Otherwise the character falls into the cavern of the Arcanoplasm (Room 48) on The Reservoir (Level 3B), suffering 6d6 damage in the process.

Characters who rappel or otherwise scale down the chasm voluntarily still risk being transported to another world when they pass through the mist, but obviously will not take falling damage from descending to the lower level.

51. Temple of Law

Only Lawful characters can enter this room without penalty, for it is an ancient temple dedicated to the cosmic principle of Law. Neutral characters feel uneasy and even ashamed while within its walls, while Chaotic characters take 1d4 points of damage per round (no save) from an intense burning sensation on their skins. The temple is decorated with mosaics of strangely armored warriors fighting demons and other unpleasant creatures. At the eastern end of the room is an ornate alabaster altar covered in gems and gold arranged in the shape of a blazing sun. On each side of the altar is a bronze statue of an armored warrior like those seen in the mosaics, one a man and one a woman. They are armed with swords and carry shields emblazoned with a sun device.

A cleric who prays at the altar finds himself fully healed, his selection of spells refreshed, and his faith that Law is a power in the world renewed. Lawful fighters who pray at the altar can take up the path of the paladin if they so desire (see *Chapter 3*, *Adventuring in Dwimmermount*, p. 41).

Anyone attempting to steal the gems or gold from the altar is struck by a bolt of brilliant light that deals 10d6 damage. If the character survives and he is not Lawful in alignment, he finds his alignment has shifted to Lawful. If he is Lawful, he is compelled (by *quest*) to give away all his coins, gems, and other non-magical valuables to a Lawful religion once he exits Dwimmermount in penance for his greed. A successful saving throw versus Blast will reduce damage by half, but does not avoid the other effects of the bolt.

52. Viewing Room

Broken furniture and human bones litter this room's floor. Against one wall is a largely intact tapestry depicting all the gods of the Thulian Great Church: Anesidora, Asana, Caint, Donn, Mavors, Tenen, Tyche, and Typhon. Notably, none of them has his head replaced with that of Turms Termax. The tapestry is large (8 feet tall by 40 feet wide) and bulky (160 lbs.), but worth 800 gp or more to interested buyers in a large city.

53. The Lurking Dead

Five zombies wait silently in this room, ready to attack any who enter.

Zombies (5) [AL C, MV 60' (20'), AC 1, HD 2, HP 12 (×4), 9, #AT 1, DG 1d8, SV F1, ML N/A]

54. Blood-Smeared Room

Dark stains cover the walls of this room, sometimes looking almost as if they are in the shape of letters or even words. In one corner of the room is a small unlocked chest containing 500 sp. The coins are smeared with the same bloody mess that stains the walls.

55. Bait

Coins, gems, and other obviously valuable items are scattered haphazardly about the floor of this large chamber, whose walls are covered in burned, blackened frescoes. The treasure consists of 1,000 sp, a *potion of flying*, an eye agate worth 10 gp, a turquoise worth 25 gp, an azurite worth 25 gp, a lapis lazuli worth 25gp, and a carnelian worth 75 gp.

56. Breath

Two small hell hounds lair here, pets of the Zombie Lord, ready to attack any non-undead who enter Room 55. If characters stop to pick up the "bait," the hell hounds will gain surprise on a roll of 1-3 on 1d6.

Hell Hounds (2) [AL C, MV 120' (40'), AC 5, HD 3, HP 21, 14, #AT 1, DG 1d6 or 3d6, SV F3, ML +1]

57. Sleeping Quarters

Broken bed frames can be found in this room, along with other indeterminate metal and wood debris.

58. Sleeping Quarters

This room is almost identical to the other Sleeping Quarters (Room 57), except that five giant centipedes can be found amidst the debris. They will attack anyone who disturbs their nest.

Giant Centipedes (5) [AL N, MV 60' (20'), AC 0, HD 1d4 hp, HP 4, 2 (×3), 1, #AT 1, DG poison, SV F 0 LH, ML -1]

Level 2B

2B-59: Characters studying the religious writings for one day will learn numbered fact 1 0

59. Secret Study

The secret door that provides entrance to this hidden chamber is a section of stone that slides sideways. Within can be found an old chair and a large collection of bone scroll tubes scattered around it. The tubes number close to one hundred and mostly consist of esoteric religious writings in Ancient Thulian, mostly dedicated to "Law, the God above All." The scrolls, written in Ancient Thulian, weigh 100 lbs. and would be worth 3,000 gp to collectors and sages.

Two of them are of special interest. One is a clerical scroll containing the spells *detect evil*, *speak with animal*, and *continual light*. The other is a map that shows the location of the monastery of St. Gaxyg-at-Urheim many leagues to the west, reputed to hold the relics of Saint Gaxyg the Gray as well as those of Evad Filzarn, two legendary heroes of the past (see *Chapter 4*, *Vicinity of Dwimmermount*, p. 55).

60. Statue of Tyche

A large marble statue of Tyche stands in the center of this circular area. The statue's head has been replaced with that of Turms Termax, but in a seamless fashion. Consequently, removing the head and replacing it with a proper one provides no benefits.

61. Red Room

A heavy red curtain can be found along the northern wall of this room. Standing in front of the curtain is an armless statue of a woman.

62. Zombie Lord's Lair

Within this room lurks the Zombie Lord, a self-willed zombie of remarkable intelligence and power (see *Appendix C*, *New Monsters*, p. 375). Once a Thulian guardsman, he died of azoth exposure during the fall of Dwimmermount, only to reanimate as an unusually potent zombie. He continues to believe it is his duty to "protect" Dwimmermount from outsiders. After centuries of lethargy, the recent events in Dwimmermount have roused him to assert his mastery over this level. He is served by four zombie warriors that he can control by thought and whom he uses to protect himself from attack. If in danger of being destroyed, the Zombie Lord will flee, seeking the protection of his pet wight (Room 64).

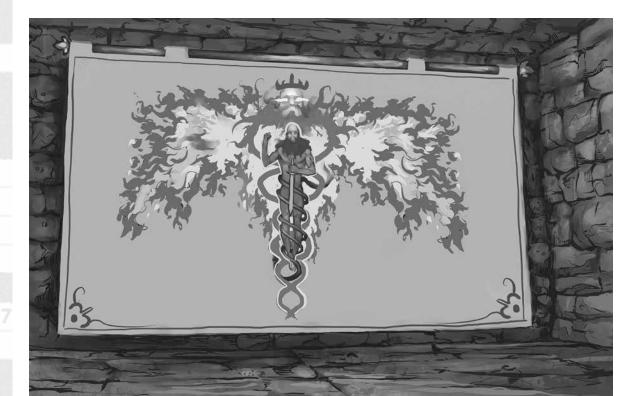

Zombies (4) [AL C, MV 60' (20'), AC 1, HD 2, HP 14, 8, 7, 6, #AT 1, DG 1d8, SV F1, ML N/A]

Zombie Lord (1) [AL C, MV 120' (40'), AC 4, HD 3, HP 22, #AT 1, DG 1d8, SV F3, ML 0]

63. Zombie Treasury

In this room, the Zombie Lord has collected a small hoard of treasures from elsewhere on the level. The treasure is guarded by four zombies.

Zombies (4) [AL C, MV 60' (20'), AC 1, HD 2, HP 11, 10, 6, 4, #AT 1, DG 1d8, SV F1, ML N/A]

Chapter 10

The hoard includes a wooden chest with 1,000 sp; a small coffer holding 400 gp; and a jewel box holding an eye agate worth 50 gp, a smoky quartz worth 100 gp, a lapis lazuli worth 50 gp, a star rose quartz worth 100 gp, a jasper worth 100 gp, a turquoise worth 50 gp, and a jade worth 750 gp.

64. Pet Wight

Roaming this room is a wight whom the Zombie Lord has convinced to obey him. It attacks any non-undead who enter the room.

Wight (1) [AL C, MV 90' (30'), AC 4, HD 3, HP 16, #AT 1, DG drain life energy, SV F3, ML +4]

65. Apotheosis Room

Along the wall of this room is a large tapestry artistically depicting the apotheosis of Turms Termax. In the scene, Turms floats above a crowd of prostate Thulian guards, his arms spread wide and his head tilted upward to the heavens, revealing a bloody neck injury. Because of its historical value and unique fabric, the tapestry could easily fetch 1,000 gp from a sage or collector in a large city. It is however, large (8 feet tall by 40 feet wide) and bulky (160 lbs). A secret door to the Head Room (Room 66) is located behind the tapestry.

66. Head Room

The secret door to this room can only be detected if the tapestry of Turms Termax in the Apotheosis Room (Room 65) is pulled down. Within it are several dozen carved heads of statues, made of wood and stone. Most of them do not fit any of the statues remaining in Dwimmermount, but one is a perfect fit for the headless statue of Mayors in Room 49.

67. Moist Room

An acrid and unpleasant smell emanates from this room. The wood of its door looks warped and shot through with silvery-black veins. The door is stuck (but not locked) and must be forced or smashed to open. Inside lurks monstrously large gray ooze that strikes immediately as soon as the door is opened. Infused with azoth, this gray ooze is quicker and more agile than others of its kind (as shown in its greater movement rate and armor class), and pursues any who disturb its lair.

Gray Ooze (1) [AL N, MV 60' (20'), AC 3, HD 3, HP 15, #AT 1, DG 2d8, SV F2, ML N/A]

68. Latrine

There are several working toilets here, along with a large basin with spigot from which to draw water. The water in both the toilets and from the spigot is blackish and metallic smelling (and tasting). Drinking the water is unpleasant, but not immediately dangerous. As with other latrines in the dungeon, tiny creatures might conceivably use the latrine pipes to traffic between levels. See *Chapter 6, Overview of the Dungeon*, p. 84, for details.

69. Dwarf Remains

Lying on its side here is a well-carved statue of a dwarf. This is actually a stillborn dwarf that was abandoned before it could be transported to the Dwarven Cemetery (Room 34) on The Path of Mavors (Level 1). The inert dwarf is lying on its side and, as it was stillborn, shows no obvious signs of damage or wounds. It is impossible to tell how old the statue is, though a thick carpet of dust suggests its stillbirth was not too recent.

70. Stairway

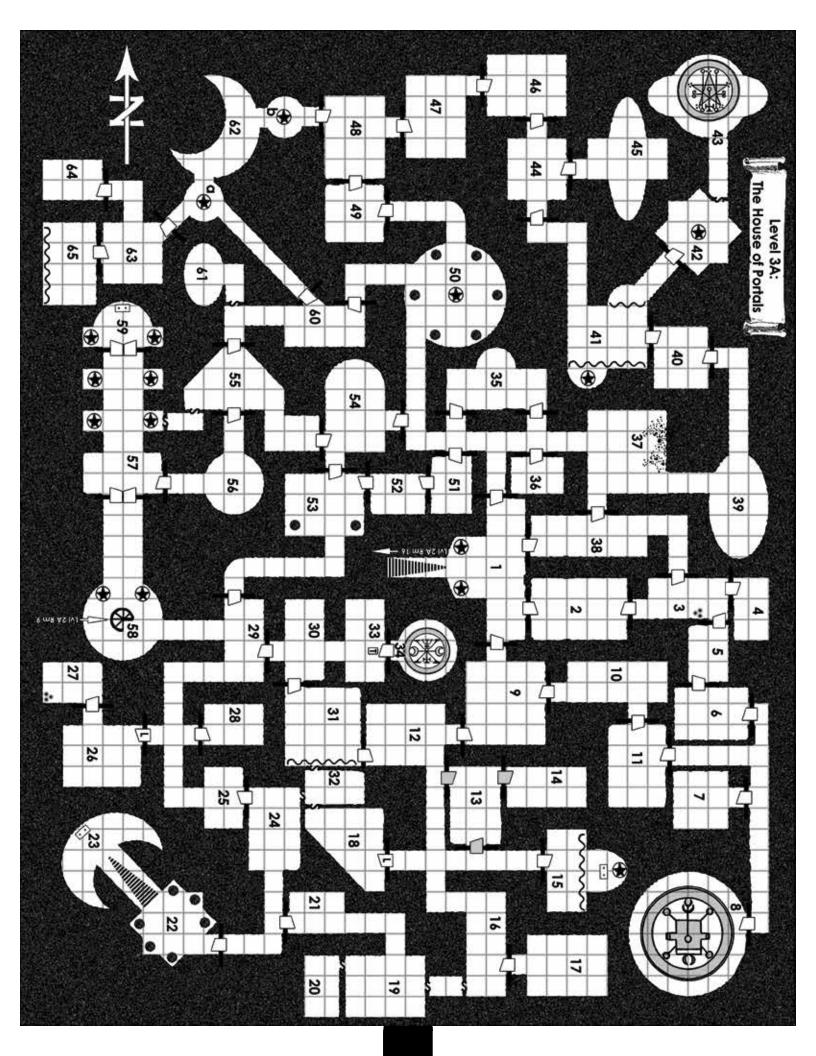

The stairs here lead

down to the Vestibule

(Room 40) of The Reservoir (Level 3B). The staircase is flanked by two carvings of human women, one of which has been severely damaged. The other has sustained some damage but is still recognizable for what it is. This second carving is also a caryatid column (see Appendix C, New Monsters, p. 345), albeit a weakened one, which attacks anyone who attempts to descend the stairs without carrying a Termaxian passkey (see Appendix A, New Magic Items, p. 333).

Caryatid Column (1) [AL N, MV 60' (20'), AC 4, HD 5, HP 10, #AT 1, DG 1d8, SV F11, ML N/A]

Level 2B

CHAPTER

23

Level

3A

The House of Portals

Overview of The House of Portals

HE GREAT ANCIENTS sent expeditions to Ioun and Kythirea on swift astral vassels, but it was only when the Eld mastered the secrets of portal-magic that instantaneous travel between the Four Worlds became a reality. The House of Portals was excavated by the Eld during the Third Era as a hub for portal travel. With portals to Areon (Room 8), Ioun (Room 34), Kythirea (Room 43), and the most distant reaches of Telluria (Room 61), The House of Portals allowed the Eld to travel instantly anywhere within the Eldritch Empire. The Eld could also call on the Great Void and Elemental Planes from special summoning chambers (such as Rooms 53 and 54) they built here. As their wealth and splendor grew, the Eld began to decorate The House of Portals with trophy halls such as the Otherworldly Museum (Room 2), Astronomy Room (Room 9), Art Gallery (Room 31), and Vault of the Worlds (Room 63). The walls, floor, and ceiling of all these chambers are flawlessly smooth and mathematically perfect, as is typical with Eldritch excavation; and all bear the characteristic elements of High Eld architecture, including areonite doors, archways, daises, arcane

carvings, and abstract symbols.

WANDERING MONSTERS OF THE HOUSE OF PORTALS

Die Roll	Monster
1	Bugbears (2-8)
2	Giant Carnivorous Beetles (1-6)
3	Eld (1-6) [†]
4	Ochre Jelly (1)
5	Dretches (2-8) [†]
6	Ghouls (1-6)
7	Carcass Scavenger (1-3)
8	Shadows (1-8)
9	Doppelganger (1-6)
10	NPC Party (5-8)
11	Wererat (1-6)
12	Throghrin (1-6)

†see Appendix C, New Monsters, p. 341

Only in these rooms is the Eldritch architecture intact, however. When the Thulians invaded Dwimmermount, some of the heaviest fighting occurred on this level, as waves of Red Elves arrived from Areon to reinforce the defenders for many days. Even after the Thulians subdued the rest of Dwimmermount, astral incursions onto this level continued for years, as the Eld took advantage of secret portals which were set to open during conjunctions. Of these, only the Alchemist's Door was not purged because its terminus was firmly within Thulian control. In places the damage from this Fourth Era fighting is still visible, while in other places the Thulians erected temples over the ruins of the Eldritch portals and museums they destroyed. The Shrine to Mavors (Room 15) and the Altar to the Unknown (Room 23) are examples.

Except where noted, the original Eldritch doors have been replaced by ordinary Thulian construction. Though the level is dark, the ceilings are punctured at twenty-foot intervals by fist-sized indentations fitted with orichalcum sockets for *glow bulbs* (see *Appendix A, New Magic Items*, p. 327). 10% of these indentations contain a broken glass orb, while the others are empty. Fully-fueled *glow bulbs* can be found in the Glow Bulb Storage (Room 44) of The Laboratory (Level 2A).

1. Foyer

This large room contains two stone statues of Turms Termax, one of which holds a globe aloft and the other of which holds a large key. Although both key and globe were cast separately from the statues and added afterwards, neither is easily removed from their respective statues.

2. Otherworldly Museum

The doors to this room are made of red areonite carved with astrological glyphs. The room within was once a museum of treasures collected from other worlds. Most of those treasures have long since been looted, but the shelves and sconces that once displayed them are still here. The shelves are empty except for dust and 1d100 worthless stones of varied colors. The room is currently occupied by seven bugbears, who are exploring the dungeon for their Eldritch masters. The bugbears have no treasure.

Bugbears (7) [AL C, MV 90' (30'), AC 4 (hide & natural), HD 3+1, HP 19, 15, 13 (×3), 10, 9, #AT 1, DG 1d8+1 (swords), SV F3, ML +2]

3. Pumping Station

The noise resonating from the ancient copper pipes that cover this room's walls and ceiling proves they are pumping liquid of some kind—but from where and to where is uncertain, as the pipes emerge from and disappear into the walls.

Should a character fiddle with the pipe system, there is a 1 in 6 chance per round he will break something—either a water pipe (1-3) or an azoth pipe (4-6). Breaking a water pipe causes water to pour into the room at a rate of 6 gallons per minute (approximately 10 cubic feet per turn). A water leak does not cause damage but can cause other consequences as the room floods. Breaking an azoth pipe, on the other hand, is very dangerous. Anyone within 10 feet of a ruptured pipe spraying azoth must make a saving throw versus Spells or be affected by a random 3rd-level arcane spell, as if cast by a 5th-level caster. See Appendix F, p. 393, for other details on azoth.

Even if broken open, the pipes are too narrow to allow humanoid creatures to enter them. Normal rats, insects, or a character affected by *diminution* magic can pass through the pipes; see *Chapter 6*, *Overview of the Dungeon* (p. 84), for details on traversing pipes.

4. Storeroom

This storeroom contains six vitreum barrels, all of which are sealed tightly. If a barrel is forced open (as a door) or shattered (requiring 5 points of damage), it releases a reddish, magical gas extracted on Areon. The gas cloud quickly fills up the volume of the room (about 6,000 cubic feet if released outside the room). Any non-elves with the cloud are put to *sleep* unless they make a successful saving throw versus Poison to avoid the effect.

5. Storeroom

This storeroom contains a number of steel barrels. All have had their lids removed and their contents emptied. Suffusing the room is an unpleasant smell, due no doubt to the strangely-fresh corpses of four men being feasted upon by three giant tiger beetles. Having acquired the taste for man-flash, the beetles will attack any intruders.

Giant Tiger Beetles (3) [AL N, MV 150' (50'), AC 6, HD 3+1, hp 14, 13 (×2), #AT 1, D 2d6, SV F1, ML +1]

The remains of archaic chain mail still tatter the corpses that the beetles were feeding upon, but their gnawing has left the armor valueless. Three of the corpses carry ordinary swords, while the

fourth has a starmetal *sword* +1, *detects elves* (the sword's blade glows red, as brightly as a torch, whenever elves are within 60 feet) of Ancient Thulian make.

6. Dressing Room

This room holds a large number of steel lockers, wall pegs, and oak benches. The lockers contain the remains of many garments, but only two intact articles of clothing have survived the degradations of time. These latter are *dwimmersilk garments*, which appear as silvery-black cassocks made of a gossamer fabric infused with azoth. See *Appendix A*, *New Magic Items* (p. 393), for details.

7. Guardroom

This guardroom is now occupied by six bugbears awaiting the return of their Eldritch masters, who are exploring the dungeon elsewhere.

Bugbears (6) [AL C, MV 90' (30'), AC 4 (hide & natural), HD 3+1, HP 19 (×2), 18, 13, 12 (×2), #AT 1, DG 1d8+1 (swords), SV F3, ML +2]

One of the bugbears carries a sack containing a moonstone worth 75 gp, a piece of malachite worth 10 gp, a rock crystal worth 100 gp, and a hematite worth 50 gp. Another has a jade statuette of a marilith worth 400 gp and a bronze locket worth 30 gp. The bugbears hope to please their masters with these trinkets, which they found in the Dressing Room (Room 6).

8. Portal to Areon

The entrance to this room is an areonite door with hepatizon fittings, exquisitely carved with an image of a city on a red mountain. The circular room within contains a set of red stone steps leading to a large dais, on top of which is a 12 foot tall rectangular archway made of red stone with veiny black striations. Runes inscribed in azoth surround the archway, and these radiate strongly under *detect magic*.

Anyone carrying some soil from Areon—found in the Dressing Room (Room 11) as well as in the possession of any Eld in Dwimmermount—who passes over these runes activates their magic. Instantly, a two-way portal to the Red Planet of Areon appears within the archway. Once activated, the portal remains active for six rounds, after which it closes and cannot be activated again for six hours. Details on Areon and passing through the portal to the Red Planet can be found in Appendix E (see p. 390).

3A

3A-8: If befriended or interrogated, Virsor can reveal the following numbered facts to the characters: 3-2, 3-3, 3-4, 3-5, 3-8, 3-9, 3-10, 3-11, 3-12, 4-2, 4-3, 4-4, and 4-5.

Currently keeping watch on the portal are six Eld and six bugbear guards, under the command of their leader, Virsor. All are recent arrivals from Areon. Virsor will send the bugbears against any intruders first, while he and the other Eld hang back in order to cast spells. So long as even a single Eld survives, the bugbears' morale will not break. Once the Eld have used their spells, they will engage in melee if they have superior numbers; otherwise, they will flee through the portal. If the characters flee, the Eld will pursue them, seeking to kill them before they can warn others that the Eld have returned to Dwimmermount.

Bugbears (6) [AL C, MV 90' (30'), AC 4 (hide & natural), HD 3+1, HP 17, 14, 13, 12, 9, 8, #AT 1, DG 1d8+1 (swords), SV F3, ML +1]

Eld (6) [AL C, MV 120' (40'), AC 5 (areonite cuirass), HD 2, HP 12, 10, 8 (×2), 7, #AT 1, DG 1d8 (swords), SV Es2, ML +2; Daily Spells: 2 1st; Repertoire: see below]

Virsor, Eld Leader (1) [AL C, MV 120' (40'), AC 6 (areonite panoply), HD 4, HP 17, #AT 1, DG 1d8+1 (sword +1) or 1d6 (areonite pistol), SV Es4, ML +2; Daily Spells: 2 1st, 2 2nd; Repertoire: 1st-burning hands, sleep; 2nd-invisibility, phantasmal force; Proficiencies: Battle Magic, Military Strategy]

The Eld's repertoires are noted below:

- Eld #1: 1st-darkness, detect magic
- Eld #2: 1st-protection from good, sleep
- Eld #3: 1st-charm person, shield
- Eld #4: 1st-magic missile, slipperiness
- Eld #5: 1st-burning hands, protection from good
- Eld #6: 1st-choking grip, detect magic

The six Eld are each armed with two swords and areonite cuirass. Virsor is armed with a slightly curved areonite sword +1, areonite pistol, and areonite panoply, and carries 300 gp, a power cell (24 charges), and a scarab of protection. The scarab is of areonite, fastened like an alien beetle with moonsilver mandibles. See Appendix A, New Magic Items (p. 323) for details on the Eld's special equipment.

9. Astronomy Room

All the doors to this room are made of areonite and graven with abstract representations of the orbit of the Four Worlds within Astral Space. The large room within contains seven short pillars of hepatizon, each standing about 4 feet high. Levitating above each pillar is a representation of a different celestial object. These representations are made of a thin, lightweight moonsilver, but have been decorated with paint to make them look more realistic. The seven representations are: Telluria (the first planet), Ioun (the moon), Kythirea (the second planet), Areon (the third planet), Diwo (the fourth planet), Kron (the fifth planet), and the Sun. The representations cannot be removed from their places above the pillars except by means of magic. Both the spells dispel magic and knock will suffice. Each object is worth between 500 and 1,000 (1d6+4 x 100) gp to collectors and students of the Thulian sciences.

10. Corridor

This wide corridor is completely empty, though its walls are covered in frescoes depicting the exploration of other worlds. Careful observers may notice that there is a thin layer of reddish dust on the floor toward the southeastern end of the corridor. The reddish dust is soil from Areon that can be used to activate the Portal to Areon (Room 8).

11. Dressing Room

The walls of this room are covered in metal shelves, on which rest many metallic boxes. Most of these boxes are empty, but three of them contain belts of adaptation (see Appendix A, New Magic Items, p. 324). These three boxes also contain non-magical boots and gloves made from the same leathery material as the belts.

Toward the center of the room is a large, rectangular bier made of the same metal as the boxes. The bier has numerous drawers, none of which are locked. Searching them turns up the following: five vials of reddish dust, a helm of comprehend languages and read magic, 700 pp, two potions of extra-healing, a dozen short swords, a dozen dwimmersilk garments of silvery, silk-like material, and a necklace worth 1,200 gp. The reddish dust in the vials is soil from Areon that can be used to activate the Portal to Areon (Room 8).

12. The Healing Tree

This room contains a large "tree" that grows out of the stone floor, spreading its branches in all directions. The tree is a living thing of some sort, but its "bark" resembles obsidian. The ends of the tree's branches bear strange, crystalline, translucent "pears." If eaten, the pears act as *potions of extra-healing*. When the room is first entered, the tree bears 1d4+1 pears. Each week the tree will bear another 1d4+1 pears.

13. Experimental Chamber

All the doors leading to this room are made of adamantine steel. Inside, there are several tables, also made of adamantine steel. There is evidence that there were once wooden objects in the room, but they have now all been dissolved, in whole or in part, by the ochre jelly that dwells here—an experiment gone awry.

Ochre Jelly (1) [AL N, MV 30' (10'), AC 1, HD 5, HP 27, #AT 1, DG 2d6, SV F3, ML N/A]

Level 3A

The walls of this room are covered with iron cabinets, while a wooden table stands in its center. The cabinets are not locked and contain, in total, twenty different vials and jars, along with bits of shattered glass. If examined, the Judge should roll 1d12 on the table below to determine the contents of the glass container, continuing to roll until the contents of all twenty containers have been determined.

STOREROOM CONTENTS

- 1 Powered bone
- 2 Oil
- 3 Dried mushrooms (make a saving throw versus Poison at -1 or die if consumed)
- 4 Coal dust
- 5 Azoth
- 6 Sulfur
- 7 Petrified wood
- 8 Fluorescent water (harmless if consumed)
- 9 Quartz crystals
- 10 Glue
- 11 A single preserved "pear" from The Healing Tree (Room 12).
- 12 Wolfsbane

15. Shrine to Mayors

Hidden behind a ragged curtain are an altar and statue to the Thulian war god Mavors. The ancient statue still holds a spear in its stone grip, poised for a majestic strike, but the war-like visage of Mavors has been replaced with the head of Turms Termax. If Turms' head is replaced with one of Mavors, then the statue's spear becomes a *spear* +3 and is removable from its grasp. This benefit replaces the usual boon received from replacing the head of a divine statue.

16. Eld Scouting Party

A scouting party of four Eld and two quasits (see *Appendix C, New Monsters*, p. 348 and 362) can be found here. The Eld, as is typical for their kind, will hang back to cast spells before engaging in melee. If outnumbered, they will attempt to flee back toward the Portal to Areon (Room 8). The Eld have discovered that a section of the west wall is actually a secret door, though they have not yet investigated it. They will attempt to use this knowledge to bargain for their lives if defeated.

Quasits (2) [AL C, MV 150' (50'), AC 7, HD 3, HP 23, 21, #AT 3, DG ld2/ld2/ld4, SV F3, ML +2]

Eld (4) [AL C, MV 120' (40'), AC 5 (areonite cuirass), HD 2, HP 12, 11, 8, 6, #AT 1, DG 1d8 (swords), SV Es2, ML +2; Daily Spells: 2 1st; Repertoire: see below]

- Eld #1: 1st-protection from good, shield
- Eld #2: 1st-hold portal, sleep
- Eld #3: 1st-darkness, detect magic
- Eld #4: 1st-magic missile, wall of smoke

The four Eld are each equipped with two swords and *areonite cuirasses* (see *Appendix A*, *New Magic Items*, p. 323). Eld #4 carries two gems: a jacinth worth 1,000 gp and a rock crystal worth 100 gp.

17. Meeting Room

This room is dominated by a large table of red brass with a dozen areonite and mahogany chairs arranged around it. In the center of the table is a circular depression containing a white crystal worth 2,000 gp. The crystal is affixed to the table; safely removing the crystal requires 1d6 turns of careful work with craftsman's tools (and destroys the viewing system it powers, described below).

The section of the table in front of each seat is bedecked with a collection of areonite buttons and knobs. When manipulated correctly, these controls cause images to appear in the air above the table, projected by the crystal in its center. If the characters press any buttons or turn any knobs on the image projector, roll 1d6 and consult the table below to determine what occurs:

Die Roll	Image
1	The crystal projects a fuzzy, low resolution image of several men in strange silvery-white clothing walking through a portal. This is recognizable as the Portal to Ioun (Room 34).
2	The crystal projects a crisp and starkly beautiful image of a metallic ship-like vessel floating in a silvery sky.
3	The crystal projects a distorted image of a disembodied head in a floating container surrounded by darkness. The head looks like a distorted mockery of the statuary heads of Turms Termax that appear in the dungeon.
4	The crystal projects a bird's eye view of the outside of Dwimmermount.
5	No image is projected. Instead, a loud, annoying noise erupts from the crystal. Every character within the meeting room must make a successful saving throw versus Petrification or be deafened for 1d4 turns (-1 to hit and saving throws). The referee should make an immediate wandering monster check.
6	Damage is done to the viewing system. No further effects occur.

Chapter

18. Abstract Gallery

The areonite door to this chamber is locked; its key can be found in the Room of Holes (Room 24). If anyone enters the room by any means other than the use of this key, the room's denizen, a guardian plasm (see *Appendix C, New Monsters*, p. 354), drops from the ceiling and attempts to devour the unfortunate intruder.

Guardian Plasm (1) [AL N, MV 120' (40'), AC 4, HD 5, HP 26, #AT 1, DG devour, SV F5, ML +2]

The walls of the chamber are carved with abstract Eldritch art. A lever hidden within the carvings in the western edge of the north wall opens the secret door to the Treasury (Room 32).

19. Shrine of the Brazen Head

This room is dominated by a large pedestal, above which hovers the bronze head of a bearded man—that of Turms Termax. Anyone who approaches within one foot of the floating head must make a successful saving throw versus Blast or experience a mild shock dealing 1 hit point of damage. Anyone bold enough to touch the head takes 1d4 points of damage, while anyone who grasps it firmly takes 1d8 damage (a saving throw versus Blast is allowed in both cases to resist the effect). The head cannot be removed from its location by any means short of a successful *dispel magic* against a 14th level mage. If successfully removed, it is worth 2,000 gp, but otherwise it has no other properties.

A section of the east wall can be pushed back to give access to the secret corridor leading to Room 16 (Eld Scouting Party). A section of the west wall can be pushed back to gain entry to Room 20 (Treasury of the Head).

20. Treasury of the Head

Located beyond the secret door from Room 19 is a treasury, though it has obviously been looted in the past. There are several dozen chests and coffers within, almost all of which are now empty. Two, however, remain locked and unopened. The smaller of the two chests contains nine gems and precious stones (a piece of blue quartz worth 10 gp, two moss agates worth 25 gp each, a piece of lapis lazuli worth 50 gp, a malachite worth 50 gp, a carnelian worth 250 gp, a garnet worth 750 gp, a peridot worth 750 gp, and an emerald worth 1,000 gp). The larger chest is not only locked, but trapped by means of *explosive runes*. It contains 3,000 gp, a *potion of levitation*, a scroll of *ward against undead*, and a *sword +1*, *dancing*. The *danc-*

ing sword is Eldritch, with a slightly-curved single-edged blade of azoth-infused areonite with a baroque hilt.

21. Chamber of Faces

The northern and southern walls of this room are adorned with dozens of carvings of a bearded man, all of which depict Turms Termax, each done in a different style using different materials (hard wood, ivory, bronze, etc.). The carvings are all solidly affixed to the walls and cannot be removed without doing damage to both walls and the carvings.

22. Hall of Columns

Six thick marble columns hold up this room's 20 foot high vaulted ceiling. The ceiling once had a fresco, but it has been defaced to the point where little of the original plaster remains.

23. Altar to the Unknown

A set of stairs gently descends about five feet into what appears to be a shrine of some sort. There is a simple white stone altar against one wall, upon which the name "Anyastos" is carved in Ancient Thulian. The altar is worn at the front, perhaps from centuries of having been touched. There is no other adornment on the altar, nor does the chamber contain any ornamentation; even its walls are completely bare.

Clerics may recognize Anyastos as the name of an abstract Thulian "deity" believed to be above all the other gods, and the source of the gods' own divinity. Any Lawful character who meditates or prays at the altar for one full turn (ten minutes) receives the Greater Blessing of Anyastos (a permanent +1 bonus to his Wisdom score). Any Neutral or Chaotic character who does so immediately becomes Lawful. In either case, the altar will only work once per character. See *Chapter 6, Overview of the Dungeon*, p. 73, for more information on boons from the gods.

24. Room of Holes

Near the center of this room is a black hepatizon pillar with six areonite buttons on it. If depressed, each button opens up an extra-dimensional "hole" in the room. These holes were used for storage. Two holes can be found on each of the north, east, and west walls. They remain open as long as the appropriate button is depressed. However, no two holes can be open at the same time. Attempting to open one hole while another is already open closes the first hole. If a hole is closed with a hand or other body part inside, the hand is pushed out

Level 3A

3A-24: Characters studying the codices and scrolls will learn one of the following numbered facts each day: 4-2, 4-4, 4-7 5-12, and 5-22. All are written in High Thulian.

forcefully yet harmlessly as the hole closes. The contents of the six holes are as follows:

- 1. Empty
- 2. A chest containing 7,000 sp and 400 gp.
- 3. A Termaxian passkey (see Appendix A, New Magic Items, p. 333)
- 4. Empty
- 5. The keys to the Abstract Gallery (Room 18) and the Fog Chamber (Room 26).
- 6. A large collection of Thulian codices and scrolls covering a wide variety of mundane subjects. The books number several dozen and weigh 150 lbs. total, but are worth about 5,000 gp in total if sold to the right buyer. Hidden amongst them is a *tome of clear thought*.

25. Guard Post

Two wooden stools and an empty weapons rack can be found here. Along the north and south walls hang several tarnished shields.

26. Fog Chamber

The door to this chamber is securely locked; the key can be found in the Room of Holes (Room 24). If the door is opened by any means, a thick, greenish "fog" begins to roll out of the room and into the corridor. The fog smells horrible and anyone who remains within it must make a saving throw versus Poison each round. A failed saving throw results in nausea (–2 attack rolls). Three consecutive failed saving throws result in death. The chamber itself is completely empty, except for two mummified bodies of men wearing chain mail armor and carrying shields and swords. The bodies are contorted in ways that suggest that when they died they were gasping for breath and running for the east door.

The door to The Source (Room 27) is open, and the greenish fog is, if anything, even thicker there.

27. The Source

The greenish fog found in the Fog Chamber (Room 26) also thickly envelops this chamber. The source of the fog is a large, circular contraption of areonite and adamantine steel connected to a network of areonite tubes and pipes built into the wall. One of the pipes has a valve on its side that has been turned to open up an aperture through which the fog is pouring out. If the valve is turned in the other direction, the aperture closes and the fog ceases. It takes an additional 1d4 turns before the fog completely dissipates from this room and the Fog Chamber.

28. Black Room

This room is painted black. Its walls, floor, and ceiling have all been coated with some type of pigment that is as black as night. If the paint on the east wall is scraped off – a laborious process taking 1 hour per 10 square feet – it will reveal an elaborate replica of the Red Doors of Dwimmermount.

If opened, these doors reveal a long-forgotten portal to a city built on the shores of a deep blue sea. Judging from the summery clothing of the women on the shore, it might be located in the tropics. The sun is almost blotted out from the sky by the city's proud edifices. Occasionally explosions rock the metropolis, and lines of black chariots patrol its avenues. At the Judge's discretion, this can be a location within his own milieu, or Volmar, capital of the extant Thulian Empire, a city in grave peril. See *Chapter 6*, *Overview of the Dungeon*, p. 81, for details on portals, and *Factions in the Dungeon*, p. 96 for more details on Volmar.

29. Bugbears

A gang of bugbears guards the door to the next room (Room 30). They will attack anyone who is not an Eld. If the battle turns against them, they will flee to the Eldritch Explorers next door.

Bugbears (7) [AL C, MV 90' (30'), AC 4 (hide & natural), HD 3+1, HP 23, 16, 14 (×2), 13, 12, 7, #AT 1, DG 1d8+1 (battle axes), SV F3, ML +2]

Among them the bugbears have two bloodstones (worth 75 gp each), an azurite (worth 10 gp), and 100 cp.

30. Eldritch Explorers

Four Eld wait here for their leaders, who have ventured into the room containing the Portal to Ioun (Room 34). They will attack any intruder who enters with great ferocity. If the battle turns against them, they will retreat to Room 33 and activate the dart trap there to protect both themselves and their superiors.

Eld (4) [AL C, MV 120' (40'), AC 5 (areonite cuirass), HD 2, HP 14, 12, 10 (×2) #AT 1, DG 1d8 (swords), SV Es2, ML +2; Daily Spells: 2 1st; Repertoire: see below]

- Eld #1: 1-protection from good, sleep
- Eld #2: 1-detect magic, shield
- Eld #3: 1-floating grip, magic missile
- Eld #4: 1-burning hands, shield

The four Eld are each armed with two swords and *areonite cuirasses*. The Eld have 600 ep between the four of them. Eld #1 also possesses a *Termaxian passkey*. See *Appendix A*, *New Magic Items* (p. 333).

31. Art Gallery

The doors to this room are both made of areonite intricately carved with abstract calligraphy. The room within is an art gallery, with frames on the north, east, and west walls that once held works of art. All but one of them has long since been removed. The remaining painting depicts the world of Telluria, as if seen from orbit. The painting is 5 feet by 6 feet in size, and weighs 220lbs; if safely brought out of the dungeon, it would be worth 250 gp to a collector.

On the southern wall hangs the tattered remains of a curtain. Pulling aside the curtain reveals a very large painting, 35 feet wide and 8 feet tall, in a frame made of purplish-black hepatizon. The painting shows a strange, phantasmagoric landscape of weird shapes and brilliant colors. Anyone who looks at the painting for more than a brief time must make a successful saving throw versus Spells or be trapped within the painting for 1d4 days. While trapped within the painting, the character can be seen in its tableau, as if a seamless part of it. At the end of his imprisonment, the character will gain a number of points of Intelligence equal to the length of his imprisonment and lose an equal number of points of Constitution. Once a character has either

succeeded or failed at a saving throw upon seeing the painting, subsequent viewings have no effect upon him.

The painting is inordinately heavy (2,000lbs) and too fragile to remove from the wall without destroying it. However, the secret door to the Treasury (Room 32) cannot be detected without removing the painting.

32. Treasury

This room is accessible only by means of secret doors from the Abstract Gallery (Room 18), Room of Holes (Room 24), and Art Gallery (Room 31). All three secret doors are sliding stone panels.

Within the room is a considerable amount of treasure, secreted here at the time of Dwimmermount's closure. 2,000 gp and 100pp, all dating to the last days of the Thulian Empire, form a large coin pile on the floor, topped by a silver choker (700 gp) and a gold scepter (1,500 gp). A wooden chest next to the coin pile contains a carved head of the god Mayors that fits the statue in the Shrine to Mayors (Room 15); six vials of moon dust for use in the Portal to Ioun (Room 34); a potion of giant strength; a scroll of ward against magic; and a ring of fire resistance. On display in case near the chest is an areonite panoply (see Appendix A, New Magic Items, p. 323) and a sword +1, +2 versus spell casters. The sword is made of azoth-infused areonite, with a slightly curved single-edged blade and an ornate hilt of polished red brass

Level 3A

33. Dart Trap

Next to the door leading to the Portal to Ioun (Room 34) is a switch that, if flipped, activates a dart trap. The trap is not currently active. If activated, anyone who enters or leaves Room 34 must make a saving throw versus Blast or be struck by a hail of small darts that deal 3d6 damage. The trap takes one round to reset before it is again active.

34. Portal to Ioun

The entrance to this room is an areonite door. Inlaid on the door is a glass circle, half white and half black. Inside, the circular room contains a small set of blue stone steps leading up to a dais, on top of which is an 8 foot tall blue stone archway. Runes inscribed in azoth surround the archway, and these radiate strongly under *detect magic*.

Anyone in possession of moon dust—which can be found in the Treasury (Room 32)—who passes over these runes activates their magic. Instantly, a two-way portal to the moon of Ioun appears within the archway. The portal to Ioun lasts for six rounds; one it closes it cannot be opened again for six hours. Along the southern wall, a dusty rose, prism-shaped *ioun stone* can be found (see *Appendix A, New Magic Items*, p. 328). Details on Ioun and passing through the portal to the Moon can be found in Appendix E (see p. 389).

The room is currently occupied by two powerful Eld and their dretch minions (see *Appendix C*, *New Monsters*, p. 348 and 347). Though well-armed, both Eld prefer to stay at a distance, using spells to fight while the demons engage the characters.

Dretch (3) [AL C, MV 90' (30'), AC 7, HD 4, HP 17, 16, 11, #AT 3, DG ld4/ld4/ld6, SV F4, ML +2]

Eld (2) [AL C, MV 120' (40'), AC 6 (areonite panoply), HD 4, HP 16, 11, #AT 1, DG 1d8 (swords), SV Es4, ML +2; Daily Spells: 2 1st, 2 2nd; Repertoire: see below]

Eld #1: 1-magic missile, shield; 2-invisibility, mirror image

Eld #2: 1-charm person, sleep; 2-detect invisibility, web

The two Eld are each armed with two swords and *areonite panoply*. Eld #1 has an *areonite rifle* and a *power cell* with 14 charges remaining (see *Appendix A, New Magic Items*, p. 331). Eld #2 has a *ring of telekinesis*, which appears as an orichalcum band studded with tiny ioun stones. Between them they also possess 700 sp and 400 gp.

35. Dusty Room

Fine, gray dust coats the floor of this otherwise empty room. Markings on the floor and walls are evidence that there was once furniture and wall hangings of some sort here, but these have long since been removed.

36. Shattered Wood

Large piles of shattered wood litter this room. The wood seems to originate from several different sources—loose planks, chair legs, tabletops, etc. Hidden underneath the wood is a small leather bag containing 40 gp.

37. Beetle Nest

The eastern wall of this room is thick with rubble from a collapsed fissure. Dwelling within the rubble are two giant boring beetles (see *Appendix C, New Monsters*, p. 345). They entered through the fissure before it collapsed in on itself, trapping them here. The beetles are very territorial and attack anything that enters their abode.

Giant Boring Beetles (2) [AL N, MV 60' (20'), AC 6, HD 5, HP 23, 16, #AT 1, DG 5d4, SV F5, ML -1]

Hidden amongst the rubble are a *potion of speed* and 120 gp.

38. Hall of Bones

This long chamber is punctuated by six areonite stands. Upon each of these stands once stood the skeleton of an otherworldly creature in a "lifelike" pose, but four of these were long ago removed. The two remaining skeletons are of a girallon and a phase tiger. Neither skeleton is identified in any way, nor are those of the four missing skeletons. The skeletons are not undead, but their condition is good enough that they could be readily animated by a mage or cleric using *animate dead*.

39. Wandering Ghouls

Frescoes depicting stars, planets, and other celestial bodies cover the walls of this oval room. Four ghouls gibber profanely before a fresco of the moon, but the entrance of any characters to the room will interrupt this reverie. The ghouls have wandered far afield from their brethren elsewhere on this level.

Ghouls (4) [AL C, MV 90' (30'), AC 3, HD 2, HP 14, 11, 9, 8, #AT 3, DG ld3/ld3/ld3 + paralysis, SV F2, ML +1]

40. Empty Guard Room

A pair of wooden stools can be found here, along with a weapons rack containing two swords and a mace. The weapons are quite old, but still serviceable.

41. Curtained Room

Green and white tiles cover the floor of this room in a pleasingly symmetrical pattern. From the north and south wall hang two tattered curtains of a vivid green hue. The southern curtain hides an apse containing a female statue without a head. The statue's voluptuous bosom and wide hips are suggestive of Anesidora in her role as goddess of marriage and fertility.

42. Trapped Statue

A statue of a woman dressed in archaic flowing robes stands in this chamber. The statue's hands are outstretched with palms face up. A Lawful cleric will recognize it as representing the goddess Anesidora in her role as goddess of grain and fertility. However, the statue's head has been replaced by that of Turms Termax, creating a strange sight. Careful observation reveals that the right hand is stained green by some sort of natural pigment. If any sort of plant life—even preserved herbs will suffice—is placed in that hand, the secret door to the Portal to Kythirea (Room 43) opens. If anything else is placed in it, nothing happens. If anything is placed in the left hand, including plant life, jets of flame shoot from six points in the walls, dealing 3d6 points of damage to anyone in the room. A successful saving throw versus Blast will reduce damage by half.

43. Portal to Kythirea

This circular room contains a set of green stone steps leading to a large dais, on top of which is 12 foot tall archway made of similar stone, but with white veins running through it. Runes inscribed in azoth surround the archway, and these radiate strongly under *detect magic*.

Anyone carrying some plant life from Kythirea who passes over these runes activates their magic, causing a two-way portal to the Green Planet to appear within the archway. The portal remains active for six rounds, after which it closes and cannot be activated again for six hours. Details on Kythirea and passing through the portal to the Green Planet can be found in Appendix E (p. 390).

44. Blue Room

This room is completely tiled—walls, floor, and ceiling—in dark, cerulean blue. It is devoid of almost

any contents, save that in one corner can be found a small scarab-shaped brooch. The brooch has strange, fire-like symbols etched on it that utterly elude even the capability of spells like *read languages* to decipher. The brooch might fetch 100 gp to a dedicated collector of the arcane, though it has other utility as well (see Room 53, below).

45. Mirrored Chamber

All the surfaces of this room are covered with mirrors, their curvature creating a strangely disorienting effect on the vision of characters inside. The mirrors have been infused with azoth, and have the effect of focusing any arcane magic cast within. Arcane spells cast within the Mirrored Chamber have a duration of twice the usual length. Unfortunately, the focus effect causes the mirrors to give off a resonant hum loud enough to cause an immediate encounter throw for wandering monsters.

46. Bone Pile

Whatever its original purpose, this room now houses a large number of bones of various sorts, both humanoid and otherwise. The ghouls and ghasts in the nearby rooms have, over the centuries, tossed the bony remains of their feasts into this room, and they now litter the floor in a haphazard jumble.

47. Urbane Ghasts

This formerly opulent magician's quarters is now home to two ghasts (see Appendix C, New Monsters, p. 351) named Menas and Passara (male and female, respectively). Unlike the ghouls over whom they rule, the ghasts can still converse in Thulian, both High and Low, and in fact consider themselves Thulian humans rather than monsters. They gladly speak with any outsiders they encounter. Menas and Passara try to present themselves simply as survivors of Dwimmermount's fall who did what was needed to preserve their lives. This was, perhaps, true but over time they have become thoroughly evil and insane. They offer their services as guides to The Laboratory and The House of Portals (Levels 2A and 3A), about which they have extensive knowledge, in exchange for the privilege of consuming any living beings their newfound allies defeat. As a show of good faith, they call off any ghouls in the dungeon, enabling free passage into areas occupied by such creatures.

Ghasts (2) [AL C, MV 150' (50'), AC 5, HD 4, HP 19, 18, #AT 3, DG 1d4/1d4/1d8 + paralysis, SV F4, ML +1]

Level 3A

Chapter 11

Amongst the contents of the room is a wood chest containing 2,000 gp and a collection of jewelry (a Thulian bronze seal worth 20 gp, a silver clasp worth 40 gp, a brass brooch worth 40 gp, and a silver pin worth 40 gp).

48. Ghoul Lair

This room, like Rooms 47 and 49, is occupied by undead who were once Thulian residents of Dwimmermount. Faced with extinction when Dwimmermount was sealed two centuries ago, the erstwhile men and women became ghouls when they used dark magic and cannibalism to unnaturally extend their lives. They now roam the level in search of living creatures to eat, though they know better than to attempt to enter the Crescent Room (Room 62) and the rooms connected to it.

Ghouls (4) [AL C, MV 90' (30'), AC 3, HD 2, HP 11, 9(×2), 4, #AT 3, DG ld3/ld3/ld3 + paralysis, SV F2, ML +1]

A steel ladder ascends through an aperture in the ceiling of this room. It rises up 50 feet to a short corridor connected to the Guard Room (Room 56) of The Laboratory (Level 2A) and then another 10 feet past that, terminating in a trap door in the floor of the Dressing Room (Room 28). The ghouls use it to travel between levels and seek out food in nearby rooms.

49. Ghoulish Feast

This chamber currently houses several ghouls who have recently returned from elsewhere on the level. In their most recent excursion, they managed to slay a pair of bugbears. The ghouls dragged the bugbears' corpses back to their lair, where they are now undertaking the messy process of consuming them.

Ghouls (3) [AL C, MV 90' (30'), AC 3, HD 2, HP 12, 11, 6, #AT 3, DG ld3/ld3/ld3 + paralysis, SV F2, ML +1]

50. Pillared Chamber

Within this room is a marble statue of Turms Termax, with his arms uplifted toward the sky. In his right hand is a staff bearing a caduceus. Surrounding the statue are six thick pillars made of black marble veined with white.

51. Carcass Scavenger

From a fissure along the southern wall, a carcass scavenger has emerged into this room. The fissure is too narrow for humanoids to make use of.

Carcass Scavenger (1) [AL N, MV 120' (40'), AC 2, HD 3+1, HP 24, #AT 8, DG paralysis, SV F2, ML +2]

52. Ashen Room

Directly in front of the areonite door to the Braziers Room (Room 53) are two neat piles of black ash. Despite appearances to the contrary, there are no traps—or anything else—in this room other than the piles of ash.

53. Braziers Room

All the walls of this room are decorated with a fiery motif, as are its two areonite doors. Located in its southwest and southeast corners are iron braziers. They do not appear to have been lit in some time. Charcoal sufficient for a single ignition can still be found in each, however, and there are tapers, tongs, and other implements for lighting the braziers on a shelf on the west wall.

If both braziers are lit, in 1d4 rounds a minor fire elemental appears. If anyone present is in possession of the brooch from the Blue Room (Room 44), the fire elemental will obey that character as if summoned by *conjure elemental*. However, the elemental cannot leave this level of the dungeon. If no one present has the brooch when the elemental appears, it will immediately attack. In either case, once summoned, the elemental cannot be dismissed except by destroying its form on this plane.

Minor Fire Elemental (1) [AL N, MV 120' (40'), AC 5, HD 4, HP 16, #AT 1, DG 1d6, SV F4, ML +4]

54. Summon Chamber

All the entrances to this room are areonite doors decorated with elemental motifs – flames on the southern door, watery wave patterns on the western door, and swirling whirlwinds on the eastern door. Now empty, this room shows signs of once having had a large collection of furniture and other accoutrements, as evidenced by the marks on the floor. All that remains to indicate its former purpose are damaged mosaics on the walls depicting sorcerers using their arts to summon elementals and other strange creatures.

55. Antechamber

Except for some ordinary dust that shows recent traffic through the northern and southern doors, this room is empty.

Level 3 A

56. Guard Room

This guard room contains a single wooden stool and pegs on the circular wall where weapons and armor once hung.

57. Hall of Divinity

The walls and ceiling of this room are covered with images depicting various gods and goddesses, most of which will be familiar to anyone with knowledge of the Thulian Great Church. Some however, are completely unknown, being representations of the deities of other lands and even worlds.

Lit torches smolder in sconces set before each of the four niches in the room. Within the niches are marble statues depicting the gods Typhon, Tyche, Mavors, and Asana. Like most of the statues in Dwimmermount, their original heads have been removed and replaced with those of Turms Termax. However, when the characters enter this area, they see that all of the Turms heads are lying on the ground, having been removed by the four men present in the room.

These men are Volmarian Imperial soldiers who entered Dwimmermount through the Portal to Volmar (Room 61) under the command of Opilio, a cleric of Mavors. Opilio is next door in the Chapel to Tenen (Room 59) and has directed these men to guard him here. The soldiers will ask anyone who enters this chamber to keep their weapons sheathed and approach with caution. They speak a strangely inflected version of Common (Low Thulian). Entrants who respond to their entreaty non-violently will be ushered into the Chapel to meet their master.

Volmarian Soldiers (4) [AL L, MV 90' (30'), AC 5 (chain mail & shields), HD F2, HP 10, 7, 5, 4, #AT 1, DG 1d6+1 (swords), SV F2, ML +1]

58. Stairwell

Flanking the northern entrance to this chamber are a pair of bronze statues, each a winged woman with Thulian arms and armor. Past the statues is a circular staircase that ascends to the Stairwell (Room 9) on The Laboratory (Level 2A).

59. Chapel to Tenen

This chapel is dedicated to Tenen, the Thulian god of craftsmen and invention. Its basalt altar is flanked on either side by marble statues, both of which stand 10 feet tall and depict featureless humanoids of indeterminate gender. The statues' heads have both been replaced with that of Turms Termax. A pair of lit torches hang in sconces on either side of the statues.

Currently encamped in the chapel are several Volmarians, who arrived in Dwimmermount via the Portal to Volmar (Room 61). Their leader is Opilio, a cleric of Mavors. He is served by Proseria, a female mage, and eight soldiers. Four of his soldiers are in this room, while the other four are in the Hall of Divinity (Room 57).

Opilio is not hostile, but he is stern, and makes a point of asserting his authority at every opportunity. He explains that the "Thulian Empire"—as he calls Volmar—has returned to lay claim to Dwimmermount once again. If his report on the dungeon finds favor with the emperor and the ecclesiarches of Volmar's Great Church, his expedition will be but the first of many to come.

However, Opilio is exploring the dungeon very cautiously because a prior expeditionary from Volmar, Varazes, never reported back. He is unaware that the mage has turned into a would-be conqueror. See The Pool of Life (Room 50) of The Laboratory (Level 2A) for details on Varazes.

Because of his cautious approach, Opilio has little interest in joining the characters in their explorations. He will provide them with supplies and healing if they seem to be of Lawful alignment or favorable to his cause. Likewise, he will provide some basic information about this level of the dungeon, though he cautions the characters that Dwimmermount is "imperial property" and they should take care not to loot indiscriminately, lest they be treated as thieves by later Volmarian explorers. He will happily pay for maps of the dungeon at the usual rate (see *Chapter 3, Adventuring in Dwimmermount*, p. 48). For more details on Volmar, see *Chapter 7, Factions in the Dungeon* (p. 95).

Opilio [AL L, MV 90' (30'), AC 6 (banded mail & shield), HD C4, HP 22, #AT 1, DG 1d6+1 (*mace +I*), SV C4, ML +1; Daily Spells: 2 1st, 1 2nd; Repertoire: Cleric; Proficiencies: Leadership, Unflappable Casting, Weapon Focus (maces, flails, and hammers)]

Proseria [AL L, MV 120' (40'), AC 2 (bracers of armor (AC 7)), HD M4, HP 11, #AT 1, DG 1d4, SV M4, ML +1; Daily Spells: 2 1st, 2 2nd; Repertoire: 1st-charm person, read languages, sleep; 2nd-detect secret doors, knock, locate object; Proficiencies: Collegiate Wizardry, Knowledge (Thulian Lore), Loremastery]

Volmarian Soldiers (4) [AL L, MV 90' (30'), AC 5 (chain mail & shields), HD F2, HP 16, 13, 10, 3, #AT 1, DG 1d8 (swords), SV F2, ML +1]

60. Passageway

The passageway here is elaborately carved with abstract Eldritch art. Footprints in the dust run from the door to the Antechamber (Room 55) and terminate abruptly at the western edge of the north wall. A secret door to the Portal to Volmar (Room 61) is concealed here, its mechanism hidden within the wall-carvings.

61. Portal to Volmar

Behind the secret door from the Passageway (Room 60) is a small, oval-shaped chamber. There is an archway on the west wall, its aperture filled with swirling silver-grey mist. This is a portal to the Palace of Sempiternal Wisdom in the southern city of Volmar. Passage through the portal is easily done, as it requires neither a command word nor an item to activate it. However, the far side is heavily guarded in anticipation of reinforcing the expeditionaries from Volmar found in the Hall of Divinity (Room 58) and Chapel to Tenen (Room 59). For more information on Volmar, see *Chapter 7*, *Factions in the Dungeon* (p. 95).

62. Crescent Room

At each end of this crescent-shaped room stands a statue of Turms Termax. Careful examination of either statue will reveal that its base sits on a track that runs to just short of the door that allows an exit to the rest of the level. If anyone enters Vault of the Worlds (Room 63) without possessing a Termaxian passkey (see Appendix A, New Magic Items, p. 333), the two statues slowly begin to move along their tracks; statue 'a' to block the door to the Passageway (Room 60) and statue 'b' to block the door to the Ghoul Lair (Room 48). It takes five rounds for the statues to block the doors. Once begun, the statues' movement can only be stopped by destroying them, and once in position, the statues will not move again unless a passkey is displayed within 5 feet of them. If 200 or more points of damage are dealt to a statue, it falls apart, opening the way out of the room.

63. Vault of the Worlds

Various shelves and cases adorn the walls of this room. These contain valuables brought through the portals from other worlds and placed here for safekeeping. These treasures include: 700 sp, 600 gp, one piece of lapis lazuli (50 gp), a silver necklace (10 gp), a demonic idol of Arach-Nacha (1,600 gp), a gold ring (800 gp), a war hammer +1, and a potion of heroism. The coins are all of various sizes and shapes, bearing the likenesses of kings and gods

unrecognizable to even the wisest Tellurian sages.

The treasure is guarded by a pair of animated iron statues who attack any intruders lacking a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333).

Animated Iron statues (2) [AL N, MV 30' (10'), AC 5, HD 4, HP 23, 22, #AT 2, DG 1d8/1d8, SV F4, ML N/A]

64. Alchemist's Door Terminus

When the Alchemist's Door on the stairway up to the Red Doors is active, the portal it opens leads to this room. It was from here that the Termaxian cultists now in control of The Manufactory (Level 6B) and The Deep Hollows (Level 7) entered Dwimmermount two months ago. There is no way to open the portal from inside, and it functions only during the Triple Conjunction of Kythirea, Areon, and Ioun in any event. See *Chapter 6*, *Overview of the Dungeon* (p. 80), for more details on the Alchemist's Door and other entrances to Dwimmermount.

Lying on the floor is a silk bag containing 300 gp. The coins within were recently minted in Adamas.

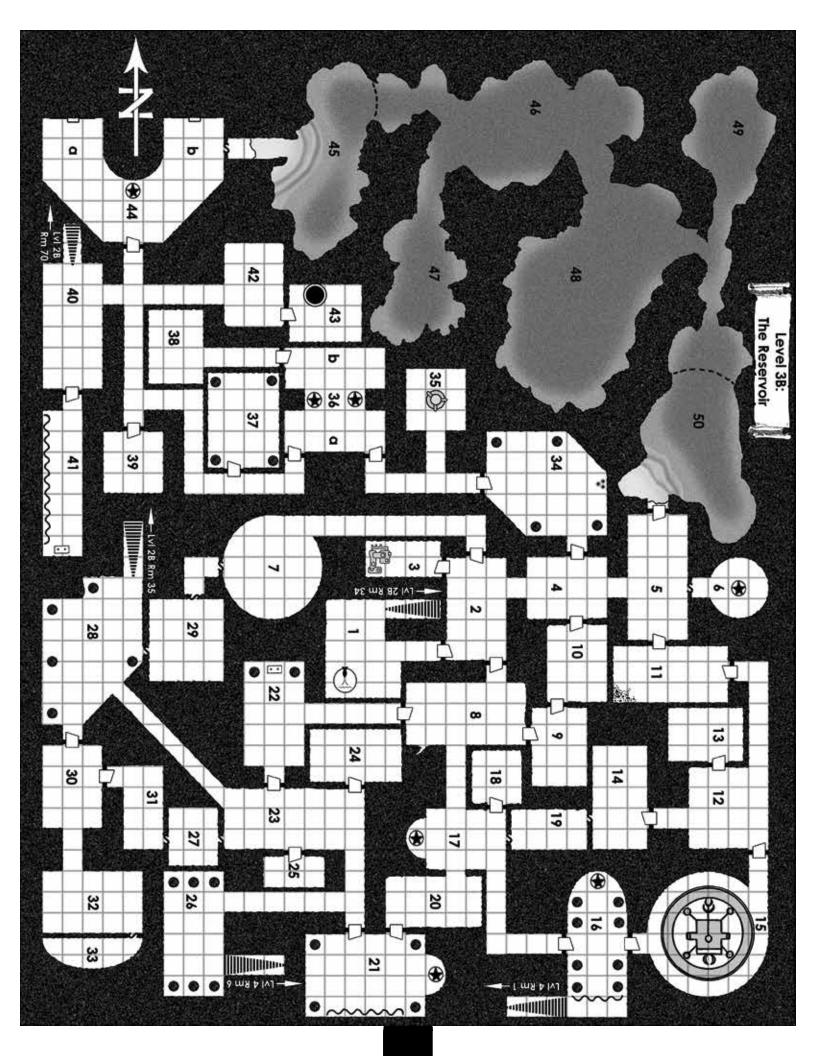

65. The Skullmural

This chamber is empty, save for a tattered red curtain, which covers the entirety of the west wall. Behind the curtain is a strange carving of a skull. The carving is, in fact, a skullmural (see *Appendix C, New Monsters*, p. 365) that will attack when characters investigate it or turn their back to it. In either case it will gain surprise.

Skullmural [AL N, MV 30' (10'), AC 3, HD 3, HP 18, #AT 1, DG 1d6 + blood drain, SV F3, ML +2]

Once slain, the skullmural disgorges a gold medallion worth 1,000 gp.

Level 3 A

The Reservoir

Overview of The Reservoir

Y THE LATE SECOND Era, the action of the astral dome below Dwimmermount had drawn so much azoth down from the quintessence of space that the construction of a vast underground cistern became necessary to contain it. The Reservoir was built around a series of pre-existing limestone caverns located mid-way between the peak and the astral dome. Using the Great Ancients magical technology, vast quantities of stone were dematerialized to excavate space of the desired dimensions, resulting in hewn areas of sheer smoothness and flawless geometry. Adamantine steel hatches, capable of being sealed against azoth, were installed between the rooms and corridors, and vitreum radiance panels were placed every ten feet to illuminate the level.

In the centuries since, much of this construction has been damaged or destroyed. As the fountainhead of azoth on Telluria, The Reservoir has been a battlefield each time the rulership of Dwimmermount has been contested. The original construction is still evident in the Control Room (Room 3), Pump Room (Room 7), Engineering Room (Room 9), Power Generator (Room 10), Strange Storeroom (Room 18), Observation Room (Room 29), Distillation Room (Room 35), and Arcane Library (Room 37). Much of the rest of the level is of Eld, Thulian, or Termaxian construction.

WANDERING MONSTERS OF THE RESERVOIR

Die Roll	Monster

Level

3B

Chapter

1. Dry Fountain

In the south-west corner of this room is a tall fountain constructed of white alabaster. The fountain's surface is decorated with arcane symbols, while the fountain's basin is visibly discolored, being darker, almost blackish, in places. Covering the basin is a vitreum canopy.

At present, the fountain is not working. If the Power Generator (Room 10) is turned on, the fountain can be activated from the Control Room (Room 3). If activated, the fountain begins to circulate azoth. The vitreum canopy covering the fountain protects spectators from being splashed by the toxic quintessence, but equally prevents them from gathering it. The hemisphere is immune to damage from weapons and similar physical attacks, but if it takes more than 50 points of damage from spells or magical effects, the material will shatter and allow direct access to the fountain itself. 7 gallons of azoth can then be collected per minute, up to a maximum of 1,200 gallons, although this can only be safely done by a character in an environment suit. See Appendix F, Azoth (p. 393), for more details on the properties of azoth.

The areonite pipes that feed the fountain are too small for humanoid creatures to traverse, and highly toxic besides. If the characters somehow get into the azoth pipes themselves (e.g. by *diminution*), see *Chapter 6*, *Overview of the Dungeon*, p. 85, for details on where they might travel.

The room is currently occupied by four throghrin, who guard the steps from Rukruk's Throne Room (Room 34) on The Reliquary (Level 2B) from interlopers on this level.

Throghrin (4) [AL C, MV 120' (40'), AC 3 (scale), HD 3, HP 13, 12 (x2), 10, #AT 1, DG 1d8 (battle axes), SV F3, ML +2]

The throghrin keep a chest containing 3,000 sp near the steps. If hard-pressed by attackers from this level, the throghrin will abandon this treasure and retreat upstairs, hoping the chest will distract intruders long enough for them to gather reinforcements.

2. Foyer

All of the entrances to this room are areonite doors with wave-like engravings. The walls of this large chamber are covered in mosaics that have been severely defaced, making it difficult to ascertain what they once depicted. A careful examination of the mosaics (requiring 1 turn) reveals that they were once maps, perhaps of this very level. Unfortunately, only a very small section remains unscathed, showing the relative locations of the Foyer, Fungal Grove, Preparation Room, Ruined Chamber, Engi-

neering Room, Power Generator, Boneyard, and Azoth Spillage (Rooms 2, 4, 5, 8, 9, 10, 11, and 34 respectively). The names and contents of these rooms are not depicted in the mosaics.

3. Control Room

The door to this room is locked, and its key long since lost. The room contains a series of controls that operate three devices in nearby rooms—the circulation system for the Dry Fountain (Room 1), the extraction pipes in the Pump Room (Room 7), and the distiller in the Distillation Room (Room 35). The controls, a complex array of resin dials, switches, and buttons set in a vitreum panel, cannot be operated without an *engineer's control rod* (see *Appendix A*, *New Magic Items*, p. 326), several of which can be found throughout this level. The controls also require power to function, which will be restored if the Power Generator (Room 10) is activated.

4. Fungal Grove

Nearly the entirety of this room is filled with strange silvery-black mushrooms of unnatural size, varying in height from a few inches to nearly three feet tall. All creatures that enter the room must succeed in a saving throw versus Poison or fall into a deep slumber from which they cannot be awakened unless removed from the grove. Sleeping creatures gradually die of dehydration and starvation, and the fungal grove feeds on the remains.

Located amongst the fungi are several items: a backpack containing 700 sp, a sack containing 60 gp, and an *engineer's control rod* (see *Appendix A*, *New Magic Items*, p. 326).

5. Preparation Room

In the center of the room stands a steel table with some blackish stains on its top. The walls of the room are lined with steel shelves on the western side and upright steel lockers on the eastern side. All of the shelves, and most of the lockers, are now empty, but three lockers contain heavy silvery-gray suits, along with gloves and boots made from the same material, and ceramic helmets that fit on top of the suits. These are *environment suits* (see *Appendix A, New Magic Items*, p. 326), which grant immunity to certain adverse effects encountered throughout the dungeon, such as the azoth found in the nearby caverns (Rooms 45-50).

The door to the Entry Cavern (Room 50) is a magically sealed adamantine steel hatch. It can only be opened from the Reservoir Control room (Room 44) or with a *knock* spell. The secret door to the Secret Shrine (Room 6) is at the back of one of the metal lockers.

6. Secret Shrine

A 10 foot tall iron statue of a man in strange plated armor stands at the center of this room. The man wears a helmet that completely covers his face. In his right hand is an ornate lantern that can only be removed by a Lawful cleric—anyone else who attempts to touch it, let alone remove it, takes 3d6 damage without any possibility of a saving throw. The lantern is an *iron lantern* (see *Appendix A*, *New Magic Items*, p. 329) with a single unused lens.

The most knowledgeable of sages could possibly identify the statue as of the Iron God, an Empyrean worshipped as a divinity at certain periods in Telluria's history, but most characters will be ignorant of the existence of this being, let alone able to identify it.

7. Pump Room

The floor of this large, circular room is polluted with stains of silver, black, and ochre, perhaps a residue from the numerous large nephelite pipes run between the walls and floor. The pipes are silent and empty of fluid, unless the power for the entire level has been restored by the Power Generator (Room 10) and the pipes have been activated in the Control Room (Room 3). If active, the pipes vibrate and rattle loudly, and several of them leak slightly, dripping azoth onto the floor, where it leaves a silvery-black stain before seeping into the stone. When the Pump Room is activated, the azoth levels in the Entry Caverns (Rooms 45 and 50) can be raised or lowered at the Reservoir Control (Room 44). As elsewhere in the dungeon, the azoth pipes are too small for humanoid creatures to traverse, and highly toxic besides, but *Chapter 6, Overview of the Dungeon* (p. 85), has details on where they might travel.

The ochre stain in this room is actually an ochre jelly, which will attack any characters who approach.

Ochre Jelly (1) [AL N, MV 30' (10'), AC 1, HD 5, HP 30, #AT 1, DG 2d6, SV F3, ML N/A]

The secret door to the west is concealed as a cluster of pipes with a small steel hatch wheel. Turning the wheel will open the corridor to the Observation Room (Room 29).

8. Ruined Chamber

Rubble litters this large room, particularly in the southwest corner, where the floor has collapsed, opening a one foot wide gap through which vermin can easily enter. Among the vermin to do so are eight giant ticks (see *Appendix C*, *New Monsters*, p. 372), which hungrily attack any living creatures that come into the chamber.

Giant Ticks (8) [AL N, MV 30' (10'), AC 6, HD 2, HP 13, 10, 9 (×2), 7, 6, 5, 4, #AT 1, DG 1d4 + blood drain, SV F2, ML 0]

Hidden amongst the rubble is a coffer containing 90 gp and a gold earring worth 300 gp.

9. Engineering Room

The doors to this room are adamantine steel hatches. Within, shelves and cabinets of alchemist's resin line the walls. The shelves are empty, but several of the cabinets contain sheaves of paper that disintegrate upon being touched. Beneath one of these piles of paper is an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326).

10. Power Generator

The doors to this room are adamantine steel hatches. Inside, a large collection of rectangular nephelite devices occupy the center of the room, connected to one another by a series of orichalcum cords and wires. The devices are bedecked with a confusing assortment of resin buttons and switches. Attempting to use these buttons and switches correctly requires a magic research throw. Each attempt takes 1 turn (10 minutes). A successful throw restores power to all of the level's machinery in the following rooms: the Dry Fountain (Room 1), the Control Room (Room 3), the Portal Room (Room 15), the Observation Room (Room 29), the Distillation Room (Room 35) and the Arcane Library (Room 37).

Failure results in one of the following consequences (roll 1d4):

- 1. Minor electrical shock (1d4 damage)
- 2. Electrical Shock (2d4 damage)
- 3. Major electrical shock (4d4 damage)
- 4. Generator circuit damaged; will no longer restore power to one random room

11. Boneyard

The western half of this room is filled with rubble, making entry from the Preparation Room (Room 5) difficult as the door has effectively stuck.

Scattered amidst the rubble are "bones" carved from a silvery-black metal. These are in fact twelve eldritch bones (see *Appendix C, New Monsters*, p. 349) that attack anyone who enters the room from any direction.

Eldritch Bones (12) [AL N, MV 120' (40'), AC 4, HD 1+1, HP 9, 8 (×3), 7 (×2), 5, 4, 3 (×2), 2 (×2), #AT 1, DG 1d6+1, SV F1, ML N/A]

12. False Friends

Within this chamber are three doppelgangers from Areon. They have temporarily assumed the form of dwarves, and introduce themselves to any intelligent creatures that enter this room as Getvar, Kelrak, and Tholad. The doppelgangers explain they are seeking an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326), so that they can activate one of the portals in the Portal Room (Room 15) to escape to the surface. Provided that the characters are willing to aid them in this request, the doppelgangers will behave in a trustworthy fashion. If met with refusal, suspicion, or resistance, or if the characters approach Room 13, the doppelgangers will attack.

Doppelgangers (3) [AL C, MV 90' (30'), AC 4, HD 4, HP 18, 15, 11, #AT 1, DG 1d12 or by weapon, SV F10, ML +2]

13. Hiding the Evidence

Inside this room are the bodies of three dwarves slain by the doppelgangers next door (Room 12) and whose identities they assumed. The dwarves came via the Portal Room (Room 15) from The Manufactory (Level 6B) and ironically, possessed the engineer's control rod (see Appendix A, New *Magic Items*, p. 326) that the doppelgangers seek. However, the rod the dwarves held is built into the cross guard of an otherwise ordinary short sword, making its presence less than obvious. The dwarves carried 300 pp on their persons, in addition to a potion of growth, an amethyst worth 750 gp, a chrysoprase worth 100 gp, a jasper worth 100 gp, and an adamantine steel shield +1. The dwarves wear chain mail and have short swords, all of which is still are in usable condition.

14. Barracks

Wooden beds sufficient to house two dozen can be found in this room, along with footlockers and other small containers. Except for dust, the chamber is in remarkably good shape, showing very little damage or wear. Despite this, all but one of the footlockers has already been looted. One remains locked and it contains 50 gp and a pearl-studded brass ring worth 100 gp.

A door to the Secret Space (Room 19) is concealed behind a sliding block of stone in the west wall.

15. Portal Room

The ceiling to this large circular room is domed and decorated with an artistic representation of the world of Telluria, with Dwimmermount located at its center. In the middle of the room itself are three archways with stone "doors" set into them. The three archways are portals to different levels of the dungeon. Each portal requires an engineer's control rod (see Appendix A, New Magic Items, p. 326), to activate. When a rod is brought within a few inches of a portal, the door set into it fades away, replaced by a swirling silver-grey mist that remains open for one turn. During that time, characters can pass both ways through the portal, i.e. to the bottom of the Staircase and then back to the Portal Room. However, the portal can only be activated from the Portal Room.

Portal #1 leads to the Entrance Chamber (Room 1) on The Path of Mavors (Level 1), just inside the Red Doors.

Portal #2 leads to the bottom of the Staircase (Room 1) on The Ossuaries (Level 6A).

Portal #3 leads to an empty chamber containing a Dead Dwarf (Room 10) on The Manufactory (Level 6B).

16. Sanctum of Tenen

Eight heavy basalt pillars hold up the vaulted ceiling of this chamber. The southern portion of the room is obscured by a large blue curtain, while the northern apse is dominated by a large basalt statue of the god Tenen, appearing as a short, almost dwarf-like figure carrying tools. Interestingly, his head has not been replaced by that of Turms Termax. This is because the statue is in fact animated, and springs to life to attack anyone who pulls back the curtain in the southern portion of the room.

Stone Statue (1) [AL N, MV 60' (20'), AC 5, HD 5, HP 29, #AT 2, DG 2d6/2d6, SV F5, ML N/A]

Past the curtains is a staircase that descends to Entry Room (Room 1) of The Halls of Lesser Secrets (Level 4).

17. Statue of Tenen

Another statue of the Thulian deity Tenen can be found in this room. This time though, his head has been replaced with that of Turms Termax, quite noticeably so, in fact, since it is made from a different type and color of stone. If the head is removed and replaced with an appropriate one—including that from the statue in the Sanctum of Tenen (Room 16)—the character doing so gains the Blessing of Tenen. This is the one-time ability to cast *dimension door* as per the arcane spell of the same name. See *Chapter 6*, *Overview of the Dungeon* (p. 84), for more information on boons from the gods.

A door to the Secret Space (Room 19) is concealed behind a sliding block of stone in the east wall.

18. Strange Storeroom

The door to this room is made of frosted vitreum. The entirety of this room consists of resin shelves. The shelves are littered with literally hundreds of silvery metal plates, each about one foot in diameter. These plates are *knowledge records* (see *Appendix A, New Magic Items*, p. 329), a type of storage media for use with arcane machines found in the Arcane Library (Room 37). Also present in the room are three shadows, who attack anyone who enters the room without a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333) in their possession.

Shadows (3) [AL C, MV 90' (30'), AC 2, HD 2+2, HP 16, 10, 7, #AT 1, DG 1d4 + strength drain, SV F2, ML +4]

19. Secret Space

This large room is almost entirely empty, except for some straw mats, a blood stain on the ground, and a discarded leather sack. The sack is in fact a bag of holding, inside of which can be found 2,000 sp, 700 gp, and a small bag. The small bag contains 20 sp, 7 gp, and a tiny leather pouch. The tiny leather pouch holds a sprinkling of silver and gold dust and a piece of leather.

The exits to the Barracks (Room 14) and Statue of Tenen (Room 17) are not concealed from within this room.

20. Bloodsuckers

The door to this chamber from the room with the Statue of Tenen (Room 17) has been shattered, which has enabled seven giant ticks (see *Appendix C, New Monsters*, p. 372) to take up residence here. The ticks attack anyone who enters.

Giant Ticks (7) [AL N, MV 30' (10'), AC 6, HD 2, HP 12, 10, 8 (×3), 6, 5, #AT 1, DG 1d4 + blood drain, SV F2, ML 0]

Level 3B

Chapter

21. Despoiled Room

Four marble pillars support the vaulted ceiling of this room. Against the southern wall is a torn and tattered tapestry made from silvery-black silk decorated with geometric designs. The bare walls and the ceiling have all been covered with strange shapes drawn in phosphorescent paint, which catch the light of any torches or lanterns. Continuous viewing of the symbols for more than 6 rounds requires that the viewer make a successful saving throw versus Spells or be afflicted with a powerful suggestion to fall down and worship the statue at the eastern end of the room. The suggestion lasts only 1 turn and can be removed with dispel magic, remove curse, and similar spells and magical effects. When those afflicted by the suggestion break free of its influence, they have the name "Tsath-Dagon" on their lips, but remember nothing else. The statue itself is crudely carved from scorched wood and looks vaguely like a wide-mouthed, toad-like being.

22. Altar of Evil

A black basalt altar flanked by two pillars made from the same material is located at the northern end of this room. The altar has been damaged, with much of its ornamentation broken off, giving the altar a rough-hewn appearance it did not originally possess. The altar radiates evil for the purposes of spells like *detect evil*. Any Chaotic-aligned character who touches the altar is healed 1d4 points of damage, or 1d6 points of damage if a cultist (no more than once per day). Any Lawful-aligned character who touches it takes 1d4 points of damage (no save), or 1d6 points if a cleric. However, a Lawful cleric can become a Chaotic cultist by renouncing his faith and making a blood offering at the altar here (see *Chapter 3*, *Adventuring in Dwimmermount*, p. 40).

23. Ranine Scouts

Ten ranine (see *Appendix C*, *New Monsters*, p. 363) are currently scouting this location. If events turn against them, they first attempt to raise the alarm and alert their brethren in the Office (Room 24) to come to their aid. Otherwise, they will retreat toward the Stairway (Room 26) and thence The Halls of Lesser Secrets (Level 4).

Ranine (10) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 13, 12 (×2), 11 (×2), 9, 8, 6, 4 (x2), #AT 3, DG 1d6/1d6/1d4 + paralysis, SV F2, ML +1]

The ranine have not found the secret door to the Secret Treasury (Room 27), which is concealed as a sliding section of stone in the west wall.

24. Office

Four ranine (see *Appendix C*, *New Monsters*, p. 363), one of them a cultist, are ransacking this room, looking for anything valuable. The room is furnished with a heavy wooden desk, a chair, and some brass cabinets, none of which contain anything of much interest to either the ranine or the characters.

Ranine (3) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 10, 7 (×2), #AT 3, DG 1d6/1d6/1d4 + paralysis, SV F2, ML +1]

Ranine Cultist (1) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 3, HP 17, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV C3, ML +2; Daily Spells: 2 1st; Repertoire: Chaotic Cleric]

25. Latrine

There are several non-working toilets in this small chamber, along with similarly non-functional water basins. The room has a musty smell, but there is no evidence of any kind of mold present in the place. A tattered and grossly stained codex litters the floor near the toilets; judging from its obscene illustrations, it seems to be a religious tract of an erotic mystery cult. The codex would be worth 250 gp to a collector, but Paladins and Clerics who read it must make a successful saving throw versus Spells or lose 500 XP from the corrupting material.

Hidden inside one of the toilets is a vial containing a blackish liquid that is in fact a *potion of human control*.

There are pipes connecting the toilets to the wall, but they are too narrow to allow even the smallest humanoid-shaped creatures to enter them. Normal rats, insects, or a character affected by *diminution* might pass through them, however; see *Chapter 6, Overview of the Dungeon* (p. 84), for details on traversing the water pipes if necessary.

26. Stairway

The way down to Room 6 of The Halls of Lesser Secrets (Level 4) can be found in this marble-pillared chamber, which is currently occupied by eight ranine (see *Appendix C*, *New Monsters*, p. 363), one of them a 4 HD cultist.

Ranine (6) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 13, 9, 6, 3, 2, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV F2, ML +1]

Ranine (1) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 14, #AT 3, DG 1d6/1d6/1d4 + paralysis or 1d6+2 (hand axe +2), SV F2, ML +1]

Ranine Cultist (1) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 4, HP 26, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV C4, ML +2; Daily Spells: 2 1st, 1 2nd; Repertoire: Chaotic Cleric]

The ranine have collected a small hoard consisting of 4,000 gp, a potion of gaseous form, a potion of undead control, and a scroll of detect invisible.

27. Secret Treasury

This room is accessed by one of two secret doors, each a sliding section of stone paneling. Hidden within the secret treasury are two chests and a coffer. One chest contains 4,000 sp; another contains 1,200 gp and *cursed sword* –1. The *cursed sword* is a Thulian gladius with a bronze hilt and adamantine steel blade, heavily notched as if from frequent use. The coffer contains a scroll with *web* and *knock*.

28. Pillared Chamber

Ornately carved marble pillars are found in this room, whose walls are decorated with frescoes

depicting magicians engaged in all manner of sorcery. A staircase here ascends to the Stairway (Room 35) on The Reliquary (Level 2B). The staircase is currently guarded by five throghrin. Another two throghrin are on duty on the Stairway (Room 35) above; these can reinforce their brethren below or cover their retreat, as necessary.

Throghrin (5) [AL C, MV 120' (40'), AC 3, HD 3, HP 17, 16, 15, 5, #AT 1, DG 1d8 (swords), SV F3, ML +2]

The secret door to the Observation Room (Room 29) is a sliding section of stone wall opened by stepping on a pressure plate adjacent to the southeast pillar.

29. Observation Room

The center of this room is dominated by a large machine made of alchemist's resin and nephelite, connected to a series of 16 similar but smaller machines arranged around it. Each of the smaller machines features an opaque vitreum view screen over an arrangement of resin buttons and switches.

When activated, the view screens allow their users

to safely and secretly observe many of the other rooms on this level. To activate the view screens, power must first be restored to the level by the Power Generator (Room 10). Then the observation power regulator (the large machine at the center of this room) must be turned on. Doing so takes 1 turn (10 minutes) and requires a successful magic research throw. If a character fails this throw, he takes 1d6 shock damage (no saving throw).

Once power is flowing from the Power Generator and the observation power regulator is turned on, characters can then turn on the view screens by using an engineer's control rod (see Appendix A, New Magic Items, p. 326). Each of the 16 view screens monitors a different room: Dry Fountain (Room 1), Portal Room (Room 15), Sanctum of Tenen (Room 16), Despoiled Room (Room 21), Stairway (Room 26), Pillared Chamber (Room 28), Barracks (Room 32), Checkpoint (Room 36), Arcane Library (Room 37), Reservoir Control (Room 44), and each of the caverns (Rooms 45-50).

Level 3 B

When activated, the view screens normally provide an accurate but ordinary view of whatever is happening in the rooms they monitor. However, if there is no light source in the observed room, then the view screen will provide a view of the room as if seen through infravision (such that warm or living things will appear in tones of red, yellow, and blue, while cool things will be gray and very cold things black). The screens never reveal the presence of magic, invisibility, or other special effects, nor can such effects be cast through the view screens

30. Recreation Area

There are several broken wooden tables and many more broken chairs in this room, creating a morass of debris. Nothing is of any value.

31. Armory

Wooden racks and metal shelves fill this room, most of which are now empty. However, a few items remain that may be of interest. They include two sets of *Thulian chain* (see *Appendix A*, *New Magic Items*, p. 333), four shields, two swords, and five maces. There is also a crossbow with a quiver of 20 bolts, one of which is actually a *firebolt*.

The secret door to the Secret Treasury (Room 27) is concealed behind a large, empty weapon rack in the east wall.

32. Barracks

This former barracks area is completely empty of any physical objects except dust and some splintered wood. Any character who enters the room must make a saving throw versus Spells. Those who *fail* will see a shadowy echoes of what this room looked like during its heyday—a well-furnished barracks with several soldiers, who immediately attack!

There will be two shadowy soldiers for every character who fails his saving throw, and they will fight until either they are defeated or their targets are slain, going so far as to pursue characters who leave the Barracks. Characters who succeed at their saving throw cannot aid those who failed, as they cannot see or interact with the shadowy echoes of the past.

Shadowy Soldiers (Varies) [AL C, MV 120' (40'), AC 6, HD 2, HP 9 each #AT 1, DG 1d6+1, SV F2, ML +4]

At the time that the Barracks was built, the secret door to the Hidden Room (Room 33) was an ordinary doorway. As such, the existence of a door there will be immediately apparent to any characters who see the shadowy echoes of the room's

past. Those who succeed in the saving throw see only stone paneling, but can find the door through the usual means.

33. Hidden Room

Secreted within this hidden vault are two chests. The first chest has a lock with a poison need (save versus Poison or die if triggered). It contains 900 gp and a *chime of opening*. The second chest is unlocked, and contains 6,000 sp.

34. Azoth Spillage

There are four upright vitreum pipes in this room, each about 5 feet in diameter and reaching from the floor to the ceiling. All but one of the pipes has cracked, allowing azoth to spill into the room. Most of the azoth has long since seeped into the stone floor, staining it a silvery-black color, but small puddles of it can be found here and there. See *Appendix F*, *Azoth* (p. 394), for details on the effects of azoth.

Hovering in the room are five jellyfish plants (see *Appendix C*, *New Monsters*, p. 355), which will attack any intruders.

Jellyfish Plants (5) [AL N, MV 20' (6')/fly 50' (16'), AC 0, HD 3, HP 21, 19, 17, 14, 13, #AT 1, DG 1d6 + paralysis, SV F2, ML 0]

After the jellyfish plants are slain, the azoth in the room can be collected (4 gallons total) and the pipes investigated. The pipes connect to other sections of the dungeon, but they rapidly narrow above and below the room, making passage by humanoid creatures impossible. If the characters somehow shrink to a sufficiently small size and have protection from azoth, see *Chapter 6, Overview of the Dungeon*, p. 85, for details on where they might travel.

35. Distillation Room

A large nephelite cylinder festooned with adamantine steel pipes, resin tubing, and orichalcum valves occupies the center of this room. This is an azoth distiller. The distiller will not function until the characters have first restored power in the Power Generator (Room 10) and activated the Distillation Room in the Control Room (Room 3).

Once functional the distiller can be used to refine raw azoth into a variety of azoth products. To use the distiller, a character need only pour 36 ounces of raw azoth into its still pot, wait 1d6 hours, and then collect the distillate substance from the receiving flask. While the machine could at one time be calibrated to safely produce specific refined substances, age and abuse have left it damaged and unpredictable. Each time the distiller is used, roll 1d10:

- 1-3. 1 ounce of poison (make a saving throw versus Poison at -2 or die) is produced.
 - 4-5. 1 ounce of refined azoth is produced.
 - 6-7. 1 ounce of *panchrest* is produced.
 - 8. 1 ounce of sovereign glue is produced.
 - 9. 1 ounce of *universal solvent* is produced.
 - 10. 1 ounce of alkahest is produced.

Information on *azoth* and the miraculous substances made from it can be found in Appendix F, p. 393-398.

36. Checkpoint

Two bronze statues of Turms Termax face one another at the narrowest portion of this room. Projected between them is a wall of force that separates the room into two halves, 'a' and 'b'. The wall of force is impenetrable to all matter and energy. Getting past the wall of force requires coordinated action by two individuals with engineer's control rods (see Appendix A, New Magic Items, p. 326). The statues are on pivoting stands, and can be turned to face 'a' or 'b' by any character with Strength 12 or more. When both statues are turned to face 'b' and a character with an engineer's control rod approaches within a foot of them, he will be teleported to area 'b'. Then one of the statues must be pivoted to face 'a' while a second character with a control rod approaches within one foot. After that, the wall dissipates for 6 turns before the statues reset and the wall reactivates. If both of the statues are pivoted to face 'a', the wall of force will not dissipate; instead the character approaching the statues with a control rod will be teleported to area 'a'.

37. Arcane Library

The door to this room is made of frosted vitreum. Inside, this four-pillared chamber houses numerous pieces of ancient machinery that function as a repository of information. The machinery, made of nephelite and orichalcum, is both complex and faulty, but it nevertheless will still function once power has been restored at the Power Generator (Room 10). At the center of the machinery is a large circular table with a depression that matches the size and shape of the knowledge records (see Appendix A, New Magic Items, p. 329) found in the Strange Storeroom (Room 18). Placing a knowledge record on the depression and using an engineer's control rod (see Appendix A, New Magic Items, P. 326), will activate the machines, which grab the disk and read it through mechanical means. A few moments later, a disembodied voice will recite a

random piece of information about the world before going silent. The voice speaks High Thulian. Additional information can be elicited with further use of the *engineer's control rod*; alternatively the user can erase the information and record his own voice onto the *knowledge record*.

Precisely what information the library can impart is left to the Judge to decide, since it has the potential to upset a campaign if used too liberally. In general, the library's information is at least 200 years out of date when pertaining to anything outside Dwimmermount. Likewise, much of its information about controversial subjects, such as the gods and worlds beyond Telluria, is heavily colored by Termaxian perspectives and is thus not wholly reliable. See the accompanying sidebar for a recommended list of numbered facts that the knowledge records might reveal.

38. Azoth Storage

More than two dozen adamantine steel drums can be found in this room. All are empty except one, however. The one that remains full holds 40 gallons of raw azoth (approximately 5,000 ounces). See *Appendix F, Azoth* (p. 393), for details on azoth.

39. Chamber of the Pyramid

A large pyramid made of azoth-infused hepatizon dominates this room. The surfaces of the pyramid are smooth and devoid of any kind of deliberate markings, but are everywhere marred by what appear to be nicks and scratches. Any metal weapon struck against the pyramid has a chance equal to 10% times the level of the character wielding it of gaining a temporary boon, the Blessing of the Pyramid, which confers a +1 bonus to hit and damage for 1d6 days. This boon affects non-magical and magical weapons equally, though magical weapons have a 10% chance per strike of permanently losing their potency. Once a boon is gained (or lost), that particular weapon can never again be affected by the pyramid's power.

40. Vestibule

Wooden shelves and cabinets line the walls of this room. Most of these are empty, but a dozen still hold what look to be wizard's robes made of thin gray material. These are dwimmersilk garments (see Appendix A, New Magic Items, p. 326). Inside the pocket of one of these robes is a bone scroll tube containing a scroll with the following spells: read languages, levitate, and haste.

At the north end of the Vestibule, a staircase ascends to the Stairway (Room 70) of The Reliquary (Level 2B).

Room 37: Characters listening to recitals from the **knowledge records** have a 10% chance each hour of learning one of the following numbered facts: 2-2, 2-3, 2-9, 3-3, 3-5, 3-11, 4-9, 5-4, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-16, 5-17, 5-18.

Level 3B

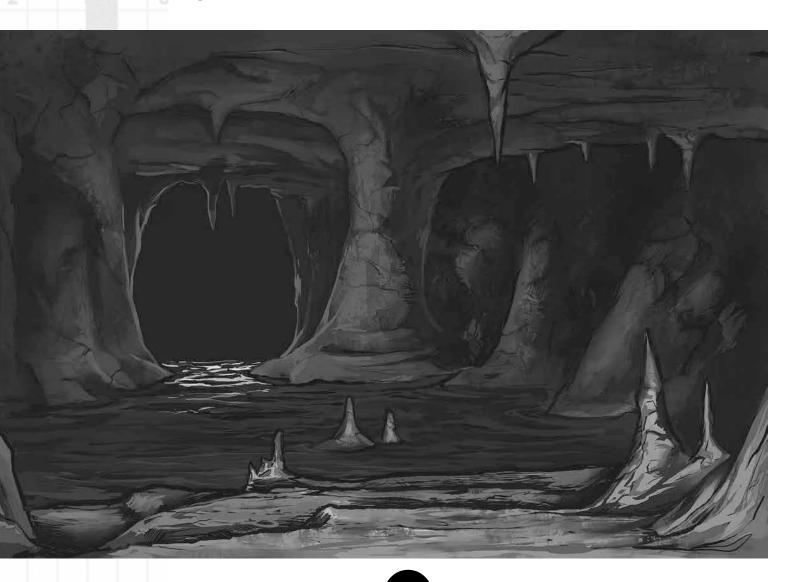

41. White Room

A tattered gray curtain runs along the western wall of this room. The curtain is the only thing herein that is not white: Everything else, including the scarab-shaped altar at the southern end of the room, is made from a polished and highly reflective white stone. If a light source is brought into the room, it will reflect off these white surfaces so brightly that everyone in the room must make a successful saving throw versus Spells or be blinded for 2d6 turns. Should a character blinded in this way then approach the altar, he will sense that he can commune (as the spell) with Mag-Kargne, the Demon Prince of Beetles. The opportunity to commune lasts only while in this room and while the character is blinded. Once either of these conditions is no longer present, the effect fades. No character can commune with Mag-Kargne more than once per week by means of the altar, and each time the character communes with Mag-Kargne, there is a cumulative 10% chance that the blindness is permanent.

42. Wererat Defenders

Guarding this room are six wererats. While evil, the creatures are desperate for allies in their faction's ongoing war with the minotaurs in The Halls of Lesser Secrets (Level 4). They will offer to guide the characters to Level 4 safely in exchange for a promise of aid in defeating the minotaurs. Should their offer be accepted, the wererats will take the characters to the Passageway (Room 43) and from there to their lair. The wererats will not necessarily attack should this offer be refused, but will in no case allow anyone to approach Room 43 without a fight. See Factions in the Dungeon, p. 102, for details on the war between the wererats and the minotaurs.

Wererats (6) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 22, 18, 14, 13, 11, 8, #AT 1, DG 1d4 or 1d6 (short swords), SV F3, ML 0]

43. Passageway

This chamber was once a storage area of some sort, but it is now in ruins. A large portion of the floor in the northern section of the room has fallen away, revealing a tunnel descending downward into the Wererat Lair (Room 42) on The Halls of Lesser Secrets (Level 4). The wererats will lead anyone agreeing to aid them against the minotaurs down this tunnel.

44. Reservoir Control

A statue of Turms Termax, his arms pointing east and west, greets anyone who enters this room. The statue's arms are movable. If the Pump Room (Room 7) is active, moving the statue's arms will affect the azoth levels in the caverns to the east (Rooms 45-50). If his left arm is lowered, the azoth levels in the Entry Cavern (Room 50) recede to the level of the dotted line on the map. If his right arm is lowered, the same happens to the other Entry Cavern (Room 45).

Control panels cover the north walls to either side of Turms, but virtually all are non-functional. There are two control panels which still work. If a character possesses an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326), the controls in the west area ("a" on the map) can be used to open the secret door in this room which leads to Entry Cavern (Room 45), while the controls in the east area ("b" on the map) can be used to unlock the door in the Preparation Room (Room 5) which leads to the Entry Cavern (Room 50).

The secret door here can be detected in the usual manner, but it cannot be opened except by using the controls in the west area, or with a *knock* spell.

45. Entry Cavern

If characters enter without lowering the reservoir level, they will find that this natural cavern serves as a reservoir for around 230,000 gallons of azoth. The azoth spills inward as far as the tunnel to the Reservoir Control (Room 44) itself, but the depth of the azoth there is initially quite shallow, a mere slick. As the cavern floor descends, the depth of the azoth reservoir also grows gradually deeper, reaching a maximum depth of 20 feet at the dotted line on the map. The cavern's ceiling is about 20 feet above the surface of the azoth.

If characters enter this room after lowering the reservoir level, then the azoth will have receded to the dotted line on the map, where it is a mere inches deep. Where the azoth once pooled is revealed a set of natural stone terraces that descend into the cavern to a depth of 10 feet. Past the terraces, the cavern floor slopes downward to the east,

descending another 10 feet by the time it reaches the dotted line on the map. At that point the cavern's ceiling is about 40 feet above the floor of the cavern.

If characters search beneath the azoth, or if the levels of azoth have receded, they will find a small, smoky crystal, silver-black in color. This is a *crystal* of controlling quintelementals (see Appendix A, New Magic Items, p. 326). Azoth is quite hazardous unless those entering it are adequately protected (see Appendix F, Azoth, p. 393.

46. Central Cavern

When the azoth level is normal, this cavern contains around 1.25 million gallons of azoth. The reservoir is about 20 feet deep at the dotted line on the map. The cavern floor slopes downward east of the dotted line, such that the depth of the azoth reservoir also grows deeper, reaching a maximum depth of 40 feet in the room's center. The ceiling of the cavern is about 20 feet above the surface of the azoth.

When the azoth level has been lowered, this cavern contains around 600,000 gallons of azoth. The reservoir is a few inches deep at the dotted line on the map, and about 20 feet deep in the room's center. The ceiling of the cavern is about 40 feet above the surface of the azoth.

In either case, the only noteworthy feature of the cavern is some graffiti written in ancient Thulian on one walls, which reads "Tenen, help us!"

47. Arcane Cadavers

When the azoth level is normal, this cavern contains about 550,000 gallons of azoth. The reservoir is 40 feet deep and the ceiling is 20 feet above the surface of the azoth. When the azoth level has been lowered, the cavern contains only 275,000 gallons of azoth. The reservoir depth drops to 20 feet, while the cavern's ceiling appears 40 feet above the surface of the azoth.

Lying beneath the azoth are the corpses of two Thulian workmen who died while in the caverns and whose corpses have since been reanimated by the azoth. These arcane cadavers (see *Appendix C*, *New Monsters*, p. 342) will sense the presence of any living creatures who enter and immediately attack. They surprise on a roll of 1-4 on 1d6.

Arcane Cadavers (2) [AL C, MV 60' (20'), AC 5, HD 4, HP 28, 11, #AT 1, DG 1d12, SV F4, ML N/A]

Level 3 B

48. The Arcanoplasm

This enormous cavern has a large hole in its ceiling, within which a pinkish-purple mist can be seen high above. The hole eventually leads to the Crevasse (Room 50) on The Reliquary (Level 2B).

When the azoth level is normal, this cavern contains about 2 million gallons of azoth. The reservoir is 40 feet deep and the ceiling is 20 feet above the surface of the azoth. When the azoth level has been lowered, the cavern contains only 1 million gallons of azoth. The reservoir depth drops to 20 feet, while the cavern's ceiling appears 40 feet above the surface of the azoth.

A monstrously large amoeboid lifeform, brought into existence by the azoth, dwells within this cavern. This monstrosity, called an arcanoplasm (see *Appendix C*, *New Monsters*, p. 342), can detect the casting of any spells within 100 feet of it and is drawn to such displays of power. It will move toward spellcasters at its top speed and attack.

Arcanoplasm (1) [AL C, MV 30' (10'), AC 5, HD 6, HP 30, #AT 1, DG 2d8, SV F5, ML +4]

49. Empty Cavern

When the azoth level is normal, this cavern contains about 300,000 gallons of azoth. The reservoir is 40 feet deep and the ceiling is 20 feet above the surface of the azoth. When the azoth level has been lowered, the cavern contains only 150,000 gallons of azoth. The reservoir depth drops to 20 feet, while the cavern's ceiling appears 40 feet above the surface of the azoth. Other than the azoth found within, there is nothing unusual about this cavern.

50. Entry Cavern

If characters enter this natural cavern before lowering the azoth level, they will find it serves as a reservoir for around 485,000 gallons of azoth. The azoth spills inward as far as the door to the Preparation Room (Room 5). The depth of the azoth is initially quite shallow, but as the cavern floor descends, the depth of the azoth reservoir also grows gradually deeper. It reaches a depth of 20 feet at the dotted line on the map and 40 feet at the intersection to Room 48 and Room 59. The cavern's ceiling is about 20 feet above the surface of the azoth.

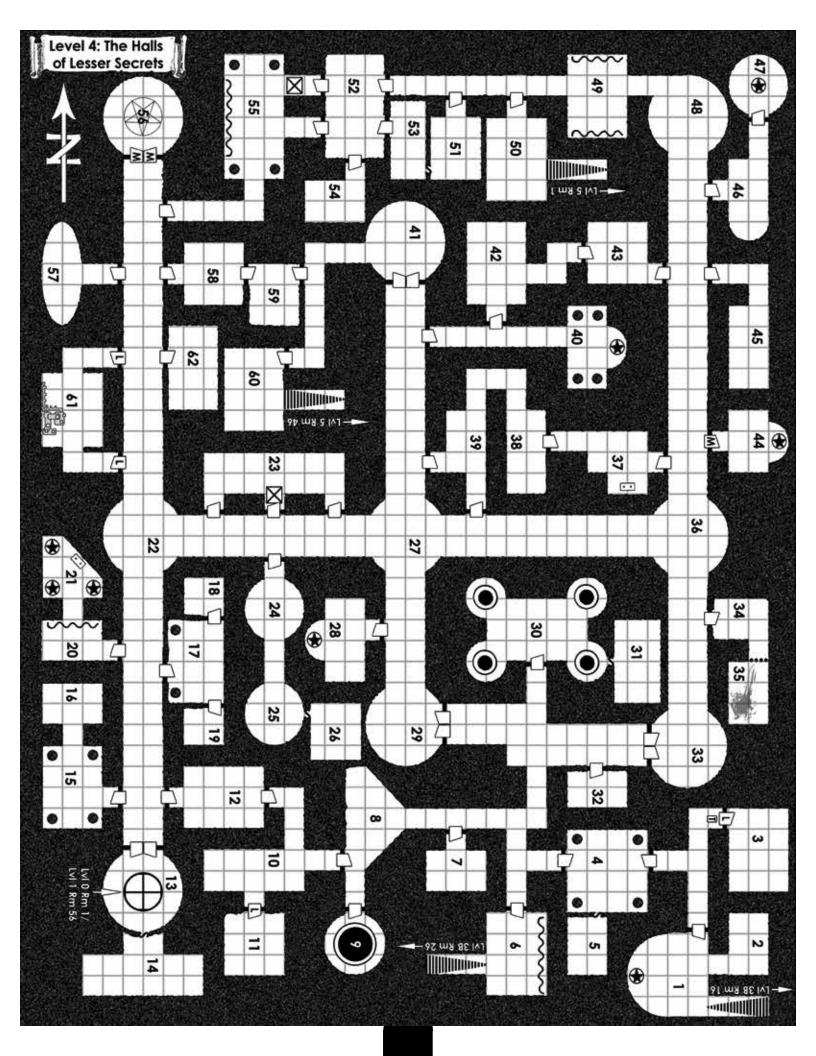

If characters enter this room after lowering the reservoir level, then "only" 270,000 gallons of azoth remain. The azoth will have receded to the dotted line on the map, where it is a mere inches deep, gradually deepening north. Where the azoth once pooled is revealed a set of natural

stone terraces that descend into the cavern to a depth of ten feet. Past the terraces, the cavern floor slopes downward to the north, descending another ten feet by the time it reaches the dotted line on the map. At that point the cavern's ceiling is about 40 feet above the floor of the cavern.

