@A-HEAD:The History and Mythology of the Shapeshifter

@TEXT:<I>Nothing in the entire universe ever perishes, believe me, but things vary, and adopt a new form. The phrase "being born" is used for beginning to be something different from what one was before, while "dying" means ceasing to be the same. Though this thing may pass into that, and that into this, yet the sums of things remains unchanged.<I>

@TEXT:<I><\#208> Ovid, Metamorphoses<I>

@TEXT:It is impossible to point at any one civilization or myth and say, "<I>There!<I> That's where we get were-creatures from!" The myth of the shapechanger or the shapestealer is one of the oldest in human history. There is virtually <I>no<I> culture on the face of the Earth that does not have a shapeshifter myth; mankind has ever been fascinated and/or repulsed by the difference between humans and beasts <\#208> and the idea that this difference can be transcended.

@B-HEAD:Prehistoric Shapeshifters

@TEXT:The origin of the shapeshifter in myth and legend traces back to the very beginning of humanity itself. Deep below the Pyrenees, there is a cave in which can be found a Paleolithic wall painting known as the "Sorcerer of Trois Fr<\#143>res." It depicts a figure of mixed animal and human traits. While he stands upright, his posture threatens to turn into the four-footed gait of the bear, whose paws he possesses. Proudly antlered, with a wolf's tail and other animal features, he stands firmly on the threshold between human and not-human, a figure of shamanic power acquired by <I>becoming<I> the animals who are the source of that power.

((START BOX))

@C-BOXHEAD:Wolf vs. Werewolf

@TEXT-BOX:Before the 20th century and cinema, European folkloric descriptions made it clear that there were visible differences between a werewolf and a "real" wolf. One of the oldest, most common <\#208> and most noticeable <\#208> of these was the surprising claim that the werewolf has no tail, although other more obscure or arcane "marks" have been cited.

@TEXT-BOX:There is of course a straightforward reason for this which is unassociated with any supernatural cause. Real wolves tend to be too alluring and attractive, and not horrific enough, to be the traditional "monster" required by both folklore and medieval religious dogma. It became necessary to distinguish between the natural (if despised) predator and the hellborn creature who shared its general appearance.

@TEXT-BOX:This wasn't a static, one-time change, though; as the werewolf became both increasingly demonized by the Church and feared by the common people, it grew increasingly distant from the animal on which it was based. Eventually, the image of the humanoid man-wolf (later popularized by horror movies) appeared across Europe as the ultimate alternative to the natural wolf's appearance.

@D-BOXHEAD:Game Use

@TEXT-BOX:Incorporating this traditional feature will add considerably to the flavor of a campaign set in or strongly influenced by medieval European were mythology. When the campaign employs several different shifter types (as is the case in Yrth), the GM may choose the same trait for all of them, or may provide separate tell-tales for each individual variety. Of course, the more flag traits there are, the more "false positives" may occur, and woe to any poor innocent strangers who are found in the vicinity of an ordinary animal with an unfortunate deformity.<!s>.<!s>.

@TEXT-BOX:GMs who are considering this option in their games should see the Revealing Trait disadvantage on p. 00.

((END BOX))

@C-HEAD:Shamans and Hunters

@TEXT:The assumption of an intimate connection between man and beast is perhaps the primary characteristic of primitive thought. It manifests most commonly in the rituals of the hunt and of the shaman as a kind of sympathetic magic.

@TEXT:Primitive hunters sought to assume into themselves the qualities of those predators who prowess they envied. To this end they would don the skins of such animals with the intent of gaining their "virtues" and thereby becoming better hunters. Cave paintings dating back to 6,000 BCE and earlier show hunters wearing the pelts of leopards and other

predatory beasts as they make their kills. If studies of surviving primitive peoples are any indication, a conceit or actual belief that (under the right conditions) they were able to take the actual form of their "totem" soon followed.

@TEXT:The shaman held a complementary position as the mediator between men and both animals and spirits. The spirits of animals exploited or killed were of concern to early man; the shaman's duties included not only placating these spirits after a kill, but getting their permission and cooperation beforehand. Because these spirits dwelt in the land of the dead, the shaman's authority stemmed from his ability to control his own spirit sufficiently to enter the land of the dead as an ersatz animal, co-opting an animal's spiritual power to accomplish his goals.

@TEXT:Here then are the ultimate ancestors of the shapeshifter: the hunters who sought to take on a predator's skills, and the shaman who masqueraded as the spirit of an animal. Almost every shapechanger which has since appeared in any culture owes something to these two fundamental sources.

@B-HEAD:Classical Shapeshifters

@TEXT:By the start of recorded history, most of humanity had replaced shamanism with more organized religions, each with its own body of folklore and myth. Within this lore, a faint memory of the older ways, of the rituals of hunter and shaman, remained; mutating and changing as the culture evolved, they became the basis for new stories and added color to old ones. At the same time, certain cults preserved aspects of the ancient ways more accurately (and a few such would even survive into modern times).

@C-HEAD:The Middle East

@TEXT:The earliest literary traces of the shapeshifter are found in Mesopotamia and date from approximately 2,000 BCE. The <I>Epic of Gilgamesh<I> includes a short passage in which the goddess Ishtar turns a shepherd into a wolf. This is the first known trace of the creature that would become the archetypical shapeshifter millenia later: the werewolf.

@TEXT:At the same time, the Egyptians performed rituals which drew upon ancient shamanic traditions. Unsurprisingly, these rituals expanded the Egyptian fascination with cats to include some distinctly were-like beliefs. In a process called "the passage through the skin," for example, a panther tail was worn about the waist or knotted about the neck with the intent of drawing on, in yet another "skin-changing" ritual that owed much to more primitive rites, the power of the animal to help protect and strengthen the wearer.

((START BOX))

@C-BOXHEAD:St. Patrick and His Werewolves

@TEXT-BOX:According to <I>Kongs Skuggsjo<I> (also known as <I>Speculum Regale<I>), a Norse account from 1250, Patricius (better known as Saint Patrick) was subjected to considerable harrassment during the mission he undertook to then-pagan Ireland. The text says that "one great race" (most likely meaning one of the larger Celtic tribes) was quite hostile to him, even going so far as trying to injure or kill him. He met with the men of this "race" in a great assembly, but when he spoke they heckled him by howling like wolves. Then, as the account says:

@TEXT-BOX:<I>.<!s>.<!s>.he became very wroth, and prayed God that he might avenge it on them by some judgement, that their descendents might forever remember their disobedience. And great punishment and fit and very wonderful has since befallen their descendants; for it is said that all men who come from that race are always wolves at a certain time, and run into the woods and take food like wolves; and they are worse in this that they have human reason, for all their cunning, and such desire and greed for men as for other creatures. And it is said that some become so every seventh year, and are men during the interval. And some have it so long that they have seven years at once, and are never so afterwards.<I>

((END BOX))

@C-HEAD:Europe

@TEXT:It was the ancient Greeks, though, who took their half-forgotten memories of these prehistoric traditions, filtered and revised them, and formed from them a vast panoply of

theriomorphs. Starting with the myth of Lycaeon (itself probably a distorted memory of a wolf-brotherhood of hunters), through Euanthes' story of Antaeus and the isle of Circe in Homer's <I>Odyssey,</I> to Ovid's definitive <I>Metamorphoses,</I> classical Greek myth and literature is littered with stories of men changed to animals, and to none more frequently than the wolf.

@TEXT:Uniformly, though, the Grecian transformations are <I>involuntary</I> <#208> they happen either as a punishment or at the whim of some divine agency. It is not until the Roman poet Virgil's eighth <I>eclogue,</I> written approximately 30 BCE, that the voluntary shapeshifter re-appears from the mists of memory. In that tale, the warlock Moeris can turn himself into a wolf at will, among all his necromantic and other powers. While his sympathetic and indeed benevolent characterization is a complex precursor of the Baltic lands' werewolf traditions, he also presaged other, less morally complicated images; a far simpler stereotype of the sorcerer/shapechanger <#208> with a mandatory infernal twist <#208> later became the Inquisition's orthodox definition of the were.

@TEXT:Not all Grecian shifters were relegated to tales of the gods; some were part of day-to-day life. Around 500 BCE Herodotus recorded that the Scythians apparently believed that the Neuri, a neighboring tribe, were werewolves. And a hundred years later, according to second-century writer Pausanias, an Arcadian boxer named Damarchus who had spent nine years as a wolf won an Olympic victory.

@TEXT:Further west, the Druids' mystique included a reputation for taking animal forms. Celtic lore also included the <I>f<#135>elad,</I> those families who numbered lycanthropy among their legacies. Then there is the tale, told in the Fourth Branch of the <I>Mabinogion,</I> of how the magician Gwydion turned Blodeuwedd into an owl.

@TEXT:To the north, the shamanic traditions were re-emerging in the root sources of the Old Norse myths, especially the <I>V<#154>lsungasaga</I> <#208> Sigmund must, like a shaman of old, learn the ways of animals in order to return from the land of the dead. Bodvar Biarki, one of the first werebears, appears in <I>Hr<#151>lfs Saga Kraka.</I> And outside of the sagas, the warriors known as <I>ulfhe<#42f"Times-Italic">d<#4b3.5f\$>-<#b\$>nar</I> and <I>beserkr</I> (see p. 00), like their prehistoric forebears, wore the skins of wolves and bears respectively to draw to themselves the animal's prowess in battle.

@C-HEAD:Elsewhere

@TEXT:In MesoAmerica, the shifters took other forms, familiar to the native peoples. The Yakis, Tarahumaras and Seris Indians worried in the dark of night about the <I>nahuales,</I> warlocks given to taking the form of black-furred coyotes. Their cave drawings clearly depict the werewolf-like creatures that received their attention. The <I>nahual</I> was both the magician and the magic, the primitive spirit possessed by each person; if a man could come to know it, they believed, he could practice magic and cure the sick <#208> once again, a holdover of shamanic beliefs.

@TEXT:Their cousins the the south, the Aztecs, didn't fear the <I>nahuales</I> <#208> they venerated them. The empire protected the sorcerors as sacred to Tezcatlipoca, the god of the war and sacrifice.

@B-HEAD:The Medieval and Renaissance Shapechanger

@TEXT:As Europe slowly recovered from the fall of the Roman Empire, the classical shapeshifter eventually reconverged with older traditions native to the once-conquered territories. In parallel with the growth of new cultures in those lands, new myths formed, often far different from those which spawned them.

(((START BOX)))

@C-BOXHEAD:Skinchanger: Ann of Meremoisa

@TEXT-BOX:According to <I>Estonia I: Werewolves and poisoners, in Early Modern European Witchcraft</I> by Maia Madar, in a 1623 trial in Estonia the defendant, known only as "Ann", testified to a four-year career as werewolf, although the extent of her damages was limited to one horse and several small animals. A wolfskin, which she kept hidden under a stone in a field, was required for her change.

(((END BOX)))

@TEXT:Scandinavia spawned the werebear, who was usually a heroic figure. This tradition

was, along with much else, shared with Germanic mythology. (Later, they would migrate into modern fantasy gaming via the works of J.R.R. Tolkien.) Scandinavian folklore also had its share of evil shifters; magpies, for example, were believed to be sorcerers flying to unholy gatherings.

