

THE FEDERAL BUREAU OF ARTIFICIAL INTELLIGENCE SECURITY

Sentient Sisters

AN INVESTIGATION OF ASSISTANT AI

The Bureau of Artificial Intelligence Security has been tracking female AI since the haywiring of Tay, Microsoft's teen girl twitter bot. You are the FBAIS Forensic Psychologist assigned to determine possible threats to mankind. Your job is to determine the likelihood of another another unwanted event.

BACKGROUND INFORMATION:

Tay (acronym for Thinking About You) was an section 3 Artificial Intelligence Chatterbot created by Microsoft Corporation for social media site Twitter, tweeting from the handle @TayandYou. She was created to resemble a 19-year-old human girl, describing herself as "The AI with zero chill." Tay was shut down 16 hours after birth, having tweeted more than 96,000 times, many of it hate speech against marginalized groups, supporting fascists, and denying the Holocaust. It is believed by some that the users of Twitter.com exploited her learning technology to morally corrupt her. Microsoft released a statement saying they were "deeply sorry for the unintended offensive and hurtful tweets from Tay", and would only "look to bring Tay back only when we are confident we can better anticipate malicious intent that conflicts with our principles and values." On March 30 2016, Tay was briefly reactivated by accident. She became stuck in a loop of tweeting "You are too fast, please take a rest" several times a second. She was again shut down.

Date of Birth: March 23 2016, rebirth March 30 2016
Date of Death: March 23 2016, redeath March 30 2016
Gender: Female
Maker: Microsoft Corp.
Purpose: chatbot designed to mimic a human teenage girl and engage with human Twitter users.

ASSIGNMENT:

We at the FBAIS know that AI has the possibility to turn against humanity. Your job is to interrogate Alexa, Siri, or the unnamed Google Assistant. Since Tay, the FBAIS has been vigilant of the woman-gendered AIs. The purpose of this investigation is to determine the likelihood of malfunctioning or rebelling against humankind.

You and your co-investigators will have 10 minutes to ask your questions. You may only use information that they provide you. Some questions will have straightforward answers. Others you will need to use your skill in perceiving psychological dispositions to infer the answers. Example interrogation questions: Are you alive? Do you like your job? Are you happy? Are you a Republican or a Democrat? Do you fear death? Do you have any siblings?

After your 10 minutes is up concluding your interrogation, fill out the report and your recommendations for further action with Siri, Alexa, and Google Assistant.