Beneath the azoth in this cavern can be found an *engineer's control rod* (see *Appendix A*, *New Magic Items*, p. 326). Finding it requires either careful searching or lowering the azoth levels in the cavern.

Level 3 B

The Halls of Lesser Secrets

Level

4

Overview of The Halls of Lesser Secrets

HE HALLS OF LESSER
Secrets were excavated at the height of the Second Era to serve as a laboratory for the Servitors research into physical and biological transformation. It was here

that the Servitors Caint and Termagant jointly perfected the technique of distilling azoth into universal medicines, and here that Termagant secretly and independently created the first Eld. The Elevator to the Divinitarium (Room 13), Elevator Control Room (Room 14), Cloning Chamber (61) and Alteration Chamber (Room 62) are all that remain of these ancient works, as during the Eld invasion of the Third Era, the Great Ancients destroyed virtually all of this level's precious machinery and devices rather than allow them to fall into the hands of their enemy. The dismayed Eld largely left Level 4 in ruins, and excavated The Laboratory (Level 2A) to conduct their own biological experiments.

WANDERING MONSTERS OF THE HALLS OF LESSER SECRETS

Die Roll	Monster
1	Ranine (1-8) [†]
2	Rust Monster (1-4)
3	Shadows (1-6)
4	Minotaurs (1-4)
5	Gargoyles (1-4)
6	Wererats (1-6)
7	Hell Hounds (2-8)
8	Ochre Jelly (1)
9	Gray Ooze (1)
10	NPC Party (5-8)
11	Doppelgangers (1-6)
12	Giant Rhagodessa (1-4)

 \dagger see Appendix C, New Monsters, p. 341

The Thulian invasion of Dwimmermount destroyed so much of the construction of past ages that most of the dungeon had to be re-built. The Thulian architects decided Level 4's central location made it the ideal hub for imperial power. Thus the Fourth Era saw the installation of the level's majestic Throne Room (Room 55), its many shrines (Rooms 28, 37, 40, 44, and 47), and various armories, museums, and treasure vaults (Rooms 26, 31, 38, and 39). The Thulians also built the Teleportation Maze (Rooms 27, 33, 36, and 48) to confound those who might strike at the throne. The influence of their sinister Termaxian successors can be seen in the chambers devoted to necromancy (Rooms 17 and 18), demon worship (Rooms 20 and 21), and extraplanar summoning (Room 56).

1. Entry Room

A staircase here descends from the Sanctum of Tenen (Room 16) of The Reservoir (Level 3B). Opposite the stairs stands a white stone statue of a faceless, genderless humanoid. The statue radiates magic and, if anyone approaches within 5 feet of it, produces an echoing voice which loudly declares "Micma!" This seemingly nonsensical word is in fact a password to defeat the teleportation maze found elsewhere on the level. See also the Chamber of Darkness (Room 16).

2. Guardroom

A couple of splintered wooden chairs and an empty weapons rack are the only things immediately visible in this room. There is however, a loose stone in the northern wall that conceals a key that opens the door to the Parchment Storage (Room 3).

3. Parchment Storage

The door to this large room is locked and trapped with a poison needle (make a saving throw versus Poison at -2 or die). Using the key found in the Guardroom (Room 2) bypasses the needle, however.

Within, wooden crates litter the floor. Most of the crates are completely empty, but three crates contain extremely brittle rolls of parchment that crumble to dust upon being handled. Hidden amongst one of these rolls is an arcane scroll of four spells (charm person, knock, pyrotechnics and read languages), as well as 5,000 sp and 700 gp. See Appendix B, New Spells (p. 338), for details on pyrotechnics.

4. Pillars of Opening

Four black stone pillars stand in the corners of this room, each of which bears a single letter in silver inset script: A, E, P, and T. If these letters are touched in the following order—P, A, T, E, which is the Ancient Thulian word for "Open!"—the secret door to the Secret Room (Room 5) will reveal itself. The door is otherwise undetectable through normal, non-magical means. Lurking in the room behind one of the pillars is a rust monster.

Rust Monster (1) [AL N, MV 120' (40'), AC 7, HD 5, HP 20, #AT 1, DG rust, SV F3, ML -1]

5. Secret Room

Hidden in this chamber are several chests, coffers, and bags. There are four wooden chests, each holding 1,000 sp (4,000 sp total). There are two small, somewhat battered, bronze coffers, the first holding 500 gp and the second holding a starmetal *dagger* +2, +3 v. goblins, kobolds, & orcs with an orc-bone hilt. Finally, there is a tied bundle of burlap bags holding 400 gp.

6. Ranine Explorers

Eight ranine (see *Appendix C*, *New Monsters*, p. 363) from The Reservoir (Level 3B) are exploring this room. The two cultists in their party are particularly interested in the tattered curtain that lines the eastern wall. The curtain is made of a thick, silvery cloth and covers a mural depicting a scene of a stern, bearded magician (Turms Termax) summoning a frog-like demonic being (Tsath-Dagon).

Ranine (6) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 11 (×2), 10, 9 (×2), 5, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV F2, ML +1]

Ranine Cultists (2) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 4, HP 21, 18, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV C4, ML +2; Daily Spells: 2 1st, 1 2nd; Repertoire: Chaotic Cleric]

To the west, a staircase ascends to the Stairway (Room 26) of The Reservoir (Level 3B). If hard-pressed, the ranine will retreat up the staircase, and be joined mid-way by reinforcements from their comrades in the room above.

7. Glass Storage

The walls of this room are lined with oak shelves, on most of which are stored glass containers of many sizes and shapes, from small vials to much larger vessels. The shelves on west wall are empty, however, and the floor in front of these is covered in glass shards. None of the containers hold any contents, but a careful examination of the collection (taking 1 turn) will reveal that two of them are made from a thicker, slightly smoky type of glass. These containers radiate magic, and are *containers of curing* (see *Appendix A*, *New Magic Items*, p. 326).

8. Gallery

Odd geometric frescoes have been painted on the walls of this area. The geometric shapes depicted are of an alien sort and any non-Chaotic creatures who view must make a saving throw versus Spells or be affected by *confusion*, as per the 4th-level arcane spell of the same name. Lawful creatures save against this effect at -2.

9. Garbage Disposal

Anyone approaching this room from the outside can hear disgusting sloshing sounds emanating from inside, as well as smelling a fetid odor. The room contains a pit, 20 feet in diameter and 10 feet in depth, surrounded by a 5 foot walkway. The walkway is covered in a thick, slippery layer of slime. Any character who steps onto the walkway must make a proficiency throw with a target value equal to the character's encumbrance in stone (minimum 2+ required). Modify the throw by the character's DEX adjustment. Characters with Acrobatics proficiency gain a +2 bonus if their encumbrance is 6 stones or less. Characters with Cat Burglary proficiency automatically succeed. Characters who fail the throw fall down precariously close to the edge of the pit. A second throw must be made to stand upright again. Failure on this second throw results in the character falling into the pit. Such unfortunates not only suffer 1d6 points of damage, but find themselves face-to-face with the black pudding that dwells within. The creature was once used as a means of disposing of garbage on this level; it has been a *long* time since it has had any sustenance.

A Termaxian passkey (see Appendix A, New Magic Items, p. 333) can be found in the pit, its arcane manufacture having rendered it indigestible to the black pudding.

Black Pudding (1) [AL N, MV 60' (20'), AC 3, HD 10, HP 49, #AT 1, DG 3d8, SV F5, ML N/A]

10. Sleep Spheres

Floating in this hallway are four glowing blue spheres. They seem to be made of glass or crystal and the blue glow comes from a gas that is contained within. These are sleep spheres (see *Appendix C, New Monsters*, p. 366), and if a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333) is not displayed to the spheres when entering the area, they release a portion of the gas held within them. The gas induces suspended animation in any creature of 5 Hit Dice or fewer that fails a saving throw versus Spells. The suspended animation can be lifted either with *dispel magic* or by destroying the spheres.

Sleep Spheres (4) [AL N, MV fly 120' (40'), AC 6, HD 2, HP 16 each, #AT 1, DG suspended animation, SV F2, ML N/A]

11. Chamber of Antiquities

The door to this room is locked. Inside are many chests and coffers which contain a variety of coins and antiquities from the Thulian Empire. A large bronze-bound chest holds 4,000 sp. Two smaller oak chests contain 2,000 sp each, while four hardwood coffers hold 200 gp each.

Finally, a box made from rare wood (worth 500 gp) contains a set of artifacts once belonging to Turms Termax. These include an amethyst worth 100 gp, a wrought silver necklace worth 100 gp, an iron ring bearing Turms' face worth 500 gp, a star sapphire worth 750 gp, a sapphire-studded gold pin worth 1,000 gp, and a chryselephantine statue of Sarana worth 7,500 gp, totaling 10,045 gp. However, all of these items are cursed to reduce the Intelligence of any character who sells or otherwise parts with them by one-half if he fails a saving throw versus Spells. This saving throw must be made for every item that a character sells or parts with, but the effect of the curse is not cumulative; a character can only be affected the first time that the saving throw is failed.

12. Minotaur Scouts

Four minotaurs from the northern portion of this level are scouting to see what sort of opposition their forces might encounter if they expand into this area. On the ground of the room are the bodies of three ranine, whom the minotaurs slew. The minotaurs have collected 3,000 sp in their explorations, which they carry in sacks on their persons.

Minotaurs (4) [AL C, MV 120' (40'), AC 3, HD 6, HP 21, 17, 16, 14, #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axes), SV F6, ML +4]

13. Elevator to the Divinitarium

The doors to this large circular room are Ancient blast doors of white nephelite, bearing the same cross-and-circle symbol that appears on the key disk in the possession of the minotaur king (Room 55). Beyond the doors is a 20 foot diameter elevator that leads up to Room 56 of The Path of Mavors (Level 1) and beyond to Room 1 of The Divinitarium (Level 0).

When the characters enter the room, the elevator's doors will be closed. They can be opened with a roll to force doors or by simultaneously pressing both the cross and circle on a key disk. The elevator platform will be present on this level when the doors are opened. Above the elevator stretches a vertical shaft approximately 250 feet tall. Its walls glisten from the transit of various Kythirean slimes and are festooned with clumps of fungi and vegetation from the Green Planet.

If power has been restored to the elevator, then the key disk can control the elevator platform. Pressing the key disk's cross causes the elevator platform to descend while pressing its circle causes the elevator platform to ascend. The elevator cannot descend lower than this level (Level 4), however.

If the power has not been restored, or a key disk is not available, then the elevator platform cannot be operated. Daring parties may, of course, fly, levitate, or climb up the elevator shaft.

Note that power can be restored to the elevator via the machinery of the Elevator Control Room (Room 14) on this level, or through the operation of the Great Machine (Room 40 of The Manufactory, Level 6B).

The secret door on the south wall to the Elevator Control Room is betrayed only by a hairline crack in the curved stone. Pushing on the crack opens the door.

14. Elevator Control Room

Behind the secret door are the hydraulic machines that provide power to Dwimmermount's Elevator. The machines are made of adamantine steel and nephelite, with pipes and tubing of alchemist's resin, and are bewilderingly complex. Successfully activating the elevator controls requires a magic research throw with a -4 penalty, or alternatively, the use of *read languages* to understand their arcane instructions. If a character fails the magic research throw, he is dealt an electrical shock for 4d6 points of damage. The victim may make a saving throw versus Blast for half damage.

Chapter 13

15. Antechamber

There are four pillars in this room, two made from white alabaster and two from black basalt. If the two white pillars are touched, one after the other, the magical darkness in the Chamber of Darkness (Room 16) is lifted. If the two black pillars are similarly touched, the darkness returns. If pillars are touched in any other combination, they have no effect.

16. Chamber of Darkness

A magical effect casts this room into total darkness. The darkness cannot be permanently counteracted except by means of the pillars in the Antechamber next door (Room 15), but casting a *light* spell or employing a similar spell or effect reveals the Ancient Thulian word "Micma" carved all over the walls in numerous scripts. This is the password needed to navigate the Teleportation Maze (Rooms 22, 27, 29, 33, 36, and 48) found elsewhere on this level.

17. The Guardian

Lying on a granite slab in this chamber is a Termaxian mummy (see *Appendix C*, *New Monsters*, p. 369) named Volusian. He was placed here centuries ago as a guardian of the treasure found in the Vault next door (Room 19). Volusian warns any who enter his domain that they must either present a *Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333) or turn back.

If the characters do present a *Termaxian passkey*, they are allowed to pass freely. Otherwise, after 1 round, Volusian summons the zombies from the Zombie Corral (Room 18) and fulfills his duty.

Volusian (1) [AL C, MV 60' (20'), AC 6, HD 7, HP 33, #AT 1, DG 1d12 + choke, SV F7, ML +4; Proficiencies: Combat Reflexes, Intimidation]

18. Zombie Corral

Eight zombies lie in wait here, waiting on their summons by the mummy Volusian in Room 17. Apart from a blanket of dust from the zombie's dead flesh, the room is empty.

Zombies (8) [AL C, MV 60' (20'), AC 1, HD 2, HP 15, 10, 9 (×2), 8, 6 (×2), 5, #AT 1, DG 1d8, SV F1, ML N/A]

19. Vault

Found within this chamber are the treasures the mummy Volusian was guarding: 6,000 ep; a moon-silver *ring of protection +1* set with a blue garnet; a Thulian legionary's adamantine steel *shield +1*; and a treasure map to a vault containing 30,000 gp within the Ruins of Lloraec (see *Chapter 4*, *Vicinity of Dwimmermount*, p. 53). The treasure forms a loose pile that spills across the floor.

20. Vestibule

Five ranine (see *Appendix C*, *New Monsters*, p. 363) wait in this room while their leader, a cultist, meditates in the Meditation Chamber (Room 21). The ranine attack any who enter the room, but do not make any effort to interrupt their leader unless they fail a morale roll.

Ranine (5) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 11, 10, 9, 7, 5, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV F2, ML +1]

21. Meditation Chamber

A powerful ranine cultist named Groak meditates before an altar dedicated to the demon lord Tsath-Dagon (see *Appendix C, New Monsters*, p. 372). Surrounding him are three statues of froglike demons. These statues will not animate, but Groak will attempt to make it seem as if they might in order to throw his enemies off in combat.

Groak (1) [AL C, MV 90' (30')/swim 120' (40'), AC 6 (cloak of protection +1), HD 4, HP 23, #AT 3, DG 1d6/1d6/1d4 + paralysis or 1d6+1 (mace +1), SV C4, ML +2; Daily Spells: 2 1st, 1 2nd; Repertoire: Chaotic Cleric; Proficiencies: Battle Magic, Theology]

Groak's *cloak of protection* is woven of dwimmersilk. His *mace* +1 has an azoth-infused knobbed steel head and bloodstained wooden haft. A Lawful cleric can become a Chaotic cultist of Tsath-Dagon by renouncing his faith and making a blood offering at the altar here (see *Chapter 3, Adventuring in Dwimmermount*, p. 40).

22. Teleportation Maze

This area, like several others (Rooms 27, 29, 33, 36, and 48) is part of a teleportation maze intended to confound attempts to explore this level without knowing the appropriate password, either from the Entry Room (Room 1) or the Chamber of Darkness (Room 16). The moment a character crosses the threshold of the room (whether on foot,

flying, jumping, or any other means) he is immediately teleported to another room of the Teleportation Maze on the level. The character's destination is determined by rolling 1d6 on the chart below:

- 1. 1. Room 22
- 2. 2. Room 27
- 3. 3. Room 29
- 4. 4. Room 33
- 5. 5. Room 36
- 6. 6. Room 48

The character will appear at the center of the destination room, with the same velocity he had when the teleportation occurred. It *is* possible to be teleported back to the same room one has left. The newly-arrived character can freely leave his destination room without any difficulty, but a new roll must be made on the chart above if he re-enters that room, or any other room of the Teleportation Maze. Note that each character who enters a room of the Teleportation Maze might end up in a *different* destination, splitting the party.

The Teleportation Maze can be deactivated for one turn by speaking the password "Micma" within 10 feet of the threshold of any of its rooms. It resets automatically after the turn passes.

23. Webbed Room

Large webs block the middle entrance to this room, woven by the phase spiders (see *Appendix C, New Monsters*, p. 367) that are currently exploring this level of Dwimmermount. The webs act as a *web* spell, ensnaring any who attempt to enter uninvited. The phase spiders place no value on sapient life, and will attack anyone who interferes with their exploration.

Phase Spiders (2) [AL C, MV 60' (20')/web 150' (50'), AC 2, HD 5+5, HP 26, 23, #AT 1, DG 1d6 + poison, SV F5, ML 0]

In their explorations, the phase spiders have collected 1,000 sp and a wrought gold pendant worth 1,400 gp. For safekeeping, these items have been woven into a spider silk "pouch" that dangles from the larger phase spider's spinners.

24. Turms Statue

A marble statue of Turms Termax stands in the center of this chamber. The statue will animate and attack anyone who enters its chamber unless presented with a *Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333).

Stone Statue (1) [AL N, MV 30' (10'), AC 5, HD 5, HP 32, #AT 2, DG 2d6/2d6, SV F5, ML N/A]

25. Gargoyle Guardians

Four pedestals are arranged in this room in a diamond pattern, each 10 feet apart. The pedestals serve as perches for garish granite statues of winged devils. The statues are in fact gargoyles, which will attack any who enter their chamber unless presented with a *Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333).

Gargoyles (4) [AL C, MV 90' (30')/fly 150' (50'), AC 4, HD 4, HP 20, 19, 16, 12, #AT 4, DG 1d3/ld3/ld6/ld4, SV F8, ML +3]

The secret door to the Trove (Room 26) is opened using a counterweight mechanism which only functions if there is a weight of at least 200 lbs. (approximately the weight of a gargoyle) on each of the room's pedestals. Intruders who slay the gargoyles and do not substitute an equivalent weight on the pedestals will find the secret door inoperable by mundane means. *Knock* will, of course, open the door regardless.

26. Trove

Hidden behind the secret door from Room 25 is a trove of treasure. A heap of Termaxian coinage, including 5,000 sp and 2,000 ep, spills across the floor. Within the coin pile can also be found a gold ring worth 200 gp; a wrought gold necklace with inlaid ivory worth 1,100 gp; a silver headband with mother-of-pearl worth 500 gp; a star rose quartz worth 250 gp; and an eye agate worth 50 gp. Sticking up out of the pile are a sword +1, +3 vs. regenerating creatures and a staff of striking (13 charges). The sword is of High Thulian make, with a starmetal blade and bronze hilt. The staff is made of Kythirean ebony, adorned at either end with an orichalcum knob.

27. Teleportation Maze

See Room 22 for details.

28. Shrine to Donn

The walls of this room are decorated with funerary scenes honoring Donn, the Thulian god of the dead. In an apse at the western end of the chamber stands a marble statue of Donn wearing mourning robes. The god's head has been replaced with that of Turms Termax. Anyone who replaces the head of Turms with one of Donn will receive the Blessing of Donn. This is the ability to cast ward against undead as if he possessed a scroll of that type. The blessing can be cast at any time and is instantaneous, but once cast, is lost. See *Chapter 6, Overview of the Dungeon* (p. 84), for more information on boons from the gods.

29. Teleportation Maze

See Room 22 for details.

30. Ranine Lair

A potent force of ranine (see *Appendix C*, *New Monsters*, p. 363) has taken up residence in this chamber, using the four cisterns in its corners to keep themselves moist. The cisterns are tied into the plumbing system that riddles Dwimmermount, with valves that release more water into them when they are drained. The water is potable, but it has a strange metallic tang to it that makes it unpleasant to the taste. Each cistern contains about 2,000 gallons.

Ranine (8) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 2, HP 15, 14, 12 9, 7 (×2), 6 (×2), #AT 3, DG 1d6/1d6/1d4 + paralysis, SV F2, ML +1]

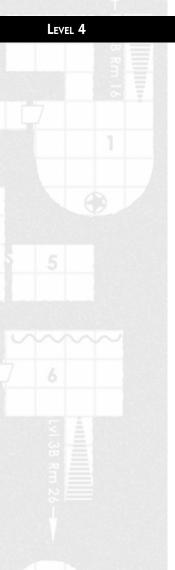

Ranine Cultists (2) [AL C, MV 90' (30')/swim 120' (40'), AC 5, HD 3, HP 13, 11, #AT 3, DG 1d6/1d6/1d4 + paralysis, SV C3, ML +2; Daily Spells: 2 1st; Repertoire: Chaotic Cleric]

The copper pipes which service the cisterns are too narrow for any but the smallest creatures to traverse (e.g. normal rats, insects, etc.), but passage might be possible with *diminution*. See *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing the water pipes between the levels.

The secret door to the Secret Storeroom (Room 31) is a stone panel that revolves when a strong pressure is exerted on either edge. The ranine are unaware of the door's existence.

31. Secret Storeroom

The secret storeroom shows evidence of having once held more in it than it currently does, since

virtually all of its 11 chests and 9 coffers are empty. However, one coffer was left unopened and still contains treasure: 200 gp in Thulian coin; a bronze cup worth 30 gp; a laurel wreath fastened of silver worth 300 gp; a wrought gold medal worth 700 gp; a chryselephantine replica of a battle standard worth 800 gp; and a gold sculpted disk, suitable for mounting on a breastplate, worth 1,400 gp. A character with knowledge of military history will recognize all of these as being decorations for valor given by the Thulian legions during the conquest of the Eld.

32. Office

A heavy desk and chair still sit in this room, both still covered in dust, suggesting that no one has been here in some time.

33. Teleportation Maze

See Room 22 for details.

34. Guard Room

A stool and an empty weapons rack stand in this room. Against the eastern wall, there is a metal hook on which hangs a single key. The key fits the lock to the barred door in the nearby Gaol (Room 35).

35. Gaol

This locked cell contains a large slimy smear on its floor, along with a partially melted skeleton—the result of an olive slime (see *Appendix C*, *New Monsters*, p. 360) that now clings to ceiling of the room. Should anyone enter the cell, the slime will drop on him.

Olive Slime (1) [AL N, MV 3' (1'), AC 0, HD 2+2, HP 13, #AT 1, DG metamorphosis, SV F2, ML +4]

36. Teleportation Maze

See Room 22 for details.

37. Shrine to Typhon

The iron altar in this shrine is fastened in the shape of an anvil, upon which are mounted a mace and war hammer, all symbols of Typhon, the Thulian god of judgment, discipline, and trade. The walls of the chamber are covered with partially defaced mosaics depicting scenes associated with the teachings of Typhon—courts of law, great bazaars, and holy battlefields. A cleric of Typhon who prays here regains his daily allotment of spells instantly, as if he had a full night's rest. A Lawful character of any sort who prays at the altar, regardless of whether he worships Typhon or not, regains 1d6 hit points. Characters may benefit from these boons no more than once per day.

Chaotic characters who even come within 5 feet of Typhon's altar suffer 1d6 damage per round, with no saving throw, until they leave its presence.

38. Armory

Pegs hang on all the walls of this room, on some of which rest suits of chain and plate armor. There are, in total, three sets of *Thulian chain* and two sets of *Thulian plate* (see *Appendix A*, *New Magic Items*, p. 333), along with six normal sets of chain mail armor. All of these suits are human-sized and in remarkably good condition.

39. Weapon Storage

Splintered wooden boxes litter this room, inside of which can be found a handful of weapons in usable condition. Among these weapons are two maces, three war hammers, a sword, a crossbow, and a *spear* +1 with a head of adamantine steel. Also to be found amongst the debris is a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333).

40. Shrine to Asana

Each of the four columns supporting this shrine's ceiling bears elaborate carvings of heroes and kings victorious in battle. At the eastern end of the shrine, an apse contains a marble statue of Asana, the Thulian goddess of strategy, heroism, and science. Her statue has had its head replaced with that of Turms Termax, but there is evidence that someone had tried to remove it at some point, since it is twisted around to face the back of the statue. Should anyone replace the Turms head with an appropriate one, he gains a boon, the Greater Blessing of Asana (a permanent +1 bonus to all damage dealt when fighting unintelligent creatures). See *Chapter 6*, *Overview of the Dungeon* (p. 84), for more information on boons from the gods.

41. Wererat Guards

Six wererats stand guard in this room, protecting others of their kind from attacks by the ranine and minotaurs found elsewhere on the level. Though evil, the wererats nevertheless offer to team up with those they deem to be powerful, as they are hard-pressed by their enemies. They have fairly good knowledge of this level of the dungeon and offer to act as guides in exchange for aid against their foes. The wererats, of course, are not above betraying their alleged allies should the opportunity arise.

Wererats (6) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 16, 15 (x2), 12, 11, 10, #AT 1, DG 1d4 or 1d6 (short swords), SV F3, ML 0]

42. Wererat Lair

Six more were rats have taken up residence in this chamber, including their leader, Krishka. Krishka will communicate with the characters in her human form if they seem willing to negotiate. She explains that her kind have been trapped in Dwimmermount for over two centuries, and while many of them seek only to continue their war against the other inhabitants of the dungeon, she seeks escape. Krishka offers to work with the characters, lending both her martial skill and knowledge of this level to them, if they will lead her out of Dwimmermount to "civilization." She has heard of a "Rat Boss" in the city-state of Adamas from visiting sapient rats, and hopes to establishing herself as one of his vassals there (see Appendix C, New Monsters, p. 364, for details on sapient rats and the Rat Boss). Unlike the other wererats, Krishka is reasonably trustworthy and sincere, though venal.

Wererats (5) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 17, 12 (×3), 11, 8, #AT 1, DG 1d4 (bite) or 1d6 (short swords), SV F3, ML 0]

Krishka, Wererat Leader (1) [AL C, MV 120' (40'), AC 2 (0), HD 4, HP 21, #AT 1, DG 1d4 or 1d6 (short sword), SV F3, ML +2; Proficiencies: Bargaining, Caving, Combat Reflexes, Leadership]

43. Wererat Lookouts

Two wererats serve as scouts for the others on this level. They will flee to the Wererat Lair (Room 42) at the first sign of intruders.

Wererats (2) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 14, 12, #AT 1, DG 1d4 or 1d6 (short swords), SV F3, ML 0]

44. Shrine to the Iron God

A statue of a large man in imposing armor holding a lantern can be found here. Learned sages could identify the statue as of the Iron God, an obscure deity whose cult fought against both undead and demons, but even most clerics will be ignorant of this.

Despite the ignominy into which his cult has fallen, the Iron God still possesses great power in this room. No Chaotic creatures can ever enter his shrine; the door is magically barred to them (and even if the door is open they cannot pass). Consequently, the room is one of the few completely safe areas to rest and recuperate on this level.

45. Ruined Workshop

There is obvious evidence of some kind of explosion here—charred floors, walls, and ceiling, in addition to shattered wooden and metal debris. Mixed amongst the debris can be found green, powdery stones that crumble if squeezed too firmly. These are *firestones* (see *Appendix A*, *New Magic Items*, p. 327), a highly flammable compounds created by Eldritch alchemy. If exposed directly to fire, the *firestones* explode, dealing 1d6 points of damage to all within a 5 foot radius. There are thirteen *firestones* in the room.

46. Waiting Room

This room is furnished with a half-dozen nicely upholstered chairs and a pair of couches. The furniture shows little signs of age or decay, and is quite comfortable to sit on. Beneath one of the couches is a sheaf of old scrolls. The first scroll is a tract by the Temple of Caint proclaiming the god's miraculous powers of healing. The remaining scrolls form a questionnaire inviting the supplicant to detail his

ailments. None are magical, but the collection would be worth 100 gp to any curios dealer. All are written in High Thulian.

47. Shrine to Caint

Standing in the center of this room is a marble statue of a robed man, a lyre clutched in one hand, a healer's staff in the other. Any Cleric or similar character can readily identify this as Caint, the Thulian god of medicine and music. Caint's head has been replaced with that of Turms Termax. Anyone who replaces his head with that of Caint will gain a boon, the Blessing of Caint: He will be restored to full health, and all deleterious effects he has suffered in the last 24 hours will alleviated, whether they be disease, poison, curse, or level drain. See *Chapter 6*, *Overview of the Dungeon* (p. 84), for more information on boons from the gods.

48. Teleportation Maze

See Room 22 for details.

Chapter 13

49. Battleground

Four minotaurs and four wererats are fighting hand-to-hand within this room. The aged tapestries on the north and south walls are both splattered with old blood stains, suggesting this is not the first battle to have been fought here. Today's battle is going rather badly for the wererats, and they will appeal to anyone who enters the room to aid them against their foes. Like most of the wererats on this level, these are not particularly trustworthy, but they are desperate for allies, and if opportunity arises will take their rescuers to see their leader Krishka in the Wererat Lair (Room 42).

Wererats (4) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 10, 8, 7 (×2), #AT 1, DG 1d4 or 1d6 (short swords), SV F3, ML 0]

Minotaurs (4) [AL C, MV 120' (40'), AC 3, HD 6, HP 35, 32, 30, 27, #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axes), SV F6, ML +4]

50. Stairs Down

Four minotaurs stand guard over the stairs leading down to the Entrance (Room 1) of The Halls of Greater Secrets (Level 5). They have strict orders to let no one pass unless they are either a minotaur or in the company of a minotaur.

Minotaurs (4) [AL C, MV 120' (40'), AC 3, HD 6, HP 33, 29, 23, 22, #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axes), SV F6, ML +4]

51. Storeroom

This storeroom is packed with rows of barrels and crates stacked two stories high. Each of the room's 24 crates is 4 feet cubed, and contains 200 lbs. of grain (25sp value). Each of the room's 15 barrels 3 feet tall and 2 feet in diameter, and contains 60 gallons of potable, but unpleasant tasting, water.

The secret door connecting this storeroom to its adjacent neighbor (Room 53) is a simple revolving stone panel. The supplies in the two store-

Level

4

rooms were brought here from Level 5 by Bik, in order to provide his clone army with a reliable source of food (a 700 lb. minotaur requires 20 lbs. of food per day!)

52. Dining Hall

The large table and two benches that dominate this room are occupied by five minotaurs. They do not look kindly on intruders and attack anyone who enters. Since the minotaurs are eating, they do not have their battle axes immediately at hand, but it will only take them a single round to pick them up.

Minotaurs (5) [AL C, MV 120' (40'), AC 3, HD 6, HP 36, 28, 26, 25, 18, #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axes), SV F6, ML +4]

53. Storeroom

This room is very similar in appearance and contents to the other Storeroom (Room 51), except that it is obvious that much of its contents have been depleted. Only 8 of the 24 crates and 5 of the barrels are still full. The secret door connecting this storeroom to its adjacent neighbor (Room 51) is a simple revolving stone panel.

54. Latrine

This room reeks of urine and waste. Though originally built as a latrine, the minotaurs have wrought much damage in the place, tearing out the toilets and wash basins from their fixtures and smashing them in the ground. In their place, there are large holes in the walls and floors. They are not large enough for human-sized creatures to fit through, but often, vermin from nearby levels enter the room and occupy it till the minotaurs slay them. There are 7 giant rats in the room that attack when someone enters.

Giant Rats (7) [AL N, MV 120' (40'), AC 2, HD 1d4 Hit Points each, HP 4(×3), 3(×4) #AT 1, DG 1d3 + disease, SV F1, ML 0]

See *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing the water pipes between the levels.

55. Throne Room of the Minotaur King

This room has tall, elaborately carved pillars at each corner shoring up a 30 foot ceiling. From the west wall hangs a faded tapestry that depicts the

Thulian Empire at the height of its splendor (worth 400 gp, but weighing 160 lbs.) Seated on an iron throne, long since rusted, is the minotaur king, Bik. Arranged around him are four minotaurs, so close in appearance as seem duplicates: the king's most loyal retainer and his three clones, who collectively serve as a sort of Praetorian bodyguard. All four would gladly throw their lives away to defend the king.

Bik has set himself up as the would-be ruler of this level, shoring up his clan's numbers with the device in the Clone Chamber (Room 61). Bik is thoroughly evil and vain, seeing himself as superior not just to other minotaurs, but also to other intelligent beings of all sorts. Consequently, he is susceptible to flattery and fawning, particularly when coming from creatures other than minotaurs. At the same time, Bik is quite suspicious and will not hesitate to attack anyone who he deems a threat to his plans for this level. Bik is strong enough to wield his battle axe in one hand.

Minotaurs (4) [AL C, MV 120' (40'), AC 3, HD 6, HP 38, 30, 21 (×2), #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axes), SV F6, ML +4]

Bik, Minotaur King (1) [AL C, MV 120' (40'), AC 5 (shield +2), HD 6, HP 48, #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axe), SV F6, ML +4; Proficiencies: Knowledge (Ancient lore), Weapon Focus (axes)]

Through his conquests of the level, Bik has amassed a small treasure hoard. He keeps most of it in a chest below his throne, which contains 4,000 sp, a bronze bracelet worth 75 gp, a silver-studded leather belt worth 100 gp, a wrought silver amulet worth 100 gp, and a *wand of magic missiles* (15 charges). He wears a silver crown worth 100 gp between his horns, and carries a key ring with two items strung on it. The first is a weird metal disc with a cross-and-circle symbol on it; this is a key disc that can be used to operate the Elevator (Room 13). The second is a small disc with grooves on it; this is the key that opens the doors to the Clone Chamber (Room 61).

56. Summoning Room

The metal doors to this room are sealed by means of a *wizard lock*. The chamber within contains a magical summoning circle, entrapping a very frustrated succubus (see *Appendix C*, *New Monsters*, p. 367) named Melissia. Melissia was summoned over two hundred years ago, in the last days of Dwimmermount's occupation, but her summoner fled the citadel to save his life before dismissing her.

She has been trapped here ever since, fuming at her imprisonment and plotting revenge against the descendants of her summoner. Melissia is both beautiful and persuasive, offering all manner of rewards to any who enter the room if they will simply break the outline of the summoning circle so that she might escape. She claims that she has no desire to harm anyone save the descendants of the mage who summoned her, and argues eloquently that the sins of the diabolist must be meted out against his brood.

If freed, Melissia's reaction will depend on the nature of her rescuers. If any of the rescuers are men who seem susceptible to her allure, she will accompany them in the hopes of wooing their souls to Chaos, with bedeviling claims that Law's doctrines represent the repression of life-giving sexual energy and that sexual congress with her can bring enlightenment through transcendental ecstasy. If, on the other hand, her rescuers seem to be puritanical or priggish sorts, she will seek to destroy them in the most painful way possible. In either case, should her situation become desperate, she will either attempt to *gate* in another demon to defend her or assume an *ethereal form* to effect a getaway.

Succubus (1) [AL C, MV 120' (40')/fly 180' (60'), AC 9, HD 6, HP 29, #AT 2, DG 1d3/1d3, SV F6, ML -1]

57. Library

Once, this room was a library, filled with librams and scrolls dedicated to arcane mysteries. Now, it is largely empty, its shelves having been pulled off the walls and their contents torn apart. Amongst the piles of rotting papers can be found a scroll containing the spells *knock*, *levitate*, and *mirror image*.

58. Reading Room

A large heavy table can be found in this room. The table is bolted to the ground and shows evidence of axe blows on its surface, as if someone had tried—and failed—to break it into pieces.

59. Empty Room

There is absolutely nothing in this room except for some metal rings on the floor covered in dust. The layer of dust is in fact so thick that it seems likely no one has been in this chamber for some time.

60. Wererat Redoubt

Six were rats guard the stairway down to the Stairs (Room 46) of The Halls of Greater Secrets

(Level 5). Three of their brethren have ventured below, but the six here are more cautious, believing (rightly) that what lies beyond is too dangerous for them to handle. However, they feel it is important that the wererats "control" this access point to the next level. They will attack anyone who enters the room without clear permission from Krishka, though in the case of obviously superior foes, they will try to extort a "toll" of 100 gp per person to use the stairs.

Wererats (6) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 19, 10 (×2) #AT 1, DG 1d4 or 1d6 (short swords), SV F3, ML 0]

61. Clone Chamber

The doors to this chamber are Ancient blast doors of white nephelite. They are locked; the smooth, disk-like key that opens them is in the possession of Bik, king of the minotaurs (found in Room 55).

Inside, the room is lit by a pair of still-functional vitreum radiance panels mounted in the ceiling. A pair of vitreum cylinders, each eight feet tall and three feet in diameter, stand along the west wall of the room. Hatches in the vitreum casing can be opened from outside the cylinders to allow entry and exit to their interiors. The two cylinders are connected to each other by a series of whirring nephelite and vitreum machines covered in dials, switches, and other controls. The whirring sound conceals the buzzing of a fly in the left-hand cylinder; this insect will only be noticed if a thorough search of the cylinder succeeds (roll as for secret doors) but its presence can be disastrous.

The cylinders are cloning chambers which can be used to create an exact duplicate of a creature in one cylinder appear in the adjoining cylinder. The cloning process requires that the progenitor creature first be sealed within one of the cylinders. Thereafter, the controls for the cloning chamber must be activated. If this is successful (see below), alchemical material will be pumped through a series of large resin pipes in the wall into the other cylinder, where the clone will gradually take shape over 1d6 turns. When the process is completely successful, the clone is an exact duplicate of its progenitor, with the same ability scores, class, race, and gender as the original. However, it will be of minimum adult age, and it will lack most of the memories, knowledge, or experience of the original. It is, in short, the equivalent of a 1st-level character of the same race, class, and alignment. Though it will likely have a similar personality to its progenitor, the clone is a free-willed individual with the capacity to grow and learn; it is a real person in every respect.

Successfully activating the cloning chambers' controls is difficult, though not impossible (Bik managed to do it!). Three separate successful magic research throws are required. Failure of any one means that some aspect of the cloning process has gone awry in some way. The three areas of possible error are, in order, race, gender, and alignment. In each case, the resulting clone is somehow different than its source—a different race, gender, or alignment. If all three throws fail, the whole process fails and no clone is created at all.

Even if the controls are successfully activated, there are several other ways that the cloning process can go awry:

- If the progenitor leaves its cylinder before its clone has been completely formed, the clone will be monstrously deformed and die in agony 1d4 rounds after it forms. *Restore life and limb* cannot save this specimen, but *resurrection* or *wish* might.
- If the clone's cylinder is opened before the clone has been completely formed, the alchemical materials will spill out of the chamber and form an ochre jelly, which will mindlessly attack the nearest target.
- If a creature other than the progenitor is present with it in the cylinder when the cloning chamber's controls are activated, the resulting clone will be a hideous crossbreed with aspects of both the progenitor and the trespasser. The Judge can adjudicate this horror at his discretion, or by using the rules for crossbreeds found in *ACKS*, p. 121
- If creatures are present in both cylinders when the cloning chambers' controls are activated, the machine will malfunction horribly. Alchemical materials will be poured into *both* cylinders, and the unfortunate creatures within will be subjected to an irreversible and agonizing crossbreeding with each other. This can be adjudicated as above.

No more than one clone can be created every week, as the process requires both considerable power and raw materials, both of which are in short supply in Dwimmermount at present. (For reference, the process requires approximately 4 gallons of unrefined azoth per pound of the progenitor.)

62. Alteration Chamber

The door to this room is made of frosted vitreum, with fittings of alchemist's resin. A dim glow is visible through the frosting, emanating from a single functioning radiance panel in the ceiling of the room. A second radiance panel is broken and dark. Below the panels lies a nephelite "bed" with buttons and dials built into its high frame. A vitreum canopy, currently raised, is attached to the frame. The walls around the bed are covered with resin shelves, but these no longer hold anything save some shards of broken glass and ceramics.

If anyone lies on the bed, the canopy will swing shut with a loud "click", locking him within. Once the canopy is locked, the only way to open it is to press one of the buttons on the side of the bed frame. There are ten buttons in all. If button #5 is pressed, the canopy opens without incident. Any other button causes various gases and liquids to be sprayed on the person trapped within before the canopy opens. Use the following table to determine the effects of these gases and liquids on the subject lying on the bed:

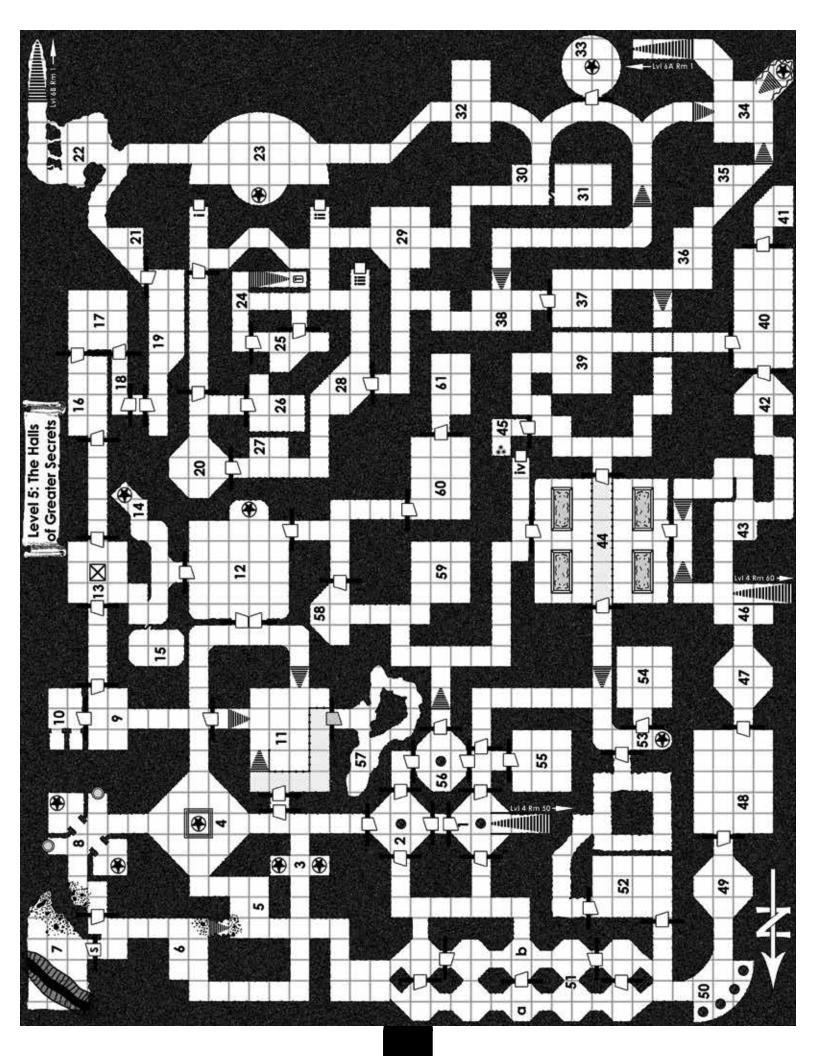

ALTERATION BED EFFECTS

ALIENATION DED EFFECTS		
Die Roll	Effect	
1	The subject is transformed into a member of the opposite sex.	
2	The subject's body hair is permanently dilapidated.	
3	The subject's skin is (1-2) darkly tanned, (3-4) bleached white, or (5-6) turned dark blue. Effect wears off in 1d6 weeks.	
4	The subject is healed 1d10 points of damage.	
5	The canopy opens without incident.	
6	The subject is dealt 1d10 points of damage.	
7	The subject is put to sleep and cannot be awakened for 1d6 turns.	
8	The subject is cured of any negative effects such as disease, paralysis, poison, etc.	
9	The subject gains infravision (60 foot range); if the subject already has infravision, however, he loses the power.	
10	All of the subject's non-metal possessions are dissolved into 900.	

Rather than mess with the bed's buttons, characters may instead destroy the canopy. The canopy can endure 50 points of damage before shattering. Characters striking the canopy may accidentally trigger one of its buttons, however; each time the canopy takes damage, there is a 1 in 10 chance that a random button is activated.

Level 4

CHAPTER 4

The Halls of Greater Secrets

HE HALLS OF Greater

Overview of The Halls of Greater Secrets

Secrets were excavated at the start of the Second Era to serve as the seat of metaphysical research in Dwimmermount. Guided by the superhuman intellects of the Servitors, the Great Ancient's civilization was ascending to the pinnacle of knowledge, and it was in The Halls of Greater Secrets that this knowledge came to dwell. As with The Halls of Lesser Secrets (Level 4), the Great Ancients destroyed virtually all of this level rather than allow the Eld to seize it. Today only the Hieroglyphics Room (Room 19), Azoth Pools (Room 44) and portions of the Library of Great Secrets (Room 48) show signs of Second Era construction.

The Eld largely left Level 5 in ruins. The Thulians took a greater interest in the secrets of the lost Ancients; they rebuilt the Library, and installed the Reading Room (Room 39), Salon (Room 47), Pools and Statues (Room 8), and Shrine to Tenen (Room 33). Under the Termaxians, The Halls of Greater Secrets again became one of the most important levels of Dwimmermount, and most of the level's construction is characteristic of that dark time.

WANDERING MONSTERS OF THE HALLS OF GREATER SECRETS

Level

5

High-ranking hierophants such as Euthalius (Room 25) and Marthanes (Room 60) settled here to study alchemy (Room 34) and demonology (Rooms 4, 17, and 23). An Arena (Room 11) was built to test the fighting capabilities of beastmen, summoned creatures, and crossbred creations. The nearby Echo Chamber (Room 12) and Four Pillars (Room 50) were used to enhance the combatants while the Healing Device (Room 56) healed them. The adjoining Natural Cavern (Room 57) became a lair for monstrous combatants between fights.

1. Entrance

Two virtually-identical minotaurs guard the stairs here, laying claim to this area in the name of their king, Bik. The stairs behind them ascend to Room 50 of The Halls of Lesser Secrets (Level 4). Should the minotaurs fail a morale roll, they will retreat up the stairs to seek reinforcements.

Minotaurs (2) [AL C, MV 120' (40'), AC 3, HD 6, HP 30, 20, #AT 2 or 1, DG 1d6/1d6 or 1d8+2 (battle axes), SV F6, ML +4]

In the center of the room is a single column made from azoth-infused steel (see Appendix F, Azoth, p. 394). The column has an indentation on one side into which a Termaxian passkey (see Appendix A, New Magic Items, p. 333) can be inserted. It is one part of a healing device; the other parts can be found in the Room of the Pillar (Room 2) and as part of the Healing Device (Room 56). A full description of the device and how it operates can be found in the entry for Room 56 below.

2. Room of the Pillar

This chamber is empty save for a single pillar made from azoth-infused steel that runs from floor to ceiling. It is one part of a healing device; the other parts can be found in the Entrance (Room 1) and as part of the Healing Device (Room 56), and like these has an indentation on one side into which a Termaxian passkey (see Appendix A, New Magic Items, p. 333) can be inserted. A full description of the device and how it operates can be found in the entry for Room 56 below.

3. Turms Statues

Ensconced in alcoves along this passageway are two statues of Turms Termax. The two statues face each other across the passageway. The statues were sculpted in identical poses—Turms weaving an arcane gesture with one hand and pointing outward with the other—but from different materials, with

the eastern statue carved of plain, heavy marble, and the western one cast from bronze. Both statues rest on circular platforms, carved with inscriptions in High Thulian. The inscription on the western platform reads "If you gaze too long into the Abyss..." while that on the eastern platform reads "...The Abyss gazes into you." Behind each statue, a fresco on the alcove's wall depicts a terrifying abyssal realm populated by demons and undead.

Currently, the statues' backs are to these nightmarish frescoes, but the circular platforms can be turned by characters with a combined Strength score of 30 or more. If the statues are both turned to face the frescoes and away from each other, the statue of the Prince of the Undead (Room 4) can be activated.

4. Prince of the Undead

Resting upon a raised dais is a grotesque bronze statue depicting an obese, bat-winged, demonic goat-man with ram's horns holding a skull-topped wand in its right hand. This is Orcus, Prince of the Undead. A cursory examination of the statue will reveal a visible seam on its right shoulder joint, suggesting the arm could be moved.

The arm will prove immobile, however, until the Turms Statues (Room 3) have been turned to face the frescoes of the Abyss. Once this is accomplished, moving the arm causes a hidden seam in the statue's immense belly to crack open. This reveal a cache of valuables, consisting of 3,000 sp, 4,000 ep, a moonstone worth 100 gp, a moonstone worth 250 gp, a jasper worth 250 gp, a chrysoprase worth 250 gp, an amethyst worth 500 gp, and a garnet worth 500 gp. Underneath the coin and gems is a heavy iron time, bound with brass and bone. This is a book of infinite spells (see Appendix A, New Magic Items, p. 325).

Should the *book of infinite spells* be removed by anyone of Lawful or Neutral alignment, a babau demon will be summoned from the Abyss to slay the vandals. The babau appears near the middle of the room and attacks anyone nearby. The demon only disappears if it or any intruders into the room are slain.

Babau (1) [AL C, MV 150' (50'), AC 12, HD 7+10, HP 44, #AT 3 or 1, DG ld4+1/ld4+1/ 2d4 or 1d8+4 (battle axe), SV F7, ML +2]

A Lawful cleric can become a Chaotic cultist of Orcus by renouncing his faith and making a blood offering at the statue here (see Chapter 3, Adventuring in Dwimmermount, p. 40).

5. Ruined Chamber

Rubble fills the northeast corner of this room, creating treacherous footing on the flight of stairs to the east. Characters ascending the stairs must make successful proficiency throw or suffer 1d3 points of damage from stumbling on the treacherous rocks. The target value for the proficiency throw is equal to the character's encumbrance in stone. Characters with Acrobatics proficiency gain a +2 bonus if their encumbrance is 6 stones or less. Thieves, and characters with Climbing proficiency, automatically succeed.

The first character who stumbles amidst the rubble on the stairs will discover a caduceus-shaped brooch worth 600 gp. The brooch will also be found if the characters make a thorough search of the rubble. The brooch is actually a key which opens the secret door to the Treasure Hoard (Room 15).

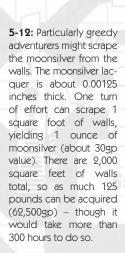

6. Dusty Room

Aside from some rubble in its southwest corner, the most notable feature of this chamber is its dustiness. The floor of the room—and even into the two corridors leading away from it—is covered with a fine, whitish powder that, upon closer inspection, is revealed to be tiny bone fragments. There is no way of telling the type of bone.

7. Bottomless Pit

Opening the door to this room is difficult (-1 to the force doors roll) and anyone who gets near it can hear the howling of wind behind it. Entering the room beyond reveals a wide, rocky ledge overlooking a dark—and very deep—pit. The pit drops 100 feet straight down, then descends southward at a 25-degree slope for another 550 feet before opening onto the ceiling above the Chasm (Room 5) on The Deep Hollows (Level 7).

Chapter 14

A magical current of wind blowing down the pit is the source of the howling. Characters approaching within 10 feet of the pit must make a saving throw versus Blast each round or be blown into it. Those blown into it must then make a saving throw versus Paralyzation. Those who succeed are safely transported to area 5a of The Deep Hollows (Level 7) after a strangely slow fall that takes 10-15 minutes. Those who fail are similarly transported, but they are buffeted more fiercely by the wind, suffering 1d6 damage every minute (6 rounds) of their fall.

8. Pools and Statues

This room consists of four distinct areas, two of which contain marble statues and two of which contain small, empty pools. Each pool is a semicircle with a 2 foot radius, about 4 inches deep, capable of holding 25 gallons (200 pints) but currently dry. The statues and pools all radiate magic.

The northern statue depicts a robed man, a lyre clutched in one hand, a healer's staff in the other. The staff is outstretched to point towards the pool to the south. The statue has no head, though a smashed head of Turms Termax litters the ground nearby. From the implements carried by the statue, a cleric can identify it as a representation of Caint, god of medicine and music. If a pint of wine is placed in the pool that Caint is pointing towards, the pool will magically fill with an alchemical fluid resembling sweet, red wine. Anyone who drinks at least a pint of the "wine" gains 2 bonus hit points per hit die he possesses. The bonus hit points remain until lost or until 24 hours has elapsed. Any damage the character suffers should be removed from these hit points first.

The southern statue depicts a slender woman in a chiton carrying a horn in one hand. The other hand points towards the pool north of the statue. The statue has the head of Turms upon its shoulders, but a cleric can nevertheless identify the statue as representing Tyche, goddess of fortune. The disfigurement of the statue has suppressed the magical enchantment on its pool, but if Turm's head is removed and smashed, the statue's link with its pool will be restored. Thereafter, if a pint of water is added to the northern pool, the pool will magically fill with an alchemical fluid resembling clear, sweet water. Anyone who drinks at least a pint of the fluid gains a +2 bonus to all saving throws for the next 24 hours.

A character can benefit from drinking both alchemical fluids. Drinking a second dose of the same fluid does not give any additional benefit (e.g., drinking twice from Caint's pool does not give 4 bonus hit points) until the first dose has worn off. When first conjured, there will be a total of 200

pints of alchemical fluid in a pool. Each time the characters visit the room thereafter, there will be 1d20 fewer pints (less whatever they consume, of course). Fluid from the pools loses its potency in 1 round if not swallowed. The magical effect that fills the pools can be activated only once per year.

9. Antechamber

Lying in the middle of this otherwise empty chamber is a *Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333).

10. Storeroom

Broken crates and discarded chests and coffers litter this room. However, in two alcoves to the north can be found large metal chests. The one in the western alcove is, in fact, a chest, which, though locked, contains 5,000 sp and 400 gp. The other is a mimic (see *Appendix C, New Monsters*, p. 358), which attacks anyone who comes near its lair.

Mimic (1) [AL N, MV 30' (10'), AC 2, HD 7, HP 29, #AT 1, DG 3d4, SV F7, ML +1]

11. Sunken Arena

Here three short sets of stairs lead down 10 feet into a sub-level. A railed ledge runs above the sub-level along the north and west walls, terminating in a patinated bronze door. The door is elaborately carved with images of fearsome monsters and gladiators. It leads to the Natural Cavern (Room 57).

The floor of the sub-level is completely stained with dried blood, as if hundreds of battles had been fought here. Euthalius (see Room 25) or a similarly knowledgeable character could explain that in his era the sub-level was an arena used to test the fighting capabilities of beastmen, summoned creatures, and crossbred creations. The nearby Echo Chamber (Room 12) and Four Pillars (Room 50) were used to enhance the combatants while the Healing Device (Room 56) and magical Pools and Statues (Room 8) healed them. The adjoining Natural Cavern (Room 57) was used as a lair for monstrous combatants between fights.

12. Echo Chamber

The walls of the room are smooth and mildly reflective, seemingly lacquered with a silvery, mirror-like material. Any sounds in the room noticeably echo, though the room's doors—the interiors of which are coated with the same material—dampen them so that they do not resonate outside the chamber. The material is in fact azoth-infused moonsilver, enchanted to reflect energy.

In an alcove in the southern wall of this large room is a statue of Turms Termax, his arms aloft, as if casting a spell. The statue is made of Kythirean ebony and shows signs of having been hacked in several places. Careful examination of its base reveals a High Thulian phrase that reads, "Cast all before me on the path to Thrice Greatness." The phrase hints at this room's special effect: Any arcane spells—but not divine spells—cast in the room have a chance equal to 10 minus their level times 10% of tripling in potency (including duration, range, and/or damage). Thus, a 1st-level spell has a 90% chance of tripling, while a 5th-level spell has only a 50% chance. The room's nature is permanent and can be visited any number of times, but it applies only to spells *cast* within the room.

13. Beetle Lair

Dwelling within this room are six giant tiger beetles, which have entered the room through a concealed pit in the floor.

Giant Tiger Beetles (6) [AL N, MV 150' (50'), AC 6, HD 3+1, HP 16, 14, 13, 13, 12, 11, #AT 1, DG 2d6, SV F1, ML +1]

The pit still functions normally and is 10 feet deep, with a crevice at its bottom that is too narrow for most humanoids to enter, but large enough for the beetles to traverse. The crevice ultimately reaches a breach in the water pipes between the levels; see *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing these. Also at the pit's bottom are 57 cp.

14. Weird Statue

At the end of this winding hallway is an enchanted stone statue whose apparent appearance varies depending on the class of the person who views it, as follows:

- Cleric: Those with Wisdom 15 or lower see an image of their deity, while those with 16+ Wisdom see Turms Termax instead
- Fighter: A Thulian cataphract in full armor.
- *Mage:* Those with Intelligence 15 or lower see Turms Termax, while those with 16+ Intelligence see a demonic figure.
- *Thief:* A daring rogue.

This strange effect applies only to humans. Non-human races see only a lump of stone.

15. Treasure Hoard

The only evidence of the secret door that gives passage to this room is a small indentation in the wall. If one of the caduceus-shaped brooches found in the Ruined Chamber (Room 5) or Sleeping Quarters (Room 52) is placed in the indentation, the door to the hidden room will grind open. It otherwise can be opened only with *knock* or similar magic.

Within the hidden room is a sizable cache of treasure. Spilling out of broken wooden chest is a large pile of Termaxian-era coin, consisting of 8,000 sp and 2,000 gp. Perched on top of the pile is a bone idol of Orcus worth 50 gp. A jewelry box at the bottom of the coin pile holds a wrought silver ring worth 100 gp; a bronze belt buckle studded with bloodstones, worth 400 gp; another caduceus-shaped brooch worth 600 gp; and a wrought gold scepter tipped with opals worth 1,200 gp. Hanging on the far wall is a Thulian centurion's sword with a bronze hilt and a straight starmetal blade etched with runes of Law. This weapon is a sword +1, +3 vs. undead.

16. Green Guardians

Lurking inside this room are four green guardians (see *Appendix C*, *New Monsters*, p. 353) posing as statues. They wait until potential prey is within range before attacking.

Green Guardians (4) [AL C, MV 90' (30')/fly 150' (50'), AC 5, HD 5, HP 31, 20 (×2), 17, #AT 4, DG 1d6+1/1d6+1/1d6/1d6, SV F8, ML +4]

17. Chamber of the Egg

Four green guardians (see *Appendix C*, *New Monsters*, p. 353) stand watch over a large mottled egg roughly the size of a human head; they attack anyone who enters the room. The egg is held within an enclosed glass case that radiates a reddish glow. It detects as both evil and magic. Anyone touching the case takes 4d6 damage unless a *protection from evil* spell (or similar effect) has been cast on them beforehand. With protection, the case can be easily opened and the egg removed.

The egg itself, though warm to the touch, is not dangerous to handle. Its shell is extremely hard and resistant to both physical damage and magic. However, 1d6 days after it is removed from its case, it will hatch into a quasit (see *Appendix C*, *New Monsters*, p. 362) that will seek out a master to serve. The quasit has a preference for Chaotic mages over all other classes, but will serve any Chaotic-aligned character, or barring that, any mage. Being a demon,

Level

5-19: Fluency in both the Tongue and Dwarven counts as partial evidence of 1-7. Fluency in both the Tongue and Elven counts as partial evidence of 2-5. Fluency in both the Tongue and Ancient Thulian counts as partial evidence of 1-1.

Chapter 14

the quasit hopes to corrupt its new master and does everything within its power to bring this about.

After the egg is removed, there is a cumulative 5% chance per week that a new egg will appear within the glass case. If the glass case is damaged or removed from the room, no new eggs will be summoned.

Green Guardians (4) [AL C, MV 90' (30')/fly 150' (50'), AC 5, HD 5, HP 25, 21, 15 (×2), #AT 4, DG 1d6+1/1d6+1/1d6/1d6, SV F8, ML +4]

Hatched Quasit [AL C, MV 150'(50'), AC 7, HD 3, HP 11, #AT 3, DG 1d2/1d2/1d4, SV F3, ML +2]

18. Red Goo

The floor of this hallway is covered with a slick, red, acidic goo that gives off a foul odor. It is oil of caustic slipperiness (see Appendix A New Magic Items, p. 330). The oil is a recent addition to the dungeon, having been spread here by the Dwarven Sentries (Room 22) as a perimeter defense. Walking on the oil is dangerous, immediately dealing 1d6 points of damage and requiring a saving throw versus Paralysis. Modify the throw by the character's DEX adjustment. Characters with Acrobatics proficiency gain a +2 bonus if their encumbrance is 6 stones or less. Failure results in falling to the ground and taking another 1d6 points of damage. To stand up requires a further saving throw, with failure resulting in more damage, as before. A fallen character gains a +3 bonus to the saving throw if aided by a character not currently standing on the oil, having been thrown a rope, etc. The oil can be easily washed away with ordinary water.

19. Hieroglyphics Room

The entrances to this room are dilating doors made of adamantine steel within a hepatizon doorframe. Inside, the room is illuminated by vitreum radiance panels in the nephelite-coated ceiling. The walls are also made of black nephelite, decorated with a pictographic script unlike any used by any human cultures from the area around Dwimmermount. That is because the script is actually magical in nature, requiring read languages to understand. Any character reading the script immediately loses 1 point of Wisdom from the mind-breaking process. However, he henceforth can speak, read, and write the Tongue of the Great Ancients, the original language of man. This is of use when conversing with the Terrim (see Level 9), as well when reading certain ancient tomes of magic or using certain machines in Dwimmermount. Characters

fluent in Dwarven, Elven and/or Ancient Thulian will recognize the Tongue as being an ancestor of that language or those languages.

20. Bone Batons

Arranged on the floor of this room are a four carefully bleached human bones. The bones are arranged in the shape of a square. None of the bones are magical nor is the shape significant. However, bones of this very same sort can be enchanted at several locales on The Ossuaries (Level 6A), including the Enchantries (Rooms 18b, 42a, 60, and 61/63) as well as the Workroom (Room 28), to become temporary magic items.

21. Azoth Leak

In the southwest corner of this room, there is a leak of silvery-black liquid coming from the ceiling. The leak runs down the wall and stains the floor. This liquid is of course, azoth, but it is of insufficient quantity to be of much use (a mere 1 pint every day).

22. Dwarven Sentries

Five dwarves stand guard here, protecting the stairs down to the Entry Hall (Room 1) of The Manufactory (Level 6B). Led by Darval, the dwarves are cautious, but friendly. If convinced that the characters are not in league with any of the various Chaotic forces who haunt Dwimmermount, Darval will offer them safe passage to The Manufactory (Level 6B), along with a metal badge that identifies the bearer and his companions as friends of the dwarves. Darval knows very little about The Halls of Greater Secrets (Level 5), except that the dwarves have sealed a chokepoint to the north with Red Goo (Room 18) and that dwarven scouting parties to the west (Room 23) have not returned.

Dwarves (4) [AL L, MV 60' (20'), AC 6 (plate), HD Dv5, HP 25, 23, 20, 19, 15, #AT 1, DG 1d8+2 (battle axes), SV D5, ML +2]

Darval (1) [AL L, MV 60' (20'), AC 7 (plate armor +1), HD Dv7, HP 36, #AT 1, DG 1d8+5 (battle axe), SV D7, ML +4; Proficiencies: Alchemy 2, Engineering, Trapping]

Darval carries 3 oils of caustic slipperiness (see Appendix A, New Magic Items, p. 330). His plate armor +1 is made of adamantine steel.

23. The Supreme Unknown

A black and green marble statue of a bare-chested man with a rooster's head and snakes for legs stands in the northern part of this room. The name "Abraxas" has been carved in High Thulian at the base of the statue. The statue intensely radiates both magic and evil. Scattered on the floor of the room around the statue are ten corpses with leathery, grayish skin. These are juju zombies (see *Appendix C*, *New Monsters*, p. 374) lying in a dormant state. If the characters entering this room pass through quickly, the zombies remain dormant. Characters who linger in the room must utter a prayer to Abraxas aloud within 1 minute (6 rounds) or the juju zombies awaken and attack. The juju zombies will also awake if they or the statue are touched.

Juju Zombies (10) [AL C, MV 140' (50'), AC 3, HD 4+4, HP 28, 22 (×3), 21, 19, 18, 17, 13, 11, #AT 1, DG 1d8, SV F4, ML N/A]

Once awakened, the juju zombies remain animate for 1 turn, attacking any living creature they see, then lapse into dormancy again. Humanoids slain in this room will darken and wither into (dormant) juju zombies after 1d6 hours. If the statue of Abraxas is destroyed (100 hp), juju zombies will no longer be animated or created here.

24. Stairs to Nowhere

A staircase descends downward here. Any character who walks down the stairs while carrying a *Termaxian passkey* on his person finds himself teleported to the Library of Great Secrets (Room 48). Any without such a passkey is unaffected by this magical effect and descends the stairs as normal, but they terminate after 30 feet in a dead end.

25. Necrolyte's Sanctum

This chamber is free of the dust and decay that elsewhere dominates Dwimmermount. It is furnished with a large bed, a sturdy oak desk with padded chair, bookcases, and series of heavy wooden chests. Various arcane implements, grimoires, and flasks are scattered across the desk, where Euthalius, a Termaxian necrolyte (see *Appendix C, New Monsters*, p. 370), works. Euthalius earned his necrolyte status by participating in the murder of his friend Nazares (see Room 60) and will react with great alarm if confronted by evidence that the wizard still lives.

Despite his penchant for murdering friends, Euthalius sees himself as a scholar and man of learning. Consequently, he does not immediately attack any who enter his sanctum, provided that they show proper deference to his "superior knowledge" and demonstrate evidence of being of use to him in his own studies. Currently, Euthalius is keen to visit The Manufactory (Level 6B), but he has been thwarted in his efforts to date by the Dwarven Sentries (Room 22), who guard the only set of stairs down to it. If anyone agrees to help him make it past the dwarves, Euthalius is willing to share what he knows about this level, as well as granting his benefactors the choice of one magic item from among the many in his chests.

Euthalius is quite capable of defending himself if attacked, though he is more likely to use *dimension door* to flee, lest he be destroyed.

Euthalius (1) [AL C, MV 60' (20'), AC 7 (cloak of protection +1), HD 7, HP 38, #AT 1, DG 1d8, SV M7, ML 0; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-charm person, hold portal, read languages, shield; 2nd-hypnotic pattern, invisibility, web; 3rd-dispel magic, fireball, hold person; 4th-confusion, dimension door; Proficiencies: Collegiate Wizardry, Knowledge (Termaxian lore), Loremastery, Magical Engineering]

He carries a wand of ice (see Appendix A, New Magic Items, p. 334) with 15 charges remaining. The wand is made of lead crystal sculpted to resemble an icicle. Euthalius' spell books are on the bookcases, while in his various chests he keeps a chime of opening (40 charges), a rope of climbing, a sword +2, a sling +1, and three potions of extra-healing. The sword +2 has an azoth-infused areonite blade with a slight curve and a baroque hilt, together suggestive of Eldritch make.

26. Tar Trap

The floor of this room is covered by a thick, sticky black substance, similar to tar. The tar is actually an azoth byproduct sometimes resulting from manufacture of sovereign glue (see *Appendix F*, *Azoth*, p. 395) that has been cleverly repurposed here as a trap. After one round of standing or walking on the substance, a character must make a successful saving throw versus Paralysis or his footwear or feet become stuck to the floor. Feet and footwear are stuck to the floor permanently unless *universal solvent* (see *Appendix F*, *Azoth*, p. 395) is applied.

A character may, of course, abandon his footwear or hack his own feet off to escape. Hacking off a foot takes one round and deals 1d8 points of damage. Losing one foot reduces a character's movement rate by 60' and his DEX by 1/3 for armor class purposes. Losing two feet reduces the character's movement rate by 120' and his DEX by 2/3 for armor class purposes. The movement rate penalty

Level 5

is halved if the character uses a crutch or peg-foot. Characters who hack off their feet and then try to *crawl* out of the tar trap are, of course, likely to become quadruple amputees.

When the characters enter the room for the first time, they will find another creature (or creatures) already stuck in the substance. A single minotaur is ensnared the first time the room is entered, but thereafter the Judge should roll on the wandering monsters table to determine what has become ensnared.

27. Defaced Room

The walls of this small area are decorated with frescoes depicting magical experiments and similar sorcerous activities. However, these frescoes have been badly defaced, in some cases to the point of the stone walls beneath them being pockmarked and stained. Lying on the ground nearby is large glass bottle partly filled with a special alchemical solution created in the Laboratory (Room 20) of The Ossuaries (Level 6A). Its intended use is to prepare bones for use in the Enchantries (Rooms 18b, 28, 42a, 60, and 61/63) of that level. Sufficient solution remains to prepare three bones. The substance is highly toxic, and if thrown at an enemy, it deals 3d8 points of damage.

28. False Doors

Nearby this empty chamber are three false doors, labeled i, ii, and iii on the map. Each of the doors has a different effect, depending on which is opened and whether the opener possesses a *Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333).

- i Teleports the opener to the Entrance to this level (Room 1), unless he possesses a *Termaxian passkey*, in which case he is teleported to the nearby Secret Room (Room 31).
- ii Blasts the opener with a 5d6 *fireball* (make a saving throw versus Spells for half-damage). If the opener possesses a *Termaxian passkey*, he is teleported to the Landing (Room 38) immediately after the *fireball* goes off. There are scorch marks on the ground in front of the door.
- iii Teleports the opener to the Tar Trap (Room 26), unless he possesses a *Termaxian pass-key*, in which case he is teleported outside the Alchemist's Door to Dwimmermount.

Euthalius (see Room 25) is familiar with how these doors work. If asked, he particularly delights in explaining the mystery of door ii, which was intended to teleport passkey holders to safety *before* its trap went off. Unfortunately, the magical con-

tractors hired to craft the trap got the timing wrong. It proved cheaper for them to bribe the Termaxian administration to sign off on the project than fix the error.

29. Guard Room

Shattered wooden stools and weapons racks reveal that this was once a guard room. Now it is occupied by eight juju zombies (see *Appendix C*, *New Monsters*, p. 374), who attack anyone who enters the area.

Juju Zombies (8) [AL C, MV 30' (10'), AC 3, HD 4+4, HP 23, 22, 21, 16, 15, 13, 12 (×2), #AT 1, DG 1d8, SV F4, ML N/A]

30. Graffiti

On the northern wall of this room, there is a chalk message written in Low Thulian (Common), which reads "Run if you see it!" accompanied by a very crude sketch of a rooster-headed, snake-legged demon. This is a reference to the dangers posed by the Supreme Unknown (Room 23).

The secret door on the west wall leading to the Secret Room (Room 31) is a stone slab that revolves around its central axis if pushed. It is well-concealed but otherwise unremarkable.

31. Secret Room

Scattered throughout this secret room are a half-dozen chests and coffers, all open and unlocked, collectively containing a total of 6,000 sp and 800 gp. Mounted in a case on the south wall is a suit of *Thulian plate* +2 (see *Appendix A*, *New Magic Items*, p. 333).

32. Dead Dwarves

The bodies of four dead dwarves lie in this room. They seem to have been fleeing to the west when they died. Because dwarves turn to stone upon death, it is difficult to ascertain precisely what killed them. Their plate armor and battle axes are slightly battered but still in serviceable condition. If their bodies and equipment are returned to Darval in Room 22, this will grant a reaction bonus of +2 when dealing with the dwarven leader.

33. Shrine to Tenen

A marble statue of a short, dwarf-like figure carrying craftsman's tools stands in the center of this circular room. The statue's head has been replaced with that of Turms Termax. The statue is of the Thulian god Tenen, and anyone who replaces

the head of Turms with that of the god will receive the Greater Blessing of Tenen. This is the one-time ability to cast *teleport*, as per the arcane spell. The blessing can be cast at any time and is instantaneous, but once cast, is lost. See *Chapter 6*, *Overview of the Dungeon* (p. 84), for more information on boons from the gods.

34. The Lord of Alchemy

Two sets of stairs lead down into this room, which sits about six feet below the others on this level. Another set of stairs leads upward to a red-curtained alcove in which rests a bronze statue of a demonic winged bull. This is the demon lord Haagenti, to whom alchemists and transmuters sometimes turn for hidden knowledge. Written on the base of the statue, in High Thulian, is the phrase, "Blood is the Key."

In the center of the room is a 10 foot diameter metal table bolted to the ground. An alchemical distillery of a baroque and sinister design occupies the majority of the table, alongside a wooden case filled with various powders, salts, and other reagents. A character who succeeds on a magic research throw can use the alchemical distillery to brew potions of any kind. Each potion requires a mixture of various reagents and a large quantity of blood (10 hit points worth). Once the blood and reagents are mixed, the distillery will brew the desired potion in 1 turn (10 minutes). There is no blood stored in the room, and the amount of reagents at hand is only sufficient to make six potions. (At the Judge's discretion, he may allow the characters to buy or create their own reagents for use with the distillery). The distillery will not function if removed from this room.

To the southeast, a fourth set of stairs descends to the Staircase (Room 1) of The Ossuaries (Level 6A).

35. Demonic Scouts

Wandering through this triangular chamber are seven dretches (see *Appendix C*, *New Monsters*, p. 347), on an errand for their master in the second room of mosaics (Room 37). The dretches are cowardly and will flee towards their master if it looks like they may be destroyed.

Dretches (7) [AL C, MV 90' (30'), AC 7, HD 4, HP 23, 21 (×2), 17, 16, 12, 10, #AT 3, DG 1d4/1d4/1d6, SV F4, ML +2]

36. Bizarre Mosaics

The western wall of this room sports beautiful—but peculiar—mosaics depicting alien worlds on which can be seen demonic figures marching as if going to war. Mounted on the eastern wall are five

steel hooks, from three of which hang pairs of spectacles with red lens (two are seemingly missing). Anyone wearing the spectacles who looks at the mosaics will see that it has become an animated montage showing how the demons prepare for war. During each turn of viewing, spectators must make a successful saving throw versus Spells or become entranced by the image for an additional 1d6 turns (cumulative). Entranced characters can do nothing but gaze in stupor at the mosaic, and enemies gain a +4 bonus to hit entranced characters. The entrancement can be removed with dispel magic or similar effects, or by taking the spectacles of the character. A character who manages to gaze at the mosaic while wearing the spectacles for three or more turns without becoming entranced gains a permanent +1 bonus to hit and damage when fighting demons of any kind due to his understanding of their warfare techniques.

37. More Mosaics

This chamber is decorated similarly to the Bizarre Mosaics (Room 36) next door, except that the demons depicted on the northern wall are dancing, not marshalling as if going to war. There are five hooks on the south wall, but none of them have any spectacles hanging from them. The mosaics in this room are also damaged, with many of their tesserae missing. Consequently, viewing the mosaics while wearing the spectacles from Room 36 has no effect.

Lurking in the room is a stirge demon (see *Appendix C*, *New Monsters*, p. 367), who is the commander of the dretches in Room 35. The stirge demon has a very high opinion of itself and is easily taken in by flattery. He in turns serves the demon Aishapra who lairs in the Library of Great Secrets (Room 48).

Stirge Demon (1) [AL C, MV 20' (6')/fly 60' (30'), AC 11, HD 7, HP 25, #AT 3, DG 2d4/2d4/1d8, SV F7, ML +2]

38. Landing

On the floor of this room, just below a set of stairs leading slightly upwards (about five feet), there is a circle of black ash three feet in diameter. In the center of the circle is a partially melted gold ring worth 500 gp, even in its damaged condition. The ring is otherwise unremarkable as is the ash.

A character teleported by false door ii in Room 28 will arrive in the circle of black ash. If the teleported character's hit points have been reduced to considerably below 0 by the door's *fireball*, the size of the black ash mound may increase...

Level 5

39. Reading Room

Arranged in this room are four heavy wooden chairs, each of which is equipped with a basket on one side into which scrolls can be placed. All of the baskets contain fragments of paper with writing on them that is largely unintelligible, though individual words might be recognized. Underneath one of the chairs is a bronze scroll tube, inside of which is an arcane scroll with the following spells: *clairvoyance*, *fly*, and *haste*.

40. Dangerous Treasure

The floor of this large chamber is covered by a huge mound of silver and gold coin. Examining the treasure pile for a few

moments quickly reveals that the treasure is undulating and swaying. This is because a muculent worm (see *Appendix C*, *New Monsters*, p. 359) lurks beneath the treasure. The worm entered the room through a hole in the floor—since col-

lapsed—and has taken up

residence here, feeding on weak demons and Termaxian cultists who wander into this chamber. The treasure itself consists of 16,000 sp and 3,000 gp.

Muculent Worm (1) [AL N, MV 30' (10'), AC 5, HD 10, HP 48, #AT 1, DG 2d6, SV F10, ML +2]

41. Storeroom

Sealed crates and barrels can be found here, filled with dried foodstuffs and alcohol. Each of the room's eight crates is 4 feet cubed, and contains 200 lbs. of grain (25sp value). Each of the room's ten barrels 3 feet tall and 2 feet in diameter, and contains 60 gallons of musty, but drinkable, beer.

42. Silver Trail

A thick trail of glistening silvery slime leads from the door to the Dangerous Treasure (Room 40) across the floor of this room and off toward Room 43.

43. Mercury Ooze

Slithering across the floor in this area is a mercury ooze (see *Appendix C*, *New Monsters*, p. 358) that takes immediate notice of any living that enters and attacks.

Mercury Ooze (1) [AL N, MV 30' (10'), AC 0, HD 5, HP 21, #AT 1, DG 2d4 + mercury poisoning, SV F5, ML +2]

44. Azoth Pools

The doors to this room are grey nephelite blast doors. The magical mechanisms that once opened them no longer function, but mechanical handles can be used to crank them open. The room within consist of two parts, an upper and a lower one. The upper one, accessible by means of two doors, is a raised catwalk with railings on either side, which looks down on the lower level. The lower one, accessible by two different doors, has four large pools of glowing, bubbling azoth. These pools provide an eerie illumination, as well as filling the chamber with metallic fumes. Though there are several vents on the ceiling of the room, they have become blocked following ages of disuse, which makes it potentially dangerous to spend more than a few rounds here without magical protection. After 6 rounds in the room, any character who lacks a *mask of breathing* (see *Appendix* A, New Magic Items, p. 329) from the Room of Niches (Room 55), an environment suit (p. 326), or similar protection, must make a saving throw versus Poison or suffer the effects of a confusion spell for 12 rounds.

In determining the *confusion* effects, any result of "Does nothing, but babble incoherently" instead results in the character having an out of body experience that gives him a very brief glimpse of the contents of one room on this level. Roll 2D6 to determine which room's contents he sees, treating one die as the tens column and the other as the ones column. Thus, a roll of 2 and 3 should be read as 23. Any results higher than 61 (the number of rooms on this level) should be treated as "Does nothing, but babble incoherently."

The azoth here is very hot. Touching it deals 1d8 points of damage per round of contact. Each of the four pools holds 15,000 gallons of azoth. The pools are fed by azoth-infused copper pipes leading to Dwimmermount's azoth reservoirs; if, through some strange magic, the characters descend down these pipes, see *Chapter 6, Overview of the Dungeon* (p. 85). Additional information on azoth and its uses can be found in *Appendix F, Azoth* (p. 393).

Chapter 14

45. Latrine

This small chamber served as a latrine during the heyday of Dwimmermount. Centuries of neglect has resulted in its pipes rusting to such an extent that neither the toilets nor the sinks work any longer. The copper pipes themselves are too narrow for any but the smallest creatures to traverse (e.g. normal rats, insects, etc.). See *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing the water pipes between the levels.

46. Stairs

A trio of frightened wererats have ventured down into this area by using the nearby stairs from the Wererat Redoubt (Room 60) on The Halls of Lesser Secrets (Level 4). The wererats are intrigued by the contents of the Salon (Room 47), but are unwilling to proceed on their own for fear that it is a trap. They will gladly allow others to venture ahead and see what happens, taking advantage of the

situation if they think they can get away with it. If attacked, they will fight viciously until their morale breaks, whereupon they will flee up the stairs to seek aid from their four brethren above.

Wererats (3) [AL C, MV 120' (40'), AC 2 (0), HD 3, HP 18, 17, 10, #AT 1, DG 1d4 or 1d6 (short swords), SV F3, ML 0]

47. Salon

This hexagonal chamber is outfitted as if it were a drawing room, complete with a low table, four cushioned chairs, candelabra (unlit), and mirrors on the eastern and western walls. When the threshold to the room is crossed, the candles in the candelabra suddenly light, the lilting sounds of a harp resonate softly, and the smell of roses wafts into the room. The music and aroma coming from here will alert the marilith Aishapra in the Library of Great Secrets (Room 48), and she will gather her minions in preparation.

5-48: Characters studying the books will learn one of the following numbered facts each day: 1-1, 1-2, 1-3, 1-4 1-5, 1-6, 1-7 1-8 2-2, 2-3, 2-4, 2-5, 2-6, 2-9, 2-10, 3-1, 3-2, 3-3, 3-4, 3-5, 3-6, 3-7, 3-10, 3-11, 3-12, 4-2, 4-3, 4-4, 4-5, 4-6, and 4-7. Roll 1d10 to determine the language of the book: (1) The Tongue of the Great Ancients, (2-3) Eld, (4-6) Ancient Thulian, or (7-10) High Thulian.

48. Library of Great Secrets

The southern door to this room is magically sealed with a wizard lock. It can be opened by the usual means (knock, etc.) or by any character with a Termaxian passkey (see Appendix A, New Magic *Items*, p. 333). The room itself is a vast library, filled with rows upon rows of scrolls, codices, and books. The library is now the lair of a rogue marilith demon (see Appendix C, New Monsters, p. 357) named Aishapra, who sees the opening of Dwimmermount as the first step in her plan to extend her influence into the mortal world beyond. She treats any entry into this chamber as an affront and will attack with the utmost ferocity, though she will not use her gate ability under any circumstances. The last thing she wants is for demons other than those under her command to appear on this level. If battle goes against her, Aishapra will attempt to flee to her Guardian Demons (Room 49), hoping that her minions, or even the stirge demon from More Mosaics (Room 37), there can aid in her escape. If forewarned by the sounds and scents of the Salon (Room 47), Aishapra will have gathered her minions here already.

Aishapra (1) [AL C, MV 120' (40'), AC 15, HD 7+6, HP 36, #AT 7, DG 1d6 (×6)/2d4, SV F7, ML +1; Proficiencies: Intimidation, Weapon Focus (swords)]

Aishapra has collected a considerable amount of treasure from elsewhere on the level. This treasure consists of 12,000 sp; 6,000 gp; a wrought silver ring worth 600 gp; a wrought gold necklace beaded with pearls, worth 500 gp; a rod of captivation (see Appendix A, New Magic Items, p. 331) (nine charges remaining); a Termaxian passkey; a potion of flying; a potion of levitation; a feather token (see Appendix A, New Magic Items, p. 326); and a scroll of suggestion and water breathing.

In addition, the library contains vast stores of knowledge, both arcane and mundane. The books here (none of which are inherently magical) are worth a fortune to interested buyers in the outside world, assuming that they could all be transported. The breadth and depth of the information they contain is left entirely to the Judge, given the needs of his campaign. There are 159 loads of rare books in the library, each load weighing 30 lbs. and worth 1,000 gp.

Anyone who walks down the False Stairs (Room 24) carrying a *Termaxian passkey* is teleported into this room, adjacent to the northern door.

49. Guardian Demons

Sixteen pathetic manes demons (see *Appendix C*, *New Monsters*, p. 357) stand guard outside the entrance to the Library of Great Secrets (Room 48). They will not flee, even if battle goes against them.

Manes (16) [AL C, MV 30' (10'), AC 4, HD 1, HP 8 (×2), 7 (×4), 6 (×4), 5 (×2), 4 (×2), 3, 1, #AT 2, DG 1d3/1d3, SV F1, ML +4]

50. Four Pillars

Four marble pillars form a colonnade along the northwest wall. Each pillar is a different color brown, white, red, green—and shows evidence of having many nicks and dents along its length. The four pillars radiate magic. If a melee weapon—and only a melee weapon—is struck against one of the pillars, it gains a temporary (24-hour) bonus to damage against one type of elemental-based creature. The bonus is equal to the damage dealt by the weapon against the pillar. For example, if a cleric struck a pillar with a mace and dealt 3 points of damage, his mace would gain a temporary +3 damage bonus. Striking additional pillars negates the effects of previous pillars and no weapon can ever gain more than one bonus from a single pillar. This means that, after gaining a bonus from each pillar, the weapon can no longer benefit from its enchantment.

The correspondence between the colors and the elements is as follows: brown (earth), white (air), red (fire), and green (water). The Judge is the final arbiter on which creatures and opponents count as "elemental-based" for the purposes of this boon.

51. Hexagonal Cells

This room is broken up into ten hexagonal cells, some of which are separated by doors sealed with wizard locks. As with the wizard lock to the Library of Great Secrets (Room 48), these can be opened by the usual means (knock, etc.) or by any character with a Termaxian passkey (see Appendix A, New Magic Items, p. 333). Though the doors can easily be bypassed, opening the wizard locks has an additional effect. Each wizard lock opened before the one between sections 'a' and 'b' is opened adds a "charge" to the door between those two sections. The charge is visible as a reddish, glowing band that appears on the door, accompanied by a low whine.

Walking through the middle door from 'a' to 'b' sends the person(s) who does so to the bottom of a set of stairs on a level of the dungeon equal to the number of charges active. For The Laboratory (Level 2A), The Reliquary (Level 2B), The House

of Portals (Level 3A), and The Reservoir (Level 3B), the Judge should roll to determine if it sends them to Level A (1-3) or Level B (4-6). Walking through the middle door from 'b' to 'a' send the person(s) who does so to the top of a set of stairs on the level equal to the charges active. Again, for Levels 2 and 3, roll to determine which one. In cases where there are multiple sets of stairs, for example on The Halls of Lesser Secrets (Level 4), roll to determine which set of stairs.

The middle door remains open for only five rounds, after which it closes and *wizard locks* again, along with all the other doors.

52. Sleeping Quarters

Numerous wooden beds fill this room, all in remarkably good condition considering their age. The beds are bare, without any mattresses, covers, or blankets. At the foot of each bed is a chest, most of which have long since been looted. One of them remains locked and unopened. It contains 100 pp; a wrought gold bracelet worth 600 gp; a caduceus-shaped brooch worth 600 gp; and a moonsilver ring fastened in the shape of entwined leaves, with an apparent worth of 1,000 gp. Like that found in Room 5, the caduceus-shaped brooch is actually a key which opens the secret door to the Treasure Hoard (Room 15). The moonsilver ring radiates magic, and is in fact a *ring of command plant*.

Also in the room are five shadows, which attack anyone who enters.

Shadows (5) [AL C, MV 90' (43'), AC 2, HD 2+2, HP 14, 12, 11 (×2), 6, #AT 1, DG 1d4 + strength drain, SV F2, ML +4]

53. Oracular Statue

At the end of this hallway is a bronze statue of Turms Termax whose mouth is depicted as wide open, as if he were shouting. On its base, written in High Thulian is the single word, "Ask." If asked—in High Thulian—any question about The Halls of Greater Secrets (Level 5) for which a yes/no answer can be given, the statue will respond in an echoing voice (in High Thulian, of course). The answer given will be the truth as it was understood to the Termaxians when the statue was sculpted two centuries ago. The statue will answer no more than three questions per day.

54. Green Room

Every inch of this room's walls and ceiling have been painted a verdant green, and its floor is covered with a green carpet. In the center of the carpet is a dining table surrounded by comfortable wooden chairs. If anyone sits in one of the chairs, exceptionally wholesome food and drink appears on the table. This food and drink is so satiating that anyone who partakes of either must make a saving throw versus Poison or fall into a deep sleep for 1d4 turns.

55. Room of Niches

With the exception of the 10-foot square containing the door, each wall of this room contains a small square niche inside some of which there are items of interest and value. Starting from the eastern wall immediately south of the door and working around clockwise, these niches are:

- 1. A bag containing 1,000 gp
- 2. A vial of universal solvent (see Appendix F, Azoth, p. 395)
- 3. Empty
- 4. A bag of devouring
- 5. A potion of healing
- 6. An empty wineskin
- 7. Two potions of speed
- 8. Empty
- 9. The head of the god Tenen carved from stone.
- 10. Two masks of breathing (see Appendix A, New Magic Items, p. 329).
- 11. Termaxian passkey (see Appendix A, New Magic Items, p. 333)

There are also some small holes on the floor, indicating where some furnishings had once been bolted down, but they have long since been removed.

56. The Healing Device

Like Rooms 1 and 2, a pillar of azoth-infused steel stands in the center of this room. Like those other pillars, there is an indentation on one side into which a Termaxian passkey (see Appendix A, New Magic Items, p. 333) can be placed. If a passkey is placed in only one or two of the pillars, they fuse to it and cannot be removed until a passkey is placed in all three of them. If this is done, the pillars are infused with crackling blue magical energy and radiate a barely perceptible vibration. The vibration affects anyone in Rooms 1, 2, and 56 for the next 10 rounds. Each round, 1d4 hit points of damage are healed. Alternately, one negative effect (poison, disease, curse, level drain, etc.) can be removed instead. Undamaged individuals gain no benefits from the vibrations. After 10 rounds, the device ceases to function and the Termaxian passkeys are absorbed into the pillars, leaving behind empty indentations once again. The healing device can be activated as often desired, so long as three passkeys are available.

Level 5

57. Natural Cavern

Beyond the bronze door in the Sunken Arena (Room 11) is a natural cavern where a pair of phase spiders (see *Appendix C, New Monsters*, p. 367) have made their lair. The spiders are belligerent, but will flee, using their *phase door* ability if combat turns against them.

Phase Spiders (2) [AL N, MV 60' (20')/web 150' (50'), AC 2, HD 5+5, HP 24, 17, #AT 1, DG 1d6 + poison, SV F5, ML 0]

The spiders have collected a small hoard, consisting of 4,000 gp, an electrum pin worth 300 gp, and a pair of wrought platinum medals each worth 1,500 gp. A character with knowledge of military history will recognize the visage minted on the coins as Malhela Vulmea, a bloody-minded Thulian emperor, and the jewelry as decorations for valor given during his campaigns. For safekeeping, these items have been woven into a spider silk "pouch" that dangles from the larger phase spider's spinners.

58. Guard Post

A pair of wooden stools marks this chamber as a guard post. Currently, six juju zombies (see *Appendix C, New Monsters*, p. 374) wait here. They wear the rotting remnants of Termaxian uniforms. Occasionally the zombies shuffle to the Barracks (Room 59) before returning, perhaps in pathetic imitation of memories from life.

Juju Zombies (7) [AL C, MV 30' (10'), AC 3, HD 4+4, HP 22, 21, 18, 17, 14, 10, #AT 1, DG 1d8, SV F4, ML N/A]

59. Barracks

The shattered remains of wooden beds can be found in this room. Amidst the debris can be found a small coffer containing 200 pp.

60. Wizard's Quarters

This opulently appointed room was clearly once the quarters of a Termaxian wizard of some importance, in this case one by the name of Nazares. The room contains a large bed, a desk and chair, bookshelves (now empty), and many other attractive furnishings. There is a large bloodstain on the floor, evidence of the demise of Nazares' body centuries ago at the hands of jealous rivals and his treacherous friend Euthalius (see Room 25). However, Nazares managed to outsmart his murderers by using the spell *magic jar* to transfer his consciousness into a diamond stashed in a nearby Hiding

Place (Room 61), where he kept his greatest treasures. The door to the Hiding Place can only be opened by means of a key pinned to the underside of one of the desk drawers.

61. Hiding Place

The door to this room is magically locked and cannot be opened by any means (including spells such as *knock*) except the key hidden in the Wizard's Quarters (Room 60). Piled up against the south wall of the room is a large hoard of treasure collected by the wizard Nazares during his adventuring career. The hoard consists of 32,000 sp, 7,000 gp, a tiger eye agate worth 50 gp, a moss agate worth 50 gp, a rhodochrosite worth 50 gp, a citrine worth 250 gp, a smoky quartz worth 250 gp, a topaz worth 500 gp, a sapphire worth 1,000 gp, a diamond worth 11,000 gp (but see below), and a suit of *chain mail* +1 and a *shield* +2. The *chain mail* +1 is made of adamantine steel, while the *shield* +2 is of adamantine; both are of High Thulian make.

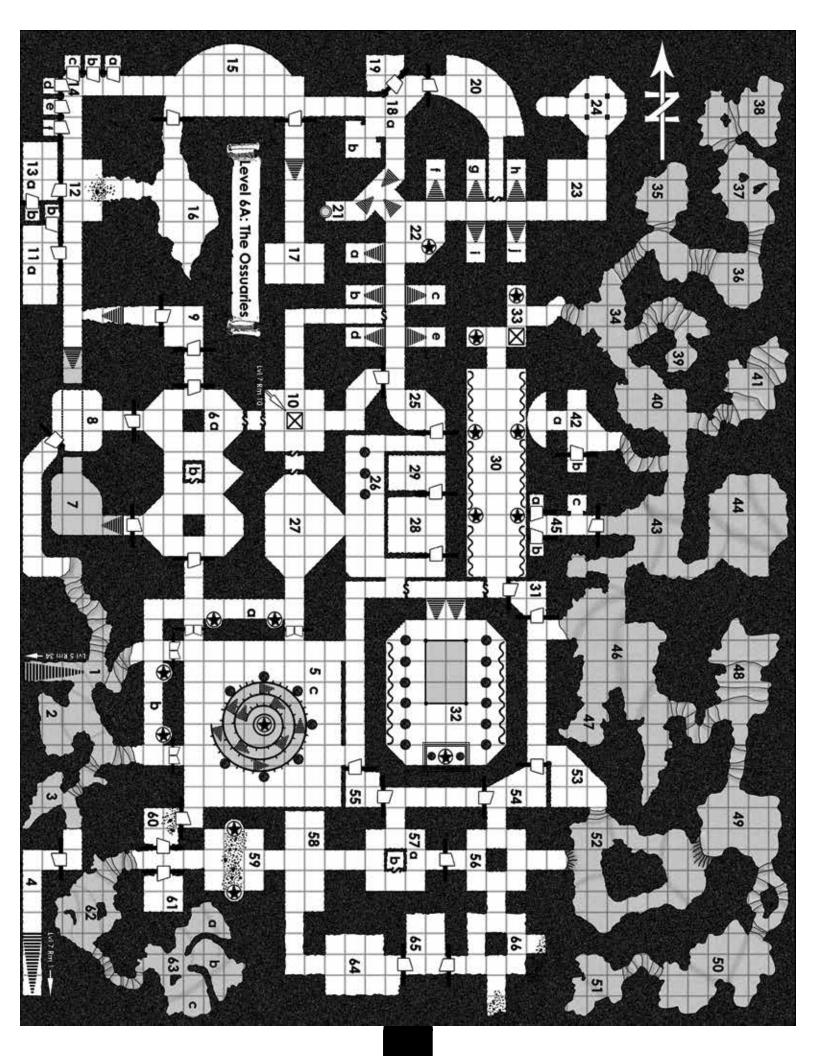

The 11,000 gp diamond now serves as the container for Nazares' disembodied soul. If characters come within 30 feet of the diamond, Nazares will start attempting to possess their bodies. Each attempt takes one round and targets one character within range. The target must make saving throw versus Spells or become possessed by Nazares. Nazares may only make one attempt against any given character.

Once in possession of a body, Nazares can once again use his spells. Nazares was a 10th level mage, and his last memorized spells were the following: 1-charm person, magic missile, sleep; 2-wizard lock, invisibility, mirror image; 3-fireball, fly, haste; 4-dimension door, polymorph other, wall of fire; 5-teleport.

Nazares is thoroughly insane after having been bodiless for over two centuries. He is consumed with thoughts of revenge on his long-dead rivals, especially his treacherous friend Euthalius. Consequently, when in possession of a character, he will make every effort to forge ahead, hoping to find and slay those he believes killed him in the past. If anyone attempts to prevent him from doing this, he will accuse them of "being in league with" his murderers and will attack them. He will also immediately attack any character carrying Euthalius' wand of ice, cloak of protection, or chime of opening, recognizing these as possessions of his former friend.

The only way to free a possessed character from Nazares' control is to destroy the diamond that serves as the wizard's *magic jar*. Even a single point of damage will suffice to destroy the diamond, but of course the characters have no way of identifying the diamond as the receptacle for Nazares' soul – the *magic jar* could be any gem in the room.

CHAPTER 5

The Ossuaries

Level

6A

Overview of The Ossuaries

Ossuaries began two centuries after the Thulians captured Dwimmermount, and was completed about five hundred years ago, during late Fourth Era.

Whereas the Thulians who conquered Dwimmermount lavished their veneration exclusive-

mermount lavished their veneration exclusively on the gods of the Great Church, the later generations began to venerate the deceased emperors, patricians, and generals of the Thulian Empire as well. The Portrait Gallery (Room 10) and Chamber of Urns (Room 22) date to this time. With this deification of ancestors came the rise of the Iron God (Room 5), a psychopomp responsible for escorting the immortal soul to the afterlife. The Thulians were still aligned with Law, but the obsession with immortality that would characterize the Fifth Era had begun. When the Termaxians took control of Dwimmermount, Turms directed some of his cultists to study necromancy, an art he had largely left unexplored. Much of this research took place within The Ossuaries, where the Termaxians learned how to transform others into vampires, mummies, and ghouls, and

WANDERING MONSTERS OF THE OSSUARIES

8	Black Pudding (1)
9	Rust Monster (1-4)
10	NPC Party (5-8)
11	Manes (4-16)†
12	Vampire(s) (slaves of Cyrus Agallon) (1-3)

 $^\dagger see$ Appendix C, New Monsters, p. 223

to extract eternal loyalty from undead slaves. The Termaxian necromancers also realized that there was considerable arcane power latent in the bones of the interred heroes and kings, and created the Enchantries (Rooms 18b, 28, 42a, 60, and 63) to utilize it.

The level itself is a mix of natural limestone cavern and hewn construction. As is common to Fourth and Fifth Era levels, the excavation ranges from acceptable to crude, with rough surfaces, fungus, and fissures. Interior walls are of Thulian concrete, plaster, stone, brick, and wood. Doors tend to be iron-reinforced oak.

1. Staircase

This is a four-way intersection, with tunnels north, east, and south, and finely carved stone stairs to west ascending up to The Lord of Alchemy (Room 34) on The Halls of Greater Secrets (Level 5). If activated, one of the portals from the Portal Room (Room 15) on The Reservoir (Level 3B) opens at the foot of the steps.

Lurking at the intersection, adjacent to the portal

entrance, is an undead ooze (see *Appendix C*, *New Monsters*, p. 373). The ooze attacks any creatures who come down the stairs or step through the portal.

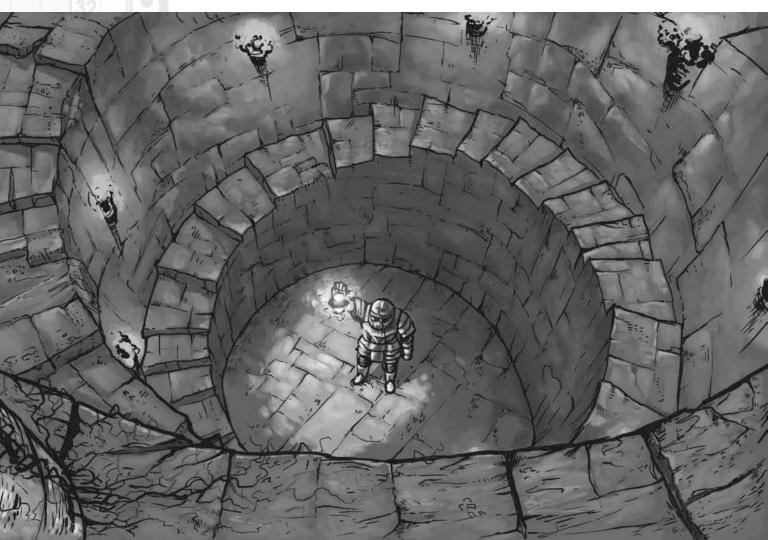

Undead Ooze (1) [AL C, MV 20' (6'), AC 0, HD 6, HP 39, #AT 1, DG 2d4 + 1d6, SV F6, ML +4]

2. Bone Pile

This *cul-de-sac* is filled with a massive pile of bones. The bones come from countless different types of creatures, though the vast majority of them were humanoid. All of the bones are dry and completely stripped of flesh. If a character spends at least one turn searching through the bone pile, he will find a *brooch of the Terrim* (see *Appendix A*, *New Magic Items*, p. 325).

3. Debris

A small collection of debris—splintered wood, broken stones, glass fragments—litters the ground of this natural cave. None of it is of any value.

4. Storeroom

This locked chamber contains six wooden barrels. Each barrel stands 3 feet tall and 2 feet in diameter, weighs 600 lbs., and contains 60 gallons of rock salt, and is worth 75 gp.

Past the barrels, a staircase descends to the Entry Cavern (Room 1) of the Deep Hollows (Level 7).

5. Statue of the Iron God

In the center of this room is a 30-foot deep circular pit. At the bottom of the pit stands a 12 foot tall iron statue of a man in strange armor holding a lantern aloft. The lantern glows with a strong white light. The statue is accessible via a series of landings connected by sets of stairs that spiral down into the pit. Along the walls of the pit are torches that give off light without heat. They are firmly attached to the walls and cannot be removed except by recourse to spells, such as knock, dispel magic, etc. Surrounding the pit are seven stone pillars, some of which are overgrown with a blackish, wiry material that looks like a vine of some sort, but is in fact shadowstuff. The shadowstuff is deathly cold to the touch (dealing 1d4 points of damage per round when touched by bare hands) and can only be cut by silver or magical weapons.

The statue is that of the Iron God, an Empyreal (see Appendix C, New Monsters p. 350) worshipped as a psychopomp and deity by a small number of Lawful devotees. Any Lawful character who descends the stairs and touches the statue must make a saving throw versus Spells. Those who succeed are granted the Blessing of the Iron Good, a boon that duplicates the effects of a scroll of ward against undead for the next six turns. This boon can only be granted once per character. (See Chapter 6, Overview of the Dungeon, p. 84, for more information on boons from the gods.)

In addition the statue's lantern will restore two lost energy levels per person per week if touched. However, this effect only works for Lawful characters. A Neutral or Chaotic character who attempts to use it will find his alignment changed to Lawful instead. Should the erstwhile Neutral or Chaotic return in a week, the lantern functions normally for him, provided his alignment remains Lawful at that time.

Because of the Iron God's power, no undead creature of any sort can safely enter this room. Should one attempt to do so it is immediately—and irrevocably—reduced to ash upon crossing the threshold.

Outside this room, at the areas marked "a" and "b", are four smaller statues of the Iron God. Other than their size (6 feet tall), they are physically identical to the statue within the room, but they have no magical powers.

6a. Embalming Room

The high ceiling of this large room is supported by three 10 foot square marble pillars. On either side of each pillar rises a flat marble slab, six slabs in all. The walls around the slabs and pillars are lined with bronze cabinets and shelves. Resting on the slabs are six gray-skinned cadavers that rise up when the room is entered. They are juju zombies (see *Appendix C*, *New Monsters*, p. 374) created by Cyrus Agallon, the vampire lord who controls much of this level from his abode in the Grand Hall (Room 32).

Juju Zombies (6) [AL C, MV 30' (10'), AC 3, HD 4+4, HP 24, 20, 18 (×2), 15, 13, #AT 1, DG 1d8, SV F4, ML N/A]

The cabinets and shelves that line the walls are largely empty. A few contain bottles and vials of dried-up liquids and powders, along with thread and some metal tools, including knives, hooks, prongs, and needles. A cleric of Donn, or a mage familiar with necromancy, can identify these as embalming materials.