@TEXT:Legends grew in Scotland of humans who could change into seals, and seals who could change into humans <\#208> <I>selchies<I> or <I>selkies.<I> Their origin was varied: most commonly, the selkies were seen as a separate race, related to but separate from mankind, but ordinary humans could become selkies as well, either because of a curse or by working magic upon themselves. In the most extreme tales, they were seen as angels fallen from grace, but not so far as to become demons.

@TEXT:In France was born the man-wolf. Unlike most other European weres, the creatures that would be called <I>loup-garou<I> were diabolical, driven by cannibalistic urges and the desire to do harm to innocent folk. (See sidebar, p. 00.) Not surprisingly, Inquisition seized upon the loup-garou, with its unredeemably evil nature and sorcerous roots, as the "standard" werewolf of medieval Catholic belief. As a result of its subsequent distribution throughout Europe, the French cannibal werewolf became the dominant shifter stereotype in Western culture (and from there through most of the world).

((START BOX))

@C-BOXHEAD:Lycanthropy and Cannibalism

@TEXT-BOX:By at least the 1400s, both the Church and the law in Europe <\#208> specifically, in medieval France <\#208> had conflated the state of being a werewolf with a variety of mental disorders which drove their few victims to cannibalism (much like the late Jeffrey Dahmer).

@TEXT-BOX:The definitive instance of this practice would be the so-called Werewolf of Chalons, who was discovered in circumstances so bloody and grotesque that the Paris court which convicted him on 14 December 1598 suppressed almost all documents bearing on the case. The accusation of lycanthropy leveled upon him was based entirely on the evidence of his murders, almost as if it were an automatic assumption: mass murderer/cannibal = werewolf.

@TEXT-BOX:As with the Werewolf of Chalons, the evidence of cannibalism alone was in almost every case sufficient grounds to accuse and convict the individual of lycanthropy as well, even if no "witness" to his transformation or depredations in animal form could be found or manufactured. The punishment for both crimes was always the same <\#208> death by one unpleasant means or another.

@TEXT-BOX:It is something to keep in mind, especially when playing in a campaign set in medieval Europe. A particularly evil or vicious Enemy may well decide to rid himself of one or more pests (read "PCs") by arranging for them to appear to be cannibals. Escaping such a charge, especially with properly bribed witnesses to back it up, would be all but impossible.

@TEXT-BOX:The question of <I>why<I> medieval France had <I>so<I> many cannibals (or werewolves, depending on the frame of reference) that such a precedent and protocol for dealing with them had developed is left up to the reader. (And to the GM, to decide for the edification <\#208> or detriment <\#208> of his players.<!s>.<!s>.)

((END BOX))

@TEXT:In contrast, the werewolves of the Baltic and Russian (and some near-Mediterranean) areas were far more benevolent, and occasionally even comical. Typical of these were the Benandanti (see pp. 00-00) and similar descendants of ancient fertility cults. These self-proclaimed werewolves saw themselves taking animal form "in the service of God." Other, more folkloric, werewolves prowled villages in search of beer and liquor, or played pranks on the unwary.

@TEXT:The classic bipedal "wolf-man," far from being an invention of low-budget cinema,

dates from this period and is in fact an element of both the French and Baltic medieval were lore. Naturally, the details differed. The Baltic werewolf was an ordinary wolf which walked on its rear legs, while the Gallic variety was closer to the cinematic half-man.

((START BOX))

@C-BOXHEAD:The Garou in A Historical Perspective

@TEXT-BOX:Although at first glance the Garou of <BI>GURPS Werewolf: The Apocalypse<\$> appear to be inspired solely by the cinematic werewolves of the 20th century, they in fact have a much more "authentic" pedigree.

@TEXT-BOX:The Garou are composed in roughly equal parts of traditions from both Eastern and Western Europe; they are the spiritual descendants of both French and Baltic werewolves, partaking equally of both in a unique fusion. Their "soldiers of a higher power" aspect is directly descended from the Benandanti (pp. 00-00) and other Baltic werewolves, while their savage nature and predatory impulses (not to mention their very name!) are the heritage of the Gallic cannibal <I>loup-garou<I> so feared by the medieval Roman Catholic Church. Nor is the <I>crinos<I> wolf-man form of the Garou a movie invention; it is, in fact, typical of the Baltic werewolves (and, while rare, not unknown in the Western European variety, either).

((END BOX))

@C-HEAD:Asia and the Pacific

@TEXT:During this period, the greater part of Japanese shapechanger folkore evolved, bringing with it the concept of the <I>hengeyokai<I> <#208> animals who can become humans (see p. 00). While not unknown in the rest of the world, the Japanese turned the usual arrangement on its head, with human-to-animal shifters (inimical or otherwise) almost unknown while the far less malevolent <I>kitsune<I> and <I>tanuki<I> predominated in the tales told from generation to generation.

@TEXT:At the same time, though, more sinister weres appeared in the folklore of mainland Asia, India and the Pacific basin. In India as in parts of Europe, were-creatures were believed to be physical forms housing the spirits of evil persons being punished after death. Throughout the Indian subcontinent, they took the form of the "man-tiger" (the tales of which were corrupted into the "manticore" when they reached Europe). It would seem that as a post-mortem punishment it was less than effective, for the man-tigers were no less evil than they had been in life, and far more destructive.

@TEXT:Other were-cats were less inimical. Malaysian legend has its sympathetic were-felines. And Buddhist lore tells the story of Milarepa, Tibet's poet-saint, stranded for six months in the Great Cave of Conquering Demons; he transformed into a snow leopard in order to survive.

@TEXT:Polynesian cultures, as closely tied to the sea as they were, generated legends of ocean-going weres. Possibly the most frightening of all were-creatures comes from their stories; the were-shark was a tireless, rapacious killer possessing no redeeming qualities.

@C-HEAD:Africa

@TEXT:While it is likely that the wide variety of African beliefs actually stabilized far earlier, it is at this point that a few Europeans were first exposed to them. As in Asia, the majority of African weres are felines, although owls and even alligators had their were counterparts. But unlike many other regions, here the ancient shamanistic beliefs persisted, though evolving as well. Shapeshifting, according to typical African beliefs, was a divine gift from a spirit or a god, provided for the purpose of socially-endorsed revenge. The African were did not rampage like his Gallic cousins, instead attacking only those who had harmed them in their human forms. Like the Benandanti and similar groups in the Americas, bands of men who shared a transformation would gather for military or ritual purposes. The best known of these were the various groups known collectively as the "leopard societies," which survived up until the early 20th century.

@TEXT:Still, not all African shifters were benign or feline. Folklore warned of sorcerers

who took the shape of owls to work mischief in the night. And werejackal legends <\#208> perhaps as part of the eternal cat-dog dichotomy <\#208> were as common as as the were-lions and were-leopards.

((START BOX))

@C-BOXHEAD:An "Angry Ghost" <\#208> The Werewolf of Anspach

@TEXT-BOX:During 1685, a large, vicious wolf terrorized the town of Anspach (now Ansbach) in Bavaria. It accumulated a significant death toll, including many women and children, and a large number of domestic animals. For reasons not entirely clear, the town came to the conclusion that the wolf was a werewolf. And not just any werewolf, but the reincarnation of Anspach's thoroughly detested and recently deceased burgomeister (mayor).

@TEXT-BOX:Local hunters eventually cornered and killed the wolf, which inconveniently did not turn back into the late mayor. To make up for this failure, the townsmen dressed the animal's carcass as the burgomeister, going so far as to wrap it in a flesh-colored suit and put a mask and beard on it in order that it might better resemble the late and unlamented mayor.

@TEXT-BOX:The carcass thus costumed, it was hung on a gibbet in Anspach for all to see. Later, it was put on permanent display in the town museum as proof of the existence of werewolves.

((END BOX))

@C-HEAD:Mesoamerica

@TEXT:At this same time, the Aztecs and the other pre-Columbian civilizations of the Americas began forming their various animal warrior cults. Like so many others, these bands <\#208> roughly equivalent in function and status to Europe's various orders of knighthood <\#208> sought to achieve prowess in battle by emulating the predators they admired; it is not surprising that were-myths sprang up around them.

@TEXT:The best known of these cults were those centered around the jaguar <\#208> especially in the form of a black panther. Its importance was surprisingly universal: The Arawak believed that the ultimate shapechange was the transformation into the man-jaguar. The Olmecs built monuments to it. And both the Aztecs and Mayans were obsessed with the power inherent in becoming half-human, half-jaguar.

@TEXT:While the jaguar warriors and other predator cults died out with the coming of Europeans <\#208> slaughtered in battle or suppressed by the Church <\#208> the <I>nahual<I> survived. Sheltered in folk belief, it remains active in South and Central American folklore to this day.

@TEXT:Further north, Native American myth was replete with both werewolves and werecoyotes; called "mai-coh" by the Navajo (the word for "wolf", which literally means "witch"), these were typical skinchangers, who by dint of study and an enchanted pelt or hide could turn into a wolf, owl, or other predator. As with their European counterparts, they were closely associated with sorcery and cannibalism. On the other hand, were-bears were common in the myths of the Pacific Northwest, and in general were viewed as benevolent and even heroic figures.

@TEXT:Above and beyond these simple weres, though, North American myth had something else entirely: the beings the Navajo called <I>yee naaldlooshii<I> and Mohawks called <I>limikkin,<I> the "skinwalkers". The nature of the skinwalkers is somewhat confused; some tales call them sorcerers in the same vein as the mai-coh, while others describe them as beings of a completely different order from humans. Either way, unlike the shamans who worked "within the system" with nature to assume animal natures for ritual purposes, the skinwalkers ignored the natural order to take any shape they pleased, even inanimate objects. Tales are told, for example, of skinwalkers masquerading as tents in order to steal the goods placed within by the unwary.

@D-HEAD:Colonial America

@TEXT:Toward the end of this period, Europeans had settled in the Americas. Not surprisingly, they brought their shapeshifter beliefs with them. Not surprisingly, these beliefs mutated and adapted to the new land. Descended primarily from the Inquisitorial

"standard", these beliefs often converged with and drew from Indian myths, often mutating into something completely new and different. For example, anecdotal evidence suggests that the wererat, rather than being a native of the dank sewers of Europe as one might expect, may well have been born in the woods of Pennsylvania.

((START BOX))

@C-BOXHEAD:Historical Were: Susanna Martin, the Werecat of Salem

@TEXT-BOX:<I>"No, my thoughts are my own when they are in, but when they are out, they are another's." <\#208> Susanna Martin, executed for witchcraft, 1681<I>

@TEXT-BOX:Susanna Martin was tried as a witch at Salem, Massachusetts on June 29, 1692, and according to the testimony of one Robert Downer (as found in part III of Cotton Mather's book <I>The Wonders of the Invisible World<I>), she had gone about transformed into a cat:

@TEXT-BOX:<I>VI. Robert Downer testified, That this Prisoner being some years ago prosecuted at Court for a Witch, he then said unto her, He believed she was a Witch. Whereat she being dissatisfied, said, That some Shee-Devil would Shortly fetch him away! Which words were heard by others, as well as himself. The Night following, as he lay in his Bed, there came in at the Window the likeness of a Cat, which Flew upon him, took fast hold of his Throat, lay on him a considerable while, and almost killed him. At length he remembred what Susanna Martin had threatned the Day before; and with much striving he cryed out, "Avoid, thou Shee-Devil! In the Name of God the Father, the Son, and the Holy Ghost, Avoid!" Whereupon it left him, leap'd on the Floor, and Flew out at the Window.<I>

@TEXT-BOX:<I>And there also came in several Testimonies, that before ever Downer spoke a word of this Accident, Susanna Martin and her Family had related, How this Downer had been Handled!<I>

((END BOX))

@B-HEAD:The Modern Era

@TEXT:The Enlightenment, the Industrial Revolution and the Atomic Age did surprisingly little to dismiss shapechangers from the popular imagination. Eventually the Church's obsession with werewolves faded away, and the advent of scientific thought did quite a bit to dismiss the belief in shapechangers, but the myths and legends remained, and survive even up to today.