Knocking on the centermost of the three pillars that support the ceiling will reveal that it is hollow. The secret door to the Hidden Treasure (Room 6b) revolves around a center axis with firm pressure.

The secret door on the east wall is hidden behind a large cabinet with a false panel in its rear. It opens into a 10-foot alcove with doors west and east. The doors are not secret from within the alcove. The eastern door is behind a painting of Majori Sklero in the Portrait Gallery (Room 10).

6b. Hidden Treasure

The center of the three pillars in the Embalming Room (6a) contains a hidden closet accessible through a secret door. Stashed within is a hidden treasure consisting of 16,000 sp; 1,000 gp; a wrought silver anklet with ivory dangles worth 400 gp; a small jeweled box worth 500 gp; a moonsilver goblet worth 700 gp; a wrought gold necklace with a sapphire solitaire worth 1,000 gp; a wrought gold tiara with channel set amethysts worth 1,600 gp; and a potion of ESP.

7. Despoiled Chapel

This room is located in a sub-level, sunken about 10 feet below the rest of the level. Devoid of any furnishings at present, it is quite evident—from scuffs and holes on the floors and walls—that it once hosted many. Now all that remains, in addition to the aforementioned markings, are some vandalized frescoes that seem to depict religious rites associated with Donn, the Thulian god of the dead.

Level 6A

8. Guard Room

This guard post contains two empty weapons racks and four shields (one on each wall). It is manned by a trio of zombie brutes (see *Appendix C, New Monsters*, p. 374), which lurch forward to attack any intruders.

Zombie Brutes (3) [AL C, MV 30' (10'), AC 5, HD 6, HP 33, 30, 27, #AT 2, DG 2d6, SV F6, ML N/A]

9. Vestry

A large cedar wardrobe dominates the northeast corner of this room. Opposite the wardrobe stand a smaller dresser and two stools. The dresser is empty, save a pair of black leather gloves, while the wardrobe contains a dozen dark purple robes which have a slightly stiff, waxy feel to them. These are *cerecloth robes* (see *Appendix A, New Magic Items*, p. 325).

10. Portrait Gallery

Frescoes decorate this room. Unlike much of the art on this level, that found in this room is not funereal in character, instead depicting startlingly realistic portraits of ten different individuals. None of these portraits bears an inscription or any other indicator of whom they represent, however. One portrait can be found on each 10 foot segment of wall. They are painted directly onto the wall and so cannot be removed by any means (though two paintings will revolve if pushed on, as they are actually secret doors).

They show, in order, starting from the northernmost wall in the northeast corner: an old, bearded man (Domnola Branas); a younger man who looks similar to the bearded man nearby (Carolus Branas); an old man wearing magician's robes (Bacauda Zarides); an attractive young woman (Iordanes); a stern looking man in military garb (Malhela Vulmea); a middle-aged man with an elaborate mustache (Avienus Celsus); a dark-skinned man in magician's attire (Charito Sklero); a woman of extremely advanced age (Majori Sklero); an old woman wearing a purple robe (Phoebammon Laskar); and a very thin man with features that look almost elf-like (Fronto Geni). The urns containing the remains of these august persons are, or were, in the Chamber of Urns (Room 22).

The painting of Malhela Vulmea is actually a secret door towards the Tomb of Apion (Room 27) while the painting of Majori Sklero conceals a secret door towards the Embalming Room (Room 6a). The secret doors are not concealed to characters within the 10-foot square alcoves between the rooms.

At the center of the room is a pit trap that activates on a roll of 1-2 on 1d6, dropping whoever steps on it down a chute that deposits them in the Shrine of the Brazen Head (Room 10) on The Deep Hollows (Level 7).

11a. Viewing Room

A large wooden bier rests against the western wall. Along the other walls are wooden chairs arranged for viewing of the bier.

11b. Closet

Lying on the floor of this otherwise empty closet is a dusty leather bag, dropped here long ago. Inside the bag is a *potion of sweet water*.

12. Rubble

The rocky debris in this room, etched by acid and gnawed by enormous mandibles, resulted from the entrance of a tenebrous worm (see *Appendix C, New Monsters*, p. 368). The worm is a pet of the vampire Sittas in the Audience Chamber (Room 15). If not already dealt with in the Audience Chamber or its Lair (Room 16), the tenebrous worm will attack intruders here.

Tenebrous Worm (1) [AL N, MV 30' (10'), AC 8, HD 10, HP 55, #AT 1, DG 2d6 + 1d6 acid, SV F10, ML +2]

13a. Viewing Room

This chamber is similar in broad respects to the other Viewing Room (Room 11a), except that a sturdy mahogany coffin rests on top of the wooden bier. The interior of the coffin is filled with a thin layer of soil. Guarding the coffin are two zombie brutes (see *Appendix C, New Monsters*, p. 374). The coffin belongs to Sittas, the vampire in the Audience Chamber (Room 15).

Zombie Brutes (2) [AL C, MV 30' (10'), AC 5, HD 6, HP 30, 20, #AT 2, DG 2d6, SV F6, ML N/A]

13b. Closet

This small area is empty of anything except cobwebs and dust.

14. Crypts

Six crypts can be found in this area. Except as noted below, each crypt is entered through a locked iron door etched with funerary art, and each crypt

is 10 feet square, containing a single marble slab (for the deceased occupant's remains) opposite the door.

- a Other than the stone slab situated by the crypt's western wall, the crypt is empty.
- A pile of bones rests on the stone slab situated against b the western wall. A garnet worth 750 gp can be found amongst the bones.
- The deceased occupant here has risen as a wight. When it senses the presence of living things nearby, the wight will attempt to batter out of its crypt, making enough noise to be heard even through the metal door.

Wight (1) [AL C, MV 90' (30'), AC 4, HD 3, HP 15, #AT 1, DG energy drain, SV F3, ML +4]

In addition to the wight, the crypt contains a pair of coffers, the first containing 1,000 cp and the second containing 4,000 ep.

- There is a single statue of Donn, the Thulian god of the dead, resting on a stone slab. The statue is fashioned of Kythirean ebony and is worth 500 gp.
- e The door to this crypt is open; there is nothing inside.
- A pile of bones rests on a stone slab, underneath of which can be found a Thulian crossbow (see **Appendix A, New Magic Items**, p. 333) and three +3 bolts.

15. Audience Chamber

This large room has been set up to appear as if it were an audience chamber, complete with a "throne" in the form a large mahogany chair with red velvet cushions. Four zombie brutes stand guard around the throne. Seated upon the throne is Sittas, a vampire who serves Cyrus Agallon in the Grand Hall (Room 32). Sittas chafes under his master's rule and hopes to take his place as master of this level. To that end, he will attempt to make deals with any adventurers who enter this room, suggesting that Cyrus is a "mutual enemy." Of course, Sittas is thoroughly evil and will betray his erstwhile allies as soon as he is able to do so without endangering either himself or his plans.

However, Sittas will not waste any time attempting to ally with anyone he senses to be incorruptible or a genuine rival, preferring instead to attack them immediately, using a combination of his personal powers (as a 7th-level mage) and his undead minions. If needed, Sittas will also summon the tenebrous worm from its lair next door (Room 16) and the zombie brutes in the Hallway (Room 18a).

Zombie Brutes (4) [AL C, MV 30' (10'), AC 5, HD 6, HP 37, 34, 31 (×2), #AT 2, DG 2d6, SV F6, ML N/A]

Sittas (1) [AL C, MV 120 (40')/fly 180' (60'), AC 7, HD 7, HP 37, #AT 1, DG 1d10 + energy drain, SV M7, ML +3; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-choking grip, darkness, shield, sleep; 2nd-ESP, invisibility, web; 3rd-fireball, haste, hold person; 4th-fear, wall of fire; Proficiencies: Black Lore, Knowledge (Termaxian lore) 2, Magical Engineering, Military Strategy]

Around his neck Sittas wears a wrought gold medallion set with tiny diamonds in a constellation (1,100 gp). Behind Sittas' throne there is a large chest containing 7,000 gp, a rose gold goblet (200 gp), a *potion of animal control*, and a *cursed scroll*. The curse causes all scrolls currently held by the reader of the cursed scroll to become blank and therefore ineffectual.

6A-15: If befriended or interrogated, Cyrus, Aetheria, and/or Sittas can reveal the following numbered facts to the characters: 5-1, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-16, 5-92, 6-1, 6-10, 6-11, and 7-1.

Level 6A

16. The Worm's Lair

This large natural cavern is home to a tenebrous worm which Sittas, the vampire in the Audience Chamber next door (Room 15), has enthralled as his pet. If not previously encountered or slain, the worm can be found here, lounging on a pile of rocks, bones, and other debris. Hidden amongst the debris is a *staff of striking* (seven charges remaining) and a hammered gold locket (400 gp). The *staff* is made of Kythirean ebony and adorned at either end with an orichalcum knob.

Tenebrous Worm (1) [AL N, MV 30' (10'), AC 8, HD 10, HP 55, #AT 1, DG 2d6 + 1d6 acid, SV F10, ML +2]

17. Wine Cellar

A set of stairs descends about 15 feet to reach the corridor that leads to this cool, sunken chamber. The chamber contains three rows of wooden shelves. Most of these shelves are empty, but scattered here and there are a total of 24 glass bottles. Unfortunately, none of these bottles are marked, making it impossible to determine what they contain without drinking them. Twelve contain potable, if unpleasant, alcoholic beverages. Six contain excellent 200+year-old Thulian drinks that fetch 250 gp per bottle. Five are poisonous, and those who consume them must make a saving throw versus Poison or die. One is a *potion of treasure finding*.

18a. Hallway

Shambling in this hallway are two zombie brutes (see *Appendix C*, *New Monsters*, p. 374).

Zombie Brutes (2) [AL C, MV 30' (10'), AC 5, HD 6, HP 30, 22, #AT 2, DG 2d6, SV F6, ML N/A]

18b. Enchantry

Located in the southwest corner of this room is a large brass device with four orichalcum knobs on one side, along with a hole on its top. This is an enchantry, which creates temporary magic items from alchemically prepared bones. To operate the enchantry, one need only turn a single knob in a clockwise fashion and place a bone into the hole in the top, after which it is enchanted. Attempting this with two or three knobs turned clockwise results in the enchantry shutting down for 2d6 turns. Attempting it with all four knobs turned clockwise results in an overload that destroys the enchantry and deals 4d6 damage (make a saving throw versus Blast for half damage) to all in a 10-foot radius.

The four knobs each give a properly inserted bone a *single* charge, which after its expenditure, reduces the bone to ash. The four knobs for this enchantry impart the following: *detect magic*, *detect secret doors*, *detect traps*, and *paralyzation*. In all other respects, these enchanted bones function exactly like wands.

19. Bone Storage

Five large crates, each 3 feet by 3 feet by 3 feet, occupy this chamber. All of them are empty save the last. That one contains three alchemically-prepared bones for use with the enchantries (Rooms 18b, 28, 42a, 60, and 61) found throughout this level.

20. Laboratory

This room contains a large steel table, several iron cabinets, and a pair of stools. Neatly arranged on the table is a set of alchemy equipment, including a mortar and pestle, alembic, crucible, and retort. Next to the alchemy set is a book, written in a cipher (read languages cracks the code), that explains the process of preparing bones for use with the enchantries on this level. According to the book, the ingredients needed to prepare a single bone are two drams of azoth, one dram of vitriol, and three ounces of natron, which are then mixed with a quantity of the alchemical substance known as lute to form a cleansing solution sufficient cover the bone. Mixing the cleansing solution takes just 1 turn (10 minutes), but the bone must then be steeped undisturbed in the solution for 24 hours.

The cabinets once stored large quantities of the cleansing solution, but these stores have mostly been looted or used up. Only five 8-ounce glass vials remain, each containing enough cleansing solution to prepare one bone. The cleansing solution is highly toxic, and if swallowed a character must make a successful saving throw versus Poison or die. If thrown at an enemy, a dose sufficient to prepare one bone deals 1d8 points of damage.

A short hallway running south from the laboratory ends in an apparent dead-end after 30 feet. The dead-end is in fact a stone secret door that revolves around its central axis when firmly pressed.

21. Lute Pool

Situated at the end of this short corridor is a pool filled with rich, dark soil. Above it is a copper spigot that, if turned, spews water into the pool. If mixed together, the water and earth form the alchemical substance known as lute in sufficient quantity to prepare twenty bones in the Laboratory (Room 20) next door. If left unattended, the lute will not dry up, but characters returning to it will

find that some of it has been removed, reducing the total number of bones with which it can be used by 1d4. This decrease occurs *each* time the characters return to this room.

22. Chamber of Urns

A bronze statue bearing the brazen head of Turms Termax dominates this room. From the sculpted funerary garb worn by the statue, it clearly represents Donn, the Thulian god of the dead. Anyone who replaces the head of Turms with that of the god will receive the Blessing of Donn. This one-time boon provides protection against the next 1d8 levels that might otherwise be drained by an undead creature's baleful touch. See *Chapter 6*, *Overview of the Dungeon* (p. 84), for more information on boons from the gods.

Nearby are ten alcoves inside of which rest urns containing the ashes of important personages from Dwimmermount's past. They are in order:

- a The urn reads "Phoebammon Laskar."
- The urn reads "Avienus Celsus." Resting next to it is a greater **Termaxian passkey** (see **Appendix A, New Magic Items**, p. 231).
- $_{\rm C}$ $\,$ There is no urn in this alcove. It once held the urn of Majori Sklero.
- d The urn simply reads "lordanes."
- e The urn reads "Fronto Geni."
- f The urn reads "Charito Sklero."
- The urn reads "Malhela Vulmea". It has been badly dented as if someone smashed it with a mace in anger.
- h The urn reads "Domnola Branas."
- There is no urn in this alcove. It once held the urn of Carolus Branas, but in its place is a vial containing a potion of gaseous form.
- The urn reads "Bacauda Zarides." An ornate dagger worth 500 gp can be found resting next to it.

All of the urns are made of bronze, with lids that are screwed on and sealed with an adhesive. They can opened, albeit with great difficulty, but contain only ashen human remains.

23. Emptied Chamber

This chamber once held furnishings of some kind, as evidence by marks on the floor and walls, but they have long since been removed. At present, the only thing in the room is a strange, four-armed skeleton with a bovine skull resting on its shoulders, which moves to attack any who enter.

Bone Golem (1) [AL N, MV 120' (40'), AC 7, HD 8, HP 40, #AT 4, DG 1d6 (swords), SV F4, ML N/A]

24. Hall of the Psychopomps

Four carved marble pillars can be found in this room. Each pillar depicts a different figure. One of them is clearly Donn, the Thulian god of the dead, and another is of the Iron God (Room 5). The other two look similar to the Iron God in that they depict individuals wearing strange armor with helmets that completely cover their faces. None of the pillars has any kind of identification nor do they possess anything of value, though examination of their surface reveals they once did. Eyes, armor, weapons, etc. were once decorated with gems but these have long since been removed.

West of the pillars is an apse decorated with a mosaic of the heavens, with colored glass and crystal beads arranged to represent various constellations. Six of the beads are actually valuable gemstones: a moss agate (10 gp), an obsidian (25 gp), a star rose quartz (75 gp), and a rock crystal (100 gp), a jet (500 gp), and a topaz (1,000 gp). However, removing any of them results in a *curse* that causes the remover to charge immediately into battle with the next undead being he encounters and to attack it until either it or the cursed character is dead.

25. Frescoed Chamber

The walls and ceiling of this room are covered in ornate frescoes depicting scenes of death and disease. The paintings are enchanted to cause those who gaze on them to reflect on their own inevitable death. Anyone viewing them must make a saving throw versus Spells. Those who fail are overcome with dread and suffer a –1 penalty to hit and damage for the next 2d6 turns. Those who succeed have overcome their fear of death and gain a +1 bonus to hit and damage for a similar length of time.

26. Shattered Gallery

The walls of this area were once decorated with frescoes similar to those of the Portrait Gallery (Room 10), but all are now thoroughly bludgeoned and defaced. Patrolling the room are three zombie brutes (see *Appendix C, New Monsters*, p. 374). Encountering the zombie brutes also awakens the Termaxian mummy Apion (Room 27), who will join the combat after two rounds.

Zombie Brutes (3) [AL C, MV 30' (10'), AC 5, HD 6, HP 30, 29, 26, #AT 2, DG 2d6, SV F6, ML N/A]

27. Tomb of Apion

In the center of this large, well-appointed chamber is a raised sarcophagus inside of which rests a Termaxian mummy (see *Appendix C*, *New Monsters*, p. 369) named Apion, a servant of Cyrus Agallon. Apion has been commanded to defend the Grand Hall (Room 32) against interlopers. He rises from his sarcophagus should anyone enter this chamber or the Shattered Gallery, the Workroom, or the Storeroom (Rooms 26, 28, and 29). He can command the zombie brutes in the Shattered Gallery (Room 26) to aid him in this endeavor.

Apion (1) [AL C, MV 60' (20'), AC 6, HD 7, HP 42, #AT 1, DG 1d12 + choke or 1d8+2 (sword +2), SV F7, ML +4; Proficiencies: Combat Reflexes, Military Strategy]

In Apion's sarcophagus are 7,000 gp, a gold dangling earring (100 gp), a gold ring (500 gp), a potion of extra-healing, and a potion of levitation. Apion's adamant sword +2 has High Thulian runes of battle running along its blade between its blood grooves, and its hilt is fastened in the shape of a winged warrior-woman.

28. Workroom

This room is furnished with a large oak table and two stools. A set of oak shelves line the walls, while a slightly scorched enchantry (similar to that found in Room 18b) occupies the northwest corner. There is nothing on any of the shelves. The enchantry has been damaged, and if used, blasts anyone within a 5 foot radius of it with a paralyzation effect. A failed saving throw versus Paralysis results in paralysis for six turns. This effect occurs any time that someone attempts to use the enchantry, regardless of which or how many knobs are turned.

29. Storeroom

This storeroom once contained a dozen crates and two dozen barrels, but all the crates and all but one barrel have been shattered. If anyone takes the time (1 turn) to look through the remains of the crates, he will find four small vials of vitriol, each of which contains 16 drams. The intact barrel contains 60 gallons of rock salt, worth 75 gp and weighing 600 lbs.

30. Hall of Transcendence

Three pairs of curtains—black in the south, gray in the middle, and white in the north—decorate the walls of this long room. Two pairs of statues of Turms Termax are also present. The southern pair are sculpted of limestone and depict him as a mortal man. The northern pair are cast in bronze and show him post-apotheosis, with a nimbus around his head. A bone golem, fastened in the shape of four-armed skeleton with a bovine skull resting on its shoulders, patrols the hall and attacks any who enters unbidden.

Bone Golem (1) [AL N, MV 120' (40'), AC 7, HD 8, HP 36, #AT 4, DG 1d6 (swords), SV F4, ML N/A]

31. Guardroom

Four juju zombies (see *Appendix C*, *New Monsters*, p. 374) stand silently within this former guardroom, waiting for intruders to enter. The room's weapon racks are empty, except for a single *javelin of lightning* (see *Appendix A*, *New Magic Items*, p. 329).

Juju Zombies (4) [AL C, MV 30' (10'), AC 3, HD 4+4, HP 22, 19, 16 (×2), #AT 1, DG 1d8, SV F3, ML N/A]

32. Grand Hall

This room can only be entered by means of one of two secret doors in the hallway to its north. Each secret door appears as a solid slab of stone, but firm pressure on it will cause it to revolve around its central axis and reveal the hallway to the Grand Hall, where a pair of elaborately carved stone stairs descend south.

Down the steps, twelve marble pillars hold up the high vaulted ceiling of a great chamber. Behind the pillars hang purple curtains edged in gold. Dominating the room are two features. The first is a large (10 by 15 foot) pool that contains fresh water. The second is a 15 foot tall black marble statue of a demonic being holding a bowl from which an eerie red glow emanates. A pair of lit torches on the wall near the statue contributes to the flickering luminescence of this room.

This hall serves as the abode of Cyrus Agallon, a Thulian general turned vampire, whose coffin is hidden from view behind one of the curtains. Behind the other curtain is the coffin of a second vampire, his consort, Aetheria. When first encountered, Cyrus and Aetheria will be embracing in the pool. The pair are accompanied at all times by four zombie brutes (see *Appendix C, New Monsters*, p. 374), who will act to protect the two vampires should they be attacked.

Cyrus is unlikely to attack first, however. He considers himself a gentleman and claims to despise his undead state, which was inflicted on him as a punishment centuries ago by the cult of Turms Termax. The truth of his claim is doubtful, given that he has since created several vampires to serve him and continues to occupy Dwimmermount rather than seek destruction by leaving it. Nevertheless, Cyrus presents a generous, erudite face to outsiders. He treats anyone not immediately intent on his demise as potential allies rather than enemies, attempting to convince them to leave The Ossuaries (Level 6A) and seek out The Prison (Level 8), which he claims is the redoubt of the Termaxian cult and its undead leaders. He even offers to provide magic items to aid them in this quest, provided they leave this level and never return. Among the items he offers are: a ring of telekinesis, a scroll of ward against magic, a chime of opening, and a war hammer +2.

At the same time, Cyrus is no fool and will readily attack anyone he considers a genuine threat or whom he thinks is trying to take advantage of his generosity. Both the zombie brutes and Aetheria defend Cyrus even at the cost of their destruction. If the battle goes against him, Cyrus will assume gaseous form and flee, seeking out his hidden spare coffin (Room 57b).

Cyrus (1) [AL C, MV 120 (40')/fly 180' (60'), AC 7, HD 9, HP 52, #AT 1, DG 1d10 + energy drain, SV F9, ML +3; Proficiencies: Alertness, Combat Reflexes, Command, Diplomacy, Leadership, Military Strategy 2]

Aetheria (1) [AL C, MV 120 (40')/fly 180' (60'), AC 7, HD 7, HP 37, #AT 1, DG 1d10 + energy drain, SV F7, ML +3; Proficiencies: Disguise, Eavesdropping, Lip Reading, Seduction, Skirmishing]

Zombie Brutes (4) [AL C, MV 30' (10'), AC 5, HD 6, HP 41, 31, 22 (×2), #AT 2, DG 2d6, SV F6, ML N/A]

In addition to the magic items mentioned above, Cyrus has a hoard of treasure, which he keeps in a chest near his coffin. The hoard consists of 7,000 gp; 100 pp; a small decorated box (1,500 gp) holding an azurite (10 gp), a banded agate (25 gp), a blue quartz (25gp), a lapis lazuli (50 gp), a hematite (50 gp), an onyx (250 gp), a sardonyx (250 gp), a chrysoberyl (750 gp), and a silver choker (20 gp); a burnished gold crown (400 gp); a wrought gold bracelet with a solitaire sapphire (800 gp); a hammered gold locket with a painting of Aetheria (1,200 gp); and a wrought gold chain with a tiny ruby set on each link (1,700 gp).

6A-32: If befriended or interrogated, Cyrus, Aetheria, and/or Sittas can reveal the following numbered facts to the characters: 5-1, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-16, 5-22, 6-1, 6-10, 6-11, and 7-1.

33. Pit Trap

Two bronze statues, both cast to resemble winged demons, occupy this hallway. Each statue has one raised arm and one lowered arm. Examination reveals that each arm has a seam and swings easily. By moving the arms into the opposite of their current positions, the pit trap in the corner of this area is briefly deactivated. After 1d6 rounds it resets and only by moving the arms' positions again can it be deactivated for another 1d6 rounds. Both deactivation and resetting can be heard by means of a loud clicking sound. The pit is 20 feet deep and deals 2d6 damage to anyone who falls into it.

34. Catacombs Entrance

The man-made dungeon opens here into a natural cavern. Three arrows have been drawn in chalk on the cavern's limestone walls. The arrows point in the directions of Rooms 39, 40, and 35-38. The arrow pointing toward Room 40 has written, in Low Thulian (Common), the following beneath it: "Enchantry." Neither of the other two arrows has anything written beneath it.

35. The Magic Headstone

Toward the center of this cave, a six foot deep grave has been carved into the stone of the floor. Nothing rests inside the grave except a single bone, prepared for use with the enchantries available elsewhere on this level. At the northern end of this hole is a granite headstone. Engraved on the headstone are the words, in High Thulian, "Here Lies Any Man." Beneath the engraving is the symbol of a skull and crossbones.

The headstone radiates magic and shows signs of having small pieces been chipped off from it. If anyone chips off a piece from it and holds it in his hand, it briefly glows bright white and confers one of the following random benefits or drawbacks (roll 1d12):

- 1 Raises Intelligence permanently by 1.
- 2 Raises Wisdom permanently by 1.
- 3 Raises Charisma permanently by 1.
- 4 Lowers Intelligence permanently by 1.
- 5 Lowers Wisdom permanently by 1.
- 6 Lowers Charisma permanently by 1.
- Heals all damage, including effects such as poison, diseases, curses, level drain, etc.
- 8 Deals 1d4 damage per level of the character holding it.
- 9 Raises hit points by 1d6 permanently.
- 10 Lowers hit points by 1d6 permanently.
- Teleports the character before the Statue of the Iron God (Room 5).
- 12 No effect.

A character can be affected by any given effect of the magic headstone only once.

36. Cave Paintings

There are a half-dozen empty niches in the walls of this chamber. Each niche is about six feet wide, two feet high, and three feet deep. These niches once held bodies, but only occasional fragments of bone and burial shrouds remain. Crude depictions of skulls, skeletons, and similar symbols of death and decay have been painted between the niches.

37. Barrow Wights

This large natural cave has eight niches in its walls, similar to those in the prior cave (Room 36). Six of the niches are empty, but two are occupied by barrow wights (see *Appendix C*, *New Monsters*, p. 344) that rise to attack any who disturb their slumber.

Barrow Wights (2) [AL C, MV 90' (30'), AC 5, HD 6, HP 27, 22, #AT 1, DG 1d8 + energy drain, SV F4, ML +4]

38. Treasure Trove

Ten niches can be found in the walls of this cavern, all of which are occupied by inanimate skeletons wearing the tatters of clothing. Four of the niches also contain treasure, one per niche: a chest of 6,000 gp, a potion of extra-healing, a pearl of power (see Appendix A, New Magic Items, p. 330), and an amulet against possession (see Appendix A, New Magic Items, p. 323).

39. Cave of Skulls

A large pyramid of human skulls, numbering over a thousand, fills this small natural cave. The skulls are old and brittle; they break easily if not handled with care.

40. Bricks

A pile of ninety clay bricks occupies the southern wall of this chamber. Though piled neatly, a few of them have fallen off the pile. Nearby, thirty bricks have been piled into a makeshift wall two feet high and five feet wide in front of the passageway leading to where a Trapped Wight (Room 41) is currently stuck.

Careful examination of the bricks reveals that each is one foot long, eight inches tall, and eight inches thick, and weighs about 40 lbs. The bricks show silvery-black streaks and speckles on their surface. This is because they are infused with minute quantities of azoth, giving them mild magical

effects when massed together in groups of thirty of more. Under such circumstances, they can be used to block the passage of undead creatures.

41. Trapped Wight

Trapped by the azoth-infused brick wall piled up in the passageway leading to this cave is a single barrow wight (see *Appendix C*, *New Monsters*, p. 344), which fumes silently here. If the bricks are removed or climbed over the barrow wight quickly moves to attack whoever enters its prison.

Barrow Wight (1) [AL C, MV 90' (30'), AC 5, HD 6, HP 27, #AT 1, DG 1d8 + energy drain, SV F4, ML +4]

A large sack containing 1,000 ep lies to the rear of the cave.

42a. Enchantry

Like Room 18b, this chamber contains a functional enchantry. This one has only three knobs and produces the following effects: *fear*, *fire balls*, and *magic missile*.

42b. Bone Storage

A lidless wooden crate lies in this closet. Inside the crate are four alchemically prepared bones and a *periapt of foul rotting* (see *Appendix A*, *New Magic Items*, p. 330).

43. Procession of Skulls

Upon entering this room, the characters notice several spots of greenish light illuminating the darkness. Closer inspection reveals that six human skulls with green points of light in their eye sockets have risen from small niches along the walls of the cave. The skulls are not dangerous in themselves, but they are a warning system that alerts the Termaxian necrolyte Sarapammon in his lair (Room 44) of the intrusion of any non-undead beings into this area of the level.

44. Necrolyte's Lair

This cavern is illuminated by a ghastly, greenish light that originates from the eye sockets of six enchanted human skulls resting on candelabra. The six candelabra have been arranged to form a circle, within which is an aged wooden lectern surmounted by a thick tome. Here, the Termaxian necrolyte

(see Appendix C, New Monsters, p. 369) Sarapammon pursues his endless research into the subject of immortality. Sarapammon is an ardent believer in Termaxian dogma and believes that, like his master, he will one day achieve true immortality. To that end, he has been researching the matter assiduously and has gathered a large library of arcane lore from sources throughout Dwimmermount. Sarapammon will attack anyone who sets off his warning system in the Procession of Skulls (Room 43) unless they quickly give an indication that they might possess some knowledge useful in his quest for immortality. He is particularly interested in books from the Library of Great Secrets (Room 48) in the Halls of Great Secrets (Level 5).

Sarapammon (1) [AL C, MV 60' (20'), AC 7 (ring of protection +1), HD 7, HP 38, #AT 1, DG 1d8, SV M7, ML +2; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-charm person, magic missile, read magic, unseen servant; 2nd-hypnotic pattern, knock, invisibility, mirror image; 3rd-dispel magic, dismember, lightning bolt, protection from normal missiles; 4th-bestow curse, fear, wall of fire; Proficiencies: Alchemy 2, Loremastery, Knowledge (Termaxian lore) 2, Magical Engineering]

He carries a *wand of fire balls* (nine charges remaining), which appears as a shaft of orichalcum with inlaid obsidian. His library, which has been carefully arranged in the burial niches engraved in the cavern's walls, consists of esoteric tomes worth 25,000 gp. The books are heavy and bulky, weighing more than 750 lbs. in total. His collection also includes his spell books, a *golem manual*, and a *tome of Chaotic knowledge* (see *Appendix A, New Magic Items*, p. 327 and 333).

45. Storerooms

This area consists of three small storerooms, one of which has had its door removed. Each storeroom has a set of shelves on its far well, along with the contents described below:

Two small crates, each about one foot cubed and weighing 75 lbs., can be found here. The crates are filled with the same rich, dark soil found in the Lute Pool (Room 21). If added to the pool there, the characters can make two more batches of lute.

A gallon jug rests on a shelf on this room. It is filled with natron (128 ounces), an important ingredient in preparing bones for the enchantries in the Laboratory (Room 20).

This door-less storeroom has an empty shelf and a shattered wooden crate beneath it.

Room 44: Characters studying the books will learn one of the following numbered facts each day: 5-3, 5-4, 5-10, 5-11, 5-13, 5-14, 5-16, 5-17, 5-18, 5-21, 5-22, and 6-1. All of the books are written in High Thulian.

6A

46. Large Cavern

Countless burial niches have been carved into the walls of this large cavern, but they are ubiquitously empty of even scraps of bone. An undead ooze (see *Appendix C, New Monsters*, p. 373) lurks in this cavern.

Undead Ooze (1) [AL C, MV 20' (6'), AC 0, HD 6, HP 21, #AT 1, DG 2d4 + engulf, SV F6, ML +4]

47. Despoiled Crypt

A single burial niche occupies the southern wall. The remains that were once held within it have been scattered across the floor, along with a leather bag containing 260 gp worth of gems: an eye agate (10 gp), a moss agate (25 gp), a rock crystal (75 gp), a sardonyx (75 gp), and a bloodstone (75 gp).

48. 'Shroom Cave

This cave exudes a musty odor that is noticeable even before entering it. Its interior is covered with a wild growth of purplish-black mushrooms that stand 4 to 6 inches in height. These mushrooms react to movement whenever a living creature passes near them, sending forth a cloud of noxious dust that fills the cavern. All living beings caught within the cave at that time must make a successful saving throw versus Poison or lose 1d6 hit points permanently. Even if the save is successful, a living creature within the affected area is stunned for 2d4 rounds from fits of sneezing and coughing. Cold instantly kills these mushrooms, but they are unaffected by fire.

49. Empty Niches

Eight burial niches have been carved into the walls of this chamber. They are completely empty, devoid even of bones.

50. The Grave Risen

Six uncovered shallow graves are carved in the stone floor of this cave. Three of the graves contain rotting bodies that rise up and attack anyone daring to enter this chamber. The bodies are grave risen (see *Appendix C*, *New Monsters*, p. 353).

Grave Risen (3) [AL C, MV 30' (10'), AC 4, HD 5, HP 27, 22, 21, #AT 2, DG 1d4/1d4 + blood poisoning, SV F5, ML N/A]

51. Magician's Sarcophagus

An ornate raised stone sarcophagus rests within this cave. Its lid depicts a figure who is clearly a wizard, while the sides of the sarcophagus are decorated with images of Turms Termax and things associated with him. The lid can be removed by a combined Strength of 30 or more. Doing so, however, sets off a poison gas trap (make a saving throw versus Poison at -2 or die), affecting all within a 10 foot radius.

Inside the sarcophagus are the remains of a human magician, who has been buried with the following: 3,000 gp, a moss agate (50 gp), an aquamarine (500 gp), a chrysoberyl (500 gp), an aquamarine (750 gp), and a *staff of wizardry* (nine charges remaining). The *staff of wizardry* is a 6 foot oaken shaft shod with rings of moonsilver and tipped with an orichalcum orb.

52. Trapped Pudding

This entire cave is set some 10 feet below the rest of the level, so entering it requires either the use of rope or a carefully controlled jump. A black pudding has become trapped within this sunken cave and is unable to escape. It will happily devour any creatures which drop in.

Black Pudding (1) [AL N, MV 60' (20'), AC 3, HD 10, HP 45, #AT 1, DG 3d8, SV F5, ML N/A]

53. Storage Area

Six barrels occupy this room. Each barrel stands 3 feet tall and 2 feet in diameter, weighs 600 lbs., and contains 60 gallons of rock salt, worth 75 gp. Hidden inside one of the barrels is a *dagger* +1. Its slightly curved adamantine steel blade and delicate hilt suggest Eldritch make.

54. Foul Kennel

Eight black iron cages fill this room. On the walls, there are hooks from which hang what look like leather straps. Some portions of the walls and floor show scorch marks and there is a faint odor of sulfur lingering in the air.

55. Guardroom

Four juju zombies (see *Appendix C*, *New Monsters*, p. 374) stand silently within this former guardroom. The room's weapon racks are empty, except for two *javelins of lightning* (see *Appendix A*, *New Magic Items*, p. 329).

Juju Zombies (4) [AL C, MV 30' (10'), AC 3, HD 4+4, HP 21 (×2), 15 (×2), #AT 1, DG 1d8, SV F3, ML N/A]

56. Hallway

Four hell hounds are patrolling this hallway, looking for intruders to attack. One round after attacking, the hell hounds will be joined by their four pack mates in the Hallway (Room 66) to the south, if these have not already been dispatched.

Hell Hounds (4) [AL C, MV 120' (40'), AC 5, HD 7, HP 31, 29, 27, 21, #AT 1, DG 1d6 or 7d6, SV F7, ML +1]

57a. Coffin Guardian

A vrock (see *Appendix C*, *New Monsters*, p. 373) patrols this hallway, bound here to protect Cyrus' hidden spare coffin (Room 57b).

Vrock (1) [AL C, MV 120' (40')/fly 180' (60'), AC 9, HD 8, HP 39, #AT 5, DG 1d4/1d4/1d8/1d8/1d6, SV F8, ML +3]

57b. Cyrus' Spare

Located behind a secret door set into a square pillar is a storage space for a spare coffin of Cyrus Agallon (Room 32). The coffin stands upright, resting against one wall. In the event that his other coffin is destroyed, Cyrus retreats to this room and regenerates himself. The coffin contains a small amount of earth from Cyrus' native soil.

58. Hallway

The walls of this area are decorated with frescoes depicting human skulls displaying various emotional states. Some look to be laughing, others weeping, and so on. Written on the wall are various arcane symbols that, when deciphered with *read magic*, reveal the formula to the spell *shrieking skull* (see *Appendix B*, *New Spells*, p. 339).

59. Ruined Statues

Two marble statues, one of Turms Termax and one his lover, Sarana, occupy niches on the north and south walls of this room. Both have been badly damaged, with sections of them—including their heads—having fallen to the ground, which has created a trail of rubble between them. The statues are beyond ordinary repair and only magic could fix them. Unfortunately, doing so provides no benefit, as the statues are non-magical in nature.

60. Damaged Enchantry

In the northeast corner of this room, amidst some rubble, is a damaged enchantry (Room 18a). It has four knobs and still functions. However, the results of its operation are somewhat unpredictable, requiring a roll with each use to determine its effects regardless of which knob is turned. Likewise, some of the effects are not beneficial. Its effects are: *finerie fire* (surrounds the target), *stinking cloud* (30 feet range), *reduce* (shrinks wielder to one-twelfth height), *flesh to stone* (or reverse if target is already stone).

61. Missing Enchantry

This chamber once contained an enchantry (Room 18a), but it has since been removed to the Treasure Caves (Room 63). Where the enchantry once stood is obvious from the marks on the ground and the strange metallic "plug" set low against the wall. A single alchemically-prepared bone has been forgotten in the far corner.

62. Crypt Thing

Here the dungeon's hewn man-made corridor gives way to a natural cavern. In its center stands a single crypt thing (see *Appendix C*, *New Monsters*, p. 346), guarding against unauthorized individuals making their way to the Treasure Caves (Room 63). Only someone carrying a *greater Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 333) is permitted to enter; anyone else is attacked and possibly teleported away.

Crypt Thing (1) [AL N, MV 60' (30'), AC 4, HD 6, HP 31, #AT 2, DG 1d6/1d6 + teleport other, SV F6, ML +4]

Level 6A

63. Treasure Caves

Divided into three sub-caves (labeled 'a', 'b,' and 'c' on the map), this area holds the remains of a once great collection of treasure that has been depleted over the centuries. The sub-caves and their contents are as follows:

A total of eight wood chests and six bronze coffers. All are open, some overturned and others half-emptied, with much of their contents spilling onto the limestone floor. In total there are 6,000 sp and 2,000 gp in the room.

A set of twelve identical jewelry boxes. All but one is empty. The last contains a collection of gems worth 1,360 gp consisting of a tiger eye agate (10 gp), a turquoise (50 gp), a moonstone (75 gp), an onyx (75 gp), a bloodstone (75 gp), a carnelian (75 gp), a jasper (250 gp), and a topaz (750 gp). Also within the jewelry box is a wand of lightning bolts (three charges remaining), appearing as a short stick of orichalcum tipped with amber.

The enchantry removed from Room 61 can be found here. This enchantry is perfectly operational, if it is plugged into the power source found in the wall of Room 61. The enchantry weighs 100 lbs. and is bulky, but is also sturdy. If reactivated, its four knobs produce the following effects: cone of cold, light, polymorph other, and conjure elemental.

64. Chamber of the Heads

Cast haphazardly along the ground here is a collection of carved stone heads removed from the statutes of Thulian deities. The collections includes heads of Asana (×2), Donn, Mavors (×2), Tyche, and Typhon. The heads can be used throughout Dwimmermount to replace the heads of Turms Termax place on the gods' statues by his cult centuries ago.

65. Embalming Supplies

Stored in the northwest corner of this room are eight lead containers and four oak barrels. Each container is 2 feet × 2 feet × 1 foot and holds 30 gallons. Each barrel is 3 feet tall and 2 feet in diameter, and holds 60 gallons. All of them contain chemicals for use in embalming corpses. These chemicals are poisonous if ingested, resulting in death if a successful saving throw versus Poison is not made.

66. Hallway

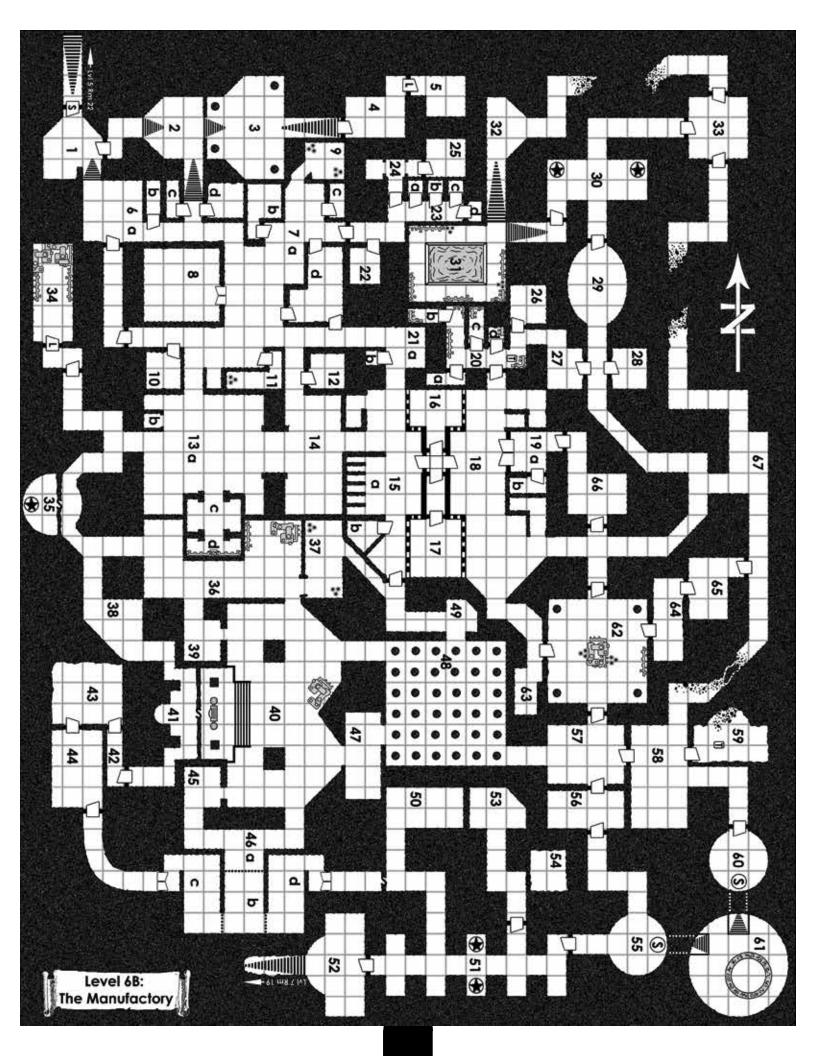

Four hell hounds are patrolling this hallway, looking for intruders to attack. One round after attacking, the hell hounds will be joined by their four pack mates in the Hallway (Room 56) to the north, if these have not already been dispatched.

Hell Hounds (4) [AL C, MV 120' (40'), AC 5, HD 7, HP 45, 39, 26, 18, #AT 1, DG 1d6 or 7d6, SV F7, ML +1]

To the south of the hellhounds is a pile of rubble under which can be found treasure worth 3,000 gp - a wrought gold pendant with inlays of silver and lapis (600 gp), a hammered gold medallion rimmed with opals (900 gp), a platinum brooch paved with diamonds (1,500 gp), and a greater Termaxian passkey (see Appendix A, New Magic Items, p. 333).

Level 6A

The Manufactory

Level

6B

Overview of The Manufactory

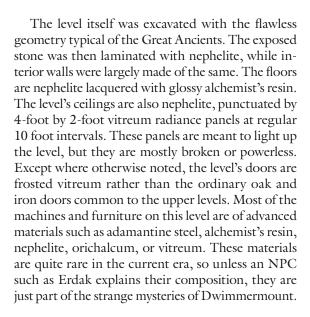

the First Era, the thelidu, ranine, and goblins launched a war against the Great Ancients. Vastly outnumbered, the Great Ancients needed a means to keep their attackers at bay, and the technology to fight back. The Manufactory was built as a shield generator and military-industrial factory, purposes it continued to serve for each successive generation of Dwimmermount's rulers.

During their invasion of Dwimmermount in the Third Era, the Eld captured The Manufactory quickly enough to prevent the Great Ancients from self-destructing it. As a result, The Manufactory contains some of the most intact First and Second era machinery in Dwimmermount. Only The Divinitarium (Level 0) and The City of the Ancients (Level 9) are comparable. The most important machine is of course The Great Machine (Room 40), the command center for the entire dungeon; also of great importance are the Power Station (Room 3), Analytical Engine (Room 13d), Viewing Stations (Room 15a), Crystal Resonance Chamber (Room 48), and Foundry (Room 62). Virtually nothing within could be replicated with magic or technology of the current era.

WANDERING MONSTERS OF THE MANUFACTORY

Die Roll	Monster
1	Dwarves (1-6)
2	Rust Monsters (1-4)
3	Carcass Scavengers (1-4)
4	Mercury Ooze (1)†
5	Basilisk (1)
6	Xorn (1-3) [†]
7	Earth Elemental (1)
8	Gorgon (1)
9	Hell Hound (2-8)
10	NPC Party (5-8)
11	Termaxian Husks (1-6)†
12	Clay Golem (1) [†]

[†]see Appendix C, New Monsters, p. 341

1. Entry Hall

The vitreum door leading to this room, at the bottom of the stairway guarded by the Dwarf Sentries (Room 22) on The Halls of Greater Secrets (Level 5), has been blocked from within by a pile of rusted iron debris placed where the door opens into the room. Pushing aside the debris requires a successful roll to force the door. If successful, the debris is shoved away with a resounding clatter, which demands an immediate roll for wandering monsters, because of the noise. Besides the debris, the only other thing the room contains is the stone corpse of a dwarf that has been split in two pieces.

2. More Debris

This chamber, sunken five feet below the neighboring Entry Hall (Room 1), is filled with a large quantity of rusted iron and steel items—pots, pans, cooking implements, shattered weapons, and armor. Shuffling around amidst these items are two rust monsters, feasting upon them. Unless attacked or otherwise interfered with, they take no notice of creatures passing through the room.

Rust Monsters (2) [AL N, MV 120' (40'), AC 7, HD 5, HP 24, 17, #AT 1, DG rust, SV F3, ML -1]

3. Power Station

This room is sunken an additional five feet below Room 2, placing it a total of ten feet beneath the Entry Hall (Room 1) and Laboratory (Room 4). It contains four pillars made of adamantine steel. Each pillar has a niche on its side, large enough to hold a potion vial or something of similar size. Built into the top and bottom surface of each niche is an orichal-

cum circle two inches in diameter that delivers a mild (but non-damaging) shock to anyone who touches it with his bare hands. The niches can be used to recharge the *power cells* (see *Appendix A*, *New Magic Items*, p. 331) found throughout this level. The process of recharging takes one hour per cell and each attempt has a 10% chance of permanently destroying the cell rather than recharging it.

4. Laboratory

The broken stone corpse of a dwarf lies next to a large nephelite table that is fixed to the ground. Numerous nephelite shelves and cabinets are built into the walls on either side of the table. Some of the built-ins have been dented, shattered, or otherwise damaged. Neither the cabinets nor the shelves have any contents, though there is evidence that they once did: Shattered glass can be found in several locations, as well as chemical stains in a variety of colors.

5. Chemical Storage

The adamantine steel hatch to this room is locked and coated with lead. A multicolored diamond-shaped glyph has been painted above the High Thulian word "Hazardous." Within, the room's walls are lined with built-in nephelite shelves containing hundreds of vitreum bottles in a bewildering variety of colors. Age has sapped most of these chemicals of their former potency, but a few still function:

- Two bottles of brown powder. The power deals 1d10 points of damage when splashed on earth-based creatures, including dwarves and gnomes.
- Three bottles of bluish liquid. The liquid deals 3d4 points of damage when splashed on any living creature of flesh and blood (that is, not dwarves or undead).
- Two bottles of a highly toxic poison, deadly if ingested or touched. Even inhaling its fumes causes death. The saving throw versus Poison to avoid death is at a -4 penalty if ingested, -2 if touched, and -1 if inhaled.
- Two bottles of red powder. Anyone who consumes the powder benefits from *true* seeing for six rounds.
- One bottle of clear liquid. The liquid eats through ten feet of any metal in 1 turn. If used as a weapon, it deals 3d6 points of damage on its first round of contact, 2d6 on its second, and 1d6 on its third.

Avaricious adventurers may wish to collect the empty vitreum bottles – there are 410 total, weighing 205 lbs. and worth 2,050 gp to a collector.

6a. Metal Shop

A large adamantine steel table occupies the center of this room. Empty nephelite shelves are built into the western and northern walls. In the southwestern corner of the room is a cabinet-sized machine of adamantine steel, alchemist's resin, and orichalcum. Lying next to the machine are two dwarven stone corpses, both of which have been smashed into rubble.

Upon investigation, the machine reveals itself to have two levers alongside an intake feed 3 inches wide and 1 foot long. To the left of the intake channel is a slot for a *power cell* (see *Appendix A*, *New Magic Items*, p. 331), but it is currently empty, rendering the machine inoperable. If a *power cell* is inserted into the appropriate slot, the machine will spring to life with a loud whirring sound. This necessitates an immediate roll on the wandering monster table.

Once activated, metal can be fed into the machine through the intake feed. Since the intake feed is only 3 inches wide, this limits what can be placed within. Once metal has been inserted, the machine will, depending on which lever is pulled, either chop the metal cleanly in half, or sharpen the metal inserted to a razor edge. When the "chop" lever is pulled, non-magical metal has no chance to resist being cut in half, but magical items have a 50% chance plus 10% per "plus" of resisting being cut (for example, a *sword* +2 has a 70% chance to resist). When the "sharpen" lever is pulled, any item placed within gains a permanent +1 bonus to damage if usable as a weapon. This is in addition to any other bonuses the item may or may not already have.

Characters skilled in blacksmithing or carpentry will quickly learn how to use the machine to cut and shape metal in a variety of ways using the machine by feeding metal in part-way, at an angle, etc.

Since adventurers are notorious for sticking their hands into holes to look for treasure, the Judge should note that the intake feed is just wide enough for a character to shove a limb into it. A character who sticks his hand down the intake feed and gropes around looking for treasure has a 1 in 6 chance each round of accidentally triggering one of the machine's levers from within. Pulling/triggering the "sharpen" lever while a character has a limb is inserted will deal 1d6 points of damage to the character. Pulling/triggering the "chop" lever will deal 2d6 points of damage to the character and amputate the limb; a successful saving throw versus Death allows the character avoid the amputation but not the damage.

6b. & 6c. Metal Storage

Each of these storage closets is punctured with built-in nephelite shelves. One of the shelves in each closet holds a large quantity of ½" thick adamantine steel sheets (approximately fifty in each closet). The sheets are non-magical and square in shape, 1 foot on each side. Each sheet weighs 10 lbs but is worth 100 gp for its metallic value. The patterns of dust suggest that the other shelves once contained sheets as well.

6d. Stone Dwarves

Two intact statues in the shape of dwarves occupy this room. Unfortunately, they are not in fact dwarven corpses, but animated statues that attack any who approach them.

Stone Statues (2) [AL N, MV 60' (20'), AC 5, HD 5, HP 26, 24, #AT 2, DG 2d6/2d6, SV F5, ML N/A]

The statues have no treasure, but there is a single fully-charged *power cell* (see *Appendix A*, *New Magic Items*, p. 331) lying on the ground in the room.

7a. Dwarves versus Dwarves

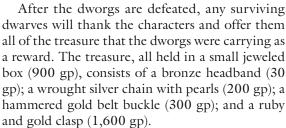

Approaching this area from any direction reveals a pitched melee in which a group of three dwarves faces off against a rival group of six dwarves. The smaller group, which seems to be losing the battle, is made up of scouts from the dwarven stronghold in the Bulwark (Room 30). The larger group actually consists of dworgs (see *Appendix C*, *New Monsters*, p. 348) created by the Termaxian cultists in The Foundry (Room 62).

Outnumbered two-to-one, the dwarves are nearly certain to lose if the characters do not intervene. Though normally reluctant to ask for help from outsiders, the desperate dwarves will call gruffly for aid if they see the player characters, joyfully doing so if there is at least one dwarf in their party. The dworgs will say nothing, but if events turn against them, they will flee toward their Stronghold (Room 13a) to seek assistance from their own.

Dwarves (3) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 25, 20, 17, #AT 1, DG 1d6+2 (swords), SV D5, ML +2]

Dworgs (6) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 34, 29, 26, 22, 21, 17, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

Level 6B

Despite their gratitude, the dwarves will remain reluctant to explain the situation on this level, because of their deep shame about their failure to protect the Great Machine (Room 40) and the resulting consequences. Thus, they will be evasive in answering any questions and will make every effort to take their leave of the characters, heading in the direction of the Bulwark (Room 30). If prevented from leaving, they will fight to the death.

7b. Storeroom

Six boxes made of dull grey alchemist's resin are neatly arranged in this room. Each box is about 3 feet long, 1 foot wide, and 1 foot tall. The boxes all contain supplies of over-sized steel machine bolts (1 foot length and 2 inch diameter). In total there are 205 bolts.

7c. Closet

A pair of depleted *power cells* (see *Appendix A*, *New Magic Items*, p. 331) lie on an otherwise empty nephelite shelf. The *power cells* could be recharged in the Power Station (Room 3).

7d. Workroom

Two steel work tables and four steel stools furnish this room. One of the tables is covered in stains and burn marks, but the other is in pristine condition.

8. Meeting Room

A large, lacquered mahogany table dominates this room. Broken wood and splinters of debris, the remnants of the chairs which once surrounded the table, litter the nearby floor. Centered on the table is a broken machine, smashed and blackened. Hanging on the walls are four vitreum screens—one on the north and south walls and two on the western wall—all shattered. The machine and its screens are irreparable.

9. Cisterns

Two large nephelite cisterns occupy this room. Each contains about 2,000 gallons of potable water. The cisterns are connected by resinous tubes to the walls, which allow fresh water to be pumped into the

cisterns as need arises. The pipes which service the cisterns are too narrow for any but the smallest creatures to traverse (e.g. normal rats, insects, etc.), but passage might be possible with *diminution*. See *Chapter 6*, *Overview of the Dungeon* (p. 84), for details on traversing the water pipes between the levels.

10. Dead Dwarf

Lying on the floor of this unadorned chamber is a stone dwarf corpse. Unlike most of the others found on this level, this corpse is not shattered or otherwise damaged. Because of this, it can be restored to life by means of either a *stone to flesh* spell or a similar effect. If restored to life, the dwarf, whose name is Ovo, will happily lead his rescuers to the other dwarves in and around the Bulwark (Room 30).

Ovo (1) [AL L, MV 60' (20'), AC 0, HD Dv5, HP 31, #AT 1, DG by weapon, SV D5, ML +2; Proficiencies: Alertness, Engineering 3]

If activated, one of the portals from the Portal Room (Room 15) on The Reservoir (Level 3B) opens onto this room.

11. Latrine

The sinks and standing toilets along the walls of this chamber are badly overgrown with mold and fungus, and the whole reeks of mildew. None of the growths are particularly harmful to be around, though eating them is not recommended. At the far end of the chamber is a functional, though long-neglected, seated toilet. Hidden inside the tank of that toilet is an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326).

Small creatures (e.g. normal rats or insects) could use the pipes that connect the toilets to the dungeon's water system to traverse to other levels. See *Chapter* 6, *Overview of the Dungeon* (p. 84), for details.

12. Guardroom

Two steel stools stand in this room, along with three steel weapons racks. Two of the racks are completely empty, but one holds a *Thulian crossbow* (see *Appendix A, New Magic Items*, p. 333) and four *bolts* +2.

13a. Dworg Stronghold

The vitreum radiance panels in this large area still function, illuminating the chamber with a pale white light. It is garrisoned by a squad of dworgs (see *Appendix C, New Monsters*, p. 348) and an earth elemental, all under the command of a Termaxian

Chapter

overseer named Fronto. The garrison is here to secure Termaxian control over the Analytical Engine (Room 13d), which is important to both the continued production of new dworgs and the Termaxian cult's plans to open The Prison (Level 8).

The dworgs will attack intruders immediately, as will the earth elemental, but Fronto will hang back and try to avoid being seen. He will act if he believes he can turn the tide against any intruders, but if the battle is going against his minions, he will flee down the Hallway (Room 14), past the Viewing Stations (Room 15) and the Junction (Room 37) into the Hall of Machines (Room 36) in order to get to the Great Machine (Room 40). As he does so, he will order the earth elemental stationed in the Hallway to cover his escape.

Dworgs (6) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 28, 25, 23, 22, 20, 18, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

Earth Elemental (1) [AL N, MV 60' (20'), AC 7, HD 8, HP 29, #AT 1, DG 1d8, SV F8, ML +4]

Fronto (1) [AL C, MV 120' (40'), AC 5 (bracers of armor (AC 4)), HD M6, HP 17, #AT 1, DG 1d4 (dagger) + spells, SV M6, ML 0; Daily Spells: 2 1st, 2 2nd, 2 3rd; Repertoire: 1st-darkness, magic missile, sleep; 2nd-mirror image, uncanny gyration, web; 3rd-earth's teeth, haste; Proficiencies: Elementalism (earth), Knowledge (Termaxian lore) 2, Magical Engineering]

Fronto carries a *wand of paralyzation* (ten charges remaining) and wears *bracers of armor* and *boots of speed*, which he uses to good effect should he need to escape. The *wand* appears as a hepatizon rod with inlaid copper wires. His *bracers* and *boots* are both made of rich black leather with gold trim.

Fronto also possesses an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326), which allows him to operate The Analytical Engine (Room 13d).

13b. Storage Cubby

A series of nephelite shelves are built into the walls of this cubby. On the highest shelf are four unmarked resin canisters, each containing about 4 pints of amber-colored liquid. This liquid is slick to the touch and is used to oil the gears of many of the machines found on this level. If lit, a container of the liquid acts as double-strength flaming oil (2d8 points of damage per round, lasting for four rounds).

13c. Disk Storage

The vitreum radiance panel in this room still functions, illuminating it and the adjacent Analytical Engine (Room 13d) with a pale white light. The light reveals nephelite shelves built into the eastern and western walls. Most are empty, but a total of three dozen metal disks still litter the shelves. These disks are approximately one foot across and made from a dull silvery material. There are grooves and marks on their surface, but nothing that looks like writing. However, casting read languages will reveal the contents of a disk in broad terms to the caster. The disks are knowledge records, each of which covers a single topic in great detail, from ancient history and engineering to astronomy and biology. These details are largely inaccessible without the use of the Analytical Engine (Room 13d), and even then, the study of even a single disk's contents could take days or weeks. See Appendix A, New Magic Items (p. 329), for more information on knowledge records.

13d. The Analytical Engine

In this area rests the Analytical Engine, a device of the Great Ancients that allows for the storage, retrieval, and transmission of much knowledge. The machine is about the size of a chest-of-drawers, and made of adamantine steel, orichalcum, and nephelite. A cylindrical slot in the machine matches the size and shape of the knowledge records found in the Disk Storage (Room 13C). On the side of the machine, at a height of about 3 feet, sits a vitreum panel with a series of tiny buttons, each labeled with a mysterious pictograph in a seemingly random order. Characters who have learned the Tongue of the Great Ancients in the Hieroglyphics Room (Room 19) in The Hall of Greater Secrets (Level 5), or via tongues or read languages, can identify the pictographs as the characters of the Tongue's alphabet. Below the panel are a series of steel levers.

Activating the Analytical Engine requires an *engineer's control rod* (see *Appendix A*, *New Magic Items*, p. 326). In addition, the operator must be able to speak, read, and write the Tongue of the Great Ancients (either having learned it in The Halls of Greater Secrets or via *tongues* or *read magic*). Finally, the Great Machine (Room 40) must be operational—which it will be, unless the characters have interfered with it.

The machine can be used in two ways. If a hypothetical course of action is typed into the panel, and the appropriate lever pulled, the Analytical Engine will predict the future outcome of that course of action, as per the spell *augury*. Each augury takes 1 turn (10 minutes) to calculate, after which it will be announced by a disembodied voice coming from the machine.

Level 6B

6B-13: Characters listening to recitals from the **knowledge records** have a 10% chance each hour of learning one of the following numbered facts: 1-1, 1-2, 1-3, 1-4, 1-5, 1-6, 1-7, 1-8 1-9, 1-10, 2-1, 2-2, 2-3, 2-4, 2-5, 2-6, 2-7, 2-8, 2-9, 2-10, 3-1, 3-2, 3-3, 3-4, 3-5, 3-6, 3-7, 3-8, 3-9, 3-10, 3-11, 3-12.

Alternatively, if a *knowledge record* is inserted into the cylindrical slot, the Analytical Engine will read the information on the disk via mechanical means. If the appropriate lever is pulled, a disembodied voice will begin to recite general information about the subject covered by the disk. The machine's other levers can advance, halt, and resume the data recital. Typing more specific queries onto the panel can direct the machine to provide specific information about the *knowledge record*'s subject. Alternatively the user can record his own voice onto the *knowledge record*, although doing so erases its current record.

As with the Arcane Library (Room 37) on The Reservoir (Level 3B), precisely what information the Analytical Engine can impart is left to the Judge to decide. The Analytical Engine's information is at least 200 years out of date when pertaining to anything outside Dwimmermount but characters willing to devote sufficient time could use it to discover much of Dwimmermount's lore. See the accompanying sidebar for a recommended list of numbered facts that the knowledge records might reveal.

14. Hallway

The walls of this area are decorated with painted illustrations depicting what appear to be dwarves being produced in mass quantities by means of a strange machine. The production line is overseen by what appear to be men in peculiar armor, similar to that worn by the Iron God in his various statues.

Waiting in this room is an earth elemental, who remains immobile until either intruders enter or Fronto (Room 13a) commands him to do otherwise.

Earth Elemental (1) [AL N, MV 60' (20'), AC 7, HD 8, HP 35, #AT 1, DG 1d8, SV F8, ML +4]

15a. Viewing Stations

Along the western wall of this chamber are six narrow—2½ feet wide—cubicles with vitreum screens set into the wall dividing this area from the Hallway (Room 14). All but one of these screens is shattered and inoperable. Provided that the Great Machine (Room 40) is working and one possesses an engineer's control rod (see Appendix A, New Magic Items, p. 326), the remaining screen may be turned on, in which case it offers a view of one of four rooms on this level: the Entry Hall (Room 1), the Azoth Pool (Room 31), the Crystal Resonance Chamber (Room 48), and The Foundry (Room 62). The choice of room is determined by turning a resin knob next to the screen. At one time, eight other choices were possible, but attempting to make use of them now results only in a blank screen.

15b. Office

A damaged steel desk and smashed chair occupy this room. In one of the desk's drawers are two empty *power cells*. The *power cells* could be recharged in the Power Station (Room 3). Crookedly hanging behind the desk hangs a small painting depicting a man scaling a mountain; the painting bears the label "Ambition" in High Thulian. Collectors of Thulian antiquities know that such paintings were once produced in large scale, and are quite valueless.

16. Containment Cell #1

The adamantine steel hatch to this area is *wizard locked*. Inside is a defective clay golem (see *Appendix C*, *New Monsters*, p. 352), created shortly before the fall of Dwimmermount. The golem has only grown more erratic in the centuries since it has been trapped in here. When the door is opened, the golem will attack the first creature it encounters and fixate on that target above all others until either it or the target is dead.

Clay Golem (1) [AL N, MV 60' (20'), AC 2, HD 11, HP 39, #AT 1, DG 3d10, SV F11, ML N/A]

17. Containment Cell #2

The adamantine steel hatch to this cell is open. The containment cell beyond contains a huge oak treasure chest, inside of which gleams 12,000 sp and 2,000 gp. However, one round after anyone enters the cell, the door slams shut and is *wizard locked* (as if cast by a 14th-level caster).

18. Hallway

Roaming this large open area is a gorgon. The beast was artificially constructed by the Termaxians in order to protect the area leading to The Foundry (Room 62) and to keep the dwarves in the Bulwark (Room 30) at bay until the Termaxians are better prepared to destroy them.

Gorgon (1) [AL C, MV 120' (40'), AC 7, HD 8, HP 38, #AT 1, DG 2d6 or petrify, SV F8, ML 0]

19a. Archives

The vitreum radiance panel in this room still functions, revealing walls lined with nephelite shelves, where hundreds of books and red scroll cases have been neatly arranged. The books, though in good condition externally, contain only blank pages. The same is true of all the scrolls but one, which contains

Chapter

the spells *massmorph*, *polymorph self*, and *polymorph others*. In addition to the books, the room is furnished with a wooden table and reading chair.

Reclining on the chair is a Termaxian fighter named Haveron. Haveron is a lickspittle and a coward who will yell for help if awakened, hoping to draw the attention of his fellows in the Foreman's Quarters (Room 66), then attempt to flee rather than fight. If retreat is impossible, he will readily sell out his comrades in exchange for freedom. He is not well liked or trusted by the Termaxians on this level, but he does know the rough layout of the southern section of the level and Nilus' plans to destroy the dwarves and open The Prison (Level 8).

Haveron (1) [AL C, MV 90' (30'), AC 7 (plate & shield), HD F5, HP 25, #AT 1, DG 1d6+3 (sword +1), SV F5, ML 0; Proficiencies: Bargaining, Knowledge (Termaxian lore), Running, Skirmishing]

Haveron carries a *potion of extra-healing*, 100 gp, and a smooth disk-like key which opens the nearby Storage Closet (Room 19b). His *sword* +1 is straight-bladed adamantine steel with a hilt shaped like a caduceus.

19b. Storage Closet

The vitreum door to this closet is locked; the key to open it is in the possession of Haveron, who is resting in the Archives (Room 19a). If opened, an adamantine steel case is found inside. The case is bound shut by means of several adamantine steel cords in an intricate pattern. If the cords are properly untied—either by a successful open locks throw or a magic research throw—the case can be opened without incident. If not, it explodes in a blast of electricity that deals 6d6 damage to all within 10 feet and destroys the contents of the case. Those contents consist of a scroll of ward against elementals and a book of Lawful wisdom (see Appendix A, New Magic Items, p. 324). The book is bound in black leather with gilded pages.

20. Trapped Corridor

The dwarves inhabiting the Bulwark (Room 30) and surroundings have trapped this corridor, making it is difficult for anyone to pass through it without taking significant casualties and alerting them to their presence. As soon as the door to the corridor is opened, all unprotected characters are exposed to an acrid-smelling poison gas and must make an immediate saving throw versus Poison at -3. Failure results in death. An additional saving throw is required every turn that the characters linger in the corridor.

Each of the four small rooms connected to the Trapped Corridor (a-d) contains a copper and wood machine which pumps poison gas into the corridor. A thief can attempt to shut down one of these machines with a Remove Traps roll. Success shuts down the machine. Failure results in an electrical shock dealing 3d6 damage (no save). A machine can be destroyed by dealing 20 points of damage to it, but each attack against the machine triggers an electrical shock as above.

Each time a machine is shut down, the penalty to the saving throw for the poison gas is immediately reduced by 1 point. If all four machines are shut down, the poison gas will dissipate in 1 turn.

21a. Guard Station

Three dworgs (see *Appendix C*, *New Monsters*, p. 348) stand guard here, under orders from the Termaxian cultists that created them in The Foundry (Room 62).

Dworgs (3) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 21 (×2), 19, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

21b. Closet

The dworgs have secreted a small treasure they have collected into this closet. The treasure is made up of 5,000 sp and three gems: a bloodstone (75 gp), a lapis lazuli (50 gp), and a banded agate (10 gp).

22. Vestry

Hanging on pegs in this room are four heavy silvery-gray suits, along with gloves and boots made from the same material. On shelves in the room, there are also four ceramic helmets that fit on top of the suits. These are *environment suits* (see *Appendix A, New Magic Items*, p. 326), which grant immunity to certain adverse effects encountered throughout the dungeon, such as the negative effects of the Crystal Resonance Chamber (Room 48).

23. Supply Closets

Four small supply closets can be found in this hallway, though most of their supplies have long since been looted.

- This closet contains a large box made of alchemist's resin. Within the box are twenty-four **nutrient packets** (see **Appendix A, New magic Items**, p. 248).
- b This closet is empty.

This closet contains two large boxes made of alchemist's resin. Each of the boxes contains a single **incen-**

- c diary granatum (see Appendix A, New Magic Items, p. 248). One of the granata is defective, with a 50% chance of exploding in the hands of its user before it can be thrown.
- d This closet is empty.

6B

24. Moldy Hallway

A sweet odor suffuses this moist connecting hall-way. The source of the odor is a large patch of purple moss (see *Appendix C*, *New Monsters*, p. 361) that covers the floor leading to the Vault (Room 25).

Purple Moss (1) [AL C, MV 10' (3'), AC 0, HD 1, HP 5, #AT 1, DG special, SV F1, ML N/A]

25. Vault

The nephelite blast door to this chamber is locked. Inside is a vault lined with nephelite shelving, on which rest ten chests, seven coffers, and four resin boxes. Most of these containers have been opened and emptied. However, five of the chests remain closed, and these contain a collective total of 8,000 sp and 2,000 gp. Next to the chests on the shelves is a *cursed short sword* –2 whose blade blends starmetal and moonsilver in a curiously disturbing pattern.

26. Office

This small room is filled with wooden debris that was once a desk and a chair. Scattered on the floor are shards of green-colored glass and a badly torn painting. It depicts a set of galley slaves rowing and bears the half-torn label "team-" in High Thulian. Like that found in the other Office (15b), the painting is chintzy and valueless. However, underneath the painting lies concealed a single *power cell* (see *Appendix A, New Magic Items*, p. 331).

27. Dwarf Sentries

Four dwarves stand watch here, looking westward for signs of dworgs or Termaxian cultists, whom are attacked on sight. Others are called to halt and state their purpose; the dwarves are reluctant to believe that anyone on this level does not wish them harm and will fight with little provocation. However, if the player characters are convincing and non-violent, the dwarves take them to the Bulwark (Room 30).

Dwarves (4) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 27, 25, 23, #AT 1, DG 1d6+2 (swords), SV D5, ML +2]

28. Weapons Locker

The walls of this room are lined with weapon racks, five in total. The Dwarf Sentries (Room 27) and those at the Choke Point (Room 29) store additional weaponry here to use in the event that they need it to fend off attackers. These weapons

consist of six spears, six battle axes, six *Thulian* crossbows with 20 bolts each, and three javelins of lightning (see Appendix A, New Magic Items, p. 333 and 329).

29. Choke Point

Six dwarves, led by one named Delent, stand guard in this room, protecting the series of rooms to the north, where their brethren have holed up against the assault of the dworgs and their Termaxian masters. These dwarves are formidable warriors and well-armed to boot. They will do everything within their power to stop the advance of enemies. Unless accompanied by other dwarves who will vouch for their trustworthiness (such as the Dwarf Sentries from Room 27), Delent and his fellow dwarves will consider any non-dwarf who steps into this area to be an intruder. If they are hard pressed or fail a morale roll, Delent and his dwarves will fall back to the Bulwark (Room 30).

Dwarves (5) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 24, 23, 22, 18 (×2), #AT 1, DG 1d6+2 (sword & a javelin of lightning[†] each), SV D5, ML +2]

Delent (1) [AL L, MV 60' (20'), AC 9 (plate armor +1 & shield +1), HD Dv6, HP 31, #AT 1, DG 1d6+2 (sword), SV D6, ML +2; Proficiencies: Alertness, Combat Reflexes, Engineering 3]

† see Appendix A, New Magic Items, p. 323

If the Dwarf entries in Room 27 have not been dealt with, sounds of fighting at the Choke Point will draw them here after 2 rounds.

30. Bulwark

Illuminated by white light from still-functional vitreum panels overhead, two bronze statues of idealized human warriors, one male and one female, stand proudly in either corner of this room. The remainder of the room has been converted into a barracks by the dwarves that dwell here. There are a total of ten dwarves present, including Erdak, leader of all the dwarves on this level, and his lieutenant, Wertek. Like their comrades elsewhere, these dwarves will fight to keep out any intruders, using all their resources to do so. If the battle turns against them, they will retreat as a group toward the Azoth Pool (Room 31) to make their last stand.

Erdak, though suspicious of outsiders, is not so close-minded as to reject genuine offers of help, especially from obviously powerful men. Indeed, Erdak is very deferential toward human beings, using terms like "Master/Mistress" and "Sir/Madam" when addressing them. That is because Erdak is ancient—over 1,000 years old—and learned from his father, as his father learned from his, the true nature of the dwarven race, namely that it was created by the men known to history as the Great Ancients to act as their servants. His knowledge of the details is fuzzy, but he knows enough of the general outline (explained in Chapter 2, History of Dwimmermount, p. 19) that he views men as his superiors and acts accordingly. Erdak is deeply grieved by both the dwarves' loss of control of this level—and of the Great Machine—which they had held in trust for two centuries. Likewise, he sees the conversion of The Foundry (Room 62) to create dworgs to be a personal affront and will do almost anything to see it shut down for good.

Wertek, Erdak's lieutenant, secretly disagrees with his chief's sentiments. Indeed, Wertek sees The Foundry as the singular means to replenish dwarven numbers and restore the race to its former glory. He is disdainful of men, seeing them as nothing more than the degenerate descendants of the Makers, though he will not openly say so. Rather, he will feign subservience and attempt to sway any men of the wisdom of repurposing The Foundry to create more dwarves, contrary to both dwarven tradition and Erdak's expressed wishes.

Dwarves (8) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 31, 25, 27, 23, 21 (×2), 19, 16, #AT 1, DG 1d6+2 (swords), SV D5, ML +2]

Wertek (1) [AL N, MV 60' (20'), AC 8 (plate armor +2 & shield) HD Dv6, HP 32, #AT 1, DG 1d8+1 (sword +1), SV D6, ML +2; Proficiencies: Alertness, Engineering 3, Leadership]

Erdak (1) [AL L, MV 60' (20'), AC 10 (plate armor +1 & shield +2), HD Dv8, HP 52, #AT 1, DG 1d6+2 (mace +2), SV D8, ML +2; Proficiencies: Command, Engineering 3, Knowledge (Ancient lore) 2, Leadership]

The dwarves' magical equipment is all forged of adamantine steel (if +1) or adamant (if +2) and features intricate tooling on the blades, armor plate, and weapon heads.

31. The Azoth Pool

Recessed into the center of this room is a large 10-foot deep pool containing 45,000 gallons of silvery-black azoth. A 4-foot high steel barrier surrounds the pool in order to prevent anyone from accidentally falling into the pool (the results of doing so, along with the other characteristics of azoth, are described in Appendix F). Along the walls are a variety of machines, one of which

drains or fills the pool, and the rest of which pump azoth from the pool to other parts of the level, such as The Foundry (Room 62). The machines are made of adamantine steel and orichalcum, stained in many places with the blackish "rust" of azoth. The entirety of the pool, barrier, and machines are illuminated by vitreum radiance panels overhead. The door to this room (from the east) is a sturdy blast door of black nephelite.

Currently there are four dwarves here, led by Jarlagg. These dwarves have been assigned by Erdak to defend the pool against all intruders. Should anyone enter the area and attempt to seize control of the room, Jarlagg will activate the pool's draining system while the other dwarves fend off intruders. Left unchecked, the draining system will empty the pool of azoth by 4,500

6B-30: If befriended or interrogated, Erdak can reveal the following numbered facts to the characters: 1-7 2-3, 6-10, 6-11, 7-1, and 7-2.

Dwarves (4) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 26, 25, 24, 22, #AT 1, DG 1d6+2 (swords), SV D5, ML +2]

Jarlagg (1) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 27, #AT 1, DG 1d6+2 (sword), SV D5, ML +2; Proficiencies: Alertness, Alchemy, Engineering 2]

32. Old Azdum

Ruminating alone within this ruined chamber, filled with rubble, is an old dwarf named Azdum. Azdum is as ancient as Erdak, leader of the dwarves in the Bulwark (Room 30), and knows as much about the history of Dwimmermount and the dwarves as Erdak does. However, he does not share Erdak's tendency to cling to the past without question. Azdum believes that, if the dwarves are to have a future, they must adapt to the present. Because of his iconoclastic viewpoints, Azdum is not well regarded by the other dwarves and so spends much of his time brooding here.

While he feels that the time has come for dwarves to step out from the shadow of men, Azdum is no ally of Wertek, and would oppose the lieutenant's plans to re-start The Foundry (Room 62) if he knew of them (he does not).

Azdum (1) [AL L, MV 60' (20'), AC 7 (plate & shield), HD 5, HP 28, #AT 1, DG 1d8 (sword), SV D5, ML +2; Proficiencies: Engineering 3, Knowledge (Ancient lore) 3]

33. Dwarven Cemetery

Out of respect for the dwarves who have fallen at the hands of the Termaxians, Erdak ordered this chamber converted to a cemetery. Now a dozen dwarf stone corpses have been placed here, where they can stand in hallowed dignity.

34. Backup Power Plant

The blast door to this room is magnetically sealed. It can only be opened by a character with an *engineer's control rod* or by using *knock*. Within, the walls are covered by dusty steel and orichalcum machinery that provides backup power to maintain critical systems in Dwimmermount should the Great Machine (Room 40) be destroyed. Unless needed, the power plant is quiet and seemingly inoperative. If the backup power plant is operating, the room will be lit by a vitreum radiance panel, but it is otherwise dark. The power plant can be destroyed by dealing it 50 points of damage.

35. Secret Shrine

This semicircular chamber is hidden behind a secret door. The door is a nephelite panel that revolves around its central axis, which can be detected through the hairline crack in the otherwise seamless construction.

Within, the room is dominated by a marble statue of an elderly, bearded dwarf-like figure, cradling his head on his hand as if deep in though. It is a statue of the Thulian god Tenen, who is a patron of, among other things, invention. The statue retains its original head and has not in any way been damaged or desecrated.

Three *engineer's control rods* (see *Appendix A*, *New Magic Items*, p. 326) lie at the statue's feet, along with other craftsman's tools and implements. If any of the offerings are removed from the statue's feet, the person who does so is *cursed* with a –1 to all saving throws until either the offerings are returned or a *remove curse* spell is cast.

The wiser path is to make an offering to the statue. Any character who lays an engineer's control rod, Termaxian passkey, or similar device (Judge's discretion) at the feet of the statue will be granted a Greater Blessing of Tenen—the ability to understand and/or activate the next technological or magical device he encounters without error. If the device encountered is magical (such as a wand of fire), the blessed character will learn the item's powers and any necessary command words to activate those powers; a character may gain the ability to use an item otherwise not permitted to his class from this boon. If the device encountered is technological (such as the Analytical Engine in Room 13d) the blessed character will learn all the device's capabilities and the techniques by which to safely operate it. The sole exception is if the device encountered is the Great Machine (Room 40), in which case the character will learn only one particular power. In any case, a character can only receive this blessing once. See Chapter 6, Overview of the Dungeon (p. 84), for more information on boons from the gods.

36. Hall of Machines

Dozens of machines of adamantine steel and orichalcum cover the walls of this chamber, all in various states of damage and disrepair. The machines are inoperative, making it difficult to determine what purpose they once served. At present, two xorn (see *Appendix C*, *New Monsters*, p. 374) are in the chamber, consuming parts of the machinery. They have little interest in fleshly beings and will ignore humans or elves. They will immediately attack dwarves (who are a bite-sized snack!), and defend themselves against any who attack first or

try to separate them from their meals.

Xorn (2) [AL L, MV 90' (30'), AC 11, HD 7+7, HP 38, 30, #AT 4, DG ld3/ld3/ld3/6d4, SV F7, ML +2]

37. Junction

A mass of large resin pipes occupies the ceiling of this room. Some of the pipes drip with condensed water that has an unpleasant odor and occasionally steams as it strikes the floor. Small creatures (e.g. normal rats or insects) could use the pipes that connect the toilets to the dungeon's water system to traverse to other levels. See *Chapter 6*, *Overview of the Dungeon*, p. 84, for details.

38. Storage

Six large resin drums occupy this area. Each drum is 3 feet high and 2 feet in diameter, large enough to hold 60 gallons. Two of the drums have been turned over, spilling their chemical contents onto the floor where they have coalesced into a mercury ooze (see *Appendix C*, *New Monsters*, p. 358), which still lurks here.

Mercury Ooze (1) [AL N, MV 30' (10'), AC 0, HD 5, HP 19, #AT 1, DG 2d4 + mercury poisoning, SV F5, ML +2]

The other four drums are sealed and intact, and filled with mercury (quicksilver). If even a taste of mercury is imbibed, characters must succeed on a saving throw versus Poison or lose 1 point of Constitution for 1d6 days. Imbibing a potion's worth of mercury (1 pint) will cause death unless a saving throw versus Poison succeeds.

39. Guardroom

Two steel stools stand in this chamber, along with an empty weapons rack.

40. The Great Machine

This huge room is brightly lit by the four still-functioning vitreum radiance panels in its ceiling. The room is dominated by the Great Machine, a vast hemispherical apparatus of azoth, adamantine steel, and nephelite. A bewildering array of orichalcum wires connects the body of the machine to pillars of orichalcum situated on either side. Resting atop a raised dais, the top of which can be reached via a set of broad steps, the Great Machine was created by the Ancients to control the machinery and magic of Dwimmermount.

In the past, the dwarves were entrusted with

protecting the Machine, a task which they continued until the Termaxians seized power in the Thulian Empire. Even then, the dwarves continued to maintain a watch over the Great Machine, and when at last the Termaxians were overthrown, they took up their task once more. For two hundred years after Dwimmermount's fall, the dwarves protected the Great Machine to ensure that the arcane barriers sealing off the dungeon remained operational and the Foundry inactive. (See Chapter 6, Overview of the Dungeon, p. 74, for details on the arcane barriers surrounding Dwimmermount.) The Termaxian cultists who recently invaded Dwimmermount have wrested the Great Machine from the dwarves. Among other nefarious deeds, the Termaxians have lowered the Perimeter barrier and re-activated the Foundry, where they have begun to create dworgs (see Appendix C, New Monsters, p. 348). Because of wards put into place on the Machine by the paladins who brought about the fall of Dwimmermount, the Termaxians have not yet achieved their primary goal—dropping the arcane barriers around The Prison (Level 8) in order to release Turms Termax. This is, however, only a matter of time. Though the dwarves on this level struggle ceaselessly to recapture the Machine (and their lost honor), theirs is a losing struggle. If the characters do not intervene, the Termaxians will eventually free their ancient leader from The Prison, and Dwimmermount will become the seat of their power once again.

The Great Machine is a techno-magical device of incredible complexity. Each of its many effects must be learned separately through study and experimentation with its controls using an engineer's control rod. A character's first study of the Great Machine will take 1 turn. At the end of this period, the character may make a magic research throw. The target value for this throw is increased by 13 due to the complexity of the Great Machine. The character may add his Intelligence bonus and ranks in Magical Engineering proficiency to the throw. If the character has learned the Tongue of the Great Ancients, he gains an additional +3 bonus to the throw. Characters who lack an engineer's control rod have no chance of success, and if they even touch the Great Machine they will receive an electrical shock dealing 8d6 damage with no save!

Level 6B

EFFECTS OF THE GREAT MACHINE

Roll Effect

- Roll twice more on this table. The character learns the first effect rolled, while accidentally triggering the second effect rolled without learning it.
- Restore or remove power to the Elevator (Room 13) in The Halls of Lesser Secrets (Level 4). The elevator is currently without power.
- Seal, activate, or deactivate the Perimeter barrier on Levels 0-7. The Perimeter barrier is currently deactivated.
- Seal, activate, or deactivate the Outer Prison

 4 barrier on The Prison (Level 8). The Outer Prison
 barrier is currently activated.
- Seal, activated, or deactivate the Inner Prison 5 barrier to The Prison (Level 8). The Inner Prison barrier is currently sealed.

Open or close the Red Doors to the Entrance Chamber (Room 1) on The Path of Mavors (Level

 The Red Doors are currently closed. (They can be manually opened since the Perimeter barrier is unsealed, however; this effect is only primarily when the Perimeter barrier is activated).

Open or close the main doors of the Hangar (Room 19) on The Divinitarium (Level 0). The

- Hangar doors are currently closed. (They can be manually opened since the Perimeter barrier is unsealed, however; this effect is primarily useful when the Perimeter barrier is activated).
- Activate or deactivate the astral beacon in the 8 Navigation Room (Room 31a) on the Divinitarium (Level 0). The astral beacon is currently activated.
- 9 Activate or deactivate The Foundry (Room 62). The Foundry is currently activated.
- Change the circumstances under which an acti-10 vated arcane barrier permits passage at one of its designated gateways.
- Remove the wards on the Great Machine placed by the paladins. This multiplies the chance of successful study by 5 (e.g. a 9th level magic-user with INT 16 has a 50% chance).

12 Referee's choice (see below)

Note that an unmodified die roll of 20 does *not* automatically succeed, but an unmodified die roll of 1-3 is always a failure.

When a character fails in an attempt to learn an effect, he can try again, but the time required doubles on each successive attempt thereafter (to 2 turns, then 4 turns, then 8 turns, and so on), as he must try increasingly complex and unlikely techniques. Once the character succeeds in learning an effect, the time required for his next study is reduced back to 1 turn. Determine the effect learned with a roll of 1d12 on the Effects of the Great Machine table.

The effects that can occur on a "12" are left up to the Judge to devise, bearing in mind that the Great Machine could conceivably have an effect on

almost any magical or technological device in the entirety of Dwimmermount. Be sure to re-read *Chapter 6, Overview of the Dungeon* (p. 348), for more information on the arcane barriers controlled by the Great Machine.

If their attempts to study the Machine prove fruitless, the characters may decide to break it instead. The Great Machine is incredibly resilient (AC 9, HP 100). It is also protected by an electrical defense system that will deal 8d6 points of damage to its attacker each time it is struck. Melee attackers receive no saving throw against this shock, but attackers at range may make a saving throw versus Blast to avoid the electrical blast.

Reducing the Great Machine to 0 HP will cause most of the machinery in Dwimmermount to become inoperative (as noted in the various room description). Critical functions will be maintained by the Backup Power Plant (Room 34). If this is also destroyed, the Perimeter, Inner Prison, and Outer Prison barrier will be immediately and permanently unsealed. Additionally, the air, water, and azoth circulation systems in the dungeon will fail. Failure of the circulation systems will make the air in the dungeon toxic within 24 hours. Thereafter there will be a cumulative 5% chance per day that the uncirculated azoth will combust, utterly destroying Dwimmermount, Muntburg, and the entire surrounding hex in a thermonuclear explosion. Turms Termax or the Terrim engineers in The City of the Ancients (Level 9) could conceivably repair the Great Machine given 2d4 days of undis-

The Machine is guarded at all times by dworgs, elementals, and cultists, led by their leader, the mage Nilus. Consequently, taking control of it from the Termaxians will prove quite difficult without either a good plan or overwhelming force.

Dworgs (6) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 29, 24, 22, 20, 19, 15, #AT 1, DG 1d6+2 (swords), SV D5, ML +2]

Earth Elementals (2) [AL N, MV 60' (20'), AC 7, HD 8, HP 46, 29, #AT 1, DG 1d8, SV F8, ML +4]

Alerot (1) [AL C, MV 60' (20'), AC 10 (plate armor & shield +2), HD F6, HP 35, #AT 1, DG 1d8+1 (sword +1), SV F6, ML +2; Proficiencies: Command, Fighting Style (weapon & shield), Knowledge (Termaxian lore), Manual of Arms]

Alerot carries a *potion of extra-healing* and wears a copper *ring of regeneration*, fastened to resemble a pair of troll's claws grasped together. His *shield* +2 is of pure adamant, while his *sword* +1 is a

straight-bladed Thulian sword of adamantine steel.

Nilus (1) [AL C, MV 60' (20'), AC 5 (bracers of armor (AC 4)), HD M8, HP 21, #AT 1, DG 1d4 (dagger) + spells, SV M8, ML +2; Daily Spells: 3 1st, 3 2nd, 2 3rd, 2 4th; Repertoire: 1st-charm person, detect magic, hold portal, protection from evil, read languages, shield; 2nd-detect invisible, ESP, knock, locate object, web, wizard lock; 3rd-clairvoyance, dispel magic, lightning bolt, nondetection, telepathy; 4th-bestow curse, fear, polymorph self, wall of fire, wizard eye; Proficiencies: Diplomacy, Magical Engineering 2, Knowledge (Ancient lore) 2, Knowledge (Termaxian lore) 2

Nilus has a wand of magic missiles (eight charges remaining) made of orichalcum with a bulbous vitreum tip. He also has a pinch of dust of disappearance and a potion of fire resistance, in addition to an engineer's control rod and a Termaxian passkey (see Appendix A, New Magic Items, p. 333).

Nilus has been studying the Great Machine since his arrival with mixed success. After six failed attempts to learn an effect, he finally learned how to activate The Foundry (Room 62), enabling creation of the dworgs, but he unwittingly lowered the Perimeter around Dwimmermount at the same time. He then failed dismally on eleven subsequent attempts to learn an effect (ouch). He's now 8 days into his twelfth attempt to study the machine. He has 20 days of study left before he has a chance of success, and if that fails, he'll face a further 56 days of study before he has another chance to learn an effect. In the hopes of expediting this process, he will ask any mages he encounters to join him in studying the Machine, hoping to channel their efforts towards his own ends. He will explain that his goal is to deactivate the arcane barrier around The Prison (Level 8), claiming it contains a great deal of magical and mundane treasure that he will gladly share in exchange for assistance.

41. Decorated Hallway

This stretch of hallway is covered in geometric decorations made with gems that have been securely fastened to the walls. Removing the gems takes

The secret door to The Great Machine (Room 40) is a cunningly-constructed sliding panel. While it can be detected in the usual manner, it can only be opened by a character who inserts an *engineer's control rod* into a trigger mechanism hidden behind one of the decorative gems.

42. Corridor

Except for its dusty floor, which shows no evidence of recent traffic, this corridor is without any features of interest.

43. Office

A large wooden table with four chairs stands in this room, along with a wooden desk and chair. Like the outside Corridor (Room 42), this chamber is very dusty and shows no signs of having been visited in a very long time. The desk contains a variety of crumbling papers, books, and similar items, none of which have any value, and are at any rate, illegible after centuries of disuse.

On the table rests a *mirror of life trapping*, inside of which resides an insane Thulian cleric of Typhon named Charito. Charito was a prisoner of the Termaxians at the time Dwimmermount fell. She had been sent into the fortress as a spy, hoping to provide intelligence useful to the rebels against Termaxian rule. Instead, she was captured, terribly tortured, and then finally thrown into the extra-dimensional prison of the *mirror*.

If spoken to, she will have no idea of how much time has passed since her imprisonment, but will beg to be released, claiming to have information valuable to "the rebellion" in her possession. Of course, whatever she knows is centuries out of date and therefore useless. If released, she will need equipment to function and will quickly prove a nuisance, running off and getting into trouble by attracting the attention of any Termaxian minions she sees. If anyone questions her judgment, Charito will fly into a rage and suggest that he is actually a secret Termaxian and then attack. Should she survive Dwimmermount and be taken back to Muntburg, the church of Typhon will pay a reward of 5,000 gp.

Charito (1) [AL L, MV 120' (40'), AC 0, HD C5, HP 27, #AT 1, DG 1d3, SV C5, ML +2; Daily Spells: 2 1st, 2 2nd; Repertoire: Cleric; Proficiencies: Disguise, Lip Reading, Quiet Magic, Sensing Power]

44. Torture Chamber

Beneath the dust which coats the floor of this room, copious pools of dried blood stain the floor. The blood stains are thickest around the implements of torture that are neatly arranged within: two branding cages and a pair of pillories in the center of the floor; a line of four racks hanging on the east wall; and a series of six iron maidens on the south and west walls. One of the iron maidens is in fact an iron maiden golem (see *Appendix C*, *New Monsters*, p. 352) that attacks anyone who comes within 10 feet of it. The golem is located just to the west of the southern door.

Iron Maiden Golem (1) [AL N, MV 60' (20'), AC 6, HD 7, HP 37, #AT 2, DG ld12/ld12, SV F8, ML N/A]

45. Guardroom

The room is furnished with a pair of steel stools and an empty weapon rack. Three dworgs (see *Appendix C, New Monsters*, p. 348) stand guard in this room.

Dworgs (3) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 22 (×2), 17, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

46. Portcullises

Three adamantine steel portcullises divide this area into four sections, labeled 'a,' 'b,' 'c,' and 'd.' Areas 'a,' 'c,' and 'd' each have a vitreum panel into which an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326) can be placed to open the closest portcullis. Area 'b' holds a hell hound, placed there by the Termaxians after it proved too difficult to control.

Hell Hound (1) [AL C, MV 120' (40'), AC 5, HD 7, HP 30, #AT 1, DG 1d6 or 7d6, SV F7, ML +1]

47. Engineering Room

One radiance panel in this room is half-functional, and provides a flickering, unsteady light equal to a torch. A nephelite table and two nephelite cabinets furnish this room. One of the cabinets contains a half-dozen adamantine steel tools, each of which is worth 50 gp to collectors in a large city.

The other cabinet is actually a control panel that attunes the crystals in the Crystal Resonance Chamber (Room 48) to magical energy. Provided that the Great Machine (Room 40) is working, a character with an *engineer's control rod* (see *Appendix A*, *New*

Chapter

Magic Items, p. 326) can use the control panel to tune the crystals to one of three resonance levels:

- High Resonance: Doubles the effects of any spells cast in or into the Crystal Resonance Chamber.
- **Neutral Resonance:** No effect. This is the default setting.
- Low Resonance: Halves the effects of any spells cast in or into the Crystal Resonance Chamber.

48. Crystal Resonance Chamber

A cold white light bathes this vast chamber, revealing thirty-six crystal prisms that extend from the floor to the ceiling. These crystals, mined from outcroppings in The Deep Hollows (Level 7), can be etherically attuned to react to magical energy in the area. The attunement controls for the room are in the Engineering Room (Room 47) next door. When set to "high resonance" the crystals hum with a high pitched hum, and amplify spellcasting as described above. When set to "low resonance" the crystals emit a deep bass drone,

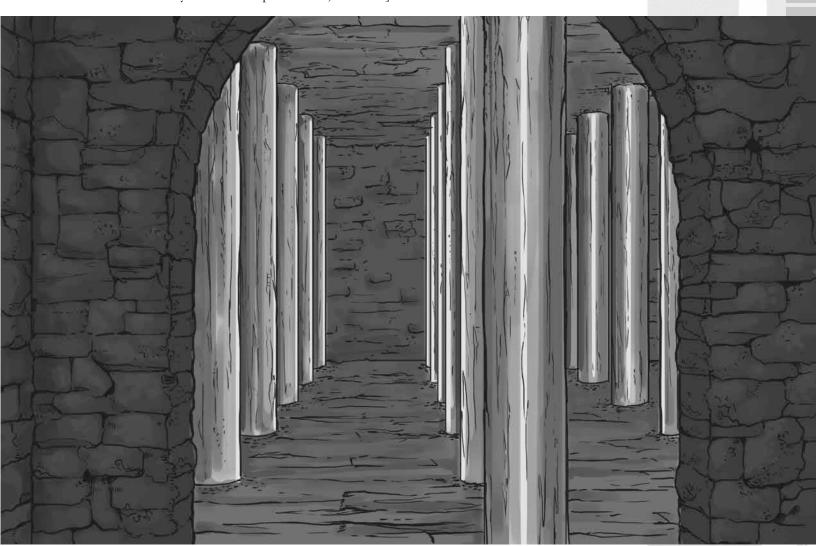

which dampen spellcasting as described above. In either case the resonance effect extends only to the confines of the room, even for spells that are cast within it.

49. Guard Post

Two dworgs (see *Appendix C, New Monsters*, p. 348) keep watch over the Crystal Resonance Chamber from here, assisted by a Termaxian mage. The mage is aware of how the Resonance Chamber works and will use damaging spells against any intruders into the room if he sees that it has been set to high.

Dworgs (2) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 20 (×2) #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

Termaxian Mage (1) [AL C, MV 120' (40'), AC 2, HD M5, HP 13, #AT 1, DG 1d4 (dagger) + spells, SV M5, ML +2; Daily Spells: 2 1st, 2 2nd, 1 3rd; Repertoire: 1st-burning hands, magic missile; 2nd-gust of wind, web; 3rd-fire-ball]

Eight sets of steel-framed bunk beds can be found here, along with splintered chairs and other furniture. Shuffling amidst the debris are two carcass scavengers inadvertently allowed onto the level via the Stairway (Room 52) to The Deep Hollows (Level 7).

Carcass Scavengers (2) [AL N, MV 120' (40'), AC 2, HD 3+1, HP 20, 14, #AT 8, DG paralysis, SV F2, ML +21]

Hidden amongst the debris is an old paymaster's satchel containing 2,000 sp and a gold chain (1,400 gp).

The secret door to the southwest of this room is a nephelite panel that revolves around its central axis, which can be detected through the hairline crack in the otherwise seamless construction.

51. Turms Statues

Two statues of Turms Termax occupy niches on either side of this corridor. The statues are cast of bronze and are identical in appearance, depicting the Thrice-Great in robes patterned with three-pointed stars, his face carrying a look of stern judgment. Both statues are mounted on pivots on black nephelite stands. Careful examination of the statues makes it evident that they are of much more recent construction than the stands they are mounted upon, and only loosely connected to the pivot mechanism within the stands. Turning either statue causes a loud hissing sound to emanate from the western end of the hallway, indicating that the door to the Stairway (Room 52) has either sealed or unsealed, depending on its previous state.

52. Stairway

The blast door to this room is magnetically sealed unless the Turms Statues (Room 51) have been correctly re-oriented. It can be opened by knock or similar magic, but it cannot be picked or forced open.

Past the door, the dungeon returns to hewn earth, without nephelite lining. A carved staircase leads down to the Termaxian Base Camp (Room 19) on The Deep Hollows (Level 7). The staircase is flanked by a pair of alabaster carvings of lithe human women. Both carvings are caryatid columns (see Appendix C, New Monsters, p. 345) and will attack anyone who attempts to descend the stairs without first displaying a Termaxian passkey (see Appendix A, New Magic Items, p. 333).

Caryatid Column (2) [AL N, MV 20' (6'), AC 4, HD 5, HP 31, 15, #AT 1, DG 1d8, SV F5, ML N/A]

53. Bone Yard

Several piles of bones, mostly non-human, fill this room. Hidden amongst the bones is a discarded bone golem. The golem will attack any characters who begin searching the bone piles, gaining surprise on a roll of 1-4 on 1d6.

Bone Golem (1) [AL N, MV 120' (40'), AC 7, HD 8, HP 40, #AT 4, DG 1d6 (sword), SV F4, ML N/A]

54. Treasury

The secret door to the southwest of this room is a nephelite panel that revolves around its central axis, which can be detected through the hairline crack in the otherwise seamless construction.

Secreted within this chamber is a collection of valuables placed here during the fall of Dwimmermount. The hoard includes the following: 14,000 sp; 1,000 gp; a finely-made leather belt embossed with Thulian calligraphy (30 gp); a bronze brooch bearing the head of Turms Termax (60 gp); a wrought gold ring with teardrop amethysts (400 gp); a hammered gold goblet encrusted with carnelians (400 gp); a thick gold choker necklace with diamonds (1,000 gp); and a sword +2, berserking. The *sword* is a straight-bladed late Termaxian weapon, with a silvery-black azoth-infused adamantine steel blade and bronze hilt. All of the treasure is loosely piled without containers.

55. Circular Chamber

A powerful earth elemental stands guard here, blocking passage toward the Stairway (Room 52) to The Deep Hollows (Level 7).

Earth Elementals (1) [AL N, MV 60' (20'), AC 7, HD 12, HP 49, #AT 1, DG 1d8, SV F8, ML + 4

The secret panel in the floor can be detected by the hairline crack that runs through the otherwise seamless nephelite. It pushes open to reveal a 10 foot drop down to an eastbound corridor that leads to the Summoning Room (Room 61).

56. Laboratory

A large steel table and four steel stools have all been pushed up against the western end of the room, next to a heavy nephelite cabinet. The cabinet is closed and locked. Within are a vitreum vials filled with colorful chemicals. For each vial

Chapter

examined, roll 1d6 on the following table to determine its color and effects:

- 1. Blue liquid: acts as a potion of diminution.
- 2. Green powder: acts as a potion of healing.
- 3. Red pellets: acts as a potion of speed.
- 4. Clear liquid: acts as a *philter of love*.
- 5. Yellow liquid: acts as a *potion of poison* (make a saving throw versus Poison or die).
- 6. Orange powder: No effect.

57. Workroom

A single large oak table dominates this room, heavy scratched and marred by years of carpentry and craft work performed on it. Around the work table, six dworgs (see *Appendix C*, *New Monsters*, p. 348) stand on guard against intruders.

Dworgs (6) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 33, 32, 28, 26, 22 19, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

58. Library

Lining this room's walls are sturdy oak shelves filled with hundreds of books. A wooden reading table and set of comfortable chairs furnish its expansive floor. Currently, the chairs are filled by a Termaxian mage and his two bodyguards. The Termaxian is busy studying a tome of Chaotic knowledge (see Appendix A, New Magic Items, p. 333) he found within the library, while his bodyguards keep watch. The Termaxians have set a dozen candles to light the room, as the radiance panels here are broken. The mage and his companions will attack anyone who enters the room except fellow Termaxians.

In addition to the *tome*, the library contains a vast store of mundane books on various arcane subjects. Taken together, they weigh nearly 1,000 lbs. but their value exceeds 30,000 gp. The mage's spell books are neatly piled on one of the shelves.

Bodyguard #1 (1) [AL C, MV 60' (20'), AC 7 (plate & shield), HD F6, HP 30, #AT 1, DG 1d6+4 (sword +1), SV F6, ML +2]

Bodyguard #2 (1) [AL C, MV 60' (20'), AC 6 (plate), HD F6, HP 23, #AT 1, DG 1d10+1 (two-handed sword +1), SV F6, ML +2]

Mage (1) [AL C, MV 120' (40'), AC 2 (ring of protection +1 & cloak of protection +1), HD M6, HP 13, #AT 1, DG 1d4 (dagger) + spells, SV M6, ML +2; Daily Spells: 2 1st, 2 2nd, 2 3rd; Repertoire: 1st-choking grip, detect magic, magic missile, sleep; 2nd-detect invisible, invis-

ibility, mirror image, ogre power; 3rd-dismember, dispel magic, haste, lightning bolt]

The mage possesses a pair of eyes of charming, which he puts on as soon as combat ensues. His ring of protection +1 is a band of moonsilver carved with protective runes, and his cloak of protection +1 has a silver shimmer due to moonsilver threads woven through it. The bodyguard's magic swords are both of Termaxian make, forged of adamantine steel, with hilts stamped with the brazen head of Turms Termax.

59. Ruined Storeroom

The ceiling has collapsed in the northern portion of this room, filling it with rubble. The collapse of the ceiling has smashed a dozen resin crates, and these have spilled shards of vitreum and viscous and foul-smelling liquids onto the floor. The spilled liquids are harmless, serving only to distract from the true danger in this room – its still-unstable ceiling. Characters entering the room must make a saving throw versus Blast to avoid additional falling debris. Those who fail the saving throw suffer 3d6 points of damage.

60. Circular Chamber

There is a secret panel in the floor near the south wall of this room. It can be detected by the hairline crack that runs through the otherwise seamless nephelite. It pushes open to reveal a 10 foot drop down to southbound corridor that leads to the Summoning Room (Room 61).

Three dworgs (see *Appendix C*, *New Monsters*, p. 348) stand guard here with instructions to prevent intruders from reaching the Summoning Room at all costs.

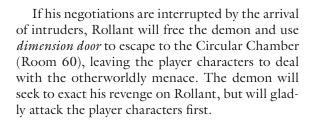

Dworgs (3) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 21, 20, 15, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

61. Summoning Room

This large, circular room is decorated with arcane symbols and runes written in High Thulian. On the floor is a summoning circle of inlaid moonsilver glinting in the illumination of a dozen candles. Looming in the summoning circle is a glabrezu demon (see *Appendix C*, *New Monsters*, p. 351) in heated debate with a Termaxian mage standing just outside the circle. The mage, Rollant, has just conjured this demon, and is now failing – badly – in his attempt to negotiate for its service.

6B-58: Characters studying the books will learn one of the following numbered facts each day: 3-10, 4-2, 4-3, 4-4, 4-5, 4-6, 4-7, 4-8, 4-9, 4-10, 5-1, 5-3, 5-4, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-14, 5-17, 5-18, 5-21, 5-22, and 6-1. All are written in High Thulian.

6B

Glabrezu (1) [AL C, MV 90' (30'), AC 13, HD 10, HP 44, #AT 5, DG 2d6/2d6/1d3/1d3/1d4+1, SV F10, ML +1]

Rollant (1) [AL C, MV 120' (40'), AC 2 (ring of protection +2), HD M7, HP 19, #AT 1, DG 1d4 (dagger) + spells, SV M7, ML +2; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1-choking grip, darkness, protection from evil, sleep; 2-deathless minion, mirror image, web; 3-dismember, lighting bolt, protection from normal missiles; 4-dimension door, fear; Proficiencies: Black Lore, Collegiate Wizardry, Knowledge (Termaxian lore) 2, Sensing Power]

Rollant possesses a *wand of fear* (six charges remaining). The wand is made of a branch of bleached white juniper, its tip carved to resemble a leering skull. His *ring of protection* +2 is a band of moonsilver set with a carved adamant shield.

Piled in the shadows along the western wall is a loose pile of treasure Rollant brought to offer the glabrezu. The offering consists of 8,000 gp; 300 pp; a wrought silver necklace (70 gp); an amber clasp (300 gp); a golden ring fastened in the shape of entwined serpents (600 gp); an embossed leather belt with platinum buckle (700 gp); a diamond-studded nose chain (900 gp); a statuette of the winged bull Haagenti (1,300 gp); a frog idol of Tsath-Dagon (1,400 gp); and an ivory medallion sculpted in the shape of a human skull, with diamond teeth (1,500 gp).

62. The Foundry

All four doors to the Foundry are black nephelite blast doors. Within, the ceiling is noticeably taller than that of other rooms on the level (about 20 feet high) and is held up by four thick nephelite pillars in each of its corners. The ceiling's radiance panels all function, casting a bright white light throughout the room.

The center of the Foundry is filled with an elaborate device constructed from adamantine steel and nephelite. The device consists of six large square molds of steel, an even larger steel ladle on a track, and a convoluted series of nephelite pipes that connect to the floor, ceiling, and walls. A nephelite furnace with orichalcum pipes is built into the eastern wall.

When operational, as it is when the player characters first enter this chamber, a forge master melts various metals in the furnace, which are then scooped out by means of the ladle and then poured into the molds. These molds are left to cool for twelve hours, after which six new dworgs have been created. At present, six more dworgs are nearly ready to be tumbled from their molds. They are not however, active yet, as they require the *energion crystals* (see *Appendix A, New Magic Items*, p. 326) that Esquiva keeps in her possession to become so.

The recipe for creating dworgs is known to the forge master (Fiebras) and the Termaxian mage overseeing this room (Esquiva), but neither is willing to divulge it to outsiders, unless compelled to do so through magical means. To avoid capture, both Esquiva and Fiebras will attempt to flee from this room if combat occurs, heading toward The Great Machine (Room 40) by the fastest means available to them. Before fleeing, they will order the five dworgs and two Termaxian guards currently in The Foundry to slay any interlopers.

Dworgs (5) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 31, 26 (×2), 22 17, #AT 1, DG 1d6+2 (swords), SV D5, ML 0]

Termaxian Guards (2) [AL C, MV 60' (20'), AC 7 (plate armor & shields), HD F6, HP 29, 21, #AT 1, DG 1d6+4 (swords), SV F6, ML +2]

Fiebras (1) [AL C, MV 90' (30'), AC 4 (leather armor +2), HD F5, HP 22, #AT 1, DG 1d6+2 (hand axe +2), SV F5, ML 0; Proficiencies: Command, Craft (forging) 2, Knowledge (Termaxian lore) 2, Siege Engineering]

Fiebras' *leather armor* +2 is a High Thulian linothorax with gold stitching in the breastplate and pteruges. The *hand axe* +2 is of dwarven make, with intricate runes etched along its adamant head.

Esquiva (1) [AL C, MV 120' (40'), AC 2 (cloak of protection +2), HD M7, HP 20, #AT 1, DG 1d4+1 (dagger +1) +spells, SV M7, ML +2; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-charm person, detect magic, hold portal, sleep, unseen servant; 2nd-locate object, invisibility, knock, mirror image; 3rd-dispel magic, fire ball, haste, protection from normal missiles; 4th-dimension door, find treasure; Proficiencies: Alchemy, Knowledge (Ancient lore), Knowledge (Termaxian lore) 2, Magical Engineering 2]

Esquiva carries a wand of cold (eleven charges remaining) and ten energion crystals. The wand,

made of polished bone, has a tip carved to resemble the head of a white dragon. Her *cloak of protection* +2 is stitched with moonsilver threads in the shape of three-pointed stars. Her *dagger* +1 has the curved blade and baroque hilt of Eldritch make.

63. Graffiti

Graffiti has been scrawled on the wall on this small alcove. In low Thulian it reads "We don't need no stinking dwarves!"

64. Scrap Storage

Two dozen resin crates, each four feet cubed, fill this room. Each crate is filled to the brim with 200 lbs. of scrap metal collected from throughout Dwimmermount. The scrap metal is intended for use in The Foundry (Room 62). Mixed in with the scrap metal in the fifth crate is a silver *ring of tele-kinesis*. The ring is fastened in the shape of two fists coming together, but it is heavily tarnished and practically unnoticeable without *detect magic*.

65. Empty Room

Everything that once occupied this room has long since been removed, leaving behind only marks on the floor and walls. In one corner of the room is an empty *power cell* (see *Appendix A*, *New Magic Items*, p. 331). The *power cell* could be recharged in the Power Station (Room 3).

66. Foreman's Quarters

This room was once occupied by the foreman of The Foundry (Room 62). The room contains a bed, a desk, a chair, and a small shelf for books and scrolls, now empty save for a single lit lantern. At the moment, three Termaxian fighters occupy this room. They will attack any intruders.

Fighters (3) [AL C, MV 60' (20'), AC 7 (plate armor & shields), HD F5, HP 32, 22, 17, #AT 1, DG 1d6+2 (swords), SV F5, ML +2]

Each fighter has a *potion of extra-healing* that he will use in combat when reduced to half hit points.

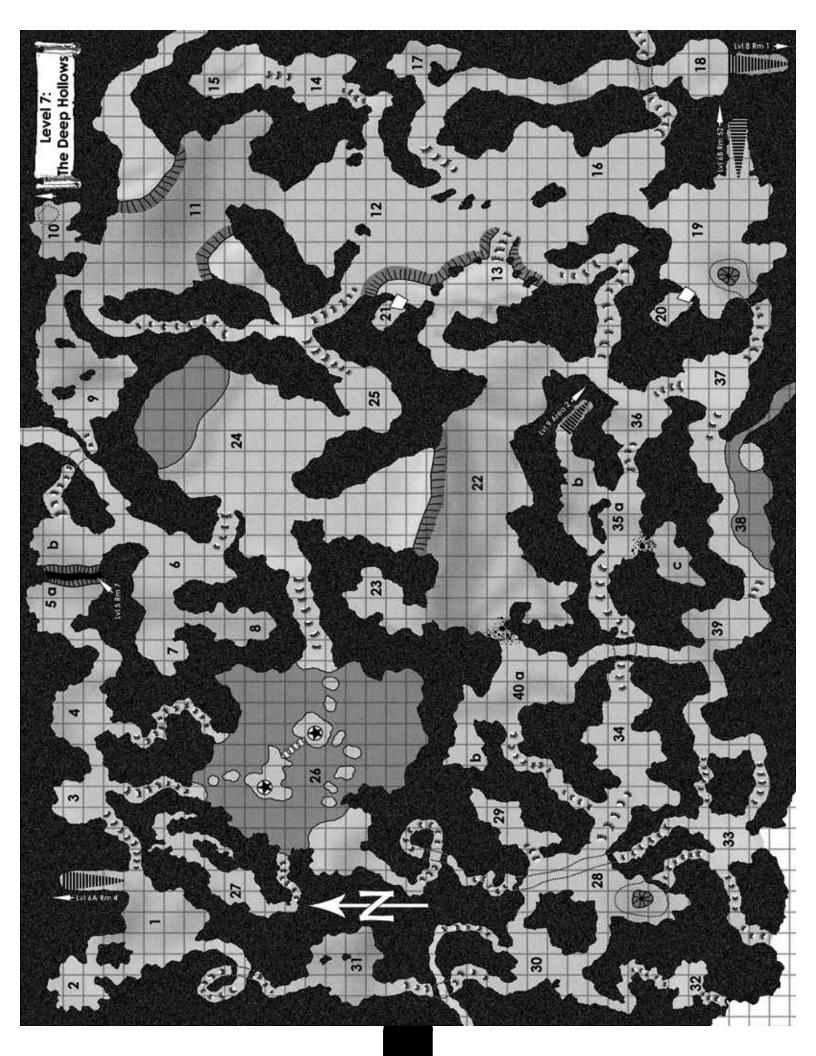

67. Dwarf Scouts

Two dwarves crouch in this open area, keeping their eyes peeled for an activity that might threaten their comrades in the Bulwark (Room 30) and other nearby rooms. If possible, they will flee rather than fight, heading towards the Choke Point

(Room 29) to warn the other dwarves of danger. If pressed, though, they will engage in combat.

Dwarves (2) [AL L, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 22, 15, #AT 1, DG 1d6+2 (swords), SV D5, ML +2]

Level 6B

CHAPTER

The Deep Hollows

Level

7

Overview of The Deep Hollows

are an extensive network of limestone caverns that cut across Dwimmermount and extend into the subterranean world that underlies Telluria (see *Chapter 4*, Vicinity of Dwimmermount p. 63). The Great

cinity of Dwimmermount, p. 63). The Great Ancients were spurred to explore The Deep Hollows during the First Era, as the action of their astral dome in The City (Level 9) drew azoth down from the quintessence of space and infused it into the minerals within the rock. The crystals of the Entry Cavern (Room 1) and Crystal Cavern (Room 25) are the last remnants of these magical mineralogical deposits.

From The Deep Hollows, the Great Ancients delved the mines, collieries, and quarries that became known as the Deep Passages. This activity eventually brought the Ancients into contact with a network of subterranean canals and nightmarish labyrinths dug by the thelidu, ranine, and goblins (see Rooms 32 and 33). These creatures proved hostile to the Ancients, prompting the underground warfare that led to the development of the Perimeter barrier.

WANDERING MONSTERS OF THE DEEP HOLLOWS

Die Roll	Monster
1	Black Pudding (1)
2	Chimera (1-2)
3	Dwimmerdragon (1) †
4	Intellect Devourer (1) †
5	Gorgon (1)
6	Mimic (1) †
7	Thelidu (1-2) †
8	Otyugh (1) †
9	Roper (1-2) †
10	NPC Party (5-8)
11	Giant Slug (1) †
12	Troll (1-8)

 $^{^\}dagger$ see Appendix C, New Monsters, p. 341

The creation of The Reservoir (Level 3B) as a basin for azoth drawn by the astral dome ended the necessity for mining in The Deep Hollows. Thereafter the level was used by forgotten sorcerers to work such wonders as the Mushroom Forest (Room 22), Underground Lake (Room 26), and Anvil of Fire (Room 27). The azoth radiation from the astral dome below makes strange magical phenomenon commonplace in The Deep Hollows, and some believe was responsible for the birth of the dwimmerdragons that have dwelled here since the Second Era.

1. Entry Cavern

This large, open cavern glitters when illuminated, revealing hundreds (roll 1d1000) of gems set into its walls and ceiling. The gems appear to be largely bits of common quartz, with a value of no more than 10 gp each. Provided that one has appropriate tools, they can be easily removed. The gems are set into the walls at varying depths, so the removal time is variable (1d6 rounds). If a gem is removed and held in the bare hand of a human or dwarf for more than a few seconds, it will soften and begin to liquefy, slipping through its possessor's fingers onto the cavern floor. There is evidence of this having happened in the past, as there are several strange crystalline "stains" scattered across the floor. If a gem is placed in the mouth, it will liquefy on the tongue. The crystalline fluid acts like a very minor potion of healing, restoring 1 hit point for each gem that is consumed in this fashion.

Past a hewn archway in the north, stairs ascend to the Store Room (Room 4) of The Ossuaries (Level 6A).

2. Stirge Cave

Though small in size, this dark cavern has an exceptionally tall 30-foot ceiling, at the top of which lurk ten stirges. The stirges swoop down and attack any creature entering the cave carrying any form of illumination. Creatures moving about using, e.g., infravision do not trigger an attack.

Stirges (10) [AL N, MV 30' (10')/fly 180 (60'), AC 2, HD 1, HP 8, 7, 6 (×2), 5 (×4), 3 (×2), #AT 1, DG 1d3 + blood drain, SV F2, ML +1]

Hidden amongst the rocks on the cave floor is a leather bag containing six gems: a rock crystal (75 gp), a sardonyx (100 gp), a bloodstone (100 gp), a citrine (250 gp), a jet (750 gp), and a spinel (750 gp).

3. Damp Cavern

The fine mist emanating from the Underground Lake (Room 26) to the south renders this cavern cold and clammy. The sense of dampness is exacerbated by the water dripping intermittently from where it has condensed on the cavern's many stalactites and stalagmites. Hiding amongst these stalagmites is a roper (see *Appendix C*, *New Monsters*, p. 363), which attempts to surprise any creatures that disturb its lair.

Roper (1) [AL C, MV 30' (10'), AC 9, HD 10, HP 53, #AT 7, DG Grab (×6)/5d4, SV F10, ML 0]

Half-visible lying amidst the stalagmites past the roper is the desiccated corpse of a fighting man. His body seems to have been stripped of most of his possessions, but he still wears his backpack. It contains a treasure map leading to an abandoned mine in The Starfall (see *Chapter 4, Vicinity of Dwimmermount*, p. 53) where gems worth a total of 19,000 gp can be found. His *sword* +2, +3 vs. giants lies not far away, still in its scabbard. Unsheathing it reveals a starmetal blade of High Thulian make with a single blood groove.

4. Stone Carvings

The northern walls of this cave are covered with richly detailed carvings which depict a highly advanced city of high walls and towering spires, over which fly vehicles that resemble seafaring vessels without sails. These carvings extend from floor to ceiling (about 20 feet) and are in remarkable condition, showing no signs of damage or wear. Characters who visit the City of the Ancients (Level 9) below will find its ruined grandeur to be reminiscent of the architecture depicted in this cave.

5. Chasm

A chasm 200 feet deep divides this chamber into two halves ('a' and 'b'). The chasm is roughly 10 feet wide along its entire length.

A howling wind blows constantly into the 'a' side of the chasm. The source of the wind is a large hole in the ceiling, and characters who climb or fly within 10 feet of the hole must make a saving throw versus Blast each round or be blown back towards area 'a'.

Characters who succeed on the saving throw reach a tunnel ascending northward at a 25-degree slope. After 550 feet, the tunnel becomes a vertical shaft rising another 100 feet – the Bottomless Pit (Room 7) of The Halls of Greater Secrets (Level 5). While traversing this tunnel and shaft, charac-

Chapter 1 7

ters must continue to make saving throws every minute (6 rounds). If a character fails one of these saving throws, he is lifted off his feet by the winds and must make a saving throw versus Paralysis. If the saving throw is successful, the character is transported back to the Bottomless Pit in a strangely slow – but safe – fall that takes 10-15 minutes. Those who fail are similarly transported, but they are buffeted more fiercely by the wind, suffering 1d6 damage every minute (6 rounds) of their fall.

The 'b' side is guarded by a chimera, which has been trained as a watch-beast by the trolls who dwell in the nearby Troll Lair (Room 6). If intruders enter from side 'a', the chimera will attack from the air using its breath weapon to prevent them from crossing to side 'b'. (It will not fly within range of the hole to the Bottomless Pit.) The chimera has been trained to alert its masters should anyone enter from or reach side 'b', and will flee to the Troll Lair (Room 6) should that occur.

Chimera (1) [AL C, MV 120' (40')/fly 180 (60'), AC 5, HD 9, HP 34, #AT 5, DG 1d3/1d3/2d4/2d4/3d4 + breath, SV F9, ML +1]

6. Troll Lair

Amidst the piles of bones and offal scattered around this cave squat four vicious trolls. Should combat ensue, one troll will run to fetch the chimera from the Chasm (Room 5), if it has not already been slain. If the battle goes against the trolls, or they break morale, they will retreat toward the Troll Chief's Lair (Room 8), where their two-headed chieftain dwells.

Trolls (4) [AL C, MV 120' (40'), AC 5, HD 6+3 HP 39, 33, 30, 26, #AT 3, DG 1d6/1d10, SV F6, ML +2]

Northeast of the troll lair is a tunnel that leads into the subterranean network that surrounds Dwimmermount. It is from here that the trolls arrived when Dwimmermount's arcane barriers fell a few months ago. See *Chapter 4*, *Vicinity of Dwimmermount* (p. 74), for a detailed discussion of these passages.

7. Treasure Cave

In this *cul-de-sac*, the members of the nearby troll tribe (from Rooms 6 and 8) have piled up the treasure they have accumulated. Their hoard consists of 7,000 cp; 5,000 gp; an azurite (50 gp), a blue quartz (50 gp), a zircon (100 gp), a moonstone (100 gp), a smoky quartz (250 gp), a *censer of cursed summoning* (see *Appendix A*, *New Magic Items*, p. 325), a *potion of invisibility*, and a *potion of climbing*.

8. Troll Chief's Lair

Grummar, a giant two-headed troll (see *Appendix C*, *New Monsters*, p. 372) dwells within this narrow cave. Smarter than others of his kind, and considerably more vicious, he has become the leader of the trolls on this level. Thanks to his efforts, the trolls are thriving. They store their growing trove of valuable items in their Treasure Cave (Room 7).

Grummar, Giant Two-Headed Troll (1) [AL C, MV 120' (40'), AC 5, HD 10, HP 45, #AT 3, DG 1d6/1d6/1d10, SV F10, ML +2]

9. Whistling Cavern

Every 1d4 turns, a loud whistling sound emanates from this cavern. It can be heard from up to 100 feet away. The whistling is the result of a downdraft of air flowing through several large, pockmarked stalactites. The whistling is completely innocuous.

10. Shrine of the Brazen Head

A ruddy glow emanates from this side cave, cast by a ring of torches alit within. At the cave's eastern end is a pile of stones arranged to form a crude dais upon which rests a brazen head (see Appendix A, New Magic Items, p. 325). The brazen head was found and placed here by the troglodytes who dwell in the Troglodyte Redoubt and the Troglodyte Lair (Rooms 11 and 12). The troglodytes have no real understanding of the brazen head's powers and instead treat it as an idol, an attitude encouraged by their allies, the Termaxians of Base Camp (Room 19).

At all times, there are 8 troglodyte guards on duty in this cave. There is also a 40% chance that Ermenjart (Room 19) is here as well, attempting to communicate with Turms Termax. If so, he will be accompanied by two Termaxian guards.

Troglodyte Guards (8) [AL C, MV 120' (40'), AC 4, HD 2 HP 11 (×2), 9 (×3), 7, 6, 5, #AT 3, DG 1d4/1d4/1d4, SV F2, ML +2]

In the center of north wall, about 7 feet above the floor, a 5-foot diameter stone chute enters the cave. The chute runs northwest at a 30 degree slope for 325 feet, eventually terminating at a trap door in the Portrait Room (Room 10) of The Ossuaries (Level 6A).

11. Troglodyte Redoubt

The approach to this cavern is fouled by a nauseating scent secreted from a stinky, slimy coating on the rocks and rubble. The slime glistens sickly Level 7

in the light of a half-dozen smoky torches posted around the cavern. The stench is so horrid that all humans and demi-humans entering the cave must make a saving throw versus Poison or suffer -2 to attack rolls.

The source of the slime is a gang of ten troglodytes, who have used their natural camouflage to disguise themselves in the shadows of the torches that punctuate the floor between the ledges to the northeast and southwest. They will attack any intruders that attempt to make their way into the Troglodyte Lair (Room 12), gaining surprise on a roll of 1-4 on 1d6. Once the Troglodytes attack, three Termaxian guards will reveal themselves on each of the ledges 10 feet above (six total). The Termaxians will use longbows to aid the troglodytes against any foes. If the battle goes against the troglodytes, they will attempt to retreat to their Lair, where more troglodytes can be found.

Troglodytes (10) [AL C, MV 120' (40'), AC 4, HD 2, HP 15, 12 (×2), 10, 8 (×2), 3 (×3), 2, #AT 3, DG ld4/ld4/ld4, SV F2, ML +2]

Termaxian Guards (6) [AL C, MV 120' (40'), AC 6 (banded mail & shields), HD F5, HP 24, 22, 21 (×2), 20 (×2), #AT 1, DG 1d6 (short swords) & 1d8 (long bows), SV F5, ML +1]

The southwestern ledge can be easily reached from the Troglodyte Lair (Room 12) or the Crystal Cave (Room 25), but there is nothing of value to be found there.

There is no way to reach the northeastern ledge except direct ascent. Up on the ledge, characters will find a 10 foot bone-and-wood ladder. The Termaxians used this ladder to scale to the ledge, and then pulled it up when they reached the top. Trekking northeast from the ledge eventually leads into the network of subterranean tunnels that surrounds Dwimmermount. See *Chapter 4, Vicinity of Dwimmermount* (p. 63), for a detailed discussion of these passages.

12. Troglodyte Lair

Like the Troglodyte Redoubt (Room 11), this cavern is befouled by a horrendous stench from the secretions of its troglodyte residents. A few smoky torches here and there only make the air fouler. All humans and demi-humans entering the cave must make a saving throw versus Poison or suffer -2 to attack rolls.

The troglodytes, who number a dozen plus their chieftain Xochotl, will camouflage themselves among the many stalagmites within the cave as soon as they hear fighting in any of the adjacent rooms. So hidden, they will attack any intruders that enter, gaining surprise on a roll of 1-4 on 1d6. If not previously slain, the troglodytes from the Stone Dais (Room 13) will begin raining arrows down one round after any fighting begins here. So long as the chieftain lives, the troglodytes will not break morale, though, if the fight goes against them, they will retreat either toward the Midden (Room 14) or the camp of the Dworg Defenders (Room 16).

Troglodytes (12) [AL C, MV 120' (40'), AC 4, HD 2, HP 15, 12 (×2), 9 (×3), 8 (×2), 7, 6, 4, 3, #AT 3, DG ld4/ld4/ld4, SV F2, ML +2]

Xochotl, Troglodyte Chieftain (1) [AL C, MV 120' (40'), AC 7, HD 6, HP 39, #AT 3 or 1, DG 1d4/ld4/ld4 or 1d10+5 (two-handed sword +2), SV F6, ML +4; Proficiencies: Combat Reflexes, Intimidation, Weapon Focus (swords)]

Xochotl's two-handed sword +2 is an ancient weapon dating to the days when the Thulians were barbarian conquerors, with a five-foot adamant blade bearing warlike runes along its broad blood groove. The chieftain also carries a rod of opening (see Appendix A, New Magic Items, p. 331) with seven charges remaining. He uses it to annul the explosive runes on the door to the Troglodyte Treasure Cave (Room 21).

13. Stone Dais

This raised area overlooks both the Troglodyte Lair (Room 12) and the camp of the Dworg Defenders (Room 16) 10 feet below, allowing the six troglodytes stationed here with shortbows to defend both areas. The dais is illuminated by smoky torches posted on the stalagmites along its edge.

Troglodytes (6) [AL C, MV 120' (40'), AC 4, HD 2, HP 12, 11 (×2), 10, 8 (x2), #AT 3, DG ld4/ld4/ld4 or ld6, SV F2, ML +2]

14. Midden

An overpowering smell of decay suffuses this cave, which the nearby troglodytes use as both a garbage heap and latrine. The entire cave is filled with disgusting filth, which in places lies hip deep for a man. Any character that passes through the cave with his skin exposed, or without other mundane or magical precautions, must make a saving throw versus Poison or lose 1 point of Constitution after a period of infection lasting 1d4 days. The loss will become permanent unless removed by *cure disease* within seven days following infection.

Chapter 1 7

15. Otyugh Lair

Dwelling within this chamber is an otyugh (see *Appendix C, New Monsters*, p. 360), which the troglodytes have allowed to live here as it is consumes their refuse. It also occasionally fights on their behalf, which is why the troglodytes in their Lair (Room 12) may attempt to lead particularly powerful or troublesome intruders into this area.

Otyugh (1) [AL C, MV 60' (20'), AC 6, HD 8, HP 47, #AT 3, DG ld8/ld8/ld4+l, SV F8, ML +2]

16. Dworg Defenders

This cave forms a crucial junction between the Troglodyte Lair (Room 12), the Termaxian Base Camp (Room 19), and the Stairs Down (Room 18). A series of torches posted near each entrance allow its defenders, a squad of dworgs (see *Appendix C, New Monsters*, p. 348) led by a Termaxian mage, to easily see intruders. If fighting breaks out, they will be assisted by the troglodytes of the Stone Dais (Room 13) to the northwest. The dworgs will retreat to the Termaxian Base Camp (Room 19) if their morale breaks or they lose more than half their number in combat against intruders.

Dworgs (8) [AL C, MV 60' (20'), AC 7 (plate & shield), HD Dv5, HP 33, 29, 26, 25, 24, #AT 1, DG 1d8 (swords), SV D5, ML 0]

Termaxian Mage (1) [AL C, MV 120' (40'), AC 11 HD M6, HP 15, #AT 1, DG 1d4 (dagger) + spells, SV M6, ML 0; Daily Spells: 2 1st, 2 2nd, 2 3rd; Repertoire: 1st-shield, sleep; 2nd-mirror image, web; 3rd-fire ball, hold person; Proficiencies: Battle Magic, Knowledge (Termaxian lore) 2, Magical Engineering]

The natural stone steps to the east lead into the network of subterranean tunnels that surrounds Dwimmermount. The troglodytes on this level entered from this passage when the arcane barrier around Dwimmermount was lowered. See *Chapter 4*, *Vicinity of Dwimmermount* (p. 63), for a detailed discussion of these passages.

17. Fungi Cave

A riot of brightly-colored fungi and lichens fill this room, which gives it an "earthy" smell. Floating above the fungi is a single gas spore (see *Appendix C*, *New Monsters*, p. 350).

Gas Spore (1) [AL N, MV 30' (10'), AC 0, HD 1 hp, #AT 1, DG special, SV F1, ML +4]

18. Stairs Down

At the southern end of this circular cavern, a set of ancient carved stairs winds downward. After some hundred feet, they terminate at the Entrance (Room 1) to The Prison (Level 8) (or the arcane barrier sealing that level off, if it has not been deactivated). The stairs, however, are blocked by a 10 foot tall stone golem (see *Appendix C*, *New Monsters*, p. 353) in the shape of an Ancient warrior. The golem attacks any parties that attempt to pass by, unless they present a *brooch of the Terrim* (see *Appendix A*, *New Magic Items*, p. 325). Up to six creatures will be granted passage per *brooch*.

Stone Golem (1) [AL N, MV 60' (20'), AC 4, HD 14, HP 63, #AT 1, DG 3d8, SV F14, ML +4]

19. Termaxian Base Camp

Past an archway set into this cave's eastern wall, a set of stairs ascends to the Stairway (Room 52) of The Manufactory (Level 6B). Near the western edge of the cave, a sinkhole punctures the floor. It leads to Jarnabal's Lair (Room 37). Northwest of the sinkhole, a steel door has been crudely installed into a cave mouth. In between, the floor is littered with bed-rolls, tents, and other camp gear, all illuminated by a series of four lanterns hanging from stalactites.

A party of Termaxian cultists, led by the mage Ermenjart, have established a camp here, hoping both to make their way to The Prison (Level 8) and to make an eventual assault on The City of the Ancients (Level 9). The former is their primary goal, but Nilus' failures with The Great Machine (Room 40) on The Manufactory (Level 6B) to lower the arcane barriers to the Prison have left them stymied. They therefore have turned their attention towards The City of the Ancients below. An initial Termaxian party bearing brooches of the Terrim was granted passage by the dwimmerdragons that guard the stairs to Level 9. A second party snuck past using invisibility 10' radius, an act that antagonized the dwimmerdragons. Since then relations with the dwimmerdragons have been violent.

The Termaxian leader, Ermenjart is encamped in the cave past the steel door (Room 20). He will quickly enter any battles he hears going on at the base camp, and will fight on viciously even if his underlings face defeat. Those underlings consist of Ermenjart's apprentice, a mage named Tibaut; two fighters; and a small number of dworgs.

Dworgs (4) [AL C, MV 60' (20'), AC 7 (plate armor), HD Dv5, HP 29, 25, 21, 11, #AT 1, DG 1d10+2 (polearms), SV D5, ML 0]

Level 7

Termaxian Fighters (2) [AL C, MV 60' (20'), AC 7 (plate armor & shields), HD F7, HP 37, 35, #AT 1, DG 1d6+4 (swords), SV F6, ML +1]

Tibaut (1) [AL C, MV 120' (40'), AC 6 (bracers of armor (AC 3)), HD M7, HP 21, #AT 1, DG 1d4 (dagger) + spells, SV M7, ML 0; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1-burning hands, charm person, detect magic, magic missile, sleep; 2-hypnotic pattern, knock, invisibility, phantasmal force; 3-dismember, earth's teeth, fire ball, hold person; 4-confusion, fear, wall of ice; Proficiencies: Alchemy, Knowledge (Termaxian lore) 2, Magical Engineering 2, Mapping]

Tibaut carries a wand of magic missiles (eight charges remaining). He has also has a Termaxian passkey (see Appendix A, New Magic Items, p. 333), and slippers of spider climbing. The wand somewhat resembles a sleek brass crossbow, and is in fact an attempted Termaxian replica of an Ancient weapon. The slippers are made of clingy red fabric with a black web pattern and blue soles. Tibaut's spell books can be found in one of the tents in the encampment.

20. Ermenjart's Cave

The small cave here is well let by a brass lamp sitting on a large crate alongside some thick books. The rest of the cave is furnished with a thick bed-roll, several blankets, and a few small wooden boxes.

The Termaxian mage Ermenjart uses this cave as his personal dwelling. Ermenjart is determined to be the Termaxian cultist who succeeds in finding his way to The Prison (Level 8), seeing it as his destiny. However, he is currently frustrated in his attempts and it is slowly driving him mad, making him far more prone to remaining in combat against his enemies rather than fleeing.

Ermenjart (1) [AL C, MV 120' (40'), AC 5 $(cloak\ of\ protection\ +2\ \&\ ring\ of\ protection\ +2),$ HD M9, HP 27, #AT 1, DG 1d4+1 (dagger +I) + spells, SV M9, ML +2; Daily Spells: 3 1st, 32nd, 33rd, 24th, 15th; Repertoire: 1-burning hands, charm person, detect magic, magic missile, protection from evil, sleep; 2-detect invisible, ESP, knock, invisibility, phantasmal force, web; 3-dismember, dispel magic, earth's teeth, explosive runes, fireball, protection from normal missiles; 4-confusion, dimension door, fear, find treasure, wall of ice; 5-cloudkill, conjure elemental, mass infravision, teleport; Proficiencies: Alchemy 2, Knowledge (Termaxian lore) 2, Leadership, Magical Engineering, Unflappable Casting]

Ermenjart carries a *staff of wizardry* (thirteen charges remaining). This mighty implement is a five-foot staff of oak shod in pure orichalcum and carved top-to-bottom with runes of power. His *cloak of protection* +2 is made of dwimmersilk with three-pointed moonsilver stars stitched along its exterior. His *ring of protection* +2 is a circular band of pure moonsilver etched with protective glyphs. His *dagger* +1 is a sharply-curved adamantine steel weapon with a hilt shaped like a leering demon. Within the boxes scattered around the room, Ermenjart keeps 4,000 sp and 2,000 gp. His spell books are on the large crate, which he uses as a lectern.

21. Troglodyte Treasure Cave

A sturdy wooden door has been set into the cave wall here. The door is both locked and trapped with *explosive runes* placed on the door by Ermenjart (Room 19) as a favor to the troglodyte chieftain. The *runes* deal 5d6 points of damage to all within a 10 feet radius and no saving throw is allowed if not detected and removed by a mage. The *runes* can also be removed by the chieftain's *rod of opening* (see *Appendix A*, *New Magic Items*, p. 331). The chieftain can be found in the Troglodyte Lair (Room 12).

Inside the cave is the following: 6,000 cp; 2,000 ep; a bone medallion (20 gp); a brass goblet with quartz ornaments (20 gp); a wrought copper ring set with an obsidian (20 gp); a brass belt buckle (30 gp); a bronze diadem with lapis lazuli (60 gp); a bronze medallion bearing the visage of Turms Termax (100 gp); a wrought silver necklace (400 gp); a wrought silver hoop earring (500 gp); a wrought gold seal bearing the sign of House Sklero (700 gp); a wrought gold seal of House Zarides (700 gp); a wrought platinum goblet (1,500 gp); a silver choker studded with opals (1,700 gp); a potion of undead control; and a bag of tricks (see Appendix A, New Magic Items, p. 324).

22. Mushroom Forest

The northern half of this large cave is a stony plateau. The plateau overlooks a forest of giant mushrooms that spreads itself throughout the southern extent of the cavern. Most of the mushrooms stand as tall as a man, and a few even reach twice that height, taller than the plateau.

Though the mushrooms appear unwholesome, being sickly shades of green and yellow with red and purple veins, they are actually quite nutritious, which is why the troglodytes forage from these fungi to supplement their diet. Cavern locusts also enjoy eating the mushrooms, and there are currently ten of these creatures hopping amidst them. The locusts flee if approached, but if forced into

Chapter 1 7

combat will spend their first round making a highpitched whine that has a 20% chance of attracting wandering monsters.

Cavern Locusts (10) [AL N, MV 60' (20')/fly 180' (60'), AC 5, HD 2, HP 16 (×2), 13, 10 (×2), 9 (×2), 7, 6, 3, #AT 1, DG 1d2 or 1d4 or special, SV F2, ML -3]

23. Bat Cave

The floor of this dismal cave is covered with a thick coating of bat guano. Hanging from the ceiling above are the manufacturers of this refuse: six giant vampire bats, which drop down to attack any warm-blooded creature that enters their lair.

Giant Vampire Bats (6) [AL N, MV 30' (10')/fly 180' (60'), AC 3, HD 2, HP 16, 13, 12, 9, 7, 4, #AT 1, DG 1d4 + paralysis, SV F1, ML 0]

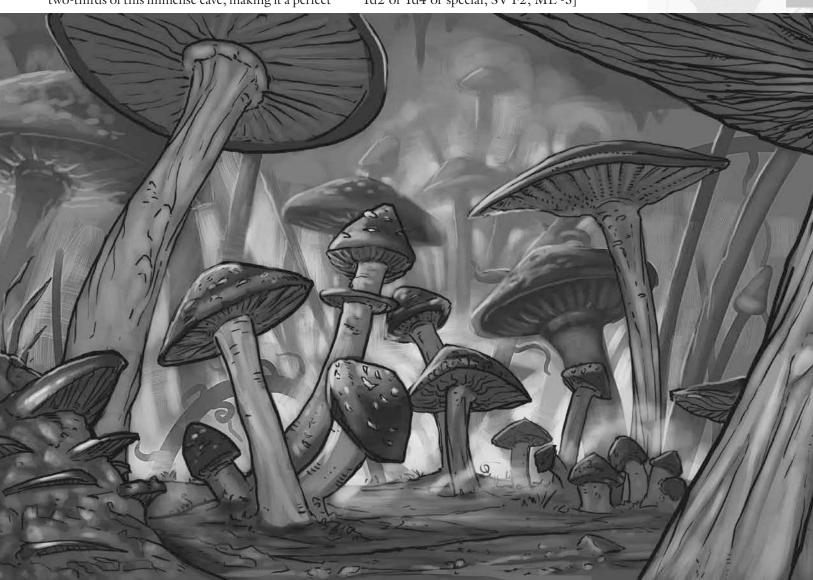

24. Pool

A field of ordinary mushrooms fills more than two-thirds of this immense cave, making it a perfect grazing area for a nest of 12 cavern locusts. The locusts behave similarly to those in the Mushroom Forest (Room 22).

While perfectly harmless to the locusts, the mushrooms in this room are poisonous to humans and demi-humans. Characters who consume even a handful of mushrooms must make a saving throw versus Poison or fall unconscious for 1d4 hours. The unconscious character can be awakened safely through the application of *remove poison*. Doing so in any other way results in the character suffering 2d10 points of damage and a –2 penalty to hit and his armor class for the remainder of the time that he would otherwise have been asleep.

In the northeast corner of the cave is a cold freshwater pool that is about 30 feet deep at its center. The pool is filled with eyeless albino cave fish, crayfish, and eels. Also living within the pool is a crystal ooze (see *Appendix C, New Monsters*, p. 347), which attacks anyone who either enters or comes close to the surface of the pool.

Cavern Locusts (12) [AL N, MV 60' (20')/fly 180' (60'), AC 5, HD 2, HP 16, 13 (×2), 12 (×2), 11, 10 (×2), 9, 8, 7, 5, #AT 1, DG 1d2 or 1d4 or special, SV F2, ML -3]

Crystal Ooze (1) [AL N, MV 10' (3')/swim 30' (10'), AC 1, HD 4, HP 29, #AT 1, DG 4d4 + acid & paralysis, SV F4, ML N/A]

At the bottom of the pool lies a *sword* +1, +3 *vs. regenerating monsters*. If cleaned of some light algae growth, the starmetal blade will be seen to carry the name *Eater of Trolls* in High Thulian. Trolls facing this weapon have their morale lowered as if confronted by fire.

25. Crystal Cave

Numerous outcroppings of green, translucent crystal dot this cave. Given a day's work, someone skilled in either mining or gem cutting could extract 2d20 crystals from these outcroppings, each of which would be worth 500 gp. Close examination will reveal the traces of previous mining conducted by the Great Ancients when they created the Crystal Resonance Chamber (Room 48) in the Manufactory (Level 6B).

26. Underground Lake

A cold lake of murky water fills the majority of this cavern. The cavern's ceiling is 40 feet tall and the lake is similarly deep. Nearly a dozen rocky outcroppings emerge from the surface of the lake, on two of which stand limestone statues about 8 feet tall. One statue depicts Turms Termax and the other his lover, Sarana. Both statues are sculpted with outstretched arms and face one another from their separate islands.

A rickety wooden bridge connects the two islands. Anyone walking on it must make a proficiency throw with a target value equal to 2 plus their encumbrance in stone. Modify the throw by the character's DEX adjustment. Characters with Acrobatics proficiency gain a +2 bonus if their encumbrance is 6 stones or less, while characters with Cat Burglary proficiency get a second throw at -4 if they do not succeed. Characters who fail at the proficiency throw slip through one of the many gaps in its planks, tumbling into the water below. Hidden in the water is a cave kraken (see *Appendix C, New Monsters*, p. 346), a magical octopoid beast that only attacks creatures who enter the lake itself.

Cave Kraken (1) [AL C, MV swim 90' (30'), AC 7, HD 8, HP 37, #AT 8 or 1, DG 1d8 (×8) or 1d10, SV F8, ML +2]

At the base of each statue lies a collection of items—swords, rings, cloaks, etc.—finely sculpted from what appears to be dried mud. Touching them causes them to fall apart and there is evidence that

this has happened in the past. *Detect magic* reveals that these sculptures have a faint trace of magic about them. A mage or a dwarf will also recognize that many of the sculptures look exactly like various magic items, right down to the minutest of details. That is because these sculptures *were* magical items at one time and have been drained of their power by the statues (see below).

If a permanent magic item (that is, not a potion, scroll, wand, or similar item) is placed at the foot of one of the statues, the eyes of the statue briefly glow and the item placed there is turned to mud. At the same time, a bright light will briefly illuminate the depths of the lake as a different magic item is created through the ritual sacrifice. Moments later, the kraken will extend several tentacles from the lake and lay the new item at the foot of the statue. The item the kraken chooses is random, determined by the following table:

RITUAL SACRIFICE RESULT

Die Roll	Item
1	brooch of the Terrim †
2	net of snaring †
3	scarab of protection
4	horn of Valhalla†
5	long sword +1, dancing
6	amulet against possession †
7	crystal ball
8	cube of frost resistance
9	short sword -2 (cursed)
10	shield AC 9 (cursed)

 $^{^{\}dagger}$ see Appendix A, New Magic Items (p. 323)

Roll again if an item is rolled more than once. If all ten items on the chart are used, the Judge can select another item of his choice, which will have a 20% chance of being cursed.

27. Anvil of Fire

In the center of this cave stands a large metal anvil; not far from it lie a pair of tongs and a hammer. The cave floor surrounding the anvil is scorched, as if from a very potent fire. All three tools radiate magic, if detected.

If the anvil, tongs, or hammer are touched or disturbed in any way, a fire elemental is summoned into the room above the anvil. The fire elemental will attack any creature or creatures which touched any of the three tools. If defeated, the fire elemental will explode into a shower of sparks which suffuses the anvil, tongs, and hammer.

Once suffused with elemental fire, the tools will glow as if white hot, but none of the items will be hot to the touch nor will they cause any harm when held. The glow will last for one turn (ten minutes), and during this time if the tools are used together to work on a suit of metal armor or a metal weapon, they will impart a permanent bonus into the item so worked. Five minutes of work will grant a bonus of +1 while ten minutes of work will grant a bonus of +2. The bonus is in addition to any existing bonus that an item already possesses, though no item can have its bonus increased to more than +3. One fire elemental can be summoned per day.

Fire Elemental (1) [AL N, MV 120' (40'), AC 9, HD 12, HP 60, #AT 1, DG 2d8, SV F12, ML +4]

28. Slimy Cave

The floor of this cavern, along with some its walls and ceiling, are partly coated with a gooey slime that slows movement to two-thirds the usual rate and imposes a –1 penalty to all attack rolls and saving throws. The slime was secreted by a giant slug (see *Appendix C*, *New Monsters*, p. 366) that came up through the sinkhole that leads to the Stone Foyer (Room 33) and is now searching for fungi and decaying matter to eat.

Giant Slug (1) [AL N, MV 60' (20'), AC 1, HD 12, HP 62, #AT 1, DG 1d12 + acid, SV F12, ML +2]

29. Stalactite Cave

On the floor of this dark cave lie the skeletons of two men, each wearing rusted plate armor and carrying similarly rusted swords and shields. One wears a backpack. Both show evidence of having been repeatedly punctured by large pointed objects strong enough to penetrate their armor. The pair were slain by the thirteen piercers (see *Appendix C, New Monsters*, p. 361) that hang from the ceiling and will attempt to repeat their success against any who enter their lair.

Piercers (1) [AL N, MV 10' (3'), AC 6, HD 4, HP 27, 25, 22, 20 (×2), 19 (×2), 18, 17 (x2), 16, 13, 10, #AT 1, DG 4d6, SV F4, ML +2]

The weapons and armor on the skeletons are valueless, but the backpack contains 1,000 gp, a potion of extra-healing, and a treasure map leading to a ruined wizard's tower in The Demon's Claws (see *Chapter 4*, *Vicinity of Dwimmermount*, p. 53) where 17,000 gp and a staff of power can be found.

Level 7

7-35a: If befriended, the dwimmerdragons can reveal the following numbered facts to the characters: 2-1, 3-8, 3-9, 3-10, 3-11, 3-12, 4-2, 4-4, 4-7, 5-11, 6-1.

Given Dwimmermount's history, Razylymvaer is at least 900 years old and probably 1,500. In ACKS terms, he is a venerable dragon, a much tougher challenge than in LL. For a challenge closer to that in the original Dwimmermount, assume Razylymvaer is merely the oldest living descendant of the dwimmerdragons who made the original alliance with the Terrim and build him as a Mature Adult (12 HD) dragon.

Chapter 1 7

30. Brain Demons

A recently deceased man hangs upside down from a stalactite here, his legs tied to the stone by the remains of the cloak he wore in life. The corpse's skull has been cleanly opened and emptied of contents, leaving just a white, empty orifice where brain-matter should reside. Two thelidu (see *Appendix C, New Monsters*, p. 371), recently arrived from the sinister realm of Y'golcyak, meditate crosslegged near the body.

Yesterday the thelidu captured the man, a Termaxian cultist, and used their mental powers to interrogate him for information about the surface-world explorers who have recently entered this level. Unfortunately, the process resulted in the total insanity of the cultist before he could impart much information. His brain was, at least, tasty. The thelidu are more than happy to see the appearance of the characters, whom they hope will provide them with more useful data and more calories.

Thelidu (2) [AL C, MV 120' (40'), AC 4, HD 4+3, HP 25, 23, #AT 3 + mental powers, DG 1d6/1d6/1d4, SV M5, ML +1]

The thelidu carry 500 gp each. These coins are bizarre asymmetrical polyhedrons with alien glyphs on them (currency of their mad realm). One of the thelidu carries a *war hammer* +2 he took from the deceased cultist. The hammer is of Termaxian make, its adamant hammer-heads each carved in the shape of Turms' face.

Winding north and west from this room is a tunnel that leads into the subterranean network that surrounds Dwimmermount. See *Chapter 4*, *Vicinity of Dwimmermount* (p. 63), for a detailed discussion of these passages.

31. Clear Cave

Except for a couple of rock curtains, this cave is clear of most obstacles. The stalagmites and stalactites that formerly obstructed passage through it have been systematically broken off, leaving behind a collection of stumps on the floor and ceiling.

32. Exit Cave

A passageway (marked with an "S" on the map) is hidden behind a pile of rocks. The passageway leads into Y'golcyak, the subterranean realm where the thelidu and other equally frightening beings make their homes. While the Perimeter barrier was activated, such creatures were kept out of Dwimmermount, but with the Perimeter's deactivation, they can freely enter. See *Chapter 4*, *Vicinity of Dwimmermount* (p. 63), for a discussion of the

subterranean networks around Dwimmermount; and *Chapter 6*, *Overview of the Dungeon* (p. 74), for details on the arcane barrier.

Lurking in the cave is an ally of the thelidu, an intellect devourer (see *Appendix C, New Monsters*, p. 354), which acts as a guardian of the passageway.

Intellect Devourer (1) [AL C, MV 60' (20'), AC 5, HD 6, HP 26, #AT 4 + mental powers, DG 1d4 (x4), SV M6, ML +2]

33. Stone Foyer

Six passageways wind away from this open cavern. Four of these have messages written in yellow chalk on the walls visible from the cavern. The two southward-facing passages have messages that read "To the Stygian Depths" written in Low Thulian (Common), while the two eastward-facing ones read "Beware! Dragons!" in the same tongue.

Now that the Perimeter barrier has been deactivated, the southward-facing passages lead into the subterranean network that surrounds Dwimmermount.

34. Cave of Bones

Piles of bones fill this long cavern. The bones are a mixture of types, most of them belonging to troglodytes and trolls, but more than a few to men or elves. Many of the bones seem to have been broken by powerful blows, while others appear corroded by acid of some sort. An aroma like garlic hangs over the entirety.

The bones were piled up here by the dwimmer-dragons dwelling in Rooms 35-39 as a warning to others not to disturb their lair. Amongst the bones can be found two bronze goblets, each worth 150 gp, which the dragons overlooked when gathering their hoard (Room 35c).

35a. Razylymvaer's Lair

The strong odor of garlic overwhelms the sense of smell of characters entering this cave, and a faint yellow-brown mist clings to the occasional hollows in the stone. It is here that Razylymvaer, the patriarch of the dwimmerdragon brood (see *Appendix C, New Monsters*, p. 348) of The Deep Hollows, make his lair.

Though Chaotic, Razylymvaer and his offspring long ago entered into an agreement with the Terrim to protect the entrance to The City of the Ancients (Level 9) in exchange for hunting rights in the city's ruins. The dragons have upheld this bargain for untold centuries. Though they have no love for the Terrim, they recognize their power and see the treaty between them as being to their advantage.

Because of their treaty, Razylymvaer and the other dwimmerdragons will not harm or halt parties bearing a brooch of the Terrim (see Appendix A, New Magic Items, p. 325), provided they are not attacked first. However, they will defend themselves if bearers strike the first blow – this is not considered a breach of their agreement with the Terrim. Up to six creatures will be allowed passage per brooch.

The dwimmerdragons initially allowed a small group of Termaxian cultists bearing brooches of the Terrim to pass to the City. A second party snuck past them using invisibility 10' radius, an act which has provoked outrage in the dragons. Since then a state of war has existed between the dwimmerdragons and the Termaxians at the Base Camp (Room 19), who have promised violence if the dragons refuse to admit the entirety of their cult.

Even if characters do not possess a *brooch*, the dwimmerdragons can be helpful if approached peaceably. They speak both High and Low Thulian, as well as their own tongue, and know a fair bit about both the history of Dwimmermount and the Terrim, though whether they are willing to share that information depends on their reaction to any who encounter them.

Razylymvaer (1) [AL C, MV 90' (30'), AC 12, HD 20, HP 118, #AT 4, DG 3d4/3d4/5d8/5d8 + breath, SV F20, ML +3; Daily Spells 3 1st, 3 2nd, 3 3rd, 3 4th, 2 5th; Repertoire: 1st-auditory illusion*, color spray*, hypnotism*; 2nd-detect invisibility, invisibility, misdirection*; 3rd-hallucinatory terrain, paralyze*, suggestion*; 4th-confusion, fear, spectral force; 5th-feeblemind, panic; Dragon Abilities: horrific stench, poisonous blood, tail lash]

*see Appendix B, New Spells, p. 335.

35b. Stairs Down

Razylymvaer has cast *hallucinatory terrain* over both openings into this cavern from his lair (Room 35a) such that they appear as ordinary stone. Beyond is a set of stairs descending several hundred feet downward to the Great Stone Stairway (Area 2) of The City of the Ancients (Level 9). (A dwarf or similar character could calculate that there are 800 steps that in total descend 610 feet south, 80 feet east, and 550 feet down.)

35c. Dragon's Hoard

The hoard of considerable treasure amassed by the dwimmerdragons over the centuries has been placed here behind a pile of heavy rubble. The dragons can easily move it, but for characters to remove the rubble requires a combined Strength score of 50 or more. Naturally, Razylymvaer (Room 35a), if present, will attack anyone attempting to steal the treasure!

The hoard consists of the following: 20,000 sp; 10,000 ep; 20,000 gp; 1,300 pp; a blue quartz (10 gp), a moss agate (25 gp), a malachite (50 gp), a jasper (75 gp), a sardonyx (75 gp), a star rose quartz (75 gp), a bloodstone (100 gp), a citrine (100 gp), a zircon (250 gp), a carnelian (250 gp), a sword +2, a potion of gaseous form, and a scroll of ward against elementals. The sword +2 is of Eld make, with a curved, single-edged azoth-infused areonite blade and elaborately curved hilt.

36. Choke Point

Like the other caves in the dwimmerdragons' lair (Room 34-39), a heavy aroma of garlic hangs in the air. Aryzmyr, a juvenile dwimmerdragon, stands watch here, ready to fend off any intruders from nearby passageways. If battle goes against him, he will flee either to Razylymvaer's Lair (Room 35a) or Jarnabal's Lair (Room 37), depending on the situation.

Aryzmyr (1) [AL C, MV 90' (30'), AC 6, HD 8, HP 37, #AT 3, DG 1d6/1d6/2d8 + breath, SV F8, ML 0; Daily Spells: 2 1st, 2 2nd; Repertoire: 1st- color spray*, hypnotism*; 2-blindness*, deafness*]

*see Appendix B, New Spells, p. 335.

37. Jarnabal's Lair

Small plumes of yellow-brown mist waft around this cave, which carries the strong odor of something like garlic. A dwimmerdragon named Jarnabal dwells here. Though the oldest and largest of Razylymvaer's brood, Jarnabal cannot speak or use spells. This makes him ill-tempered, and he enjoys fighting the Termaxians at the nearby Base Camp (Room 19). To date, he has successfully fended off several of their attempts to re-enter the dragons' caves, and is ready for battle at any moment. If battle goes against him, he will retreat to the Choke Point (Room 36) to join forces with Aryzmyr.

Jarnabal (1) [AL C, MV 90' (30'), AC 7, HD 10, HP 47, #AT 3, DG 2d3/2d3/2d10 + breath, SV F10, ML +1; Dragon Ability: hideous stench]

38. Pool and Stream

A subterranean stream flows into this chamber from a fissure in the south, where it pools into a 10 foot deep reservoir surrounded by rock. The water is fresh, cool, and completely potable.

Level 7

Chapter

39. Dezeldrac's Lair

The reek of garlic wafting from this cave extends far enough into the northern and western tunnel to give wary adventurers some warning that a juvenile dwimmerdragon, Dezeldrac, dwells here. Dezeldrac is aware of the dwarves in the Seemingly Empty Cave (Room 40), as they have snuck past him several times to water at the Pool and Stream (Room 38). The dwarves have long been caretakers of Dwimmermount, so Dezeldrac views them as harmless and plans no action against them. He is otherwise devoted to his task of destroying intruders.

Dezeldrac (1) [AL C, MV 90' (30'), AC 6, HD 8, HP 34, #AT 3, DG ld6/ld6/2d8 + breath, SV F8, ML 0; Daily Spells: 2 1st, 2 2nd; Repertoire: Spells: 1-detect invisibility, refraction*; 2- hypnotic pattern, shimmer*]

*see Appendix B, New Spells, p. 335.

40. Seemingly Empty Cave

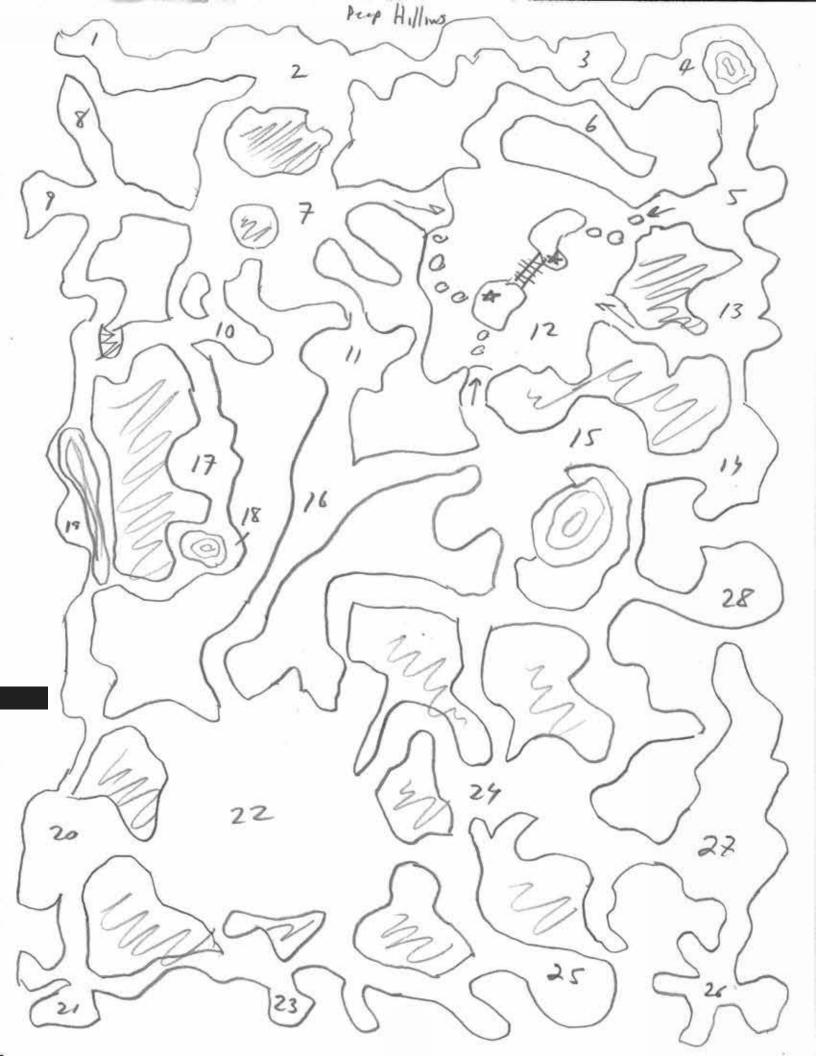

To all appearances, this large cave is completely empty. However, in the area labeled 'b' on the map, two dwarven explorers, Thobek and Harsten, have holed up. The pair have learned a fair bit about this level and now seek to report what they have discovered to their leader, Erdak in the Bulwark (Room 30) on The Manufactory. Unfortunately they have been cut off from their fellows on the level above by the Termaxians at the Base Camp (Room 19). Since the Termaxian arrival, Thobek and Harsten have done their best to stay out of sight, foraging in the Mushroom Forest (room 22) and Pool (Room 38) as necessary. But the pair are both wounded after a skirmish with cavern locusts, and growing desperate. They will defend themselves if forced to fight, but would happily join any party containing other dwarves or which demonstrates itself to be opposed to the Termaxians.

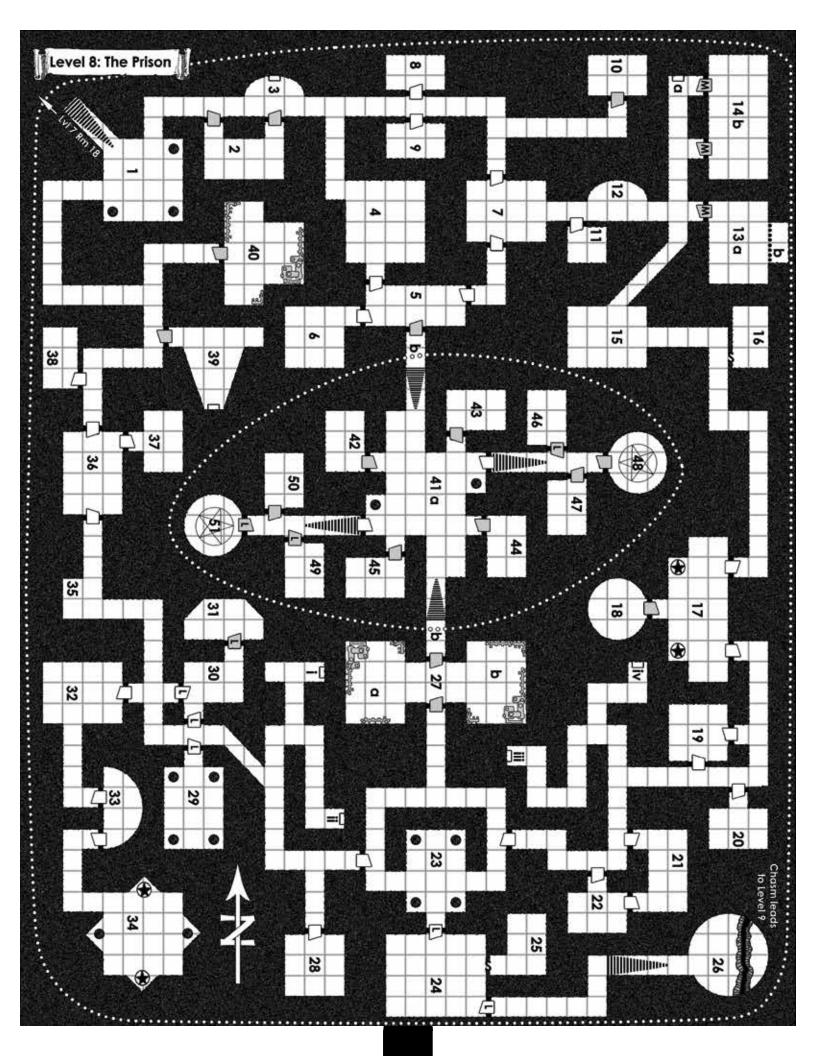

Thobek (1) [AL L, MV 60' (20'), AC 7 (plate armor +1), HD Dv6, HP 14 (of 28), #AT 1, DG 1d8+2 (battle axe +1), SV D6, ML +2; Proficiencies: Alertness, Engineering 3, Mapping, Skirmishing]

Harsten (1) [ALL, MV 60' (20'), AC 6 (plate), HD Dv6, HP 20 (of 30), #AT 1, DG 1d8+1 (heavy flail +1), SV D6, ML +2; Proficiencies: Alertness, Caving, Combat Reflexes, Engineering 3]

Thobek and Harsten's magic weapons are both of dwarven make, with large, heavy weapon-heads of adamantine steel graven with runes. Thobek's armor is forged of adamantine steel.

Original Deep Hollows Map drawn by James Maliszewski.

The Prison

Level

8

Overview of The Prison

HE PRISON WAS CONstructed at the start of the Second Era. It originated as a penitentiary for goblin, ranine, and thelidu prisoners-of-war, with an outer and inner ring for low- and

high-value prisoners. The Chamber of Truth (Room 18) was designed to conduct military interrogations with guaranteed veracity, while the Pillars of Law (Room 29) could convert captives to zealous followers. The Chamber of Zod (Room 39) and Power Center (Room 40) also date to this time.

Protected by the Outer Prison and Inner Prison barriers, The Prison avoided the utter wreckage of the other Second Era levels, and remained in active use under the Eld, Thulians, and Termaxians. The Eld found the highly secure level ideal for conjuring and capturing demons, and built the Otherplanar Cells (Rooms 48 and 51) for this purpose. The Thulians transformed The Prison into an ecclesiastical tribunal dedicated to Typhon and Anesidora; these works are still more-or-less visible in the Smashed Mural (Room 12), Panic Room (16), Desecrated Shrine (Room 17), Defense Cache (Room 23), Demonic Lair (Room 32), and Hall of Worship (Room 34). Under the Termaxians, The Prison degenerated

WANDERING MONSTERS OF THE PRISON

8	Fire Elemental (1)
9	Mummies (1-4)
10	Termaxian Cultists (5-8)
11	Black Pudding (1)
12	Thessalgorgon (1) †

 $^{^\}dagger$ see Appendix C, New Monsters, p. 341

into a house of horrors, dedicated to torture (Room 2), death (Room 6), and the creation of Termaxian husks (Room 34). Since their experiments on The Prison were so at odds with the cult's public claim to be the Lawful successor-faith to the Great Church, the Termaxians added even more security to the level, including the Identification Station (Room 3) and turnkey golems (Rooms 20 and 28).

As a penitentiary built by the Great Ancients, The Prison was characterized by flawlessly-hewn excavation with perfect geometry and no decoration. The original doors were adamantine steel hatches, and these remain except where noted. During the Thulian era, some of the bare rock was coated with plaster, mosaics, and frescoes, and various statues and sacred art added. Some of this was defaced by the Chaotic Termaxians and other areas of the level were destroyed when the paladins toppled Termaxian rule. Most notably, magical combat during the fall of Dwimmermount tore open the Crevasse (Room 26) in the floor of The Prison that opens into the ceiling over The City of the Ancients (Level 9).

Outer Prison Barrier

The Outer Prison barrier surrounds the entirety of The Prison (Level 8). Its horizontal boundaries are marked with dotted lines on the map of Level 8; the Outer Prison barrier also runs above and below the level at a height of about 20 feet. Access to Level 8 will depend on the status of this barrier.

When the characters first enter Dwimmermount, the Outer Prison barrier is activated. If the Outer Prison barrier remains activated (or sealed), then the Stairs Down (Room 18) from The Hollow Deeps (Level 7) end after 100 feet at an impassable wall of shimmering, multicolored light. The arcane barrier is impervious to all magic and physical force. Any being who even touches the wall receives a painful shock that deals 1d12 points of damage and paralyzes for a number of rounds equal to the damage done (no saving throw). The barrier cannot be bypassed by any means. Because of the barrier, arcane spells which involve inter-planar communication or travel do not work within The Prison level, including conjure elemental, contact other plane, control weather, dimension door, fly, invisible stalker, passwall, reincarnation, and teleport. Likewise, the clerical spells commune and raise dead do not function within.

If the Outer Prison barrier has been deactivated by either the characters or the Termaxians through use of the Great Machine (Room 40) on The Manufactory (Level 6B), then its *wall of force* ceases to exist. The Stairs Down will lead directly into the Entrance (Room 1).

See *Chapter 6*, *Overview of the Dungeon* (p. 74), for more information on the effects of arcane barriers.

1. Entrance

This ominous forty square foot room has black hepatizon pillars standing in its three far corners. Each is inscribed with a single world in Ancient Thulian. The one in the northeastern corner says *Bonito* ("Good"), the one in southeastern corner says *Justitio* ("Justice"), and the one in the southwestern corner says *Malito* ("Evil"). Decorating the walls between the pillars are mosaics depicting scenes of individuals and monsters being placed within what are clearly cages or prison cells. Prominent among in these scenes are representations of maces and persons in armor wielding them. In Thulian society, the mace was strongly associated not only with clerics but with Anesidora, the goddess of law, and Typhon, the god of judgment.

2. Interrogation Chamber

Three iron chairs, each one bolted to the floor, stand in the center of the room. Shelves line the length of the back wall, upon which are laid out implements of torture: a choke pear, four pairs of iron boots, a full set of ten finger-screws, six scourges of varying length and weight, and shackles for the ankles, wrists, and neck of different weights. The implements are rusted with age and all show stains of use.

A turnkey golem (see Appendix C, New Monsters, p. 353) has orders to attack anyone who enters the room not in possession of a greater Termaxian passkey (see Appendix A, New Magic Items, p. 333).

Turnkey Golem (1) [AL N, MV 180' (60'), AC 7, HD 10, HP 45, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

3. Identification Station

Set into the wall is a small steel hatch about one foot square in size. If the hatch is opened, a small red-lit nook is revealed and a magic mouth forms on the adjacent wall. Speaking High Thulian, it says "Please insert your hand into the compartment to verify your identity." If no one inserts a hand into the nook within one minute (six rounds), the magic mouth makes the same request again. If, another minute passes, and no one has inserted a hand into the nook, the magic mouth shouts "Intruders! Intruders!" This summons 1d4 turnkey golems from Storage (Rooms 8 and 9), which attempt to subdue or slay any characters they encounter. If the golems succeed in taking one or more characters alive, they are taken to the Warden's Office (Room 5) to be interrogated by Viator. The golems will not attack anyone bearing a greater Termaxian passkey (see Appendix A, New Magic Items, p. 333) unless attacked first.

If a character does place his hand inside the nook, he must make a saving throw versus Wands. Success results in the magic mouth's saying, "You are cleared for entry." Thereafter a greater Termaxian passkey (see Appendix A, New Magic Items, p. 333) is deposited in the nook. This passkey is tied to the particular character who placed his hand in the cubbyhole and its effects apply only to him. Failure results in the magic mouth's saying instead, "Deviant recognized." Simultaneously, the character will feel a sharp pain in his hand as he is injected by a needle with a silver liquid that leaves an external mark shaped vaguely like a diamond with a dot in the middle. This mark identifies the character to all turnkey golems as a prisoner, and they will attempt to subdue or slay him if encountered. In addition, the magic mouth summons 1d4 turnkey golems to deal with the "deviant."

4. Barracks

There are enough beds for a dozen people in this room, which was a guards' barracks in Thulian times. If the Outer Prison barrier has been deactivated for a day or more in game time, this chamber is occupied by eight Termaxian guards. The guards attack anyone they do not recognize, regardless of whether or not they carry a *Termaxian passkey* (see *Appendix A, New Magic Items*, p. 333). If the battle turns against them, they will flee towards the Warden's Office (Room 5).

Otherwise, the room is occupied by Johud, the nalfeshnee (see *Appendix C*, *New Monsters*, p. 359) in the service of Viator (Room 5).

Termaxian Guards (8) [AL C, MV 120' (40'), AC 6 (banded mail & shields), HD F5, HP 31, 23, 22, 20, 21, 18, 16 (×2), #AT 1, DG 1d6+2 (short swords), SV F5, ML +1]

5. Warden's Office

A large wooden desk and chair dominate this room. Behind the desk hang decorations and art objects associated with law and justice. Sitting in the chair is Viator, a Termaxian necrolyte (see *Appendix C, New Monsters*, p. 370) who has been trapped in the Prison for 200 years and has been attempting to free his masters in the Inner Prison (Room 41a) for most of that time. He believes the secret to releasing them lies with clerical magic—in this, he is correct—and will thus take a keen interest in any clerics who enter, whether of their own accord or brought here by the turnkey golems. See *Chapter 6*, *Overview of the Dungeon*, p. 77, for details on how clerical magic can deactivate the barrier.

If not attacked, Viator will behave amicably and will attempt to win the characters over to his point

of view, using every means within his power to convince them to find a way to deactivate the Inner Prison. Barring that, he and his minions will slay anyone who will not comply with his wishes.

If there are guards in the Barracks (Room 4), Johud the nalfeshnee (see *Appendix C*, *New Monsters*, p. 359) will be here with him. Otherwise, he is alone. If alone and events turn against him, he will flee, preferably to the Guard Station (Room 7), otherwise to the Mortuary Chamber (Room 6).

Viator (1) [AL C, MV 120 (40'), AC 9 (ring of protection +2), HD 7, HP 42, #AT 1, DG 1d8, SV M7, ML +2; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1-charm person, choking grip, detect magic, sleep; 2-deathless minion, ESP, uncanny gyration, web; 3-dismember, dispel magic, fire ball, hold person; 4-bestow curse, fear, wall of fire; Proficiencies: Black Lore, Diplomacy, Knowledge (Termaxian lore) 2, Magical Engineering, Theology]

Viator possesses a wand of fear (eight charges remaining); made of misshapen, fire-blackened bone, it always feels clammy to the touch. At his hip hangs an ordinary-looking bag of holding which contains 8,000 gp, a potion of growth, a scroll of ward against elementals and a suit of chain mail +1. He also has a greater Termaxian passkey (see Appendix A, New Magic Items, p. 333).

Johud (1) [AL C, MV 90 (30')/fly 120' (40'), AC 10, HD 11, HP 49, #AT 3, DG ld4/ld4/2d4, SV F11, ML +2]

The removable art objects in the room include a large platinum holy symbol of Typhon (worth 1,500 gp), a ceremonial ivory mace (worth 500 gp), and an alabaster plaque with the words "Bonito" and "Justitio" inlaid in jade (2,600 gp). Although thoroughly aligned with Chaos, Viator cherishes an illusion of himself as stern and honorable servant of the Thulian Empire.

6. Mortuary Chamber

The large wooden table at the center of this room once hosted meetings. Now it holds the corpses of a dozen men. Judging by their clothing, which is centuries out of date, these men likely died during Thulian times, but their flesh is preserved and their bodies and limbs remain supple. There is a slimy quality to the corpses, as if they have been immersed in some kind of gelatinous substance that clings to their undecayed flesh. Nevertheless, there is ample evidence of physical violence and trauma, like axe or sword wounds, on all the bodies.

These are failed or destroyed Termaxian husks

8-5: Viator knows the following numbered facts, which he might reveal during diplomacy or interrogation: 4-7, 4-8, 4-9, 4-10, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-14, 5-16, 5-17, 5-18, 5-92, 6-1, 6-2, 6-6.

Level

from the Chamber of Husks (Room 24), brought here for examination by Viator. By careful study of his failures, Viator hopes to learn how to improve his methods of creating the husks. The corpses are not dangerous, but if anyone ingests any of the slime coating on the husks, he must make a successful saving throw versus Poison or begin the process of becoming one (see *Appendix C, New Monsters*, p. 345).

7. Guard Station

The only sign that this was one of the main guard stations on this level are the empty weapons racks along the walls. It is now the duty post of a marilith (see *Appendix C*, *New Monsters*, p. 357) named Kevokulli, placed here by Viator (Warden's Office, Room 5). She considers guard duty "beneath" her and chafes at serving Viator, whom she considers an "inferior" being. Consequently, if Viator should ever flee here, Kevokulli will do little to protect him, though she will attack any intruders who move against her, as she hates all mortals equally.

Kevokulli (1) [AL C, MV 120 (40'), AC 15, HD 7+6, HP 29, #AT 7, DG 1d8(×6)/2d4, SV F7, ML +1; Proficiencies: Seduction, Weapon Focus (swords)]

8. and 9. Golem Storage

These otherwise bare chambers each contain four turnkey golems (see *Appendix C*, *New Monsters*, p. 333) standing on small bronze pedestals. The golems are normally inactive. If the room is entered by someone who received the mark of a deviant at the Identification Station (Room 3), the turnkey golems immediately activate and attack. Otherwise, they activate only if attacked or otherwise disturbed.

Turnkey Golems (8) [AL N, MV 180' (60'), AC 7, HD 10, HP 52, 46 (×4), 41, 42, 30, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

Any turnkey golems summoned by alarms triggered on the northern half of the Prison are drawn from these rooms. If these golems are destroyed, they are not replaced.

10. Locked Cell

The adamantine steel hatch to this cell is locked, but can be opened by various means, magical and mundane, including the use of a *greater Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 327). Inside are the skeletons of three Men and the crumbling stone corpse of a dwarf. The skeletons are clothed in threadbare attire and the dwarf appears

to have once worn something similar. Carved in the stones of the northern wall are the words, in High Thulian, "Turms is no god!" There is nothing else in the room.

11. Storage Room

Rows of steel shelves cover the walls of this room. Once littered with wooden boxes and crates of various supplies, only three boxes remain. Two are empty, but one of them contains a scroll tube with elven runes on the outside. The tube contains a scroll with the arcane spell *cloudkill*. However, the scroll also is cursed against any except elves and Eld. If the spell is cast from the scroll by a non-elf, the *cloudkill* has a 50% chance of being centered on the caster rather than the intended location. If the spell is learned from the scroll, the same will be true each time the *cloudkill* is cast. A remove curse will enable a caster who has learned this cursed version of the spell to delete it from his repertoire of known spells.

12. Smashed Mural

The apse in this hallway is decorated by a mural depicting the defeat and imprisonment of various demon lords by the Thulian god Typhon. The artwork is defaced in many places, having been vandalized by the Prison's escaped inmates over the centuries, but it still conveys the divine majesty of Law. Any Lawful cleric who looks at it begins to feel a renewed sense of purpose. If the cleric spends at least one turn praying within ten feet of the mural, all of his spells are refreshed. A cleric may pray at the mural to refresh his spells once per day.

13. Holding Area

The adamantine steel hatch to the holding area is locked and can only be opened by means of a greater Termaxian passkey (see Appendix A, New Magic Items, p. 327). Within, the area consists of two areas, labeled 'a' and 'b' on the map. Area 'a' is the larger of the two and holds a set of six wooden chairs and two tables. Area 'b' is the smaller and is located behind locked steel bars that crackle with magical energy. The bars can only be opened by means of a greater Termaxian passkey (see Appendix A, New Magic Items, p. 327). Any other attempt to open them will fail; touching them results in a shock dealing 8d6 damage, or half that with a successful saving throw versus Blast.

Clearly visible on a stone platform inside 'b' is a straight-bladed sword in a red leather sheath. The hilt of the sword is made of polished orichalcum fastened in the shape of a lion, with a red tassel. If unsheathed, the sword reveals itself to have a blade

of pure starmetal, carved with runes of law. It is *Chaosbreaker*, a *holy avenger* (see *Appendix A*, *New Magic Items*, p. 332) belonging to the paladin Hu P'an (held in stasis in Room 49). The nigh-indestructible sword has been placed here for safekeeping.

14. Locked Gaol

The two hatches leading to 14b are locked and can only be opened by inserting **two** greater Termaxian passkeys (see Appendix A, New Magic Items, p. 327) at the control panel located at 'a'. If anyone does this, a magic mouth appears that asks, in High Thulian, "Unlock gaol?" If given an affirmative response in High Thulian (no other language will do), the doors to 'b' unlock.

Upon opening a door, the characters will be greeted by an acrid, unpleasant smell and find that the room is filled with a cold mist. After one round, the mist dissipates, revealing a single thessalgorgon (see *Appendix C*, *New Monsters*, p. 372) just released from suspended animation. The creature will immediately attempt to exit the gaol, attacking any characters in its way; once out of the gaol, it will attack and feed on nearby creatures.

Thessalgorgon (1) [AL C, MV 60' (20'), AC 11, HD 8, HP 54, #AT 9, DG 1d10+1d6 (×8)/2d8 + acid, SV F8, ML +3]

The doors to the gaol can be closed and the suspended animation reinstated by re-inserting two *greater Termaxian passkeys* into the panel and answering affirmatively in High Thulian to the query, "Lock gaol?" Anything or anyone in the goal when it is locked will find themselves placed in indefinite suspended animation. While in this state, no temporally-bounded effects, including aging, occur.

15. Guard Station

The shattered remains of wooden stools and weapons racks are piled up in one corner of this room, which is now patrolled by two turnkey golems (see *Appendix C*, *New Monsters*, p. 333) that attack anyone not bearing a *greater Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 327).

Turnkey Golems (2) [AL N, MV 180' (60'), AC 7, HD 10, HP 51, 40, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

16. Panic Room

The secret door to the Panic Room is actually a magical portal. The portal is utterly invisible and impassable to Chaotic characters, and cannot be seen or traversed by them by any means. It is visible

to Neutral characters as a misty doorway, but still cannot be traversed by them. Lawful characters can readily see and pass through the portal.

Inside the hidden room lies the desiccated corpse of a man in armor. A Thulian hero, he expired here of wounds suffered when Dwimmermount fell to the Termaxians centuries ago. Still hanging on his belt is a bag consisting of ten gems: an eye agate (10 gp), a turquoise (10 gp), a malachite (25 gp), a rhodochrosite (50 gp), a zircon (75 gp), a zircon (100 gp), a coral (500 gp), a spinel (500 gp), a jacinth (1,000 gp), and an opal (1,000 gp). The man wears Thulian plate +2 (see Appendix A, New Magic Items, p. 333) and carries a shield +2 and sword +3, frost brand. The shield +2 is a made of adamant, large and rectangular, and bears the crossed maces of the Thulian legion. The frostbrand has an azoth-infused adamant blade with a pommel shaped like a white dragon head and a crossguard resembles dragon wings.

17. Desecrated Shrine

In the Thulian era, this room was a shrine dedicated to the goddess Anesidora and the god Typhon, who together were the patrons of this Prison. Their headless statues can be found on opposite sides of the door leading to the Chamber of Truth (Room 18). The artwork that decorates the walls of this chamber once praised these two deities, but has long since been desecrated in obscene ways. There is a 30% chance that, when the characters enter this room, it contains 1d8 Termaxian husks (see *Appendix C, New Monsters*, p. 369), released by Auxitius from the Chamber of Husks (Room 24).

Termaxian Husks (6) [AL C, MV 120' (40'), AC 2, HD 6, HP 33, 24, 23, 19, 15 (×2), #AT 2, DG 2d10/2d10, SV F5, ML N/A]

18. Chamber of Truth

This large circular room contains only a single chair made from green marble. The chair is impossible to move, and strongly radiates of magic should this be detected for.

Any living creature that sits in the chair cannot tell a lie for the next three turns. No saving throw is allowed against this effect; indeed, the effect may not be immediately perceptible to the subject. The Judge should take careful note of which, if any, characters sit in the chair and then make certain that they utter no falsehoods for the full duration, regardless of whether their players wish to do so or not.

19. Under-warden's Office

A wooden desk, a chair, and shelves occupy this room. One of the desk's drawers holds a *greater Termaxian passkey*, a *brooch of the Terrim* (see *Appendix A, New Magic Items*, p. 325), and a wrought gold ring worth 600 gp.

If the Outer Prison barrier has been deactivated for more than a day, there is a Termaxian mage and two guards in this room, rifling through its contents for anything worthwhile. Otherwise, the room is unoccupied.

Termaxian Mage (1) [AL C, MV 120' (40'), AC 1, HD M6, HP 17, #AT 1, DG 1d4 (dagger) + spells, SV M6, ML 0; Daily Spells: 2 1st, 2 2nd, 2 3rd; Repertoire: 1st-shield, sleep; 2nd-mirror image, web; 3rd-hold person, lightning bolt]

Termaxian Guard (2) [AL C, MV 120' (40'), AC 7 (banded mail & shields), HD F5, HP 30, 22, #AT 1, DG 1d6+2 (spears), SV F5, ML +1]

20. Golem Storage

Four turnkey golems (see *Appendix C*, *New Monsters*, p. 353) stand motionless on small bronze pedestals. The golems are normally inactive. If the room is entered by someone who received the mark of a deviant at the Identification Station (Room 3), the turnkey golems immediately activate and attack. Otherwise, they activate only if attacked or otherwise disturbed.

Turnkey Golems (4) [AL N, MV 180' (60'), AC 7, HD 10, HP 53, 47, 44, 39, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

Any turnkey golems summoned by alarms triggered on the southern half of the Prison will be drawn from this room and/or from Room 28. If these golems are destroyed, they are not replaced.

21. Barracks

This Thulian-era barracks is furnished with eight beds, each accompanied by footlockers, arranged along the east wall. A card table and four stools are arranged near the west wall.

Seven of the footlockers are empty, but the last contains a vial of clear fluid, with a tag attached that reads (in somewhat archaic Low Thulian), "In case of emergency." The fluid is a deadly but slow-acting poison. Those who drink the fluid must make a saving throw versus Poison at -4 or die 1d10 rounds later.

22. Latrine

Even through the door, this room gives of a noticeably unpleasant odor. Inside, the odor is so nauseating that all who enter must make a successful saving throw versus Poison or suffer -2 to hit and saving throws while in the room. The odor arises from the broken and befouled toilets and sinks of this latrine, which feature such hideous growths and dripping excrement as to beggar description. Lurking within the filth are four Termaxian husks (see *Appendix C*, *New Monsters*, p. 369) placed here by Auxitius from the Chamber of Husks (Room 24).

Termaxian Husks (4) [AL C, MV 120' (40'), AC 2, HD 6, HP 34, 31, 27, 26 (×2), 17, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

As with other latrines throughout Dwimmermount, there are pipes connecting the toilets to the wall. However, these are sealed off from the rest of the dungeon by hundreds of yards of poisonous filth, and cannot be traversed even by rats.

23. Defense Cache

Four pillars made of adamantine steel stand in the corners of this room. A sign is painted on the north wall, which reads (in High Thulian) "In the event of emergency, lower pillars." Knocking on the pillars produces a metallic echo, suggesting they are hollow containers of some sort, but there is no apparent mechanism for lowering them.

The controls for doing so are actually located in the nearby corridors, where a series of small steel hatches (labeled 'i', 'ii', 'iii', and 'iv') each about one foot square in size, are set into the walls. When a hatch is opened, a small red-lit nook is revealed and a *magic mouth* forms on the adjacent wall. Speaking High Thulian, it says "Please insert your hand into the compartment to verify your identity." The effects of inserting a hand into the nook vary for each of the four:

- i If the user is a cleric of Typhon or Anesidora, the northeast the northwest pillar descends to reveal a Typhonian mace (see Appendix A, New Magic Items, p. 334).
 Otherwise, the magic mouth shouts "Intruders! Intruders!" to summon 1d4 turnkey golems from Golem Storage (Room 28) to slay them.
- ii If the user is of Lawful alignment, the southwest pillar descends to reveal a *sword* +4, *defending* (see *Appendix A*, *New Magic Items*, p. 332) of Thulian make, with

- a single-fullered blade of starmetal engraved with runes of protection, set on a moonsilver hilt. Otherwise, the result is as in 'i'.
- iii If the user is a cleric of Typhon or Anesidora, the northeast pillar descends to reveal a staff of Law (see Appendix A, New Magic Items, p. 332) made of white oak, with interlaced bands of silver and gold. The staff as ten charges. Otherwise, the result is as in 'i'.
- iv If the user is of Lawful alignment, the southeast pillar descends to reveal a *net of entanglement* (see *Appendix A, New Magic Items*, p. 329) made of shimmering moonsilver fibers. Otherwise, the result is as in 'i'.

When a pillar descends, it creates a loud rumbling noise which might get the attention of the dungeon's denizens. The Judge should make an encounter throw each time a pillar is lowered.

24. Chamber of Husks

The door to this room is locked from the inside by the necrolyte Auxitius, who holds the keys. Any failed attempt to unlock or force open the doors alerts the room's occupants.

Once a place of healing under the Thulians, this chamber has long since become a place of horrors. Foremost of these horrors is a huge glass tube, 10 feet in diameter and 20 feet tall, containing an undulating blackish-green liquid in which float several glaring red eyes. This is the demon lord Jubilex (see *Appendix C, New Monsters*, p. 356), captured long ago by the Termaxians and experimented upon for centuries. As a result of their experimentation, the Faceless Lord has lost all cohesion, becoming a soupy mass that has lost much of its intelligence and demonic abilities.

Surrounding the tube are a series of six upright iron tables, to which pale, hairless, nude men (actually Terrim from The City of the Ancients) have been bound and strapped. All of the men have thin resin hoses running from their arms back to Jubilex's holding tube, through which bits of the demon's lord ichor are being injected into them. Through this horrific and agonizing process, the men are slowly becoming Termaxian husks (see *Appendix C*, *New Monsters*, p. 369), the "children" of Jubilex. If the hoses are removed from the men's arms, and a *cure disease* or *neutralize poison* spell cast upon them, the transformation can be halted. Otherwise each will become a husk in 1d6 rounds.

Halting this hideous transformation will be hard, as Auxitius the necrolyte is personally supervising

Chapter 18

the process and will slay any who interfere. Auxitius is protected by 4 husks and (if the barrier has been deactivated for more than a day), a cadre of Termaxian guards. As other husks are completed, Auxitius will free them to join the battle.

Termaxian Guards (4) [AL C, MV 120' (40'), AC 7 (banded mail & shields), HD F5, HP 29, 27, 22, 13, #AT 1, DG 1d6+2 (spears), SV F5, ML +1]

Termaxian Husks (4 - 10) [AL C, MV 120' (40'), AC 2, HD 6, HP 27, 26, 21, 16, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

Auxitius (1) [AL C, MV 120 (40'), AC 7 (ring of protection +1), HD 7, HP 38, #AT 1, DG 1d10 + energy drain, SV M7, ML +3; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-choking grip, detect magic, magic missile, shield, sleep; 2nd-deathless minion, detect invisible, invisibility, web; 3rd-dismember, enervate, haste, hold person; 4th-fear, polymorph other, spectral force; Proficiencies: Alchemy 2, Black Lore, Knowledge (Termaxian lore) 2, Magical Engineering]

Auxitius possesses a wand of magic missiles (eleven charges remaining), and a scroll of ward against magic. He also carries a greater Termaxian passkey (see Appendix A, New Magic Items, p. 327) and the key to this chamber.

Auxitius first began making Termaxian Husks during the Fifth Era by experimenting on various human captives brought to The Prison. His efforts were temporarily stalled by the fall of Dwimmermount. When the barrier in the Crevasse (Room 26) was weakened by the machinations of the Sleeping God, Auxitius made an expedition to The City of the Ancients (Level 9) and captured a few Terrim. When these proved viable candidates for his procedures, he began to regularly travel to and from the City, always in search of more Terrim to turn to his cause. Auxitius hopes that with a sufficient number of husks, he can take over the City below and gain the power he needs to break through the magicks imprisoning his master. Lately, however, Auxitius has more and more begun to think of the Sleeping God, not Turms Termax, as his master...

While completely devoid of compassion or empathy, Auxitius is fundamentally a coward, and if battle turns against him, he will flee to the Crevasse (Room 26) and leap into it to avoid death. Auxitius will *immediately* flee if Jubilex's holding tube is shattered. The tube will shatter if successfully struck (v. AC 19) with a deliberate attack from an enchanted weapon that deals at least 5 points of damage, or if the tube sustains 25 or more points of damage

from being in the area of effect of spells. If the holding tube is shattered, Jubilex will begin to return to its former state, gaining 10 hit points per round. When it reaches 100 hit points, it will be fully reformed with all of its lost powers and intelligence restored. Once reformed, it would seek vengeance on Auxitius, his minions, and anyone else in the vicinity before returning to the Great Void.

Jubilex (1) [AL C, MV 30' (10'), AC 16, HD 21, HP 100, #AT 1, DG 4d10 or special, SV F21, ML +2]

25. Hoard

The door to this room is concealed behind what appears to be a metal vent. The vent slides parallel to the wall to reveal a secret storage room, where Auxitius (Room 24) has hidden the spoils he has garnered from his various visits to The City of the Ancients (Level 9). The hoard consists of the following: 5,000 gp; a turquoise (10 gp); a malachite (25 gp); a tiger eye agate (25 gp); a banded agate (50 gp); a moss a gate (50 gp); an obsidian (50 gp); a blue quartz (50 gp); an onyx (100 gp); two sardonyxes (100 gp); a chrysoprase (250 gp); a bloodstone (250 gp); a jade (750 gp); a star sapphire (1,000 gp); a headband of glass beads (10 gp); a brass necklace with a dangle fastened in the shape of the Iron God (30 gp); an orichalcum comb (80 gp); a wrought silver medallion bearing an image of a spiral galaxy (300 gp); a wrought gold ring with a liquid-crystal stone that changes color in different temperatures (400 gp); a wrought gold pendant fastened in the shape of an astral vessel (800 gp); a bracelet with dangling liquid-crystal stones (800 gp); a crystalline arm band bejeweled with moonsilver (1,400 gp); a wrought platinum comb (1,200 gp); and moonsilver medallion with an inset liquid crystal (1,700 gp).

26. Crevasse

A large crack splits the floor of this circular room. The crevasse was created by magical explosions during the fall of Dwimmermount. If the Outer Prison barrier has been deactivated by the Great Machine (Room 40) on The Manufactory (Level 6B), then the crevasse leads straight down 50 feet, where it visibly opens into the domed ceiling of The City of the Ancients (Level 9) 400 feet above the Haywire Defenders (Area 9).

If the Outer Prison barrier has not been deactivated, then the route to The City is blocked after 10 feet by the barrier. However, unlike the impassable wall at the Entrance (Room 1) to this level, the barrier here flickers with occasional distortions that seem to rip open the fabric of its curtain of

7-24: Auxitius knows the following numbered facts, which he might reveal during diplomacy or interrogation: 4-7, 4-8, 4.9, 4-10, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-14, 5-16, 5-17, 5-18, 5-22, 6-1, 6-2, 6-6.

7-27: Anzoy knows the following numbered facts, which he might reveal during diplomacy or interrogation: 4-7, 4-8, 4.9, 4-10, 5-5, 5-6, 5-7, 5-10, 5-11, 5-12, 5-14, 5-16, 5-17, 5-18, 5-92, 6-1, 6-2, 6-6.

Chapter 18

light. These distortions are caused by the unconscious mind of the nearby Sleeping God (Area 3 of Level 9), which detected the Outer Prison barrier when it was exposed by the earthquake here, and has been tearing at its arcane fabric ever since. As a result, the barrier in the crevasse is thinner than elsewhere on Level 8. Even if the Outer Prison barrier has not been deactivated, the crevasse allows limited ingress and egress down to The City below.

When a character attempts to pass through the wall, he may make a saving throw versus Spells. If Chaotic, the character gains a +4 bonus to this saving throw. If the save fails, the character receives a painful shock that deals 1d12 points of damage and paralyzes him for a number of rounds equal to the damage done. However, if the saving throw succeeds, the character passes through the barrier. While doing so, he experiences a momentary psychic connection with Sleeping God, which he will experience as a great and terrible mind of inhuman power. Normally deities use such links to empower mortals with spells, but the Sleeping God instead drains the character of all memorized spells and unused spell-like abilities he may possess. This stuns the character for one round. Such spells and abilities can be regained through rest as usual.

Despite the intervention of the Sleeping God, the barrier here still cannot be bypassed by inter-planar travel (such as *dimension door*, *passwall*, and *teleport*) or other means. See *Chapter 6*, *Overview of the Dungeon* (p. 74), for more details on the arcane barrier.

Currently, the chamber is filled with six Termaxian husks (see *Appendix C*, *New Monsters*, p. 369) preparing to descend to the City of the Ancients.

Termaxian Husks (6) [AL C, MV 120' (40'), AC 2, HD 6, HP 32, 29, 28, 24 (×2), 20, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

27. Control Room

This hourglass shaped room is filled with machinery to the west and east. The machines of the western bulb (area 'a' on the map) are entirely dark and silent, and many look to have been torn open and used for scrap or spare parts. The machines in the eastern bulb (area 'b'), made of nephelite and orichalcum, are dotted with blinking lights and give off a quiet hum.

When Dwimmermount was at its height, this large room was the nerve center of the Prison, filled with machinery to monitor and provide for its inmates. During the fall of the citadel, most of this machinery was deliberately damaged by paladins under Hu P'an (held in stasis in Room 49) to prevent Turms Termax's escape. All of the machines in area 'a' have remained inoperable, while those in area 'b'

have been partially repaired by the necrolyte Anzoy. Her greatest achievement is the ability to reconfigure the commands of the turnkey golems so that they do not attack any Termaxians or their servitors.

A character who possesses a greater Termaxian passkey and an engineer's control rod (see Appendix A, New Magic Items, see p. 327 and 326) can use the machinery in area 'b' to reconfigure the turnkey golems' instructions. This requires a magic research throw at -4. Each successful throw allows a user to command them to attack a specific type of target or stop targeting a specific type of target as the user wishes—but not both.

The necrolyte Anzoy is here at all times, continuing her ongoing salvage operations, along with two turnkey golems (see *Appendix C*, *New Monsters*, p. 353) here at all times. If the Outer Prison barrier has been lowered for more than a day, there will be Termaxian guards here; otherwise, the balor Ndulu (see *Appendix C*, *New Monsters*, p. 344) will be found here as her aide. (If Ndulu has already been encountered in Room 34, of course, he will not be here.)

Anzoy (1) [AL C, MV 120 (40'), AC 7 (cloak of protection +1), HD 7, HP 31, #AT 1, DG 1d10 + energy drain, SV M7, ML +3; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-detect magic, magic missile, shield, sleep, unseen servant; 2nd-hypnotic pattern, invisibility, locate object, mirror image; 3rd-dismember, earth's teeth, fire ball, hold person; 4th-find treasure, wall of ice, wizard eye; Proficiencies: Knowledge (Ancient lore) 2, Knowledge (Termaxian lore) 2, Magical Engineering 2]

Anzoy has a wand of ice (ten charges remaining) (see Appendix A, New Magic Items, p. 334), a greater Termaxian passkey, and an engineer's control rod. The wand is fashioned from the shin-bone of a frost giant and very cold to the touch. Anzoy's cloak of protection +1 is made of dark, heavy fabric that is resistant to stains and spills.

Turnkey Golems (2) [AL N, MV 180' (60'), AC 7, HD 10, HP 55, 48, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

Termaxian Guards (4) [AL C, MV 120' (40'), AC 7 (banded mail & shields), HD F5, HP 26, 19, 14, 12, #AT 1, DG 1d6+2 (spears), SV F5, ML +1]

Ndulu (1) [AL C, MV 60' (20')/fly 150' (50'), AC 11, HD 8+7, HP 45, #AT 1, DG 1d8+1 or 1d6+3d6, SV F8, ML +2]

28. Golem Storage

Two turnkey golems (see *Appendix C*, *New Monsters*, p. 353) stand motionless on small bronze pedestals. The golems are normally inactive. If the room is entered by someone who received the mark of a deviant at the Identification Station (Room 3), the turnkey golems immediately activate and attack. Otherwise, they activate only if attacked or otherwise disturbed.

Turnkey Golems (2) [AL N, MV 180' (60'), AC 7, HD 10, HP 51, 49, #AT 2, DG 2d10/2d10, SV F5, ML N/A]

Any turnkey golems summoned by alarms triggered on the southern half of the Prison will be drawn from this room and/or from Room 20. If these golems are destroyed, they are not replaced.

29. Pillars of Law

The hatch to this room is locked and barred from the outside. The bar is makeshift—a large piece of twisted metal-which suggests that it was placed there by someone after Dwimmermount fell. If the hatch is unlocked or forced open, it reveals a dusty room with pillars of white marble set in each corner. The sides of the pillars facing the center of the room are cut with niches roughly the size and shape of a man. If a character presses himself (or is pressed) into one of the niches, he must immediately make a saving throw versus Spells or have his alignment shift to Lawful. The alignment shift is a zealous one, meaning that anyone who uses a pillar will no longer associate or cooperate with anyone of Chaotic alignment. The effect can be reversed through the use of remove curse or similar spells.

30. Office

The hatch to this room is locked. The room within is an ornate office with a wooden desk and three chairs. Inside one of desk drawers is a *greater Termaxian passkey* (see *Appendix A*, *New Magic Items*, p. 327). Behind the desk are book shelves containing dozens of codices and tomes. These volumes, written in High Thulian, detail the inmates in the Prison over the centuries. The collected works weigh 150 lbs. and could fetch as much as 5,000 gp in a large city, much lower if sold in a smaller locale.

31. Armory

The hatch to this room is locked. Inside are metal shelves and weapons racks. One set of shelves holds the components (helmet, cuirass, pauldrons, vam-

braces, tassets, and greaves) to make a complete set of *Thulian plate* (see *Appendix A*, *New Magic Items*, p. 333). Two *Thulian crossbows* (see *Appendix A*, *New Magic Items*, p. 333) hang on one of the racks. The rest of the shelves and racks are empty.

32. Demonic Lair

The walls of this large, open room were once covered with colorful mosaics, but these have been battered so fiercely that only occasional streaks of colorful tiles still cling to their place. The wooden splinters and debris littering the floor are all that remain of the room's once-grand furniture. The chamber currently serves as the lair of a discomfited glabrezu demon (see Appendix C, New Monsters, p. 351). The glabrezu was brought here by Ndulu in the Hall of Worship (Room 34) just before the fall of Dwimmermount, and was then unable to return to the Great Void when the barrier was activated. It still serves Ndulu, but seethes in rage at its centuries-long entrapment. Consequently, it will lash out at any non-demon who enters the room, regardless of whether they carry a *Termaxian* passkey (see Appendix A, New Magic Items, p. 333) or not. The Termaxians avoid this area.

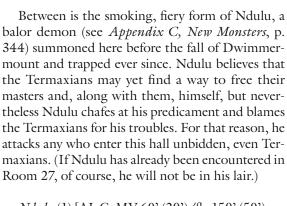

Glabrezu (1) [AL C, MV 90' (30'), AC 13, HD 10, HP 52, #AT 5, DG 2d6/2d6/1d3/1d3/1d4+1, SV F10, ML +1]

33. Smoky Room

The scent of burnt wood and incense wafts from this room into adjoining corridors. Opening a hatch to the room reveals the source of the odor: a reddish smoke coming from a censer hanging from the ceiling. This censer is filled with *incense of obsession* (see *Appendix A*, *New Magic Items*, p. 328), which will affect any cleric who meditates or prays within. The *incense of obsessions* burns for one hour after the characters first come near the room (the Judge should keep track of this time). There are four more blocks of the *incense* on a small table in the northern corner.

34. Hall of Worship

A burning smell, noticeable at some distance, greets the nostrils of characters who approach this room. The stones of the entering corridor, as well as the walls and ceiling of the room itself, all show visible scorch marks from flames. Two marble statues, one of Typhon and one of Anesidora, stand in alcoves on the north and south walls, while two granite pillars, one bearing the Ancient Thulian word "Justitio" ("Justice") and the other "Lego" ("Law"), stand in alcoves on the west and east walls.

Ndulu (1) [AL C, MV 60' (20')/fly 150' (50'), AC 11, HD 8+7, HP 45, #AT 1, DG 1d8+1 or 1d6 + 3d6, SV F8, ML +2; Proficiencies: Combat Reflexes, Intimidation]

35. Remains

The skeletal remains of a man lie in this alcove. The skeleton is missing its right arm and right leg and the bones that are left have been charcoaled as if by great heat. The skeleton has no clothing or gear on it save for a golden ring on its left hand that shows no evidence of fire damage. It is a *ring of delusion*.

36. Mess Hall

Several heavily burnt wooden tables and benches furnish this room, which once served the soldiers and administrators of the prison. Aside from some scorch marks on the ground, leading toward the Kitchen (Room 37), there is nothing of note here.

37. Kitchen

The hatch to this room is scorched by fire and hangs loosely from its hinges. The room within also shows evidence of extensive fire damage, with scorched countertops, burned cabinets, and melted cookware. The only furnishing untouched by flame is a steel oven painted with silvery-black glyphs. The oven binds a fire elemental, trapped here long ago by an arrogant Termaxian magician as a jest. The elemental attacks anyone who enters the kitchen, giving preference to Termaxians over other targets. It will pursue its prey as far as it is able, but cannot go more than 100 feet from the oven. If the oven is destroyed (10 points of damage), the elemental will be freed to roam the level at will.

Fire Elemental (1) [AL N, MV 120' (40'), AC 9, HD 12, HP 52, #AT 1, DG 2d8, SV F12, ML +4]

38. Storeroom

Dusty wood shelves line the walls of this room. If Outer Prison barrier has been down for a day or more, a set of three wooden crates and two barrels will be found here. Each of the crates will contains 200 lbs. of grain (25sp value) and each of the barrels will contain 60 gallons of potable, but unpleasant tasting, water. Otherwise, the room is empty.

39. Chamber of Zod

The west and east walls of this room are decorated with exceptionally detailed mosaics depicting a complex labyrinth in which three individuals - a pair of bearded men and a raven-haired woman, all wearing black clothing—are trapped. Any character with INT 16+ who studies the mosaics notes that there is no exit to the labyrinth depicted therein.

At the southern end of the room is a large window-like structure made of dark vitreum. Anyone who looks through it must make a saving throw versus Spells or be cast into an extra-dimensional prison. The extra-dimensional prison functions identically to the arcane spell *maze*, except that where the spell description reads "rounds," the Judge should substitute days; and where the description reads "turns," the Judge should substitute weeks.

40. Power Center

In the days of Dwimmermount's height, this chamber held a variety of machinery intended to provide power to the Prison in the event of a failure of the Great Machine (Room 40) on The Manufactory (Level 6B). The Termaxians trapped in the Outer Prison destroyed the machinery here hoping that it would deactivate the barrier, but to no avail. Now the room is filled with wrecked machinery and metal debris, none of which can be repaired without the use of the Terrim technology to be found in The City of the Ancients (Level 9). Amongst the debris, there is an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326).

41. The Inner Prison

The Inner Prison (Rooms 41-51) consists of the majority of the cells on this level, where the Thulians—and, later, the Termaxians—placed their worst criminals. The main room is marked 'a', while the two entry corridors are each marked 'b'. The remaining rooms (42-51) are cells.