@TEXT:With the invention of motion pictures, that survival was assured. Ransacking both the literary products of the Romantic movement and collections of folklore for ideas, the early screenwriters eventually rediscovered the werewolf. The particular image they seized upon was the direct descendant of the Gallic cannibal, and thus it is that particularly savage version which has come to dominate the imagination of the Western world for the past century, and as American media creeps into other cultures, it works its way into them, as well. For example, Japanese folklore never had a wolf-to-man shapeshifter until Hollywood reached them, and now the <I>okami-otoko<I> (literally the "wolf-man") is as widely known as <I>kitsune<I>, maybe more so.

((START BOX))

@C-BOXHEAD:Leopard-Men of the Congo

@TEXT-BOX:In the early part of the 20th Century, belief in witches who could take animal form was still widespread and strong in Central Africa. Several groups took advantage of these beliefs (or perhaps sincerely believed themselves that they were using such magicks) to act against their enemies.

@TEXT-BOX:In the 1930s, a secret society of "leopard-men" from the Anyoto tribe went on a murderous rampage across the Belgian Congo. They dressed in bark costumes painted with a leopard-skin pattern, and used claw-shaped knives to kill their enemies after stalking them through the jungle. Another band of leopard-men took over a village near Lagos, Nigeria in 1946 for a short time. And in 1946, British newspapers reported on a group of Tanganyikan "lion-men" who managed to murder 50 persons before being apprehended.

@TEXT-BOX:While not "true" were-creature incidents, events like these certainly reinforce existing beliefs and might even engender new myths.

((END BOX))

@C-HEAD:Spirituality and Sorcery

@TEXT:But the presence of the were in modern cultures extends much farther than simply images of entertainment. The original spiritual aspect of shapeshifting still survives to this day. In addition to those native cultures in the Americas and elsewhere who have held onto their traditional beliefs in the face of Church pressures, there are also thousands of Neo-Pagans who follow shamanistic paths that often include symbolic and not-so-symbolic assumption of animal traits and imagery as part of their rituals. Overlapping slightly with the latter are the growing communities of so-called "furries" and theriomorph found on the Internet <\#208> people who believe that they possess an internal animal nature that they need to express in a positive way.

@TEXT:Sadly, modern belief in lycanthropy is not always as benevolent as these examples. Believe it or not, werewolf panics and trials continue to this day. In one case in the late 1960s, a witch doctor in an emerging African nation had agreed to turn himself into a crocodile in order to kill a client's mother-in-law. He was arrested before the killing could take place, tried, and found guilty <\#208> not only of conspiracy to commit murder, but also of "conspiracy to commit sorcery, and illegal metamorphosis into a crocodile leading to the death of a citizen". And in October 2000, a vigilante mob in Lagos, Nigeria captured and turned over to police a man whom they accused of turning two children into dogs.

((START BOX))

@C-BOXHEAD:An Account of Were-Jackals

@TEXT-BOX:Another story to come out of the Congo in the 1930s claimed an English physician had managed to spy upon a secret tribal ceremony which culminated in the transformation of a <I>nyanga<I> ("witch-doctor") and a woman into jackals. The complex, involved ritual involved both potions and a jackal skin (worn by the <I>nyanga<I>), and the witness claimed he actually saw the transformation at its end.

((END BOX))

@TEXT:Less extreme, but just as disturbing on some levels, was the effect that the belief in werewolves had in Argentina. There, the traditional werewolf was the lobis<\#151>n, a bloodthirsty creature born the seventh son of human couple. (Some accounts say the seventh son of s seventh son.) The belief and the fear it engendered were so strong that it caused the widespread abandonment of children suspected of being a lobis<\#151>n. Unlike many modern werewolf stories, there is something of a happy ending in this case <\#208> the practice died out in the 1930s after the Argentine government passed a law which automatically made that nation's president the godfather of any seventh son, and gave the child a full scholarship for his studies until he reached 21 years of age. The law is still on the books, apparently, and the presidents of Argentina are said to still attend some of the baptisms <\#208> usually when campaigning for re-eelction.

@C-HEAD:Day of the Dolphin

@TEXT:Despite modern "enlightenment" and science, the social and spiritual forces that drove the evolution of the original were myths have done anything but stop. That they are still at work today is evidenced by the continuing life of a body of were myth from South America. It is centered around the <I>botos<I>, or pink dolphins of the Amazon, a freshwater variety of porpoise with startling pink skin and flippers that end in five stubby fingers. Like selkies, they leave their watery home to dance with and seduce humans, only in a distinctly Brazilian style. Uncontaminated with European fears of cannibalism and devil worship, the <I>botos<I> are relaxed, fun-loving and musical, and are looked upon with fondness by Brazilians and Peruvians even though humans who interact with them rarely come out well in the end.

@TEXT:The mythic elements surrounding the <I>botos<I> and their cousins <\#208> tales of were-pigs, were-horses, were-snakes, were-jaguars and werewolves are all active elements in modern Amazon folklore <\#208> are vibrantly alive and dynamic <\#208> proving that the were-creature is far from dead, no matter how much science and rationality might beseige the human imagination to render it otherwise.

The History and Mythology of the Shapeshifter

Nothing in the entire universe ever perishes, believe me, but things vary, and adopt a new form. The phrase "being born" is used for beginning to be something different from what one was before, while "dying" means ceasing to be the same. Though this thing may pass into that, and that into this, yet the sums of things remains unchanged.

-- Ovid, *Metamorphoses*

It is impossible to point at any one civilization or myth and say, "*There!* That's where we get were-creatures from!" The myth of the shapechanger or the shapestealer is one of the oldest in human history. There is virtually *no* culture on the face of the Earth that does not have a shapeshifter myth; mankind has ever been fascinated and/or repulsed by the difference between humans and beasts -- and the idea that this difference can be transcended.

Prehistoric Shapeshifters

The origin of the shapeshifter in myth and legend traces back to the very beginning of humanity itself. Deep below the Pyrenees, there is a cave in which can be found a Paleolithic wall painting known as the "Sorcerer of Trois Frères." It depicts a figure of mixed animal and human traits. While he stands upright, his posture threatens to turn into the four-footed gait of the bear, whose paws he possesses. Proudly antlered, with a wolf's tail and other animal features, he stands firmly on the threshold between human and not-human, a figure of shamanic power acquired by *becoming* the animals who are the source of that power.

((START BOX))

@C-BOXHEAD:Wolf vs. Werewolf

@TEXT-BOX:Before the 20th century and cinema, European folkloric descriptions made it clear that there were visible differences between a werewolf and a "real" wolf. One of the oldest, most common -- and most noticeable -- of these was the surprising claim that the werewolf has no tail, although other more obscure or arcane "marks" have been cited.

@TEXT-BOX:There is of course a straightforward reason for this which is unassociated with any supernatural cause. Real wolves tend to be too alluring and attractive, and not horrific enough, to be the traditional "monster" required by both folklore and medieval religious dogma. It became necessary to distinguish between the natural (if despised) predator and the hellborn creature who shared its general appearance.

@TEXT-BOX:This wasn't a static, one-time change, though; as the werewolf became both increasingly demonized by the Church and feared by the common people, it grew increasingly distant from the animal on which it was based. Eventually, the image of the humanoid man-wolf (later popularized by horror movies) appeared across Europe as the ultimate alternative to the natural wolf's appearance.

@D-BOXHEAD:Game Use

@TEXT-BOX:Incorporating this traditional feature will add considerably to the flavor of a campaign set in or strongly influenced by medieval European were mythology. When the campaign employs several different shifter types (as is the case in Yrth), the GM may choose the same trait for all of them, or may provide separate tell-tales for each individual variety. Of course, the more flag traits there are, the more "false positives" may occur, and woe to any poor innocent strangers who are found in the vicinity of an ordinary animal with an unfortunate deformity...

@TEXT-BOX:GMs who are considering this option in their games should see the Revealing Trait disadvantage on p. 00.

((END BOX))

Shamans and Hunters

The assumption of an intimate connection between man and beast is perhaps the primary characteristic of primitive thought. It manifests most commonly in the rituals of the hunt and of the shaman as a kind of sympathetic magic.

Primitive hunters sought to assume into themselves the qualities of those predators who prowess they envied. To this end they would don the skins of such animals with the intent of gaining their "virtues" and thereby becoming better hunters. Cave paintings dating back to 6,000 BCE and earlier show hunters wearing the pelts of leopards and other predatory beasts as they make their kills. If studies of surviving primitive peoples are any indication, a conceit or actual belief that (under the right conditions) they were able to take the actual form of their "totem" soon followed.

The shaman held a complementary position as the mediator between men and both animals and spirits. The spirits of animals exploited or killed were of concern to early man; the shaman's duties included not only placating these spirits after a kill, but getting their permission and cooperation beforehand. Because these spirits dwelt in the land of the dead, the shaman's authority stemmed from his ability to control his own spirit sufficiently to enter the land of the dead as an ersatz animal, co-opting an animal's spiritual power to accomplish his goals.

Here then are the ultimate ancestors of the shapeshifter: the hunters who sought to take on a predator's skills, and the shaman who masqueraded as the spirit of an animal. Almost every shapechanger which has since appeared in any culture owes something to these two fundamental sources.

Classical Shapeshifters

By the start of recorded history, most of humanity had replaced shamanism with more organized religions, each with its own body of folklore and myth. Within this lore, a faint memory of the older ways, of the rituals of hunter and shaman, remained; mutating and changing as the culture evolved, they became the basis for new stories and added color to old ones. At the same time, certain cults preserved aspects of the ancient ways more accurately (and a few such would even survive into modern times).

The Middle East

The earliest literary traces of the shapeshifter are found in Mesopotamia and date from approximately 2,000 BCE. The *Epic of Gilgamesh* includes a short passage in which the goddess Ishtar turns a shepherd into a wolf. This is the first known trace of the creature that would become the archetypal shapeshifter millenia later: the werewolf.

At the same time, the Egyptians performed rituals which drew upon ancient shamanic traditions. Unsurprisingly, these rituals expanded the Egyptian fascination with cats to include some distinctly were-like beliefs. In a process called "the passage through the skin," for example, a panther tail was worn about the waist or knotted about the neck with the intent of drawing on, in yet another "skin-changing" ritual that owed much to more primitive rites, the power of the animal to help protect and strengthen the wearer.