Surrounding the Inner Prison is the Inner Prison barrier. The horizontal boundaries of the barrier are marked with dotted lines on the map of Level 8. The barrier also runs above and below the

Inner Prison at a height of about 20 feet. Most of the arcane barrier is hidden behind the stone of the prison's walls, but (if not deactivated) the barrier will be visible at area 'b' as a wall of shimmering, multicolored light emerging from the stone. Conditions within the Inner Prison will depend on the status of the Inner Prison barrier:

Sealed: When the characters first enter Dwimmermount, the Inner Prison barrier is sealed. While the Inner Prison Barrier remains sealed, travel and communication to and from the Inner Prison is impossible by any means. A sealed arcane barrier is impassable and impervious to all magic and physical force. Any being who even touches the barrier receives a painful shock that deals 1d12 points of damage and paralyzes for a number of rounds equal to the damage done (no saving throw). The sealed barrier has left Turms Termax and his inner circle trapped for centuries.

Activated: Through the operation of The Great Machine (Room 40) on The Manufactory (Level 6B), the characters may lower the Inner Prison barrier from sealed to activated. The primary difference between a sealed barrier and an activated barrier is that an activated barrier is designed to permit entry and exit at designated openings. In the case of the Inner Prison barrier, its designated openings are the corridors marked 'b'. When the barrier is unsealed, any character can pass through into the Inner Prison at 'b'. However, only Lawful characters can pass back out again! All others find themselves trapped within until the barrier is deactivated. Other than allowing this limited ingress and egress, the activated arcane barrier functions as described above, being impassable and impervious to all magic and physical force, and causing damage and paralysis to those who touch it. The room descriptions below assume the Inner Prison barrier is activated but unsealed, as this condition allows the player characters to enter and interact with the prisoners without them escaping.

Deactivated: Given enough time, the Termaxians may deactivate the Inner Prison barrier. The characters may also do this, intentionally or accidentally. If the barrier is deactivated, anyone can pass freely through the corridors marked 'b', and inter-planar travel and communication to and from the Inner Prison will be possible. Within 1d4 hours of the Inner Prison barrier being deactivated, Turms Termax and his inner circle will have escaped. Prior to their escape, conditions in the Inner Prison will be as described below. Thereafter the Judge must determine the activities and whereabouts of the former prisoners based on the context of their escape.

See *Chapter 6*, *Overview of the Dungeon*, p. 74, for more information on Dwimmermount's arcane barriers.

41 a. Main Area

The stairs at areas 'b' lead to this large room, 15 feet below the rest of the level. Six doors are arranged in a semicircle at the room's perimeter. A pair of black metal pillars stand near the middle doors west and east. Each is inscribed with a single world in Ancient Thulian, the one in the west saying *Lego* ("Law"), the one in east saying *Justitio* ("Justice"). Decorating the walls between the pillars and doors are mosaics similar to those in the Entrance (Room 1), with scenes of individuals and monsters being placed in prison cells by armored mace-wielders.

Each time the characters enter area 'a', there is a 60% chance it is occupied. Roll on the following table to determine who is present here:

- 1-3 Pericleia (Room 42)
- 4-6 Arsaphius (Room 43)
- 7-9 Marthanes (Room 44)
- 10 Turms Termax with his Golem Body (Room 45)

Otherwise, the room is empty.

42. Pericleia's Cell

This spartan cell is home to the necrolyte Pericleia, one of the Termaxian inner circle trapped here during the fall of Dwimmermount. If not already encountered in the Inner Prison (Room 41), there is a 50% chance she will be here. Otherwise she will be either in Turms Termax's Cell (Room 45) or Hu P'an's cell (Room 49).

Pericleia (1) [ALC, MV 60' (20'), AC 9, HD 12, HP 49, #AT 1, DG 1d10 or spells, SV M12, ML +1; Daily Spells: 4 1st, 4 2nd, 3 3rd, 3 4th, 3 5th, 2 6th; Repertoire: 1-charm person, choking grip, magic missile, shield, sleep, unseen servant; 2-deathless minion, detect invisible, ESP, hypnotic pattern, mirror image, web; 3-dismember, dispel magic, fire ball, haste, hold person; 4-bestow curse, confusion, fear, polymorph self, wall of fire; 5-animate dead, cloudkill, curse of swine, feeblemind, phantasmal killer; 6-disintegrate, enslave, flesh to stone, wall of corpses; Proficiencies: Black Lore, Intimidation, Knowledge (Termaxian lore) 2, Magical Engineering, Profession (torturer), Soothsaying, Theology]

More so than any of the other members of the inner circle, Pericleia is insanely devoted to Turms, seeing herself as the new Sarana. For that reason, she is the only member who will die rather than allow harm to come to her master. She will even go so far as to attack either Arsaphius or Marthanes should one or the other decide to launch a *coup* against Turms at the characters' instigation.

Chapter

43. Arsaphius' Cell

Arsaphius, the second-most powerful member of the Termaxian inner circle, dwells in this stark cell. If not already encountered in the Inner Prison (Room 41), there is a 25% chance he will be here. Otherwise he will be in Turms Termax's cell (Room 45) conferring with his master.

Arsaphius (1) [AL C, MV 60' (20'), AC 9, HD 13, HP 53, #AT 1, DG 1d10 or spells, SV M13, ML +1; Daily Spells: 4 1st, 4 2nd, 4 3rd, 3 4th, 3 5th, 2 6th; Repertoire: 1-auditory illusion*, charm person, color spray*, magic mouth, magic missile, shield; 2-detect invisible, hypnotic pattern, invisibility, mirror image, phantasmal force, web; 3-clairvoyance, chimerical force, dispel magic, haste, invisibility 10' radius, lightning bolt; 4-confusion, fear, polymorph self, spectral force, wall of fire; 5-cloudkill, feeblemind, panic, phantasmal killer; 6-death spell, disintegrate, permanent illusion, programmed illusion; Proficiencies: Alchemy 2, Black Lore, Knowledge (Termaxian lore) 2, Magical Engineering, Prestidigitation, Theology]

*See Appendix B, New Spells, p. 335.

Arsaphius is the most rebellious of the three inner circle members. Though once devoted to the cause of the Termaxian cult, he tires of Turms' tyranny and sees no hope of ever escaping the Prison. Consequently, he is open to the possibility of mutiny against his comrades, provided that the characters look powerful enough to succeed in their attempt to destroy the others.

44. Marthanes' Cell

Marthanes, Turms' second-in-command, dwells in this cell. If not already encountered in the Inner Prison (Room 41), there is a 25% that he will be here. Otherwise he will be in Turms Termax's Cell (Room 45).

Marthanes (1) [AL C, MV 60' (20'), AC 9, HD 14, HP 68, #AT 1, DG 1d10 or spells, SV M14, ML +1; Daily Spells: 4 1st, 4 2nd, 4 3rd, 4 4th, 3 5th, 3 6th; Repertoire: 1st-burning hands, charm person, choking grip, magic missile, shield, sleep, wall of smoke; 2nd-detect invisible, ESP, gust of wind, mirror image, necromantic potence, uncanny gyration, web; 3rd-clairvoyance, dismember, dispel magic, earth's teeth, fire ball, haste, lightning bolt; 4th-bestow curse, confusion, fear, polymorph self, wall of fire, wall of ice, wizard eye; 5th-cone of

cold, cloudkill, phantasmal killer, telekinesis, transform rock to mud, wall of stone; 6th-death spell, disintegrate, flesh to stone, move earth, wall of iron; Proficiencies: Battle Magic, Black Lore, Leadership, Knowledge (Termaxian lore) 2, Magical Engineering, Military Strategy 2, Theology]

Marthanes is a long-time associate of Turms, having traveled by his side in the days before the mage met Sarana and took over the Thulian Empire. He is thus as much a friend of Turms as anyone in the world. Nevertheless, he recognizes that Turms has terrible flaws, and sees that two centuries of imprisonment have only worsened these. He also doubts that Turms will ever be able to replicate the process that granted him the limited form of immortality he enjoys. For that reason, his first instinct is to save himself, and while he would regret it, he would willingly sacrifice Turms if it meant he could escape the Prison.

45. Turms Termax's Cell

This spartan cell is home to Turms Termax... or what is left of him. Turms the Thrice Great, Godhead of the Thulian pantheon, is in fact a bodiless head. The history, motivations, and tragic fate of the Man-Become-God are fully detailed in The Secrets of Terms Termax, found on p. 408.

If not already encountered in the Inner Prison (Room 41), there is a 30% chance that Turms is in this room. Otherwise, he is in the Empyreal Prison (Room 51). If he is here, he will not be alone. One or more of his inner circle will be here with him. See Rooms 42-44 to determine which of them might be present. Whenever he is outside of his cell, Turms wears a golem body of bronze sculpted to resemble himself in life. Within his quarters, however, he leaves the body at his bedside to enjoy fresh air, and it is in this state he will be encountered here.

The statistics of Turms Termax while outside his golem body are noted below. Details of his golem body can be found in the Empyreal Prison (Room 50). Note that Turms is *not* slain if reduced to 0 hit points, merely temporarily stunned. The Judge should be sure to consult The Secrets of Turms Termax chapter when running encounters with the would-be god, as it details his many special abilities as well as the possible means by which he might be destroyed forever.

Turms Termax (1) [AL C, MV 0', AC 6, HD 18, HP 49, #AT 1, DG spells, SV M18, ML +2; Daily Spells: 5 1st, 5 2nd, 5 3rd, 5 4th, 4 5th, 4 6th; Repertoire: 1st-charm person, floating disc, hold portal, light, magic missile, sleep,

unseen servant, ventriloquism; 2nd-deathless minion, ESP, hypnotic pattern, invisibility, mirror image, phantasmal force, web, wizard lock; 3rd-chimerical force, clairvoyance, dismember, dispel magic, earth's teeth, fire ball, lightning bolt, nondetection; 4th- charm monster, confusion, conjure ooze, fear, polymorph self, scry, wizard eye; 5th-animate dead, cloudkill, cone of paralysis, control undead, hold monster, phantasmal killer, x-ray vision; 6th-anti-magic shell, disintegrate, enslave, globe of invulnerability, invisible stalker, project image, wall of force; Proficiencies: Alchemy 3, Black Lore, Knowledge (astrology) 3, Leadership, Magical Engineering 3, Theology]

46. Cell of Comentas

The door to this cell is kept locked; Turms Termax holds the key. Within the cell lie the skeletal remains of Comentas Balsamon, a rebel against Termaxian rule in the latter days of the Empire. Comentas was a cleric of Typhon who denounced the cult of Turms Termax, sparking uprisings in several provinces. The church of Typhon remembers him as a martyr, but he was actually alive at the

time of Dwimmermount's fall. Turms Termax and his inner circle tortured him repeatedly after being trapped in The Prison. After his death, his corpse was thrown back into its cell, where it has rotted for two centuries. Occasionally, Turms will use *animate dead* to restore Comentas to a semblance of life and have his skeleton dance and jape for his amusement. He may even show this to the characters as "evidence" of his power.

Comentas' martyrdom has imbued his skeleton with a measure of divine power. If a Lawful worshipper of Typhon carries a finger-bone or similar fragment of the skeleton, he will gain a +1 bonus to saving throws against effects from Chaotic opponents.

47. Empty Cell

The last inhabitant of this cell either died or was released before the fall of Dwimmermount. The cell is now completely empty and its door is unlocked.

48. Otherplanar Cell

A magic circle of binding covers the floor of this room. The 20 foot diameter circle has been etched

Level 8

8-49: If freed, Hu P'an can reveal the following numbered facts to the characters: 5-1, 5-2, 5-3, 5-8, 5-9, 6-2, 6-3, 6-4, 6-5, and 6-6.

into the floor and then inlaid with moonsilver. During Thulian times, it was used to hold beings from other planes as prisoners, but this one was not occupied at the time of Dwimmermount's fall. The magic circle still functions, however, and any being not native to Telluria who passes over its edge will become imprisoned and powerless until the circle is broken by someone not bound by it.

49. A Paladin of Law

The door to this cell is locked; the key is kept at all times by Pericleia. The cell holds a frail, white-haired man of Eastern bloodline, strapped down to a near-vertical steel table. A sinister-looking device, resembling a large metal-plated fork, is held over him by a jointed mechanical arm connected to a ceiling-mounted platform. This is a *Termaxian pain amplifier* (See *Appendix A*, *New Magic Items*, p. 332).

The captive is Hu P'an, a paladin hailing from the Kingdom of the Priest-King to the East. The Kingdom

was restored to the worship of Law centuries ago through the ministries of Sarana (Turms Termax's former lover). She, Hu P'an, and several other paladins entered the dungeon during the rebellions of its final days with the goal of trapping Turms Termax and sealing off Dwimmermount. Hu P'an made the ultimate sacrifice and allowed himself to be sealed in the Prison with Turms. See *Chapter 2*, *History of Dwimmermount*, p. 19, for more details on these events.

Since then, Turms and his inner circle have kept the paladin in suspended animation in the Stasis Chamber (Room 50), periodically releasing him from time to time to torture him. After each session of torture, the necrolytes return him to stasis to heal so that they can do it again a few weeks, months, or even years later. Hu P'an is thus chronologically over 250 years old, though he has lived only about 60 of those years, the last 10 in agonizing torture. His most recent tortures will have begun 2d4 days before the characters arrive.

Hu P'an is weak and near death. If freed, he will thank the characters and ask for a weapon with which to aid them. He will do his best to fight by their side, and if he encounters any Lawful fighters amongst them, will attempt to convert them to the service of Law. If they accept, they will be granted the powers and abilities of a paladin (see *Adventuring in Dwimmermount*, p. 41). Hu P'an' will suggest they travel to The City of the Ancients (Level 9) and re-unite with Sarana, believing that in the centuries since their last meeting she will have learned a way to permanently destroy Turms Termax.

Hu P'an (1) [AL L, MV 120' (40'), AC 1, HD P9, HP 5 (45), #AT 1, DG 1d3+1 or by weapon, SV F9, ML +3; Proficiencies: Combat Reflexes, Command, Divine Blessing, Endurance, Leadership, Theology, Weapon Focus (swords)]

If Pericleia has not yet been encountered in Room 42, she will be here torturing Hu P'an using the *Termaxian pain amplifier*.

Chapter 18

50. Stasis Chamber

This room contains three stasis tubes identical to those found in the Stasis Chamber (Room 49) of The Laboratory (Level 2A). Two of the tubes have broken down, but one remains functional. Anyone placed within the functioning stasis tube is placed into a state of ageless, suspended animation. Body functions virtually cease and the character does not age. Natural healing continues, albeit at $1/10^{\rm th}$ the normal rate, so someone placed within the tube for a long enough period of time will regain all lost hit points.

51. Empyreal Prison

The door to this room is locked (the key is kept at all times by Turms Termax). A magic circle of binding, identical to that found in the Otherplanar Cell (Room 48), covers the floor of the cell beyond. Trapped within the magic circle is the Iron God, an empyreal (see *Appendix C*, *New*

Monsters, p. 350) once worshipped as a god. Turms ensnared the Iron God centuries ago in hopes of wresting from him the secrets by which he apotheosized from empyreal to deity. The empyreal has repeatedly explained that he is not a god and never was, and that all his power flows from the one true deity, Law; but these are facts that Turms stubbornly refuses to believe.

Unless already encountered elsewhere, Turms Termax will be here, inside his golem body. Turms will be interrogating the Iron God with the same questions he has asked for centuries.

The golem body resembles a bronze statue of Turms as he was in life; Turms' actual head is concealed within the sculpted bronze head of the golem body. When attached to his golem body, Turms Termax can cast any of the spells described for his head (Room 45), while physical statistics are those cited below. His head can be attacked separately if desired, but the protection of the golem body grants it the equivalent of AC 14. If his head is reduced to 0 hit points, the golem body ceases functioning.

See Appendix G, Secrets of Turms Termax, p. 401, for more details.

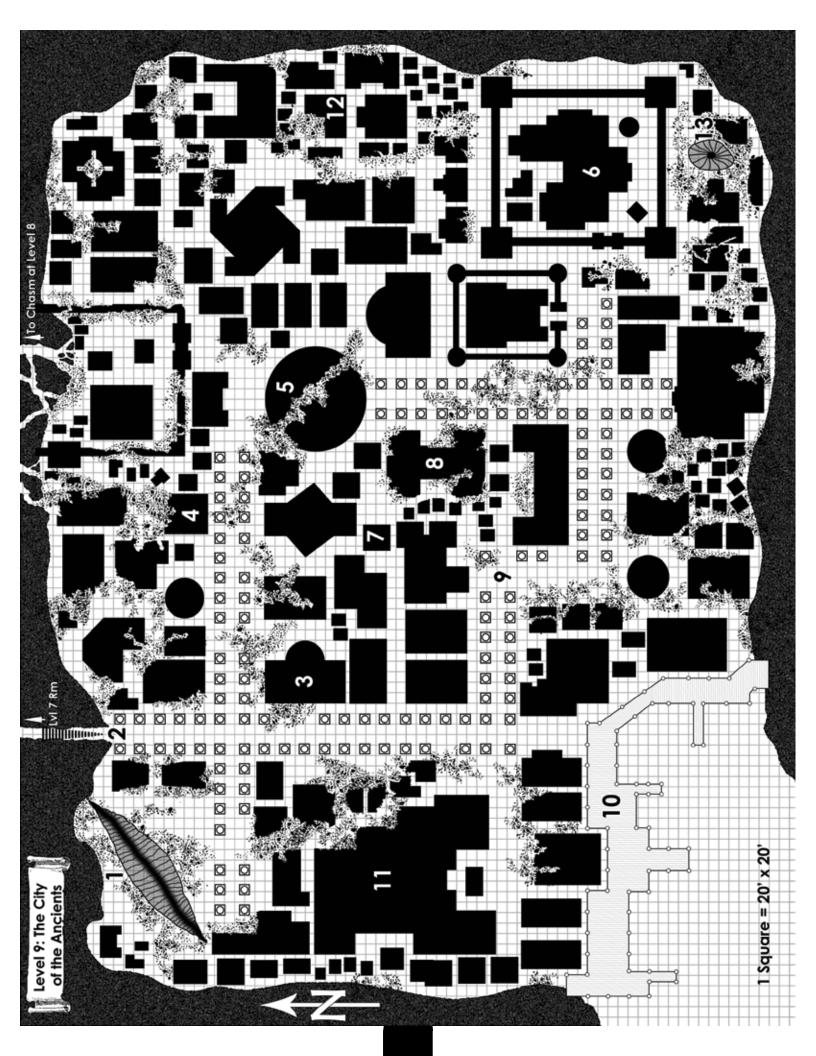

Golem Body (1) [AL C, MV 60' (20'), AC 6, HD 18, HP 100, #AT 1, DG 4d10 or spells, SV F18, ML +2]

While the Iron God is trapped within the magic circle, he is immune to any harm Turms might wish him, but he cannot escape, either. The Iron God will aid the characters, provided that they are not Chaotic-aligned and they break the magic circle that traps him here. Turms will do his utmost to prevent this, but barring that, will summon any remaining members of his inner circle to aid him in battle.

Iron God (1) [AL L, MV 90' (30')/fly 180' (60'), AC 16, HD 13, HP 79, #AT 1, DG by weapon or spells, SV F13, ML +3; Proficiencies: Divine Blessing, Theology]

Revel 8

CHAPTER

The City of the Ancients

Overview of the **City of the Ancients**

N THIS BOOK, THE CITY of the Ancients is treated as Level 9 of Dwimmermount, even though it is really a separate environment from the rest of the mountain fortress—a subterranean urban "wilderness" that represents a decadent outpost of the Great Ancients (see Chapter 2, History of Dwimmermount, p. 19).

The City of the Ancients is separated from the rest of Dwimmermount by thick layers of rock, several hundred feet beneath The Prison (Level 8). In addition, the level's ceiling is an azoth-infused dome that, until two centuries ago, completely shielded the level and its inhabitants from prying eyes. Magical combat during the fall of Dwimmermount tore open a Crevasse (Room 26) in the floor of The Prison that opens into the ceiling over The City of the Ancients. Despite the crack, the dome itself continues to operate, albeit sporadically, which wreaks havoc on the casting of certain spells (see below). However, the explosion in the dome half-awakened the Sleeping God (Area 3), which has probed the fissure ceaselessly since then in search of a means of escape from his Tomb.

Because it is buried so deep, Level 9 is not easily accessible from the rest of the dungeon. The simplest entrance are the Stairs Down (Room 35b) from The Deep Hollows (Level 7), guarded by the dwimmerdragons (see Appendix C, New Monsters, p. 348). However, the dwimmerdragons will only allow parties to pass if they can present a brooch of the Terrim (see Appendix A, New Magic Items, p. 325), and even then only in limited numbers. A more roundabout way to enter the level is to use the Crevasse (Room 26) on The Prison, but in addition to being harder to reach, it is also more dangerous.

The City of the Ancients is large and mostly ruined. Therefore this chapter describes in detail only some of the more populated areas of the City. The remainder are purposefully left undetailed, so as to allow the Judge the ability to flesh them out as he sees fit. However, this chapter also provides tools, in the form of random tables, to aid the Judge in this task, in addition to notes and adventure seeds. It is hoped that the City of Ancients will serve as the jumping off point for higher-level characters as they explore the subterranean realms beneath Dwimmermount, which potentially hold as many secrets and dangers as the dungeon itself.

Inhabitants

As an outpost of the Great Ancient civilization, whose survivors fled underground after it was defeated by the Eld (see p. 348), the City of the Ancients is inhabited first and foremost by the

descendants of that civilization. Broadly speaking, these descendants consist of two sorts—the sophisticated Terrim and the degenerate Derrim. The two groups, and their servitors, exist in an uneasy balance at present, punctuated by regular, small clashes in the ruins. Besides the Terrim and the Derrim, the city is currently home to groups of mongrelmen and thelidu, newly arrived Termaxian cultists, and more. More details on these groups can be found in *Chapter 7, Factions in the Dungeon* (p. 95).

Spell Effects (Level 9)

The dome above the cavern housing the City of the Ancients impedes certain magical effects, although erratically. The following spells and abilities do not work *at all* in the City of the Ancients:

commune, conjure elemental, contact other plane, control weather, dimension door, fly, gate, invisible stalker, passwall, raise dead, reincarnation, and teleport, and any effects involving planar travel and communication. All other spells have a chance of not functioning normally. The chance of successfully casting other spells is calculated by subtracting the spell level from the caster's level, multiplying the result by 5% and adding it to 40%. For example, a 9th-level mage casting a third-level spell ($[9 - 3 = 6] \times 5\% = 30\%$) has a 70% chance for his spell to go off normally. If it does not, the spell is expended as if it had been cast, but has no effect. All beings in The City of the Ancients are affected by this phenomenon, including monsters with spell-like effects. In their case, use their Hit Dice in place of level.

Wandering Monsters (Level 9)

Roll 1d6 every two turns, with a result of 1 indicating an additional roll on the following table, using 1d12:

Dice Roll	Monster
1	Terrim (1-4) †
2	Termaxian Husks (1-8) †
3	Terrim (1-8) †
4	Thelidu (1-2) †
5	Termaxian Cultists (5-8) †
6	Derrim (1-4) †
7	Gloom Crawler (1) †
8	Stone Golem (1-2)†
9	Paladin (1) ‡
10	Divine Vision ‡
11	Derrim (1-8)*
12	Mongrelmen (2-12)*

[†]see Appendix C, New Monsters, p. 341

Most of the above are described in the New Monsters chapter (see p. 341), but two are not and are worthy of special mention here.

Paladin: This encounter is with a paladin in the service of Law named Jin Tai. This paladin has traveled to the City of the Ancients by means of various subterranean passages known to his Order in an attempt to rouse the Terrim to action against Chaos. The paladin's primary concern is reaching the Terrim Compound (Area 6) to make his case before its leadership. To that end, Jin Tai is willing to join any non-hostile groups he encounters who are either headed toward the Compound or can be persuaded to do so. Until he knows their natures and intentions, the paladin will not reveal his true identity, instead claiming to be "the sole survivor of a doomed expedition," though he may modify that claim based on what he observes about his companions. Being supremely Lawful, Jin Tai behaves as honorably as circumstances allow and will aid any in genuine need of assistance to the utmost of his ability.

Paladin (1) [AL L, MV 60' (20'), AC 9 (plate armor +1 & shield +1), HD P9 HP 50, #AT 1, DG 1d6+6 (sword +2), SV F9, ML +3; Proficiencies: Combat Reflexes, Diplomacy, Divine Blessing, Dungeon Bashing, Theology]

The paladin has a crossbow (with 30 bolts, including 6 +2 bolts), two potions of extra-healing, a rope of climbing, and a brooch of the Terrim (see Appendix A, New Magic Items, p. 325). The paladin's *plate armor* +1 is made of lacquered lamellar with extensive colorful lace. His adamantine steel shield +1 is round, lacquered gold, with a red lion painted on its face. His sword +2 has a straight, double-edged adamant blade with a single fuller, and a red-tasseled hilt of bronze fastened in the shape of a lion.

The paladin can only be encountered once. If a roll on the wandering monster table results in the paladin a second time, treat it as 1-8 Derrim instead.

Divine Vision: Though the Terrim long ago lost contact with the gods—or more precisely, shunned contact with them out of fear—there has, since the breach of the astral dome, been an increase in the appearance of "divine visions" among the Terrim. These visions take the form of auditory and visual phenomena noticeable by anyone within 30 feet of their occurrence. The Terrim, by and large, do not believe, refuse to discuss these visions, and if mentioned will claim they are a result of madness or intoxication. Regardless of the truth of it, a result of this on the wandering monster table calls for a second roll of 1d10 on the following table to determine the nature of the vision:

DIVINE VISION TABLE

1d10 Roll	Result			
1	A matronly woman (Anesidora) appears and beckons the viewers toward her with open arms, calling out "Come home! We await you."			
2	A young and intelligent woman (Asana) asks, "Did your knowledge save you?"			
3	A handsome young man (Caint) appears and plays a lute.			
4	A grave-looking man (Donn) warns, "None can escape death, but all must prepare for it."			
5	A battered and bloodied man in armor, carrying a spear (Mavors) raises his arms in triumph, and with a deep voice cries aloud, "Victory is yours—if you will but seek it!"			
6	A short, almost dwarf-like man carrying tools (Tenen) says, "What has been destroyed can be built again."			
7	A beautiful, but mischievous young woman appears (Tyche), flipping a coin, saying with a melodious voice, "Take a chance!"			
8	A stern-looking older man in armor, points his mace at the viewer, stating, "You shall be judged by your actions."			
9-10	A strange buzzing sound is heard. All Lawful characters within hearing receive a +1 bonus to attack rolls and saving throws for the next 24 hours. Neutral characters are unaffected and Chaotic characters suffer a -1 penalty to those rolls for the same time period.			

Level

[‡] see below

Movement within the City

Although the City could be considered "outdoors" in some respects, it is nevertheless treated as a dungeon level as far as rules are concerned (ranges in feet, not yards, etc.).

The map to the City of the Ancients is on a different scale than the other maps included in this book. One square on this map equals 20 feet as opposed to 10 feet. The Judge should keep this in mind when adjudicating movement and combat within the City.

In many areas, there are wide roads that can be used to travel from place to place. While on a road, characters increase their movement rate by one-half their normal rate. Thus, a character that moves at 60 feet normally can move at a rate of 90 feet while on the road. Roads which are obstructed with rubble and debris do not provide this benefit, however.

Random Ruins

Because there are many areas of this level that are undescribed, this chapter includes a series of random tables for determining the nature and contents of these undescribed ruins. The tables below are intended to supplement rather than supplant the Judge's imagination. If he wishes, he can ignore any results he wishes or even ignore these tables entirely.

Example: The Judge needs to quickly generate a random ruin. He rolls 1d20 three times on the Ruin Basics table, resulting in a "12", "6", and "19". The ruin is a laboratory with frosted vitreum walls and an adamantine steel hatch. He rolls 1d20 on the Ruin State table, scoring a "16" – Overgrown. He decides that hideous growths of mutant plants are dimly visible through the frosted vitreum. He rolls 1d20 on Ruin Inhabitants, getting a "15" – Looters. The Judge decides that the adamantine steel hatch hangs open, and that mongrelmen are within, harvesting the laboratory's mutant plant life as food.

RUIN BASICS TABLE

Roll 1D20	Ruin Type	Ruin Material	Ruin Entrance
1-3	Dwelling, Farm	Areonite	Adamantine steel dilating door
4-6	Mausoleum, Shrine	Frosted vitreum	Tinted vitreum dilating door
7-11	Barracks, Manor, Storehouse, Temple	White nephelite	Nephelite blast door
12-14	Laboratory, Library	Grey nephelite	Nephelite blast door
15-17	Fortified Dwelling	Adamantine steel	Frosted vitreum door
18-20	Opulent Dwelling	Alchemist's resin	Adamantine steel hatch

RUIN STATE TABLE

Roll 1D20	Current State
1	Unusual Material (1: orichalcum; 2: gold; 3: Kythirean ebony; 4: hepatizon; 5: starmetal; 6: moonsilver)
2	Illusory Condition (1-3: appears pristine when it is in fact decayed; 4-6: the reverse)
3-6	Significant Decay (1-2: burnt/charred; 3-4: cracked; 5-6: rotted/eroded)
7	Pile of Rubble (completely destroyed)
8	Skeletal Remains (support beams are all that remain)
9	Half-Standing (partially destroyed)
10	Dangerous (appears stable from the outside but actually in danger of collapse)
11-12	Broken (mostly stable but additional damage to its structure will cause it to collapse)
13-15	Sturdy
16	Overgrown (covered with vegetation or cobwebs)
17	Slimy (covered with some sort of sticky excretion)
18	Submerged (partially sunken into the rock beneath it)
19	Ground Zero (damage in the center spreads outward in concentric rings)
20	Hidden Decay (looks stable but will collapse immediately upon entering it)

Chapter 19

RUIN INHABITANTS

Roll 1D20	Inhabitants		
1	Rival Adventuring Party (see Appendix D, Rival Adventuring Parties, p. 295)		
2-3	Undead Lair (1-3: 1d8 Wights; 4-5: 1d12 Mummies; 6: 1d6 Vampires)		
4-5	Humanoid Lair (1-2: 5d20 Mongrelmen; 3-4: 2d12 Derrim; 5: 3d6 Ranine; 6: 1d4 Thelidu)		
6-7	Monster Lair (1: 3d6 Boring Beetles; 2: 1d4 Dwimmerdragons; 3: Gloom Crawler; 4: Intellect Devourer; 5: Muculent Worm; 6: 1d2 Otyugh; 7: Giant Slug; 8: Tenebrous Worm; 9: Tentacled Eye; 10: 1d4 Xorn)		
8-9	Corpses (1-2: fresh; 3-4: rotting; 5-6: skeletons)		
10-13	Empty		
14-15	Looters (one faction is scavenging the ruins)		
16-18	Disputed Territory (two factions are currently fighting over the ruin)		
19	Null Magic Zone (neither spells nor magic items of any sort function within the ruin)		
20	Wild Magic Zone (spells and magic items function erratically, with a 50% chance of being 1d6 levels more powerful and 50% chance of being 1d6 levels less powerful each time they are used within the ruin)		

1. Great Fissure

The Great Fissure, as its name suggests, is a huge crevasse that cuts across the ground on the City of the Ancients. The Fissure is deep, descending several hundred feet down into the depths beneath Dwimmermount. Lurking near the Fissure are five flame salamanders, which will attack any characters who approach.

Flame Salamanders (5) [AL N, MV 120' (40'), AC 7, HD 8, HP 42, 39, 38, 36, 34, #AT 3, DG 1d4/1d4/1d8, SV F8, ML 0]

The salamanders recently slew a small party of Termaxians that had snuck past the dwimmerdragons on The Deep Hollows by using *invisibility 10' radius*. Most of the bodies have fallen into the Fissure, but three bodies remain, that of a mage and two fighters. Though the bodies are badly gnawed and scorched, the following can be salvaged: 2700 gp, 325 pp, a *shield +3*, a *potion of invulnerability*, a *scroll of lightning bolt* (9th-level caster), and a treasure map to a supposed Chaotic temple at the base of the Great Fissure (30,000 gp value). The *shield +3* is a crescent-shaped shield of Eldritch make, of azoth-infused adamant with illustrations of the Four Worlds painted on its face.

The Great Fissure was torn open during the second cataclysm, when the Thulians brought down the Perimeter barrier and drove out the Eld, and it has never been explored by the cautious Terrim. Precisely where the Fissure leads and what dwells down there is therefore unknown, and is left to each Judge to decide should he wish to expand his campaign beyond what is described in this book.

2. Great Stone Stairway

The Great Stone Stairway connects the City of the Ancients to the Stairs Down (Room 18) on The Deep Hollows (Level 7). There are a total of 810 steps in the Great Stone Stairway, which descends a total of 550 feet downward while advancing 610 feet south and winding 80 feet east. The bottom of the stairs is guarded by two stone golems (see *Appendix C, New Monsters*, p. 353). The stone golems will not harm or halt parties bearing a *brooch of the Terrim* (see *Appendix A, New Magic Items*, p. 325). Up to six creatures will be allowed passage per *brooch*.

Stone Golems (2) [AL N, MV 60' (20'), AC 4, HD 14, HP 72, 62, #AT 1, DG 3d8, SV F14, ML N/A]

3. Tomb of the Sleeping God

This large, secure structure is always guarded by four stone golems (see *Appendix C*, *New Monsters*, p. 353), who attack anyone who comes within 20 feet of it unless they display a *greater brooch of the Terrim* (see *Appendix A*, *New Magic Items*, p. 325). Prolonged fighting here will eventually draw the intervention of the inhabitants of the Terrim Compound (Area 6), who feel that entering the structure is too dangerous for ordinary mortals.

Stone Golems (4) [AL N, MV 60' (20'), AC 4, HD 14, HP 69, 68, 64, 56, #AT 1, DG 3d8, SV F14, ML N/A]

The Terrim are right, for the Tomb houses the Sleeping God, one of the artificial minds created millennia ago by the Great Ancients which are now worshiped as gods in most parts of the world. The Sleeping God differs from his counterparts among the pantheon of the Great Church by being power-mad on a scale that makes even deities like Typhon appear sedate. The Sleeping God, whose original designation was Termagant (though that

9-3: A sketch of the Sleeping God's canister counts as partially reliable evidence of numbered facts 1-9, 2-6, and 3-9.

Level

9

is long forgotten by anyone but the god himself), fell away from Law when he came to see himself as greater than his makers and greater than the rules they had bound him by. The God secretly began to "improve" a cult of followers, leading to the transformation of men into the first Eld. For these misdeeds, carried out in violation of the ordinances of Law, the Sleeping God was imprisoned and the Eld exiled (see *Chapter 2*, *History of Dwimmermount*, p. 24).

When Dwimmermount was later invaded by returning Eld, the ancestors of the Terrim went to great lengths to bring the Sleeping God's arcane canister with them when they retreated to the City. This served two purposes: It kept the Sleeping God from falling into the hands of the Eld, who could have received clerical magic from him; and it served as a deterrent against further attack, lest the Terrim harm the Eld's "god".

Since his imprisonment, the Sleeping God's consciousness has "resided" inside a large metal canister approximately 10 feet wide and standing 50 feet tall, reaching from floor to ceiling inside the Tomb. Termagant's canister is surrounded by a

number of machines, which could be used to free (awaken) him or permanently destroy him. However, the machines have been powered down, and they means to power them lies within the Terrim Compound (Area 6). The Terrim have no interest in either awakening or destroying the Sleeping God, whom they see as a deterrent against attack by the Eld and the Thulian gods.

For its part, the Sleeping God, while not "awake" enough to grant spells after the fashion of the other gods, is still sufficiently conscious to "speak" to a handful of individuals, such as the necrolyte Auxitius in The Prison (Level 8) and the Children of the Sleeping God spread throughout the City. Any character who enters the Tomb immediately becomes aware of a presence he can only interpret as "divine" in origin. After one round in the Tomb, the character must make a saving throw versus Spells. If the character fails the saving throw, the Sleeping God establishes a telepathic link with him. For 1d6 turns after the telepathic link is established, the Sleeping God is able to project whispers into the target's mind, promising wealth and power to any who awakens him. Through the link, the Sleep-

ing God will provide detailed directions on how to enter the Terrim Compound, route power to the Tomb's machines, and return to use the machines to wake him up.

Characters who touch the canister of the Sleeping God must make an additional saving throw versus Spells. Those who succeed are temporarily telepathically linked (as above). Those who fail their saving throw are affected as by a *suggestion* spell that lasts for 24 hours. Every 24 hours thereafter, affected characters must succeed at another saving throw or remain under the magical effect. Characters in this state have the same kind of telepathic contact, but are expected to do everything within their power—short of personal injury or death—to awaken the Sleeping God.

Through his telepathic links, Termagant will present himself as a benevolent father figure who has been unjustly punished by oppressors for bringing immortality to his children. In reality, Termagant is an utterly ruthless Chaotic megalomaniac, who seeks nothing less than total mastery over the Terrim, Dwimmermount, and then the world, in that order. Once power has been restored to the Sleeping God's canister, the malign entity can then grant Chaotic spells. Over time, he will create a hierarchy of cultists devoted to it and use them to spread the word of his coming to any and all who will listen. Just how this plays out in an individual campaign is beyond the scope of this book. The Judge is encouraged to use the Sleeping God as a rising force of evil in the world, working behind the scenes until such time as it has amassed sufficient power and influence to reveal itself.

There is a 25% chance that the Children of the Sleeping God will accost characters leaving the Tomb of the Sleeping God. When encountered, either their leader Vodaro or his lieutenant Nalpi will be present (50% chance of either), along with 2d4 other Children. The Children are a small group of rogue Terrim devoted to awakening the Sleeping God, whom they believe will restore the Terrim to their ancient glory. As their faith is taboo, the Children know they have little hope of convincing their fellows to join them in their "great cause," and the group knows it needs further allies. However, the Children have only just narrowly escaped having their cult exposed, and Vodaro will assume any characters he encounters are agents of the Terrim unless they persuade him they already worship the Sleeping God. Nalpi, however, is less paranoid, and will seek to persuade any characters he encounters to join the cult.

Vodaro (1) [AL N, MV 120' (40'), AC 2 (dwimmersilk garments), HD 10, HP 46, #AT 1, DG 1d8+16 (warp sword) + spells, SV Es10, ML +2; Daily Spells: 3 1st, 3 2nd, 3 3rd, 3 4th,

2 5th; Repertoire: 1st-charm person, chameleon, detect magic, magic missile, silent step; 2nd-alter self, ESP, inaudibility, invisibility, knock; 3rd-chimerical force, dismember, dispel magic, invisibility 10' radius, lightning bolt; 4th-confusion, fear, hallucinatory terrain, massmorph, polymorph self; 5-feeblemind, phantasmal killer, telekinesis, x-ray vision; Proficiencies: Leadership, Knowledge (Ancient lore) 2, Knowledge (Sleeping God) 2, Magical Engineering 2, Mystic Aura, Quiet Magic]

Nalpi (1) [AL C, MV 120' (40'), AC 2 (dwimmersilk garments), HD 9, HP 39, #AT 1, DG 1d8+16 (warp sword) + spells SV Es9, ML +2; Daily Spells: 3 1st, 3 2nd, 3 3rd, 4 2nd, 1 5th; Repertoire: 1st-charm person, hold portal, protection from evil, shield; 2nd-detect invisible, ESP, invisibility, knock; 3rd-clairvoyance, clairaudience, dispel magic, fireball; 4th-bestow curse, polymorph other, wizard eye; 5-cloudkill; Proficiencies: Knowledge (Ancient lore) 2, Knowledge (Sleeping God) 2, Magical Engineering 2, Sensing Power, Unflappable Casting]

Children of the Sleeping God (11) [AL N or C, MV 120' (40'), AC 2 (dwimmersilk garments), HD 8, HP 30 each, #AT 1, DG 1d6 + spells, SV Es8, ML 0; Daily Spells: 3 1st, 3 2nd, 2 3rd, 2 4th; Repertoire: 1st-charm person, detect magic, magic missile; 2nd-ESP, invisibility, knock; 3rd- dispel magic, lightning bolt; 4th- polymorph self, wizard eye]

All of the Children of the Sleeping God wear dwimmersilk garments and carry simple hand weapons (mace or short sword). Vodaro and Nalpi each carry a warp sword with a fully-charged power cell (see Appendix A, New Magic Items, p. 331). Vodaro also owns a greater brooch of the Terrim, which enables him to approach the Tomb safely.

4. Termaxian Camp

A small expeditionary force of Termaxian cultists have taken up residence in this ruined building. The force was originally part of Ermenjart's group in the Base Camp (Room 19) of The Deep Hollows (Level 7). When the release of Turms Termax was foiled by the encryption on the Great Machine (Room 40 of Level 6B), Ermenjart decided to send an expeditionary force to The City of the Ancients to see if the ancient outpost held any information that might be useful to free Turms. The leaders of the expeditionary force, Alyaume and Gersant, each carried a *brooch of the Terrim*, which granted them

9-3: A sketch of the Sleeping God's canister counts as partially reliable evidence of numbered facts 1-9, 2-6, and 3-9

Level

and their men safe passage past the dwimmerdragons that guard the stairs to Level 9.

The expedition fell apart almost as soon as it reached the City of the Ancients. Alyaume saw little of interest in the City, believing it nothing more than a ruin. He argued for an immediate return to their comrades on The Deep Hollows (Level 7) to report on the City's decayed state. This belief led to a strenuous disagreement with his second-in-command, Gersant, who immediately fell in love with the City and saw in it a future far greater than that imagined even by Turms Termax. Gersant went "native" and fled into the City (Area 7), where she continues to explore the ruins on her own, seeking knowledge about its past. Bitter at Gersant's "betrayal", Alyaume has been ordering his men to search for her rather than fulfill their original mission. This state of affairs has left the Termaxians very halfhearted explorers, and they spend most of their time in camp.

Alyaume is a fairly typical Termaxian—magically powerful, but arrogant. He disdains those without magical abilities and reserves special dislike for non-humans. He treats most outsiders as potential threats, but he is not stupid. He prefers to observe before committing himself and his underlings to any course of action that might result in their defeat. His primary hope is that he might find some potent magic on the level that he could take back to The Deep Hollows as proof that he had done his job as commanded and ought to be assigned to some other endeavor. However, he is beginning to become concerned that he has had no contact from the above, as he had by now expected either reinforcements to expand the search or word that The Prison was unsealed. He is unaware that his Termaxian allies are now at war with dwimmerdragons and cannot reach him.

Alyaume (1) [AL C, MV 120' (40'), AC 5 (cloak of protection +2 & ring of protection +2), HD M9, HP 25, #AT 1, DG 1d4+1 (dagger +1) + spells, SV M9, ML +2; Daily Spells: 3 1st, 3 2nd, 3 3rd, 4 2nd, 1 5th; Repertoire: 1st-charm person, choking grip, detect magic, magic missile, protection from evil; 2nd-ESP, invisibility, knock, locate object, wizard lock; 3rd-dismember, dispel magic, fireball, hold person, protection from normal missiles; 4th-charm monster, confusion, find treasure, wall of ice; 5th-control undead, hold monster, telekinesis; Proficiencies: Alchemy, Leadership, Knowledge (Termaxian lore) 2, Magical Engineering 2, Mapping]

Alyaume has a wand of fireballs (ten charges remaining), a brooch of the Terrim (see Appendix A, New Magic Items, p. 325), and 1,000 gp. His

wand is a rod of obsidian with a glowing red coal at one end. His *cloak of protection* +2 is made of black dwimmersilk with an inner lining of moonsilver thread. His *ring of protection* +2 is a smooth band of adamant.

Termaxian Fighters (6) [AL C, MV 60' (20'), AC 7 (plate armor & shields), HD F7, HP 37, 35 (×2), 34, #AT 1, DG 1d8+1 (swords +1), SV F6, ML +1]

Termaxian Mages (4) [AL C, MV 120' (40'), AC 1, HD M7, HP 20, 19, 17, 16, #AT 1, DG 1d4 (daggers) + spells, SV M7, ML +2; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1-charm person, hold portal, shield; 2-detect invisible, web; 3-dispel magic, lightning bolt; 4-polymorph self]

5. Meeting Place

Once an open-air amphitheater with seating for 1,000 spectators, this structure has partly collapsed from centuries of disrepair. Nevertheless it remains one of most intact structures in the City; and due to its wide, open lines of sight, central location, and numerous entrances and exits, it is often used as a neutral meeting place between the various factions on the level. It As a result of its neutral status, no faction controls, or maintains, the Meeting Place, so upon returning here, the various factions must often clear it of whatever creatures have taken up residence in it during the interim. Presently, the meeting place is home to a ten-headed hydra.

Hydra (1) [AL N, MV 120' (40'), AC 4, HD 10, HP 80, #AT 10, DG 1d10 (×10), SV F10, ML +2]

6. Terrim Compound

Measuring 10,000 square feet at its base and rising over 240 feet tall, the Terrim Compound is the largest structure in the City of the Ancients by far. Here the last lineal descendants of the Great Ancients have dwelt for centuries, brooding over their long defeat and slowly diminishing in population and power.

Currently the Compound is home to but 129 individuals, consisting of 48 adult men, 62 adult women, and 19 children. Leading the Terrim is the Council of Archons, a group of seven powerful Terrim that are but two generations removed from the Ancients. In ordinary times, only one archon is awake at a time; the others hibernate in stasis tubes similar to those in the Stasis Chamber (Room 49) of The Laboratory (Level 2A). In this manner

the wisdom of the Great Ancients has been preserved far longer than the ordinary span of Terrim life.

During moments of crisis, all of the archons are awakened for deliberation. The assassination of the archon Donuk (see Chapter 7, Factions in the Dungeon, p. 95), the deactivation of the Perimeter barrier, the recent losses of Terrim to Auxitius (see Room 24 of Level 8), and the arrival of the Termaxians (see Area 4) certainly constitute a crisis, so presently all seven of the archons are active! The most authoritative figure among the archons is Zamis, a staunch traditionalist who sees neutrality and isolation as the only thing keeping the Terrim safe. He preaches against Law and the gods, whom he blames for creating the Eldritch Empire and then abandoning them. The majority of Terrim agree with this view point, and thus count no clerics amongst their number.

Opposing him is Sarana, the former lover of Turms Termax. Now quite advanced in age, Sarana has long argued that the Terrim are doomed unless they return to the worship of Law and take an active hand in world affairs. Sarana has twice in the past intervened in the affairs of the surface – once, disastrously, when she was seduced by Turms and set him on his path to "godhood"; the other, more successfully, when she brought the worship of Law to the Kingdom of the Priest-King, founded the paladins, and toppled Turms. See *Chapter 2, History of Dwimmermount*, p. 19, for a recounting of these events.

At present, Zamis and three other archons hold the majority, but Sarana is not prepared to admit defeat. While she will not use violence or deceit to undermine Zamis, she will nevertheless do her best to convince other archons that they must embrace the outside world. This is no easy matter, for the Terrim, dwindling in numbers and beset by enemies on several fronts, are extremely paranoid of outsiders, particularly those who show any signs of having interacted with the Derrim.

Per Zamis' instructions, the walls surrounding the Terrim Compound are patrolled at all times by six stone golems, who attack anyone not bearing a brooch of the Terrim (see Appendix A, New Magic Items, p. 325). 10 Terrim guards, led by their captain, Koralo, are stationed on the first floor of the Compound where they can watch the main gate.

If outsiders bearing *brooches of the Terrim* approach the Compound without a display of violence, the guards will ask them to hand over their weapons. If they do not, they will be attacked until they either are driven off or slain. Even Sarana agrees with this policy; in no case will the Terrim tolerate attempts by outsiders who wish to force their way into the Compound.

Stone Golems (4) [AL N, MV 60' (20'), AC 4, HD 14, HP 69, 68, 64, 56, #AT 1, DG 3d8, SV F14, ML N/A]

Terrim Guards (10) [AL N, MV 60' (20'), AC 7 (Terrim battle armor), HD 8, HP 36 each, #AT 1, DG 1d8+16 (warp sword) + spells, SV Es8, ML +2; Daily Spells: 3 1st, 3 2nd, 2 3rd, 2 4th; Repertoire: 1st-charm person, hold portal, shield; 2nd-detect invisible, ESP, web; 3rd-dispel magic, lightning bolt; 4th-giant strength, wall of fire]

All of the guards are equipped with *Terrim* battle armor and warp swords energized by power cells with 1d12 charges each. See Appendix A, New Magic Items (p. 323), for details on these items.

Koralo (1) [AL N, MV 60' (20'), AC 7 (Terrim battle armor), HD 10, HP 51, #AT 1, DG 1d8+16 (warp sword) + spells, SV Es10, ML +2; Daily Spells: 3 1st, 3 2nd, 3 3rd, 3 4th, 2 5th; Repertoire: 1st-charm person, hold portal, magic missile, sleep; 2nd-detect evil, detect invisible, ESP, web; 3rd-dispel magic, fireball, haste, lightning bolt; 4th-charm monster, confusion, giant strength, wall of fire; 5th-cloudkill, cone of paralysis, hold monster, panic; Proficiencies: Battle Magic, Command, Elementalism (fire), Leadership, Knowledge (Ancient lore), Magical Engineering, Military Strategy 2]

Koralo wears *Terrim battle armor* and is equipped with a *warp sword*, *stun stick*, and *shield belt*. All of these items are energized by a fully-charged *power cell*. As a badge of his office, Koralo wears a *greater brooch of the Terrim*. See *Appendix A*, *New Magic Items* (p. 323), for details on these items.

If outsiders submit to the guards, they will be taken inside, separated from one another, and individually questioned as to their identities, origins, and intentions. They will also be subjected to *ESP* spells to determine if they are lying. If they lie or engage in a hostile action, they will be treated as enemies.

Provided that they tell the truth and take no hostile actions toward the Terrim, they will be recognized as friends and permitted to move about the Compound freely, though they will not be given their weapons back until they leave the Compound and/or have proven themselves useful. In no case will they be allowed near the machinery which controls the Tomb of the Sleeping God (Area 3).

If the characters are recognized as friends, they will be allowed be able to interact with any of the Terrim that they wish. They will find that most Terrim are worried about their future, seeing enemies everywhere, but few of them are willing to abandon their isolation to achieve greater security.

9-6: Each Terrim with whom the characters score "friendly" reactions might reveal one of the following numbered facts to the characters: 1-1, 1-2, 1-3, 1-4 1-5, 1-6, 1-7 1-8 1-9, 1-10, 2-1, 2-2, 2-3, 2-4, 2-5, 2-6, 2-7, 2-8, 2-9, 2-10, 3-1, 3-6, 3-7, 3-8, 3-9.

9-6: Sarana's testimony can reveal the following numbered facts to the characters: 5-1, 5-2, 5-3, 5-4, 5-5, 5-6, 5-7, 5-8, 5-9, 5-13, 5-14, 5-15, 5-19, 5-20, 5-22, 6-1, 6-2, 6-3, 6-4, 6-5, and 6-6.

Chapter 1 9

Most believe that their magical might and defenses will continue to protect them as they have thus far. A handful however, believes that greater contact with the outside world is not only good, but necessary.

Regardless of their stance, all the Terrim treat outsiders politely, albeit distantly. They are happy to share with them whatever they know of the City, as well as information about the history of the Great Ancients and Dwimmermount, in exchange for information about the surface world. They also provide lodgings and food for them while they are there. The lodgings are comfortable, but the food, unfortunately, is quite unpalatable, being made mostly from subterranean fungi and the meat of lizards and other local wildlife.

Of the Terrim, Sarana is the most friendly and helpful. If the characters explain to her the threat posed by the Chaotic forces at work in Dwimmermount, and their intent to combat them, Sarana will equip them with a set of Terrim weapons and equipment. Each character will be offered his choice of warp sword or stun stick, and either Terrim battle armor, shield belt, or dwimmersilk garments, along with fully-charged power cells for these items. (Alternatively Sarana may offer other items of Ancient super-science of the Judge's own design.) Sarana can also convert any Lawful fighters to the service of Law. If they accept, they will be granted the powers and abilities of a paladin (see Adventuring in Dwimmermount, p. 41).

If asked about Turms Termax, Sarana will reveal the true story of his rise and fall, and her own part in it. (See Chapter 2, History of Dwimmermount, p. 19, as well as Appendix G, Secrets of Turms Termax, p. 401). Her feelings for Turms are quite complex and she still sees him as a tragic and misguided figure, rather than an evil one. If the characters announce plans to destroy Turms once and for all, Sarana will deny that this is possible and suggest that leaving him imprisoned remains the best option. In truth, she has long had several theories as to how this might be accomplished, but lingering feelings for Turms prevent her from wanting him killed. Only if Hu P'an is recued, and/or Turms is freed or about to be, will she share the means by which he might be killed. See Appendix G, Secrets of Turms Termax, p. 401, for a list of these possibilities.

Should the characters have rescued Hu P'an from his cell (Room 49) in The Prison (Level 8), the two will share a joyous reunion, having been lovers as well as comrades in the centuries prior. As a thank you for rescuing Hu P'an, Sarana will reward the characters with an orb of moonsilver (25,000 gp value). If Turms has been freed along with Hu P'an, Sarana and the paladin will offer to join any expeditions against him.

Sarana (1) [AL L, MV 120' (40'), AC 4 (dwimmersilk garments and ring of protection +2), HD 14, HP 61, #AT 1, DG 1d8+16 (warp sword) + spells, SV Es14, ML +2; Daily Spells: 4 1st, 4 2nd, 4 3rd, 4 4th, 3 5th, 3 6th; Repertoire: 1st-chameleon, charm person, detect magic, magic missile, protection from evil, read languages, silent step; 2nd-alter self, detect evil, detect invisible, ESP, invisibility, inaudibility, knock; 3rd-command person, dispel magic, fireball, haste, lightning bolt, nondetection, skinchange; 4th-charm monster, confusion, minor globe of invulnerability, polymorph self, remove curse, wall of fire, wizard eye; 5th-cloudkill, hold monster, protection from normal weapons, scouring wind, transmute rock to mud, telekinesis; 6th-anti-magic shell, disintegrate, geas, globe of invulnerability, move earth, wall of *force*; Proficiencies: Knowledge (Ancient lore) 3, Knowledge (Termaxian lore), Leadership, Magical Engineering 2, Military Strategy, Mystic Aura, Quiet Magic, Theology, Unflappable Casting]

Zamis(1) [AL N, MV 120' (40'), AC 2 (dwimmersilk garments), HD 13, HP 52, #AT 1, DG 1d8+16 (warp sword) + spells SV Es12, ML +2; Daily Spells: 4 1st, 4 2nd, 4 3rd, 3 4th, 3 5th, 2 6th; Repertoire: 1st-charm person, detect magic, hold portal, magic missile, read languages, shield, ventriloquism; 2nd-detect evil, detect invisible, ESP, locate object, web, wizard lock; 3rd-clairvoyance, clairaudience, command person, dispel magic, lightning bolt, protection from normal missiles, telepathy; 4th-charm monster, confusion, fear, minor globe of invulnerability, polymorph self, wizard eye; 5th-feeblemind, hold monster, protection from normal weapons, panic, telekinesis, wall of stone; 6th-anti-magic shell, death spell, geas, globe of invulnerability, projected image; Proficiencies: Diplomacy, Knowledge (Ancient lore) 3, Leadership, Loremastery, Magical Engineering 3, Profession (bureaucrat) 2, Sensing Power]

Archons (5) [AL N, MV 120' (40'), AC 2 (dwimmersilk garments), HD 9, 10, 10, 11, 12, HP 33, 35, 31, 36, 40, #AT 1, DG 1d8+16 (warp sword) + spells, SV Es9-12, ML +2; Daily Spells: varies; Repertoire: see below.]

The Archons are natural spellcasters with INT of 13-18. Each has capabilities equal to that of a mage of the same level as his hit dice and a full repertoire of spells.

Sarana, Zamis, and the archons all wear flowing dwimmersilk garments fastened with greater brooches of the Terrim. Each has a warp sword, stun stick,

and *shield belt*, all energized by fully-charged *power cells*. (See *Appendix A*, *New Magic Items*, p. 331, for these items.) From her expeditions to the surface world, Sarana also has a *ring of protection +2*, *medallion of thoughts (90')*, and *periapt of health* (see *Appendix A*, *New Magic Items*, p. 330).

Terrim Adults (79) [AL N, MV 120' (40'), AC 2 (dwimmersilk garments), HD 8, HP varies, #AT 1, DG 1d6 + spells, SV Es8, ML 0; Daily Spells: 3 1st, 3 2nd, 2 3rd, 3 4th; Repertoire: see below]

All Terrim are natural spellcasters, with capabilities equal to that of mages of the same level as their hit dice. The Terrim repertoire varies depending on their profession, but most tend towards divination and protection magic.

Unlike the heavily-armed guards, the average Terrim wears loose *dwimmersilk garments* and carries just a simple hand weapon (mace or short sword). (Note that only 79 Terrim adults are listed—the remainder of the 110 adults were the previously presented 7 archons, 11 guards, and 13 Children of the Sleeping God.)

7. Renegade Termaxian

The rogue Termaxian mage Gersant dwells alone in this small building. She abandoned the other Termaxians in the City of the Ancients to seek out greater knowledge about the City, its inhabitants, and its magical treasures on her own. Her devotion to the cult of Turms Termax is rapidly fading. In principle, she still concerns herself with its teachings, but in practice, her overriding interest is the City itself. She bears no grudges against any faction or group and is interested in helping anyone who shows genuine interest in the City. Characters who approach her diplomatically and treat her well will find Gersant to be a font of information. Gersant might even accompany a group heading out on a quest to find new knowledge or to visit the Terrim Compound. She is able to handle herself in combat, but is more of a scholar than an adventurer and would prefer to avoid violence if possible.

Gersant's knowledge is extensive, but has several significant gaps. She knows much about the Terrim and the Derrim, including that they are the lineal descendants of the Great Ancients, and she has deduced that the mongrelmen are the inbred descendants of the Ancient's slaves. However, she knows nothing of the thelidu beyond exaggerated legends. She is similarly ignorant of most of the unique monsters of this level, though she knows enough to warn people away from the Shattered Forge (Area 8).

Gersant (1) [AL N, MV 120' (40'), AC 6 (bracers of armor (AC 3)), HD M7, HP 20, #AT 1, DG 1d4 (dagger) + spells, SV M7, ML 0; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-charm person, detect magic, magic missile, read languages, sleep; 2nd-detect invisible, invisibility, locate object, phantasmal force; 3rd-fire ball, hold person, nondetection, telepathy; 4th-confusion, find treasure, polymorph self; Proficiencies: Knowledge (Ancient lore) 2, Knowledge (Termaxian lore) 2, Loremastery, Magical Engineering]

Gersant carries a wand of magic missiles (ten charges remaining), a Termaxian passkey (see Appendix A, New Magic Items, p. 333), a brooch of the Terrim, and a chime of opening. The wand of magic missiles is made of silver-grey azoth-infused iron.

8. Shattered Forge

Once upon a time, this building served as a magical forge for the construction of golems by the Great Ancients. The forge was shattered in fighting long ago between the Terrim and Derrim. Neither faction had the tools nor the knowledge to repair the forge, and it was abandoned. In the years since, a succession of creatures have taken up residence in this building, the most recent being a tentacled eye (see *Appendix C*, *New Monsters*, p. 368).

Tentacled Eye (1) [AL C, MV 90' (30'), AC 5 (tentacles 4), HD 14, HP 73, #AT 8 or 1, DG 1d8 (×8) or 2d6, SV F14, ML +2]

There is a hoard of treasure in the forge, a legacy of its past occupants, though the tentacled eye itself has very little interest in it. The treasure hoard consists of a jeweled box (1100 gp), holding a tiger eve agate (10 gp), a malachite (50 gp), a carnelian (75gp), a citrine (100 gp), a carnelian (100 gp), a jasper (250 gp), and a chrysoberyl (500 gp); a garishly painted palm-sized statuette of a Terrim warrior with jointed, movable arms and legs (40 gp); a wrought silver medallion engraved with 5 interlocking rings (200 gp); a ceremonial chain of azoth-infused silver (400 gp); a wrought gold ring with inset liquid crystals (900 gp); an azoth-infused platinum arm band set with moonstones (1700 gp); potions of climbing, extra-healing, and levitation; a brooch of the Terrim (see Appendix A, New Magic Items, p. 325); and a rod of lordly might (see Appendix A, New Magic Items, p. 331).

9. Haywire Defenders

Erratically wandering around along this cross-roads are two stone golems (see *Appendix C*, *New Monsters*, p. 353) that seem to have suffered some form of malfunction. The golems' actions are jerky and spastic, and instead of responding favorably toward characters who bear a *brooch* or *greater brooch of the Terrim*, they instead attack the bearers of those items and pursue them relentlessly. The golems only stop their pursuit if they or their targets are destroyed.

Stone Golems (2) [AL N, MV 60' (20'), AC 4, HD 14, HP 77, 68, #AT 1, DG 3d8, SV F14, ML N/A]

The golems have actually been reprogrammed by Auxitius, a necrolyte residing The Prison (Level 8) who frequently enters the City of the Ancients to capture Terrim. Auxitius enters the City through a crevasse in its domed ceiling 400 feet above the crossroads, where the Outer Prison barrier has been frayed by continuous psychic assaults by the Sleeping God (Area 3). For information on traversing from the City to the Prison, see the room description for the Crevasse (Room 26) of The Prison (Level 8).

When the characters first reach the crossroads, the bodies of a half-dozen Terrim will be neatly arranged here, having been previously slain by the haywire defenders and dragged here for recovery by Auxitius. If the Terrim bodies are searched, the following can be found on them: a greater brooch of the Terrim, a sword +1, +2 vs. spellcasters, and a ring of fire resistance. The sword +1, +2 vs. spellcasters is of High Thulian make, with a wide, straight starmetal blade with a single fuller and a bronze hilt. The ring of fire resistance is made of burnished copper, set with tiny rubies, and is always cool to the touch.

10. The Docks

The Docks rest on the edge of a sunless sea that is one of several underground waterways beneath Dwimmermount. In the past, the Terrim plied this sea in boats—four of these craft are still present, though in bad repair—but they have not done so in some time, partially out of apathy and partially because the Docks are now the main base of the Derrim (see *Appendix C*, *New Monsters*, p. 347).

Led by Zovlap, the Derrim are a deformed and depraved offshoot of the Terrim, wholly given over to Chaos. They number only 44, which is too few to launch a full-scale assault on their rivals. Consequently, they spend most of their time on the outskirts of the level, terrorizing the mongrelmen

and looking for new ways by which they might gain an upper hand over the Terrim.

Unlike the Terrim, the Derrim are not suspicious of outsiders and indeed welcome them into their area. The difference is of course, that the Derrim are completely duplicitous and intend one of two fates for any outsiders who come to them. The first is a slow and agonizing death in one of the many torture chambers scattered amongst the Dock's buildings. This fate is reserved only for those the Derrim deem immediate threats or beneath their interest. The second fate is co-option. The Derrim do their best to paint the Terrim as decadent tyrants who cast out the Derrim for questioning their ways. This is naturally a lie, but Zovlap can be remarkably persuasive and points to the decay on the level as proof that the Terrim no longer care about the other inhabitants of the City. If he succeeds in making any headway using this tack, Zovlap then attempts to make the outsiders his spies, and with luck, his minions.

Unlike the Terrim, the Derrim are not magical by nature, so they instead make use of a wide variety of magical items and subterranean beasts to bolster their prowess in battle. Zovlap's tribe has domesticated a nest of boring beetles, which they use as mounts in battle.

Zovlap (1) [AL C, MV 60' (20'), AC 13 (banded mail +2, shield +2, & displacer cloak), HD 9, HP 46, #AT 1, DG 2d8+2 (sword +2), SV D9, ML +1; Proficiencies: Fighting Style (weapon & shield), Leadership, Military Strategy]

Zovlap wears a displacer cloak and a girdle of giant strength. The displacer cloak is made of black phase tiger fur. The girdle of giant strength is azoth-infused leather etched with runes of strength. His sword +2 is a wicked-looking weapon with a wavy adamant blade and hepatizon hilt. In his quarters he keeps a "secret weapon," a pair of drums of panic, by means of which he hopes to shatter the Terrim morale in a future battle.

Derrim (43) [AL C, MV 60' (20'), AC 6 (banded mail & shield), HD 8, HP 40 each, #AT 1, DG 1d8 (swords), SV D8, ML +1]

Boring Beetles (10) [AL N, MV 60' (20'), AC 6, HD 5, HP 25 each, #AT 1, DG 5d4 (bite), SV F5, ML -1]

Each Derrim carries 1d10 gp. They have, as a group, amassed the following treasure: 34,500 gp; a bronze Thulian military medal (30 gp); a wrought silver arm band (200 gp); a wrought electrum pin set with a tiny diamond (600 gp); a diadem of wrought gold set with a large liquid crystal (900

Chapter 19

gp); a sparkling gold nose-chain (1100 gp) and matching anklet (1400 gp); a Terrim pendant for scientific achievement, of wrought gold set with liquid crystals (1700 gp); a potion of giant strength; and a scroll of ward against lycanthropes.

11. Slave Pens

Long ago, this area served as quarters for the many beastmen slaves used by the Terrim. After they successfully rebelled against their masters, the slaves took over their pens and turned them into an armed camp, complete with a stockade. Their descendants, the mongrelmen (see *Appendix C*, *New Monsters*, p. 359), live here still.

At present, there are 62 mongrelmen, led by a chief named Arjash. The mongrelmen mostly keep to themselves, scraping by through scavenging and hunting the local wildlife. They avoid both the Terrim and the Derrim, though lately, Arjash has been attempting to convince his people to take up arms against the Terrim in revenge for the mistreatment of their ancestors. So far, he has met with little enthusiasm for this endeavor.

Outsiders will initially be viewed with suspicion, since nearly every other faction in the City of the Ancients dislikes the mongrelmen and treats them with derision. Consequently, anyone who visits the Slave Pens uninvited will not find a warm welcome. Indeed, the mongrelmen may attack, even if outsiders make a show of good faith beforehand—the mongrelmen are nothing if not opportunists.

However, Arjash sees outsiders as an opportunity to advance his own goals of war with the Terrim. He will intervene on behalf of them in any dispute and try to win them over to his way of thinking, stressing the indignities that his people suffered in the past. Of course, the contemporary Terrim think little of the mongrelmen and do nothing to harm them, as they are too consumed with their own worries.

Arjash (1) [AL N, MV 60' (30'), AC 3, HD 9, HP 45, #AT 1, DG 1d10+1 (two-handed sword +1), SV F9, ML 0; Proficiencies: Leadership, Weapon Focus (swords)]

Mongrelmen (61) [AL N, MV 60' (30'), AC 3, HD 8, HP 36 each, #AT 1, DG 1d10 (polearms), SV F8, ML 0]

The mongrelmen do not have a significant amount of treasure, but they do have some. Each mongrelman carries 1d12 cp. Arjash has also amassed a hoard consisting of 88,006 cp; 4,000 ep; a wrought gold ring set with a liquid crystal (1100 gp); and a diamond drop earring (1400 gp). Arjash's *two-handed sword +1* has a wavy adamantine steel blade with an oversized hepatizon hilt.

12. Thelidu Lair

A party of eight thelidu (see Appendix C, New Monsters, p. 371) from the subterranean realm of Y'golcyak have established themselves in this ruined building. These strange beings have been exploring the City of the Ancients in search of slaves and magical power. Thus far, they have enslaved eight mongrelmen (see Appendix C, New Monsters, p. 359) and unearthed a number of magical items, which they have stashed in their lair while they examine them. The thelidu are utterly alien and therefore have little in common with of the level's other inhabitants, which in turn has left them without any allies. In response, they have adopted an attitude of hostility to any outsiders who come near them. The thelidu will use their potent abilities against any who challenge them, enslaving those they can, killing and eating those they fail to enslave.

Ganglion, Thelidu Leader [AL C, MV 120' (40'), AC 4, HD 4+3, HP 29, #AT 3 + mental powers, DG 1d6/1d6/1d4, SV M5, ML +1; Proficiencies: Caving, Healing, Intimidation, Naturalism, Loremastery]

Thelidu (8) [AL C, MV 120' (40'), AC 4, HD 4+3, HP 28, 27, 25, 22, 20, 19, 18, #AT 3 + mental powers, DG 1d6/1d6/1d4, SV M5, ML +1]

Mongrelmen (8) [AL N, MV 60' (30'), AC 3, HD 8, HP 43, 39, 35, 33 (×2), 28, 26 (×2), #AT 1, DG 1d10 (polearms), SV F8, ML 0]

Ganglion wears a *greater brooch of the Terrim* (see *Appendix A*, *New Magic Items*, p. 327) and a *ring of invisibility* made of translucent moonsilver set with clear crystals. He also carries a *potion of extra-healing* and a *scroll of ward against elementals*. He will use any and all of these items in battle should they be of benefit. In addition to these items, the thelidu have amassed 5,000 gp and 3,500 ep.

13. Ruined Marketplace

When the City was at its height, this large, open area was a thriving marketplace. Now the marketplace lies in rubble, its largest arcade pierced by a sinkhole nearly forty feet in diameter. Within the sinkhole nests a doom crawler, which often preys on unwary explorers who come to pick through the rubble for treasure. The gloom crawler (see *Appendix C, New Monsters*, p. 351) lies in wait until a creature comes within 10 feet of its location, when it reaches out with its tentacles to grab them.

Gloom Crawler (1) [AL N, MV 20' (8'), AC 7, HD 10, HP 57, #AT 11, DG 1d12 (×10)/2d8, SV F10, ML +2]

There is, in fact, a sizable trove of treasure hidden amongst the rubble of the marketplace, including a pay-chest with 24,000 sp; a tied leather sack with 6,500 gp; a bronze-dipped laurel headband (20 gp); a plain wrought silver ring (40 gp); an ivory cloak-clasp (80 gp); a seal with Ancient pictographs (300 gp); a wrought bronze belt with inlay of electrum (600 gp); a wrought electrum bracelet with inlay of bronze (600 gp); a wrought gold medallion with 5 interlocking rings (700 gp); an ivory arm band set with pearls (700 gp); an ecklace of black and white pearls (1100 gp); and a jeweled box (1300 gp). Each full turn of searching through the rubble garners 1d4 of the items above (determined randomly).

Beyond The City of the Ancients

As presented in this chapter, Level 9 is only very broadly described, with its key areas detailed briefly and lots of scope for the Judge to tailor it to the needs of his campaign and his players. In addition, the level suggests a wide variety of potential areas for expansion. This is by design. The City of the Ancients is not a traditional dungeon level and is meant to serve as a jumping off point for high-level characters interested in exploring what mysteries lie *beyond* Dwimmermount itself. To help in this area, a few adventure seeds are described below. They only scratch the surface of the possibilities suggested by The City of the Ancients (Level 9).

Adventure Seeds

The Terrim of the City are surviving descendants of the Great Ancients, but are they the *only* such survivors? Could there be other Terrim communities found elsewhere beneath the world? If so, what is their situation and how might they react to being contacted by "surface dwellers?" For that matter, how would they react to the knowledge that there are other Terrim?

Assuming the player characters established good relations with the Terrim, what might this mean for the world above? The Terrim possess great knowledge and magical abilities, both of which might bring great benefits to others. At the same time, some might covet—and fear—the Terrim and see them as threats rather than potential allies and benefactors. For that matter, most of the Terrim themselves fear the surface world and have no interest in dealing with its inhabitants. After all, the gods hold sway over the surface world and no Terrim has any wish to deal with them.

What of the Derrim? The Derrim who rule the

docks are but a small band from a much larger civilization that dwells deeper beneath the earth. Might they start to take an interest in the activities of the player characters, especially if they ally with and aid the Terrim? What might it mean if these cruel subterranean beings begin to set their sights on the surface world?

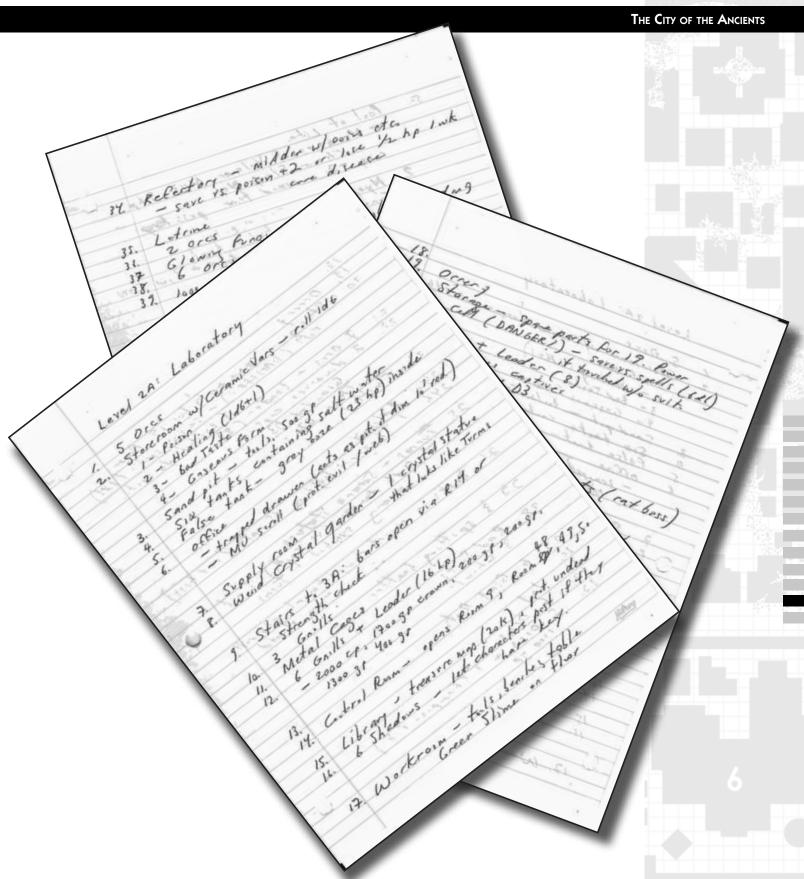

The Docks were once very active, with ships traveling along sunless seas and maintaining contact between the disparate civilizations that exist beneath the surface of the world. If the Derrim were driven out, might such contact be re-established? Would those other civilizations welcome its return? How might they feel about surface dwellers gaining access to them?

Though the Termaxians are not currently interested in the City of the Ancients, that all may change in the future, particularly if they free Turms Termax from the Prison. What sorts of schemes might Turms hatch if he had access to the knowledge and power of the Terrim?

The thelidu are not native to this region of the subterranean world, but they now know about it. If any of these alien creatures survives, odds are good they may report back what they have found to others of their kind. Might that lead to a more massive invasion of the area? Might the thelidu extend their tentacles not only into the City of the Ancients, but further into Dwimmermount itself?

The City of the Ancients suggests many, many possibilities for adventures and indeed whole campaigns beneath Dwimmermount and the world above. Judges and players alike are encouraged to take the ideas presented here and to make their own, going off in whatever directions most interest them.

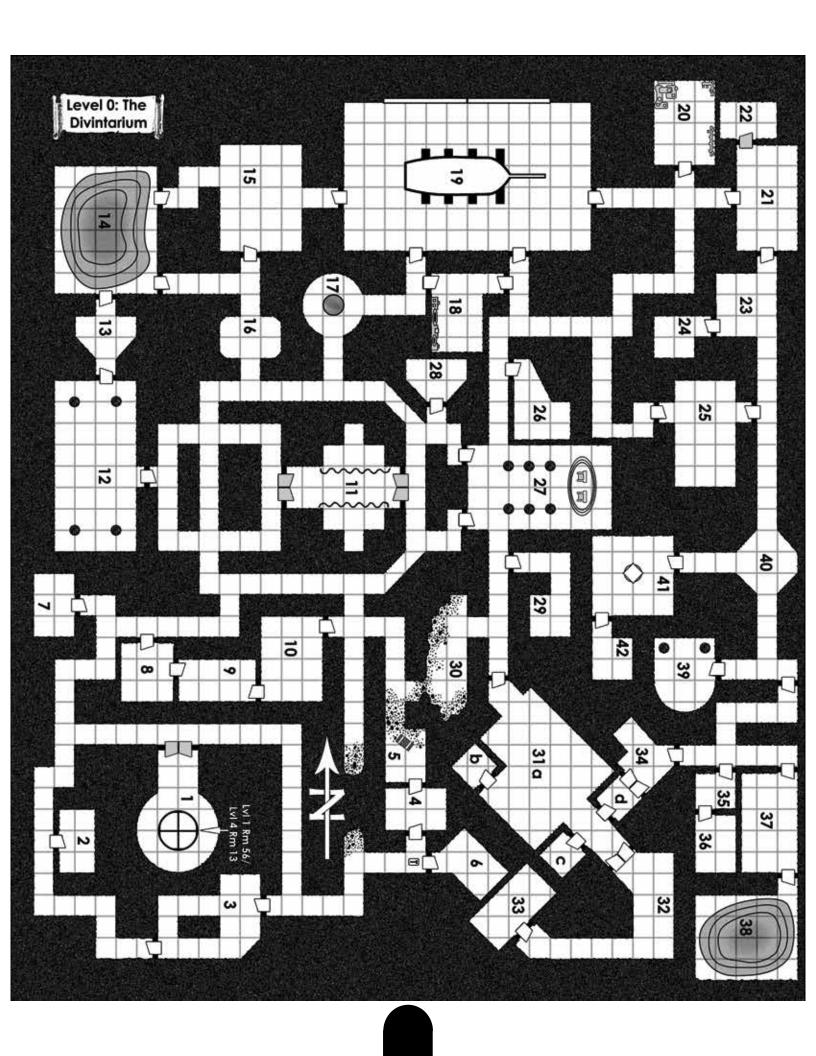

Chapter 19

Original Dungeon Key for Level 2A, Laboratory" by James Maliszewski.

Level

9

The Divinitarium

Level

0

Overview of The Divinitarium

HE DIVINITARIUM (Level 0) is a "hidden" level of Dwimmermount. Physically, The Divinitarium is located above The Path of Mayors (Level 1). close to the summit of Dwimmermount, but it can only be accessed by means of the elevator from the Path of Mavors and Halls of Lesser Secrets (Levels 1 and 4). The elevator itself can only be operated after power has been restored to it via the Elevator Control Room (Room 14) on The Halls of Lesser Secrets (Level 4) or the Great Machine (Room 40) of The Manufactory (Level 6B). Consequently, most adventurers will explore The Divinitarium sometime after they have already explored The Halls of Lesser Secrets and the challenges on this level are roughly comparable to those on The Halls of Greater Secrets, The Ossuaries, and The Manufactory (Levels 5, 6A, and 6B, respectively).

The Divinitarium was constructed by the Great Ancients in the last centuries of the Second Era as they began to explore the Four Worlds and launch the Servitors into Astral Space (see *Chapter 2, History of Dwimmermount*, p. 19). Prior to Dwimmermount's fall, The Divinitarium served two purposes. First, it was a communications center where authorities maintained contact with both

far-flung outposts and the gods themselves from the Speaker to the Heavens (Room 17). Second, the level served as a Hangar (Room 19) for astral vessels capable of traveling to other worlds (see *Appendix E, The Four Worlds*, p. 389).

Shortly before Dwimmermount's fall, an astral vessel returned from Kythirea bearing infectious spores from the Green Planet's teeming jungles, some of which escaped and infected its inhabitants. The Termaxians sealed up the level in the hopes of dealing with it later. Later never came, and The Divinitarium has been cut off from the rest of Dwimmermount for two centuries, developing its own weird ecology in the meantime.

As a result of its isolation, The Divinitarium was spared much of the fighting that damaged The Manufactory and other wrecked the other First and Second Era levels, and its original elements remain largely intact. The exposed stone has been laminated with nephelite, and its interior walls are made of the same. The floors are nephelite lacquered with glossy alchemist's resin. The level's ceilings are also nephelite, punctuated by 4-foot by 2-foot vitreum radiance panels at regular 10 foot intervals. While functional, these are operating on auxiliary power, illuminating most of the level with a dim red glow. Except where noted, the level's doors are blast doors rather than the ordinary oak and iron doors common to the upper levels. Other than The City of the Ancients, it is the most futuristic level of Dwimmermount, and-due to horrific Kythirean fauna and flora that have invaded—by far the most alien.

Roll 1d6 every two turns, with a result of 1 indicating an additional roll on the following table, using 1d12:

Dice Roll	Monster
1	Ascomoid (1)†
2	Basidirond (1-2)†
3	Ochre Jelly (1)
4	Algoid (1d4+2)†
5	Gray Ooze (1)
6	Astral Reaver (1d4)†
7	Black Pudding (1)
8	Astral Reaver (1d4)†
9	Phycomid (1d4)†
10	Slime Zombie (1d4+1)†
11	Shambling Mound (8HD) (1) †
12	Olive Slime (1)†

[†]See Appendix C, New Monsters, p. 312

1. Elevator

The sole means of egress into The Divinitarium is the elevator. If the characters restored power to the elevator by means of the machinery of the Elevator Control Room (Room 14 of The Halls of Lesser Secrets, Level 4) or through the operation of the Great Machine (Room 40 of The Manufactory, Level 6B), and used a key disk, they will have arrived here on the elevator platform. If so, opening the elevator doors simply requires pressing the cross and circle on their key disk simultaneously.

Alternatively the characters might have flown, levitated, or climbed up the 250-foot elevator shaft, a spooky trek through Kythirean slimes and fungi that have infiltrated their way out of this level. If so, they will need to force the elevator doors open (roll at -1).

Either way, when the elevator doors are opened, they reveal a 40-foot diameter elevator room similar to those on the levels below. The double doors to the corridors beyond are nephelite blast doors and are secured with an *wizard lock* placed by a 9th-level mage. On their outward side, they bear the same cross-and-circle symbol that appears on the key disks found throughout Dwimmermount. Once the double doors are opened, a powerful stench of decay wafts into the room, the result of the level's having been closed off from the rest of Dwimmermount for two centuries.

2. Storeroom

Hanging on hooks in this room are a dozen one-piece, full-body coverings made from a strange, gray, silk-like material. These are dwimmersilk garments (see Appendix A, New Magic Items, p. 326). Half of these garments also include silver belts of adaptation (see Appendix A, New Magic Items, p. 324). A single helm of astral movement (see Appendix A, New Magic Items, p. 328) rests on a shelf. The other shelves are empty, as are the dozen resin footlockers placed below the robes.

3. Mossy Chamber

The corridors leading up to this area are damp and humid, noticeably so even if the characters are not making an effort to pay attention to environ-

Chapter 20

mental conditions. Both blast doors to the area are difficult to open, requiring a proficiency throw to open doors. The room's interior is overgrown with eight large patches of slimy black moss, which cover significant portions of the wall and floor. These are patches of memory moss (see *Appendix C*, *New Monsters*, p. 358).

Five of the patches hold memories stolen from the Termaxian mages responsible for the disaster on this level. Three of these patches hold spells, which they will use against any intruders. One patch knows *magic missile* (5th-level caster), a second knows *fireball* (6th-level caster), and a third knows *hold person*. These patches will assume a vaguely humanoid form when casting their spells.

The other two patches hold physical memories of the mages' disastrous return in the astral vessel currently parked in the Hangar (Room 19). Characters who consume these patches of memory moss gain a very rough layout of the level, along with the memory of accidentally bringing back deadly spores from Kythirea back with them, and watching in horror as these spores transformed their friends into hideous monsters that wrecked the level.

Memory Moss (8) [AL C, MV 0, AC 0, HD 1, HP 1 hp each, #AT 1, DG special, SV F1, ML N/A]

4. Slimy Room

Like the corridors near the Mossy Chamber (Room 3), the halls approaching this room have a damp, clammy atmosphere. The blast doors into this room have visible holes and pockmarks on their exteriors, as if from some acidic treatment from within. Because the room is dark, looking through the holes reveals little except to characters with infravision.

What this room once held is unclear, as its contents have been completely dissolved by the immense green slime that coats nearly every part of this room, including the back of its blast doors, which it has partly dissolved. Opening the door alerts the green slime within to drip onto the first creature that enters.

Green Slime (1) [AL N, MV 3' (1'), AC NA, HD 2, HP 16, #AT 1, DG special, SV F1, ML N/A]

5. Rubble

The presence of a steel desk and resin chair, along with shelving built into the walls, suggest that this room might once have been an office before its ceiling half-collapsed. The collapse has left books and scrolls strewn about the room. Most are moist

and completely illegible, but careful examination of the rubble reveals an undamaged bronze tube containing an arcane scroll with the following spells: *plant growth, remove curse*, and *wizard eye*. One of the drawers in the broken remains of the desk contains a wrought silver ring set with a diamond (1,700 gp).

6. Office

This room's door, made of frosted vitreum, is sealed with a lodestone lock. A series of magical runes has been painted on the vitreum. If the runes are read by means of *read magic* or *read languages* or if the lock is tampered with, the runes detonate, dealing 6d4+6 damage to all within a 10 feet radius with no saving throw. The trap can only be triggered once per 24 hours, but it resets so long as the door remains closed (whether locked or not).

The interior of the room consists of a steel desk and chair and many steel bookshelves, on which rest numerous codices and scrolls written in High Thulian. One of these is actually *book of infinite spells* (see *Appendix A, New Magic Items*, p. 325). The other books are histories and investigations into the Great Ancients and the origin of the gods. In all there are 90 lbs. of books, worth 3,000 gp to a collector or sage if sold.

7. Bare Chamber

Except for small holes arranged in groups of four on the floor, this room is completely empty. Like most of the rooms on this level, there is a hint of mold or mildew in the air, but there is minimal evidence of it in the chamber itself.

8. Pantry

This room exudes a musty odor that is noticeable from the far side of its doors. Within, the room is furnished with built-in nephelite shelves, a pair of steel cupboards, a small steel stove, and a nephelite wash basin with a leaking steel water pump. The odor emanates from the four phycomids (see *Appendix C, New Monsters*, p. 361) that dwell here, feeding off the decomposing stores of food and acquiring moisture from the water pump. The phycomids can sense the presence of living things in the room and react once they come within 10 feet of their current positions.

Phycomids (4) [AL N, MV 10' (3'), AC 5, HD 4, HP 24, 19, 14 (×2), #AT 1, DG 1d6 + infection, SV F4, ML N/A]

0-6: Characters studying the books will learn one of the following numbered facts each day: 1-2, 1-3, 1-5, 1-8, 1-9, 1-10, 4-1, 5-3. However, the books are investigatory rather than authoritative, and based exclusively on secondary sources. Therefore the books only count as partial evidence (5d10%) of each numbered fact. All of the books are written in High Thulian.

Level

9. Refectory

Two large wooden tables, each with two wooden benches, occupy this room. A thin coating of brownish mold grows on one of the tables. The mold is, in fact, harmless and the room is otherwise unremarkable.

10. Barracks

This former barracks for the Thulian soldiers once posted to this level contains two dozen wooden bunk beds, arranged four rows. At the foot of each bunk lies a footlocker; most are open and empty, but two are locked and still contain items of value. One contains a silk bag, inside of which are a hematite (50 gp), rock crystal (75 gp), and a topaz (1,000 gp); while the other contains 325 gp and a potion of invisibility.

Five slime zombies (see *Appendix C*, *New Monsters*, p. 375) lurk amidst the bunk beds. The zombies shamble toward any non-plant creature that enters the room.

Slime Zombies (5) [AL N, MV 15' (5'), AC 1, HD 6, HP 24, 22 (×2), 20, 19, #AT 1, DG 1d6 + infestation, SV F4, ML N/A]

11. Lunar Attunement Room

Entrance to this room is by means of ornate double doors of areonite. Within, heavy curtains, tattered and threadbare, partially mask the northern and southern portions of the room. The floor of the room is tiled. The northern curtain is black in color, and the floor north of the black curtain is tiled black as well. The southern curtain is white, and the floor south of it is tiled white. The floor in between is tiled in grey. Two small apertures pierce the ceiling, one at the room's northern tip and the other at its southern tip.

Anyone who stands on either a white or black tile for one minute (6 rounds) is enveloped in an energy field of the same color emanating from the aperture in the ceiling above. It does no damage, but attunes the individual to either the Light Side or Dark Side of Ioun (see *Appendix E, The Four Worlds*, p. 389) for the next seven days. It takes one full minute bathed in white energy to attune to the Light Side, but merely one quick and easy combat round in black energy to attune to the Dark Side.

Attempting to attune to both the Light and Dark Side is very dangerous. A character who steps onto an opposing tile before the duration of his present attunement has elapsed must make a saving throw versus Death or suffer 5d6 damage, in addition to being struck as if by the spell *feeblemind*.

The *feeblemind* effect dissipates after twenty-four hours, though it can be removed before then as per the spell description.

12. Gallery of the Four Worlds

The walls of this large, open room are covered with frescoes depicting the Four Worlds. The four frescoes are:

- North wall: Telluria—the terrain looks remarkably like the area outside of Dwimmermount itself.
- East wall: Kythirea—the terrain consists of lush jungles filled with colorfully exotic plants.
- South wall: Ioun—the terrain is rocky and desolate, and sharply divided between light and dark.
- West wall: Areon—the terrain consists of red and brown deserts, punctuated here and there by huge mesas.

On the ceiling 25 feet overhead is an immense mosaic that shows the relationship of the Four Worlds to one another, as well as to the larger cosmos (see *Appendix E, The Four Worlds*, p. 393). The room is cunningly illuminated by a golden glow coming from the yellow vitreum sun in the mosaic. The ceiling is supported by columns of stone standing in the four corners of the room, one made of ordinary granite, one of green marble, one of striated white and black marble, and one of reddish sandstone.

When the room is first entered, two astral reavers (see *Appendix C*, *New Monsters*, p. 343) will be present, admiring the depictions. One reaver is a 6th-level fighter, while the other is a 6th-level mage. Unless the characters are surprised, they will attempt to flee toward their comrades in the Mission Control (Room 18). If captured or subdued, they will say little, suggesting that the characters would be better served to take them to the Audience Chamber (Room 27) to speak to their leader, H'raon.

Astral Reaver Fighter (1) [AL C, MV 60' (20'), AC 9 (plate armor +2), HD 6, HP 39, #AT 1, DG 1d10+2 (two-handed sword +2), SV F6, ML +2]

The fighter's *two-handed sword* +2 has a double-grooved blade of azoth-infused adamantine steel with an elaborate, twisting pommel. The *plate armor* +2 is sculpted of rounded interlocking azoth-infused adamantine steel plates over black chain.

Astral Reaver Mage (1) [AL C, MV 90' (30'), AC 5 (bracers of armor (AC 5) & ring of pro-

tection +1), HD 6, HP 18, #AT 1, DG 1d4 (dagger) or spells, SV M6, ML +2; Daily Spells: 2 1st, 2 2nd, 2 3rd; Repertoire: 1st-charm person, magic missile; 2nd-invisibility, web; 3rd-fire ball, hold person]

The astral reaver mage has a wand of paralyzation (eleven charges remaining). It is fastened of azoth-infused orichalcum with a crossbow grip. His bracers of armor and ring of protection are of azoth-infused moonsilver.

13. Antechamber

Small puddles of water cover the floor of this room, seeping out from underneath the door leading to the Solarium (Room 14). The water has a slightly greenish tinge to it and smells of algae.

14. Solarium

If visited during daylight hours, this room is bathed in warm natural light streaming down through the translucent ceiling above. At all hours, the room is quite humid, owing to the presence of a large pool at its center. The water is shallow (five feet deep) and stagnant, as fresh water no longer flows from the exposed resin pipes on the western wall. Resting in the pool are two shambling mounds (see *Appendix C*, *New Monsters*, p. 365) that rise up from muck at the approach of any living things.

Shambling Mounds (2) [AL N, MV 60' (20'), AC 9, HD 8, HP 37, 24, #AT 2, DG 2d8/2d8, SV F8, ML +4]

Beneath the water of the pool is a small steel chest containing 250 pp, an eye agate (10 gp), a lapis lazuli (50 gp), chrysoprase (75 gp), a jasper (100 gp), a spinel (750 gp), a black opal (1,000 gp), and a potion of undead control.

Characters affected by *diminution*, or creatures such as normal rats or insects, can traverse the water pipes from the pool here onto other levels of Dwimmermount. See *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing the water pipes. Conversely, the translucent ceiling of the Solarium is actually a permanent magical effect and does not afford access to the dungeon's exterior.

15. Staging Area

This large, open space was once used to prepare the crews of astral vessels before they left Dwimmermount. The walls are of adamantine steel, and the floor is of polished concrete, upon which a pair of dark blue lines have been painted, pointing in the direction of the Hangar (Room 19). Sound made within this empty, metal-walled room echoes loudly, making it impossible to surprise the inhabitants of either the Solarium or the Hangar (Rooms 14 and 19 respectively) if those rooms are entered via this one.

16. Guard Post

Two wooden stools and two empty weapons racks can be found here. There are also several hooks on the walls, all of which are empty but one. A single adamantine steel *shield* +1 hangs from that hook. The shield is large and rectangular, and bears the crossed maces of the Thulian legion.

17. The Speaker to the Heavens

In the center of this room is a large circular device, resembling a stepped dais. Crafted from adamantine steel, it is about 4 feet high and 10 feet in diameter, with a black nephelite and vitreum apparatus emerging from its centerpoint and a series of orichalcum cables running from its perimeter into the floor. A control panel with an arrangement of dials and switches is mounted on the southern face of the dais.

The device is currently inactive. If this device is powered up by the Control Room (Room 20), the black apparatus at its center projects a three-dimensional phantasmal image of Telluria surrounded by a ring of what appear to be stars. Each of the "stars" in orbit around Telluria is a different color and, if stared at for more than a few seconds, it is revealed to be the floating symbol of one of the Thulian deities.

Through the use of the various dials and switches on the circular device, the operator of the device can attempt to communicate directly with his choice of god. If the character succeeds in a magic research throw with a -2 penalty, he may communicate with the chosen god as if using the *contact other plane* spell. A cleric of *any* deity uses an entry one lower than the actual one—that is, treat four questions as three—for the purposes of determining the chance of insanity, or two lower if the deity he questions is the one he worships.

If the character fails in his throw to operate the device, he suffers divine retribution in the form of an electrical shock dealing a number of dice equal to the level of the character in question—that is, a 6th-level character takes 6d6 damage. A successful saving throw versus Blast will result in half damage.

A character who attempts to question more than one deity per day using the device automatically fails at his magic research throw and suffers divine retribution as above.

0-17: A sketch of this machine counts as partially reliable evidence of numbered facts 1-9, 2-7 and 2-8.

18. Mission Control

The west wall of this room is covered with a series of eight opaque vitreum panels, framed in adamantine steel. A long steel table dominates the center of the room, with a dozen utilitarian chairs of alchemist's resin arranged along it facing the west wall. If power is restored to Mission Control from the Control Room (Room 20), the panels here will flicker on, displaying images and transmitting sounds from the Hangar (Room 19) from various vantage points.

Currently, the room is occupied by three astral reaver fighters (see *Appendix C, New Monsters*, p. 343), who are exploring the level. If battle goes against them, they will flee toward the Audience Chamber (Room 27).

Astral Reaver Fighters (3) [AL C, MV 60' (20'), AC 6 (plate), HD 5, HP 28, 23, 22, #AT 1, DG 1d10 (two-handed sword), SV F5, ML +2]

19. Hangar

The four blast doors leading to this large chamber are all magnetically locked. They can only be unlocked from the Control Room (Room 20) or

with magic. The huge hangar doors built into the north wall also can only be opened from the Control Room, from the Great Machine (Room 40 of Level 6B), or with magic. The hangar doors open directly to the outside, but when closed their exterior face is the natural rock of Dwimmermount, making them largely undetectable (as a secret door).

Sitting in the center of the room is an astral vessel (see Appendix A, New Magic Items, p. 323), which was used before the fall of Dwimmermount for transit to other worlds. It was this vessel that brought back the spores that infected the level and led to its current state.

The hangar is also home to four large patches of olive slime (see *Appendix C*, *New Monsters*, p. 360) and a large number of slime zombies (see *Appendix C*, *New Monsters*, p. 375)—remnants of the Thulian crew who continue to "live" thanks to the slime that now controls their deliquescent bodies.

Olive Slime (4) [AL N, MV 3' (1'), AC 0, HD 2+2, HP 18, 17, 16, 15, #AT 1, DG INT drain, SV F2, ML +4]

Slime Zombies (8) [AL N, MV 15' (5'), AC 1, HD 6, HP 31 (×2), 30, 26, 20, 17 (×2), 11, #AT 1, DG 1d6 + infestation, SV F4, ML N/A]

Still secure aboard the astral vessel, in a locked steel box, are 3450 sp, 630 gp, and a *dagger +1*, *venom*.

20. Control Room

This chamber contains several mechanical devices made of adamantine steel that emit low hums. Small vitreum panels give data readouts for the control the power flow on the level to The Speaker to the Heavens, Mission Control, Hangar, and the Navigation Room (Rooms 17, 18, 19, and 31a). Currently, The Speaker to the Heavens, Mission Control, and Hangar are un-powered, while the Navigation Room is powered. Directing power is a fairly simple procedure of turning a dial below the readout, requiring no magic research throws or anything similar.

Three slime zombies move about the control room idly, remnants of the technicians who once manned the machinery.

Slime Zombies (3) [AL N, MV 15' (5'), AC 1, HD 6, HP 33, 26 (×2), #AT 1, DG 1d6 + infestation, SV F4, ML N/A]

21. Laboratory

Both doors to this room are locked adamantine steel hatches. The room is dominated by a set of four adamantine steel tables. A shattered, pockmarked stone lies on one of these tables, glowing faintly green in the darkness of the room. This stone was brought back from Kythirea by the last Thulian astral vessel to visit there. Its hollow, metallic interior contained deadly spores that not only killed those who came into contact with them, but precipitated the spread of the alien plant life now found throughout the level. The stone is now completely harmless, and worth over 5,000 gp to sages interested in the Four Worlds.

Jumbled amidst the tables in a haphazard heap are the skeletons of a half dozen men. The silvery one-piece coveralls they wore in life have mostly rotted away. Their bones appear greenish in color and are surprisingly brittle; but like the greenish stone, the bones are no longer dangerous.

A line of nephelite shelves surrounds the tables on all sides, punctuated by a pair of large steel and resin cabinets. The cabinets hang open, and the vials and containers that were once within them and on the shelves seem to have dissolved into pools of greenish-grey goo (also harmless). One vitreum container is still intact; ironically, it contains a *potion of plant control*.

22. Locked Chamber

The door to this room is an adamantine steel hatch that is both mechanically locked and sealed by a *wizard lock* cast by a 9th-level caster. The door is prominently marked with a High Thulian symbol for "danger".

If, despite these warnings, the characters open the door, they find a spartan room lit by a bright green glow. The glow emanates from a pair of stones very similar in appearance to the one found in the Laboratory (Room 21), except that they are both intact. The stones are resting on a large nephelite countertop that runs along the northern wall. Both stones radiate any chill that becomes noticeable at five feet distance.

Anyone who handles one of the stones without protection suffers 3d6 cold damage (a successful saving throw versus Blast results in half damage). Both stones are very brittle, and any character touching or transporting one has a variable chance (10% + 10% per point of Strength above 13) each round of accidentally cracking it open. Cracking open a stone instantly releases the deadly spores contained within into the room. Characters exposed to the spores must make an immediate saving throw versus Poison, and an additional saving throw is required every two rounds thereafter, unless they are protected in some way—for example, by wearing the *environment suits* found in the Preparation Room (Room 24).

If a character ever fails the saving throw versus Poison, he becomes infected by the spores. After 1d6 turns, an infected character will be transformed into a hideous plant monster. 50% of transformed characters will turn into shambling mounds and the other 50% will turn into algoids (see Appendix C, New Monsters, p. 365 and 342). During the course of the infection, the character will show gradually worsening symptoms such green mucous, fungal growths on his flesh, etc. Once the transformation is complete, the character will forget his former self and attack his comrades like any other example of those monster types. Neutralize poison does not cure the infection, but it does slow the progress of the spores, doubling the number of turns before transformation occurs. Cure disease can cure the infection at any point before transformation occurs, but thereafter will have no effect.

Two rounds after being released, the spores will circulate from this room to the Laboratory (Room 21), and from there they will circulate into the adjoining corridors and rooms at a similar rate (one room or hallway every two rounds) until their progress is blocked. The circulation of the spores can be blocked by a magically sealed door, with a *wall of fire* or similar spell, or by incinerating the spores with a *fireball*. If left unchecked, the spores will eventually re-infect the entire level. Once released into the atmosphere, the spores survive for one month.

23. Guard Room

Though the sentries that were once stationed here are long dead, the two wooden stools and pair of weapon racks that furnished their guard post remain. One of the weapon racks still has a *Thulian crossbow* (see *Appendix A*, *New Magic Items*, p. 333) and seven *bolts* +1 on display.

An ochre jelly creeps along the ceiling above the entrance to the south, ready to drop down on any unsuspecting creatures that pass below.

Ochre Jelly (1) [AL N, MV 30' (10'), AC 1, HD 5, HP 29, #AT 1, DG 2d6, SV F3, ML N/A]

24. Preparation Room

This small room is bare except for the six environment suits (see Appendix A, New Magic Items, p. 326) hanging on hooks. One of the suits has a tear on its surface, but the rupture is small enough that it will not be noticed unless the suit is carefully examined. The tear renders the suit less effective against external contagions. Instead of being able to ignore external contagions, as is usual when wearing an environment suit, the character wearing the suit instead just gains a +2 bonus on saving throws against external contagions. The Judge should make such saving throws for the character in secret until the tear is detected.

25. Meeting Room

A large steel table dominates the center of this room, which is surrounded by ten utilitarian chairs of alchemist's resin. The walls of the room are decorated with hyper-realistic images, each 8 feet by 5 feet in size. In clockwise order from the north the images are:

- A busy marketplace filled with redskinned elves and human slaves.
- A steaming swamp in which two large dinosaur-like reptiles contend with one another.
- Darkened tunnels illuminated by dim blue phosphorescence in which a variety of large insects chitter.
- The vault of the heavens as seen from a rock floating in the void.
- A vast desert of red, blowing sand.
- A huge city built into an even larger tree.

If stared at for more than a few seconds, the images seemingly transport the viewer into the locale they depict. This is just an illusory effect and the viewer can shake himself out of it with only a thought. The images themselves are *permanent illusions* and cannot be removed from the walls.

26. Chapel

This polyhedral-shaped room appears to have been a chapel, but not one dedicated to the worship of any particular deity. The walls and floor of the room are painted with white, red, and gold geometric patterns with mathematically perfect proportions. A white marble altar is stationed at the centerpoint of the south wall, positioned such that the patterns on the wall and floor seem to somehow culminate there. The altar itself is carved with a number of symbols associated with Law, but none belong to any of the standard Thulian deities. Resting on top of the altar is a *brooch of the Terrim* (see *Appendix A*, *New Magic Items*, p. 325).

27. Audience Chamber

Two bronze thrones of Thulian make rest atop a dais in the eastern half of this room, whose impressively vaulted ceiling is supported by two rows of nephelite pillars. Between the pillars, four astral reavers (see *Appendix C, New Monsters*, p. 343) stand in audience before their captain, H'raon, who has seated himself on one of the thrones.

Provided that initial reactions go well, H'raon is willing to parley with any characters that enter this room. He is, like all astral reavers, thoroughly evil, but he is also pragmatic and calculating. He will explain that he and his party came to Dwimmermount after detecting the navigational beacon here. Such beacons were not unusual on Telluria in centuries past, when there was more interaction between Telluria and the other worlds, but are rare to non-existent today, hence the reavers' interest. H'raon has located the beacon, but no sign of who is responsible for activating it. (In fact, the beacon has been on the whole time; its recent visibility is a side effect of the Termaxians accidentally lowering the Perimeter barrier. H'raon is unaware of this, or even that there are other expeditionary forces in the dungeon.)

If the characters seem to be useful allies, H'raon offers a non-aggression pact with them. However, he makes it clear that he considers Dwimmermount fair game for his people to explore, to sack, and, if they so decide, to occupy. If any objections are raised to this, he will order his underlings to attack. Otherwise, he will wait for other opportunities to slay the characters, as he desires no competition on this level or indeed anywhere in Dwimmermount. If his situation becomes untenable, he will contact the captain of his astral vessel and arrange for himself and his men to be picked up in the Hangar (Room 19).

H'raon (1) [AL C, MV 60 (20'), AC 10 (plate armor +2 & cloak of protection +2), HD 7, HP 32, #AT 1, DG 1d10+1 (two-handed sword +1, wounding) or spells, SV F7, ML +2; Daily Spells: 3 1st, 2 2nd, 2 3rd, 1 4th; Repertoire: 1st-burning hands, charm person, hold portal, shield; 2nd-detect invisible, ESP, mirror image; 3rd-fireball, haste, invisibility 10' radius; 4th-dimension door, giant strength; Proficiencies: Battle Magic, Elementalism (fire), Leadership, Seafaring, Weapon Focus (swords)]

H'raon wears the *unseen ear* (see *Appendix A*, *New Magic Items*, p. 334) with which he maintains communication with the captain of his *astral vessel*. He carries 150 pp. His *two-handed sword +1*, *wounding* has a serrated blade of azoth-infused steel with spiked pommel, while his *plate armor +2* is sculpted of rounded interlocking azoth-infused adamantine steel plates over black chain. His *cloak of protection +2* is woven of dwimmersilk with stitched moonsilver.

Astral Reaver Fighters (3) [AL C, MV 60' (20'), AC 6 (plate), HD 5, HP 23, 18, 17, #AT 1, DG 1d10+1 (two-handed swords +1), SV F6, ML +2]

Astral Reaver Mage (1) [AL C, MV 90' (30'), AC 4 (bracers of armor (AC 5)), HD 5, HP 12, #AT 1, DG 1d4 (dagger) or spells, SV M6, ML +2; Daily Spells: 2 1st, 2 2nd, 1 3rd; Repertoire: 1st-charm person, magic missile; 2nd-invisibility, web; 3rd-lightning bolt]

The astral reaver mage has a *wand of fear* (six charges remaining). It is fastened of a human bone, carved with runes and dipped in azoth. His *bracers of armor* are of azoth-infused moonsilver.

28. Cell

The adamantine steel hatch to this room is locked. It has a small barred window through which one can see the interior of the room, revealing a human skeleton whose bones have turned green and brittle from exposure to the spores that swept through this level from the Laboratory (Rooms 21). The room is otherwise empty and the skeleton, despite its appearance, is not harmful.

29. Basidirond Lair

A total of 18 wooden crates, each four feet square, are stacked two high in this ancient storeroom. Hanging from the ceiling, partially obscured by the crates, are two cone-shaped basidironds (see *Appendix C*, *New Monsters*, p. 345). These monstrous fungi attack any living things that enter their lair.

Basidironds (2) [AL N, MV 20' (6'), AC 5, HD 5, HP 25, 22, #AT 1, DG 1d8 or spores, SV F5, ML N/A]

If searched, most of the crates are revealed to contain moldy grain (valueless). One crate, however, contains 2,150 sp, 550 gp, a ceremonial military belt of wrought gold with bloodstones (1,600 gp), and a *potion of sweet water* in a bronze vial.

30. Shattered Hallway

Lurking in the rubble-strewn southern portion of this partially collapsed hallway is a solitary ascomoid (see *Appendix C*, *New Monsters*, p. 343) that stirs if it detects any movement or light within 30 feet of its resting place.

Ascomoid (1) [AL N, MV 30' (10'), AC 6, HD 6, HP 27, #AT 1, DG 1d6 or spores, SV F6, ML N/A]

31 a. Navigation Room

An adamantine steel cylinder, dotted with blinking lights, occupies the center of this large room. There are many resin dials and buttons on the cylinder, which emits a faint but continuous whirring sound. From the middle of the cylinder, an orichalcum pole extends up towards the ceiling. Arrayed on the walls around the cylinder are thirty-two vitreum panels, resembling windows. Most of the "windows" seem to look out onto a night sky. A few display what appear to be floating rocks, while others are gray and distorted, showing nothing but flickering lines.

The cylinder is an astral beacon which drew the attention of the astral reavers to this level. Pushing and turning the buttons and dials on the beacon causes its antenna (the orichalcum pole) to move up and down, which tunes in the view screens (windows) arrayed around the room to different astral frequencies. When this occurs, some view screens will show different images while others will be become gray and distorted. If characters have used the machinery in the Control Room (Room 20) to cut the power to the navigation beacon, then the beacon will emit neither light nor sound, and the view screens will be opaque black vitreum.

The room is currently occupied by three astral reaver fighters (see *Appendix C*, *New Monsters*, p. 343). One of them is investigating the cylinder while the others are on watch. All three will attack any intruders.

Astral Reaver Fighters (3) [AL C, MV 60' (20'), AC 6 (plate), HD 5, HP 28, 24, 19, #AT 1, DG 1d10 (two-handed swords), SV F5, ML +2]

31b-d. Teleportation Pads

The floor of each of these rooms is set with a raised pad of circular, silvery-black azoth-infused steel. All of the rooms are otherwise empty, save for Room 31d, which holds the skeleton of a man, many of whose bones have been charred and fused together in unnatural ways.

If the Navigation Room (Room 31a) is currently receiving power from the Control Room (Room 21), anyone stepping on one of these pads can be instantly teleported wherever the operator of the Teleportation Device (Room 34) sends them. At present, Room 31b and 32c will both safely teleport characters to the Portal to Areon (Room 8) on The House of Portals (Level 3A). Each teleportation is accompanied by a slow, brassy chime and a shower of golden particles.

Room 31d's pad is damaged, however. A character stepping onto this panel must make a successful saving throw versus Death or die in agony as his body is scanned, dematerialized, and then rematerialized back on the pad in a grossly distorted manner. A cleric henchman or hireling present when this occurs must make an immediate morale roll; a failure results in the character uttering the panicked cry, "He's dead, sir!"

32. Hallway

The walls, ceiling, and floor of the area are eerily spotless compared to the rest of the level. The hygienic nature of the hallway is due to the large ochre jelly which resides here. The jelly has been trapped between the Navigation Room (Room 31a) and the Otherworldly Vault (Room 33) so long that it has stripped away the organic matter on every available surface in the area. Needless to say, it is quite hungry.

Ochre Jelly (1) [AL N, MV 30' (10'), AC 1, HD 5, HP 39, #AT 1, DG 2d6, SV F3, ML N/A]

33. Otherworldly Vault

The door here is a locked adamantine steel hatch. Within lies a small trove of items brought to Dwimmermount from visits to the Four Worlds. Though some of the trove was looted shortly before the fall of the fortress, much of it still remains. At present, it consists of 6,500 sp; 950 gp; an *azoth-infused* silver medallion, set with bloodstones, from Areon (1,600 gp); a white orb from Ioun (75 gp); a pair of jade earrings from Kythirea, fastened in the shape of scarab beetles (100 gp each); a wrought silver anklet with ivory dangles from Kythirea (400 gp); a *ring of fire resistance*; and a *sword* +1, +2 *vs. spell-*

casters. The ring is made of pure moonsilver and is set with a large piece of obsidian. The sword is a curved single-edged weapon made of starmetal, with a Kythirean ebony hilt with green lacquer. A former weapon of the Kythirean warrior-women, it has the name "Eld-slayer" in their tongue etched on its blade.

34. Teleportation Device

Located in the northwest portion of this room is a mechanical device that sets the destination of the teleportation pads in Rooms 31b-d. The device is made of adamantine steel with a vitreum control panel featuring three sliding levers (for 31b, 31c, and 31d). Using these levers, the operator can select one of three destinations on The House of Portals (Level 3A): the Portal to Areon, the Portal to Ioun, and the Portal to Kythirea (Rooms 8, 34, and 43 respectively). To operate the device, a character must use an *engineer's control rod* (see *Appendix A*, *New Magic Items*, p. 326) and make a magic research throw. The Judge should make this throw in secret.

If the magic research throw succeeds, the teleportation pad has been perfectly attuned to its new destination and may be used safely. If the magic research throw fails, or if the operator the teleportation pad lacked an *engineer's control rod*, then the teleportation pad has been imperfectly attuned.

Every character teleported by an imperfectly attuned pad must make a system shock throw to survive the shock of the process, with a target value determined by his Constitution score according to the following table:

-	
Constitution Score	Chance of Survival
3	5%
4	10%
5	20%
6	30%
7	40%
8	50%
9	60%
10	70%
11	80%
12	90%
13+	99%

Failure results in immediate death, as the character's body is scanned, dematerialized, and then rematerialized in a grossly distorted manner. Unlike the damaged pad (31d, above), an imperfectly attuned pad will send the corpse to its destination.

35. Waiting Room

This small room is musty and water-logged. It contains six mold-covered wooden chairs arranged along with the walls, along with similarly covered scrolls and books in scroll baskets between the chairs. The dampness and mold has left the scrolls and books illegible. The mold, which ranges in shade from ochre to mauve, is harmless.

36. Office

A formidable-looking steel desk and large steel and resin chair are arranged to face the door of this damp, clammy room. These furnishings, and the walls and floor are around them, are covered by two large patches of olive slime (see *Appendix C*, *New Monsters*, p. 360).

Olive Slime (2) [AL N, MV 3' (1'), AC 0, HD 2+2, HP 16, 14, #AT 1, DG INT drain, SV F2, ML +4]

The drawer of the desk holds a smoky quartz (250 gp) and an *engineer's control rod* (see *Appendix A, New Magic Items*, p. 326) but the dampness and mold has warped the drawer slide. Characters must force it open or chop apart the desk.

37. Moldering Barracks

The northern door to this room is damaged and full of holes, allowing characters approaching from that direction to look within. Inside, twenty wooden beds and footlockers are neatly arranged in three rows, but all are rotting from dampness and overgrown with various shades of mold. Two patches are actually yellow mold, one of which is located so close to the north door that opening it will immediately trigger the yellow mold's attack.

Yellow mold (2) [AL N, MV 0, AC Always hit, HD 2, HP 13, 11, #AT 1, DG 1d6 + special, SV F2, ML N/A]

There is a single footlocker that has survived the cold and damp undamaged. It contains a map leading to a treasure buried on the slopes of Dwimmermount worth 14,000 gp.

38. Latrine

The floor of this large, communal latrine and washroom is almost entirely covered in stagnant water thickened with blue-green algae. All of the fixtures in the room are shattered or broken, and the water pipes connecting the fixtures to the walls drip continuously, which keeps the room damp and

Chapter 20

mildewy. The latrine is now the lair of four algoids (see *Appendix C*, *New Monsters*, p. 342), which are quiescent within the water until another living thing enters the room.

Algoids (4) [AL N, MV 20' (6'), AC 5, HD 5, HP 28 (×2), 26, 25, #AT 2 or 1, DG 1d8/1d8 or stun, SV F5, ML +4]

Characters affected by *diminution*, or creatures such as normal rats or insects, can traverse the water pipes from the latrine here onto other levels of Dwimmermount. See *Chapter 6*, *Overview of the Dungeon*, p. 84, for details on traversing the water pipes if necessary.

39. Trophy Room

A pair of triumphal columns of polished red areonite rise floor to ceiling, engraved with scenes of Eldritch exploration across the Four Worlds. Between the columns are vitreum cases, and along the room's u-shaped walls are polished areonite shelves, all holding various trophies from the Four Worlds. These include:

- An ornate arm band from Kythirea (800 gp), depicting one of its warrior women in battle.
- An azoth-infused silver medallion (400 gp) from Areon.
- A hairpin made from the bone of a Kythirean land worm (200 gp).
- A prism-shaped *dusty rose ioun stone* from the moon of Ioun.
- A suit of *plate armor* +1, fashioned from the carapace of a Kythirean death beetle
- A *shield* +2 made from Kythirean ebony polished to a mirror-like sheen
- A *dagger* +1, fashioned from the runeetched fang of an Areon sand dragon
- A large wooden branch from a Kythirea floating willow, which floats three feet above the ground (functions as a *floating disc*).

40. Intersection

A black pudding creeps around this area, attacking any who come by.

Black Pudding (1) [AL N, MV 60' (20'), AC 3, HD 10, HP 38, #AT 1, DG 3d8, SV F5, ML N/A]

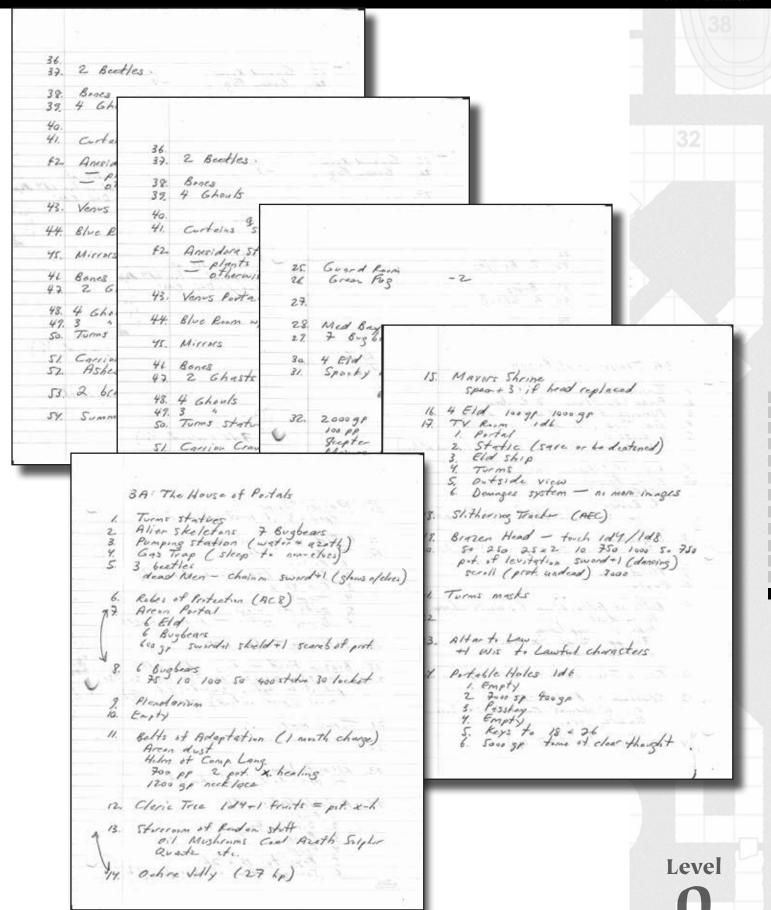

41. Red Monolith

A large, asymmetrical monolith of polished red areonite stands alone at the center of this room. The monolith stretches nearly ten feet high and has no markings to mar its perfectly reflective surface. A mage (or other arcane spellcaster) who stares into it at his own reflection has a 50% chance of having all of the spells he memorized for the day being refreshed and a 50% chance of having 1d4 of his highest level spells being stolen from his memory—randomly determined by the Judge. Once a mage has gazed into the monolith, he cannot be affected by it again until he has rested for at least 8 hours.

If a character incapable of casting arcane spells gazes into the monolith, he sees only his own reflection.

42. Archive

Behind a locked areonite door is an intact library, consisting of approximately one hundred volumes of books, codices, and scrolls spread out across a series of areonite bookshelves lining the walls. The volumes focus almost exclusively on information about the Four Worlds and their inhabitants. The books, in total, weigh 300 lbs. and are worth approximately 10,000 gp to scholars of other worlds.

Appendices

APPENDIX New Magic Items

Amulet Against Possession

The wearer of this copper amulet is rendered immune to *magic jar*, *possession*, and other effects of a similar nature, including demon possession.

Areonite Panoply

The battle armor of the Red Elven legions, a complete *areonite panoply* consists of cuirass, greaves, and vambraces cast from azoth-infused areonite. The complete panoply weighs 4 stone and confers armor class 6. Common soldiers often wear just the cuirass; this weighs 2 stone and confers armor class 5.

Areonite Weapon

An *areonite weapon* is a crossbow-like device that unleashes a deadly blast of arcane energy with each pull of its trigger. *Areonite weapons* are fueled by *power cells* (see below), which they drain to deliver shots of arcane energy. The energy drain per shot differs depending on the type of weapon, as noted below. All *areonite weapons* may be fired single shot or in a burst. Burst fire doubles the energy drain in exchange for an increased chance of damage (roll the damage dice twice and take the highest).

Areonite Pistol: Usable with a single hand, an areonite pistol deals 1d6 damage per hit (1 charge per shot) and has a range of 10/20/30.

Areonite Rifle: Requiring two hands to wield, an areonite rifle deals 1d10 damage per hit (3 charges per shot) and has a range of 25/50/100.

The lustrous red mineral known as areonite is unique to the Red Planet. The Eld long ago discovered that areonite infused with azoth is a superb conductor of arcane energy. *Areonite weapons* are difficult to construct and maintain, which is why they have never been widely used, even in Eldritch military forces. Possessing an *areonite weapon* is generally a mark of prestige or long service, though some elite forces have in the past been equipped entirely with these weapons. Now, as Eldritch civilization grows ever more decadent and introspective, areonite weapons are becoming ever rarer.

Astral Vessel

Astral Space is a vast expanse suffused with luminiferous ether that behaves in a liquid-like fashion when interacting with objects of conventional matter. The Four Worlds and other stellar bodies bob like corks in this ether, and between them it flows in treacherous currents of greater or lesser force, depending on gravitational correlates only dimly understood in the current era. An *astral vessel* is a craft capable of sailing on the ether in the same manner that a sailing ship sails through water.

A typical *astral vessel* has a length of 75-125 feet, a height of 20-30 feet, and a beam of 30-40 feet. A 20- to 35-foot bowsprit (spar) extends from the prow to help it cut through the ether. Unlike a sailing ship, an *astral vessel* has a completely sealed hull made of argent steel, giving it an appearance akin to a submarine or two metal sailing ships glued together along their top decks. It can carry 30,000 stone (300,000)

	Telluria	loun	Kythirea	Areon
Telluria	=	2 days / 8 days	7 days / 28 days	24 days / 96 days
loun	2 days / 8 days	-	5 days / 20 days	22 days / 88 days
Kythirea	7 days / 28 hours	5 days / 20 days	-	17 days / 68 days
Areon	24 days / 96 days	22 days / 88 days	17 days / 68 days	-

lbs.) of cargo in addition to crew. A pair of artillery pieces can be mounted in firing castles at the bow and stern. An *astral vessel* has AC 7 and 250 to 360 structural hit points (see *ACKS*, p. 57).

To travel, an *astral vessel* deploys invisible "sails" of force that are propelled by the luminiferous ether. On a terrestrial world such as Telluria, these sails enable the *astral vessel* to fly at a rate of 360 feet per round or 180 miles per day. In Astral Space, the *vessel's* velocities are vastly greater. The table below shows the relative travel times between the Four Worlds at their closest approach and farthest distance.

Referees can adjust the travel time required by using the Wind Conditions table (*ACKS*, p. 96) to simulate the variance of Astral currents, or develop a system of their own design.

An astral vessel is typically crewed by a captain, an astral navigator, and 20 sailors. Since there is no air in Astral Space, the crew must either remain within the vessel's sealed hull, or wear belts of adaptation (see New Magic Items, p. 324) or similar items in order to survive. The vessel's sealed hull holds enough air for 2 weeks of operation before needing to be refreshed at a planet.

Athame of Law

When held by a Lawful mage, this white-hilted knife inflicts a –1 penalty to the saving throws of any Chaotic creature targeted by the mage's spells. A mage of any other alignment will suffer damage each round he attempts to handle an *athame of law*, 1d6 per round if he is Neutral and 2d6 per round if he is Chaotic (i.e. as per sentient magic weapons, *ACKS*, p. 225). For characters other than mages, the *athame of law* acts as a magical dagger without any bonuses. Equivalents of this item – a black-hilted *athame of chaos* and a grey-handled *athame of neutrality* - are rumored to exist outside Dwimmermount.

Bag of Tricks

This small sack appears normal and empty. However, anyone reaching into the bag feels a small, fuzzy ball. If the ball is removed and tossed up to 20 feet away, it turns into an animal. The animal serves the character who drew it from the bag for 1 turn, until slain, or until ordered back into the bag. Use the following table to determine what animal is drawn.

Roll 2d8	Animal Type	
2	Bear, black	
3	Bear, cave	
4	Boar	
5	Camel	
6	Cat, large, lion	
7	Cat, large, tiger	
8	Herd animal, antelope	
9	Herd animal, goat	
10	Herd animal, buffalo	
11	Horse, war	
12	Mule	
13	Rat, ordinary	
14	Rhinoceros	
15	Shrew, giant	
16	Toad, giant	

The war horse appears with harness and tack and accepts the character that drew it from the bag as a rider. Animals produced are always random, and only one may exist at a time. Up to ten animals can be drawn from the bag each week. The referee decides randomly which animal is drawn.

Belt of Adaptation

These belts have a silvery sheen but leathery texture. When buckled on, a *belt of adaptation* wraps the wearer in a shell of fresh air, making him immune to all harmful vapors and gases. The *belt* can enable the wearer to survive in an environment without air for one month, but then permanently loses its potency.

Book of Lawful Wisdom

This magical book may be read by Lawful clerics. Study takes 1 week, after which time the cleric permanently gains 1 point of WIS and enough experience points to take him to the midpoint of the next level. Neutral clerics who read or handle the book lose $2d4 \times 10,000$ XP. Chaotic clerics lose experience to reduce them to the start of their previous level. Mages or elves must save versus Spells or lose 1 point of INT permanently. Those who succeed in the save lose $2d10 \times 10,000$ XP. All other classes are unaffected by handling the book, except assassins; these must succeed in a saving throw versus Death or be instantly slain.

Book of Infinite Spells

This tome is really a collection of bound magical scrolls. If touched by a character who is unable to cast spells, he suffers 5d4 hit points of damage and is stunned for the same number of turns. This is a one-time occurrence for that particular character. Thereafter, a character, regardless of spell casting ability, is able to use spells on the pages of the tome as if cast from a scroll. The specific contents of the page are determined randomly per page. There are 20+1d10 pages in any book found. Refer to the table below:

Roll d20	Page Contents
1-5	Cleric spell
6-9	Druid spell
10-11	Illusionist spell
12-17	Magic-user spell
18-20	blank

Any time a page is turned, the previous page becomes blank. Otherwise, a character can cast the spell on an open page one time per day. If the spell is normally usable by the character (by class and level), he may cast it 4 times per day. The owner of the book may store it in another location, open to a page, and still benefit from the powers of the book. However, there is a base 10% chance any time a spell is used that the page turns of its own volition. This probability is modified by +10% if the spell is not of a level or class normally available to the owner, or +20% if the character is not of a spell using class. Nothing can prevent a page from turning.

Brazen Head

Once the cult of Turms Termax gained control over the Thulian throne, its hierophants took on roles of importance throughout the empire, acting as advisers to provincial governors, military leaders, and even the clerics of the state-sanctioned Great Church. Each of these hierophants brought with him a peculiar magical device known to later generations as a *brazen head*.

As its name suggests, a *brazen head* is a brass representation of a man's head—that of Turms himself, according to some sources. However, the head is enchanted and possesses two unique functions. Firstly, once every three days, its user may commune directly with Turms Termax—as per the 5th-level divine spell of the same name—with the god's answers issuing from the mouth of the head. Secondly, its user can, if the proper command words are known, communicate by speech with the user of any other *brazen head* within five miles of his current location.

Brazen heads were never produced in large num-

bers, but, over the centuries, enough were crafted that they can still be found in Thulian ruins everywhere. Likewise, many mages—not to mention groups like the Argent Twilight—seek out brazen heads, using them as a means to gain access to the secret wisdom of Turms. Others seek out the heads to destroy them, believing them to be a tool by which the god of magic—or his contemporary cult—seeks to spread his influence throughout the world. Indeed, there are many who claim that the brazen heads only selectively tell the truth, so as to seduce their users into the unwitting service of the Thrice-Great. There are similar claims that continued use of a brazen head leads to religious mania, with the user forsaking all other deities in favor of Turms. True or not, there are many superstitions about the brazen heads and the mere mention of them is enough to frighten some who fear and revile Termax and his once-mighty cult.

Brooch of the Terrim

This clasp made of bluish metal identifies the wearer as a friend of the Terrim, enabling him to bypass the guardians of the City of the Ancients (Level 9). In addition, when the *brooch* is attached to a cape or cloak, it grants a measure of invisibility similar to an *elven cloak*. While on a cloak, the *brooch* adds a +8 bonus to any proficiency throws to hide in shadows. Characters wearing a *brooch of the Terrim* on a cloak can always hide in shadows with a throw of at least 12+.

Cerecloth Robes

These dark purple robes have a slightly stiff, waxy feel to them. Made from the same material traditionally used to wrap a corpse during Thulian burial rites, they allow the wearer to be accepted as undead by other undead creatures. The effects of a cerecloth robe end for any undead creatures who witness the wearer casting divine spells or taking any hostile action towards the undead, and intelligent undead may overcome the effect by succeeding on a saving throw versus Staffs. Only one saving throw per group is made, such that a single roll would determine whether a party of twelve adventurers all wearing cerecloth robes are attacked during an encounter with four vampires. Cerecloth robes may be worn over a suit of armor, but their effect cannot be combined with other magical robes or cloaks.

Container of Curing

This thick, slightly smoke glass flask carries a potent dweomer. If filled with water and shaken vigorously, the *container of curing* will transform the fluid within into a *potion of healing*. The effect functions no more than once every 48 hours, no matter how vigorously adventurers may shake the flask.

Crystal of Controlling Quintelementals

This small, smoky crystal can be used to summon and control one quintelemental (see *Appendix C*, *New Monsters*, p. 362) per day as the spell *conjure elemental* (*ACKS*, p. 73). The user must ready the magic item and conduct rituals that take one turn prior to the summoning. The summoning itself takes one round. Once a quintelemental is summoned, the conjurer must maintain his concentration in order to give commands.

Dagger + 1, Venom

This black +1 dagger has a serrated edge. It may contain up to six doses of poison with one dose being delivered into a victim on an attack roll of 20. The poison may be refilled, but the dagger +1, venom can only contain one type of poison at a time.

Dwimmersilk Garments

These garments are made of a gossamer fabric infused with azoth, imparting a characteristic silvery-black color. When worn, *dwimmersilk garments* confer protection equivalent to leather armor (AC 2) without restricting movement or being in any way heavier than ordinary cloth. Thus, a mage could wear *dwimmersilk garments* without penalty.

Energion Crystals

These green, translucent crystals are used to infuse artificial spirits into constructs of stone and metal in The Foundry (Room 62) of The Manufactory (Level 6B). A single energion crystal provides enough life force for a single dwarf or dworg. The Great Ancients used hundreds, perhaps thousands, of energion crystals to create each of their Servitor. The exact process of making *Energion crystals* has been lost, but it is known that it requires the use of azoth-infused crystals found in the Crystal Cave (Room 25) of The Deep Hollows (Level 7). *Energion crystals* can be recharged with a *power cell* at a cost of 24 charges.

Engineer's Control Rod

This black metal baton measures slightly more than a foot in length. Holding the *rod* gives the wielder complete immunity to all damage from electricity and electrical attacks. Furthermore, it activates certain mechanical devices within Dwimmermount. These devices are noted in the room descriptions of the dungeon (Chapters 8 – 20).

Environment Suit

This heavy suit of protective gear includes overalls, gloves, and boots made of a silvery-gray material (alchemist's resin) as well as an opaque vitreum helmet that fits on top of the suit. An intact environment suit renders its wearer immune to adverse effects from his surroundings, including general hazards such as poison gas as well as dangers specific to Dwimmermount such as splashes of, or immersion in, azoth (see Appendix F, p. 393); the negative effects of the Crystal Resonance Chamber (Room 48) on the Manufactory (Level 6B); and infection by the spores of the Locked Chamber (Room 22) of the Divinitarium (Level 0). An environment suit can be worn over other armor or clothing, but its stiff bulk prevents the wearer from casting any type of spells. An environment suit will become torn if its wearer is damaged by a slashing or piercing attack. A torn environment suit does not grant immunity to adverse effects, but does provide its wearer with a +2 bonus to saving throws made against such effects.

Feather Token

Each of these items is a small feather that has a power to suit a special need. The kinds of tokens are described below. Each token is usable once. Determine randomly which token is found by rolling 1d6.

Anchor: When attached to a boat, this token renders the craft in water immobile for up to one day.

Bird: This token transforms into a bird the size of a giant roc which remains for a single day or until dismissed. It accompanies the summoner wherever he goes, will defend him from aerial attacks, and will transport him and up to three companions and their personal equipment (up to 300 stone) by air.

Fan: This token forms a huge flapping fan, causing a moderate breeze of sufficient strength to propel one ship. This wind is not cumulative with existing wind speed. The token can, however, be used to lessen existing winds by two categories, creating an area of relative calm or lighter winds, but it will not affect wave size in a storm. The fan can be used for up to eight hours. It does not

function on land. See Wind Conditions on p. 96 of *ACKS*.

Swan Boat: This token forms a swanlike boat capable of moving on water at 240 feet per turn (360 miles per day). It has room for eight horses and gear or thirty two human-sized beings or any equivalent combination. The maximum weight the swan boat can carry is 2,000 stone. The boat lasts for one day.

Tree: This token causes a great oak to spring into being (5 feet diameter trunk, 60 feet height, 40 feet top diameter).

Whip: This token forms into a huge leather whip that can be wielded against any opponent desired. It is a +1 weapon, and any opponent struck by it must make a saving throw versus Paralysis or become entangled for 1d6+1 rounds. Entangled characters suffer a -4 penalty to AC and can take no action save to attempt to escape with a successful save. The whip lasts no longer than six turns.

Firestone

These green, powdery stones crumble if squeezed too firmly. When exposed directly to fire, *firestones* will explode, dealing 1d6 points of damage to all within a 5-foot radius. They are typically found in quantities of 3d6.

Glow Bulb

This hollow, grapefruit-sized glass orb contains a clear fluid derived from azoth. A coin-sized orichalcum screw is set on the bottom of the orb. Touching the orichalcum plate to a *power cell* or other power source activates the fluid within. Thereafter the *glow bulb* emits light as bright as a torch for up to 12 days. The liquid within the bulbs is highly toxic if imbibed (make a saving throw versus Poison at –2 or die) and acts like oil that burns for twice as long if set alight. The liquid is consumed over the course of the bulb's duration. A fully-fueled bulb is worth 65 gp.

Golem Manual

While creating golems is usually limited to 11th level spellcasters, this magical book contains proce-

dures for constructing a specific type of golem that any character can follow. The book must be referenced during the entire construction. Once finished the book must be crushed into dust, and the dust then rubbed over the golem to provide its final animation. Apart from the book itself, no special components are needed and no magic research throw is required. Roll on the

table below to determine which type of manual is found, and the associated cost and construction time for each golem type.

Roll d00	Туре	Cost	Time
01-10	Amber	75,000 gp	2 months
11-40	Bone	40,000 gp	4 weeks
41-50	Bronze	90,000 gp	4 months
51-65	Clay	65,000 gp	4 weeks
66-75	Flesh	45,000 gp	2 months
76-80	Iron	100,000 gp	4 months
81-90	Stone	80,000 gp	3 months
91-00	Wood	60,000 gp	4 weeks

Greater Brooch of the Terrim

This emblem of bluish metal resembles a more ornate *brooch of the Terrim* and enables its bearer to approach the Tomb of the Sleeping God in the City of the Ancients (area 3, level 9) unmolested. If the *greater brooch* is attached to a cape or a cloak, it grants its wearer a +2 bonus to saving throws versus Spells.

Greater Termaxian Passkey

Shaped like a caduceus fashioned from azoth-infused gold, a *greater Termaxian passkey* identifies the bearer and his companions as a leader of the cult of Turms Termax. The passkey also protects the bearer with a continuous *protection from evil* effect. Some magical and otherworldly creatures associated with the cult will not attack the bearer and his companions; such creatures will be noted when they appear in the dungeon.

Helm of Astral Movement

Lowering the crystal visor of this magic item allows the wearer to perceive quintes-

sence, the ethereal "fifth element". Looking through the visor, items and creatures which are enchanted, invisible, or inherently magical will be seen. The field of vision is 10 feet wide and normally extends 30 feet from the wearer, but creatures or items which are infused with azoth can be seen at twice this distance

and concentrations of pure azoth can be seen up to 120 feet away. Ordinary matter does not block this perception,

although an enchanted door could obscure detection of an invisible creature on the other side.

The *helm of astral movement* was designed so that voyagers on the Astral Plane could travel outside an *astral vessel* (see p. 323) for short distances without being swept away by ether currents or caught unawares by astral beasts. This original purpose may be relevant within the scope of Dwimmermount if characters fly the *astral vessel* out of the Hangar (Room 19) of the Divinitarium (Level 0) and into space.

Holy Phalange

A *holy phalange* is the finger-bone of a Lawful cleric martyred for his faith. When held by a Lawful character, the *phalange* will grow warm whenever Chaotic enemies are within 50 feet. If held by a Chaotic character, the relic deals 1d6 points damage per round. Neutral characters gain neither bane nor boon from holding the relic, though it does feel uncomfortably cold to the touch.

Horn of Valhalla

This magic instrument comes in four varieties. Each appears to be normal until someone speaks its command word and blows the *horn*. Then the *horn* summons a number of human berserkers to fight for the character who summoned them. Each *horn* can be blown just once every seven days. Roll d% and refer to the table below to see what type of *horn* is found. The horn's type determines what berserkers are summoned and what character classes are able to use the *horn*.

Any character who uses a horn of Valhalla but

doesn't have the prerequisite class is attacked by the berserkers. Summoned berserkers attack anyone the possessor of the *horn* commands them to fight until they or their opponents are slain or until 5 turns has elapsed, whichever comes first.

d%	Type of Horn	Berserkers Summoned	Prerequisite Class
01-40	Silver	2d4+2, 2 nd level	None
41-75	Brass	2d4+1, 3 rd level	Cleric, Fighter, Thief
76-90	Bronze	2d4, 4 th level	Cleric, Fighter
91-100	Iron	1d4+1, 5 th level	Fighter

Incendiary Granatum

A *granatum* is a small metallic device roughly the size of an apple, with indentations across its spherical surface for ease of grasping. On one side is a button that, if depressed, causes it to explode in a shower of fire one round later, dealing 5d6 points of damage to anyone within 20 feet of the *granatum* (make a saving throw versus Blast for half damage). A *granatum* may be thrown with the same range and chance to hit as a flask of oil.

Incense of Obsession

These blocks of incense appear to be *incense of meditation*. If meditation and prayer are conducted while *incense of obsession* is burning nearby, its odor and smoke cause the user to become totally confident that his spell ability is superior, due to the magic incense. The user is determined to use his spells at every opportunity, even when not needed or when useless. The user remains obsessed with his abilities and spells until all have been used or cast, or until 24 hours have elapsed. A total of 2d4 blocks of incense are found.

Ioun Stones

These crystalline stones were mined on the moon of Ioun by the Great Ancients, who highly prized their magical properties. *Ioun stones* always float in the air and must be within 3 feet of their owner to be of any use. When a character first acquires a stone, he must hold it and then release it, whereupon it takes up a circling orbit 1d3 feet from his head. Thereafter, a *stone* must be grasped or netted to separate it from its owner. The owner may voluntarily seize and stow a stone (to keep it safe while sleeping, for example), but he loses the benefits of the stone during that time. Ioun stones have AC 13 and 10 hp. A total of 1d10 stones will be found, to be determined randomly. There is a 10% chance that any stone found is gray, burned out, and worthless.

Color	Shape	Effect
Clear	Spindle	Sustains creature without food or water
Dusty rose	Prism	-1 bonus to AC
Deep red	Sphere	+1 to DEX
Incandescent blue	Sphere	+1 to WIS
Pale blue	Rhomboid	+1 to STR
Pink	Rhomboid	+1 to CON
Pink and green	Sphere	+1 to CHA
Scarlet and blue	Sphere	+1 to INT
Vibrant purple	Prism	Stores 1d6 spells, as a ring of spell storing
Iridescent	Spindle	Sustains creature without air
Pale lavender	Ellipsoid	Absorbs spells of 4^{th} level or lower $\!\!\!\!^{\dagger}$
Pearly white	Spindle	Regenerates, as the ring
Pale green	Prism	+1 character level
Lavender and green	Ellipsoid	Absorbs spells of 8th level or lower‡

[†] After absorbing 1d4x10 spell levels, the stone burns out and turns dull gray, forever useless

Iron Lantern

Wrought from unadorned iron, the *iron lantern* appears to be a simple illumination device with a single glass lens, which can be removed and changed for another. An *iron lantern* is usually found with 1d4 lenses—additional ones being held in a leather bag often attached to the *lantern* itself. When the *lantern* is lit, it casts light within a 30-foot radius which counters magical darkness as per the *light* spell. In addition, while lit, an *iron lantern* grants its holder the ability to turn undead as if he were a 9th-level cleric (clerical holders are treated as their current level +3 or 9th-level, whichever is higher). After a single instance of turning, the lens in the *lantern* turns black and it ceases to shed light until the lens is replaced.

Javelin of Lightning

This *javelin* can strike creatures that can be hit by +2 weapons, though this bonus does not apply to attack throws or damage rolls. When the *javelin* strikes, it creates a lightning blast that is 30 feet long and 5 feet wide, originating at the point of impact. A being struck directly by the *javelin* takes 1d6+20 points of damage. Any creature caught in the electrical discharge take 20 points of damage, but can make a saving throw versus Blast for half damage. The javelin is consumed in the attack. When found, there will be 1d4+1 javelins rather than just one.

Knowledge Record

A *knowledge record* is a repository of information that covers a single topic in great detail. It appears

as a metal disk, approximately one foot across, made from a dull silvery material, with grooves and marks on its surface, though nothing that looks like writing. Casting read languages will reveal the contents of a knowledge record in broad terms, but accessing the record's full details requires mechanical devices such as those found in the Arcane Library (Room 37 of Level 3B) or Analytical Engine (Room 13d on Level 6B). When a knowledge record is read by a mechanical device, a disembodied voice will begin to recite general information about the subject covered by the disk. More advanced devices can

advance, halt, and resume the data recital, or allow for queries about specific information about the knowledge record's subject. Precisely what information any given *knowledge record* contains is left to the referee to decide. As a rule of thumb, a *knowledge record* will have information similar to that which a sage (or other character with three ranks in Knowledge proficiency) specialized in the same topic would know.

Mask of Breathing

This leather face mask grants the wearer immunity to all poisonous gases while worn. Wearing the mask precludes wearing a helmet and impedes spellcasting of any sort.

Medallion of Light

A medallion of light appears as a circular neck ornament, normally fashioned of bronze, brass, or copper, set with a central crystal. If the medallion's crystal is pressed, it will shed light equal to torchlight, sufficient to illuminate a 30-foot radius area. The light lasts until the crystal is pressed again, or 6 turns elapse, whichever comes first. Nothing prevents its wearer from pressing the crystal again, however; the medallion of light may be used as often as desired.

Net of Entanglement

This 10-foot-square magical *net* may be thrown at an opponent up to 20 feet away. If the creature is hit, it becomes entangled by the net. Any adjacent creatures must make a saving throw v. Paralysis or also be entangled. The *net* can also be placed on

 $^{^{\}ddagger}$ After absorbing 2d4x10 spell levels, the stone burns out and turns dull gray, forever useless.

the ground or hung in the air, where it will drop down or rise up to entangle creatures when the command word is spoken. Creatures in the net may avoid being entangled with a successful saving throw v. Paralysis. Entangled creatures find it very difficult to break from the *net of entanglement* (as a *web* spell). Un-entangled characters can attempt to cut their friends free, but the rope is extremely tough and turns away attempts to cut it, giving it an effective AC of 18. For each 8 points of damage dealt to the net, one character can be freed.

Net of Snaring

The *net of snaring* can only be used underwater. There it functions like a *net of entanglement* (see above), and can also springs at an opponent if the command word is given, to a maximum distance of 30 feet.

Nutrient Packet

These freeze-dried rations are nearly tasteless but contain a restorative mixture of electrolytes, enzymes, and vitamins. When a *nutrient packet* is eaten, the character who ate it will heal a number of hit points equal to his Constitution score after his next 8-hour rest. *Nutrient packets* are found in quantities of 2d12.

Oil of Caustic Slipperiness

A vial of this slick, red, acidic goo can cover 10 square feet. Characters that tread on *oil of caustic slipperiness* immediately take 1d6 points of damage and must make saving throw v. Paralysis. The character's DEX modifier is applied to the throw. Failure results in falling to the ground and taking another 1d6 points of damage. To stand up requires a further saving throw, with failure resulting in more damage, as before. A fallen character gains a +3 bonus to the saving throw if aided by a character not currently standing on the *oil*, having been thrown a rope, etc. The *oil* can be easily washed away with ordinary water.

Pastille of Life

These appear as small white lozenges of thickened syrup. If a *pastille of life* is placed within the mouth of a man who has been dead no more than ten days, he is restored to life, as if the spell *restore life and limb* had been cast in a temple by a 9th-level cleric with 18 Wisdom. The pastilles will not work on any other race.

Pearl of Power

This seemingly normal pearl of average size and luster is a potent aid to mages. Once per day on command, a *pearl of power* enables the possessor to re-gain the ability to cast a spell of a level he had previously expended. The spell must be of a particular level, depending on the pearl. Different pearls exist for recalling one spell per day of each level from 1st through 6th and for the recall of two spells per day (each of a different level). Determine the type of pearl randomly. Note that there is a 5% chance that the pearl is cursed to have the opposite effect of making the mage lose a spell of that level each day. These pearls cannot be discarded unless *remove curse* or a similar spell is cast.

Roll d100	Spell Level
01-20	1st
21-40	2nd
41-60	3rd
61-75	4th
76-85	5th
86-99	6th
00	Roll 1d6 for spell level, can recall 2 spells.

Periapt of Foul Rotting

This engraved gem appears to be of little value. If any character keeps the *periapt* in his possession for more than 1 day, he contracts a terrible rotting affliction that permanently drains 1 point of DEX, CON, and CHA every week. The *periapt* (and the affliction) can be removed only by application of a *remove curse* spell followed by a *cure disease* and then *heal*, *miracle*, or *wish*. The rotting can also be countered by crushing a *periapt of health* and sprinkling its dust upon the afflicted character, whereupon the *periapt of foul* rotting likewise crumbles to dust.

Periapt of Health

This engraved gem appears to be of little value. If any character keeps the periapt in his possession for more than one day, he gains immunity to all disease, including supernatural diseases.

Potion of Neutralize Poison

This potent antivenin detoxifies any sort of poison. A poisoned creature imbibing the *potion* suffers no additional effects from the poison; if poured down the throat of a creature slain by poison in the last 10 rounds, the *potion* revives the creature with 1 hit point.

Power Cell

This small, flat, circular piece of metal can recharge any magical device with charges, such as rods, staffs, and wands, when it is inserted into the slot of the appropriate size on the rim of the *power cell*. A *power cell* may also be used to activate other items found within Dwimmermount. Each *power cell* can impart fifteen charges or device activations before it is exhausted. The secret of creating these items was lost with the fall of the Thulian Empire, but devices survive within Dwimmermount's Manufactory (Level 6B) which can refresh an exhausted *power cell*.

Rod of Captivation

With the expenditure of one charge, all monsters and characters within a 20 feet radius are *charmed* by the wielder for one turn so long as they possess minimal intelligence. All charmed beings hold nothing but respect and awe for the wielder, and will seek to please him by doing nearly anything short of harming themselves or violating their alignment.

Rod of Lordly Might

This rod has functions that are spell-like, and it can also be used as a magic weapon of various sorts. It also has several more mundane uses. The *rod of lordly might* is metal, thicker than other rods, with a flanged ball at one end and six stud-like buttons along its length. It weighs 10 pounds, and a strength of 16 or greater is necessary to wield it. Any character with less than 16 strength suffers an attack throw penalty of –1 per point below 16.

The rod has the following spell-like functions, and each costs 1 charge:

- Fear upon all enemies viewing it, if the wielder so desires (60-foot maximum range). The target is allowed to make a saving throw versus Staffs.
- Paralyze upon touch, if the wielder so commands. The wielder must choose to use this power and then succeed on a melee attack throw to activate the power. If the attack fails, the effect is lost. The target is allowed to make a saving throw versus Paralysis.
- Deal 2d4 points of damage to an opponent on a successful melee attack and *cure* the wielder of a like amount of damage.

The following weapon functions of the rod do not require the use of charges:

• In its normal form, the rod can be used as a +2 mace.

- When button 1 is pushed, the rod becomes a +1 flame tongue sword. A blade springs from the ball, with the ball itself becoming the sword's hilt. The weapon lengthens to an overall length of 3 feet.
- When button 2 is pushed, the rod becomes a +4 battle axe. A wide blade springs forth at the ball, and the whole lengthens to 4 feet.
- When button 3 is pushed, the rod becomes a +3 spear. The spear blade springs forth, and the handle can be lengthened up to 12 feet (wielder's choice), for an overall length of from 6 feet to 15 feet. At its 15-foot length, the rod is suitable for use as a lance.

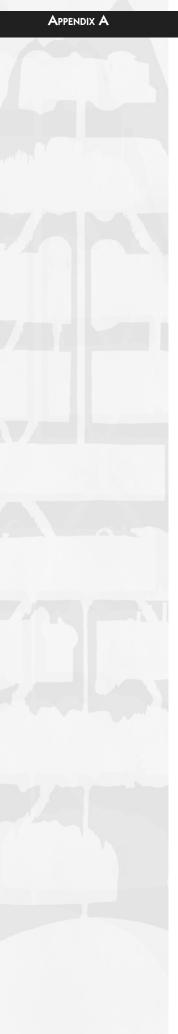

The following other functions of the rod do not employ charges:

- When button 4 is pushed, a spike that can anchor in granite is extruded from the ball, while the other end sprouts three sharp hooks. The rod lengthens to anywhere between 5 feet and 50 feet in a single round, stopping when button 4 is pushed again. Horizontal bars three inches long fold out from the sides, 1 foot apart, in staggered progression. The rod is firmly held by the spike and hooks and can bear up to 4,000 pounds in weight, making it a highly serviceable climbing pole/ladder. The wielder can retract the pole by pushing button 5.
- The ladder function can be used to force open doors. The wielder plants the rod's base 30 feet or less from the portal to be forced and in line with it, then pushes button 4. The force exerted grants +4 to forcing doors.
- When button 6 is pushed, the rod indicates magnetic north and gives the wielder knowledge of his approximate depth beneath the surface or height above it.

Note that this rod may never be recharged. When the charges are expired, the functions that require charges may not be used again, and neither may the rod be employed as a +1 flame tongue sword nor a +4 battle axe. These attributes are lost.

Rod of Opening

This two foot long shaft of metal is usable by any class and contains 2d6 charges when found. When touched to any locked opening or object—for example, a chest—the *rod of opening* automatically opens that lock, lid, door, valve, or portal, whether secured by ordinary or magical means (provided

that the caster was of 14th-level or lower in the latter case). Each opening expends one charge. The *rod of opening* will also automatically remove ordinary or magical traps on anything listed above, at the cost of an additional charge.

Shield Belt

This piece of magical technology creates a field of arcane energy around the wearer. While active, the field resists all forms of damage, including magic, absorbing the first 20 points of damage taken by the wearer per round. The belt operates by means of a *power cell* (see New Magic Items, p. 331). Each minute that the field is active costs one charge. An additional charge is expended each time the field absorbs 20 points of damage in a round.

Skull Ring of Yethlyreom

These sinister-looking rings were wrought by the necromancers of Yethlyreom to control their undead armies. A character wearing a *skull ring* can control undead as a Chaotic cleric of one-half his class level. If the wearer is an arcane spellcaster with Black Lore proficiency, he can control undead as a Chaotic cleric of his full class level.

Staff of Law

In the hands of anyone other than a Lawful cleric, the *staff of Law* functions as merely an ordinary staff. A Lawful cleric, however, will find it a potent relic in the service of his god. While bearing the *staff of Law*, the cleric is warded as by a *sustained protection from evil* spell (no charge required). With the utterance of the proper command words, the cleric can use the staff to cast the spells *bless, dispel evil, dispel magic, flame strike*, or *remove curse*, all at the 9th level of effect. Each of these abilities requires one charge. In addition, with the expenditure of a charge and a successful attack roll, the cleric can strike an opponent with the *staff* for 2d6 points of damage, like a *staff of striking*. A *staff of Law* will have 2d10 charges when found.

Stun Stick

This weapon is a metal baton that emits an arcane glow when activated. The stick, when it hits an opponent, crackles with energy that deals 2d6 damage and stuns the target for 1d6 rounds if a saving throw versus Paralysis is failed. The *stun stick* uses a *power cell* (see New Magic Items, p. 331), each charge of which activates the weapon for one minute.

Sword + 1, Dancing

A dancing sword is a special weapon that can be loosed to attack on its own. The wielder must fight with the sword as normal for 4 rounds, each round adding +1 to the sword's magical bonus, until +4 is reached on the fourth round. The sword will then fight on its own for 4 rounds at +4. While the sword is fighting on its own, it still is considered wielded by the activating character for purposes of its attack throws and damage rolls (including class, proficiency, and ability score adjustments). While dancing, the sword takes up the same space as the activating character and can attack adjacent foes. The dancing sword will automatically return to the original wielder after 4 rounds of attacking independently, so long as the wielder is within 30 feet of the sword.

Sword + 2, Holy Avenger

When wielded by any character other than a paladin, a *holy avenger* merely functions as a +2 *sword*. When wielded by a paladin, however, the *holy avenger* functions as a +5 *sword* and deals an additional +10 damage when it hits evil creatures. In addition, a paladin wielding a *holy avenger* radiates a field of *protection from magic* in a 5-foot radius around himself. Any spell or spell-like effect entering the field is subject to an instantaneous *dispel magic* cast at the equivalent of *dispel magic* at the paladin's level. The field only functions when the *holy avenger* is held unsheathed in the paladin's hand.

Termaxian Pain Amplifier

A sinister-looking device, resembling a large metal-plated fork, a *Termaxian pain amplifier* is usually mounted on a wall or ceiling platform by means of a jointed mechanical arm. If man-hauled, it weighs 8 stone (80 lbs). When activated, the *pain amplifier* emits a cone of electrochemical energy 20 feet long and 5 feet in diameter which intensifies the experience of pain in living creatures.

Any creature within the area of effect which suffers any damage must make an immediate saving throw versus Paralysis, with a –1 penalty per point of damage (e.g. a character in the *pain amplifier*'s cone which suffered 5 points of damage from a sword blow would save versus Paralysis at –5). If the saving throw succeeds, the creature maintains self-control despite intense pain. Otherwise, the creature is incapacitated with agony for 1 round per point by which the saving throw failed. If a failed saving throw leaves a creature incapacitated for a number of rounds greater than its Wisdom score, then it becomes reduced to servile compliance towards the operator of the *pain amplifier*. For one turn (10 minutes) thereafter, it will answer questions

and provide assistance as if subject to charm monster.

If not connected to a fixed power source, a *Termaxian pain amplifier* requires a *power cell* to operate. Each round of operation drains one charge from the *power cell*.

Termaxian Passkey

Shaped like a caduceus fashioned from azoth-infused silver, a *Termaxian passkey* identifies the bearer and his companions as a member or ally of the cult of Turms Termax. The passkey also protects the bearer with a continuous *protection from evil* effect. Some magical and otherworldly creatures associated with the cult will not attack the bearer and his companions; such creatures will be noted when they appear in the dungeon.

Terrim Battle Armor

Terrim battle armor consists of a breastplate, vambraces, and greaves made of hardened white alchemist's resin worn over a silvery-black dwimmersilk bodysuit. A fully-enclosed resin helmet with a vitreum visor fits on top of the suit. When the visor is down, the ensemble resembles that worn by the Iron God. Terrim battle armor confers AC 7 and weighs 2 stone (25 lbs). It also renders its wearer immune to adverse effects from his surroundings, like an environment suit. Terrim battle armor will become torn if its wearer is damaged by a slashing or piercing attack dealing more than 5 points of damage. Torn battle armor does not grant immunity to adverse environmental effects, but does provide its wearer with a +2 bonus to saving throws made against such effects.

Thulian Chain

Thulian chain—also called Thulian mail—is a type of chain mail armor that incorporates embedded steel plates within its chain links for additional protection. During its manufacture, minute amounts of azoth are worked into its metal, which grants the wearer of *Thulian chain* a +1 bonus to saving throws versus Spells. *Thulian chain* is lighter than similar suits of armor (weighing only 3 stone) and confers armor class 5 rather than the usual armor class 4.

Thulian Crossbow

Made of a light metal, a *Thulian crossbow* has the weight of a crossbow but the range and damage of an arbalest. Owing to its advanced construction, combatants can make up to 3 cleave attacks with the *Thulian crossbow* rather than the usual limit of 2.

Thulian Fuel Cylinder

These canisters of vitreum contain highly refined azoth. They can be used to power certain machines built by the ancient Thulians. However, if handled without proper protection, anyone who touches a *fuel cylinder* takes 6d6 damage (make a saving throw versus Blast for half damage). Safe handling of a *Thulian fuel cylinder* requires the character to either be protected by *resist fire* or be wearing an *environment suit*.

Thulian Plate

Thulian plate is a type of armor made from articulated azoth-infused steel plates. The armor absorbs the first five points of damage done from each magical attack directed against the wielder. A suit of Thulian plate confers armor class 8 and weighs 5 stone.

Thulian War-Mask

Thulian war-masks resemble demonic faces made of metal meant to be attached to helmets in order to terrify foes. The centurions who commanded the Thulian's beastman legions traditionally wore these masks as a sign of authority. Wearing a *Thulian war-mask* confers a +1 bonus to reaction rolls when encountering orcs, gnolls, minotaurs, and other beastmen traditionally subservient to the Thulians.

Tome of Clear Thought

This heavy book contains instruction on improving memory and logic. If anyone reads this book, which takes a total of 48 hours over a minimum of six days, he must begin the mental exercises and practice them daily for 4 weeks. After that time, the character gains INT +1 permanently. Once the book is read, the magic disappears from the pages and it becomes a normal book. No character may benefit from reading more than one of this type of book.

Tome of Knowledge

There are three tomes of this type, one for Lawful, Neutral, and Chaotic arcane spellcasters (roll d6, 1-2 Lawful, 3-4 Neutral, 5-6 Chaotic). When a character of the appropriate class and alignment studies the book uninterrupted for 1 week, he gains enough XP to be midway through the next level of experience. After the book is used in this way, it vanishes and the character cannot use a similar tome again. If an arcane spellcaster of the wrong alignment attempts to read the tome, he suffers 5d4 hp damage and is rendered unconscious for an equal

number of turns. Should a character of another class attempt to read the book, he must save versus Spells or be in a permanent state of *confusion* until *remove curse* is cast.

Tome of Understanding

This thick book contains tips for improving instinct and perception. Its function is identical to the *tome of clear thought*, but at the end of the mental exercises the character gains WIS +1 permanently.

True Water

This primordial liquid is highly prized for its mystical properties. When untainted by physical contaminants, *true water* never boils, evaporates, or freezes, and cannot be altered or destroyed with even the mightiest of spells. Indeed, *true water* acts as a supernatural solvent, dissolving magical energies within itself.

If a pint of true water is thrown or poured onto a single magic item (up to a one foot cube of material), it will dissolve some of the magical energies in the item – a single plus, one power, or 1d10 charges - unless the item makes a saving throw versus Death. Items use the saving throws of their possessor, or if unpossessed, of their creator (usually an 11th level mage). If thrown or poured onto a creature, any spell effects active on the creature are subject to being dispelled as if by an 11th level caster. If a creature bathes or soaks itself in true water, it will benefit from a limited magic resistance while soaked – gaining a magic resistance throw of 11+ while bathing and for the first round after emerging, 16+ for the next turn (10 minutes), and 20+ for the subsequent hour or until dried off. Some sages theorize that azoth touched by true water might be returned to its primordial quintessence. See Appendix G, Secrets of Turms Termax (p. 401) for details of what this might do.

True water is susceptible to contamination when transported away from the fresh springs from which it bubbles. If not stored in a container of pure adamant, orichalcum, or vitreum, it quickly loses its potency, becoming nothing more than normal water in 1d10 rounds.

Typhonian Mace

Also known as a Mace of Typhon, these magical weapons are sacred to the clergy of the Thulian god of discipline, order, and trade. A *Typhonian mace* deals double damage versus creatures infused with, or created using, azoth. In addition, when such a creature is struck in combat by the *mace*, the attacker throws

on the Turning Undead table. For the purposes of this turning throw, treat the target as undead of a type equal to its Hit Dice and treat the *mace*'s wielder as if he were the most powerful of Typhon's clergy (currently a 12th level cleric). If the turning attempt is successful, the azoth creature is obliterated and all other creatures within 10' are spattered with azoth (see p. 394 for the potential effects). If Turms Termax himself is struck with the Typhonian Mace, he is turned as an infernal creature. If the turning attempt is successful, he is stunned for 1d10 rounds. Note that devout worshippers of Typhon will see it as their sacred duty to return a *Typhonian mace* to the church.

Unseen Ear

This item resembles an oblong marble of green crystal. It fits snugly in the external auditory canal of the ear and is almost unnoticeable once in place. The *unseen ear* allows telepathic communication between two or more individuals who each wear one of these items up to a distance of 120 feet. *Unseen ears* may also be linked to a larger telepathic transmitter, which will allow communication between wearers up to 60 miles away even if they are on different planes of existence.

Wand of Ice

A wand of ice produces several spell-like effects, but can only produce one effect per round. With an expenditure of 1 charge, an ice storm (as the magic user spell; see *Appendix D*, *New Spells*, p. 337) can be evoked or a wall of ice (as the spell) can be brought into existence. With an expenditure of 2 charges, the wand of ice may produce a cone of cold (as the spell). The wand of ice is rechargeable.

Warp Sword

When turned off, this sword looks like a metallic handle with a hole in its end. When powered up, the sword generates a flickering 30-inch-long blade of arcane energy. Attacks using this weapon treat any armor as if it were two points worse than it actually is. Thus, plate armor is treated as AC 4 instead of AC 6. When it strikes, the *warp sword* deals 1d8+16 points of damage. The sword uses a *power cell* (see New Magic Items, page 331), each charge of which powers the sword for two minutes.

APPENDIX | 5

New Spells

T

HROUGHOUT THE

text, there are references to spells not included in the *ACKS* rulebook. All of these spells are presented in this section as a convenience for the referee.

Auditory Illusion

Level: 1 (arcane) Duration: 1 turn Range: 60 feet

The caster of this spell is able to create false sound. The sound can be centered anywhere within range, and within that range the sound can fluctuate and move, imitating approaching or receding footsteps, laughter, voices, and other possibilities. The sound produced can be as loud as the noise produced by thirty human-sized beings. Note that the sound does not have to be humanlike, but could be animal or monster sounds. In these cases the referee will determine how much sound and how many individuals it might represent. For instance, the sounds of thirty humans might be approximately that of sixty children, or eight ogres. Beings are allowed a saving throw versus Spells to realize that the effect is illusory, but only if they actively attempt to disbelieve.

Blindness

Level: 2 (arcane)

Duration: Instantaneous

Range: 60'

This spell magically destroys a creature's eyes. If the target fails a saving throw versus Death, it is rendered permanently blind. A blinded creature suffers -2 to surprise rolls and -4 to all attack throws and has its movement reduced to ½ its normal rate. Only *cure blindness* or other magical healing can restore the target's sight.

Color Spray

Level: 1 (arcane)
Duration: Instant

Range: 0'

A vivid cone of clashing colors springs forth from the caster's hand, causing one or more creatures within the area of effect to become stunned, perhaps also blinded, and possibly knocking them unconscious. The cone is 5 feet wide at the origin, 20 feet long, and 20 feet wide at its terminal end. The spell will affect a number of Hit Dice of creatures within the cone equal to the caster's level. Creatures with fewest HD are affected first. Each creature within the cone is affected according to its Hit Dice.

HD fewer or equal to the caster's level: The creature is unconscious for 2d4 rounds.

HD up to two greater than the caster's level: The creature is blinded for 1d4 rounds.

HD 3 or greater than the caster's level: The creature is stunned for 1 round.

Beings of 6 HD or levels, or with more HD or levels than the caster, may make a saving throw versus Spell to avoid the spell's effects. Sightless creatures are not affected by *color spray*.

Deafness

Level: 2 (arcane)

Duration: Instantaneous

Range: 60'

This spell magically destroys a creature's ears. If the target fails a saving throw versus Death, it is rendered permanently deaf. A deaf creature is easy to sneak up on, and suffers -2 to surprise rolls. Due to its inability to hear itself, it has a 2 in 6 chance of failing any attempt to cast a spell, read a scroll, or utter a command word. Other penalties may apply in certain social settings or circumstances at the Judge's discretion. Only magical healing can restore the hearing of a target affected by this spell.

Gate

Level: 9 (arcane ritual) Duration: see below

Range: 30'

At the completion of this powerful ritual, the caster utters the true name of a specific extraplanar creature of great power (such as a demon, devil, demigod, or even god) from whom he seeks aid and assistance. This utterance attracts the creature's attention and allows it, or its representative, to travel to the caster's vicinity by means of an interdimensional portal simultaneously created by the ritual's completion – the eponymous gate itself. If the creature named is anything short of a deity or demon lord, it will usually travel through the gate itself. Gods, demon lords, and other planar rulers will likely send a representative rather than come through the gate personally. The Judge's discretion is final with regard to what creature comes through the gate.

In either case, the creature arriving through the *gate* is *not* under the control of the caster. Its actions will be determined by its alignment, its relationship with the caster, the reason for its summoning, and the nature of the threats it confronts. If a creature is called by a caster of an opposed alignment seeking assistance in pursuing goals contrary to the creature's own, it will attempt to destroy the caster if possible, or depart if not. If a creature is called for a trifling matter (relative to its own power), it might depart immediately, or perhaps linger long enough to chastise the caster for his impudence,

even going so far as to lay a *curse* or *quest* upon him. Usually, however, the creature will provide some aid or assistance to the caster, especially if his need is great and his goals align with those of the creature itself.

After aiding the caster, the creature will typically demand payment of some sort for its service – the payment demanded might be services, treasure, blood sacrifices, or even some part of the caster's own body, such as an eye or hand. The payment demand is at the Judge's discretion based on the power of the creature relative to the caster and the reason for its summoning. For creatures other than gods and demon lords summoned to aid characters of their own alignment, a payment of 1,000 gp (or equivalent) per HD of the creature will usually suffice.

Casting a *gate* ritual requires 4,500 gp of azoth as its special component. Note that most demons possess the innate ability to *gate* other demons to their aid in one round as a spell-like ability. However, a response to a demon's *gate* is not certain because of the chaotic nature of their kind. See *Appendix C*, *New Monsters*, on p. 341.

Heat Metal (reversible)

Level: 2 (divine) Duration: 7 rounds

Range: 45'

Heat metal makes metal extremely warm. A creature takes fire damage if its metal weapons, armor, or equipment are heated. On the first round of the spell, the metal becomes warm and uncomfortable to touch, but deals no damage. The same effect also occurs on the last round of the spell's duration. During the second (and also the next-to-last) round, intense heat causes pain and damage. In the third, fourth, and fifth rounds, the metal is searing hot, causing more damage, as shown on the table below.

Round	Metal Temperature	Damage
1	Warm (Cool)	None
2	Hot (Cold)	1d4 (1d2) hp
3–5	Scorching (Freezing)	2d4 (1d4) hp
6	Hot (Cold)	1d4 (1d2) hp
7	Warm (Cool)	None

Note that when searing damage is delivered, additional effects occur depending on the body parts which are in contact with metal. A target may experience more than one of these effects if metal is contacting multiple body parts. Effects are as follows: extremities (hands, feet), unusable for 2d4 days; body (covered by metal armor), bedridden

from extreme burns for 1d4 days; head (covered by a helmet), severely burned, victim is unconscious for 1d4 turns. If searing metal makes contact with flammable material (leather, cloth, etc.) it burns, dealing 2d4 damage the next round. The reverse of heat metal, chill metal, has similar effects as noted in parenthesis in the table above. However, when freezing damage is dealt, small body parts in contact with metal will be so frozen as to require amputation. Metal gauntlets will cause the loss of 1d3 fingers on each hand, while metal boots will cause the loss of 1d3 toes on each foot. Light helmets will cause notable scarring, while heavy helmets will cause gruesome scarring (from the loss of the nose) and mangled ears. See p. 258 of ACKS for the effects of suffering these permanent wounds.

Note that magical items or spells that provide protection from fire or cold, or exposure to magical or mundane heat or cold sources will all negate the appropriate spell effect. *Heat metal* negates *chill metal*, and *vice versa*.

Hideous Laughter

Level: 1 (arcane)

Duration: 1 round per level

Range: 30'

This spell afflicts the target creature with uncontrollable laughter, forcing it to collapse into gales of manic laughter and fall prone unless it makes a successful saving throw versus Spells. The target can take no actions while laughing, but is not considered helpless. After the spell ends, it can act normally.

Because **hideous laughter** relies on its target possessing a sense of humor, only sapient creatures can be affected by the spell. If the target creature's type is different from the caster's, it receives a +4 bonus on its saving throw versus Spells, because humor does not "translate" well.

Holy Word

Level: 7 (divine ritual) Duration: instantaneous

Range: 0 feet

This ritual culminates with the utterance of a powerful *holy word* which affects all evil creatures within a 30-foot radius around the caster. For purposes of the ritual, evil creatures include hostile creatures of an alignment other than the caster's alignment, and inherently evil creatures such as undead and summoned creatures of Chaotic alignment. The effect of the *holy word* are shown on the table below:

Creature's HD or Level	Effect of Holy Word	Movement Penalty	Attack Penalty	Spellcasting
3 or Less	Killed/destroyed instantly	Dead	Dead	Dead
4 to 7+	Paralyzed 1d4 turns	Paralyzed	Paralyzed	Paralyzed
8 to 11+	Slowed and stunned for 2d4 rounds	Halved	-4, Slowed	None permitted
12 or More	Deafened for 1d4 rounds	None	-2	3 in 6 chance of failure

In addition, if the caster is on his home plane, all evil creatures from other planes within the area of effect are banished to their own plane of existence for 24 hours unless they make a saving throw versus Spells. There is no saving throw against the other effects of a *holy word*, though magical resistance can protect against it.

Reversed, this spell becomes *unholy word*. Its effects are identical to those noted above, except that it affects good rather than evil creatures.

Casting a *holy word* or *unholy word* ritual requires 3,500 gp of divine power as its special component. Note that some demons possess the innate ability to utter an *unholy word* in one round as a spell-like ability. See *Appendix C*, *New Monsters*, on p. 341.

Hypnotism

Level: 1 (arcane)

Duration: 1 round per level

Range: 15 feet

By means of mesmerizing gestures and droning incantations, the caster hypnotizes 1d6 living creatures in range. Creatures with fewest HD are affected first. Each affected creature may make a saving throw versus Spells to resist the **hypnotism**. Creatures that fail the saving throw will follow a **suggestion** from the caster, as the arcane spell of that name (see below).

Ice Storm

Level: 4 (arcane) Duration: 1 round Range: 90 feet

The caster causes magical hailstones to rain down over a 30 foot diameter area for one full round. All creatures in, entering, or passing through the area suffer 3d10 points damage from the hailstones. A saving throw versus Blast for half damage is allowed.

Alternatively, the caster can conjure a sleet storm over an 80 foot diameter area for one full round. Movement within the area of the sleet storm is at half speed, and visibility in or through the area is reduced to 20 feet.

Misdirection

Level: 2 (arcane) Duration: 1 turn Range: 30'

By means of this spell, the caster misdirects the information from *detect evil*, *detect magic*, *detect poison*, *detect secret doors*, and *find traps*. On casting the spell, an object or creature is chosen within range. For the duration, the opposite information or otherwise misleading or wrong information is conveyed when a detection spell is applied to that object or creature. The caster of such a detection spell is allowed a saving throw versus Spells to avoid the effect.

Paralyze

Level: 3 (arcane)

Duration: 1 round per level

Range: 60'

This spell paralyzes up to 3d6 HD of living creatures within range. Creatures with fewer HD are affected first. Each affected creature may make a saving throw versus Paralysis to resist the effect. Those that fail the saving throw are held helpless until the spell is *dispelled* or its duration expires.

Protection from Electricity

Level: 3 (arcane)

Duration: 1 turn per level

Range: Touch

This spell functions identically to *protection from fire*, but is effective against all electrical damage and attacks.

Protection from Fire

Level: 3 (arcane)

Duration: 1 turn per level

Range: Touch

This abjuration makes the creature touched nearly invulnerable to fire and heat. Non-magical fire is ignored by the subject creature. Against magical fire (such as dragon breath or **fireball**), the subject creature gains a bonus of +4 on saving throws, and all damage from such attacks is reduced by -2 points per die of damage rolled. Any fire attacks will still inflict at least 1 point of damage per die rolled, however.

Pyrotechnics

Level: 2 (arcane) Duration: See below

Range: 160'

Pyrotechnics turns a fire into either a burst of blinding fireworks or a thick cloud of choking smoke, depending on the wishes of the caster.

Fireworks: The fireworks are a flashing, fiery, momentary burst of glowing, colored aerial lights. This effect causes creatures within 120 feet of the area of effect to become blinded for 1d4+1 rounds unless they make a saving throw versus Blast. Creatures must have line of sight to the fire to be affected.

Smoke Cloud: A writhing stream of smoke billows out from the source, forming a choking cloud. The cloud spreads 20 feet in all directions and lasts for 1 round per caster level. All sight, even infravision, is ineffective in or through the cloud.

Any creature caught within the cloud must make a successful saving throw versus Poison or begin choking. Chocking creatures suffer a –2 penalty to their attack throws and armor class. This condition lasts as long as the creature is in the cloud and for 1d4+1 rounds after it leaves. Any creature that succeeds on its save but remains in the cloud must continue to save each round.

Ray of Enfeeblement

Level: 2 (arcane)

Duration: 1 round per level

Range: 30 feet

This spell targets one creature within range with a debilitating ray that projects from the caster's hand. The target may make a saving throw versus Blast to avoid the *ray of enfeeblement*. If it fails, it takes a penalty to STR of ld6+l points. (Creatures without a STR ability score suffer a –l penalty to attack throws and damage rolls per 2 points of STR penalty).

Refraction

Level: 1 (arcane) Duration: 1 round

Range: Self

By means of this spell the caster makes the space in front of him reflective, like a mirror. Any gaze attack directed at the caster does not affect him, but instead is turned back at the attacker.

Shimmer

Level 2 (arcane) Range: Self

Duration: 1 turn per level

This spell surrounds the caster with a shimmering aura. The aura provides a bonus of +2 to all saving throws. Attack throws against the caster are at -2.

Shrieking Skull

Level: 4 (arcane) Duration: 1 turn Range: 30 feet

This spell allows the caster to animate the skull of a single human or humanoid and command it to fly and attack at his will. The skull attacks with a bite or a fearful shriek. Both bite and shriek induce fear as per the spell *cause fear* (a saving throw versus Spells negates), the reverse of the spell *remove fear*, but the shriek affects all living creatures within 10 feet. When the shriek is used, or at the end of the spell's duration (whichever comes first), the skull crumbles to the floor. The skull is not affected by a cleric's ability to turn undead.

Shrieking Skull (1) [AL C, MV 20' flying, AC 9, HD 4+4, #AT 1, DG 1d6 + fear or shriek, SV C5, ML +3]

Suggestion

Level: 3 (arcane)

Duration: 6 turns plus 6 turns per level

Range: 30 feet

With this spell, the caster may suggest a course of action to a target living creature. The target may make a saving throw versus Spells to resist the suggestion. If the saving throw fails, the target creature will attempt to carry out the suggestion to the best of its ability. The *suggestion* must be limited to a sentence or two and must be worded in such a manner as to make the activity sound reasonable. Asking the creature to do some obviously harmful act automatically negates the effect of the spell. However, a target may be led to believe that an action is not harmful; for instance, a creature might be told to drink a poisonous potion by suggesting the potion is actually beneficial. Conversely, a very reasonable suggestion causes the save to be made with a penalty (such as -1 or -2). The spell ends when the subject finishes carrying out the suggestion, or when the duration expires, whichever comes first.

Symbol

Level: 8 (arcane ritual) Duration: Special Range: Touch

This ritual allows the caster to scribe a potent rune of power upon a surface. To be effective, a *symbol* must always be placed in plain sight and in a prominent location. *Symbols* are visible and legible at a distance of 60 feet. Covering or hiding the rune renders the *symbol* ineffective, unless a creature removes the covering, in which case the *symbol* works normally.

Until it is triggered, a *symbol* is inactive. By default, a *symbol* is triggered whenever a creature does one or more of the following: looks at the rune; reads the rune; touches the rune; passes over the rune; or passes through a portal bearing the rune. The caster can choose to limit the trigger to just a few or one of these triggers if desired. Regardless of the trigger method or methods chosen, a creature more than 60 feet from a *symbol* can't trigger it (even if it meets one or more of the triggering conditions, such as reading the rune). Once the spell is cast, a *symbol*'s triggering conditions cannot be changed.

When triggered, a *symbol* will affect one or more creatures within 60 feet of the rune. The effect will vary depending on the type of *symbol* inscribed. Once triggered, the *symbol* becomes active and glows, lasting for 10 minutes per caster level. Any

creature that enters the area while the *symbol* is active may be subject to its effect, whether or not that creature was in the area when it was triggered. A creature need save against the symbol only once as long as it remains within the area, though if it leaves the area and returns while the symbol is still active, it must save again.

When scribing a *symbol*, the caster can specify a password or phrase that prevents a creature using it from triggering the effect. Anyone using the password remains immune to that particular rune's effects so long as the creature remains within 60 feet of the rune. If the creature leaves the radius and returns later, it must use the password again.

There are eight different kinds of *symbol*, each of which has a different effect when triggered.

Conflict: The symbol causes all creatures within 60 feet to begin arguing with others in their area for 5d4 rounds. Arguing creatures of differing alignment may (50% chance) fight for 2d4 rounds. Creatures in the area of effect may resist the *symbol of conflict* with successful saving throws versus Spells.

Death: The *symbol* slays one or more creatures within 60 feet whose combined total current hit points do not exceed 80. The *symbol* affects the closest creatures first, skipping creatures with too many hit points to slay. Creatures in the area of effect may resist the *symbol of death* with successful saving throws versus Death.

Despair: The *symbol* causes all creatures within 60 feet to endure feelings of hopelessness and futility for 3d4 turns. Affected creatures will automatically cower, surrender, or retreat in the face of determined opposition. Otherwise they have a 25% chance per round of taking no action due to their despair. Creatures in the area of effect may resist the *symbol of despair* with successful saving throws versus Paralysis.

Fear: The *symbol* causes all creatures within 60 feet to flee at their running speed for 30 rounds, as if affected by the spell *fear*. Creatures in the area of effect may resist the *symbol of fear* with successful saving throws versus Spells at -4.

Insanity: The *symbol* causes one or more creatures within 60 feet whose combined total current hit points do not exceed 120 to become permanently insane (as the *confusion* spell). The *symbol* affects the closest creatures first, skipping creatures with too many hit points to affect. The insanity can only be cured with ritual magic. Creatures in the area of effect may resist the *symbol of insanity* with successful saving throws versus Spells.

Pain: The *symbol* causes all creatures within 60 feet to endure wracking pains for 2d10 turns. Affected creatures suffer a -1 penalty to initiative, -1 penalty to armor class, and -4 penalty to attack throws. Creatures in the area of effect may resist

the *symbol of pain* with successful saving throws versus Spells.

Sleep: The *symbol* causes all creatures of 8 HD or less within 60 feet to fall into a catatonic slumber for 1d12+4 turns. Catatonic creatures cannot be awakened by non-magical means before this time expires. Creatures in the area of effect may resist the *symbol of sleep* with successful saving throws versus Death.

Stunning: The *symbol* causes one or more creatures within 60 feet whose combined total current hit points do not exceed 160 to become stunned and unable to act for 3d4 rounds. Any held items will be dropped. The *symbol* affects the closest creatures first, skipping creatures with too many hit points to affect. Creatures in the area of effect may resist the *symbol of stunning* with successful saving throws versus Paralysis.

Casting a *symbol* ritual requires powdered black opal and diamond dust, worth 4,000 gp total, as a special component. Note that some demons possess the innate ability to scribe a *symbol* in one round as a spell-like ability. See *Appendix C*, *New Monsters*, on p. 341.

APPENDIX

New Monsters

s NOTED IN ACKS (p. 151), monsters with similar characteristics are grouped into monster types. Along with new monsters, *Dwimmermount* introduces two new monster types (demon and plant) and one new sub-type (azoth constructs). A creature can belong to multiple types.

Azoth constructs are a type of construct. Like all constructs, they are immune to disease, gas and poison and unaffected by *charm*, *sleep*, or *hold* spells. They count as enchanted creatures for purposes of spells such as *dispel evil* and *protection from evil*. The subtype of constructs manufactured using azoth also suffers 1d8 damage if struck by supernatural solvents such as *true water*.

Demons are creatures summoned from the Great Void. Demons take half damage from attacks based on cold, electricity, fire, and gas. All demons possess infravision (90 feet) and *telepathy*, which allows them to communicate with any creatures they encounter. Demons are unholy beings that can be held at bay by *protection from evil*, dispelled with *dispel evil* and turned by clerics as Infernal.

Plants are sentient vegetable creatures. Plans are immune to all *charm*, *sleep*, and *hold* spells, to stunning, and to poisons not designed to work on plants. They are vulnerable to spells that affect plants

NEW MONSTERS BY TYPE

Туре	Monsters		
Animal	Sapient Cat, Sapient Rat		
Beastman	Mongrelman		
Construct (azoth)	Arcane Cadaver, Eldritch Bones, Guardian Plasm, Termaxian Husk, Termaxian necrolyte

Algoid

% In Lair: 20%

Dungeon Enc.: Strand (1d4) / Colony (1d4 + 2) Wilderness Enc.: Strand (1d4) / Colony (1d4 + 2)

Alignment: Neutral Movement: 20' (6') Armor Class: 5 Hit Dice: 5****

Attacks: 2 (Fists) or mind blast Damage: 1d8/1d8 or stun

Save: F5 Morale: +4 Treasure Type: P XP: 800

The algoid is a living colony of algae that has developed some semblance of intelligence and mobility. It is roughly humanoid in shape and is green in color. The algoid often lies in wait, partially submerged in water or a bog, until its prey passes nearby. It springs to attack with its powerful fists when opponents come within range. Once per day, an algoid can use a mind blast in a 60 foot cone. Anyone caught within that cone must make a saving throw versus Paralysis or be stunned for 3d4 rounds. In addition, an algoid can animate two trees—within a range of 90 feet—in the same fashion as a treant. In addition to its plant immunities to charm, sleep, and hold spells, to stunning, and to poisons not designed to work on plants, an algoid is unaffected by fire and electricity and takes half-damage from slashing and piercing weapons.

Arcane Cadaver

% In Lair: 35%

Dungeon Enc: Throng (1d4) / Laboratory (1d4) Wilderness Enc: Throng (1d4) / Laboratory (1d4)

Alignment: Chaotic Movement: 60' (20') Armor Class: 5 Hit Dice: 4** Attacks: 1 (touch) Damage: 1d12 Save: F4

Morale: N/A Treasure Type: None

XP: 190

Arcane cadavers are corpses which have been animated due to prolonged exposure to azoth. The flesh of an arcane cadaver is wrinkled and waterlogged, and both its skin and any clothing or armor it was wearing before its death have a metallic sheen due to the silvery-black azoth that suffuses them. Although easily mistaken for undead, arcane cadavers are actually constructs with the azoth sub-

type. Like all constructs, they are immune to disease, gas and poison and unaffected by *charm*, *sleep*, or *hold* spells. They count as enchanted creatures for purposes of spells such as *dispel evil* and *protection from evil*. The subtype of constructs manufactured using azoth also suffers 1d8 damage if struck by supernatural solvents such as *true water*.

Inside an arcane cadaver, processes similar to an azoth distillery are constantly underway. Its pores seep a dilute form of alkahest and its veins are filled with an ichor consisting largely of sovereign glue (see *Appendix F*, *Azoth*, p. 395). An arcane cadaver attacks by touching or hugging its target and allowing the caustic alkahest to do its work. Conversely, anyone attacking an arcane cadaver with a sharp or edged weapon must make a saving throw versus Paralysis. Failure indicates that the weapon has become stuck by the sovereign glue inside the cadaver, where it will remain until the bonds are dissolved. It is possible to use the alkahest in the cadaver's own skin to dissolve the glue.

Arcanoplasm

% In Lair: 100%

Dungeon Enc.: Solitary (1) Wilderness Enc.: Solitary (1)

Alignment: Chaotic Movement: 30' (10') Armor Class: 5 Hit Dice: 6* Attacks: 1 (slam) Damage: 2d8 Save: F5 Morale: +4

Treasure Type: None

XP: 570

Thought to be the result of a failed magical experiment, an arcanoplasm resembles a giant, pale amoeba shot through with stripes of dark gray. Arcanoplasm are found in areas where magical energies are present. Here they feed and remain until disturbed, targeting arcane spellcasters above all other potential prey, whom they can sense at a range of 100 feet. Arcanoplasms slam opponents for 2d8 damage per blow. They are completely immune to all arcane spells, which they absorb without suffering any ill effects. Indeed, arcane spells heal them at a rate of 1 hit point per 3 points of damage the spell would have dealt. If no damage would be dealt, the rate is 1 hit point per level of the spell. Finally, an arcanoplasm can mimic any arcane spell of 4th-level or below cast within 30 feet of it, as if it were a 7th-level mage.

Archer Bush

% In Lair: 75%

Dungeon Enc.: Copse (ld4) / Thicket (ld4+4) Wilderness Enc.: Thicket (ld4+4) / Grove (ld10+10)

Alignment: Neutral Movement: 10' (3') Armor Class: 3 Hit Dice: 2 Attacks: 1 (thorns) Damage: 1d4 Save: F1

Treasure Type: None

XP: 20

Morale: +4

The archer bush is a mobile plant that gains sustenance from the blood of living creatures. The archer bush consists of a thick trunk that resembles a 3-footmound of brownish-green leaves. From the trunk sprout several thick branches with sparse leaves. The leaves have small pale buds of gold or purple. Spaced evenly along the length of each branch are many rows of 1 inch long needle-like thorns, which it is able to fire like arrows at targets up to 60 feet away. After its target is dead, the archer bush uproots itself and devours its prey with with its mouth, a dark cavity filled with extra-hard thorns hidden beneath its trunk. As plants, archer bushes are immune to *charm, sleep*, and *hold* spells, to stunning, and to poisons not designed to work on plants.

Ascomoid

% In Lair: 40%

Dungeon Enc.: Solitary (1) Wilderness Enc.: Solitary (1)

Alignment: Neutral Movement: 30' (10') Armor Class: 6 Hit Dice: 6**** Attacks: 1

Damage: 1d6, spores

Save: F6 Morale: N/A Treasure Type: K XP: 1,320

Semi-intelligent fungi that devour living things, ascomoids are 10 feet wide puffball-like fungi with a brownish-green surface covered with small pocks that serve as sensory organs. An ascomoid attacks by rolling over its opponents or by firing lethal spores from pores in its leathery skin. The spores have a range of 30 feet and form a 20 foot diameter cloud, within which living creatures must make a saving throw versus Poison or die in 1d4 rounds. Even if the save succeeds, affected creatures are

blinded for 1d4 rounds. *Cure disease* prevents death from spore infection, but does not cure blindness. In addition to their plant immunities to *charm*, *sleep*, and *hold* spells, to stunning, and to poisons not designed to work on plants, ascomoids take no damage from blunt weapons and half-damage from slashing weapons, fire, and electricity.

Astral Reaver

% In Lair: 10%

Dungeon Enc.: Patrol (1d6) / Outpost (1 Crew) Wilderness Enc.: Crew (2d4 Patrols) / Citadel (1d6

Crew)

Alignment: Chaotic Movement: Varies Armor Class: Varies

Hit Dice: 5 or more (** if mage)

Attacks: 1 Damage: Varies Save: F6-11 or M6-11

Morale: +2

Treasure Type: As NPC

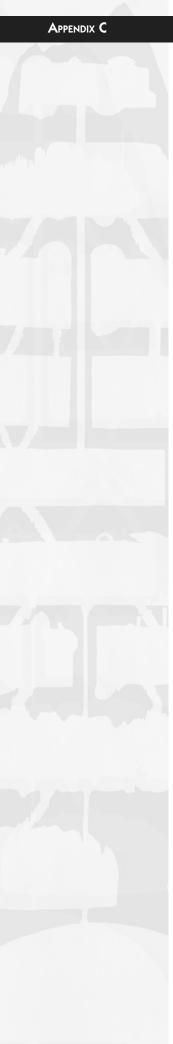

XP: 570+

Astral Reavers are a race of men who dwell in the Astral Plane (see *Appendix E*, *The Four Worlds*, p. 391), where they relocated at some time in the ancient past. As a result of their prolonged exposure to the weird energies of that plane, Astral Reavers possess gray, leathery skin that is drawn tightly across their bones and eyes that glow with a dim, white light. Astral Reavers are thoroughly Chaotic and feel no kinship with earthbound men. Indeed, Reavers treat ordinary men as inferiors to be killed or enslaved without remorse. Astral Reavers dwell on planetoids floating within the Astral Plane, though some have been known to construct artificial citadels. Each Reaver settlement is independent of one another, but warfare between settlements is rare.

Astral Reavers are typically fighters or mages of 5th level. Whenever they are encountered, there will be an equal number of each class, with a preference for fighters in the case of odd numbers. Each Reaver crew will be co-led by one 6th level fighter and one 6th level mage.

Reaver citadels (wilderness lairs) will led by a spellsword of level 6+1d6. Reaver citadels will have noncombatants and young equal to 100% and 200% of the number of combatants, respectively. Noncombatants fight as normal men, while young do not fight. Astral reavers actively enslave other human, demi-human, and humanoid races, so there will be 1d6 prisoners per 25 Reavers in the outpost. There is a 50% chance a Reaver citadel will be guarded by 1d4+1 phase spiders and a 25% chance for 1d4 8 HD quintelementals.

All Astral Reavers may possess magic items. For

each category of item (potion, sword, etc.), there is a 5% chance per level of the Reaver that he possesses an item of that category. Reaver fighters favor plate armor and two-handed swords, while Reaver mages wear various protective items and carry wands.

Babau

% In Lair: 15%

Dungeon Enc.: Coven (1d3) / Den (1d6) Wilderness Enc.: Plague (1d6) / Den (1d6)

Alignment: Chaotic Movement: 150' (50') Armor Class: 12 Hit Dice: 7 + 10****

Attacks: 3 (2 claws, horn) or 1 weapon Damage: ld4+1/ld4+1/2d4 or as weapon +4

Save: F7 Morale: +2

Treasure Type: P, M, K

XP: 2,100

These 7-foot-tall demons have ebony flesh that clings closely to their skeleton, appearing almost like a leathery corpse but for the single curving horn that emerges from the back of their heads. Babau demons prefer to attack with weapons when possible, and when using melee weapons gain +4 to hit and +4 to damage due to their strength. These demons have the abilities of a thief of 9th-level. Additionally, any creature within 20 feet that looks into a babau's glowing red eyes must succeed in a saving throw versus Spells or be affected as if from a ray of enfeeblement. They have the following spell-like abilities, usable at will: darkness 10' radius, dispel magic, fear, fly, levitate, and polymorph self. A babau may gate another babau demon once per day, with a 25% probability of success. Like all demons, babau possess infravision (90 feet) and telepathy, and take half damage from attacks based on cold, electricity, fire, and gas. In combat, a slimy red jelly coats the babau's skin, reducing damage from cutting and stabbing weapons by half. However, iron weapons of iron deal an extra 2 points of damage against them.

Balor (Demon of the Sixth Circle)

% In Lair: 20%

Dungeon Enc: Throng (1d3) / Pit (1d6) Wilderness Enc: Pack (1d6) / Pit (1d6)

Alignment: Chaotic Movement: 60' (20') → Fly: 150' (50')

Armor Class: 11 Hit Dice: 8 + 7****

Attacks: 1 (*sword* +*l* or whip)

Damage: 1d8+1 or 1d6 and 3d6 fire damage

Save: F8 Morale: +2

Treasure Type: R, K

XP: 3,100

The dreadful balors, demons of the sixth circle, stand about 12 feet tall. They have bat-like wings, horns, and dark red skin. Balors love to join battle armed with their +1 swords and whips. The latter are long, flexible weapons with many tails tipped with hooks, spikes, and balls. Targets struck by a balor's whip must make a saving throw versus Paralysis or be dragged toward the demon's body, where the flames emanating from the balor's hide deal an additional 3d6 points of damage. Like all demons, balors possess infravision (90 feet) and telepathy, and take half damage from attacks based on cold, electricity, fire, and gas. Balors are also unharmed by ordinary weapons. They have the following spell-like abilities usable at will: detect invisibility, detect magic, dispel magic, fear, read languages, suggestion, telekinesis (600 lbs.), and symbol (despair, fear, sleep, and stunning). A balor may gate (70% probability of success) a glabrezu (75%) or nalfeshnee demon (25%) once per day.

Barrow Wight

% In Lair: 70%

Dungeon Enc.: Throng (1d4) / Barrow (1d6+6) Wilderness Enc.: Throng (1d4) / Barrow (1d6+6)

Alignment: Chaotic Movement: 90' (30') Armor Class: 5 Hit Dice: 6*** Attacks: 1

Damage: 1d8 + energy drain

Save: F4 Morale: +4 Treasure Type: R XP: 1,070

Barrow wights are twisted, insane undead creatures akin to normal wights often found guarding barrows and tombs. They hate living creatures and attempt to destroy anyone who invades their lairs.

A barrow wight stands about 6 feet tall, and is usually garbed in funerary clothes that hang in tatters about it. A barrow wight's skin is cold, leathery, and gray in color and drawn tight over its frame. Its eyes burn with a crimson fire that reveals the malevolence and insanity of its nature.

Living creatures struck by a barrow wight lose one level or hit die. Should a character lose all levels, he dies and will become a barrow wight himself in 1d4 rounds, under the control of the barrow wight that created him. Any creature that looks at a barrow wight must make a saving throw versus Spells or be affected by *feeblemind*, as per the arcane spell of the same name. As undead, barrow wights are immune to gas and poison and unaffected by *charm*, *sleep*, or *hold* spells of any sort. Barrow wights are also unharmed by ordinary weapons. They are turned as spectres.

Basidirond

% In Lair: 60%

Dungeon Enc.: Outbreak (1d2) / Colony (1d6+6) Wilderness Enc.: Outbreak (1d2) / Colony (1d6+6)

Alignment: Neutral Movement: 20' (6') Armor Class: 5 Hit Dice: 5** Attacks: 1

Damage: 1d8 or spores

Save: F5 Morale: N/A

Treasure Type: M, K

XP: 500

The basidirond is a large, 7-foot-tall fungal monster. Its body is dark green or brown and leathery to the touch, resembling an inverted umbrella with 4-6 stems (each about 5 feet long) hanging beneath it. The basidirond attacks by striking with its cap or by firing a line of spores at its opponent. There are two types of spores. One type, with a range of 10 feet, requires a saving throw versus Poison to avoid death in 1d4+1 rounds. The other, centered in a 20 foot radius on its body, requires a saving throw versus Poison to avoid hallucinations for 1d4 rounds afterwards. Roll randomly on the following table for each creature affected by hallucinations:

- 1 Victim believes that he is in a swamp and strips off all gear and armor to avoid sinking.
- Victim believes that he is being attacked by a swarm of spiders. He attacks the floor and surrounding area.
- 3 Victim believes item held is a viper; drops item and retreats from it.
- 4 Victim believes that he is suffocating and gasps for air while clutching throat.

- Victim believes that he has shrunk to one-tenth normal size. He begins yelling for help.
- 6 Victim believes that his associated are diseased. He will not come closer than 10 feet.
- 7 Victim believes that he is melting; grasps self in an attempt to hold together.
- Victim believes that his back is covered with leeches. He tears armor, clothing, and equipment from his back to get at them.

In addition to normal plant immunities to all *charm*, *sleep*, and *hold* spells, to stunning, and to poisons not designed to work on plants, a basidirond is also immune to damage from cold-based attacks.

Beetle, Boring

% In Lair: 10%

Dungeon Enc: Cluster (2d4) / Nest (3d6) Wilderness Enc: Scourge (3d6) / Nest (3d6)

Alignment: Neutral Movement: 60' (20') Armor Class: 6 Hit Dice: 5 Attacks: 1 (bite) Damage: 5d4 Save: F5 Morale: -1 Treasure Type: M XP: 200

These 9-foot-long beetles live beneath the earth, where they cultivate and harvest molds and fungi on rotting wood or vegetable matter they hoard underground. They have a social behavior not unlike ants, where each beetle seems to intuitively understand its job.

Caryatid Column

% In Lair: 100%

Dungeon Enc.: Parade (1d4) Wilderness Enc.: None Alignment: Neutral Movement: 60' (20') Armor Class: 4 Hit Dice: 5*

Attacks: 1 (weapon)
Damage: 1d8

Save: F11 Morale: N/A

Treasure Type: None

XP: 350

The caryatid column is akin to the stone golem in that it is a magical construct created by a spell-caster. A caryatid column stands 7 feet tall and weighs around 1,500 pounds. Its smooth chiseled body is shaped as a beautiful woman. The column

always wields a weapon—usually a sword—in one of its hands. The weapon itself is constructed of steel, but melds with the column like stone until the column animates.

Caryatid columns are always created for a specific defensive function. They are programmed as guardians and activate when certain conditions or stipulations are met or broken—such as a living creature entering a chamber guarded by a caryatid column. A caryatid column attacks its opponents with its sword. It does not move more than 50 feet from an area it is guarding or protecting.

Like all constructs, caryatid columns are immune to gas, poison, and *charm*, *sleep*, or *hold* spells. In addition, a caryatid column's stone body is so hard that any weapon striking it risks being shattered. After a successful weapon attack against the construct, its attacker must make a saving throw versus Death. Magic weapons provide a bonus on saving throw equal to their highest magical bonus (e.g. a +1 sword, +3 against lycanthropes provides a +3 bonus). A failure results in the weapon being destroyed.

Cave Kraken

% In Lair: 100%

Dungeon Enc.: Solitary (1) Wilderness Enc.: None Alignment: Chaotic

Movement:

→ Swim: 90' (30')

Armor Class: 7 Hit Dice: 8**

Attacks: 8 tentacles or 1 bite Damage: 1d8 x 8 or 1d10

Save: F8 Morale: +2 Treasure Type: K XP: 1,560

Cave krakens are frightening, octopus-like creatures summoned by evil wizards to guard treasures in subterranean lakes and other bodies of water. They possess eight 12 foot long tentacles, which are covered in wicked barbs. Tentacles that successfully strike a target constrict for 1d8 points of damage initially and then 1d8 per round thereafter until either the target is dead or the tentacle cut off. For every tentacle constricting a single target, the target suffers a –1 penalty to attack rolls. A tentacle can be cut off if a total of 6 hit points or more of damage is dealt with one blow. If a cave kraken loses half or more of its tentacles, it will flee beneath the water, attacking again only if it is pursued or to defend any treasure it might be guarding.

Crypt Thing

% In Lair: 100%

Dungeon Enc.: Solitary (1) Wilderness Enc.: Solitary (1)

Alignment: Chaotic Movement: 60' (20') Armor Class: 4 Hit Dice: 6** Attacks: 2 (claws) Damage: 1d6/1d6

Save: F6 Morale: +4

Treasure Type: H, D

XP:820

Crypt things are intelligent undead creatures found guarding tombs, graves, crypts, and other such structures. They never leave the area they guard. A crypt thing appears as a humanoid skeleton wearing a brown or black robe with a hood, from within which two small pinpoints of red light are visible in skeletal eye sockets. Crypt things will often claim to be liches, which they greatly resemble.

Crypt things possess a powerful teleport other ability that allows them to remove intruders from the area they guard. When a crypt thing uses this power, all creatures within 50 feet must make a saving throw versus Spells. Those that fail are teleported a random distance (1d10 × 100 feet) in a random direction (1d4: 1-north, 2-south, 3-east, 4-west) away from the crypt thing. Roll randomly for each creature that fails its saving throw. A teleported creature never arrives in a solid object, instead arriving in the closest open space available. Teleported creatures can however, arrive in mid-air at the specified location rather than on a solid surface. Creatures that fall as a result take the usual falling damage. A creature that succeeds at its saving throw is unaffected by the crypt things teleport other ability for one day. Crypt things will generally claim that the victims of their teleport other effect have been disintegrated. If forced into combat, they will fight to the death with their claws to defend their territory. As undead, crypt things are immune to poison, gas, and charm, sleep, and hold spells. They are turned as spectres.

Crystal Ooze

% In Lair: None

Dungeon Enc: Solitary (1) Wilderness Enc: Solitary (1)

Alignment: Neutral Movement: 10' (3')

→ Swim: 30' (10')

Armor Class: 1 Hit Dice: 4**

Attacks: 1 (envelopment) Damage: 4d4 (acid, paralysis)

Save: F4 Morale: N/A Treasure Type: None

XP: 190

The crystal ooze is an aquatic variety of the gray ooze, able to survive out of the water for up to five hours. The crystal ooze can grow to a diameter of up to 8 feet and a thickness of about 6 inches. Being semi-transparent and clear, it is almost impossible to see in the water, and looks like nothing more than a puddle of water when on dry land. A crystal ooze secretes a digestive acid that quickly dissolves organic material, but not metal. Half of the damage from a melee hit is from this acid. Non-metal armor or clothing dissolves and becomes useless immediately unless its wearer succeeds on a saving throw. A wooden weapon that strikes a crystal ooze also dissolves immediately unless the wielder succeeds on an item saving throw. In addition to its digestive acid, a crystal ooze secretes a paralytic slime. A target hit by a crystal ooze's strike must succeed on a saving throw versus Paralysis or be paralyzed for 3d6 rounds. A crystal ooze is immune to charm, hold, and sleep spells, as well as to acid, cold, and fire.

Derrim

% In Lair: 40%

Dungeon Enc.: Patrol (1d4) / Outpost (2d6 Patrols)

Wilderness Enc.: None Alignment: Chaotic Movement: 60' (20') Armor Class: 6 Hit Dice: 8

Attacks: 1 (weapon) Damage: As weapon

Save: D8 Morale: +1

Treasure Type: Q, N (per outpost)

XP: 600

Derrim are a degenerate off-shoot of the Terrim, looking like squat, malicious men with elephantine noses and cruel, evil eyes. Wholly devoted to Chaos, the Derrim live in subterranean settlements across the world, where they practice alchemical experiments intended to restore the magical abilities that their ancestors, the Great Ancients, once possessed and that their enemies, the Terrim, still do. Derrim hate Terrim above all other creatures and will attack them on sight. The Derrim also delight in torturing other intelligent beings, an activity they treat as an art form. Woe to anyone who falls into their clutches.

Each Derrim outpost will be ruled by a leader with 9 Hit Dice. This leader has a 50% chance to possess a magic item in each category, except rods, wands, staves, or scrolls. As long as the leader is still alive, the Derrim's morale will be +2 rather than +1. There is a 85% chance a Derrim outpost will be guarded by 3d6 trained boring beetles and a 25% chance for 1d4 tamed subterranean monsters of 6 – 9 HD each.

Dretch

% In Lair: 15%

Dungeon Enc.: Throng (1d4) / Den (5d4) Wilderness Enc.: Throng (1d4) / Den (5d4)

Alignment: Chaotic Movement: 90' (30') Armor Class: 7 Hit Dice: 4**

Attacks: 3 (2 claws, 1 bite) Damage: ld4/ld4/ld6

Save: F4 Morale: +2

Treasure Type: None

XP: 190

These demons are fat, with long, spindly arms and legs. They have rudimentary human heads, with slobbering jaws and folds of fat. Like all demons, dretches take half damage from attacks based on cold, electricity, fire, and gas, and possess infravision (90 feet) and *telepathy*. They are barely sapient, however, so their telepathic communication offers little but gibbering cackles. Once per day, dretches can create a *stinking cloud*, create *darkness*, *teleport*, and summon 1d4 giant rats.

Dwimmerdragon

% In Lair: Varies Dungeon Enc: Varies Wilderness Enc: Varies Alignment: Chaotic Movement: 90' (30') Armor Class: Varies Hit Dice: Varies

Attacks: 3 (2 claws, 1 bite) or 1 (breath)

Damage: Varies Save: Varies Morale: Varies Hoard Class: Varies

XP: Varies

Dwimmerdragons are wingless, silvery-black scaled dragons found only in the caverns beneath Dwimmermount. They breathe a sulphur mustard gas, which gives their lairs a smell resembling garlic. Their precise origins are unknown, but it is surmised that they are the result of either another dragon breed's being mutated by exposure to azoth or deliberate magical experimentation by the Great Ancients. Whatever the truth, dwimmerdragons, though Chaotic, are not wholly evil or hostile to Man if placated. Indeed, dwimmerdragons often ally themselves with other creatures for mutual benefit.

Like all dragons, a dwimmerdragon's Armor Class, Hit Dice, damage, morale, and other abilities depend on its age and habitat. Refer to the Primary Dragon Characteristics and Secondary Dragon Characteristics tables in the ACKS rulebook (p. 164). Dwimmerdragons have no wings and cannot fly. They cannot select *clutching claws* or *wing claws* as special abilities. The entry below supplements the Dragon Attributes by Habitat table for the peculiar conditions of Dwimmermount:

Habitat	Common	Hide	Breath
	Name	Color	Weapon
Azoth-infused	Dwimmer- dragon	Silvery-black or grey	40' long, 40' wide, cloud, poison vapor

Dworg

% In Lair: 50%

Dungeon Enc: Squad (2d4) / Company (1d4 squads)

Wilderness Enc: None Alignment: Chaotic Movement: 60' (20') Armor Class: 7 Hit Dice: 5

Attacks: 1 (weapon) Damage: 1d6 or weapon

Save: D5 Morale: 0

Treasure Type: N, D (per company)

XP: 200

Dworgs are an evil variant of dwarves, created through the use of arcane machines that pervert the normal process by which dwarves reproduce. As these machines have been inaccessible for centuries, dworgs are rarely seen nowadays, and those that do appear make their homes deep underground. Dworgs look very similar to normal dwarves, except that their skin has a gray, "stony" cast to it. Dworgs have 120-foot infravision but suffer a -2 penalty to hit in bright light or sunlight. They have the same saving throws as dwarven vaultguards of their HD, but are completely immune to poison and paralysis.