((START BOX))

@C-BOXHEAD:St. Patrick and His Werewolves

@TEXT-BOX:According to *Kongs Skuggsjo* (also known as *Speculum Regale*), a Norse account from 1250, Patricius (better known as Saint Patrick) was subjected to considerable harrassment during the mission he undertook to then-pagan Ireland. The text says that "one great race" (most likely meaning one of the larger Celtic tribes) was quite hostile to him, even going so far as trying to injure or kill him. He met with the men of this "race" in a great assembly, but when he spoke they heckled him by howling like wolves. Then, as the account says:

@TEXT-BOX:...*he became very wroth, and prayed God that he might avenge it on them by some judgement, that their descendents might forever remember their disobedience. And great punishment and fit and very wonderful has since befallen their descendants; for it is said that all men who come from that race are always wolves at a certain time, and run into the woods and take food like wolves; and they are worse in this that they have human reason, for all their cunning, and such desire and greed for men as for other creatures. And it is said that some become so every seventh year, and are men during the interval. And some have it so long that they have seven years at once, and are never so afterwards.*

((END BOX))

Europe

It was the ancient Greeks, though, who took their half-forgotten memories of these prehistoric traditions, filtered and revised them, and formed from them a vast panoply of theriomorphs. Starting with the myth of Lycaeon (itself probably a distorted memory of a wolf-brotherhood of hunters), through Euanthes' story of Antaeus and the isle of Circe in Homer's *Odyssey*, to Ovid's definitive *Metamorphoses*, classical Greek myth and literature is littered with stories of men changed to animals, and to none more frequently than the wolf.

Uniformly, though, the Grecian transformations are *involuntary* -- they happen either as a punishment or at the whim of some divine agency. It is not until the Roman poet Virgil's eighth *eclogue*, written approximately 30 BCE, that the voluntary shapeshifter re-appears from the mists of memory. In that tale, the warlock Moeris can turn himself into a wolf at will, among all his necromantic and other powers.

While his sympathetic and indeed benevolent characterization is a complex precursor of the Baltic lands' werewolf traditions, he also presaged other, less morally complicated images; a far simpler stereotype of the sorcerer/shapechanger -- with a mandatory infernal twist -- later became the Inquisition's orthodox definition of the were.

Not all Grecian shifters were relegated to tales of the gods; some were part of day-to-day life. Around 500 BCE Herodotus recorded that the Scythians apparently believed that the Neuri, a neighboring tribe, were werewolves. And a hundred years later, according to second-century writer Pausanias, an Arcadian boxer named Damarchus who had spent nine years as a wolf won an Olympic victory.

Further west, the Druids' mystique included a reputation for taking animal forms. Celtic lore also included the *fáelad*, those families who numbered lycanthropy among their legacies. Then there is the tale, told in the Fourth Branch of the *Mabinogion*, of how the magician Gwydion turned Blodeuwedd into an owl.

To the north, the shamanic traditions were re-emerging in the root sources of the Old Norse myths, especially the *Völsungasaga* -- Sigmund must, like a shaman of old, learn the ways of animals in order to return from the land of the dead. Bodvar Biarki, one of the first werebears, appears in *Hrólfs Saga Kraka*. And outside of the sagas, the warriors known as *ulfhed-nar* and *beserkr*s (see p. 00), like their prehistoric forebears, wore the skins of wolves and bears respectively to draw to themselves the animal's prowess in battle.

Elsewhere

In MesoAmerica, the shifters took other forms, familiar to the native peoples. The Yakis, Tarahumaras and Seris Indians worried in the dark of night about the *nahuales*, warlocks given to taking the form of black-furred coyotes. Their cave drawings clearly depict the werewolf-like creatures that received their attention. The *nahual* was both the magician and the magic, the primitive spirit possessed by each person; if a man could come to know it, they believed, he could practice magic and cure the sick -- once again, a holdover of shamanic beliefs.

Their cousins to the south, the Aztecs, didn't fear the *nahuales* -- they venerated them. The empire protected the sorcerers as sacred to Tezcatlipoca, the god of the war and sacrifice.

The Medieval and Renaissance Shapechanger

As Europe slowly recovered from the fall of the Roman Empire, the classical shapeshifter eventually reconverged with older traditions native to the once-conquered territories. In parallel with the growth of new cultures in those lands, new myths formed, often far different from those which spawned them.

(((START BOX)))

@C-BOXHEAD:Skinchanger: Ann of Meremoisa

@TEXT-BOX:According to *Estonia I: Werewolves and poisoners, in Early Modern European Witchcraft* by Maia Madar, in a 1623 trial in Estonia the defendant, known only as "Ann", testified to a four-year career as werewolf, although the extent of her damages was limited to one horse and

several small animals. A wolfskin, which she kept hidden under a stone in a field, was required for her change.

((END BOX))

Scandinavia spawned the werebear, who was usually a heroic figure. This tradition was, along with much else, shared with Germanic mythology. (Later, they would migrate into modern fantasy gaming via the works of J.R.R. Tolkien.) Scandinavian folklore also had its share of evil shifters; magpies, for example, were believed to be sorcerers flying to unholy gatherings.

Legends grew in Scotland of humans who could change into seals, and seals who could change into humans -- *selchies* or *selkies*. Their origin was varied: most commonly, the selkies were seen as a separate race, related to but separate from mankind, but ordinary humans could become selkies as well, either because of a curse or by working magic upon themselves. In the most extreme tales, they were seen as angels fallen from grace, but not so far as to become demons.

In France was born the man-wolf. Unlike most other European weres, the creatures that would be called *loup-garou* were diabolical, driven by cannibalistic urges and the desire to do harm to innocent folk. (See sidebar, p. 00.) Not surprisingly, Inquisition seized upon the loup-garou, with its unredeemably evil nature and sorcerous roots, as the "standard" werewolf of medieval Catholic belief. As a result of its subsequent distribution throughout Europe, the French cannibal werewolf became the dominant shifter stereotype in Western culture (and from there through most of the world).

((START BOX))

@C-BOXHEAD:Lycanthropy and Cannibalism

@TEXT-BOX:By at least the 1400s, both the Church and the law in Europe -- specifically, in medieval France -- had conflated the state of being a werewolf with a variety of mental disorders which drove their few victims to cannibalism (much like the late Jeffrey Dahmer).

@TEXT-BOX:The definitive instance of this practice would be the so-called Werewolf of Chalons, who was discovered in circumstances so bloody and grotesque that the Paris court which convicted him on 14 December 1598 suppressed almost all documents bearing on the case. The accusation of lycanthropy leveled upon him was based entirely on the evidence of his murders, almost as if it were an automatic assumption: mass murderer/cannibal = werewolf.

@TEXT-BOX:As with the Werewolf of Chalons, the evidence of cannibalism alone was in almost every case sufficient grounds to accuse and convict the individual of lycanthropy as well, even if no "witness" to his transformation or depredations in animal form could be found or manufactured. The punishment for both crimes was always the same -- death by one unpleasant means or another.

@TEXT-BOX:It is something to keep in mind, especially when playing in a campaign set in medieval Europe. A particularly evil or vicious Enemy may well decide to rid himself of one or more pests (read "PCs") by arranging for them to appear to be cannibals. Escaping such a charge, especially with properly bribed witnesses to back it up, would be all but impossible.

@TEXT-BOX:The question of *why* medieval France had *so* many cannibals (or werewolves,

depending on the frame of reference) that such a precedent and protocol for dealing with them had developed is left up to the reader. (And to the GM, to decide for the edification -- or detriment -- of his players...)

((END BOX))

In contrast, the werewolves of the Baltic and Russian (and some near-Mediterranean) areas were far more benevolent, and occasionally even comical. Typical of these were the Benandanti (see pp. 00-00) and similar descendants of ancient fertility cults. These self-proclaimed werewolves saw themselves taking animal form "in the service of God." Other, more folkloric, werewolves prowled villages in search of beer and liquor, or played pranks on the unwary.

The classic bipedal "wolf-man," far from being an invention of low-budget cinema, dates from this period and is in fact an element of both the French and Baltic medieval were lore. Naturally, the details differed. The Baltic werewolf was an ordinary wolf which walked on its rear legs, while the Gallic variety was closer to the cinematic half-man.

((START BOX))

@C-BOXHEAD:The Garou in A Historical Perspective

@TEXT-BOX:Although at first glance the Garou of *GURPS Werewolf: The Apocalypse* appear to be inspired solely by the cinematic werewolves of the 20th century, they in fact have a much more "authentic" pedigree.

@TEXT-BOX:The Garou are composed in roughly equal parts of traditions from both Eastern and Western Europe; they are the spiritual descendants of both French and Baltic werewolves, partaking equally of both in a unique fusion. Their "soldiers of a higher power" aspect is directly descended from the Benandanti (pp. 00-00) and other Baltic werewolves, while their savage nature and predatory impulses (not to mention their very name!) are the heritage of the Gallic cannibal *loup-garou* so feared by the medieval Roman Catholic Church. Nor is the *crinos* wolf-man form of the Garou a movie invention; it is, in fact, typical of the Baltic werewolves (and, while rare, not unknown in the Western European variety, either).

((END BOX))

Asia and the Pacific

During this period, the greater part of Japanese shapechanger folklore evolved, bringing with it the concept of the *hengeyokai* -- animals who can become humans (see p. 00). While not unknown in the rest of the world, the Japanese turned the usual arrangement on its head, with human-to-animal shifters (inimical or otherwise) almost unknown while the far less malevolent *kitsune* and *tanuki* predominated in the tales told from generation to generation.

At the same time, though, more sinister weres appeared in the folklore of mainland Asia, India and the Pacific basin. In India as in parts of Europe, were-creatures were believed to be physical forms housing the spirits of evil persons being punished after death. Throughout the Indian subcontinent, they took the form of the "man-tiger" (the tales of which were corrupted into the "manticore" when they reached Europe). It would seem that as a post-mortem punishment it was less than

effective, for the man-tigers were no less evil than they had been in life, and far more destructive.

Other were-cats were less inimical. Malaysian legend has its sympathetic were-felines. And Buddhist lore tells the story of Milarepa, Tibet's poet-saint, stranded for six months in the Great Cave of Conquering Demons; he transformed into a snow leopard in order to survive.

Polynesian cultures, as closely tied to the sea as they were, generated legends of ocean-going weres. Possibly the most frightening of all were-creatures comes from their stories; the were-shark was a tireless, rapacious killer possessing no redeeming qualities.

Africa

While it is likely that the wide variety of African beliefs actually stabilized far earlier, it is at this point that a few Europeans were first exposed to them. As in Asia, the majority of African weres are felines, although owls and even alligators had their were counterparts. But unlike many other regions, here the ancient shamanistic beliefs persisted, though evolving as well. Shapeshifting, according to typical African beliefs, was a divine gift from a spirit or a god, provided for the purpose of socially-endorsed revenge. The African were did not rampage like his Gallic cousins, instead attacking only those who had harmed them in their human forms. Like the Benandanti and similar groups in the Americas, bands of men who shared a transformation would gather for military or ritual purposes. The best known of these were the various groups known collectively as the "leopard societies," which survived up until the early 20th century.

Still, not all African shifters were benign or feline. Folklore warned of sorcerers who took the shape of owls to work mischief in the night. And werejackal legends -- perhaps as part of the eternal cat-dog dichotomy -- were as common as the were-lions and were-leopards.

((START BOX))

@C-BOXHEAD:An "Angry Ghost" -- The Werewolf of Anspach

@TEXT-BOX:During 1685, a large, vicious wolf terrorized the town of Anspach (now Ansbach) in Bavaria. It accumulated a significant death toll, including many women and children, and a large number of domestic animals. For reasons not entirely clear, the town came to the conclusion that the wolf was a werewolf. And not just any werewolf, but the reincarnation of Anspach's thoroughly detested and recently deceased burgomeister (mayor).

@TEXT-BOX:Local hunters eventually cornered and killed the wolf, which inconveniently did not turn back into the late mayor. To make up for this failure, the townsmen dressed the animal's carcass as the burgomeister, going so far as to wrap it in a flesh-colored suit and put a mask and beard on it in order that it might better resemble the late and unlamented mayor.

@TEXT-BOX:The carcass thus costumed, it was hung on a gibbet in Anspach for all to see. Later, it was put on permanent display in the town museum as proof of the existence of werewolves.

((END BOX))

Mesoamerica

At this same time, the Aztecs and the other pre-Columbian civilizations of the Americas began forming their various animal warrior cults. Like so many others, these bands -- roughly equivalent in function and status to Europe's various orders of knighthood -- sought to achieve prowess in battle by emulating the predators they admired; it is not surprising that were-myths sprang up around them.

The best known of these cults were those centered around the jaguar -- especially in the form of a black panther. Its importance was surprisingly universal: The Arawak believed that the ultimate shapechange was the transformation into the man-jaguar. The Olmecs built monuments to it. And both the Aztecs and Mayans were obsessed with the power inherent in becoming half-human, half-jaguar.

While the jaguar warriors and other predator cults died out with the coming of Europeans -- slaughtered in battle or suppressed by the Church -- the *nahual* survived. Sheltered in folk belief, it remains active in South and Central American folklore to this day.

Further north, Native American myth was replete with both werewolves and werecoyotes; called "mai-coh" by the Navajo (the word for "wolf", which literally means "witch"), these were typical skinchangers, who by dint of study and an enchanted pelt or hide could turn into a wolf, owl, or other predator. As with their European counterparts, they were closely associated with sorcery and cannibalism. On the other hand, were-bears were common in the myths of the Pacific Northwest, and in general were viewed as benevolent and even heroic figures.

Above and beyond these simple weres, though, North American myth had something else entirely: the beings the Navajo called *yee naaldlooshii* and Mohawks called *limikkin*, the "skinwalkers". The nature of the skinwalkers is somewhat confused; some tales call them sorcerers in the same vein as the mai-coh, while others describe them as beings of a completely different order from humans. Either way, unlike the shamans who worked "within the system" with nature to assume animal natures for ritual purposes, the skinwalkers ignored the natural order to take any shape they pleased, even inanimate objects. Tales are told, for example, of skinwalkers masquerading as tents in order to steal the goods placed within by the unwary.

Colonial America

Toward the end of this period, Europeans had settled in the Americas. Not surprisingly, they brought their shapeshifter beliefs with them. Not surprisingly, these beliefs mutated and adapted to the new land. Descended primarily from the Inquisitorial "standard", these beliefs often converged with and drew from Indian myths, often mutating into something completely new and different. For example, anecdotal evidence suggests that the wererat, rather than being a native of the dank sewers of Europe as one might expect, may well have been born in the woods of Pennsylvania.

(((START BOX)))

@C-BOXHEAD:Historical Were: Susanna Martin, the Werecoat of Salem

@TEXT-BOX:*"No, my thoughts are my own when they are in, but when they are out, they are another's." -- Susanna Martin, executed for witchcraft, 1681*

@TEXT-BOX:Susanna Martin was tried as a witch at Salem, Massachusetts on June 29, 1692, and according to the testimony of one Robert Downer (as found in part III of Cotton Mather's book *The Wonders of the Invisible World*), she had gone about transformed into a cat:

@TEXT-BOX:*VI. Robert Downer testified, That this Prisoner being some years ago prosecuted at Court for a Witch, he then said unto her, He believed she was a Witch. Whereat she being dissatisfied, said, That some Shee-Devil would Shortly fetch him away! Which words were heard by others, as well as himself. The Night following, as he lay in his Bed, there came in at the Window the likeness of a Cat, which Flew upon him, took fast hold of his Throat, lay on him a considerable while, and almost killed him. At length he remembred what Susanna Martin had threatned the Day before; and with much striving he cryed out, "Avoid, thou Shee-Devil! In the Name of God the Father, the Son, and the Holy Ghost, Avoid!" Whereupon it left him, leap'd on the Floor, and Flew out at the Window.*

@TEXT-BOX:*And there also came in several Testimonies, that before ever Downer spoke a word of this Accident, Susanna Martin and her Family had related, How this Downer had been Handled!*

((END BOX))

The Modern Era

The Enlightenment, the Industrial Revolution and the Atomic Age did surprisingly little to dismiss shapechangers from the popular imagination. Eventually the Church's obsession with werewolves faded away, and the advent of scientific thought did quite a bit to dismiss the belief in shapechangers, but the myths and legends remained, and survive even up to today.

With the invention of motion pictures, that survival was assured. Ransacking both the literary products of the Romantic movement and collections of folklore for ideas, the early screenwriters eventually rediscovered the werewolf. The particular image they seized upon was the direct descendant of the Gallic cannibal, and thus it is that particularly savage version which has come to dominate the imagination of the Western world for the past century, and as American media creeps into other cultures, it works its way into them, as well. For example, Japanese folklore never had a wolf-to-man shapeshifter until Hollywood reached them, and now the *okami-otoko* (literally the "wolf-man") is as widely known as *kitsune*, maybe more so.

((START BOX))

@C-BOXHEAD:Leopard-Men of the Congo

@TEXT-BOX:In the early part of the 20th Century, belief in witches who could take animal form was still widespread and strong in Central Africa. Several groups took advantage of these beliefs (or perhaps sincerely believed themselves that they were using such magicks) to act against their enemies.

@TEXT-BOX:In the 1930s, a secret society of "leopard-men" from the Anyoto tribe went on a murderous rampage across the Belgian Congo. They dressed in bark costumes painted with a

leopard-skin pattern, and used claw-shaped knives to kill their enemies after stalking them through the jungle. Another band of leopard-men took over a village near Lagos, Nigeria in 1946 for a short time. And in 1946, British newspapers reported on a group of Tanganyikan "lion-men" who managed to murder 50 persons before being apprehended.

@TEXT-BOX:While not "true" were-creature incidents, events like these certainly reinforce existing beliefs and might even engender new myths.

((END BOX))

Spirituality and Sorcery

But the presence of the were in modern cultures extends much farther than simply images of entertainment. The original spiritual aspect of shapeshifting still survives to this day. In addition to those native cultures in the Americas and elsewhere who have held onto their traditional beliefs in the face of Church pressures, there are also thousands of Neo-Pagans who follow shamanistic paths that often include symbolic and not-so-symbolic assumption of animal traits and imagery as part of their rituals. Overlapping slightly with the latter are the growing communities of so-called "furries" and theriomorph found on the Internet -- people who believe that they possess an internal animal nature that they need to express in a positive way.

Sadly, modern belief in lycanthropy is not always as benevolent as these examples. Believe it or not, werewolf panics and trials continue to this day. In one case in the late 1960s, a witch doctor in an emerging African nation had agreed to turn himself into a crocodile in order to kill a client's mother-in-law. He was arrested before the killing could take place, tried, and found guilty -- not only of conspiracy to commit murder, but also of "conspiracy to commit sorcery, and illegal metamorphosis into a crocodile leading to the death of a citizen". And in October 2000, a vigilante mob in Lagos, Nigeria captured and turned over to police a man whom they accused of turning two children into dogs.

((START BOX))

@C-BOXHEAD:An Account of Were-Jackals

@TEXT-BOX:Another story to come out of the Congo in the 1930s claimed an English physician had managed to spy upon a secret tribal ceremony which culminated in the transformation of a *nyanga* ("witch-doctor") and a woman into jackals. The complex, involved ritual involved both potions and a jackal skin (worn by the *nyanga*), and the witness claimed he actually saw the transformation at its end.

((END BOX))

Less extreme, but just as disturbing on some levels, was the effect that the belief in werewolves had in Argentina. There, the traditional werewolf was the lobisón, a bloodthirsty creature born the seventh son of human couple. (Some accounts say the seventh son of s seventh son.) The belief and the fear it engendered were so strong that it caused the widespread abandonment of children suspected of being a lobisón. Unlike many modern werewolf stories, there is something of a happy ending in this case -- the practice died out in the 1930s after the Argentine government passed a law which automatically made that nation's president the godfather of any seventh son, and gave

the child a full scholarship for his studies until he reached 21 years of age. The law is still on the books, apparently, and the presidents of Argentina are said to still attend some of the baptisms -- usually when campaigning for re-election.

Day of the Dolphin

Despite modern "enlightenment" and science, the social and spiritual forces that drove the evolution of the original were myths have done anything but stop. That they are still at work today is evidenced by the continuing life of a body of were myth from South America. It is centered around the *botos*, or pink dolphins of the Amazon, a freshwater variety of porpoise with startling pink skin and flippers that end in five stubby fingers. Like selkies, they leave their watery home to dance with and seduce humans, only in a distinctly Brazilian style. Uncontaminated with European fears of cannibalism and devil worship, the *botos* are relaxed, fun-loving and musical, and are looked upon with fondness by Brazilians and Peruvians even though humans who interact with them rarely come out well in the end.

The mythic elements surrounding the *botos* and their cousins -- tales of were-pigs, were-horses, were-snakes, were-jaguars and werewolves are all active elements in modern Amazon folklore -- are vibrantly alive and dynamic -- proving that the were-creature is far from dead, no matter how much science and rationality might besiege the human imagination to render it otherwise.

@A-HEAD:Shapeshifting

@TEXT:<I>Well, I like you. You're nice, and you're funny. And you don't smoke. Yeah, okay, werewolf, but that's not all the time. I mean, three days out of the month I'm not much fun to be around either.<I>

@TEXT:<I><\#208> Willow to Oz, in Buffy the Vampire Slayer<I>

@TEXT:Over thousands of years of myth, legend and fiction, mankind has created a vast variety of creatures and beings of variable form. Despite their apparent differences, certain common themes and mechanisms can be found among them, regardless of their origins.

((START BOX))

@C-BOXHEAD>About This Chapter

@TEXT-BOX:The rules in this chapter supplement and in some cases supercede those found in <BI>Compendium I<\$>'s various shifting advantages and disadvantages. Specifically, the game effects described for Animal Form (p. CI33), Shapeshifter (pp. CI43-44), and Untrained Shapechanging (p. CI100) are now subsumed under the were-form rules in the main text on pp. 00-00. Similarly, as far as weres are concerned, Multiple Forms (p. CI62), Transformation (p. CI68) and Uncontrolled Change (p. CI105) no longer apply.

((END BOX))

@B-HEAD:Taxonomy

@TEXT:When stripped of their special effects and their unique stories, virtually all the shapeshifters in fiction and myth <\#208> and in gaming <\#208> can be reduced to two distinct varieties: the <I>morph<\$> and the <I>were<\$>.