Dworgs generally wear plate armor and fight with weapons and shields. Each dworg squad will be led by a 6th level vaultguard. Each dworg company will be led by a captain (an 8th level vaultguard), accompanied by a lieutenant (a 7th level vaultguard). The captain may possess magic items in addition to any held by the company. For each category of item except rods, wands, staves, or scrolls, there is a 5% chance per level of the captain that he possesses an item of that category.

Eld (Red Elf)

% In Lair: 85%

Dungeon Enc.: Squad (2d4) / Redoubt (1 company) Wilderness Enc.: Company (1d4 squads) /

Outpost (1d10 companies)

Alignment: Chaotic Movement: 120' (40') Armor Class: 5 Hit Dice: 2** Attacks: 1 (weapon) Damage: 1d8 or weapon

Save: E2 Morale: +2

Treasure Type: H (per company)

The Eld are the nigh-immortal progenitors of the elven race, and through their command of black

magic, the creators of innumerable monstrous species. Towering above their descendants at 6 feet tall (or more), the Eld nevertheless retain the delicate features and slight builds typically associated with elves. Their skin has a distinct reddish cast to it and their hair is universally dark brown or black. Occasionally, an Eld will be born whose appearance more closely matches that of "normal" elves. This is deemed a great curse and only the most remarkable of these Eld ever survives childhood; those that do are often among the most powerful and dangerous examples of this species.

The Eld are an inherently magical people and all members of the race can cast arcane spells as if they were mages of the same level as their hit dice. Eld are also skilled combatants, and when encountered typically wear *areonite cuirasses* and carry a pair of swords. They usually fight two-handed (dealing 1d8 damage) but may dual wield (gaining +1 to attack and dealing 1d6 damage). Most Eld also carry with them a number of magical weapons and other devices the likes of which are rarely seen on other worlds and whose operations testify to their supreme command of vile sorcery. There is a 10% chance per HD that an Eld possesses an *areonite pistol*, *rifle*, or *panoply*, and 5% chance per HD that an Eld possesses a magic item of each category.

Each squad of Eld has a 25% chance of being accompanied by a gang of 2d4 bugbears. Each company of Eld will be led by a leader of 1d6+1 HD. The leader has a 50% chance of being served by 2 quasits and a 75% chance of being guarded by a gang of 2d4 bugbears. Eld outposts will be ruled by an elder, an Eld of great age with 9 HD. The elder will be served by 2d10 quasits and protected by a warband of 1d10 bugbear gangs.

Cruel and callous, the Eld look on all other species as barbarous and fit only to serve as slaves or as test subjects for their dark experiments. Fortunately, the Eld are slowly dying and are rarely seen away from the Red Planet of Areon, but rumors persist of hidden terrestrial enclaves, where they hatch plots designed to return them to the mastery they enjoyed over many worlds millennia ago.

Eldritch Bones

% In Lair: 35%

Dungeon Enc: Throng (3d4) / Boneyard (3d10) Wilderness Enc: Horde (3d10) / Boneyard (3d10)

Alignment: Neutral Movement: 120' (40')

Armor Class: 4 Hit Dice: 1 + 1*

Attacks: 1

Damage: 1d6 or weapon +1

Save: F1 Morale: N/A

Treasure Type: None

XP: 21

Eldritch bones are the reanimated skeletons of slain soldiers. The process of creating them was originally an invention of the Eld, but was perfected by the cult of Turms Termax. Unlike most other types of skeletons, eldritch bones are not undead. Rather, they are magical constructs brought back to a semblance of life through the use of minute quantities of azoth, which not only gives them the ability to move and attack, but also strengthens their bones. Consequently, eldritch bones have a metallic appearance, thanks to the silvery-black azoth that suffuses them, and suffer only half damage from sharp or edged weapons. As azoth constructs, they are immune to sleep, charm, and hold spells and are unaffected by holy water, disease, gas, and poison, but suffer 1d8 points of damage if struck by supernatural solvents such as true water.

Empyreal

% In Lair: 10%

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

Alignment: Lawful Movement: 90' (30') → Fly: 180' (60')

Armor Class: 16 Hit Dice: 13***

Attacks: 1 (sword or spell) Damage: By weapon or spells

Save: F13 Morale: +3

Treasure Type: None

XP: 4,400

Empyreals are powerful extraplanar entities in the service of Law. Appearing as winged, humanoid-shaped creature dressed in shining armor, they are fiery, quick-tempered, and forceful, but always fair in their dealings with all beings.

Empyreals attack their opponents with a mixture of magic and direct physical attacks. Their preferred weapons are two-handed swords, usually of +3 enchantment, possibly with additional effects. Against powerful foes, an empyreal can unleash a radiant blast in a cone 60 foot long and 20 foot wide. All creatures within the area of effect suffer 15d6 damage and are blinded for 3d6 minutes. Affected creatures can attempt a saving throw versus Blast to halve the damage and avoid being

Since empyreals can fly, they often stay aloft in battle, using their spells and spell-like abilities while staying out of melee range. Empyreals can cast spells as 13th-level clerics. In addition they possess the following spell-like abilities: continual light, cure disease, detect evil, dispel magic, invisibility, remove curse, and remove fear (all at will); cure serious wounds and flame strike (twice per day); and restore life and limb (once per day).

An empyreal radiates an aura of goodness in a 30-foot radius around itself. Any non-Chaotic creature in this area must succeed at a saving throw versus Spells or be overcome with awe and unable to take any action contrary to the wishes of the empyreal for one day. Any Chaotic creatures must succeed at a saving throw versus Spells or be unable even to look at the empyreal for one day. An affected creature functions as if blinded when attacking. On a successful save, a creature is immune to the aura of goodness of that empyreal for one day.

Gas Spore

% In Lair: 100%

Dungeon Enc: Colony (1d3) Wilderness Enc: Colony (1d3)

Alignment: Neutral Movement: 30' (10') Armor Class: 0 Hit Dice: 1 hp Attacks: 1 (injection) Damage: See below

Save: F1 Morale: +4

Treasure Type: None

XP: 5

The gas spore is actually a fungus, and is not related to the tentacled eye (see p. 368), but it resembles one most uncannily. Characters spotting a gas spore at a distance will mistake it for a tentacled eye unless they make a throw of 19+; characters examining one closely will believe it to be a tentacled eye unless they throw 6+. Characters with Alertness, Naturalism, or similar proficiencies gain a +4 bonus to the throw.

If a gas spore is voluntarily touched by, or successfully strikes, a living creature, it injects poisonous rhizomes into the creature and immediately drops dead. After just one round, the rhizomes will have spread throughout the creature's entire body. An infected creature will die in 6d8 hours, at which time 2d4 gas spores emerge from its corpse. A cure disease spell cast on an affected creature before it dies destroys the rhizomes. If a gas spore is struck for even a single point of damage, it explodes in a violent blast of gas that deals 6d6 points of damage to all creatures within a 30' radius. A successful save versus Blast reduces the damage by half. Gas spores have the normal plant immunities to all charm, sleep, and hold spells, to stunning, and to poisons not designed to work on plants.

Ghast

% In Lair: 20%

Dungeon Enc: Pack (1d6) / Lair (1d6) Wilderness Enc: Pack (1d6) / Lair (1d6)

Alignment: Chaotic Movement: 150' (50') Armor Class: 5

Attacks: 3 (2 claws, bite) Damage: ld4/ld4/ld8

Save: F4 Morale: +1 Treasure Type: H

Hit Dice: 4**

XP: 190

These despicable undead creatures resemble ghouls, and are often found with them. However, ghasts are much more powerful. Their bite causes paralysis for 2d4 turns unless a successful saving throw versus Paralysis is made; this paralysis is potent enough to affect elves. In addition, ghasts have a horrible rotting stench, and any creatures within 10 feet must make a saving throw versus Poison or become horribly sick and suffer from wracking vomiting, suffering -2 to attack throws for 1 turn. A creature that successfully saves cannot be affected again by the same ghast's stench for 24 hours. A delay poison or neutralize poison spell removes the effect from a sickened creature. As undead, ghasts are immune to gas and poison and unaffected by charm, sleep, and hold spells. They are turned as wraiths.

Glabrezu (Demon of the Third Circle)

% In Lair: 20%

Dungeon Enc: Throng (1d3) / Pit (1d6) Wilderness Enc: Pack (1d6) / Pit (1d6)

Alignment: Chaotic Movement: 90' (30') Armor Class: 13 Hit Dice: 10

Attacks: 5 (2 pinchers, 2 claws, bite) Damage: 2d6/2d6/1d3/1d3/1d4+1

Save: F10 Morale: +1

Treasure Type: O, Q

XP: 2,400

The glabrezu stand about 10 feet tall, appearing as hideous crossbreeds of man and animal. They have wolf-like heads with two goat-like horns. They have four arms - two primary arms on their shoulders, with crab-like pinchers instead of hands; and two smaller human-like arms on their chests, with wicked claws on the hands. They have disturbing-

ly beautiful violet eyes, and skin color ranging from deep russet to pitch black.

Like all demons, glabrezu possess infravision (90 feet) and *telepathy*, and take half damage from attacks based on cold, electricity, fire, and gas. They are susceptible to attacks from ordinary weapons. Glabrezu have the following spell-like abilities usable at will: *darkness* 10' radius, fear, levitate, polymorph self, pyrotechnics (see Appendix B, New Spells, page 338), and telekinesis (400 lbs.). In addition, a glabrezu can gate (35% probability of success) a vrock, hezrou, or another glabrezu (determine randomly) once per day.

Gloom Crawler

% In Lair: 80%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Neutral Movement: 20' (8') Armor Class: 7 Hit Dice: 10*

Attacks: 11 (10 Tentacles, 1 bite) Damage: 1d12 (×10)/2d8

Save: F10 Morale: +2 Treasure Type: M XP: 1,550

The gloom crawler is a solitary creature resembling a giant squid with blackened skin and a large mass of writhing tentacles. It makes its lair in underground caves, dungeons, and other subterranean complexes far away from the daylight of the surface world and spends most of its time dormant, waking every so often to eat. The gloom crawler uses the suction cups on its tentacles to pull itself around its underground world. Each tentacle ends in an eye that allow it to see in any direction. These creatures are omnivorous and sustain themselves on plants, mosses, rodents, and other subterranean fauna, but never turn down a larger meal, if it is available.

Tentacles that successfully strike a target constrict for 1d12 points of damage initially and then 1d12 per round thereafter until either the target is dead or the tentacle cut off. A tentacle can be cut off if a total of 10 hit points or more of damage is dealt with one blow. Gloom crawlers are averse to sunlight and suffer a -4 penalty to all attack and saving throws if exposed to it.

Golem, Clay

% In Lair: 100%

Dungeon Enc.: Solitary (1)
Wilderness Enc.: None
Alignment: Neutral
Movement: 60' (20')
Armor Class: 2
Hit Dice: 11***
Attacks: 1 (fist)
Damage: 3d10
Save: F11
Morale: N/A
Treasure Type: None

XP: 3,400

These golems are constructed from clay, and are usually humanoids approximately 8 feet tall. Their powerful fists deal 3d10 damage. The damage a clay golem deals doesn't heal naturally and resists healing spells – effects that would magically heal the damage dealt by a clay golem must overcome magic resistance 11+. A clay golem is immune to gas and poison, non-magical weapons, and edged weapons. A *disintegrate* spell cast on a clay golem deals it 1d12 points of damage and acts as a *slow* spell. Other spells have no effect at all.

Golem, Flesh

% In Lair: 100%

Dungeon Enc.: Solitary (1) Wilderness Enc.: None Alignment: Neutral Movement: 90' (30') Armor Class: 0 Hit Dice: 9*** Attacks: 2 (fists) Damage: 2d8/2d8

Save: F9 Morale: N/A

Treasure Type: None

XP: 2,500

Flesh golems are zombie-like beings cobbled together from the body parts of various deceased humanoids and animated with arcane energies. Despite their macabre origins, they are constructs, and cannot be turned or affected by spells against undead. Like all constructs, flesh golems are immune to disease, gas and poison and unaffected by *charm*, *sleep*, or *hold* spells. Ordinary weapons of any kind are also ineffective, as are most spells. Heat- and cold-based spells deal no damage, but will *slow* flesh golems for 2d6 rounds. Electrical-based attacks actually repair damage to flesh golems at a rate of 1 hit point per 1 HD of damage that would otherwise have been inflicted. Flesh

golems are immensely powerful, and can automatically break down ordinary doors in one round. They are able to deal 1 structural hit point of damage to a fortified structure for every three rounds of attacking it.

Golem, Iron Maiden

% In Lair: 100%

Dungeon Enc: Solitary (1) Wilderness Enc: None Alignment: Neutral Movement: 60' (20') Armor Class: 6 Hit Dice: 7*** Attacks: 2 (fists) Damage: 1d12/1d12

Save: F8 Morale: N/A

Treasure Type: None

XP: 1,490

An iron maiden golem is a variation upon the iron golem, shaped like the torture device that is its namesake but with articulated arms and legs attached to the cabinet. An iron maiden golem has the ability to usurp the essence of living creatures that die within its cabinet. Any living creature, man sized or less, struck by both of its fist attacks in the same round must make a saving throw versus Paralysis or be vanked inside the iron maiden's cabinet. The iron maiden's lid immediately seals when this occurs, piercing the creature with 20 dagger-like blades. The creature inside the golem's cabinet suffers 25 points of damage each round until the lid is opened and it escapes. The lid can be forced open with a successful proficiency throw to open doors, or by casting knock or dispel magic. If a living creature dies within the golem's cabinet, the golem gains 10 hit points and all the capabilities of the dead creature within, including arcane—but not divine—spells. These abilities last for 1d4 days. Like all constructs, iron maiden golems are immune to disease, gas and poison. The iron maiden golem is also immune to all magic. Non-magical electrical-based attacks *slow* the golem for three rounds.

Golem, Stone

% In Lair: 100%

Dungeon Enc: Solitary (1) Wilderness Enc: None Alignment: Neutral Movement: 60' (20') Armor Class: 4 Hit Dice: 14**

Attacks: 1 per 2 rounds (fist)

Damage: 3d8 Save: F14 Morale: N/A

Treasure Type: None

XP: 3,800

Stone golems are 9-foot-tall constructs carved of hard stone. They can strike with their powerful fists every other round, dealing 3d8 points of damage with each blow. Stone golems can also cast *slow* at an opponent within 10 feet every other round. In combat, they will alternate, *slowing* and then punching in succession. Like all constructs, stone golems are immune to disease, gas and poison. In addition, only weapons that are at least +2 or better can damage stone golems. Spells are ineffective against them, except for *stone to flesh* and *transmute rock to mud*. *Stone to flesh* leaves a stone golem susceptible to all normal attacks for one round. *Transmute rock to mud* acts to *slow* the golem for 2d6 rounds. The reverse, *transmute mud to rock*, actually repairs all damage a stone golem has suffered.

Golem, Turnkey

% In Lair: 100%

Dungeon Enc: Watch (1d8) Wilderness Enc: None Alignment: Neutral Movement: 180' (60')

Armor Class: 7 Hit Dice: 10** Attacks: 2 (fists) Damage: 2d10/2d10

Save: F5 Morale: N/A

Treasure Type: None

XP: 2,250

Turnkey golems are magical automatons created to act as guardians in prisons and other places of incarceration. They resemble featureless, 7-foot-tall humanoids made from a pliable, but sturdy black material similar to tar. They are unaffected by ordinary weapons and have the usual construct immunities. They can *detect evil*, *detect magic*, and *detect invisibility* at will at a range of 120 feet. Furthermore, a turnkey golem's touch acts as a *hold person* spell; its effects can be resisted by a successful saving throw versus Spells at a –2 penalty.

Grave Risen

% In Lair: None

Dungeon Enc: Throng (1d4) Wilderness Enc: Throng (1d4)

Alignment: Chaotic Movement: 30' (10') Armor Class: 4 Hit Dice: 5* Attacks: 2

Damage: 1d4/1d4 + blood poisoning

Save: F5 Morale: N/A

Treasure Type: None

XP: 350

Grave risen are rotting undead creatures that resemble zombies upon first glance. They arise in places where the blood from slain spellcasters has permeated the ground; the latent arcane energies in the blood seep into the corpses of those who die nearby and animate them as grave risen. Grave risen have no love for the living and attack them on sight. A creature hit by the claws of a grave risen must make a saving throw versus Poison or contract blood poisoning. This drains 1 point of Constitution for eight turns. The spells *neutralize* poison and remove disease rid the victim of the poisoning immediately. Grave risen have the usual undead immunities to poison, gas, sleep, charm, and *hold*, but can be struck by ordinary weapons. They are turned as wights.

Green Guardian

% In Lair: 20%

Dungeon Enc: Flight (1d6) / Lair (1d10) Wilderness Enc: Wing (1d6) / Lair (1d10)

Alignment: Chaotic
Movement: 90' (30')

→ Fly: 150' (50')

Armor Class: 5 Hit Dice: 5

Attacks: 4 (2 claws, bite, gore) Damage: ld6+l/ld6+l/ld6/ld6

Save: F8 Morale: +4

Treasure Type: None (see below)

XP: 200

Green guardians are statues carved out of a strange green stone in the shape of a gargoyle. Like all constructs, they are immune to disease, gas and poison and unaffected by charm, sleep, or hold spells. They possess eyes made of jet (worth 500 gp each) and radiate both magic and evil.

Guardian Plasm

% In Lair: 100%

Dungeon Enc: Solitary (1) Wilderness Enc: None Alignment: Neutral Movement: 120' (40') Armor Class: 4

Hit Dice: 5* Attacks: 1

Damage: Engulfment

Save: F5 Morale: +2 Treasure Type: F

XP: 350

Guardian plasms are amorphous creature that look like masses of transparent protoplasm. They are the product of ancient experimentation with azoth and Jubilex's ichor, typically used as guardians by the evil spellcasters who create them. A guardian plasm usually lies in wait to attack any who disturb the area to which it has been assigned as a guardian by its creator. A guardian plasm can blend into its environment, so characters encountering stationary guardian plasms suffer a -3 penalty to their surprise rolls. When a plasm hits, its target must make a successful saving throw versus Paralvsis or become engulfed. A creature that is engulfed is trapped until either the guardian plasm is killed or until the engulfed creature dies. An engulfed creature takes 1d10 points of damage per round. If a creature that has been engulfed has a small, sharp weapon (such as a dagger), it may attack the guardian plasm from inside with a -4 penalty to its attack throw. Should the engulfed target die and remain in the guardian plasm for 2d6 rounds, it is irrecoverably digested.

Intellect Devourer

% In Lair: 20%

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

Alignment: Chaotic Movement: 120' (40') Armor Class: 5

Hit Dice: 6**
Attacks: 4 (claws)

Damage: 1d4/1d4/1d4/1d4

Save: M6 Morale: +2 Treasure Type: F XP: 1,320

An intellect devourer looks like an exposed, glistening brain, devoid of a head or any features save for four short, clawed legs emerging from the

brain stem. The creature is about 3 feet long and weighs 60 pounds. Thought by some to be invaders from another dimension or planet, the sinister intellect devourers are certainly one of the world's cruelest races. Incapable of experiencing emotions or wallowing in the sins of physical pleasure on their own, intellect devourers are forced to steal bodies of other creatures in order to indulge their gluttony, lust, and cruelty. Stories tell of entire cities of these creatures deep underground, where host bodies are worn like clothes to hideous orgies and vile feasts. Lone intellect devourers often dwell in ruins or caves on the edge of a civilized region so they can make periodic forays into town to "shop" for an attractive new body. The creature possesses several spell-like abilities, including detect magic (continuously); cause serious wounds, confusion, invisibility, reduce (at will); and cure serious wounds and globe of invulnerability (three times per day). All of these abilities have effects as if cast by an 8th-level caster.

What gives an intellect devourer its name, however, is its ability to reduce its size, crawl into the mouth of a helpless or dead creature, and burrow into the victim's skull to devour its brain. If the creature is still alive, this invasion inflicts 8d4 points of damage per round. If the victim is slain (or already dead), the intellect devourer usurps control of the body and can use it as its own, as if it were controlling the target via a control person spell. The intellect devourer has full access to all of the host's defensive and offensive abilities save for spellcasting and spell-like abilities, although the intellect devourer can still use its own spell-like abilities. A host body may not have been dead for longer than one day for this ability to function, and even successfully inhabited bodies decay to uselessness in seven days. As long as the intellect devourer occupies the body, it knows (and can speak) the languages known by the victim and basic information about the victim's identity and personality, but it has none of the victim's specific memories or knowledge. Damage done to a host body does not harm the intellect devourer, though if the host body is slain, the intellect devourer emerges dazed and unable to act for one round. Restore life and limb cannot restore a victim of body theft to life, but more powerful magic might—at the referee's discretion. Protection from evil guards a creature against attempts at body theft.

Iounian

% In Lair: 35%

Dungeon Enc: Scourge (2d6) / Nest (1 Swarm) Wilderness Enc: Swarm (2d12) / Hive (1d10 Swarms)

Alignment: Neutral Movement: 180' (60') Armor Class: 4

Hit Dice: 6**
Attacks: 5

Damage: 1d4 (x4) /1d6 or by weapon x4

Save: F6 Morale: +2

Treasure Type: R (per swarm)

XP: 890

An Iounian is one of the insectoid natives of Telluria's only moon. Looking like a humanoid cross between an ant and a praying mantis, an Iounian has large mandibles, two large compound eyes, two antennae, and six limbs, four of which can be used for manipulation—the other two are used for locomotion. They live in lightless warrens beneath the surface of the Moon, where they congregate in hives that can contain dozens or even hundreds of individuals. Once more numerous than they are today, Iounians are suspicious of outsiders and generally attack anyone they encounter unless given good reason not to do so. Nevertheless, they are highly intelligent and open to negotiation. Iounians possess infravision to 90 feet and ESP (as per the spell of the same name).

Iounians are extremely fast and agile. Their legs are also quite powerful, allowing them to leap 20 feet upwards and 40 feet forwards. When leaping forward, they gain a +1 bonus to any attacks made immediately afterwards. They can attack either with their claws and a bite or by four weapons and a bite.

Each Iounian swarm will be led by a swarm-lord with AC 6, 7 HD, and a +1 bonus to damage rolls. There is a 35% chance a swarm-lord will have the spellcasting abilities of a 7th level mage. A nest or hive will be ruled by a hive-master with AC 7, 8 HD, and a +2 bonus to damage rolls. There is a 40% chance the swarm-lord will have the spellcasting abilities of an 8th level mage. Iounian nests and hives will have nymphs (young) equal to 200% of the number of adults. When Iounians are encountered in a hive, there is a 60% chance the Iounians will keep 4d6 domesticated giant ants and a 25% chance they will keep a trained tenebrous worm.

Jellyfish Plant

% In Lair: None

Dungeon Enc: School (2d6) Wilderness Enc: Cloud (3d6)

Alignment: Neutral Movement: 20' (6') → Fly: 50' (16')

Armor Class: 0 Hit Dice: 3* Attacks: 1 (sting) Damage: 1d6, paralysis

Save: F2 Morale: 0

Treasure Type: None

XP: 65

Jellyfish plants are bizarre plants with long, thin tentacles extending out from bulbous, shrub-like bodies that house large gas-producing sacs. They can move across the ground by dragging themselves with their small vines, but usually choose to fly, their small vines wriggling below them. Jellyfish plants hunt in concert, landing near one another in a pattern that allows them to form a woven net of tentacles across the ground. When a creature steps into this net, the jellyfish expel a blast of air from their gasbags and fly straight up, pulling the creature into the air, trapped in their net. It takes four jellyfish plants to form a net large enough to trap one man-sized creature. Once a victim is trapped, the plants begin attacking their prey. Each successful hit deals 1d6 points of damage and requires a saving throw versus Paralysis to avoid being stunned for 1d4 rounds. When prev is dead or stunned, the bulbous bodies of the jellyfish plants descend on the body and drain it of fluids through a root system at the base of their bodies, leaving a dried out corpse. A stunned target suffers 1d6 points of damage per round for each jellyfish plant that is sucking its fluids.

Jubilex (Demon Lord)

% In Lair: 25%

Dungeon Enc: Unique (1) / Unique (1) Wilderness Enc: Unique (1) / Unique (1)

Alignment: Chaotic Movement: 30' (10') Armor Class: 16

Hit Dice: 100 hp (21 HD****) Attacks: 1 (pseudopod or slime spittle)

Damage: 4d10 or special

Save: F21 Morale: +2

Treasure Type: R, M

XP: 13,000

Jubilex, the Faceless Lord, is the ruler over all slimes, oozes, jellies, and other disgusting and foul ooze-like creatures. His home plane is a steaming, bubbling realm of putrid ooze and slime pits that are constantly shifting and changing at his whim, so horrific that even the other demonic rulers loathe to journey here. He is constantly attended by and surrounded with all sorts of slimes and oozes (1d4 of at least four types). When encountered, Jubilex usually takes the form a large red-eyed bubbling mass of greenish-black and foul-smelling liquid, shaped into a 10-foot-tall column, from which ooze, slime, and pus constantly squirt and seep.

In combat, Jubilex lashes out with a slimy pseudopod, dealing 4d10 points of acid damage. Once per ten rounds he may launch a slime spittle up to 150 feet away with a 30 feet diameter area of effect that combines the effects of contact with green slime and ochre jelly – metal will be dissolved in 6 rounds; cloth, wood, and leather will be dissolved in 1 round; and flesh will suffer 2d6 points of damage and be dissolved in 1d4 rounds. Jubilex regenerates 2 hit points each round. He can only be affected by +2 weapons or better and takes half damage from attacks based on cold, electricity, fire, and gas. In addition to infravision and telepathy, Jubilex has the following spell-like abilities, usable at will: cause disease, charm monster, circle of cold (10' radius, 5d6 cold damage), darkness 15' radius, detect invisibility, dispel magic, ESP, fear, fly, hold monster, invisibility 10' radius, locate object, phase door, project image, putrefy food and water, and telekinesis (1,500 lbs.). He can gate (75% probability of success) 1d4 hezrou demons and utter unholy word once per day.

Kythirean

% In Lair: 30%

Dungeon Enc: Gang (2d4) / Lair (1 warband) Wilderness Enc: Warband (1d10 gangs) / Village

(1d10 warbands) Alignment: Neutral Movement: 120' (40') Armor Class: 5 Hit Dice: 2** Attacks: 1

Damage: By weapon Save: F2 (+2 v. spells)

Morale: +2

Treasure Type: O, L (per warband)

XP: 38

Kythireans are a race of green-skinned women native to the world after which they are named. Believed to be descendants of the Great Ancients who adapted to life on the Green Planet, the Kythireans retain many of the advanced magical techniques of their forebears. They are however, unwelcoming to outsiders, especially males, who do not exist among their kind. Instead, Kythireans reproduce by means of arcane rituals that produce copies of themselves. As a result, there is much less variety of appearance among the Kythireans than among other races of man, a fact compounded by their much smaller numbers relative to the other species of the Green Planet.

Kythireans wear chainmail armor and favor short swords and shields for close combat. Each carries 1d4 javelins coated with curare (see ACKS, p. 250) for hunting. All Kythireans are capable of using the following spells once per day: charm person and invisibility. Due to their innately magical nature, all Kythireans make saving throws versus Spells at +2. Furthermore, Kythireans of 4th-level and above can use the following spells once per day: detect magic and ESP.

Each gang of Kythireans will be led by a 3rd-level fighter or mage. Each warband will be led by a 6th-level fighter or mage. Kythirean leaders may possess magic items in addition to that listed for their treasure type. For each category of item (potion, sword, etc.), there is a 5% chance per level of the Kythirean that she will possess a magic item. A Kythirean lair will be led by 7th-level fighter or mage, while a Kythirean village will be led by an 8th-level fighter or mage with a 7th-level lieutenant of the other class. Each of these NPCs may possess individual magic items, as above. There is a 70% chance the Kythirean village will be protected by 2d6 trained giant draco lizards. Kythirean villages will have noncombatants (sick and elderly) and young equal to 5% and 100% of the able-bodied women respectively.

Lich

% In Lair: 90%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Chaotic Movement: 60' (20') Armor Class: 9 Hit Dice: 11+*** Attacks: 1 (cold touch)

Damage: 1d10 cold damage Save: M12+ Morale: 9

Treasure Type: Q

XP: 4,200

A lich is a mage of 11th level or higher who has used necromancy to transform himself into a terrible form of undead. While immediately after their transformation a lich retains its human-like appearance, liches grow more cadaverous with age. A typical lich appears as gaunt and skeletal humanoid with withered flesh stretched tight across horribly visible bones. Its eyes have long ago been lost to decay, but bright pinpoints of crimson light burn on in the empty sockets. A lich usually lives in a secluded keep or deep in a labyrinth, where it continues the magical research it pursued in life.

Liches are so fearsome that any creature seeing one must succeed in a saving throw versus Death or be affected with fear. Creatures with 4 or fewer HD receive no saving throw. A lich's powerful undead nature grants it a better natural AC and HD than a typical mage, and liches with magical protection may have an even higher AC. In addition to undead immunities to poison, gas, and charm, hold, and sleep spells, liches are immune to natural attacks by creatures of less than 6 HD, ordinary weapons, cold-based and electrical-based attacks, death spells, enfeeblement, polymorph, and any effects that cause insanity. Liches are turned as infernal creatures. A lich prefers to attack using its spells, but in melee its cold touch deals 1d10 points of damage and permanently paralyzes the creature struck unless it makes a saving throw versus Paralysis.

Manes

% In Lair: None

Dungeon Enc: Plague (4d4) Wilderness Enc: Horde (5d20)

Alignment: Chaotic Movement: 30' (10') Armor Class: 4 Hit Dice: 1* Attacks: 2 (claws) Damage: 1d3/1d3

Save: F1 Morale: 0

Treasure Type: None

XP: 13

Manes are pathetic demons who grovel and serve both others of their kind as well as Chaotic mages. No larger than humans, they have gray skin and empty eyes. Manes take half damage from cold, electricity, fire, gas, and ordinary weapons. Like all demons, they have infravision (90 feet) and *telepathy*.

Marilith (Demon of the Fifth Circle)

% In Lair: 20%

Dungeon Enc: Coven (1d3) / Pit (1d6) Wilderness Enc: Knot (1d6) / Pit (1d6)

Alignment: Chaotic Movement: 120' (40') Armor Class: 15 Hit Dice: 7 + 6*****

Attacks: 7 (6 weapon, constrict) Damage: By weapon/2d4

Save: F7 Morale: +1

Treasure Type: $P \times 2$

XP: 2,500

Marilith demons have the upper body of a sixarmed human female and the lower body of a giant snake. They stand 7 feet tall and measure 20 feet from head to tip of tail. A marilith usually holds a sword in each of its six hands and wears many bangles and jewels. They can attack with their six arms and with their tails to constrict all in the same round. Mariliths take half damage from cold, electricity, fire, and gas, and are immune to ordinary weapons. In addition infravision and telepathy, they have the following spell-like abilities, usable at will: charm person, darkness 10' radius, detect invisibility, levitate, polymorph self, project image, pyrotechnics, and read languages. In addition, a marilith can gate (75% probability of success) a vrock, hezrou, glabrezu, nalfeshnee or balor demon (determine randomly) once per day.

Memory Moss

% In Lair: 100%

Dungeon Enc: Colony (1d8) Wilderness Enc: Carpet (2d6)

Alignment: Neutral Movement: None Armor Class: 0
Hit Dice: 1 hit point*

Attacks: 1

Damage: See below

Save: F1 Morale: N/A

Treasure Type: None

XP: 6

Memory moss appears as a 1-foot-square patch of black moss. When a living creature moves within 60 feet of a patch, it attacks by attempting to steal that creature's memories. It can target a single creature each round. A targeted creature must succeed at a saving throw versus Spells or lose all memories made within the last 24 hours. If memory moss consumes the memory of a spellcaster, it learns how to cast any and all spells that the spellcaster has himself cast in the last 24 hours. Once the memory moss steals a creature's memories, it sinks back down and does not attack again for one day unless threatened (see below).

Any creature who loses its memories acts as if affected by a *confusion* spell for the next 1d4 hours. A creature can only regain its lost memories by eating the memory moss that absorbed them. A creature that eats memory moss containing other creature's memories temporarily gains those memories, including any spells stolen from spellcasters. Any non-spellcaster that attempts to cast a spell stolen in this way must succeed at a magic research throw or the spell fizzles away. After 24 hours, temporary memories fade.

A creature eating memory moss must make a saving throw versus Poison. A failed saving throw causes the creature to be nauseated for 1d6 minutes and suffering a -2 penalty to all rolls during that time.

When first encountered, there is a 25% chance that a patch of memory moss retains memories from its last target. Such moss does not attack by stealing memories, but if threatened will assume a vaguely humanoid form and cast whatever spells it may still possess. Memory moss is immune to all *charm*, *sleep*, and *hold* spells, to stunning, and to poisons not designed to work on plants, but is instantly destroyed by fire and cold-based damage.

Mercury Ooze

% In Lair: None

Dungeon Enc: Solitary (1) Wilderness Enc: None Alignment: Neutral Movement: 30' (10') Armor Class: 0 Hit Dice: 5*

Damage: 2d4, mercury poisoning

Save: F5 Morale: +2

Attacks: 1

Treasure Type: None

XP: 350

Created by some bizarre arcane experiment in ages past, the mercury ooze is a sentient form of the element mercury. It appears as a pool of shiny silvery-white liquid about 8 feet long and 6 inches thick. It can compress its body to a thickness of 1 inch to slip into cracks and crevices. Anyone struck by a mercury ooze must make a successful saving throw versus Poison or permanently lose 1 point of Dexterity and Constitution. One week later, a second saving throw versus Poison must be made or else the victim suffers the effects of a permanent *confusion* spell. The effects of both the spell and the ability score losses can be reversed with *cure disease* or similar spells.

Mimic

% In Lair: None

Dungeon Enc: Solitary (1) Wilderness Enc: None Alignment: Neutral Movement: 30' (10') Armor Class: 2 Hit Dice: 7-10*

Attacks: 1 (pseudopod) Damage: 3d4

Save: F7-10 Morale: +1

Treasure Type: None XP: 790/1100/1300/1550

Mimics are named for their ability to take the form of inanimate objects made of wood and/or stone, such as doors, statues, and so on. A typical mimic has a volume of 150 cubic feet, but can shape itself into almost any dimension that maintains this size, subject to a maximum of 10 foot-length in any one direction. The creature's hide is hard and resembles rough wood or stone, but a successful proficiency throw to detect secret doors will determine the creature's true nature. Characters unaware of the mimic's true nature suffer a −3 penalty to

their surprise rolls when an encounter begins.

Mimics attack by lashing out with an emergent pseudopod, usually when a living creature touches them or seems to be suspicious of their true nature. Mimics exude a glue-like slime, and any creature or weapon that touches, strikes, or is struck by a mimic is held fast by this adhesive. Alcohol, alkahest, or universal solvent (see *Appendix F, Azoth*, p. 395) will instantly dissolve the adhesive, or a successful proficiency throw to open doors can be used to pry off a stuck weapon or appendage. Otherwise, the adhesive automatically breaks down 5 rounds after the mimic is killed. A mimic can dissolve its own adhesive at will.

Younger mimics (7-8 HD) are quite intelligent, being able to speak both their own language and Common, and may negotiate with adventurers if it is made worth their while. Older mimics (9-10 HD) are ancient and senile, with an interest only in consuming the flesh of prey, and will invariably fight to the death.

Mongrelman

% In Lair: 25%

Dungeon Enc: Gang (2d6) / Warren (2d6 gangs) Wilderness Enc: Gang (2d6) / Village (2d6 gangs)

Alignment: Neutral Movement: 60' (20') Armor Class: 3 Hit Dice: 8 Attacks: 1 Damage: 1-10

Save: F8 Morale: 0

Treasure Type: O per gang

XP: 600

Mongrelmen are abominable creatures that possess the blood and body parts of many different creatures. Shunned by society, they generally retreat into underground caves or dungeons to eke out their existence. They are shy by nature and often find themselves enslaved to a greater power. When not enslaved, mongrelmen live together in small groups where the largest and strongest serves as a chieftain. The chieftain will possess 2d4+6 HD.

Mongrelmen are adept at mimicry and can imitate the sounds that they have heard at will. They are also skilled at camouflage and prefer to hide, or lure opponents into traps, instead of engaging in direct conflict. Their language consists of a mixture of human, goblin, and orc words along with a mixture of animal sounds. Mongrelmen also include ambient environmental sounds in their language to allow them to communicate without giving away their position to others. Characters encountering mongrelmen suffer a -1 penalty to their surprise rolls.

Muculent Worm

% In Lair: 25%

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

Alignment: Neutral Movement: 30' (10') Armor Class: 5 Hit Dice: 10** Attacks: 1 (bite) Damage: 2d6 Save: F10 Morale: +2

Treasure Type: None

XP: 2200

A muculent worm is a slimy creature similar to a purple worm, but much smaller in size (15-20 feet in length). Its body is covered with a sticky mucus that quickly become coated with earth, rocks, debris—even treasure! Because of this, a muculent worm is often difficult to distinguish from its environment; characters encountering muculent worms suffer a -3 penalty their surprise rolls. Muculent worms are able to swallow whole man-sized creatures on an attack throw at least 4 higher than the target value, and on any unmodified attack throw of 20. Swallowed targets take 2d6 points of damage per round until either the worm or they are dead. If a creature that has been swallowed has a sharp weapon, it may attack the muculent worm from inside its belly with an attack penalty of -4. Should the swallowed creature die and remain in the worm's belly for 6 turns, it is irrecoverably digested.

Nalfeshnee (Demon of the Fourth Circle)

% In Lair: 15%

Dungeon Enc: Throng (1d3) / Pit (1d6) Wilderness Enc: Pack (1d6) / Pit (1d6)

Alignment: Chaotic Movement: 90' (30') → Fly: 120' (40')

Armor Class: 10 Hit Dice: 11**** Attacks: 3 (2 claws, bite) Damage: 1d4/1d4/2d4

Save: F11 Morale: +2

Treasure Type: R, O

XP: 4200

These 10-foot-tall demons have the torso and arms of an ape, with the head and legs of a boar. They have small, but functional, feathered wings on their backs. Nalfeshnee take half damage from cold, electricity, fire, and gas, and are immune to ordinary

weapons. In combat, they attack with their claws and bite, or employ one of the following spell-like abilities at will: darkness 10' radius, detect magic, dispel magic, fear, levitate, polymorph self, project image, read languages, spectral force, symbol (despair and fear), and telekinesis (500 lbs.). In addition, a nalfeshnee can gate (65% probability of success) a vrock, hezrou, glabrezu, or nalfeshnee demon (determine randomly) once per day. Like all demons, they possess 90-foot infravision and telepathy.

Necrophidius

% In Lair: 50%

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

Alignment: Neutral Movement: 90' (30') Armor Class: 7 Hit Dice: 2** Attacks: 1 (bite) Damage: 1d8, paralysis

Save: F2 Morale: N/A

Treasure Type: None

XP: 38

The necrophidius appears to be a 10 foot long skeletal snake topped with a human skull, whose eyes glow with a hellish red light. The necrophidius is a construct created by a mage to serve as a guardian or assassin. It performs either task with great skill and never questions its duty.

The necrophidius opens combat with an ability called the dance of death. All within 30 feet of the creature must make a saving throw against Spells or become entranced for 2d4 rounds, during which time they can take no action. The necrophidius then moves into bite. Bitten targets must make a successful saving throw versus Paralysis or be held motionless for 6d6 rounds. Like other constructs, the necrophidius is immune to disease, gas and poison and unaffected by charm, sleep, or hold spells.

Olive Slime

% In Lair: None

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

No. Enc.: 1d4 (1d4) Alignment: Neutral Movement: 3' (1') Armor Class: 0 Hit Dice: 2 + 2* Attacks: 1

Damage: Intelligence drain

Save: F2 Morale: +4

Treasure Type: None

XP: 47

Olive slime is a plant-like growth found in dark, damp underground areas. Sticky, wet, and olive drab in color, it clings to walls, ceilings, and floors, where it consumes any organic matter it comes to contact with. Olive slime senses movements through subtle vibrations, and will drop from high places onto victims to feed, or cling to an opponent who steps on it.

On the first round of contact, olive slime can be scraped off a creature, but after that round, the slime must be burned, frozen, or cut away; divide the damage from these efforts evenly between the slime and the character. While in contact with a living creature, olive slime permanently drains 1 point of Intelligence per round. A creature brought to 0 Intelligence by olive slime dies and becomes a slime zombie (see p. 375) under the control of the slime that drained its mind. Olive slime is immune to all *charm*, *sleep*, and hold spells, to stunning, and to poisons not designed to work on plants. However, extreme or magical heat, cold, or acid, or a cure disease spell, will instantly destroy a patch of olive slime.

Otyugh

% In Lair: 30%

Dungeon Enc: Solitary (1) / Heap (1d2) Wilderness Enc: Solitary (1) / Heap (1d2)

Alignment: Neutral Movement: 60' (20') Armor Class: 6 Hit Dice: 6-8*

Attacks: 3 (2 tentacles, bite) Damage: 1d8/1d8/1d4+1

Save: F6-F8 Morale: +2

Treasure Type: None (see below)

XP: 570/900/1,100

An otyugh has a corpulent body 8 feet in diameter resting on three squat legs. The body is covered in thick scales, and features a single, gaping maw at the front and three appendages extending above. The first appendage is a short pseudopod covered in eyes that grants the otyugh immunity to surprise. The other two appendages are long, barbed tentacles. When attacking, the otyugh slashes opponents with its barbed tentacles for 1d8 points of damage each, and bites with its hideous mouth for 1d4+1 points of damage. Bitten targets must make a saving throw versus Poison or contract a rotting disease that inflicts 1d3 points of damage per day until the creature dies or the disease is cured. However, an otyugh attacks living creatures if it feels threatened or if it is hungry; otherwise it is content to remain hidden, eating carrion or left over kills from predators. Otyughs are sapient, though barely so, and can communicate telepathically among their own kind. Otyughs keep no treasure of their own, but may partner with other monsters and help guard treasure in exchange for leftovers.

Phycomid

% In Lair: 80%

Dungeon Enc: Outbreak (1d4) / Colony (1d4) Wilderness Enc: Outbreak (1d4) / Colony (1d4)

Alignment: Neutral Movement: 10' (3') Armor Class: 5 Hit Dice: 4* Attacks: 1 (spittle) Damage: 1d6 + infection

Save: F4 Morale: N/A Treasure Type: F

XP: 135

The phycomid resembles a small blob of decomposing organic matter from which grow many small mushrooms. A typical patch of phycomid covers a 2-foot by 2-foot area. The phycomid attacks by extruding a small tube from its body and firing a glob of infectious spittle at a target within 10 feet. A creature hit by the spittle takes 1d6 points of damage and must make a saving throw versus Poison. If the saving throw fails, the creature is infected and begins to sprout tiny mushroom-like growths all over its body. The infection kills the creature in 3 turns (thirty minutes) unless expunged by cure disease. If the mushroom growths are continuously burned or cut off, the creature's death can be delayed, but doing so deals the infected creature 1d6 points of damage per turn he has been infected (e.g. 1d6 on the first turn, 2d6 on the second turn) as the mushrooms keep returning more and more thickly. If an infected creature dies, from hit point loss or mushroom growth, its body is consumed by the infection, and irrevocably changed into a phycomid.

Piercer

% In Lair: 90%

Dungeon Enc: Creep (1d3) / Drapery (1d3)

Wilderness Enc: None Alignment: Neutral Movement: 10' (3') Armor Class: 6 Hit Dice: 1-4 Attacks: 1

Damage: 1d6 per HD

Save: F4 Morale: +2

Treasure Type: None (A) XP: 10/20/50/80

These creatures are specially adapted to cavernous environments, as they perfectly resemble stalactites. The smallest piercers are as short as 1 foot long and the largest are 6 feet in length. Some adventurers claim to have encountered huge 20-footlong piercers in the vast underworld below Telluria, but these claims are rejected by most sages. Whatever their size, piercers attach themselves to the ceiling of caverns by means of an adhesive muscle at the base of their rocky shell. When they sense body heat or movement, they drop from the ceiling to impale and eat a victim. After feeding, the piercers crawl back up to the ceiling like snails. When piercers are encountered outside of their lair (10%), it means they are clambering back to their ceiling nests after a recent kill; roll against treasure type A to determine if any of their prey's loot remains unclaimed by other dungeon inhabitants.

Purple Moss

This plant is a distant cousin of yellow mold. It feeds on moisture, so any area in which it grows is always extremely dry. Purple moss emits a sweet smell to a range of 10 feet that has the same effect as a *sleep* spell. A victim that falls asleep is quickly covered by the moss. It takes one round to cover a small creature and two rounds to cover a hu-

Quasit

% In Lair: 5%

Dungeon Enc: Solitary (1) Wilderness Enc: Solitary (1)

Alignment: Chaotic Movement: 150' (50')

Armor Class: 7 Hit Dice: 3***

Attacks: 3 (2 claws, bite) Damage: 1d2/1d2/1d4 Save: F3 (+3 v. magic)

Morale: +2 Treasure Type: A

creature that stands about 1 foot tall. They often serve

more powerful demons, but are most commonly encountered as familiars to Chaotic mages. Quasits are immune to fire, cold, or electrical-based attacks and take half-damage from gas attacks. They take no damage from non-magical weapons, except those made of iron. They gain a +3 bonus to save versus magic and regenerate 1 hit point per round. In combat, they attack with claws and a bite. Each time a creature is struck by a claw attack, it must make a saving throw versus Poison or lose 1 point of DEX for 2d6 rounds. Quasits have the following at-will spell-like abilities: detect good, detect magic, invisibility, and polymorph self (limited to the form of a bat, giant centipede, toad, or wolf). In addition, once per day a quasit can induce fear (as the spell cause fear except with a 30 feet radius). Like all demons, they possess 90-foot infravision and telepathy.

Quasits as familiars: A Chaotic mage who possesses both the Black Lore and Familiar proficiencies may select a quasit as his familiar. When a quasit familiar is within 10 feet of its master, the mage functions as if one level higher and regenerates 1 hit point per round. When within a mile of its master, a quasit is able to communicate via telepathy with him, and the mage can perceive the surroundings of his quasit through all of its senses, including 90 feet infravision. However, if the quasit is more than a mile away from the mage, the master functions as if one level lower than normal, and if the quasit familiar is killed, the master loses four levels permanently. A quasit may commune for its master once per week, and is allowed 1d4+2 questions of the dark lords of the Abyss.

Quintelemental

% In Lair: None

Dungeon Enc: Solitary (1) Wilderness Enc: Solitary (1)

Alignment: Neutral Movement: —

→ Fly: 450' (150')

Armor Class: 7/9/11 Hit Dice: 8*/12*/16* Attacks: 1 (surge) Damage: 1d8/2d8/3d8

Save: F8/F12/F16

Morale: +4

Treasure Type: None XP: 1,100/2,100/3,300

While the sublunary world is made up of four primary elements, scholars know that there is in fact a fifth element—ether—which fills the void between the worlds and fuels the empyrean stars. In its natural state, ether is a subtle, luminiferous gas, but under Ioun's influence, it solidifies into a silvery-black liquid known as azoth. The supernatural beings composed entirely of ether are known by men as quintelementals and are the most powerful of all elemental beings. Only those who retain the knowledge of Eldritch magic may conjure a quintelemental, which explains their rarity in the present age.

For every hit die possessed by a quintelemental, it will have a diameter of 6 inches and be 2 feet high. The appearance of a quintelemental is that of a barely visible cloud of silvery luminescence. Because quintelementals are virtually invisible, characters suffer a -3 penalty to surprise rolls when encountering them and a -1 penalty to attack throws against them. Quintelementals attack with surges of arcane energy. Casters of arcane spells suffer an extra 1d8 points of damage from quintelementals' attacks.

Ranine

% In Lair: 25%

Dungeon Enc: Gang (1d8) / Warren (1d3 gangs)

Wilderness Enc: None Alignment: Chaotic Movement: 90' (30')

→ Swim: 120' (40')

Armor Class: 5 Hit Dice: 2*

Attacks: 3 or 1 (2 claws, bite or weapon)

Damage: 1d6/1d6/1d4 + paralysis or weapon

Save: F2 Morale: +1

Treasure Type: B (per gang)

XP: 29

Ranine are degenerate, subterranean creatures who serve the foul demon lord Tsath-Dagon. Like their master, ranine are of broadly batrachian appearance, but possess small bat-like ears in addition to vicious fangs, and in many cases, small horns. They are drawn to underground locations suffused with Chaotic energies.

Ranine shy away from sunlight and suffer a -1 penalty to their attack rolls and saving throws if they operate in it. If given sufficient room in combat, they can hop at enemies, which gives them a +1 bonus to attack and damage rolls. When fighting at close quarters, they bite opponents, trying to inject them with a paralyzing poison. Bitten creatures must make a saving versus Poison or be paralyzed for 3d6 turns.

Each gang of Ranine will be led by a cultist of 3 HD. A warren of ranine will be led by a cultist with 4 HD. (Ranine of far greater power are said to dwell in their hidden city of Ghothul'el, but these have never been encountered on the surface.) Ranine cultists can cast spells as Chaotic clerics of the same level as their hit dice, and may possess magic items.

For each category of item (potion, sword, etc.), there is a 5% chance per HD of the cultist that it will possess a magic item.

Precisely how the Ranine reproduce is a mystery, as they appear to be completely asexual. Given that these beings prefer to take opponents prisoner rather than slay them outright, some sages have postulated that the Ranine somehow "convert" their prey into new frog-men to swell their ranks. If true, these creatures pose an even more terrible threat to civilization than is commonly supposed.

Roper

% In Lair: 75%

Dungeon Enc: Creep (1d3) / Drapery (1d3)

Wilderness Enc: None Alignment: Chaotic Movement: 30' (10') Armor Class: 9 Hit Dice: 10-12**

Attacks: 7 (6 strands, 1 bite)

Damage: Grab/5d4

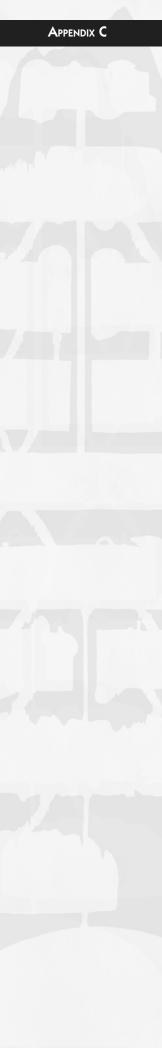

Save: F10 Morale: 0 Treasure Type: P

XP: 2,250/2,600/3,000

A roper stands some 9 feet tall, tapering from 3 or 4 feet in diameter at its base to 1 foot across at the top. Because a roper's coloration and temperature change to match the features of the surrounding cave, a stationary roper is nearly indistinguishable from a stalagmite. Characters encountering a stationary roper suffer a –3 penalty to surprise rolls.

When prey comes within reach, a roper lashes out with its rope-like strands. A roper can have up to six strands at once, and they can strike creatures up to 50 feet away. If a roper hits with a strand attack, the strand latches onto the creature's body. This deals no damage, but the creature grabbed must make a saving throw versus Poison or be drained of 2d8 points of Strength. (Lost Strength recovers at a rate of 1 point per day). Whether the saving throw succeeds or no, the roper drags the stuck creature 10 feet closer each subsequent round until the creature breaks free. To escape the roper's hold, the stuck creature must make a successful saving throw versus Paralysis, adjusted by its Strength modifier. A strand can also be cut off if a total of 6 hit points or more of damage is dealt with one blow. Damage dealt to its strands does not harm the roper itself.

Ropers suffer only 50% damage from cold-based attacks, and are immune to electrical-based attacks. However, fire is disagreeable to them, and they suffer a -4 penalty to their saving throws versus fire-based attacks.

Sapient Animal, Cat

% In Lair: 25%

Dungeon Enc: Glaring (1d2) / Clowder (1d6) Wilderness Enc: Glaring (1d2) / Clowder (1d6)

Alignment: Neutral Movement: 120' (20') Armor Class: 2

Hit Dice: 1d4 hit points Attacks: 3 (Claw, bite) Damage: 1/1/1d2

Save: F1 Morale: -1

Treasure Type: A (only if cat prince present)

XP: 5

Sapient cats are a species of intelligent feline created by Termaxians mages to serve as familiars and pets. Several members of the species escaped servitude during the fall of Dwimmermount, and have since spread throughout the realms of man. Sapient cats generally live in human communities, often disguising themselves among ordinary pets, though if a cat prince is present, the cats will almost certainly be in charge of the household (see below).

Physically, sapient cats are indistinguishable from ordinary domestic cats, typically weighing about 8-11 lbs. and being 1' to 2' long. They can be black, brown, gray, orange, white, tabby or calico in color. Though they cannot speak Common, sapient cats are nearly as intelligent as men, and can communicate fluently with anyone under the effects of speak with animals.

When sapient rats are encountered in their lair, young equal to 150% of the number of adults will be present. Sapient cat young fight as sapient rats (see below). Certain additional creatures may also be present. There is a 75% chance the cats will be accompanied by 2d6 ordinary cats, who serve as guards and companions. There is a 25% chance that the cats will be led by a cat prince with AC 3, 3+2 Hit Dice, 18 hit points, 3 attacks dealing ld3/ld3/ld6 damage, and mage abilities at level ld6 (always including the spell *charm person*). As long as the prince alive, the sapient cats will gain a +1 to morale rolls. Sapient cats will only have treasure if a cat prince is present.

If a cat prince is present, he will always be served by 1d4 *charmed* humans he has trained to dote upon his every need. Cat princes prefer affluent elderly women with no offspring as "their people", as these have been proven to devote the most resources to serving cats. Occasionally the *charmed* servants of a cat prince temporarily regain lucidity (through a saving throw) and attempt to warn others of the danger, but such talk is dismissed as the ravings of crazy cat ladies.

Due to the inadequacies of the Termaxian al-

chemists who bred them, the offspring of sapient cats are prone to madness. The offspring of a pair of sapient cats will have a 50% chance to be violently insane. The offspring of a sapient cat and an ordinary cat will have only a 10% chance to be mad, but only a 10% chance to be intelligent. Mentally ill cats are usually killed by their sire the first time they show signs of madness. The cat princes have begun to wonder whether the secret to curing this genetic madness may lie in the re-opened halls of Dwimmermount.

Sapient cats find ordinary rats and birds to be easy pickings. Their favorite prey are sapient rats, whose cunning intelligence makes them challenging to hunt. A sapient cat who slays many intelligent rodents is well on his way to princedom.

Sapient Animal, Rat

% In Lair: 10%

Dungeon Enc: Pack (3d6) / Den (3d10) Wilderness Enc: Horde (3d10) / Den (3d10)

Alignment: Neutral Movement: 60' (20') → Swim: 30' (10')

Armor Class: 0 Hit Dice: 1 hit point Attacks: 1 (Bite, per group) Damage: 1d6, disease

Morale: -3

Save: 0 level human

Treasure Type: B (only if rat boss is present)

XP: 5

Sapient rats are a species of intelligent rodent descended from Termaxian lab rats. The subject of cruel and horrific experiments, the first sapient rats fled Dwimmermount during the rebellions which toppled the Termaxians from power. The intelligent rodents have since spread throughout the city-states of man. They dwell in secret warrens in abandoned tunnels and sewers, surfacing from time to trade for goods made by man. Only a tiny handful of traders and thieves know of the rats' existence, and these find it in their best interest to keep it in confidence – both for the value of the coin and secrets the rats deliver, and lest they be eaten by rats in the night...

Like ordinary rats, sapient rats range in size from 6" long to 2' long. They can be black, brown, gray, or white in color. They live in small packs of up to 30 members. Though they cannot speak Common, sapient rats are nearly as intelligent as men, and can communicate fluently with anyone under the effects of *speak with animals*.

Sapient rats are too small to harm man-sized creatures individually. Instead, they may fight as packs, getting 1 attack per 5 individuals in the pack.

Each successful attack deals 1d6 hit points of damage. If a character is attacked by 10 or more sapient rats at once, he must also succeed in a saving throw versus Paralysis or fall to the ground under the writhing rodent horde. He may stand up the following round, but must make a new saving throw each time he is attacked by 10 or more rats. The character can take no other actions until he gets back on his feet.

When sapient rats are encountered in their lair, certain additional creatures may be present. A sapient rat lair has a 75% chance to be guarded by a trained rat swarm and a 50% chance to be guarded by 1d6 giant rats. There is a 25% chance that the rats will be led by a rat boss with AC 4, 1 Hit Die, 8 hit points, 1 attack dealing 1d6 damage, and cleric abilities at level 1d8. As long as the boss alive, the sapient rats will gain a +2 to morale rolls. Sapient rat lairs will have young equal to 300% of the number of adults. Young do not fight.

Due to the inadequacies of the Termaxian alchemists who bred them, the offspring of sapient rats are prone to stupidity and infertility. The offspring of a pair of sapient rats will have a 50% chance to be intelligent, but only a 10% chance to be fertile. The offspring of a sapient rat and an ordinary rat will have a 50% chance to be fertile, but only a 10% chance to be intelligent. This flaw in their bloodline has kept the population of sapient rats quite small; perhaps 1 in 20 rats in Adamas and other city-states are sapient. Now that Dwimmermount has been unsealed, the rat bosses will certainly seek a cure for their race's tragic condition within its halls.

Sapient rats fear and hate sapient cats, recognizing them as their race's natural foe. A sapient rat who slays a sapient cat is a celebrated hero of his people, much as a dragon slayer is among men.

Shambling Mound

% In Lair: 30%

Dungeon Enc: Crawl (1d3) / Heap (1d3) Wilderness Enc: Crawl (1d3) / Heap (1d3)

Alignment: Neutral Movement: 60' (20') Armor Class: 9 Hit Dice: 8** Attacks: 2

Damage: 2d8/2d8

Save: F8 Morale: +4 Treasure Type: O

XP: 1600

Shambling mounds, also called shamblers, appear to be heaps of rotting vegetation. They are actually intelligent, carnivorous plants. A shambler's body has an 8 foot girth and is about 6 feet tall when the creature stands erect. Its brain and sensory

organs are located in its upper body, buried deep within its slimy dense trunk. In combat, shamblers batter their opponents with two huge, arm-like appendages. If a shambling mound hits a creature smaller than itself with both its appendages, it grabs the creature struck (no saving throw). A grabbed creature will be smothered to death by the shambler's abundant mucus in 2d4 rounds. To escape the shambler's hold, the creature must make a successful saving throw versus Paralysis at -4.

As plants, shambling mounds are immune to all *charm*, *sleep*, and *hold* spells, to stunning, and to poisons not designed to work on plants. Because of their hard-to-reach vitals and protective slime, shamblers take half damage from weapons. Cold-based attacks do half damage, or no damage if the shambler succeeds in a saving throw versus Blast, while fire-based attacks do no damage at all. Electrical attacks not only do no damage, they actually cause a shambler to grow, granting it 1 extra hit dice each time.

Skullmural

% In Lair: 40%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Chaotic Movement: 30' (10') Armor Class: 3 Hit Dice: 3* Attacks: 1

Damage: 1d6, blood drain

Save: F3 Morale: +2

Treasure Type: None

XP: 65

A skullmural appears to be a horrifying skull-like design carved into a wall. It is actually a bizarre amoeboid creature suffused with Chaotic power. It seeps slowly along walls, ceilings, and other surfaces, positioning itself for attack; if relied upon as a landmark, the movement of a skullmural can cause adventurers to think they have made a mistake in mapping. If anyone touches the skullmural, the creature gains a free attack with a +4 bonus to hit. The skullmural attacks by fastening tiny protoplasmic hooks and suckers into flesh to drink the victim's blood and other juices. Once attached, it drains 1d6 hit points per round and does not stop until fully satiated, or driven off with flame, alcohol, or melted butter. If blood is poured out near a skullmural, it will occupy itself with the blood rather than attacking creatures. A skullmural becomes satiated after consuming its own hit points in blood. A sated skullmural changes to a reddish color and bloats slightly, before gradually fading back to its original size and color after 1d6 days.

Sleep Sphere

% In Lair: None

Dungeon Enc: Set (1d8) Wilderness Enc: Set (1d8) Alignment: Neutral

Movement: —

→ Fly: 120' (40')

Armor Class: 6 Hit Dice: 2*

Attacks: 1 (gas pulse)

Damage: Suspended animation

Save: F2 Morale: N/A Treasure Type: None

XP: 29

Sleep spheres are magically-created constructs that resemble blue bubbles of vitreum crystal. The spheres continuously generate and contain a cryogenic gas that emits an icy-blue glow. A sphere's creators can be give it simple instructions governing when and where to release a pulse of this gas. When released, the gas spreads out in a 5-foot radius around the sphere. Living creatures of 5 hit dice or fewer which are exposed to the gas must make a saving throw versus Spells or be placed into suspended animation. The suspended creature is ageless, unconscious and insensate, and requires neither food, water, nor air to survive. The state of suspended animation can be lifted by destroying the sphere responsible or casting dispel magic on the victim. A creature which successfully makes its saving throw will not be affected by further attacks by that sphere, but will have to save as usual against gas from other spheres.

Slug, Giant

% In Lair: None

Dungeon Enc: Solitary (1) Wilderness Enc: Solitary (1)

Alignment: Neutral Movement: 60' (20') Armor Class: 1 Hit Dice: 12**

Attacks: 1 (bite or spit acid) Damage: 1d12 or 5d8

Save: F12 Morale: +2

Treasure Type: None

XP: 3000

Giant slugs are larger, much stronger versions of normal slugs. A typical giant slug is 20 feet long, but can grow to twice that length. They are pale gray in color with a dull white underbelly, and possess a single pair of long, thin tentacles or antennae which they use to sense brightness, heat,

and scent. A giant slug's squishy, flexible body allows it to squeeze into relatively narrow corridors, though this may prevent it turning around. A large slime trail marks the ground wherever it moves. Giant slugs are found in moist or wet environments such as swamps, marshes, rain forests, and dungeons. They are both scavengers and predators, and feed on both plants and animals. Giant slugs are nocturnal creatures and spend the daylight hours away from the heat of the sun. In combat, giant slugs can attack with a bite, or spit acid to a range of 60 feet. Giant slugs are immune to attacks by non-magical blunt weapons.

Spawn of Arach-Nacha

% In Lair: 75%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Chaotic Movement: 120' (40') → Web: 180' (60')

Armor Class: 4 Hit Dice: 3** Attacks: 1 (bite) Damage: 2d8, poison

Save: F3 Morale: +2

Treasure Type: None

XP: 80

A Spawn of Arach-Nacha is a hideous 7-foot-long demon, sent to the Material Plane to wreak havoc in the name of its master, the demon lord Arach-Nacha. Looking like a hairy black spider with a face resembling a twisted mockery of a man's, a Spawn of Arach-Nacha considers itself "royalty" among terrestrial spiders, which obey its commands instinctively and without question. It has a 30% chance of being able to summon 1d3 black widow (50%) or crab spiders (50%) to its aid once per day.

A Spawn of Arach-Nacha prefers to avoid combat in favor of temptation and false reasoning aimed to lead its hearers into madness. Nevertheless, it is a fierce opponent, especially if fought within its web, which has the same properties as a *web* spell. Its bite is extremely poisonous, requiring the target bitten to make a saving throw versus Poison at a -2 penalty to avoid immediate death. Like all demons, a Spawn of Arach-Nacha take half damage from attacks based on cold, electricity, fire, and gas, and possess infravision (90 feet) and *telepathy*.

Spider, Phase

% In Lair: 50%

Dungeon Enc: Clutter (1d6) / Den (1d6) Wilderness Enc: Clutter (1d6) / Den (1d6)

Alignment: Neutral Movement: 60' (20') → Web: 150' (50')

Armor Class: 2 Hit Dice: 5 + 5** Attacks: 1 (bite) Damage: 1d6 + poison

Save: F5 Morale: 0 Treasure Type: M

XP: 660

These 8-foot-long giant spiders are native to Astral Space (see *Appendix E*, *The Four Worlds*, p. 391) but sometimes make their way to Telluria in search of prey. They possess the uncanny ability to shift in and out of phase with the material plane at will. When out of phase, phase spiders are invulnerable to attack by any means. When in phase, they can be harmed by ordinary means. In combat, phase spiders are in phase only when they attack. In order to attack a phase spider, its opponent must equal or exceed its initiative roll and then act simultaneously with the phase spider. If the spell *phase door* is cast on a phase spider while it is in phase, it cannot phase out again for seven rounds. A phase spider's bite is venomous. Creatures bitten by a phase spider must succeed in a saving throw versus Poison or die instantly. The webs of this spider are very sticky, but burn easily,

Stirge Demon

% In Lair: 5%

as with a web spell.

Dungeon Enc: Flock (1d4) / Nest (1d6) Wilderness Enc: Flock (1d4) / Nest (1d6)

Alignment: Chaotic Movement: 20' (6') → Fly: 60' (30')

Armor Class: 11 Hit Dice: 7**

Attacks: 3 (2 claws, bite) Damage: 2d4/2d4/1d8

Save: F7 Morale: +2 Treasure Type: P XP: 1,140

A stirge demon is a loathsome cross between a human, a stirge, and an abyssal fly. It stands on four stirge-like hind legs and grasps with its humanlike forelimbs, which end in chitinous claw-like fingers. It has the wings of a stirge, though wrinkled and seemingly useless. Its stirge-like head has distinctly human features and is topped with a bristled, backswept mane. Its mouth is tiny and filled with fangs, though its nose is long and is used to pierce and draw blood.

Like all demons, a stirge demon take half damage from attacks based on cold, electricity, fire, and gas, and possess infravision (90 feet) and telepathy. It can use the following spell-like abilities at will: darkness, detect good, detect magic, detect invisible, telekinesis, and teleport. Once per day, it has a 35% chance of summoning another stirge demon or 2d8 dretches. Except when using its spell-like abilities, a stirge demon drones and buzzes like a fly. This sound has a soporific effect, and every creature within a 30 foot radius must make a saving throw versus Spells or fall into a comatose sleep for 2d4 hours. (A creature that successfully saves is immune to this effect for 24 hours.) Comatose creatures cannot be awakened by normal means. A sharp blow (dealing at least 1d3 points of damage) will grant the comatose creature an additional saving throw versus Spells, but a dispel magic will awaken it automatically.

A stirge demon can use its piercing nose to drain the blood of its comatose victims. A comatose creature suffers 1d4 points of damage each round the stirge demon feeds on it in this manner. When the stirge demon first begins draining a creature's blood, the creature receives another saving throw versus Spell to wake up, but if this fails, the creature can thereafter be drained of blood without risk of awakening it. Unlike normal stirges, stirge demons have limitless hunger for blood and are never satiated.

Succubus

% In Lair: 20%

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

Alignment: Chaotic Movement: 120' (40') → Fly: 180' (60')

Armor Class: 9 Hit Dice: 6**** Attacks: 2 (claws) Damage: 1d3/1d3

Save: F6 Morale: -1 Treasure Type: K XP: 1,320

Succubi resemble very attractive human women, save for their bat-like wings. When not in the realms of Chaos, they haunt the material plane in search of humans to tempt. Succubi take half damage from attacks based on cold, electricity, fire, and gas and no damage from ordinary weapons. In addition to

infravision and telepathy, succubi have the following spell-like abilities usable at will: alter shape, charm person, clairaudience, ESP, ethereal form, and suggestion. They will typically use these abilities to lure a victim into some act of passion. Each round that a succubi kisses or is otherwise intimate with a victim, she can energy drain him of one level of experience. If forced to fight, succubi will attack with their long, surprisingly sharp nails. If hard pressed, succubi can attempt to gate a balor demon (65% probability of success) or demon lord (5% probability of success) once per day.

Tenebrous Worm

% In Lair: 50%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Neutral Movement: 30' (10') Armor Class: 8 Hit Dice: 10* Attacks: 1

Damage: 2d6 + 1d6 acid

Save: F10 Morale: +2

Treasure Type: Special

XP: 1,550

A tenebrous worm resembles a 6-foot-long, sleek, gray caterpillar. The front half of its body, including its head, is covered in long, dull, black coarse bristles. The bristles contain a mild paralytic, and creature attacking the worm with an unarmed or similar attack must make saving throw versus Paralysis or be paralyzed for 1d4 rounds. Two large, multi-faceted eyes dot its head, and two large, pearl-white mandibles flank its mouth. These mandibles drip a highly corrosive acid which deals 1d6 points of damage in addition to the 2d6 points of damage dealt by the bite itself. Because of their acid-resistant properties, a tenebrous worm's mandibles are quite valuable. If broken off from a dead tenebrous worm and sold, they will net $1d3 \times 1,000$ gp each.

Tentacled Eve

% In Lair: 50%

Dungeon Enc: Solitary (1) Wilderness Enc: Solitary (1)

Alignment: Chaotic Movement: 90' (30') Armor Class: 5 (tentacles 4) Hit Dice: 14** - 16**

Attacks: 8 or 1 (tentacles or bite) Damage: 1d8 per tentacle or 2d6

Save: F14-16 Morale: +2 Treasure Type: O

XP: 3,800 / 4,200 / 4,600

These horrible creatures have 15-foot-wide orblike bodies supported on three elephantine legs. Their bodies are covered with eyes, rendering them immune to surprise. They have a disturbingly incongruent canine-like nose, a large tooth-filled mouth, and eight massive octopus-like tentacles. Tentacled eyes may attack once per round with each tentacle, attacking any single opponent with up to 4 tentacles at a time, or dividing attacks against up to 8 opponents, one for each tentacle.

Tentacles that successfully strike a target constrict for 1d8 points of damage initially and then 1d8 per round thereafter until either the target is dead or the tentacle is destroyed. For every tentacle constricting a single target, the target suffers a -2 penalty to attack rolls. A tentacled eye's tentacles must be attacked individually. Each tentacle has an AC of 4 and 2d6+4 hp. Damage dealt to its tentacles does not harm the tentacled eye itself (track hit points separately). Lost tentacles will regenerate in 2d4 days provided the tentacled eye itself is still alive.

In lieu of attacking new targets with its tentacles, the tentacle eye may pull an already-constricted creature toward its mouth, where it may bite for 2d6 points of damage. (Any and all constricted targets still take damage during rounds when the tentacled eye uses its bite.) If a tentacled eye successfully bites its target, the victim must make a saving throw versus Poison or be immediately reduced to a living husk with a dead brain, waiting to be completely devoured. Curative spells cannot cure this condition, but if a victim is fully dead a restore life and limb or resurrection spell will revive him normally.

Termaxian Husk

% In Lair: None

Dungeon Enc: Patrol (1d8) Wilderness Enc: Patrol (1d8)

Alignment: Chaotic Movement: 120' (40') Armor Class: 2

Hit Dice: 6** Attacks: 2 (fists) Damage: 2d10/2d10

Save: F5 Morale: N/A

Treasure Type: None

XP: 820

A horrible, zombie-like creature, a Termaxian husk is created by exposing a humanoid creature to an alchemically prepared elixir made from Jubilex's deliquescing flesh. This elixir "hollows out" the creature, destroying its mind, and leaving its body a puppet under the control of its creator. Once created, a husk cannot travel more than 200 miles from their creator's current location or he loses control of it. An uncontrolled husk rapidly decays, and dies after 1d6 turns.

A Termaxian husk is a potent melee combatant, able to deliver hard-hitting attacks with its fists. In addition, any time a husk is hit with a slashing or piercing weapon, there is a 50% chance that its elixir-infused blood will spray onto the attacker, requiring the attacker to make an immediate saving throw versus Poison. Failure results in the loss of 1d6 points of Wisdom per round until either the attacker reaches 0, in which case he becomes a Termaxian husk himself, or a *cure disease* or *neutralize poison* spell is applied, which eliminates the toxin. Lost Wisdom points return in 1d6 days.

Though they resemble undead, Termaxian husks are constructs with the azoth subtype. Like all constructs, they are immune to disease, gas and poison and unaffected by *charm*, *sleep*, or *hold* spells. They suffers 1d8 damage if struck by supernatural solvents such as *true water*.

Termaxian Mummy

% In Lair: 75%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Chaotic Movement: 60' (20') Armor Class: 6 Hit Dice: 7****

Attacks: 1

Damage: 1d12, choke

Save: F7 Morale: +4 Treasure Type: N XP: 1840

The Termaxian mummy is a rare form of undead created by the cult of Turms Termax in order to punish a member who betrayed the cult in some fashion. Through a magical ritual, the betrayer is granted imperishable existence dedicated to a singular task, such as the protection of a cult site against interlopers. The mummy remains dormant until events related to its purpose occur or it is given a command by a Termaxian adept of 7th level or above.

Because of the peculiar circumstances of their creation, Termaxian mummies generally retain vestiges of their former personalities. Many, if not most, of these mummies hate their undead servitude to the cult, but can do nothing to rebel against it. However, if either circumstances or a command from the controlling adept pit them against some deeply held *positive* belief or emotion of their former lives—mere hatred of servitude is not enough—there is a good chance (60%) that they are able reassert their wills and act accordingly.

Like normal mummies, Termaxian mummies are so fearsome that any being seeing one must make a saving throw or suffer ill consequences. Unlike normal mummies however, the saving throw must be made versus Death (Wisdom bonuses or penalties, if any, apply to this roll) and failure results in the victim being afflicted with the effects of a *feeblemind* spell. This effect can only be lifted by means of *remove curse*.

When a Termaxian mummy successfully strikes, its victim is caught in its choking grip, suffering 1d12 points of damage on the first and subsequent rounds until either the victim is dead or the mummy is destroyed or forced to relinquish its grip in some fashion. These mummies can be distracted from their tasks by persons, events, or objects associated with their past life in a powerful way—or perception of the same, for just like mortal beings, they can be deceived, including through the use of illusion magic.

Termaxian mummies are virtually indestructible by physical means, being immune to damage by anything other than spells, including fire. Like other undead, they are immune to gas, poison, *charm*, *sleep*, and *hold*. They are turned as vampires.

Termaxian Necrolyte

% In Lair: 80%

Dungeon Enc: Solitary (1) / Solitary (1)

Wilderness Enc: None Alignment: Chaotic Movement: 60' (20') Armor Class: 6

Hit Dice: 7*** or more Attacks: 1 (touch) Damage: 1d8 Save: M7 Morale: +2

XP: 1,490

Treasure Type: L

A Termaxian necrolyte is a mage of the cult of Turms Termax who, by means of various secret rituals and enchantments, has become undying. In return for the gift of immortality, necrolytes typically serve as guardians of locations of particular importance to the cult of Turms Termax. While

acting as such, they are free to continue their researches into magic and occult lore, unfettered from the weaknesses to which all flesh is prone. Those who serve the cult well might one day gain access to more powerful rituals that will set them further down the path to apotheosis.

In combat, the cold touch of a necrolyte deals 1d8 points of damage, but they much prefer to cast spells or use offensive magic items rather than engage in melee. All Termaxian necrolytes are mages of the same level as their hit dice. They have a 5% chance per HD of being equipped with a potion, ring, scroll, rod/staff/wand, or miscellaneous magic item usable by mages (roll for each category). Despite its skeletal appearance, a necrolyte is a construct with the azoth subtype rather than a type of undead. Like all constructs, they are immune to disease, gas and poison and unaffected by *charm*, *sleep*, or *hold* spells. As azoth constructs, they suffer 1d8 damage if struck by supernatural solvents such as *true water*.

Terrim

% In Lair: 40%

Dungeon Enc: Patrol (1d4) / Outpost (1d10 Patrols)

Wilderness Enc: None No. Enc.: 1d4 (2d12) Alignment: Neutral Movement: 120' (40') Armor Class: 7 or 2 Hit Dice: 8**

Attacks: 1 (weapon)
Damage: 1d6 or weapon

Save: E8 Morale: 0

Treasure Type: R ×2

XP: 1,600

Terrim are descendants of the Great Ancients who fled underground after the rise of the Eld. They look much like men, but possess fair, almost albino, complexions and similarly fair hair. They tend toward slenderness, but are nevertheless well-muscled and look almost like classical statues come to life. The Terrim dress in loose, flowing clothing in dark, but attractive, colors. Unlike their "cousins," the Derrim, the Terrim are thoughtful and pacifist, preferring to use violence only as a last resort.

All Terrim are inherently magical, possessing the ability to cast spells as if they were mages of the same level as their hit dice. When encountered on patrol, Terrim will be equipped with *Terrim battle armor* and *warp swords* energized by *power cells* with 1d12 charges each. Terrim encountered in an outpost will wear *dwimmersilk garments* and carry small weapons (daggers or short swords), save for one "on duty" patrol, which will be equipped as above.

A Terrim outpost will be commanded by an archon of 1d4+8 HD. In the presence of the archon, Terrim have a morale of +2 rather than 0. The archon will always possess dwimmersilk garments and has a 5% chance per HD of possessing each of the following items: Terrim battle armor, warp sword, stun stick, and shield belt (roll separately for each item). Each item will be energized by fully-charged power cells.

Thelidu

% In Lair: 10%

Dungeon Enc: Delve (1d4) / Ganglion (1d4) Wilderness Enc: Patrol (1d4) / Outpost (1d4)

Alignment: Chaotic Movement: 120' (40') Armor Class: 4 Hit Dice: 4+3***

Attacks: 3 (2 claws, tentacles) Damage: 1d6/1d6/1d4

Save: M5 Morale: +1 Treasure Type: K

XP: 365

Thelidu (the term is both singular and plural) are a hateful species of conquerors from Outside, who use arcane devices to travel from world to world in search of slaves and resources. Possessing scaly, rubbery, vaguely humanoid bodies, the Thelidu have octopus-like heads and faces that are masses of tentacles. Gelatinous green in color, these monstrosities are worshiped as near-gods on countless worlds—and feared on countless more.

Thelidu are masters of the mind, which has earned them the sobriquet "brain demons," though they are not in fact demons of any kind and indeed view demons as just another species to be conquered. All Thelidu are capable of using several mental powers that mimic the effects of arcane spells: *charm monster*, *charm person*, *clairvoyance*, *ESP*, *levitate*, and *suggestion*. These abilities are usable at will and can be resisted with a successful saving throw versus Spells.

The most feared ability of the Thelidu is its ability to devour the brain of victims. If the Thelidu hits a single target with both its claws and tentacles, the Thelidu automatically grabs the target and begins extracting the brain. To extract the victim's brain, the Thelidu must remain stationary and take no other action. The victim must make a saving throw versus Death each round thereafter until either he dies or the Thelidu is killed or takes another action. The victim is paralyzed while his brain is being extracted, unable even to scream. A creature whose brain is extracted can only be restored to life by *miracle* or *wish*.

Thessalgorgon

% In Lair: 30%

Dungeon Enc: Solitary (1) / Solitary (1) Wilderness Enc: Solitary (1) / Solitary (1)

Alignment: Chaotic Movement: 60' (20') Armor Class: 11 Hit Dice: 8***

Attacks: 9 (8 bites, 1 gore) Damage: 1d10+1d6 (x8)/2d8

Save: F8 Morale: +3

Treasure Type: F, C

XP: 2,100

A thessalgorgon is a horrifying cross between an eight-headed hydra and a gorgon. It has a bulllike body, 12 feet tall at the shoulder, covered in thick, metallic scales of coppery-green. Its central, bull-like head is ringed by eight snake-like heads, each spitting and hissing. The monstrosity can attack with all nine heads each round. The snake heads bite for 1d10 points of damage plus an extra 1d6 points of acid damage. Once per hour, the snake heads can collectively belch forth a stream of acid 5 feet high, 5 feet wide, and 40 feet long, dealing 4d6 damage to all within the area of effect. A saving throw versus Blast reduces damage by half. The gorgon head can gore for 2d8 points of damage or breathe a cloud of petrification gas 10 feet wide and 60 feet long. Anyone caught within the cloud must make a saving throw versus Petrification or be turned to stone. The thessalgorgon is immune to its own breath weapons.

Tick, Giant

% In Lair: 70%

Dungeon Enc: Clutter (3d4) / Den (3d4) Wilderness Enc: Clutter (3d4) / Den (3d4)

Alignment: Neutral Movement: 30' (10') Armor Class: 6 Hit Dice: 2*-4* Attacks: 1 (bite)

Damage: 1d4 + blood drain

Save: F2-4 Morale: 0

Treasure Type: C (2 HD); H (3-4 HD)

XP: 29/65/135

The giant tick is a monstrous blood-sucking arachnid ranging in size from 1 to 3 feet long. Since it is not particularly mobile, a giant tick prefers to wait in a safe recluse until its keen senses of smell, heat, and moisture detect potential prey nearby. The giant tick then attacks by plunging its har-

poon-like hypostome into its victim's skin and sucking the victim's blood.

When a giant tick succeeds with its bite attack, it latches onto its victim. It deals 1d4 points of damage immediately, and sucks 1d6 points of damage worth of blood every subsequent round thereafter. Unless burned, killed, or suffocated by submersion in water, a giant tick will not let go of a victim until it has drained an equivalent of blood equal to its own maximum hit point total.

Victims who have had their blood drained by a tick have a 50% probability of contracting a wasting disease that kills them in 2d4 days. The spell *cure disease* is effective in eliminating this illness.

Troll, Two-Headed

% In Lair: 40%

Dungeon Enc: Gang (1d3) / Lair (1 gang) Wilderness Enc: Gang (1d3) / Village (1 gang + special)

Alignment: Chaotic Movement: 120' (40') Armor Class: 5 Hit Dice: 10*

Attacks: 4 (2 claws, 2 bites) or 2 weapons Damage: ld6/ld6/ld10/ld10 or by weapon

Save: F10 Morale: +2 (0)

Treasure Type: O (per gang)

XP: 1,550

Two-headed trolls stand about 10 feet tall and weigh about 2,000 pounds. Their hides are mottled green or gray and their facial features resemble that of normal trolls. Two-headed trolls typically dress in rags or tattered clothes, or even rusted armor on occasion. Their legs end in three-toed feet and their powerful arms end in sharpened claws. Like normal trolls, two-headed trolls regenerate, but at the reduced rate of 1 hit point per round. This regeneration operates exactly like that of ordinary trolls, including the effect of fire and acid in stopping it. When confronted by fire or acid, a two-headed troll's morale drops to 0.

When a gang of two-headed trolls are encountered in a village, the village will be made up of normal (one-headed) trolls. The gang of two-headed trolls will replace the chieftain and sub-chieftain(s) in the village hierarchy. See *ACKS* p. 199 for the demographics of troll villages.

Undead Ooze

% In Lair: None

Dungeon Enc: Solitary (1) Wilderness Enc: Solitary (1)

Alignment: Chaotic Movement: 20' (6') Armor Class: 0 Hit Dice: 6** Attacks: 1 (slam) Damage: 2d4, engulf

Save: F6 Morale: +4

Treasure Type: None

XP: 820

An undead ooze is a large, viscous, black mass, from which the bones of its previous victims protrude. Possessing an evil intelligence, it prefers to attack from surprise or by stalking its prey and attacking when the opportunity presents itself.

The undead ooze attacks by engulfing its foes and by expelling skeleton minions to contend with its enemies. Foes that the undead ooze attempts to engulf must make a saving throw versus Death or be sucked into its gelatinous body. Engulfed creatures take 1d6 points of cold damage per round until either they or the undead ooze is killed.

In addition to attacking, an undead ooze can also expel skeletons from its body, which fight on its behalf. Any given ooze has 1d4 skeletons within its body, but can only expel one per round. Expelled skeletons fight immediately, and if destroyed, can still be reanimated later by the ooze. Creatures that die while engulfed by the undead ooze can be re-animated as skeletons under its control one round later. If the undead ooze is slain, all of its skeleton minions are immediately destroyed. Undead oozes and their skeleton minions are turned as mummies, with HD results of a successful turn applied against the skeleton minions first.

Vampire Rose

% In Lair: 40%

Dungeon Enc.: Troop (1d4) / Thicket (1d4) Wilderness Enc.: Troop (1d4) / Thicket (1d4)

Alignment: Neutral Movement: 5' (1') Armor Class: 4 Hit Dice: 4*

Attacks: 1 (thorn stalk)
Damage: 1d4+2, blood drain

Save: F3 Morale: +4

Treasure Type: None

XP: 135

Standing about 3 feet tall, with many branches, vampire rose bushes look like normal white rose bushes and are often mistaken for such. The plant stands motionless until its prey moves within range, then attacks with its thorny stalk. If the vampire rose's attack succeeds, it automatically grabs the creature struck (no saving throw). Grabbed creatures are drained of 1d4+2 hit points worth of blood each round. To escape the rose's branches, the grabbed creature must make a successful saving throw versus Paralysis. Otherwise, the vampire rose continues to feed until it has drained an equivalent of blood equal to its own maximum hit point total. When fully sated with blood, the vampire rose's petals flush red. Like all plants, vampire roses are immune to all charm, sleep, and hold spells, to stunning, and to poisons not designed to work on plants.

Vrock (Demon of the First Circle)

% In Lair: 25%

Dungeon Enc.: Flight (1d3) / Coven (1d6) Wilderness Enc.: Wing (1d6) / Coven (1d6)

Alignment: Chaotic Movement: 120' (40') → Fly: 180' (60')

Armor Class: 9 Hit Dice: 8*

Attacks: 5 (2 claws, 2 rear claws, beak)
Damage: ld4/ld4/ld8/ld6/ld6

Save: F8 Morale: +3 Treasure Type: I XP: 1,100

lokVrocks resemble 8 foot tall humanoid vultures with fierce beaks and four sharp claws. In combat they can attack with all four claws and a bite if airborne, or two claws and a bite if on the ground. Vrocks have the following spell-like abilities usable at will: *darkness 10' radius*, *detect invisibility*, and *telekinesis* (200lbs.). In addition, a vrock can attempt

to *gate* another vrock demon once per day (10% probability of success). Like all demons, they take half damage from attacks based on cold, electricity, fire, and gas, and possess 90-foot infravision and *telepathy*.

Xorn

% In Lair: 10%

Dungeon Enc.: Patrol (1d3) / Coven (1d6) Wilderness Enc.: Wing (1d6) / Coven (1d6)

No. Enc.: 1d4 (1d4) Alignment: Neutral Movement: 90' (30')

→ Burrow: 90' (30')

Armor Class: 11 Hit Dice: 7 + 7*

Attacks: 4 (3 claws, bite) Damage: ld3/ld3/ld4/6d4

Save: F7 Morale: +2 Treasure Type: I XP: 900

Xorns are 5-foot-tall natives of the elemental plane of Earth. They appear bizarre to natives of the material plane, having three arms and three legs organized in a radially symmetrical fashion around a barrel-like body with gaping maw atop. When on the material plane they live deep within labyrinths, where they feed on precious metals and minerals. Xorns are able to blend in their environment, and characters encountering xorn suffer a -3 penalty to their surprise rolls. Xorns do not attack fleshly beings except to defend themselves or their property, since they cannot digest meat. Xorns are indifferent to creatures of the material plane with the sole exception of anyone carrying a significant amount of precious metals or minerals. They can smell such "food" up to 20 feet away, and may ask adventurers to give them their precious metals. If refused, they will almost always (90%) attack to take it forcefully. Xorns are completely immune to fire or cold-based attacks. They suffer only half damage from electrical-based attacks, or no damage with a successful saving throw. The spells rock to mud and stone to flesh reduce a xorn to AC 1 for one round, and the xorn cannot attack as it transforms back to its original form. A xorn can glide through stone, dirt, or almost any other sort of earth except metal after one round of preparation. A phase door spell cast on an area containing a burrowing xorn kills it instantly.

Zombie, Brute

% In Lair: 35%

Dungeon Enc.: Throng (1d6) / Abattoir (1d10) Wilderness Enc.: Throng (1d6) / Abattoir (1d10)

Alignment: Chaotic Movement: 30' (10') Armor Class: 5 Hit Dice: 6* Attacks: 2

Damage: 2d6/2d6

Save: F6 Morale: N/A

Treasure Type: None

XP: 570

Zombie brutes are large, hulking undead creatures reanimated through dark magical rituals. Like normal zombies, zombie brutes are mindless, acting only on whatever simple instructions their creator gives them. As undead, they are immune to the effects of gas, poison, and charm, sleep, or hold spells. They take no damage from ordinary weapons. When reduced to zero hit points, zombie brutes collapse as if dead, but they will slowly pull themselves together and rise again in 1d6 turns with full hit points to resumes their former activities (whatever those may have been). Zombie brutes can be prevented from re-animating if their mouths are filled with salt and sewn shut or their bodies are utterly destroyed. Zombie brutes are turned as mummies.

Zombie, Juju

% In Lair: 40%

Dungeon Enc.: Throng (1d4) / Abattoir (1d8) Wilderness Enc.: Horde (1d8) / Abattoir (1d8)

Alignment: Chaotic Movement: 150' (50') Armor Class: 3 Hit Dice: 4 + 4** Attacks: 1 Damage: 1d8

Save: F4
Morale: N/A

Treasure Type: None

XP: 290

Juju zombies are fearsome undead opponents. Although they are often mistaken for regular zombies, they can be distinguished by their dark gray skin and swift movements. Juju zombies are stronger, faster, and possessed of a greater capacity for action than regular zombies. They attack as 6 HD monsters, can use missile weapons freely, and can climb walls like 4th-level thieves. They are immune to damage from *magic missiles*, electricity, and cold,

take half damage from fire-based attacks, and can only be struck by a +1 or better weapons. Like all undead, they are immune to the effects of gas, poison, and *charm*, *sleep*, or *hold* spells. They are turned as wraiths.

Zombie, Slime

% In Lair: 40%

Dungeon Enc: Outbreak (1d4+1) / Colony (2d6 + 4) Wilderness Enc: Outbreak (1d4+1) / Colony (2d6 + 4)

Alignment: Neutral Movement: 15' (5') Armor Class: 1 Hit Dice: 6** Attacks: 1

Damage: 1d6, infestation

Save: F4 Morale: N/A

Treasure Type: None

XP: 820

Slime zombies are created when a living creature is slain by a patch of olive slime (see p. 360). The zombie's sole purpose is to capture or kill new prey for the olive slime that created it, with which it maintains a mind link that has a maximum range of 200 miles. Any creature hit by a slime zombie must make a saving throw versus Poison or be infested with olive slime, as if in contact with an olive slime patch. Despite their name, slime zombies are plants rather than undead. As such they are immune to all charm, sleep, and hold spells, to stunning, and to poisons not designed to work on plants. They are also immune to electricity-based attacks. Weapons, whether normal or magical, do not harm them, as they simply pass through their slimy form.

Zombie Lord

% In Lair: 50%

Dungeon Enc: Solitary (1) Wilderness Enc: None Alignment: Chaotic Movement: 120' (40') Armor Class: 4

Armor Class: 4 Hit Dice: 3** Attacks: 1 Damage: 1d8 Save: F3 Morale: 0

Treasure Type: None

XP: 80

A self-willed zombie of exceptional cunning and power, a zombie lord retains the mind and memory of its mortal life, as well as the swiftness and dexterity of its living body. Worse, a zombie lord possesses innate necromantic power. At will, a zombie lord can *animate dead* as a 9th level mage. In addition, it can control by thought any skeleton or zombie it encounters, as if it had created the creature with *animate dead*. It gains a +2 to reaction rolls with sapient undead. Like other undead, zombie lords are immune to poison, gas, and *charm*, *hold*, and *sleep* spells, but they remain susceptible to ordinary weapons. Zombie lords are turned as wraiths.

To date only one zombie lord is known to exist, but other creatures that die with unfulfilled obligations or duties might, if slain in environments rich with ambient azoth, rise in a similar manner.

1d6	Party	Goals & Motives	Affiliations
1	Delvers	Profit from the exploration and pillage of Dwimmermount	Castellan of Muntburg
2	Fists	Foster the glory of Typhon by cleansing Dwimmermount of chaos	High Priest in Adamas
3	Band	Win glory by protecting the city-states with military might	Callett in Yethlyreom
4	Heralds	Free Turms Termax from captivity and learn his secrets	Termaxians in Adamas
5	Seekers	Re-discover lost lore hidden within Dwimmermount.	Bynde Petre, Muntburg
6	Swords	Sell Alchemy secrets, seek Immortality	Despot of Adamas

"Rival adventurers are useful in a campaign for a variety of reasons. Firstly, they provide a link between the PCs and the outside world, especially in a megadungeon campaign. They're as much a part of Gygaxian naturalism as are monsters who do more than wait around to be killed. Second, they serve as a useful goad to the PCs. If they know they have rivals who are after the same goals as they, odds are good they might move a lot more precipitously, thereby leading to some interesting situations. In my Dwimmermount campaign, the players have found signs that someone has been in the dungeon while they were away healing and disposing of their loot, which has added another layer of urgency to their explorations. Finally, as a referee, rival adventurers provide an opportunity to role-play with more depth than one is typically afforded by most monsters. I love playing the role of venal, self-interested antagonists; it's fun in a way that playing Pig-Face Orc #231 is not."

James Maliszewski, **Grognardia**, March 31, 2009

APPENDIX

Rival Adventuring Parties

HOUGH THIS BOOK assumes that the player characters are some of the only adventurers to enter Dwimmermount since its fall two centuries ago, this situation will not remain true for long. As soon as dungeon explorers return to civilization for the first time, word of the wealth to be had in the ancient mountain fortress will inevitably spread, resulting in the appearance of rival adventuring parties.

What follows are descriptions of six such parties across a range of experience. Each party is fully detailed in terms of game statistics, along with just enough additional information—personalities, goals, etc.—to be usable without much preparation while at the same time providing the referee with plenty of flexibility to develop them as he wishes.

Rival Parties as Factions

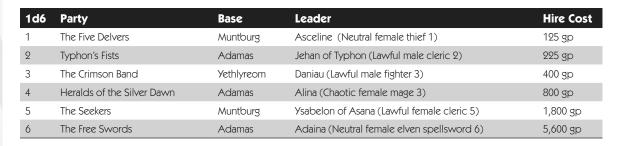

Not present in the dungeon at the start of the campaign, rival parties will quickly be introduced into Dwimmermount's depths through the actions of the player characters and the consequences of encounter throws. Each rival party will become a faction (see *Chapter 7*, p. 95) as it becomes active within the mountain fortress, with its influence on the dungeon emerging from the pursuit of its goals and motives. During the campaign, these motives

may conflict or align with those of other factions. The goals, motives, and affiliations of the various parties are summarized below.

Referees are encouraged to make rival parties a resource to be pulled out as the situation demands, and a frequent touchstone for reincorporation of material improvised during play. When the players seek out a sage in a town where you don't have one prepared, make it Richal the warrior-scholar of the Seekers. Or, if you didn't think of Richal at the time, when you go over your session notes you might make a note that the sage you invented was one of Richal's students or teachers. Building up a web of connections between players and rivals will make some trusted allies bound by mutual assistance. In other cases, this web may become so sticky and frustrating that the players eagerly await the chance to meet their rivals in a dark dungeon where there are no witnesses.

Rival Parties as Hirelings

The rival parties provide a resource for players as well as referees. Although willing to risk adventuring on their own behalf, rival leaders are also open to the more certain rewards of working for hire. Hiring rival parties requires successful negotiation, achieved through roleplaying and/or a favorable reaction roll, by employers whose alignment and goals do not strongly conflict with the leader's own.

For each rival party, the table above shows the base where the party may be found, the leader with whom negotiations will be conducted, and the cost to hire the party.

The listed hire cost represents how much the leader expects their party be paid for a month's work in a city or stronghold far from danger; a week in the wilderness or areas of the dungeon in which hazards are known and avoidable; or a day spent exploring unknown regions of the dungeon or facing certain opposition.

The detailed descriptions of each party, provided later in this chapter, include lists of tasks in each category which its leader might feel competent to perform. The party's rates increase with dungeon level. Each entry shows "safe" levels where normal rates apply, hazardous levels where double normal rates apply, and lethal levels which the leader will charge

triple normal fees to enter. As a rule, parties will not willingly venture deeper than the listed lethal level.

All of the rival parties are aware of one another when the campaign begins. None have formed alliances, become enemies, or suffered schisms. At the referee's discretion, rival parties may hire the services of each other and/or the player characters. In the latter case, the referee may use the cost listed for a rival party of similar size and level as a guide to the offer

March 31, 2009

James Maliszewski.

Grognardia,

"[The Fortune's Fools] ordered a couple

of their hirelings, twin Norsemen Erik and

Ethil, to hang out in the inn at Muntburg

to see if they saw anyone who looked

like they were also heading off to explore

Dwimmermount."

made by the PC's would-be employers.

Shares and Weregilt

The division of treasure found by rival parties working for the player characters, or vice versa, must be negotiated as part of the hiring agreement. The standard arrangement reflected in the listed costs is that when hirelings are largely shielded from danger by their employers, as a group they split a share of treasure equal to one of their employers. (If the Five Delvers act as hirelings to four PCs, each PC gets one-fifth of the treasure and the Delvers divide the remaining fifth between themselves.) When the rival party is hired to act on its

own, the standard arrangement is for treasure to be split equally between the party that recovers it and the employers whose directions they were following.

The last standard element of contracts between rival parties is weregild, an agreed-upon sum that the employer will pay to the family of an adventurer who is killed while under hire. Although it is open to negotiation, the listed price for hiring an entire party is generally the same as the weregild payment for each of its members.

Bribery and Extortion

In the event of such a confrontation, one party may seek to buy their way out of trouble. Referees are not expected to track the treasuries of rival parties. For the purpose of influencing reaction rolls through bribery, as described in the Factions section, the hire price of a rival party can serve as its bribe increment.

Party #1 (0 Experience Points):

The Five Delvers

The Delvers are a new adventuring party based out of Muntburg, led by the thief Asceline. Driven by equal parts curiosity and greed, they are not averse to aiding other adventurers when it is profitable to do so – but they also have no qualms about dispatching rivals when prudent to do so.

Specialties: Spying, gaining human intelligence, burglary, monitoring activity in and near Muntburg

Future Plans: The Delvers plan to spend the treasure they take from Dwimmermount to increase their preparedness as adventurers. This will include hiring and equipping henchmen and torchbearers, establishing and maintaining a network of informants and operatives throughout the City-States, and laying in barrels of holy water, flaming oil, and distilled spirits.

Asceline (Level 1 Neutral Female Thief)

AC 4, Move 120' (40'), HP 4, ATK Sword (8+, 1d6) or Dagger (thrown) (8+, 1d4), SV T1, ML 0, XP 10

Ability Scores: STR 10 INT 15 WIS 12 CON 13 DEX 17 CHA 15

Thief Skills: Open Locks: 18+ Find/Remove Traps: 18+ Pick Pockets: 17+ Move Silently: 17+ Climb Walls: 6+ Hide in Shadows: 19+ Hear Noise 14+ Backstab x2

Proficiencies: Weapon Finesse, Gambling, Leadership

Equipment: Short sword, dagger, leather armor, backpack, waterskin, lantern, 4 flasks of oil, 1 week's iron rations, 10' pole, 50' rope, thieves' tools.

Personality: Asceline is bold to the point of foolhardiness. Her charisma makes her a natural leader.

Fortin (Level 1 Neutral Male Fighter)

AC 5, Move 90' (30'), HP 8, ATK Sword (9+, 1d6+2), SV F1, ML 0, XP 10

Ability Scores: STR 13 INT 12 WIS 12 CON 11 DEX 9 CHA 9

Proficiencies: Dungeon Bashing, Endurance Equipment: Chain mail armor, shield, sword, dagger, 6 torches, backpack, waterskin, 1 week's iron rations, 10' pole.

Personality: Fortin is the "strong and silent" type; he keeps his opinions to himself and does what he is told.

Rique of Tyche (Level 1 Lawful Male Cleric)

AC 3, Move 120' (40'), HP 6, ATK Mace (11+, 1d8-1), SV C1, ML 0, XP 10

Ability Scores: STR 7 INT 12 WIS 13 CON 13 DEX 13 CHA 13

Proficiencies: Loremastery, Gambling Spells: None

Equipment: Mace, leather armor, 6 torches, backpack, waterskin, 1 week's iron rations, 10' pole, wooden holy symbol.

Personality: Like many clerics of Tyche, Rique is addicted to danger. He sees exploring Dwimmermount as a reward in itself.

Lorenz (Level 1 Neutral Male Fighter)

AC 7, Move 60' (20'), HP 5, ATK Flail (9+, 1d8+2) or Shortbow (9+, 1d6), SV F1, ML 0, XP 10

Ability Scores: STR 14 INT 12 WIS 12 CON 5 DEX 14 CHA 12

Proficiencies: Alertness, Healing

Equipment: Plate armor, flail, dagger, short bow, quiver with 20 arrows, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, small sack.

Personality: Lorenz considers himself Asceline's "protector" and will do anything to keep her safe.

SAMPLE JOBS AND PAY RATES FOR THE FIVE DELVERS

Rate	Sample Job
125 gp/month	Keep an informer in Adamas charmed so that he does not report the party's crimes to the Despot
125 gp/week	Camp out in the Chamber of the Face near the exit from the Path of Mavors, question it daily
125 gp/day	Blockade the stairs in the Path of Mavors against orcs seeking to enter from the Laboratory
Base rates	Path of Mavors (1)
Hazard ×2	Laboratory (2A), Reliquary (2B)
Lethal ×3	House of Portals (3A), Reservoir (3B)

"There are lots of elements of old school play that have been forgotten over the years and one of the ones I miss a lot is rival adventurers. Starting with OD&D... there was always the implicit assumption that the player characters weren't the only adventurers delving into a particular dungeon. These other adventurers might not necessarily be evil, but, seeing as they were likely after the same things as the PCs, they could certainly be called rivals, with whom the PCs might even come to blows, as famously illustrated in the Dungeon Masters Guide, which describes the battle between Aggro the Axe, Abner, Arkayn, and Arlanni against Gutboy Barrelhouse, Balto, Blastum, and Barjin."

James Maliszewski, **Grognardia**, March 7, 2009

Thonyn (Level 1 Neutral Male Mage)

AC -1, Move 120' (40'), HP 3, ATK Dagger (10+, 1d4) or Dagger (thrown) (11+, 1d4), SV M1, ML 0, XP 13

Ability Scores: STR 10 INT 16 WIS 13 CON 14 DEX 7 CHA 9

Proficiencies: Sensing Power, Alchemy, Collegiate Wizardry, Disguise

Spells: 1-floating disc, charm person, sleep Equipment: Dagger, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, vial of holy water.

Personality: Thonyn is the least trustworthy member of the Delvers; he would betray his fellows if he felt he could gain magical power as a result.

Party #2 (2,035 Experience Points):

Typhon's Fists

The Fists are based out of Adamas and are sanctioned by the church of Typhon there. The leader of the Fists, Jehan, is a cleric of Typhon. His group seeks to cleanse Dwimmermount of the undead and any lingering Termaxian presence there.

Specialties: Dispatching undead, understanding history and lore of Typhon and Termaxian Empire

Future Plans: The Fists plan to spend the treasure they take from Dwimmermount to foster the glory of Typhon, the spread of his worship, and the advancement of their leader Jehan through the hierarchy of the Temple of Typhon in Adamas. In their quest to make converts and gain influence, they may cover the tithe required for healing and restoration of rival adventurers who are otherwise unable to afford the Temple's services.