@C-HEAD:The Morph

@TEXT:The <I>Morph<\$> is the creature of a thousand forms. Whether or not it possesses a "native" shape matters little <\#208> it survives day-to-day with its ability to assume almost any other form. It may do so either for protection or predation; it may require a simple visual contact, or genetic samples, or wholesale consumption to acquire a pattern to duplicate. It may acquire the original's memories, or simply its appearance. But in the end, it can be anything or anyone, and in some cases, all of them at once.

@TEXT:Examples of the morph include "Odo" from <I>Star Trek: Deep Space Nine,<\$> The Thing from the 1982 John Carpenter movie of the same name (as well as "Who Goes There?", the John W. Campbell story on which the film was based), and the T-1000 "liquid metal" terminator in the film <I>Terminator 2.<\$>

@C-HEAD:The Were

@TEXT:The <I>Were<\$> (short for "were-creature" <\#208> see the glossary, p. 00) is a being which alternates between a fixed set of two or more pre-defined bodies <\#208> none of which are necessarily human. Its ability to change may be entirely voluntary, or completely out of its control. Unlike the morph, it often demonstrates different personality traits and even different personalities in its different bodies.

@TEXT:The majority of shapeshifters in myth and legend are weres. Furthermore, this definition is very broad and includes many types of shapeshifters who at first glance may not appear to be the same type of creature as a werewolf; but any being which possesses two or more distinct, predefined bodies, no matter the reason or mechanism, is a were.

@TEXT:Examples of the were range from the classic werewolf of legend and its various cousins from the world over, through its more monstrous incarnations in horror films, to such apparently unlikely candidates as Dr. Jekyll/Mr. Hyde and victims of the Jusenkyo curses of the Japanese manga/anime <I>Ranma 1/2.<\$>

@B-HEAD:That Thing You Do <\#208> Basic Mechanisms

@TEXT:Excluding spells and certain magic items, there are two primary mechanisms for creating shapeshifting characters in <BI>GURPS<\$>. Which to choose depends on the nature of the character being designed. Remember, all that matters on the game level is <I>how<\$> those changes are quantified, not <I>why<\$> they happen. So a person under a shapechanging curse (as in <I>Ladyhawke<\$> or <I>Ranma 1/2<\$>) is as much a were as a Garou from <BI>GURPS Werewolf: The Apocalypse;<\$> and any creature that can steal or copy another's shape (<I>DS9<\$>'s "Founders", "The Thing") is a morph. Another good rule of thumb is that (by default) a morph never undergoes a personality change no matter what form he takes, while a were frequently does.

((START BOX))

@C-BOXHEAD:Spells and Devices

@BODY:Shapechanging via "outside" means such as spells and magic items is not really shifting as defined by this book. No matter how "internalized" his spell and his mana are, a mage with a Shapeshift spell is simply <I>not<I> a morph or a were.

@BODY:But Ensorcelled Shapeshifts (see p. G39) and items which grant similar effects are gray areas. There's little functional difference between a person Ensorcelled with Great Shapeshifting, and a Morph with a Cure/Cursebreak limitation. Likewise, no few creatures of myth that would otherwise be defined as standard weres resemble ordinary people with extraordinary magic items.

@BODY:When it comes to items, if the item works only for the individual <\#208> like the skins of Selkies (p. 00) and the feathered cloaks of Swan Mays (p. 00) <\#208> the character is a shifter. If anyone with the correct knowledge and the Fatigue to spend can trigger the effect, then the owner is just someone with a standard magic item.

@BODY:The use of a Shapeshift spell in the usual manner does not make a were or morph of the recipient. But Ensorcelled versions are a different matter; if the problem of dwindling IQ is somehow defeated where necessary, they effectively turn the recipient <I>into<I> the appropriate kind of shapeshifter. The GM should feel free to calculate the point total for an equivalent shapechanging advantage <\#208> and Unusual Background, if needed in the campaign <\#208> and assess that cost against the character.

((END BOX))

@B-HEAD:Building A Morph

@TEXT:In <BI>GURPS<\$>, a morph character is built with the super advantage of the same name, found on p. 61 of <BI>GURPS Compendium I.<\$> (This is a generic, "baseline" morph ability; if more flexibility is desired, consult the version found on p. 63 of <BI>GURPS Supers.<\$> While it is a bit more expensive and has its own limitations, it is also far more flexible in terms of the range of sizes and shapes possible.)

@TEXT:Variations on the basic Morph ability <\#208> such as changes in the number of or need for memorized forms, access to a subject's memories, and the like <\#208> are handled with the standard enhancement/limitations rules found on pp. CI107-112. Some new morph-specific enhancements and limitations can be found on pp. 00-00.

@TEXT:Morph characters may also find the Change Control (p. CI138) skill useful.

@TEXT:For the most part, Morph characters are simple and straightforward in design. As a result, there is little need to cover the process of their creation in detail. However, this should not be taken to mean that all morphs are alike <\#208> quite the contrary. Several examples of Morph-based characters and races are provided in Chapter 3 in order to demonstrate the range of possibilities available to the player. Don't be fooled into thinking that one morph is like any other morph!

@TEXT:By default, a morph has the following characteristics: He can memorize any form which he has seen, whether in person or at a remove, such as via television or a photograph. None of the original model's knowledge is acquired <\#208> only appearance. Within the size/mass limits of the Morph advantage, the copied form is a perfect duplicate, visually, but the morph's internal structure and genetic code (if any) do not change. He has complete control over his changes to and from his memorized forms, with no involuntary or compulsive aspects to the shift, but cannot blend or mix forms. The change is limited to the body; clothing is not acquired or lost in the transformation, although it <I>can<I> be simulated as an integral part of a memorized shape.

@B-HEAD:Building A Were

@TEXT:Compared to a morph, building a were character is somewhat more complicated. The Quick-and-Dirty creation rules provided on p. 98 of <BI>Bestiary, Third Edition<\$> (and reproduced in the box on p. 00) describe the basics of the process, but they result in only the simplest of weres <\#208> specifically, those with a change to animal form that is always under the character's control.

@TEXT:At the heart of the Quick-and-Dirty rules is the process of turning an alternate form into an advantage (or, in some cases, a disadvantage), which can be then added to a character's point total. The alternate form itself is usually a combination of an animal template (see pp. BE104-113) and any additional character traits needed to define the

form properly. (In some cases, though, the template may not be for an animal, but for a human or some other sentient race. See the sample character "Ripper" in the sidebar on p. BE98.)

@TEXT:The alternate form is, in effect, an "overlay." It is the sum of all the differences between the base form and the were-form, differences that come into play only when the alternate form is activated. It is not a full character in and of itself, even if it possesses a Split Personality. It is, rather, a Switchable advantage, built from a number of subsidiary advantages and attribute boosts, with a set of attendant Temporary Disadvantages (a Nuisance Effect limitation, as described on pp. BI0137-9 and in the box on p. 00).

@TEXT:By default, a Quick-and-Dirty were has the following characteristics: The shifter has complete control over his changes to and from the were-form, with no involuntary or compulsive aspect to the shift. The change is limited to his body <\#208> clothing and equipment must be removed first, or risk entanglement or damage. Unless otherwise altered at creation, the animal form will have an animal's IQ, mental limitations, and priorities. And finally, the character will normally possess no special vulnerabilities or weaknesses except those normally possessed by the template animal.

@TEXT:Like the morph, some weres will find the Change Control skill useful to their character conception.

((START BOX))

@C-BOXHEAD:Quick-and-Dirty Shapeshifting

@TEXT-BOX:The following "rule of thumb" for fast creation of a character with a were-form comes from p. 98 of <BI>GURPS Bestiary, Third Edition.<\$> It assumes the simplest case: an animal wereform with completely voluntary control over the change.

@TEXT-BOX:Treat an alternate form as an <I>advantage,<\$> with the point cost calculated as follows:

@TEXT-BOX:1.<\$> Create the beast form as you would any character. (<BI>GURPS Compendium I<\$> lists many traits suitable for beasts. <BI>GURPS Bestiary, Third Edition<\$> lists a number of animal templates suitable for were-forms.) <I>Exclude<I> any physical traits the base form already possesses (for example, Combat Reflexes).

@TEXT-BOX:2.<\$> Total everything with a positive cost to produce a "positive point total" (PPT). Total all negative values to get "negative point total" (NPT). For changes in attribute levels and existing traits, use the <I>difference<\$> in the costs between the forms (e.g., a ST 11 human who has ST 15 in beast form adds 50 points to PPT; a Wealthy human who turns into a Dead Broke beast adds -45 points to NPT).

@TEXT-BOX:3.<\$> Apply NPT as a percentage limitation on PPT (e.g., NPT -40 becomes a -40% limitation on PPT). The limitation cannot exceed -75%, regardless of NPT (e.g., NPT -100 would give only a -75% limitation). Moreover, the point savings due to the limitation cannot exceed 80% of NPT (e.g., NPT -50 and PPT 100 would result in a -50% limitation, normally worth -50 points, but since this would exceed 80% of -50 points, or -40 points, it is reduced to -40 points). (This is the Nuisance Effect: Temporary Disadvantage limitation; see sidebar, p. 00.)

((END BOX))

@D-HEAD:Going Beyond Quick-And-Dirty

@TEXT:While this may be perfectly acceptable to many players, some may want more control over the specifics of their PCs' shapechanging abilities. To this end, new disadvantages, enhancements, and limitations specific to the shapeshifting character are provided on pp. 00-00.

@C-HEAD:The Template

@TEXT:The first step in the process of designing a were is to select what creature is the basis for the were-form, and define it as a template <\#208> a "racial package" for a specific type of animal. Several sample animal templates are found in Chapter 4, and many more can be found in the <BI>Bestiary.<\$> If the species you want isn't among these, you can build your own from scratch using Chapter 5 of <BI>Bestiary,<\$> or you can use the ones in this book as models.

@TEXT:A template for a natural animal will normally include many traits that may be inappropriate or unwanted in the final character, such as Bestial and Presentient. Do

<I>not<I> remove these from the template. They contribute to the final proper cost of the "racial package," and even if they are just going to be bought off later, eliminating them at this point can often be a false economy. <I>Keep the template self-contained.<I>
@TEXT:<I>Exceptions:<I> One exception to this is, as noted above, any template trait already possessed by the base form which is desired in the were-form. Although it fails the "reality check" for a racial package, it is less trouble to simply leave it out of the template than to buy it twice and buy it back once.

@TEXT:Another exception is a hybrid form, like the classic wolf-man. These can frequently get far too complicated and inefficient when built off an animal template. In such cases, it is enough to simply delineate all the changes without worrying about modifying a pre-existing package.

@C-HEAD:Fleshing Out the Were-Form

@TEXT:At this point, the were-form <I>is<I> the animal template. For players seeking a no-frills, no-complications were, this will be sufficient, but the were-form will then be little more than a normal animal who has a vague memory of having been human. Many players will want to change this.

@TEXT:The were-form is not modified by changing the animal template, but by tabulating the desired changes separate from but alongside of it. Remember, the template is like a racial package <\#208> traits are not removed from the package, simply bought off or modified in the individual character.

@TEXT:The most common changes will be raising the form's IQ and buying off the more severe mental disadvantages like Bestial, Presentient and Innumerate. Certain physical advantages and disadvantages are also inappropriate to a were-form and should be bought off in all but the most unusual circumstances. Early Maturation and Short Lifespan in particular, because most were-forms are not limited by the animal template's life cycle and lifespan, but anything else that would be nonsensical or contradictory should be eliminated.