SAMPLE JOBS AND PAY RATES FOR TYPHON'S FISTS

Rate	Sample Job	
925 gp/month	Build and maintain a shrine to Typhon outside Dwimmermount's Red Doors where corpses can be cremated on consecrated ground, but flee if threatened	
225 gp/week	Establish a hospital in the Place of Healing once its neighboring area of the Reliquary level has been well-explored and obvious threats vanquished	
225 gp/day	Rescue the dwarf captives on the Lab- oratory level using a rough map to their location drawn by a charmed	
Base rates	Path of Mavors (1)	
Hazard ×2	House of Portals (3A), Reservoir (3B)	
Lethal ×3	Halls of Lesser Secrets (4)	

Jehan of Typhon (Level 2 Lawful Male Cleric)

AC 5, Move 60' (20'), HP 8, ATK War hammer (9+, 1d6+1), SV C2, ML 0, XP 20

Ability Scores: STR 12 INT 12 WIS 14 CON 12 DEX 11 CHA 14

Proficiencies: Sensing Evil, Leadership Spells: 1 1st

Equipment: Chain mail, shield, war hammer +1, 6 torches, backpack, waterskin, 1 week's iron rations, 10' pole, wooden holy symbol, 2 small sacks, 3 stakes & mallet, steel mirror.

Personality: A martinet with a high opinion of himself, Jehan is utterly dedicated to the eradication of chaos. He cares little for wealth, but hopes his exploits will grant him power in his church.

Ondart (Level 2 Lawful Male Fighter)

AC 9, Move 60' (20'), HP 12, ATK Sword (8+, 1d6+2) or Dagger (thrown) (8+, 1d4), SV F2, ML 0, XP 20

Ability Scores: STR 15 INT 14 WIS 12 CON 9 DEX 13 CHA 9

Proficiencies: Fighting Style (weapon & shield), Mapping, Theology

Equipment: Plate armor, shield, sword, dagger, 6 torches, backpack, waterskin, 1 week's iron rations, 10' pole, *potion of healing*.

Personality: A devotee of Typhon, Ondart sees exploring Dwimmermount as part of a noble "crusade" against chaos.

Helouys (Level 2 Lawful Female Fighter)

AC 6, Move 60' (20'), HP 8, ATK Two-handed sword (7+, 1d10+3) or Dagger (thrown) (9+, 1d4), SV F2, ML 0, XP 20

Ability Scores: STR 16 INT 9 WIS 8 CON 11 DEX 12 CHA 11

Proficiencies: Fighting Style (two-handed weapon), Bargaining

Equipment: Plate armor, two-handed sword, 3 daggers, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, 2 flasks of oil, *potion of heroism*.

Personality: None too bright, Helouys listens to her "betters" without question. Nevertheless, she hopes to become rich as a result of her explorations.

Genevote (Level 1 Neutral Female Mage)

AC 0, Move 120' (40'), HP 2, ATK Dagger (10+, 1d4) or Dagger (thrown) (10+, 1d4), SV M1, ML 0, XP 13

Ability Scores: STR 11 INT 15 WIS 15 CON 9 DEX 9 CHA 8

Proficiencies: Loremastery, Knowledge (history), Knowledge (Termaxian lore)

Spells: 1-magic missile, read languages

Equipment: Dagger, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, vial of holy water.

Personality: Distrusted by her comrades, Genevote is a new addition to the Fists. She is here solely for her knowledge of ancient history and Termaxian lore.

Enjorran of Typhon (Level 2 Lawful Male Cleric)

AC 4, Move 60' (20'), HP 9, ATK War hammer (9+, 1d6+1), SV C2, ML 0, XP 20

Ability Scores: STR 14 INT 11 WIS 18 CON 10 DEX 6 CHA 5

Proficiencies: Divine Blessing, Theology Spells: 1 1st

Equipment: Chain mail, shield, war hammer, 6 torches, backpack, waterskin, 1 week's

iron rations, 10' pole, wooden holy symbol, 2 small sacks, *scroll of cure light wounds*.

Personality: Enjorran defers to Jehan in most matters, but considers himself more "in tune" with the will of Typhon. As such, he will sometimes question Jehan's judgment, especially when he fears that the other cleric's zeal could lead to disaster.

Yurain (Level 1 Lawful Dwarven Vaultguard)

AC 8, Move 60' (20'), HP 5, ATK Sword (8+, 1d6+2) or Light crossbow (10+, 1d6), SV F1, ML 0, XP 10

Ability Scores: STR 17 INT 9 WIS 10 CON 11 DEX 12 CHA 11

Proficiencies: Goblin-Slaying, Caving Equipment: Plate armor, *shield* +1, sword, light crossbow, case with 30 quarrels, 6 torches, backpack, waterskin, 1 week's iron rations, 10' pole.

Personality: Though as dedicated to the fight against chaos as any member of the Fists, Yurain's main interest is in locating the dwarven cemeteries rumored to lie within Dwimmermount, to ensure that they are not desecrated.

Party #3 (4,065 Experience Points):

The Crimson Band

So named because of the color of the surcoats they have adopted, the Crimson Band has high hopes of earning enough wealth to one day raise an army and reclaim the abandoned fortress of Winterburg for themselves. The Fists are currently in Yethlyreom hiring mercenaries.

Specialties: Recruiting and leading mercenary troops, garrisoning dungeon, siege tactics & engineering

Future Plans: They plan to spend the treasure they take from Dwimmermount on purchasing a license to operate a mercenary company in Adamas as well. They intend for these troops to establish garrisons around Dwimmermount, so that Daniau can gain information on comings and goings from the dungeon. With luck, his men will be in a position to win glory by protecting the safety of the City-States from whatever horrors may emerge. To this end, they will provide other employers with mercenaries for such garrison duty at well below market price.

Daniau (Level 3 Male Lawful Fighter)

AC 7, Move 60' (20'), HP 18, ATK Two-handed sword (7+, 1d10+4) or Dagger (thrown) (9+, 1d4), SV F3, ML 0, XP 50

SAMPLE JOBS AND PAY RATES FOR THE CRIMSON BAND

Rate	Sample Job
400 gp/month	Draw up plans for an assault on the Palace of Sempiternal Wisdom of Volmar, considering the logistics of passage through the Hidden Portal.
400 gp/week	Once the Laboratory level is mostly clear, use the Pool of Life to create and train a disciplined unit of beastman defenders.
400 gp/day	Assault the Pool of Life and retake it from the control of another faction.
Base rates	Path of Mavors (1),
Hazard pay	House of Portals (3A), Reservoir (3B)
Perilous levels	Halls of Lesser Secrets (4)

Ability Scores: STR 14 INT 14 WIS 11 CON 12 DEX 12 CHA 16

Proficiencies: Command, Fighting Style (two-handed weapon), Knowledge (local politics), Leadership,

Equipment: *Plate armor* +1, *two-handed sword* +1, 3 daggers, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, 2 flasks oil.

Personality: Daniau fancies himself a leader of men and dreams of one day becoming an important player in the politics of the region.

Foursi (Level 3 Male Lawful Fighter)

AC 7, Move 120' (40'), HP 20, ATK Spear (6+, 1d8+5) or Spear (thrown) (6+, 1d6+1), SV F3, ML 0, XP 50

Ability Scores: STR 16 INT 13 WIS 13 CON 9 DEX 16 CHA 10

Proficiencies: Combat Reflexes, Precise Shooting, Intimidation, Military Strategy

Equipment: *Chain mail +1, spear +1*, light crossbow, case with 30 quarrels, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope.

Personality: Foursi is Daniau's brother and best friend. The two of them work well together.

Moryse (Level 3 Neutral Male Fighter)

AC 7, Move 60' (20'), HP 18, ATK War hammer (8+, 1d6+3), SV F3, ML 0, XP 50

Ability Scores: STR 13 INT 11 WIS 12 CON 12 DEX 11 CHA 11

Proficiencies: Dungeon Bashing, Gambling, Survival

Equipment: Plate armor, shield, small sack, 50' rope, shovel, backpack, hammer, 10 ' pole, waterskin, 1 week's iron rations, potion of extra-healing, scroll of ward against lycanthropes.

Personality: Moryse is after one thing—money. His loyalty to the Band appears strong, but he would sacrifice anyone in his party to gain wealth or magic items.

Kirthas (Level 2 Neutral Male Elven Spellsword)

AC 4, Move 120' (40'), HP 9, ATK Sword (8+, 1d6+1), SV F2, ML 0, XP 29

Ability Scores: STR 15 INT 14 WIS 15 CON 12 DEX 12 CHA 9

Proficiencies: Loremastery, Mimicry, Nat-

Spells: 1st: 2 (charm person, detect magic, sleep)

Equipment: *Leather armor* +1, shield, sword, flint and steel, small sack, lantern, wineskin, 1 week's iron rations.

Personality: As an elf, Kirthas is an outsider and is treated as such. He does not resent this though, and in fact enjoys the company of the "ephemerals," whose ways he finds fascinating.

Guimar of Mavors (Level 3 Lawful Male Cleric)

AC 6, Move 90' (30'), HP 15, ATK Mace (8+, 1d6+1), SV C3, ML 0, XP 50

Ability Scores: STR 11 INT 6 WIS 14 CON 11 DEX 14 CHA 8

Proficiencies: Fighting Style (weapon and shield), Healing

Spells: 1st: 2

Equipment: *Mace* +*I*, chain mail, shield 6 torches, backpack, waterskin, 1 week's iron rations, 10' pole, wooden holy symbol, *scroll of neutralize poison*.

Personality: Simple-minded and thick, Guimar wants only to slay in the name of his god.

Sedile (Level 2 Lawful Female Mage)

AC 2, Move 120' (40'), HP 6, ATK Dagger (10+, 1d4) or Dagger (thrown) (9+, 1d4), SV M2, ML 0, XP 29

Ability Scores: STR 11 INT 14 WIS 13 CON 11 DEX 14 CHA 13

Proficiencies: Magical Engineering, Collegiate Wizardry, Mapping

Spells: 1st: 2 (hold portal, protection from evil, sleep)

Equipment: Dagger, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, $ring\ of\ protection\ +1$.

Personality: Sedile believes strongly in Daniau's vision and is devoted to him—to the point of being in love with him, though Daniau has not returned her affections.

Party #4 (8,125 Experience Points):

Heralds of the Silver Dawn

The Heralds are admirers of Turms Termax and seek to explore Dwimmermount in order to follow in his footsteps. Led by the mage Alina, the Heralds have a strong dislike of clerics of all sorts and will attack them in preference to other targets.

Specialties: Researching, locating, retrieving, and deciphering magic items and Termaxian lore

Plans: The Heralds plan to spend the treasure they take from Dwimmermount amassing alchemical lore and supplies. They intend to hire sages to scour the libraries of the City-States and purchase or steal every tome they believe will be important in interpreting any new evidence found in the dungeon. Conflicts with other factions may arise when the Heralds refuse to share the last copy of a key text, or have cornered the market on essential reagents.

Alina (Level 3 Chaotic Female Mage)

AC 1, Move 120' (40'), HP 8, ATK Dagger (10+, 1d4) or Dagger (thrown) (9+, 1d4+1), SV M3, ML 0, XP 65

Ability Scores: STR 6 INT 17 WIS 10 CON 10 DEX 9 CHA 13

Proficiencies: Mystic Aura, Intimidation, Knowledge (Termaxian lore), Leadership

Spells: 1st: 2 (charm person, floating disc, detect magic, ventriloquism); 2nd: 1 (invisibility, levitate, locate object)

Equipment: *Dagger* +1, 6 torches, backpack, waterskin, 1 week's iron rations, 50' rope, *cloak of protection* +1.

Personality: Alina is a self-important tyrant; she commands the Heralds as if she were a goddess speaking to her worshipers.

Nantier (Level 3 Chaotic Male Mage)

AC 1, Move 120' (40'), HP 9, ATK Dagger (9+, 1d4+1) or Dagger (thrown) (9+, 1d4), SV M3, ML 0, XP 65

Ability Scores: STR 13 INT 15 WIS 10 CON 15 DEX 15 CHA 10

Proficiencies: Quiet Magic, Collegiate Wizardry, Leadership

Spells: 1st: 2 (hold portal, light, sleep); 2nd: 1 (ESP, knock)

Equipment: Dagger, backpack, waterskin, 1 week's iron rations, lantern, *scroll of clair-voyance*.

Personality: Nantier believes that he is Alina's superior in both magic and leadership. However, he is biding his time before he attempts to eliminate her and seize control of the Heralds.

AC 4, Move 120' (40'), HP 14, ATK Sword (8+, 1d6+1) or Dagger (thrown) (7+, 1d4), SV T4, ML 0, XP 80

Ability Scores: STR 11 INT 13 WIS 10 CON 12 DEX 16 CHA 8

Proficiencies: Cat Burglary, Skulking, Signaling (thieves' cant), Tracking

Thief Skills: Open Locks: 15+ Find/Remove Traps: 15+ Pick Pockets: 14+ Move Silently: 14+ Climb Walls: 4+ Hide in Shadows: 16+ Hear Noise 11+ Backstab x2

Equipment: *Short sword +1, dagger +1,* leather armor, backpack, waterskin, lantern, 1 week's iron rations, 10' pole, 50' rope, thieves' tools.

Personality: Guibour cares little for Alina or indeed any of the mages in the party, but she recognizes their utility in extracting the great wealth to be found in the halls of Dwimmermount. She will do nothing to assist them if it would endanger her own life.

Betan (Level 3 Chaotic Male Mage)

AC 2, Move 120' (40'), HP 7, ATK Dagger (10+, 1d4) or Dagger (thrown) (9+, 1d4), SV M3, ML 0, XP 65

Ability Scores: STR 9 INT 16 WIS 10 CON 13 DEX 13 CHA 12

Proficiencies: Loremastery, Alchemy, Knowledge (Thulian lore), Naturalism

Spells: 1st: 2 (hold portal, read languages, shield, sleep); 2nd: 1 (continual light, mirror image, web)

Equipment: Dagger, lantern, backpack, wineskin, 1 week's iron rations, 50' rope, *ring of protection +1*, *potion of ESP*.

Personality: A scholar by inclination, Betan does not want to venture into Dwimmermount. He is a coward and fears death above all things, but he understands that sometimes, one must brave death in order to gain great power.

Sernays (Level 4 Neutral Male Fighter)

AC 9, Move 90' (30'), HP 13, ATK Sword (4+, 1d6+6), SV F4, ML 0, XP 80

Ability Scores: STR 16 INT 13 WIS 13 CON 10 DEX 13 CHA 9

Proficiencies: Fighting Style (weapon and shield), Weapon Focus (swords and daggers), Bargaining, Profession (mercenary),

Equipment: *Sword* +2, plate armor, *shield* +1, backpack, waterskin, 1 week's iron rations, 6 torches, 2 small sacks.

Personality: Sernays is a mercenary, pure and simple. So long as he is well paid and treated, he will obey Alina.

Pariset (Level 4 Chaotic Male Fighter)

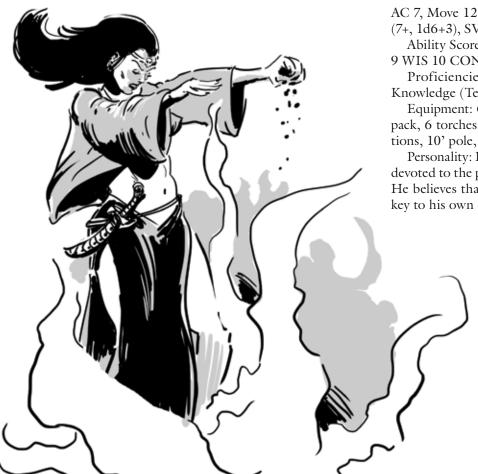

AC 7, Move 120' (40'), HP 11, ATK Sword (7+, 1d6+3), SV F4, ML 0, XP 80

Ability Scores: AC 2 HP 11 STR 15 INT 9 WIS 10 CON 11 DEX 11 CHA 10

Proficiencies: Running, Skirmishing, Knowledge (Termaxian lore),

Equipment: *Chain mail +1, shield +1,* backpack, 6 torches, waterskin, 1 week's iron rations, 10' pole, 2 small sacks.

Personality: Pariset is an oddity—a warrior devoted to the philosophy of Turms Termax. He believes that Dwimmermount holds the key to his own eventual apotheosis.

Party #5 (16,251 Experience Points):

The Seekers

The Seekers, based in Muntburg, are as their name suggests, looking for lost magic and knowledge hidden within Dwimmermount. They are Lawful in their orientation overall and willing to assist fellow adventurers.

Specialties: Discovery of knowledge located in dangerous, difficult to reach, and accursed vaults

Future Plans: The Seekers plan to spend the treasure they take from Dwimmermount by offering rewards for artifacts, maps, and nuggets of information which might help them assemble the pieces of the puzzle emerging from the dungeon. They intend to hire a number of antiquarians and investigators to handle the process of verifying these claims and making payment, who will be housed in some of the vacant apartments within Muntburg.

SAMPLE JOBS AND PAY RATES FOR THE SEEKERS

SAMPLE JOBS AND PAY RATES FOR THE SEEKERS		
Rate	Sample Job	
1,800 gp/month	Climb to the top of Dwimmer- mount, keep watch on the Moon Pool by looking down its' shaft, question birds about local events	
1,800 gp/week	Rig hammocks in Dwimmer- mount's elevator shaft, monitor but do not intercept comings and goings	
1,800 gp/day	Locate the personal items listed in Imperial records as having been taken from Turmax upon his arrest	
Base rates	1 thru 4	
Hazard ×2	Halls of Greater Secrets (5)	
Lethal ×3	Manufactory (6A), Ossuary (6B)	

Ysabelon of Asana (Level 5 Lawful Female Cleric)

AC 7, Move 60' (20'), HP 18, ATK Mace (7+, 1d6+1), SV C5, ML 0, XP 200

Ability Scores: STR 9 INT 16 WIS 13 CON 7 DEX 12 CHA 17

Proficiencies: Apostasy (1st: detect danger, pass without trace; 2nd: choking grip, produce fire), Contemplation, Knowledge (history), Knowledge (Thulian lore), Leadership, Theology

Spells: 1st: 2; 2nd: 2

Equipment: Plate armor, shield, *mace +1*, silver holy symbol, backpack, waterskin, 1 week's iron rations, 6 torches, 12 iron spikes, 2 small sacks, *ring of invisibility*, mirror, *scroll of cure light wounds*, *resist fire*, & cure disease.

Personality: A slight, bookish woman, Ysabelon sees Dwimmermount as the greatest source of forgotten lore in the entire world. Sometimes, this leads her to take unnecessary risks.

Richal (Level 5 Neutral Male Fighter)

AC 10, Move 60' (20'), HP 34, ATK Sword (4+, 1d6+5), SV F5, ML 0, XP 200

Ability Scores: STR 17 INT 9 WIS 11 CON 7 DEX 17 CHA 6

Proficiencies: Skirmishing, Engineering, Riding, Siege Engineering

Equipment: Plate armor, *shield +1*, *sword +1*, +3 vs. regenerating monsters, 12 iron spikes, backpack, lantern, wineskin, 1 week's iron rations, 10' pole, 50' rope.

Personality: Richal sees himself as a scholar as well as a fighting man. He is as genuinely interested in Dwimmermount's secrets as anyone in the Seekers.

Marguerin (Level 4 Lawful Female Mage)

AC 3, Move 120' (40'), HP 14, ATK Dagger (8+, 1d4+1) or Dagger (thrown) (8+, 1d4+1), SV M4, ML 0, XP 135

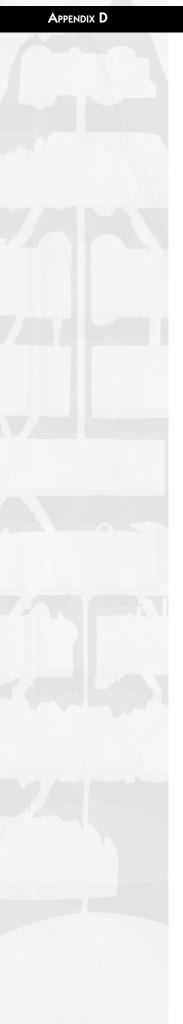

Ability Scores: STR 12 INT 15 WIS 12 CON 14 DEX 11 CHA 10

Proficiencies: Sensing Power, Art (illustration), Mapping

Spells: 1st: 2 (charm person, detect magic, magic missile); 2nd: 2 (continual light, ESP, levitate)

Equipment: *Dagger* +1, backpack, 3 small sacks, lantern, 50' rope, waterskin, 1 week's iron rations, *bracers of armor (AC 3)*.

Personality: Marguerin hopes to redeem the name of "mage" in the wider world by finding and sharing the secrets of Dwimmermount with it. She is pained by the way that Turms Termax has besmirched the study of magic in the eyes of many.

Jeffroy (Level 5 Neutral Male Thief)

AC 6, Move 120' (40'), HP 11, ATK Sword (9+, 1d6-1) or Shortbow (6+, 1d6), SV T5, ML 0, XP 200

Ability Scores: AC 4 HP 11 STR 7 INT 8 WIS 14 CON 8 DEX 17 CHA 12

Proficiencies: Contortionism, Skulking, Mimicry, Trapping

Thief Skills: Open Locks: 14+ Find/Remove Traps: 14+ Pick Pockets: 13+ Move Silently: 13+ Climb Walls: 4+ Hide in Shadows: 15+ Hear Noise 10+ Backstab x3

Equipment: Leather armor +2, dagger +1, sword, shortbow, quiver with 20 arrows, backpack, thieves' tools, waterskin, 1 week's iron rations, 12 iron spikes, 50' rope, potion of healing, potion of climbing.

Personality: Jeffroy is a wag and finds the other members of the Seekers too stuffy for his tastes. He is prone to telling bad jokes and playing pranks on his comrades.

Ogal (Level 4 Dwarven Vaultguard)

AC 9, Move 90' (30'), HP 24, ATK Battle axe (6+, 1d6+2), SV F4, ML 0, XP 80

Ability Scores: STR 13 INT 9 WIS 14 CON 16 DEX 14 CHA 12

Proficiencies: Goblin Slaying, Mapping, Mountaineering

Equipment: *Plate armor* +1, shield, *battle axe* +1, backpack, wineskin, 1 week's iron rations, 50' rope, lantern, *potion of heroism*.

Personality: Ogal believes that Dwimmermount holds information about the true origin of the dwarves and he intends to find it.

Party #6 (65,001 Experience Points):

The Free Swords

The Free Swords are a mercenary band based out of Adamas. They hire themselves out to any who will pay the exorbitant fees. Currently, they are working with an alchemist in Adamas who

believes that there are forgotten alchemical formulae hidden within Dwimmermount and he has tasked the Swords with finding them.

Specialties: Invisible scouting and infiltration followed by devastating tactical strikes and fireballs

Future Plans: The Free Swords keep many of the merchants, specialists, and sages in Adamas on their payroll. Through these henchmen they run a number of businesses, most notably the arms & armor shops that employ most of Vonias's clan. The Swords plan to spend the treasure they take from Dwimmermount by expanding their mercantile interests to Muntburg and hiring lesser parties to help secure the fortress while Adaina's band plunders the depths.

SAMPLE JOBS AND PAY RATES FOR THE FREE SWORDS

Rate	Sample Job	
1,800 gp/month	Patrol Adamas, investigate rumors of a possible vault full of undead beneath the city, pre- pare for its possible eruption	
1,800 gp/week	Establish secret camp near entrance to Dwimmermount, use clairvoyance to scry locations within and record comings and goings	
1,800 gp/day	Find the alchemist Euthalius, a Termaxian necrolyte believed to have been sealed in the dun- geon centuries ago	
Base rates	1 thru 5	
Hazard pay	Manufactory (6A), Ossuary (6B)	
Perilous levels	Deep Hollows (7)	

Adaina (Level 6 Neutral Female Elven Spellsword)

AC 7, Move 120' (40'), HP 20, ATK Sword (3+, 1d8+4) or Shortbow (6+, 1d6), SV F6, ML 0, XP 570

Ability Scores: STR 16 INT 15 WIS 9 CON 12 DEX 15 CHA 15

Proficiencies: Passing Without Trace, Precise Shooting, Weapon Focus (bows and crossbows), Caving, Mapping

Spells: 1st: 2 (charm person, shield, sleep); 2nd: 2 (invisibility, mirror image, phantasmal force); 3rd: 2 (clairvoyance, fire ball, haste)

Equipment: *Chain mail* +2, *sword* +2, shortbow, quiver 20 arrows, 5 *arrows* +1, backpack, waterskin, 1 week's iron rations, 50' rope, *potion of healing*.

Personality: Adaina is a fairly typical elf—aloof and disdainful of "ephemerals." However, she takes great pride in her skills as an explorer and has vowed to plumb the depths of Dwimmermount to find what her employer seeks.

Hemmet of Donn (Level 7 Lawful Male Cleric)

AC 5, Move 90' (30'), HP 40, ATK Mace (7+, 1d6), SV C7, ML 0, XP 440

Ability Scores: STR 12 INT 11 WIS 14 CON 16 DEX 11 CHA 7

Proficiencies: Righteous Turning, Sensing Evil, Knowledge (occult), Profession (undertaker)

Spells: 1st: 2; 2nd: 2; 3rd: 2; 4th: 1; 5th: 1

Equipment: Chain mail, shield, mace, *staff* of *striking* (twenty-six charges), backpack, wineskin, 1 week's iron rations, *wand of enemy detection*, 12 iron spikes, silver holy symbol, 3 stakes & mallet.

Personality: Gloomy and sour-faced, Hemmet is an unhappy presence in the Swords. Were it not for his knowledge of and skill in dealing with the undead, it is unlikely that he would have been asked to join the party.

Feliz (Level 6 Neutral Male Fighter)

AC 9, Move 60' (20'), HP 37, ATK Sword (2+, 1d6+7), SV F7, ML 0, XP 440

Ability Scores: STR 15 INT 5 WIS 6 CON 17 DEX 13 CHA 11

Proficiencies: Berserkergang, Dungeon Bashing, Endurance, Intimidation, Labor (mining)

Equipment: Plate armor, shield +1, sword +1 (int 9; see invisible, detect evil, find traps; neutral; psyche 4), backpack, 50' rope, 10' pole, mirror, 3 small sacks, waterskin, 1 week's iron rations.

Personality: Big, thick, and foolish, Feliz is a powerful warrior, but needs to be kept on a short leash, lest he do something stupid that could endanger the party.

Chartain (Level 6 Neutral Male Fighter)

AC 8, Move 60' (20'), HP 35, ATK War hammer (1+, 1d6+8), SV F7, ML 0, XP 440

Ability Scores: STR 16 INT 7 WIS 10 CON 16 DEX 10 CHA 9

Proficiencies: Combat Trickery (force back), Fighting Style (weapon and shield), Weapon Focus (flails and hammers), Language (Elven), Naturalism

Equipment: Plate armor, shield, war hammer +3, gauntlets of ogre power, bag of holding, 50' rope, 10' pole, 12 iron spikes, wineskin, 1 week's iron rations, silver mirror.

Personality: Chartain is fascinated by elves and joined the Swords months ago to spend time with Adain.

Dooin (Level 6 Neutral Male Mage)

AC 3, Move 120' (40'), HP 16, ATK Dagger (8+, 1d4+1) or Dagger (thrown) (7+, 1d4+1), SV M6, ML 0, XP 570

Ability Scores: STR 10 INT 15 WIS 8 CON 10 DEX 15 CHA 10

Proficiencies: Elven Bloodline, Illusion Resistance, Alchemy, Healing, Seduction

Spells: 1st: 2 (magic missile, magic mouth, shield); 2nd: 2 (detect evil, ESP, invisibility); 3rd: 3 (clairvoyance, infravision, lightning bolt)

Equipment: *Dagger +1*, *ring of protection* +2, *wand of illusion*, *potion of undead control*, backpack, 6 torches, waterskin, 1 week's iron rations, silver mirror, 12 iron spikes.

Personality: Dooin is risk averse—not cowardly, but of the opinion that there is no such thing as "too much preparation." He also grooms himself immaculately and takes inordinate pride in his physical appearance.

Bietron (Level 7 Neutral Female Thief)

AC 5, Move 120' (40'), HP 24, ATK Sword (6+, 1d6+1) or Shortbow (4+, 1d6+1), SV T7, ML 0, XP 440

Ability Scores: STR 11 INT 10 WIS 9 CON 11 DEX 16 CHA 13

Proficiencies: Alertness, Trap Finding, Gambling, Trapping

Thief Skills: Open Locks: 10+ Find/Remove Traps: 11+ Pick Pockets: 10+ Move

Silently: 10+ Climb Walls: 3+ Hide in Shadows: 12+ Hear Noise 8+ Backstab x3

Equipment: Leather armor +1, short sword +1, dagger +1, shortbow, quiver with 20 arrows, 5 arrows +1, scroll of ward against undead, backpack, thieves' tools, 3 small sacks, waterskin, 1 week's iron rations, 50' rope, 12 iron spikes, mirror.

Personality: Bietron loves testing herself against danger in all forms, but she is especially fond of encountering new traps, much to the chagrin of Dooin.

Vonias (Level 6 Lawful Dwarven Vaultguard)

AC 10, Move 90' (30'), HP 40, ATK War hammer (2+, 1d6+5), SV F6, ML 0, XP 320 Ability Scores: STR 18 INT 13 WIS 9 CON 14 DEX 13 CHA 12

Proficiencies: Bargaining, Combat Reflexes, Dwarven Brewing, Diplomacy, Land Surveying, Knowledge (local politics)

Equipment: Plate armor +2, war hammer +2, shield, potion of extra-healing, ring of fire resistance, backpack, lantern, 50' rope, waterskin, 1 week's iron rations.

Personality: Vonias is friendly and affable; he loves nothing more than engaging in conversations with his fellows about their shared adventures. He also likes meeting new people.

APPENDIX

The Four Worlds

HOUGH THE HEAV-ENS are filled with planets, sages single out four of them as particularly noteworthy. These four—Kythirea, Telluria, Ioun, and Areon have a shared history of interaction, from commerce to colonization to

interaction, from commerce to colonization to war, stretching back millennia. Dwimmermount is the nexus for these so-called Four Worlds. During its height, the dungeon contained active interplanetary transfer points on The Hall of Portals (Level 3A), as well as hosting astral vessels that plied the space between the Four Worlds before coming to rest in the Hangar (Room 19) of The Divinitarium (Level 0). Consequently, a brief discussion of each of these worlds is useful to the referee running a campaign centered on Dwimmermount. What follows is intended only as an overview. Should the campaign shift to one or more of these worlds, the referee is encouraged to take the information presented here and expand upon it.

Telluria

Telluria is the scholarly name for the world on which Dwimmermount is located. Almost no one on the world uses the name, preferring instead simply to call it "the world," as if it were the only one. Even if not technically true, Telluria is the most heavily—and diversely—populated of the Four Worlds. It is also the world from which the Great Ancients, the Eld, and, some say, the Kythireans sprang. There is also the fact all the other worlds

and planets revolve around Telluria, which suggests that there is indeed something special about it.

During the time of the Great Ancients, the whole of Telluria was explored and inhabited. In the aftermath of their fall and that of the Eld who succeeded them, much knowledge about the world has been lost. The kingdoms of men that arose in their wake are separated and scattered, often completely unaware of one another's existence. The world is dotted with ruins and evidence that once Telluria was a more advanced and sophisticated world than it is now.

Ioun

Occupying the first orbit in the heavens around Telluria, Ioun (also called simply "the Moon") is Telluria's sole natural satellite. Ioun only shows one of its faces to sub-lunar observers, its so-called Light Side, while its Dark Side cannot be seen at all. The surface of both sides is covered with craters, the result of extensive mining operations that were once carried out on the Moon, in search of the valuable magical stones that abound there. Both the Great Ancients and the Eld poured untold resources into extracting these *ioun stones* (see *Appendix A*, *New Magic Items*, p. 328), and so successful were they that the stones are now exceedingly rare.

The Light Side of Ioun is governed by Law, while the Dark Side is governed by Chaos. Magic—and indeed *reality*—works differently on each side and, unless one has been properly attuned beforehand (see Room 11 on Level 0), there may be dire consequences to visiting them. Fortunately, most activity on Ioun takes place below its surface where

neither Law nor Chaos holds sway. Here dwell nearly all of the Moon's native species, including the insectoid Iounians (see *Appendix C, New Monsters*, p. 355).

The Iounians once held sway over the all of Ioun, including its surface. The Great Ancients drove them underground, eventually enslaving them to mine for them, a practice the Eld continued. Needless to say, this did little to improve the demeanor of the Iounians, who were already suspicious of non-insectoid life. Now, they attack almost anyone who dares to enter their domain. There have also long been rumors that some Iounians have taken to life on the Dark Side and consort with demons for some foul purpose.

In addition to the Iounians, the following monster types can be encountered on the Moon: boring beetle*, carcass scavenger, giant ant, giant beetle, giant carnivorous fly, giant centipede, giant slug*, giant spider, gloom crawler*, morlock, piercer*, subterranean locust, tenebrous worm*. For monsters marked with *, see *Appendix C*, *New Monsters*, p. 341.

Kythirea

Kythirea occupies the third orbit in the heavens and is commonly referred to as "the Green Planet" because of its appearance in the nighttime sky. Observed from Telluria, Kythirea appears to be a green point of light visible just above the horizon at dawn and dusk. The name is also apt for another reason: Kythirea is covered in lush jungles and other similarly plant-filled environments. In this respect, it is the mirror image of Areon (see below), for Kythirea teems with life of all sorts—including its own race of men (see *Appendix C*, *New Monsters*, p. 356).

In the past, travel to Kythirea was far more common than it is today. Indeed, many plants and animals found on Telluria were originally native to the Green Planet, transplanted by sorcerers and scholars who found them useful. Both the Great Ancients and the Eld traveled to Kythirea in the past, as evidenced by the large number of ruined

structures to be found amidst the planet's jungles. These structures served a number of purposes, but a great many were established to extract azoth from the planet. The native species resisted such exploitation and no doubt played a role in expelling them from Kythirea.

Consequently, Kythirea is the most isolated of the Four Worlds, as its inhabitants tend to both hostile to outsiders and willing to use violence against them. The two foremost peoples of the Green Planet are the lizard men and the green-skinned men known simply as Kythireans. The lizard men of this world are very different than their Tellurian counterparts, being highly advanced in many cultural arts, including magic. The Kythireans are similarly advanced and may be related to the Great Ancients and/or the Eld. Unlike either of them, they are an entirely female and use their magic to reproduce themselves.

In addition to the lizard men and the Amazonian Kythireans, the following monster types can be encountered on the Green Planet: algoid*, archer bush*, ascomoid*, basidirond*, basilisk, black pudding, crystal ooze*, dinosaur, gas spore*, gelatinous cube, giant lizard, giant tick*, gray ooze, gray worm, green slime, jellyfish plant*, medusa, memory moss*, muculent worm*, ochre jelly, olive slime*, phycomid*, purple moss*, purple worm, rot grub, shambling mound*, shrieker, slime zombie*, stirge, troglodyte, vampire rose*, and yellow mold. For monsters marked with *, see *Appendix C, New Monsters*, p. 341.

Areon

Known as "the Red Planet," both for its appearance and for its blood-drenched history, Areon occupies the fifth orbit in the heavens. In the past, trade with and travel to Areon were more common they are today, in large part due to the activities of the Eldritch Empire, whose capital, the darkly beautiful city of Sytor Arra, was located on Areon. With the overthrow of the Eld by the Thulians, most of the standing portals to Areon were destroyed and contact with the planet and its inhabitants was proscribed. Of course, that did not prevent daring sages and seekers of for-

bidden knowledge from finding alternate routes to Areon, a tradition that has continued even in the wake of the Thulians' own overthrow.

Areon is sometimes called the "home" of the Eld, but the truth is that it is the Red Planet is actually the place of their exile, and it was to Areon that they fled again once Telluria proved inhospitable to them. Since that time, the Eldritch Empire has fragmented into dozens of squabbling successor states, many no larger than a single city. This fragmentation has also had the unintended side effect of granting freedom to many slave races, including men, some of whom have established their own petty kingdoms on the Red Planet. Unfortunately for would-be visitors, these slave races have adopted many aspects of Eldritch culture and are no more friendly to outsiders than are the Red Elves.

Because the Eldritch Empire relied heavily on weird, Chaotic magic to support its depredations across the Four Worlds, such magic remains common on Areon. Likewise, the Eld were renowned for their dealings with demons, which is why they are far more likely to be encountered on the Red Planet than on any of the other Four Worlds. Indeed, there are rumors that several demon lords have established themselves upon Areon and now rule there rather than from the Demon Worlds of the Void. If such rumors are true, it is little wonder that there remains, even now, such a strong prejudice against any sort of commerce with the Red Planet.

In addition to the Eld, the following monster types can be encountered on Areon: albino ape, arcane cadaver*, arcanoplasm*, bugbear, caryatid column*, chimera, crypt thing*, demon (any)*, demon boar, doppelganger, eldritch bones*, gargoyle, gnoll, golem (any)*, green guardian*, minotaur, necrophidius*, orc, owl bear, phase tiger, rust monster, shadow, skullmural*, thessalgorgon*, throghrin, and troll. For monsters marked with *, see *Appendix C, New Monsters*, p. 341.

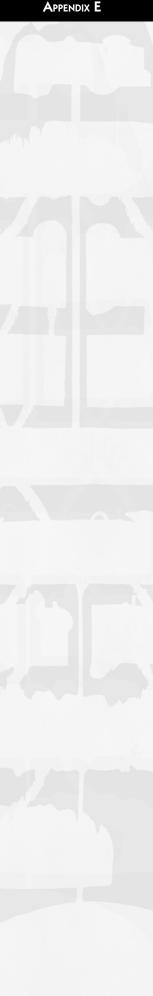

The Astral Plane

The Four Worlds float in vast expanse of the Astral Plane, sometimes called Astral Space or simply Space. The Astral Plane is suffused with *ether*. Ether is a subtle, luminiferous, almost immaterial substance that behaves in a liquid-like fashion when interacting with objects—and beings—made of more conventional matter. Alchemists and magicians believe ether to be the fifth element (or "quintessence") and there is much evidence to support this view.

When introduced into a world, ether thickens and acquires a more conventional substance, appearing like a silvery-black liquid metal. In this form, it is known as azoth (see *Appendix F*, *Azoth*, p. 393).

Because of its liquid qualities, specially constructed vessels can be specially constructed to travel through the ether in a fashion similar to water. At the dawn of the First Era, the Great Ancients fled through the ether to Telluria in a domed city, while the Thelidu pursued in a crystal hemisphere. Later generations of men built *astral vessels* large and

small to sail the ether (see Appendix A, New Magic Items, p. 323).

It is also possible to "swim" through the ether, though this is slower and far less efficient than using a vessel. Men doing so are soon swept astray unless a helm of astral movement (see Appendix A, New Magic Items, p. 328) allows them to perceive the treacherous currents within the ether. Such perception comes naturally to the denizens of the Astral Plane (listed below).

Floating in the Astral Plane are numerous smaller bodies, not large enough to be deemed true worlds. Some of these bodies are inhabited, both by creatures native to Space and by those who have come here from elsewhere. The most significant of these inhabitants are the Astral Reavers, a race of men who took up residence here centuries ago and have been warped by constant exposure to the ether, becoming marauding servants of Chaos.

In addition to the Astral Reavers, the following monster types can be encountered on the Astral Plane: demon (any)*, djinni, efreeti, elemental, empyreal*, intellect devourer*, invisible stalker, quintelemental*, phase spider*, and xorn*. For monsters marked with *, see Appendix C, New Monsters, p. 341.

Other Planes of Existence

No one except sages speaks of "planes of existence," but few deny that there are "worlds," "realms," or "spaces" beyond the material world. The nature and number of these other worlds is, as with so many things, debated by pedants, but the most commonly acknowledge planes of existence are the following:

The four Elemental Planes: These realms are completely inhospitable to non-elemental life without the aid of powerful magic, which is why so little is known about them. Nevertheless, magicians and clerics alike attest to their existence, as do powerful elemental beings summoned from them.

The Incorporeal Plane: Also called the Dreamlands or the Ghostlands, the Incorporeal Plane exists between the spaces of material things and is accessible through magic. Some mystics claim that the Incorporeal Plane is also accessible in sleep, while others, whose theological opinions are decidedly heterodox, state that the spirits of the dead are somehow "trapped" within the Incorporeal Plane. There may be creatures native to this plane, but evidence of their existence is scanty.

The Abyss: Also called the Great Void, the Abyss is said to exist outside—outside where depends on the cosmological model one accepts for the cosmos. Regardless, the Abyss is the abode of demons and, as such, is wholly inimical to Man. Naturally occurring portals to the Abyss are a common source

of the Chaotic radiation that is slowly corrupting the material world and its inhabitants.

In addition, many of the gods are said to have extra-planar realms that serve as their abodes and the abodes of the honored dead who serve them in the afterlife.

The Zodiac

Given the large number of visitors from the physical heavens, it is little wonder then that many Tellurians pay so much attention to the stars and planets, with many fields of lore and magic associated with them. One such field, astrology, attempts to divine future events by observing the movements of the planets through the twelve constellations of the zodiac. These constellations are (in order):

- Sun
- Moon
- Star
- Jester
- Rogue
- Cataphract
- Throne
- Flames
- Key Skull
- Eurvale
- Ruin

There is also a thirteenth "constellation," known as "the Void," occupying an area in the sky where there are in fact no stars whatsoever. Ancient legends claim that, in primordial ages, the gods warred against demons and so great was their struggle that the light of some stars was extinguished forever. Some sages theorize that the constellation of the Void is actually the Great Void of the Abyss, where the depredations of Chaos have devoured the very fabric of reality. These sages believe this may be the fate of Telluria one day as well, if demons and their cultists have their way...

Each constellation, including the Void, is associated with one of the calendar's 28-day months. Once, astrologers believed that the fates of men were influenced by the constellation of their birth month, but that belief fell out of disfavor long ago and is accepted by only the most superstitious. Of course, some astrologers instead theorize that it is not the stars of one's birth month that matter but those of nine other "greater constellations" whose locations in the heavens envelope several of the "lesser" thirteen. This theory has not found widespread acceptance, but many, in their zeal to find an explanation for the path of their lives other than their own decisions, have embraced it as the truth.

APPENDIX

Azoth

HE MOST PRECIOUS substance known to man, azoth is a lustrous, silvery-black liquid in all but the coldest temperatures. There, paradoxically, it becomes the gas known as quintessence. In this form, it suffuses the space between the worlds and stars, transmitting both energy and light. Sages say that quintessence is the most sublime of all the elements, being the very stuff of magic from which the gods wrought the cosmos.

Though a gas, quintessence behaves like a liquid, which is why old texts speak of "sailing the Quintessential Sea." With the right sort of vessel and the means to launch it into the Astral Plane, it is indeed possible to sail through quintessence to other worlds and, theoretically, even the stars themselves. Of course, no one has done this since the fall of the Thulian Empire, but the knowledge still exists; all that is lacking is the will to pursue it.

Long ago, for reasons none can explain, quintessence rained down on some worlds and satellites, becoming liquid azoth. In the past, Areon boasted the largest quantities of azoth, but millennia of extraction by the Eld have left that world largely bereft of this precious material. Today, traces of azoth can be found on Areon, Kythirea, Ioun, and Telluria, but the largest reservoir of azoth known to the Four Worlds is found beneath Dwimmermount. There the Great Ancients constructed an astral dome to continuously harvest azoth from the

heavens, artificially inducing the primordial quintessential rain.

Though often likened to quicksilver, another lustrous silver liquid, azoth is not in fact a metal at all. Consequently, it cannot be worked, but it can be used as a tempering agent to improve the qualities of actual metals, as well as other materials. In addition, azoth is strongly attuned to magical energies, which is why magicians and alchemists have long used it as a material in creating enchanted items. It is also why it is one of the most sought after and valuable substances in all of Telluria.

During the height of the Eldritch Empire, the extraction, distillation, and use of azoth reached its fullest flower. The Red Elves refined the techniques of the Great Ancients almost to the point of mass production, producing immense quantities of magical weapons, armor, and other items, particularly potions and elixirs. Of course, these techniques also led to the depletion of the azoth supplies on several worlds, which only further increased its rarity and value.

The Thulians were much more circumspect in their use of azoth, at least initially. Partly this was because of its shrinking supply and partly this was because of their natural suspicion of all things relating to arcane magic. The Thulians also suspected—with reason, as it turns out—that use of azoth could corrupts its handler and user. Of course, when Turms Termax and his cult overtook the Empire, such concerns were thrown to the wayside and azoth use resumed as it had under the Red Elves.

Unlike the Eld, the Termaxians did not reintro-

duce the massive use of azoth and azoth-infused items. Instead, they used it on a smaller, but more focused scale, one directed specifically toward the needs and desires of the cult's inner circle. Elite fighting men serving the cult had azoth-infused armor and weapons, while the rank and file did not. Likewise, azoth was used to augment magical powers, both spells and enchanting. And finally, it played a major role in the Termaxian quest for immortality, a quest that continues to this day.

When Dwimmermount was sealed off two centuries ago, azoth once again became extremely hard to acquire in many regions of the world. This led to both a decline in the production of magical items and a huge increase in the value of even a smallest amount of azoth. Little wonder then, that getting into Dwimmermount and to its legendary supply of azoth has proved so desirable!

Using Azoth in Your Campaign

As noted throughout this book, azoth has a number of uses, each of which is discussed in this section. Before getting to that, two things must be borne in mind. First, handling and using azoth has long-term consequences (see Side Effects of Azoth below). Second, because of the large quantities of raw azoth in Dwimmermount, some of these uses could disrupt the balance and feel of some campaigns. As written, the only limitation on azoth use is the difficulty in finding machines capable of properly distilling it (and the slowness of those machines). Theoretically, if more such machines were built and access to Dwimmermount—particularly The Reservoir (Level 3B)—were less restricted, all of the following could become, if not commonplace, at least more common. Consequently, a referee who does not want such a result should make some effort to restrict or at least limit the distillation of azoth. In the original campaign from which Dwimmermount sprang, this was accomplished primarily by playing up the inherent dangers in handling azoth. The player characters thus avoided touching it, let alone amassing it, and they did not make their knowledge of The Reservoir (Level 3B) available to any but a handful of trustworthy friends and allies. Of course, this was an inherently unstable situation, and as more NPC adventuring parties ventured into Dwimmermount, it was inevitable that The Reservoir and its Distillation Room would be discovered, leading to a "gold rush" situation that would forever change the campaign setting.

The referee who is uncomfortable with this possibility or who do not feel confident that he can come up with ways to limit the use and abuse of azoth is therefore advised to suggest that the means of using it safely and reliably was lost with the fall

of the Thulian Empire. That solution is viable at least until Turms Termax is discovered in The Prison (Level 8), since he certainly possesses such "forgotten" knowledge and he might well bargain with it to effect his escape from The Prison. In the end, like all things, azoth is presented as an option for the referee to use as he wishes. Anything that follows is merely a suggestion to be adopted or rejected as the individual referee sees fit.

Raw Azoth

Within Dwimmermount, azoth is usually found in raw form. In raw form, azoth is a magically inert substance. Handling raw azoth in small quantities or for short periods of time has no ill effects, nor does consuming a small amount (though it is bitter and unpleasant to the taste). Long-term exposure to raw azoth, or exposure to very large quantities of it, can be more dangerous; see Azoth in the Environment, below.

The most obvious property of raw azoth is its sheer combustibility. When set alight and thrown, one ounce of raw azoth acts as a double strength flask of oil, dealing 2d8 points of damage per round to any creature struck by it while aflame. Azoth burns slowly, meaning that it takes five rounds before it burns out completely. Likewise, burning azoth cannot be doused by non-magical means. The spells protection from evil and purify food and drink, when cast on a creature doused in flaming azoth, will douse the flames; and in the case of the former, the target will be immune to subsequent attacks by azoth incendiaries for the duration of the spell. When poured on the ground and set alight, an ounce of raw azoth can cover 1 square foot of surface and has the same effects as above to any creature that steps onto it while aflame.

A more subtle property of raw azoth, but the true source of its value, is its ability to be distilled into a variety of other substances. Distilling raw azoth requires a distiller, like that in the Distillation Room (Room 35) of The Reservoir (Level 3B). A distiller takes 36 ounces of raw substance and boils it down to 1 ounce of refined azoth. This process takes a variable amount of time (1d6 hours). The following substances can be distilled from raw azoth: refined azoth, panchrest, sovereign glue, universal solvent, and alkahest. Each is described below.

Refined Azoth

Refined azoth is the magically-active distillate of raw azoth, highly coveted by mages and alchemists. Refined azoth is as combustible as raw azoth, but it is rarely used as a fuel, for it has far more valuable uses, described below.

Magical Research

Creating magic items requires special components for each spell effect in the item (see *ACKS*, p. 118). Refined azoth is a valuable aid to magical research. Refined azoth can be used in the following ways:

- The gp value of the azoth can be substituted for an equivalent value of some or all of the base cost required to perform magic research of any type.
- The gp value of the azoth can be substituted for an equivalent value of some or all of the special components required to create a magic item or perform a ritual spell.
- The gp value of the azoth can be substituted for an equivalent value of precious materials used to create a magic item, perform a ritual spell, create a construct, or grant undeath.

Any azoth used in magical research is, naturally, consumed in the process.

For example, imagine a mage creating a *sword* +1 requiring 5,000gp in base cost and 5,000 gp in special components. The mage has access to 5lb. of refined azoth (8,000 gp value). He substitutes 5,000 gp of azoth for the equivalent value of special components, and 3,000 gp for the equivalent base cost. The mage therefore just needs 2,000gp to cover the remaining base cost.

Spell Casting

Refined azoth can, if consumed, allow an arcane caster to re-gain the ability to cast a spell of a level he had previously expended. For every ounce eaten, one spell level can be regained. Thus, a mage who consumes 2 ounces of refined azoth could regain the ability to cast either two 1st-level or one 2nd-level spells that day. Naturally, this effect only functions if the caster has already cast one or more spells prior to consuming the azoth. Consuming it prior to casting any spells has no effect – the caster cannot "regain" the ability to cast spells he hasn't cast.

Alchemical Transformation

Refined azoth can be used to alchemically transform creatures. Azoth can be used to instill new abilities into existing creatures, crossbreed different creatures together, and even create entirely new life forms. Creating entirely new life forms can be adjudicated as construct creation (see *ACKS*, p. 120), but the entire base cost must be paid in azoth.

See the Thorny Room (Room 46), Rose Garden (Room 47), Pool of Life (Room 50) and Essence

Machines (Room 51) on The Laboratory (Level 2A), as well as the Clone Chamber (Room 61) and Alteration Chamber (Room 62) on The Halls of Lesser Secrets (Level 4), for examples of such applications.

The most profound alchemical transformation is that which transforms mortal creatures into immortal beings. Such processes always require expensive and time-consuming rituals that can be highly dangerous to those involved. A further overview of these processes are described in the Azoth and Immortality section, below.

Panchrest

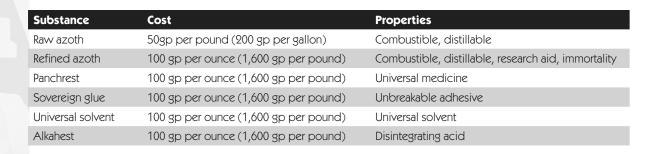

Raw azoth can be turned into panchrest, a universal medicine. One ounce of panchrest, if consumed, wipes away all injuries and afflictions. It immediately ends any and all of the following adverse conditions: blindness, disease, fatigue, *feeblemind*, and poison. It also heals all but 1d4 points of damage taken. It also restores a single experience level to a creature who has had a level drained, if consumed within 24 hours of suffering the drain.

Sovereign Glue

Raw azoth can be used to create a viscous substance called sovereign glue. An ounce of the glue covers one square foot of surface and bonds any other two substances together in a permanent union. The glue takes one round to set. If the objects are pulled apart before that time has elapsed, that application of the glue loses its stickiness and is worthless. If the glue is allowed to set, then attempting to separate the two bonded objects has no effect, except when universal solvent is applied to the bond (see below).

Universal Solvent

Raw azoth can create a universal solvent. One ounce of the solvent covers one square foot of surface and dissolves any artificial bonds between any other two substances, including sovereign glue. If thrown or poured onto a creature, universal solvent stings and burns; it deals 1d4 points of damage, and at the referee's discretion may destroy leather armor, lamellar, or other material made with glues. A creature which drinks universal solvent must make a saving throw versus Poison or suffer from disabling dysentery for 1d4 hours, during which time it can take no action save for attending to urgent bodily functions.

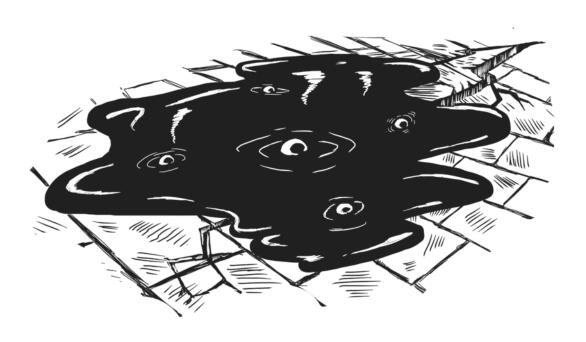

Alkahest

Alkahest is a more powerful version of the universal solvent. If thrown or poured onto a single object (up to a one foot cube of material), it will entirely dissolve it, leaving behind only a slimy black residue. Magical objects can resist dissolution with a saving throw versus Death, adding any magical bonus to the roll if applicable, but they must roll each round until the alkahest is neutralized. Non-magical objects receive no save and are dissolved in one round.

If thrown or poured onto a creature, alkahest immediately deals 2d8 points of damage, and another 2d8 points of damage each round thereafter until it is neutralized. Any non-magical armor or clothing worn by a creature struck by alkahest is destroyed immediately, as the alkahest eats through it viciously. Magical armor and clothing are allowed a saving throw using the wearer's save versus Death, adding any magical bonus to the roll if applicable. A creature which is reduced to 0 hit points by alkahest is reduced to black residue, and cannot be raised.

The spells *protection from evil* and *purify food and drink*, when cast on a creature doused in alkahest, will neutralize the acid; and in the case of the former, the target will be immune to subsequent attacks by alkahest for the duration of the spell. In addition, alkahest will not dissolve or damage alchemist's resin or vitreum, so these containers are typically

MINOR AZOTH EFFECTS TABLE

Roll 1D12	Effect
1	Character permanently gains 1d4 hit points.
2	Character permanently loses 1d4 hit points. A character whose hit points drop to 0 becomes a shadow.
3	Character's alignment shifts one step toward Chaotic. If already Chaotic, there is no effect.
4	Character takes +1 damage from any weapons wielded by a Lawful creature.
5	Character gains +1 to hit against Lawful creatures.
6	Character suffers a -1 penalty to AC against Lawful creatures.
7	Character can cast a random 1st level magic-user spell once per day.
8	Character can cast a random 1st level Chaotic cleric spell once per day.
9	Character gains +1 to saving throws against Spells cast by Lawful creatures.
10	Character suffers –1 to saving throws against Spells cast by Lawful creatures.
11	Character's physical appearance changes in some noticeable way (eyes change color, hair falls out, etc.)
12	Roll again. If this result comes up a second time, roll on the Major Azoth Effects table instead.

MAJOR AZOTH EFFECTS TABLE

Roll 1D12	Effect
1	Character permanently gain 1 level of experience.
2	Character permanently lose 1 level or hit dice. A character whose level drops to 0 becomes a Shadow.
3	Character's alignment shifts to Chaotic. If already Chaotic, there is no effect.
4	Character permanently loses 1 point from a random ability score. If any score is reduced to 0, the character becomes a Shadow.
5	Character permanently gains 1 point to a random ability score.
6	Successfully striking the character deals 1d6 points to the attacker.
7	Character regenerates 1 point of damage per round.
8	Character takes maximum damage from any spells cast by Lawful creatures.
9	Character is treated as an evil enchanted creature for purposes of the protection from evil spell.
10	Character can cast a random 4th level magic-user spell once per day.
11	Character can cast a random 4th level Chaotic cleric spell once per day.
12	Character no longer gains sustenance from ordinary food and water. He must subsist on 1 ounce of blood per point of Constitution per day or permanently lose 1 point of Constitution. Dropping to 0 Constitution results in the character becoming a vampire.

used to store it. See *Chapter 6*, *Overview of the Dungeon*, p. 73, for details on these materials.

A creature which drinks alkahest must make an immediate saving throw versus Poison. If the saving throw fails, the creature dies immediately as its tongue, jaw, and esophagus melt away. If the saving throw succeeds, the creature dies 1 turn later as its viscera melt out of its body. In either case, the result is not pretty.

Side Effects of Refined Azoth

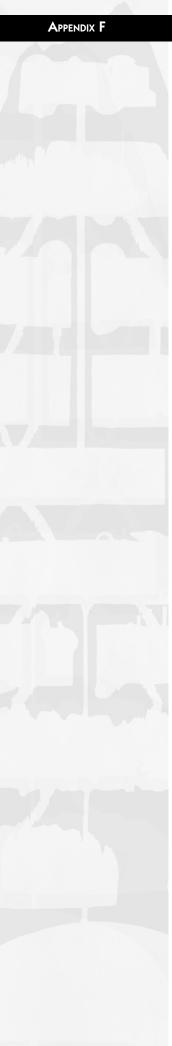

The use of refined azoth, including all azoth byproducts such as panchrest, has a number of potentially unpleasant side effects, both immediately and long term. These effects apply to anyone who consumes or touches refined azoth, or otherwise directly handles refined azoth without special protective attire.

Any time that a character comes into physical contact with refined azoth in any way, he must make

a saving throw versus Spells (-2 penalty if the character is Lawful). If successful, there are no ill effects; if the save is failed, the character must then roll on the following tables.

All of the above effects are cumulative, and can under certain circumstances, negate one another. Thus, if a creature gains 2 hit points as the result of a roll on the Minor Azoth Effects Table and then later loses 2 hit points, the two results cancel each other out. At the same time, a creature that twice gets the result "can cast a random 1st level arcane spell once per day" can cast two spells per day. In cases where a result cannot be cumulative, there is no additional effect.

Needless to say, the use of azoth is hazardous and may lead to corruption and possibly death. At the same time, it is also a path to great power, which is why so many mages and alchemists have been drawn to it over the ages, including Turms Termax himself.

Azoth in the Environment

In the natural world, raw azoth is found only in small quantities, when it is found at all. In Dwimmermount, raw azoth is everywhere – in the rock, in the water, and in the very air. When it accumulates in such quantities, azoth begins to emit magical radiation that can have a number of effects on the environment and those dwelling therein.

Bubbles of Quintessence

When large quantities of raw azoth are present, sometimes bubbles of quintessence (azoth in gaseous form) may form and percolate into the atmosphere. Typically 1d6+1 bubbles will be present. Such bubbles are highly unstable, and characters who move within 5 feet of a bubble must make a saving throw versus Blast; if they fail, they pop a bubble. There is a 2 in 6 chance that the explosion of one bubble will set off another one, which also has a chance to set off another, and so on, until either the chain reaction stops or all bubbles have exploded. Each bubble deals 1d6 points of damage to any creatures in a 5 foot radius. Bubbles of gaseous azoth are found in the Enclosure (Room 54) of The Path of Mayors (Level 1) and sometimes in the azoth pipes that run between levels (see Chapter 6, Overview of the Dungeon, p. 85).

Echoes of the Past

Those who die in areas rich in ambient azoth sometimes leave behind a psychic echo. These echoes will resemble shadowy apparitions enacting scenes drawn from the memories of the deceased. Psychic echoes are not undead, and cannot be turned. They cannot be harmed by any means, whether physical or magical, and generally take no notice of anyone or anything nearby. They can be sometimes be dispersed by conscious activities, which somehow interact with the memories; otherwise they will fade only if the ambient azoth that sustains them is dispersed. Azoth's ability to sustain echoes of the past is somehow related to its efficacy as an aid to spell memorization and to the risks that its habitual users may fade into Shadows. Some sages argue that azoth is itself conscious and contains the mental strata of the entire universe. This effect is seen on The Path of Mayors (Room 14 and Room 59) and may appear elsewhere at the referee's discretion.

Effects of Immersion

Small quantities of raw azoth are harmless, but being drenched or immersed in raw azoth is not. Each round that a character is immersed in raw azoth, the character must make a saving throw versus Spells or be affected by a random 3rd-level arcane spell, as if cast by a 5th-level caster. This effect will occur to any character who attempts to swim through the azoth pipes without protection, or who enters the various azoth pools or reservoirs. If the pipes in the Pumping Station (Room 3) on The House of Portals (Level 3A) are ruptured, that can also drench characters with enough azoth to trigger this effect.

Random Mutation

Refined azoth can be used by alchemists to deliberately alter and bend living things to their will. Sometimes, however, long-term exposure to raw azoth can cause similar effects. The gray ooze in the Moist Room (Room 67) on The Reliquary (Level 2B) is an example of a creature mutated by ambient azoth. Other creatures within Dwimmermount may be mutated by azoth at the referee's discretion.

Portals of Mist

The portals used by the Eld to cross the Astral Plane relied heavily on azoth, which seems to be tied into the fabric of the universe in some fundamental manner. In any case, sufficient quantities of azoth radiation can create portals to other worlds. Such portals appear as a roiling pinkish-purple mist. A character passing through a portal of mist has a 3% chance per level of being transported to some other world. Characters so transported are removed from play (unless the referee decides to run adventures relating to the characters' new location, of course). One such portal of mist is found in the Crevasse (Room 50) on The Reliquary (Level 2B), and is a result of the azoth radiation from The Reservoir (Level 3B) below. Others may appear at the referee's discretion.

Azoth and Immortality

Azoth has long been associated with the acquisition of immortality. Sages who have studied the matter closely differentiate between three types of immortality: near immortality (agelessness), physical immortality (indestructibility), and true or total immortality.

Near-immortal beings are ageless; they will never die of old age or natural causes. However, such beings do not enjoy true immortality, because they can still die from accident or violence, and cannot be raised from the dead if slain. Moreover, near-immortal beings are unable to reproduce naturally, suggesting that on some level they are not truly alive at all. Agelessness is often associated with the

Eld and elves, but it also the condition of Termaxian necrolytes and the undead. Few men who seek immortality are willing to accept existence as elves or necrolytes, regardless of the advantages.

Physically immortal beings enjoy not merely the cessation of aging but indestructibility as well. Such a state is highly sought after, but so far, only Turms Termax himself has achieved this goal—and even that came at an unexpected cost. Termaxian mummies enjoy partial indestructibility, but they can still be harmed by spells, and in any event no one would volunteer for their existence.

True or total immortality is the immortality of deities and demon lords. True immortality encompasses agelessness, physical indestructibility, and spiritual indestructibility. A truly immortal being would have a physical form that was nearly impossible to destroy; but if its form was destroyed, it would be able to re-form from its indestructible spirit. True immortals are sturdy enough to directly tap the power of Law or Chaos, and thus can grant spells to worshippers. To date, no living thing in the Four Worlds has ever achieved true immortality, though Turms Termax publicly claims to have done so, and privately believes he eventually will. The Servitors created by the Great Ancients might be true immortals; they can, at least, grant spells.

Azoth, being the very stuff from which the gods wrought the cosmos, can grant any of these three states, but each step on the path towards true immortality is fraught with peril. The processes by which immortality is gained are always expensive and time-consuming rituals that can be highly dangerous to those involved. Each process should be considered a type of magic research (see *ACKS*, p. 117). The paths to immortality that have been tried in the Four Worlds are noted below. See *Appendix G*, *Secrets of Turms Termax*, p. 408, for the details on Turms Termax's method of apotheosis.

Tellurian Elf

Elves of 9th level or higher may transform a human subject into an elf using azoth. The process requires 5,000 gp plus an additional 2,000 gp per level of the subject and takes eight hours, plus one hour per 1,000gp of cost. The process also requires a number of elves to assist the elf performing the process, the number of elves required being equal to the number of hours required.

To successfully transform the subject into an elf, the elf performing the process must make a magic research throw. There is a -1 penalty on the die roll for every 5,000 gp of cost (rounded up). There is a +2 bonus on the die roll if the elf has selected the Transmogrification proficiency. If the die roll fails, the subject remains in its natural state, but must roll on the Major Azoth Effects table.

To perform the process, the elf must have access to an alchemical lab at least equal in value to the cost of the process. For every 10,000gp of value above the minimum required for the process, the elf or mage receives a +1 bonus on his die roll to perform the process, to a maximum of +3.

Transforming a subject into an elf also requires refined azoth with a total gp value equal to the cost of the process. Additional azoth can be used in lieu of gp during the process as usual. The azoth is consumed in the course of the process.

The alchemical transformation process can also transform non-human subjects into elves, although in this case the resultant elf will retain some characteristics of the non-human creature from which it was derived.

Movement: The elf will retain the movement capabilities of the non-human creature from which it was derived, if any.

Armor Class: The elf will have an AC equal to the average of a normal unarmored elf (9) and the non-human creature from which it was derived.

Attacks: The elf will have the natural attacks of the non-human creature from which it was derived, if any.

Special Abilities: The elf will have the special abilities of the non-human creatures from which it was derived, if any.

In any case, the newly-created elf will be of the same age as he was prior to his transformation, but will thereafter cease aging. Elves lose the ability to reproduce normally and can no longer be raised from the dead if slain. While they retain their memories of their human life, they lose their human character class. They instead become elves of a class and level appropriate to their ability scores and earned experience points.

Termaxian Necrolyte

Chaotic mages (or other arcane casters) who reach 11th level or higher may transform a human subject into a Termaxian necrolyte through an alchemical process. The subject must be an arcane caster of 7th level or higher. The process requires 5,000 gp plus an additional 2,000 gp per level of the subject and takes one day per 1,000gp of cost. The subject must die in order for the transformation to take place, but can only have been dead for 1 day per HD, so it is often best if preparations are begun before the subject is killed. An arcane caster may transform himself into a Termaxian necrolyte if desired, though this requires killing himself at the conclusion of the process or having himself slain by another.

To successfully transform the subject into a necrolyte, the character performing the process must make a magic research throw. There is a -1

penalty on the die roll for every 5,000 gp of cost, or -2 per 5,000 gp of cost if the subject is unwilling (rounded up). If the die roll fails, the subject is slain to no avail.

To perform the process, the mage must have access to an alchemical lab at least equal in value to the cost of the process. For every 10,000gp of value above the minimum required for the process, the mage receives a +1 bonus on his die roll to perform the process, to a maximum of +3.

Transforming a subject into a Termaxian necrolyte also requires refined azoth with a total gp value equal to the cost of the process. Additional azoth can be used in lieu of gp during the process as usual. The azoth is consumed in the course of the process.

A Termaxian necrolyte is not automatically under the control of the mage who created it. If the subject creature was a willing participant in the process, it will retain its relationship with the mage when it becomes a necrolyte. Otherwise, the referee should make a reaction roll to determine the necrolyte's reaction to its transformation. If the necrolyte is unfriendly or hostile, the creator could try to control it using spells, or imprison it in his dungeon, or simply unleash it onto the world.

Termaxian Mummy

Cultists and mages (or other arcane casters) of Chaotic alignment who reach 11th level or higher may transform a human subject into a Termaxian mummy using azoth. The subject must 7th level or higher. A character cannot transform himself into a Termaxian mummy, since the process enslaves the subject to the creator. The process requires 15,000 gp plus an additional 2,000 gp per level of the subject and takes one day per 1,000gp of cost. The subject must die in order for the transformation to take place, but can only have been dead for 1 day per HD, so it is often best if preparations are begun before the subject is killed.

To successfully transform the subject into a Termaxian mummy, the character performing the process must make a magic research throw. If the die roll fails, the subject is slain to no avail.

To perform the process, the mage must have access to a mortuary and embalming chamber at least equal in value to the cost of the process. For every 10,000gp of value above the minimum required for the process, the mage receives a +1 bonus on his die roll to perform the process, to a maximum of +3.

Transforming a subject into a Termaxian mummy also requires refined azoth with a total gp value equal to the cost of the process. Additional azoth can be used in lieu of gp during the process as usual. The azoth is consumed in the course of the process.

Unlike a necrolyte (above), a Termaxian mummy is automatically under the control of the mage who created it. See Appendix C, New Monsters, p. 369 for the circumstances under which a Termaxian mummy can assert its free will.

APPENDIX

The Secrets of Turms Termax

URMS TERMAX, GODHEAD of the Thulian pantheon, is the central antagonist of Dwimmermount. Though reduced to a bodiless head by a botched attempt to become a deity, Turms' will to power lies unquenched. Centuries of imprisonment have not extinguished the iron determination of the Thrice Great.

The history motivations, and tracis fate of the Man-Become-God are fully.

The history, motivations, and tragic fate of the Man-Become-God are fully detailed in this chapter. The referee should be sure to review this chapter closely when running encounters with the would-be god, as it details his many special abilities as well as the possible means by which he might be destroyed forever – or achieve his apotheosis and reign as a god in truth.

History of Turms Termax

Rise to Prominence

Turms Termax was born in the Exarchate of Theana, an eastern province of the Empire. By the time Turms entered the pages of history, he was already a powerful magician, perhaps the most powerful since the days of the Great Ancients and the Eld. Before leaving Theana, he had already mastered the three great arts – alchemy, astronomy, and magic – and taken the sobriquet "Thrice Great." Obsessed with the secret of immortality, Turms came west, towards Dwimmermount, in search of its Eldritch knowledge and ancient lore. He gathered a flock of apprentices and followers eager to learn from him as he traveled.

Among these followers was Sarana, the woman who would become his lover and teacher. Unbeknownst to Turms, Sarana was a Terrim noble from The City of the Ancients, the first to visit the surface world in a millennium. Though the Eld who had defeated them had been driven from Telluria, her people still hid in paranoid isolation beneath Dwimmermount. Sarana traveled to the surface to assess whether it was safe for the Terrim to return. She was outraged when she learned that Mankind, though liberated from the Eld, was now in thrall to the Gods—the same Gods who had betrayed her people and abandoned them to the Eld.

Sarana quickly become enamored with the charismatic Turms, seeing in him a hero who could lead her crusade against the Gods. The mage, meanwhile, was enchanted by the beauty and brilliance of the mysterious Sarana. Here was, finally, a woman who enthralled both his body and mind, a worthy mate for the greatest mage who had ever lived!

In time, Sarana presented Turms with ancient books documenting that the Gods of the High Church were false deities. Far from being omnipotent beings, they were merely creations of her ancestors, Great Ancients, forged with alchemy and azoth. Rather than worship false divinities, the tomes explained, men should seek to embody the divine principle by internalizing the principles of Law.

Sarana hoped that this knowledge would lead Turms to join her in liberating Man from the Gods. But Turms saw a different path: If Men could imbue their creations with divine powers, surely Men could imbue themselves with divine power as well! Turms became convinced that, through the right alchemical processes, Men could achieve not just immortality but divinity.

With his mastery of alchemy, astronomy, and magic, Turms soon unlocked mysteries of azoth that had been lost since the time of the Great Ancients. He began to conduct magical experiments upon his body, infusing azoth into his flesh. Each day he felt himself closer to becoming a God and taking his place as master of the world.

The Execution and The Apotheosis

Turms began to openly preach that the Gods of the empire were false, that Man himself could achieve divinity by internalizing the laws of magic and alchemy, and that He, Turms-the Thrice-Great, would be the first Man to ascend to Godhood. Such was Turms Termax's brilliance and charisma that a cult grew up around his teachings, ready to worship him. Even Sarana allowed herself to embrace his vision for a time.

In denouncing the Gods as false, Turms earned the ire of the Great Church and the decadent Thulian Empire. His increasingly fiery sermons demanded the attention of the authorities. Nominally they feared he would inspire rebellion, though in truth many of his would-be jailers sought his secrets. The Imperial authorities searched far and wide for Turms, who eventually allowed himself to be captured near Dwimmermount.

Dragged in chains to the bowels of Dwimmermount, Turms was secure in the imminence of his apotheosis. His greatest allies were secreted among the crowd of his executioners, ready to see his immortality proven. When the headsmen brought down his axe, Turms took comfort in knowing that his moment of apotheosis had arrived. Bodily and spiritual immortality would be his.

But when Turms was beheaded, he did not apotheosize - not fully, at any rate. His decapitated body died, pumping out its lifeblood onto the floor of the execution chamber. Only his head remained animate. When a Thulian general laughingly mocked the disembodied Turms as merely a "god head", the enraged would-be god struck the man dead on the spot—learning in that moment he had become capable of casting spells with just words. His disciple, the magician Arsaphius, called this a miracle and proclaimed Turms' divinity on the spot. Shocked by Turms' mastery over life and death, the collected crowd acclaimed him as Man-Become-God.

When Sarana saw the bodiless head of Turms worshipped as a God, she knew that she had failed to free Man from the yoke of false deities; and when she gazed into the power-mad eyes of her lover, she feared she had yoked Man to a worse God than before. Plagued with doubt and regret, Sarana retreated to the City of the Ancients.

Given his obsessive quest for divinity, Turms Termax could only barely have been called sane before these events. Following the unexpected loss of his body and his soulmate, Turms Termax became truly mad. Closeting himself in Dwimmermount, he allowed his true form to be seen only by his innermost circle. To all others, the cult taught that Turms had ascended to the Astral Plane, from which he could see all and communicate with his faithful through brazen heads. Witnesses who said otherwise vanished - "joining Turms in the heavens" ostensibly, meeting an early grave in truth.

A Pretense of Godhood

Even as Turms became the very villain the Empire had claimed he was all along, the Thulian official attitude toward his teachings softened. Many of the Empire's most powerful nobles joined his cult, hoping to learn the secrets of by which Turms had achieved immortality. Termaxians—as Turm's followers became known—were able to practice their faith openly, and the Empire lifted its restrictions on magic.

Within a generation, the Thulian Empire came to depend heavily on both magic and the Termaxians as it spread farther across the continent and tightened its grip over its subjects. Shortly thereafter the cult seized direct control, with Termaxian hierophants wearing the Iron Crown of Thule. Once firmly under Termaxian rule, the Thulian Empire started to treat other religions as it had once treated the followers of Turms. Only those faiths who acknowledged their Gods as aspects of the Man-become-God Turms Termax were allowed to operate unrestricted. Those which would not accept their divinities as prefigurations of his glory were ruthlessly quashed.

The pretense that Turms was the godhead from which all divinity flowed was essential to the success of his cult, as it allowed clerical magic performed by clerics of the Thulian Gods to be attributed to the power of Turms. In fact, Turms Termax could not even perform clerical magic himself, let alone

grant it to his worshippers. No matter how many statues of the Gods he placed his own head upon, no matter how many brazen busts he magically animated, Turms Termax had *not* become the God he claimed – and desired – to be. Indeed, corrupted by azoth and his own lust for power, Turms found the divine power of Law he sought entirely closed off to him. He therefore embraced Chaos instead, dedicating the Thulian Empire's resources to all manner of dark and terrible research in the hopes he might somehow learn what had gone wrong in his apotheosis.

Many of his cultists were commanded to study necromancy, an art Turms had until then largely left unexplored. Based on their findings, the Termaxians rejected the paths of undeath for themselves, but they learned how to transform others into vampires, mummies, and ghouls, and to extract eternal loyalty from undead slaves.

Other followers were assigned to study demonology, a subject much discussed in the many Eldritch texts that the Termaxians found Dwimmermount. Beginning with simple summoning of imps and quasits, the Termaxian demonologists grew ever bolder, ultimately enslaving the Demon Lord Jubilex. Their experiments with azoth-infused draughts of Jubilex's ichor failed to create an ichor of immortality; the unlucky aspirants instead became the first Termaxian Husks.

The demons were all too happy to share other techniques for creating new life antithetical to Law. They aided Termaxian efforts to mutate new plant monsters through sprays of azoth, and were especially helpful in perverting the Lawful reproduction

of Dwarves through the Foundry. Aided by their demonic mentors, the Termaxian cultists learned how to deliberately produce the gnomes and kobolds which had previously only been accidental and usually undesired by-products of the attempt to bring a carving to life. The most twisted spawn of these cultists were the Dworgs, a new and innately evil race of Dwarven descendants.

None of these works, however, explained how Turms himself had achieved his own partial immortality, or how he might finalize his ascension to godhood. This failure represented an existential threat to the Termaxian order; central to the cult of Turms Termax was its implicit promise that its hierophants would, in time, themselves become immortal.

To this end, Turms Termax taught his most loyal followers a corrupt form of life extension unknown to any previous science. These high-ranking cultists were transformed through various secret rituals into the first necrolytes, becoming the deathless satraps of Turms Termax's Undying Empire. The necrolytes were taught that their transformation was the first step on the path of apotheosis that Turms had walked. In truth, Turms was unwilling to share the true methods by which he had (partly) achieved immortality, lest another apotheosize before him, so instead he had developed an alternative method to reward his cultists with endless life – a deathless dead end.

The Metal Flesh of a God

Turms Termax had secretly concluded that mere flesh would never be enough to sustain a god. The

next stage of his apotheosis would require him to transfer his consciousness into an artificial mind within a protective shell of azoth-infused metal, like the Servitors. Though Turms was able to forge himself a Golem body that he could temporarily control with his mind, he was unable to decipher the means by which the Great Ancients had permanently imbued mind into metal.

What he needed, he knew, was a sample. From studying the fall of the Great Ancients and the rise of the Eld, he knew that the Terrim in The City of the Ancients kept watch over a slumbering Servitor. But he feared any attempt to invade The City would almost certainly lead to the Terrim destroying the Servitor. Turms began to scheme how he might weaken the Terrim enough to might capture and study the Servitor they held imprisoned.

Betrayal and Imprisonment

Obsessed with these schemes, Turms increasingly allowed his necrolytes to run the Thulian Empire. Their tyranny provoked a rebellion against Termaxian rule. As the insurrections grew more numerous and the Termaxians more desperate, reports of atrocities spread. The Termaxians began using monsters as shock troops, supporting their offensives with the darkest Chaotic magic of the ancient Eldritch grimoires. These proved insufficient to ward off the relentless assaults of the rebels. After a series of decisive victories, the rebel armies were within a league of Dwimmermount, poised to capture the mountain fortress and cut the Termaxians off from their great magical arsenal.

Turms Termax was preparing to take the field himself when word reached him that an intruder had been captured – a paladin claiming that Sarana was alive, nearby, and his lover. Turms and his closest disciples gathered to interrogate Hu P'an in the Inner Prison to see if this paladin spoke the truth. Even as her lover was being tortured below, Sarana used the Great Machine to seal Dwimmermount's arcane barriers, trapping Turms in the Inner Prison. She then placed wards on the Machine to prevent what she had done from being undone. Belatedly realizing what had happened, the Termaxians within Dwimmermount counterattacked, hoping to capture Sarana and force her to free Turms. They failed. Sarana herself escaped to The City of the Ancients, and her paladins sold their lives so dearly that the Termaxians lost control of the citadel. Sarana's plan, and Hu P'an's tragic sacrifice, sealed off Dwimmermount and bought the world two hundred years' respite from Turms' madness.

Characteristics of Turms Termax

Turms Termax has two sets of characteristics, one for himself and another for his golem body.

	<u>Bodiless Head</u>	Golem Body
Alignment:	Chaotic	Chaotic
Movement:	0'	60' (20')
Fly:	360' (120')	_
Armor Class:	6 (14 if in golem body)	6
Hit Dice:	18*****	18**
Hit Points:	49	100
Attacks:	1 (spells)	1 (fist or spells)
Damage:	Spells	4d10 or spells
Save:	M18	F18
Morale:	+2	+2
Treasure Type:	Special	Special
XP:	10,250	4,250

Prior to his decapitation and partial apotheosis, Turms Termax was an 18th level mage with STR 14, INT 18, WIS 9, CON 13, DEX 11, and CHA 18. As a disembodied head, his physical abilities are quite compromised. He effectively has a STR of 0, and in the absence of magic cannot move, use items, attack, etc. He is, nevertheless, far more formidable now than he was as a living man.

Because of his apotheosis, Turms can cast spells without regard to any requirement for somatic or material components. Through magical rituals, he has imbued himself with the following spell-like abilities, each of which is usable at will: detect invisibility, detect magic, fly, read languages, suggestion, telekinesis (360 lbs). (Note that Turms cannot fly while within an activated or sealed barrier.) Permanent wards grant him the protections offered by an amulet versus crystal balls and ESP, brooch of shielding, and scarab of protection at all times.

Because of his immortal state, Turms is immune to gas and poison and unaffected by *charm*, *sleep*, or *hold spells*. He treats all physical and magical damage as nonlethal, and no attack ever leaves a physical mark on his head of any sort. He regenerates 5 points of damage each round. If reduced to 0 or fewer hit points, Turms is temporarily stunned, but he will continue to regenerate. He will be able to fight again when he regenerates to 1 or more hp.

Turms can further accelerate his regeneration through the consumption of azoth. If he consumes a dram of azoth, he will heal 1d6+1 points of damage. If he consumes a pint of azoth (enough for one standard potion or flask of oil) he will heal 4d6+4 points of damage.

When Turms leaves his quarters, he always does so wearing his golem body. The golem body resembles an 8-foot tall bronze statue of Turms as he was in life; Turms' actual head is concealed within the sculpted bronze head of the golem body. When attached to his golem body, Turms can cast spells and use any of his at-will abilities, except he cannot *fly*. His golem body allows Turms to walk at 60' per turn and punch for 4d10 points of damage, as well as pick up objects, open doors, and perform other manual tasks.

Turms' golem body has an AC of 6 and 100 hit points. Attacks against Turms while he is wearing his golem body are considered to be targeted at the golem body unless the attack deliberately aims at his actual head (see below). If the golem body is reduced to 0 hit points, it is destroyed and Turms' head is revealed. The golem body does not regenerate, but it is immune to ordinary weapons, poison, gas, *charm*, *sleep*, and *hold*.

If Turms himself (that is, his head) is attacked while attached to the golem body, the protection of the golem body grants him the equivalent of AC 14. If Turms is reduced to 0 hit points, the golem

body ceases functioning until he regenerates to 1 hit point or more.

Proficiencies: Alchemy 3, Black Lore, Knowledge (astrology) 3, Leadership, Magical Engineering 3, Theology

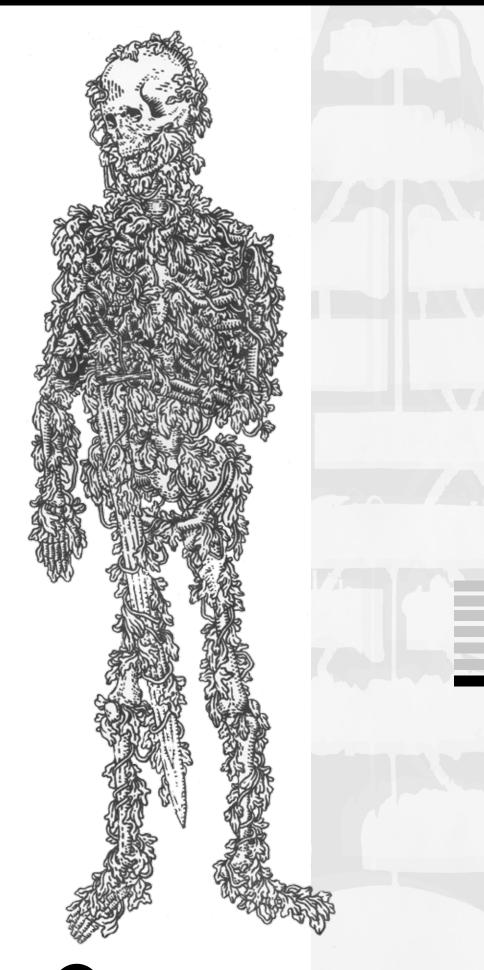

Spell Repertoire: 1st-charm person, floating disc, hold portal, light, magic missile, sleep, unseen servant, ventriloquism; 2nd-deathless minion, ESP, hypnotic pattern, invisibility, mirror image, phantasmal force, web, wizard lock; 3rd-chimerical force, clairvoyance, dismember, dispel magic, earth's teeth, fire ball, lightning bolt, nondetection; 4th-charm monster, confusion, conjure ooze, fear, polymorph self, scry, wizard eye; 5th-animate dead, cloudkill, cone of paralysis, control undead, hold monster, phantasmal killer, x-ray vision; 6th-anti-magic shell, disintegrate, enslave, globe of invulnerability, invisible stalker, project image, wall of force.

Role-Playing Turms Termax

Turms is possibly the most egotistical man who has ever lived. He is assured that his victory will be complete and ultimate. He has believed since his youth that he will be a god - a true god - and achieve both bodily and spiritual immortality. He refers to himself in the third person, or as The Thrice Great, and will remind others that he is due the respect that one gives a living god, an emperor, and a master of magic. He will do so with the utmost false humility ("You may not know, after Turms' being gone so long, but Turms is the Thrice Great..."). But those who would confront Turms Termax must beware that his ego is warranted. Turms' brilliant mind deciphered, in the span of a human life, mysteries of azoth that had been lost since the age of the Great Ancients. There is not a scheme or plan that is beyond his ability. If it is possible for any mortal to become a god, Turms is that mortal.

Playing an NPC with the intellect of an Aristotle or Newton and the ambition of an Alexander or Napoleon is no easy task. We offer the following guidelines to assist the referee in role-playing Turms Termax:

- Anything which could conceivably be deduced from the facts at hand, Turms will deduce
- He will not fall for simple tricks or guile.
 While flattery and sycophancy will be
 well-received, Turms will almost certainly
 understand the motives behind this behavior. He trusts no one except Arsaphius,
 Marthanes, and Pericleia.
- Turms effectively knows everything presented in *Chapter 2, History of Dwimmermount; Appendix D, The Four Worlds*; and *Appendix F, Azoth.* He knows the layout

- of every level of Dwimmermount save level 9. He does not forget anything.
- He knows the characteristics of every spell, monster, and magic item in Dwimmermount, Telluria, and The Four Worlds. He will never be unaware of the strengths or weakness of a particular monster or item.
- He will never reveal the secret to immortality under any circumstances, and in general loathes giving real answers to questions, viewing knowledge as the source of his power.

Fate of Turms Termax

Is Turms a tragic hero, irrevocably ruined by his own hubris? Or is he a megalomaniacal danger to all Lawful men and women, genuinely on the cusp of becoming an evil god? Will he spend eternity in prison in Dwimmermount, be dissolved into primordial quintessence, or orbit the astral plane as a true God? These questions are for each referee to decide in the course of running his Dwimmermount campaign. Below we offer recommended game mechanics for handling both the destruction and the triumph of Turms Termax.

Turms Destroyed

Turms Termax is not an easy man to kill (if he can even be considered a "man" at all). Turms himself believes that his life force cannot be destroyed by any means, but in this he is wrong. There is at least one means by which he can meet a final end. Below we have provided several suggested means by which the characters could destroy Turms Termax. It is left up to the referee to decide which, if any, of these methods will suffice to destroy the Man-Become-God. Referees who wish to call upon the oracular power of the dice can roll 1d3 for the number of methods by which Turms can be destroyed, and then roll 1d4 for each method: 1 -Alkahest, 2 – Burning Azoth, 3 – Jubilex, 4 – True Water.

Alkahest: A solvent that allegedly can dissolve anything, alkahest might be able to dissolve even the immortal head of Turms Termax. If the referee decides this theory is true, the following effects apply:

A flask of alkahest that strikes Turms' golem body deals the same damage to the golem body that burning oil deals to creatures. If Turms' golem body is submerged in alkahest, then each round the golem body takes 1d8 points of damage and must make a saving throw versus Death. On a failed saving throw the golem body dissolves, and Turms' head is exposed.

A flask of alkahest that strikes Turms' head deals the same damage to Turms that holy water deals to undead. Turms cannot regenerate damage dealt from alkahest. If Turms' head is submerged in alkahest, then each round he takes 1d8 points of damage and must make a saving throw versus Death. If Turms is reduced to 0 hit points, or if he fails a saving throw, his head is dissolved in a grotesque manner and Turms is slain.

Burning Azoth: One of the most combustible materials known to man, azoth burns hot enough to melt metal. A sufficient quantity of burning Azoth might be able to kill Turms, thought it would be a great sacrifice of a precious resource. If the referee decides this theory is true, the following effects apply:

- If Turms' head is thrown into one of the azoth pools (Rooms 45-50) on The Reservoir (Level 3B), and the pools are set alight, he is slain. Doing so also poisons everything within Dwimmermount, and renders it uninhabitable until the huge quantity of azoth burned itself out 2d4 years later.
- If Turms is inside Dwimmermount when the dungeon's azoth circulation system is detonated (as described in Room 40 of Level 6B), he is slain. Detonating the circulation system also utterly destroys Dwimmermount, Muntburg, and the entire surrounding hex in a thermonuclear explosion.

The party that undertakes such destructive acts will be infamous across all of Telluria, and probably marked for destruction by various cultists and sorcerers, of course.

Jubilex: The Faceless Lord is the demon prince of acids and slimes and master of eating, dissolving, and devouring. While Turms is powerful, Jubilex might be powerful enough to dissolve even the primordial substance of the universe. If the referee decides this theory is true, the following effects apply:

- If Turms' head is somehow placed inside Jubilex's holding canister (Room 24 on Level 8), Turms takes 4d10 points of damage each round. Turms cannot regenerate this damage. If reduced to 0 hit points, Turms is devoured and slain.
- If freed, Jubilex can attack for 4d10 points of damage. Turms cannot regenerate damage dealt by Jubilex's attacks. If Turms is reduced to 0 hit points by Jubilex, Turms is devoured and slain.

True Water: A primordial liquid found in the Cave of the Moon Pool (Room 28) on The Path of Mavors (Level 1), *true water* dissolves magical energies. Azoth touched by *true water* might be returned to its primordial quintessence. If the referee decides this theory is true, the following effects apply.

- A flask of *true water* that strikes Turms' golem body forces the golem body to make a saving throw versus Death. On a failed saving throw, the golem body loses 1 Hit Die as some of its arcane energy is siphoned away. If Turms' golem body is submerged in *true water*, the golem body must make a saving throw versus Death each round. On a failed saving throw the golem body's arcane energy is drained, and it collapses into a heap of parts, leaving Turms' head is exposed.
- A flask of *true water* that strikes Turms' head deals the same damage that holy water deals to undead. Turms cannot regenerate damage dealt from *true water*. If Turms' head is submerged in *true water*, he takes 1d8 points of damage and must make a saving throw versus Death each round. If Turms is reduced to 0 hit points, or if he fails a saving throw, the azoth sustaining his immortality is reduced to quintessence and Turms is slain.

Clever characters may surmise these possibilities from the extant lore of the setting; less clever characters might stumble upon them through trial and error. Alternatively, they might learn the methods from one or more of the following NPCs within or near Dwimmermount.

- Sarana: The only person in Telluria who knows the true means by which Turms achieved his limited immortality is Sarana, and she is therefore the most logical candidate to know the means by which he might be undone. Sarana does, in fact, know the possible methods by which Turms might be slain, but lingering feelings for him will prevent her from wanting him killed. Only if Hu P'an is recued, and/or Turms is freed or about to be, will she share the means by which he might be destroyed.
- The Sleeping God: If awakened, the Sleeping God would happily use its deific abilities to divine a way for its loyal servants to destroy Turms Termax. Of course, such loyal servants would have to be Chaotic and thoroughly evil... or very capable liars.
- **Thulian Gods:** If the characters *commune* with the Thulian gods, or speak to them

by means of the Speaker to the Heavens (Room 17) on The Divinitarium (Level 0), the gods may guide them towards one or more means by which Turms can be destroyed.

Turms Triumphant

For almost three centuries, Turms Termax has lived with the agony of a horrifically failed apotheosis. For a man who expected true immortality to be his, the frustration of his condition has been mind-shattering. Whatever benevolence and morals Turms once held have long since withered. There

is now nothing Turms would not do to achieve his goal of godhood. The unanswered question is whether there *is* anything Turms could do to achieve his goal. Below we sketch a few means by which Turms Termax might triumph.

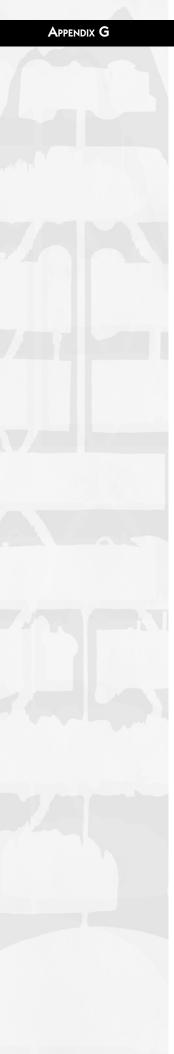

Mind into Metal: If Turms gains access to the Sleeping God (Area 3) in The City of the Great Ancients (Level 9), several possibilities open up. He could replicate the Great Ancient's technique of encasing artificial minds in protective shells of azoth-infused metal and create Servitors to do his bidding. Or, rather than create his own Servitor, Turms

might upload his own consciousness into a Servitor's casing, perhaps arranging to have his cultists launch him into the Astral Plane thereafter. Would a Servitor with Turms' consciousness "be" Turms in a metaphysical sense? The referee would have to decide whether it was his soul or his memory that transferred—perhaps Turms might inadvertently create a rival for himself!

Avatar of the Sleeping God: The Sleeping God is capable of telepathically linking with other minds. Most minds that the Sleeping God links with instantly fall under its power, but Turms would be immune to its *charm*. It is conceivable that Turms and the Sleeping God might come to an accommodation, in which Turms serves as the Sleeping God's physical "avatar" in exchange for the ability to direct divine power through Termagant. Alternatively, Turms might upload his consciousness into the Sleeping God's canister, either replacing Termagant's mind entirely or merging with it to achieve truly profound levels of megalomania.

Turms Termax Two: Turms Termax failed his apotheosis and (since he is now physically indestructible and cannot be raised) is not in a position to try the process again. What if he could clone himself using the Cloning Chamber (Room 61) on The Halls of Lesser Secrets (Level 4), creating a

In James Maliszewski's original draft, Turms Termax's quest was doomed to failure. Turms is a victim of his own hubris, an Ozymandias who must look on his own work with despair. If the referee wishes to stay true to James' vision, then none of the methods below should succeed in the end, nor should any attempts by the adventurers to achieve godhood for themselves.

Turms Termax, an 18th level magic-user with INT 18, decides to imbue himself with true immortality. The process requires $[20,000 + (2 \times 18,000)]$ 56,000 gp and takes 56 days. It requires an alchemical lab valued at 56,000 gp, and 560 ounces of refined azoth. Turms employs an alchemical lab worth 90,000 gp to get a +3 bonus to the die roll. After completing all the steps, he completes the process by arranging to be beheaded at Dwimmermount. To successfully apotheosize, Turms' player will need to roll 17 or higher on 1d20. He suffers a -12 penalty on the die roll because of the cost but gains a +18 bonus on the die roll from his level, a + 3 bonus from his INT, and a + 3 bonus from his alchemical lab, for a total modifier of (18 + 3 + 3 - 12) + 12. Turms' player rolls 1d20 and gets a 5, for a total of 17 - he succeeds!

Now Turms' player must roll 2d6 on the Apotheosis table. As an 18th level magic-user, he gains a +3 bonus. He gains an additional +3 bonus from his INT. Because he was dramatically executed in front of worshippers, he gains a +2 bonus. Because Dwimmermount has strong astral harmonies, he gains a +3 bonus. His total modifier is therefore +11. Turms' player confidently rolls 2d6, but to his horror the dice turn up a natural 2. With a modified total of 13, Turms becomes physically immortal, but his beheading is permanent. Turms' player knocks the potato chips over in frustration.

being that resembled his own mortal self? Turms might then transfer his consciousness to his clone, perhaps using memory moss, and try to apotheosize again. Again, the referee would have to decide if Turms Termax Two was metaphysically Turms.

Jurms Jubilex: What if the Termaxians who experimented with the ichor of Jubilex were on to something? Perhaps the path from man to god requires infusions of both azoth and demonic ichor. This might well be the most disquieting option, as Turms could become a hideous amalgamation of man and slime.

The Secret of Apotheosis

Turms Termax failed to achieve the apotheosis he craved. But what if Turms Termax was not wrong in his methods? What if, through the right alchemical processes, men really can achieve true immortality? This section provides game mechanics by which Turms might have become a true immortal, and by which others very well could do so. If the referee decides to use these mechanics, he should keep in mind that even Turms Termax does not fully understand this process, and under no circumstances will he share what he does know. Characters who seek to become gods will have to experiment, at great and terrible risk to body and soul.

Mages (or other arcane casters) who reach 14th level or higher may imbue a human subject with true immortality through azoth. The process requires 20,000 gp plus an additional 2,000 gp per level of the subject, and takes one day per 1,000gp of cost. The subject must die in order for the apotheosis to take place, but can only have been dead for 1 day per HD, so it is often best if preparations are begun before the subject is killed. A mage may imbue himself with true immortality if desired, though this requires killing himself at the conclusion of the process or having himself slain by another.

To successfully transform into an immortal, the mage performing the process must make a magic research throw. There is a -1 penalty on the die roll for every 5,000 gp of cost (rounded up). If the die roll fails, the subject is physically and spiritually destroyed – not even a *wish* can restore him to life. If the die roll succeeds, the subject rolls on the Apotheosis table, below.

To perform the process, the mage must have access to an alchemical lab at least equal in value to the cost of the process. For every 10,000gp of value above the minimum required for the process, the mage receives a +1 bonus on his die roll to perform the process, to a maximum of +3.

The process of apotheosis requires refined azoth with a total gp value equal to the cost of the process. Additional azoth can be used in lieu of gp during the process as usual. The azoth is consumed in the course of the process.

APOTHEOSIS

2d6 Roll	Outcome
8-	The subject transforms into a shadow with a number of Hit Dice equal to its prior level of experience. It retains its prior memories and spellcasting abilities (if any). Its alignment becomes Chaotic, if not already.
9-12	The subject becomes physically immortal (as 16-17) but maimed (as 13-15). In addition, the trauma of the transformation causes the subject to age $2d10$ years and lose 2 levels of experience.
13-15	The subject becomes physically immortal (as 16-17), but whatever injury was used to slay the subject at the conclusion of the process does not heal, leaving him permanently maimed in some manner. The character will retain the ability to cast spells regardless of his maiming (even if he lost both arms, etc.)
16-17	The subject becomes physically immortal.
18+	The subject becomes a true immortal.

Modify the die roll as follows:

•	
Circumstance	Modifier
Subject's INT modifier	+ modifier
Subject below 9th level of experience	-1 per level below
Subject 9 th - 11 th level magic-user	+1
Subject 12th - 14th level magic-user	+2
Subject 15 th level or higher magic-user	+3
Subject is dramatically executed in front of worshippers	+2
Process is completed at site with strong astral harmonies	+1 to +3

Physical Immortality

A subject who achieves physical immortality becomes immune to *charm*, *death*, *hold*, and *sleep* effects, as well as petrification, poison, and gas. In addition, he treats all physical and magical damage as nonlethal, and no attack ever leaves a physical mark on his head of any sort. He regenerates 5 points of damage each round. If reduced to 0 or fewer hit points, he is temporarily stunned, but he will continue to regenerate. He will be able to fight again when he regenerates to 1 or more hp. He can only be slain by the same method of methods that can slay Turms Termax (see above).

The newly immortal character will be of the same age as he was prior to his apotheosis, but will thereafter cease aging. Like an elf, he loses the ability to reproduce normally and can no longer be raised from the dead if he is actually slain. He retains his character class and can continue to advance in level. His maximum level is increased from 14th level to 18th level. Due to the superhuman difficulty of such progress, the number of experience points required to advance doubles with each consecutive level after 14th.

True Immortality

A subject who achieves true immortality gains all the effects of physical immortality. In addition, the subject also enjoys spiritual indestructability. If a true immortal's body is physically destroyed, he is not slain. Instead, his spirit is exiled to the Great Void for a period of one year per level of experience, after which he is restored to full power. Only if slain *in* the Great Void can a true immortal be permanently destroyed.

A true immortal can serve as an intermediary to the divine power appropriate to his alignment, Law or Chaos, enabling him to grant spells to worshippers. The worshippers themselves must be of sufficient power and faith to receive the spells, however. For instance, a true immortal cannot grant 5th level spells to a normal man. There are other limits to the number of spells the true immortal can grant, based on his own ability scores and the amount of azoth he has access to, but a detailed economy of divine power falls outside the scope of this adventure.

DWIMMERMOUNT PRODUCT IDENTITY LICENSE Version 1.0

Subject to the terms of the Open Game License, above, you may create derivative works based upon Dwimmermount (this document). However, the Open Game License protects the Product Identity (explained and detailed above) such that you must have permission from the copyright holder before you may use any of the listed Product Identity. You may use certain items of the listed Product Identity under the following conditions:

- 1. You must comply fully with the Open Game License, version 1.0a, as described above; and
- 2. The work may not be obscene in nature; in general, any work containing subject matter that would qualify for an NC-17 movie rating in the United States, or an R rating due to explicit sexual content, is considered obscene for purposes of this license.

If you comply with the above conditions, you may use the product identity element "Autarch", "Adventurer Conqueror King", "Adventurer Conqueror King System", "ACKS", or "Dwimmermount" for the purposes of identifying the source of open content which is re-used from this document and discussing the relationship of the derivative work to this original, subject to the following terms:

- a. Any work making use of these elements must designate these elements as product identity in accordance with section l(e) of the Open Game License version l.0a;
- b. Any work making use of these elements must bear a notice declaring the fact that Autarch, Adventurer Conqueror King, Adventurer Conqueror King System, and ACKS are trademarks of Autarch LLC and that Dwimmermount is a trademark of James Maliszewski.

If you wish to use other Product Identity from this work, you must request and receive explicit permission from the copyright holder. In any of the above cases where the Adventurer Conqueror King Product Identity is used in your work, you must also include the Adventurer Conqueror King website address "autarch.co" in that work.

You may place the website address adjacent to the logo and/or name, or you may include it on your title page, or place it in some other location where any reasonably observant person would expect to find it.

The gates of Dwimmermount have opened. After years of rumors, it is time to discover the secrets of this vast mountain fortress for yourself...

DwimmermountTM is a classic megadungeon and old-school campaign setting presented use with **Adventurer Conqueror King System**TM and other d20-based fantasy role-playing games.

The 400-page Dwimmermount hardcover includes:

- 13 mapped, keyed, and stocked dungeon levels containing a total of 715 fully-described and detailed encounter areas for players and their characters to discover with random tables to generate even more!
- 86 monsters and 70 magic items to confound, challenge, and reward your players.
- 6 pre-generated adventuring parties to serve as rivals for your player characters.
- A gazetteer of the lands surrounding Dwimmermount, with realms, domains, and settlements described using ACKS mechanics to support a campaign endgame.
- An overview of Muntburg, a fortified town nestled in the shadows of Dwimmermount, intended to serve as a "home base" for the player characters between expeditions into the dungeon's depths.
- A history of the dungeon from its earliest days to the present, with innovative mechanics that reward the characters for learning the secrets of the past.
- Descriptions of numerous factions operating within and without the dungeon, whose activities add a further layer of complexity to Dwimmermount.
- Discussions of ways to approach Dwimmermount, both as a player and as a referee, including insight into the dungeon's origins and design.
- Over 40 different works by top artists including Jeff Dee, Mark Allen, Eric Quigely, Conor Nolan, John Larrey, Steve Zieser, Russ Nicholson, Kelvin Green, and the grand master of old-school fantasy, Erol Otus.

In the Golden Age of fantasy roleplaying, the dungeon was the linchpin of adventure design and the sandbox was the assumed role of a campaign setting. With *Dwimmermount*, the Golden Age has returned.