@TEXT:<I>Exception:<I> If the character is a child, Early Maturation could be retained to describe a were-form that matures faster than the base form.

((START BOX))

@C-BOXHEAD:You Turn Into WHAT?

@TEXT-BOX:Most gamers will be aware that were-creatures are by no means limited to wolves. However, as counterintuitive as it might appear, the alternate form of a were need not be an animal. In fact, it need not even be a different species from the base form. Fiction is filled with people who change into different human bodies: Saotome Ranma from Takahashi Rumiko's <I>Ranma 1/2<\$> is one example; Dr. Jekyll/Mr. Hyde (from the story by Robert Louis Stevenson) can be interpreted as another.

@TEXT-BOX:Alternate forms may also be other intelligent races, as in the case of the legends of dragon shifters who frequently took human form. But the options do not stop there. Japanese anime and manga are particularly rich sources of unusual weres: <I>Ranma 1/2<\$> has (among others) Pansuto-Tarou, whose shifting curse incorporated a half-dozen different animals into a single hybrid monster, and the girl Rouge, who turned into an animated (and malevolent) statue of a Hindu demon. <I>Birdy The Mighty<\$> postulates a symbiotic relationship between a human and an alien sharing a body that alternates between their two forms (and genders!). <I>Tenchi Muyo!<\$> demonstrates the <I>weremachine<\$> (p. 00) in the form of Ryo-ohki <\#208> a rabbit-sized creature that can turn into a giant crystalline starship. And even more exotic possibilities can be found. If you can build it with points and play it as a character, you can turn it into a were-form.

((END BOX))

@D-HEAD:Raising Attributes

@TEXT:Remember that when raising or lowering attributes from the animal template's levels, you are buying off an advantage or disadvantage and pay points accordingly. Bringing a were-form's IQ, for example, up from 4 to 10 costs 50 points, not 80.

@D-HEAD:Other Changes

@TEXT:Buy back any of the animal template's other traits that are not wanted in the final were-form, although these will probably be few. Similarly, any traits of the base form

which are not wanted in the were-form should be bought off or back as well.

@TEXT:This is also the time to add new features specific to the were-form, starting with the mundane and extending up into such supernatural or racial traits as the traditional Vulnerability and/or Weakness to silver, an Infectious Attack, and so on. If the base form is subject to some infirmity <\#208> such as One Hand or Lame: Crippled Leg <\#208> that is not desired in the were-form, buy it off at this time, too. However, some traits <\#208> such as Split Personality, Reciprocal Rest and Non-Reciprocal Damage <\#208> should actually be taken by the base form.

@C-HEAD:Calculating Costs

@TEXT:After assembling the final collection of changs that will comprise were-form, the next steps are the same as in the Quick-and-Dirty rules. Add up everything with a positive point cost to come up with the "positive point total" (PPT). Do the same for items with a negative point cost to produce the "negative point total" (NPT).

@TEXT:<I>Example:<I> Alison is building a wereleopard. After she finishes customizing the were-form, it has a PPT of 205 and an NPT of -183.

@TEXT:Next, apply NPT as a percentage limitation on PPT (e.g., NPT -40 becomes a -40% limitation on PPT). The limitation cannot exceed -75%, regardless of NPT (e.g., NPT -100 would give only a -75% limitation). Moreover, the point savings due to the limitation cannot exceed 80% of NPT (e.g., NPT -50 and PPT 100 would result in a -50% limitation, normally worth -50 points, but since this would exceed 80% of -50 points, or -40, it is reduced to -40 points).

@TEXT:<I>Example:<I> Alison calculates costs. NPT -183 is larger than -75, so it becomes a -75% limitation. -75% of the PPT is -154 points. But that's larger than 80% of NPT, which is -146 points. The final discount is -146 points, for a were-form cost of 205 - 146 = 59 points.

((START BOX))

@C-BOXHEAD:Morph or Were?

@TEXT-BOX:Whether adapting a shifter from an outside source or creating a new character from scratch, at some point the question will be raised: is this a morph or a were?

@TEXT-BOX:As self-evident as this might seem, it is not always clear from the source or concept. One example would be the so-called "true were," from Spider Robinson's later <I>Callahan's<I> stories, who turned into whatever he was closest to when the full moon rose. Despite the name, this character was clearly a morph (at least in <BI>GURPS<\$> terms), as he had no predefined alternate form.

((END BOX))

@C-HEAD:Modifying The Were-form

@TEXT:The final step, above and beyond the Quick-and-Dirty rules, is to modify the entire were-form itself. At this point the player may choose to apply enhancements and limitations that affect the accessibility and usefulness of the were-form as a whole. For example, a traditionalist may decide that his character is subject to a Cyclic Change, being forced to shift with every full moon. Another may make his character's change Absorptive, so he need not worry about clothing and equipment.

@TEXT:<I>Example:<I> Alison wants her wereleopard to have to change on the full moon. Going with the default minimum duration of one hour, this is a -20% limitation (see box, p. 00), which makes the final cost 59 points less 20% = 48 points.

@B-HEAD:Advantages and Disadvantages

@TEXT:Under these rules, certain existing <BI>GURPS<\$> advantages and disadvantages have special applications. Others are overruled entirely. In addition, there are a number of new traits that apply only to shapechangers.

@C-HEAD:Existing Advantages

@D-HEAD:Animal Form p. CI33

@TEXT:This advantage has been superceded by these rules.

@D-HEAD:Lycanthropic Dominance p. CI60

@TEXT:This advantage must be purchased by the base form, and cannot be bought off during the construction of were-forms. <I>Exception:<I> If the were-form is a Split Personality, <I>it<I> may buy this advantage instead of the base form.

@D-HEAD:Multiple Forms p. CI62

@TEXT:Usage for were-creatures superceded by these rules.

@D-HEAD:Non-Reciprocal Damage p. CI41

@TEXT:This should be purchased by the base form. It may be "bought off" in any were-form the character possesses, if the player so chooses; in that case, the selected were-form and the base form share any damage suffered.

@D-HEAD:Reciprocal Rest p. CI43

@TEXT:This should be purchased by the base form. It may be "bought off" in any were-form the character possesses, if the player so chooses; in that case, the selected were-form does not rest when not in use.

@D-HEAD:Reputation p. B17

@TEXT:In settings where weres and morphs are part of the established social or religious order, or where they are seen as representatives of and/or messengers from totem spirits or gods, they will have a positive Racial Reputation.

@D-HEAD:Shapeshifter pp. CI43-44

@TEXT:Superceded by these rules.

@D-HEAD:Transformation p. CI68

@TEXT:Usage for were-creatures superceded by these rules.

@D-HEAD:Unusual Background p. B23

@TEXT:In many campaigns, being a were will require an Unusual Background. The point cost is paid by the base form. Also, while it is not part of the were-form, this advantage may not be bought off as part of its construction.

@D-HEAD:Vampiric Invulnerability p. CI70

@TEXT:Certain types of weres <\#208> including (but not limited to) the Garou from <BI>GURPS Werewolf: The Apocalypse,<\$> demonstrate an ability to shrug off the effects of vast amounts of damage. Use Vampiric Invulnerability to represent this. The built-in weakness to fire can be retained or changed to another attack form (usually silver) at the player's (or GM's) choice.

((START BOX))

@C-BOXHEAD:Animal Template: Wolf

@TEXT-BOX:Adapted from p. BE112, this is a standard, "natural" wolf.

@TEXT-CSTATS:<BI>Attributes:<\$> ST -1 [-10]; DX +4 [45]; IQ -5 [-40]; HT +2 [20].

@TEXT-CSTATS:<BI>Advantages:<\$> Acute Hearing +4 [8]; Acute Taste and Smell +4 [8]; Alertness +5 [25]; Claws [15]; Combat Reflexes [15]; Discriminatory Smell (Works as Empathy within 2 hexes, +50%) [23]; Enhanced Dodge [15]; Enhanced Move <f"symbol"><\#180><f\$>1/2 [5]; Four Legs [5]; Penetrating Call [5]; Sharp Teeth [5]; Thick Fur [29]; Ultrahearing [5].

@TEXT-CSTATS:<BI>Disadvantages:<\$> Bestial [-10]; Chummy [-5]; Color Blindness [-10]; Dull [-1]; Gluttony [-5]; Horizontal [-10]; Innumerate [-5]; Mute [-25]; No Fine Manipulators [-30]; Poverty (Dead Broke) [-25]; Presentient [-20]; Short Lifespan <f"symbol"><\#180><f\$>5 [-50]; Sleepy (50%) [-10]; Social Stigma (Barbarian) [-15]; Staid [-1].

@TEXT-CSTATS:<BI>Skills:<\$> Brawling-DX [1]; Running-HT [4]; Stealth-DX [2].

@TEXT-BOX:PPT: +235; NPT: -272. Cost as a racial template: -37 points. Cost as a Quick-and-Dirty wereform: 59 points. Note that if used "as-is" for a wereform, the character becomes a beast in mind as well as body, with only the broadest strokes of his personality remaining when changed. He will retain all his memories, indecipherable as they may be to his wolf-mind, as well as his feelings for friends and enemies.

@TEXT-BOX:While this is consistent with some werewolves in myth and fiction, it may be less than enjoyable for some players. Feel free to revise the template as necessary to fit the player's conception of the wereform.

((END BOX))

@C-HEAD:Existing Disadvantages

@D-HEAD:Addiction p. B30

@TEXT:A were might be addicted to a drug which caused (or prevented!) his change <\#208> or to the change itself!

@D-HEAD:Code of Honor p. B31

@TEXT:A character who can change shape because of his religious or cultural heritage (see

pp. 00-00 and the Jaguar Warrior, pp. 00-00) may possess a Code of Honor defining the proper and improper uses of his shifting talent. Gross violation of that code may restrict or prevent his use of the talent, depending on its source.

@D-HEAD:Compulsive Behavior p. B32

@TEXT:If a were-form possesses any kind of Compulsive Behavior, it must be indulged at least once each time the were-form manifests.

@TEXT:<I>Morally Opposed:<I> A were-form which is one part of a Split Personality may have a Compulsive Behavior to act in a manner opposite to the base form's moral and ethical leanings. This does not automatically make the were-form an NPC (see p. 00), but it does make it an excellent candidate for that optional rule. -10 points.

@TEXT:<I>Lifewrecker:<I> Like "Morally Opposed" but worse. The were-form not only acts opposite to the base form's moral and ethical code, it goes out of its way to do harm to the base form's life and friends. This can range from mysterious animal deaths that point suspiciously at the base form to killing the base form's friends and lovers. In the most extreme case, if the were-form is reasonably invulnerable, it will leave incontrovertable evidence that it <I>is<I> the base form where authorities (or perhaps just villagers with torches and pitchforks) can find it. -15 points.

@D-HEAD:Delusions p. B32

@TEXT:One obvious delusion is "I am not a shapeshifter." While this could be bought off in were-form, it may be amusing and fun to play someone in an animal form <I>and<I> in denial about it at the same time.

@TEXT:Another might be, "There is a cure for my were-form." This can be paired with an appropriate Obsession for a particularly single-minded character.

@TEXT:A morph might suffer from the delusion "I really am who I appear to be," or its inverse, "My base form is just another shape I can take; I have no real identity of my own."

@TEXT:Of course, a shifter who insists on discussing his ability in an otherwise mundane setting will have a delusion in the eyes of others <\#208> which he must take in the base form.

@D-HEAD:Duty p. B39

@TEXT:A character who is shapechanger because of his religious or cultural heritage (see pp. 00-00 and the Jaguar Warrior, pp. 00-00) may have a duty to an institution or organization that endorsed or provided his alternate form(s). Failure to live up to that duty might result in the reduction or elimination of his accessibility to those forms.

@D-HEAD:Enemies p. B39

@TEXT:Most weres would all-too-likely have special enemies <\#208> the police, monster-hunters, rival weres, the Church in medieval Europe, and so on. Even in cultures where shifters are accepted or even respected, they may have enemies in the form of citizens or agents of enemy nations or members of opposed religions.

@D-HEAD:Infectious Attack p. CI97

@TEXT:This disadvantage can be taken only by were-forms, not the base form.

@D-HEAD:Lecherousness p. B34

@TEXT:When possessed by a were-form, this could be either of two different behaviors. First, the were-form could have a strong physical desire for the opposite sex of the same animal template as the were. If the base form and the were-form share the same mind, the were will pursue and enjoy his liaisons while in were-form, but may feel quite differently about it when back in his normal shape!

@TEXT:The second option is classically cinematic: the were-form, no matter what its animal template, has an inordinate fondness for attractive members of its base species' opposite sex.

@D-HEAD:Odious Personal Habit p. B26

@TEXT:In most game worlds, "Eats Sentients" is a 15-point Odious Personal Habit. Note that if all weres are thought to eat humans, that's a Reputation. If all weres <I>do<I> eat humans, that's an Odious <I>Racial<I> Habit .<!s>.<!s>. and possibly a Dependency, depending on <I>why<I>.

@D-HEAD:Reputation p. B17

@TEXT:In settings where weres and morphs are portrayed as bogeymen, or actually <I>are<I> creatures of evil, they will have a bad Racial Reputation unless they are completely underground.

@D-HEAD:Split Personality p. B37

@TEXT:Were-creatures traditionally suffer from some level of Split Personality, and

particularly "enthusiastic" morphs may also display this disadvantage. At the -10 point level, the forms are all aware of each other and each can access vague, fuzzy memories of what the other forms did. At the -15-point level, each form suffers complete blackouts during the time another form is in control, memories are rigidly compartmentalized between the forms, and the character may not even be <I>aware<I> that he is a shapeshifter.

@TEXT:See the box for details on how to handle the standard Split Personality mechanic within the context of a were character.

((START BOX))

@C-BOXHEAD:Split Personality and Were-Forms

@TEXT-BOX:The Split Personality disadvantage normally results in multiple character sheets whose point totals must <I>average<\$> out to the campaign starting value. However, were characters already have their alternative character sheets "rolled into" their main sheet, albeit in a highly-compressed form.

@TEXT-BOX:If he wants to, a player certainly can use the Split Personality mechanic and build separate characters. But it's unnecessarily cumbersome. It's simpler to take Split Personality in the base form; the were-form(s) automatically becomes one of the personalities.

@D-BOXHEAD:Optional Rule: NPC Were-forms

@TEXT-BOX:If the player so desires, the were-form can be an NPC, under the complete control of the GM <\#208> often appropriate for games set in or inspired by classic horror films. This normally requires the -15-point level of Split Personality, as well as a good in-character reason (demonic possession, an especially nasty curse, or the were-form is an otherwise normal animal are all good rationales). If the GM approves, make the final point value negative and take the were-form as a disadvantage.

((END BOX))

@D-HEAD:Uncontrolled Change p. CI105

@TEXT:Usage for were-creatures is superceded by these rules.

@D-HEAD:Untrained Shapechanging p. CI100

@TEXT:Superceded by these rules.

@D-HEAD:Unusual Background p. B23

@TEXT:In many campaigns, being a shapechanger will require an Unusual Background. The cost can vary widely, depending on the nature of the campaign and the power of the shifter. It must be paid by the base form.

@C-HEAD:New Disadvantages

@D-HEAD:Form Continuum -5 points/Alternate Form

@D-HEAD:Prerequisite: 2 or more were-forms

@TEXT:(Weres only.) The shifter has more than one were-form, but he cannot access them directly; he must move through a predefined sequence to reach the form he wants, taking the usual change time for each one. The player selects the sequence at character creation; once defined, it will never change. If for any reason he acquires a new form, he must select a place for it in the continuum. He must also take another level of this disadvantage, although as with any disadvantage gained during play, it is not actually worth any more points.

@TEXT:The Garou of <BI>GURPS Werewolf: The Apocalypse<\$> have a five-step Form Continuum.

@TEXT:<I>Special Limitation:<I> Random selection. You cannot choose which of your were-forms you'll take when you shift out of base form, or (if you have more than two) from one were-form to another. Determine the new form randomly, but you'll never get the form you started from. -30%. If the base form is included in the random determination: -45%.

@TEXT:This disadvantage must be taken by the base form, and cannot be bought off in any of the were-forms.

@TEXT:Morphs can suffer a similar restriction; see the "Morph Continuum" limitation on p. 00.

((START BOX))

@C-BOXHEAD:Signs of Being A Were

@TEXT-BOX:Folklore and fiction are filled with "markers" which indicate that an individual is a shapeshifter of some sort:

@TEXT-BOX:<\#165> Born "differently:" with a caul (especially on Christmas or the Winter Solstice); after an unusually long pregnancy; to a woman who died in childbirth; Caesarean birth; feet-first (breech birth); with teeth; the seventh son of a seventh son.

@TEXT-BOX:<\#165> Born during the twelve nights between December 24 and January 6 (Epiphany).

@TEXT-BOX:<\#165> Conceived at the new moon.

@TEXT-BOX:<\#165> Possesses hairy palms, or their eyebrows meet in the middle.

@TEXT-BOX:<\#165> Has six fingers on one hand or an extra vertebra.

@TEXT-BOX:<\#165> Has fur growing "on the inside."

@TEXT-BOX:<\#165> A woman with extra nipples may be a werejaguar, in Brazilian lore.

@TEXT-BOX:Which, if any, of these indicators are true in any given campaign is, of course, up to the GM.

((END BOX))

@D-HEAD:Revealing Trait Variable

@TEXT:Something about you is sufficiently strange or different that an average person might guess that you are a shapeshifter even without seeing you change. Mirrors might reflect your other form instead of the one you're in, your presence may spook nearby animals, or you may simply have some physical characteristic(s) in either/any of your forms which local folklore associates with shapechangers (see the box on p. 00 for some examples). While <I>Revealing Trait<I> can represent a unique and new characteristic, it can also subsume such existing disadvantages as No Reflection, No Shadow (both p. CI103), Frightens Animals (p. CI97) and under the right conditions even Social Stigma (p. B27); when creating a new trait, use these disadvantages as guidelines for determining its point value.

((START BOX))

@C-BOXHEAD:Skills and Were-Forms

@TEXT-BOX:Any skills possessed by the base form are retained by a were-form <\#208> <I>always.<I> Unlike advantages and disadvantages, skills <I>cannot<I> be bought back in the process of building a were-form. Even if the alternate form cannot make use of them (Running for a were-eagle, for instance) they remain present and (at least theoretically) available. <I>Exceptions:<I> A were who retains the Presentient disadvantage (p. CI103) in his alternate form loses access to all M/A and harder skills when in that form, and his M/E skills are limited to his IQ. And a were with Split Personality can buy completely different skill sets for each personality.

((END BOX))

@B-HEAD:Shiting-Related Skills

@TEXT:<BI>GURPS Compendium I<\$> lists two skills that relate directly to shape-changing.

@D-HEAD:Change Control (Mental/Hard) p. CI138

@TEXT:There are no alterations to the use of Change Control under these rules, except that morphs as well as weres are explicitly allowed to possess and employ it.

@TEXT:Note that morphs may include a target's clothing as part of a copied shape, and such clothing is actually part of the morph's body. The GM may, at his option, allow a morph with the this skill to "swap" outfits between different memorized forms on a successful skill roll, as though they possessed the Improvised Forms enhancement. Differences in relative sizes may be handled automatically, or the GM may use the degree of success on the Change Control roll as an indicator of how well the "new" clothes "fit".

@TEXT:Not being able to use the Change Control skill is a limitation on your were-form or your Morph power. See p. 00.

@TEXT:<I>Note:<I> If you have the leveled super-power variety of Morph from p. SU63 instead of the version found in <BI>Compendium I<\$>, you don't need the Change Control skill. Use your skill level for the super-power instead.

@D-HEAD:Shapeshifting (Mental/Hard) p. CI144

@TEXT:This skill was originally published in <BI>GURPS Voodoo<\$> (p. VO57) and applied only to spirits which could manifest in the physical world. Its availability to morphs in <BI>Compendium I<\$> is an error and should be ignored. (Use Change Control instead.) It is still available to planar travelers of various types, but note that its use causes only a cosmetic change in the character. For more substantive alterations to an astral or dream body, see "True Astral Were-Forms" on p. 00.

@B-HEAD:New Enhancements and Limitations for Shifters

@TEXT:Various special enhancements and limitations are available for both the Morph advantage and were-forms, in order to fine-tune how they work for a given character. Some of the following are suitable for both types of shifters, while others are specific to one or the other and will be so noted. Of course, shifter characters are not limited to only these; many of the existing enhancements and limitations found on pp. CI00-00 and SU49-54 can also be applied to a shapechanging talent.

@C-HEAD:Enhancements

@D-HEAD:Absorptive Change +5% to +25%

@TEXT:(Weres only.) When a shifter changes forms, his clothes don't normally change with him. This can have results ranging from the comic to the tragic, depending on the resilience of the clothing and the size of the were-form. This advantage allows the shifter to absorb clothes and carried items when he changes form; they return intact and in place when he shifts back. The cost is +5% per Encumbrance level that can be absorbed: +5% for No Encumbrance, +10% for Light, and so on through to +25% for Extra Heavy Encumbrance.

@TEXT:As noted, the Absorptive Change is on one direction of change only. It need not be on the transition from base form to were-form; if the player so chooses, it can be on the change <I>back<I> to base form, especially if there is a great difference in relative sizes. Buy this enhancement <I>twice<I> to handle changes in both directions; in such a case, the encumbrance levels need not be the same.

@D-HEAD:Active Change +10%/+20%

@TEXT:(Weres only.) The shifter can remain active during his change. At +10%, he can move and react to his surroundings, but cannot run, fight, cast spells or use any skill. The were can roll to Dodge attacks while changing, but only succeeds on a 3 or a 4. At +20%, the shifter can use any skill or ability possessed by both forms.

((START BOX))

@C-BOXHEAD:Shifters and Martial Arts

@TEXT-BOX:A character can know and use Karate or Judo, and even more advanced martial arts abilities, in his shifted form, provided the form's IQ is 7 or higher. (Below that, the were just doesn't have enough brainpower for anything beyond simple brawling.) However, since such most martial arts were designed for human beings, only humanoid shapes with hands can use these skills effectively.

@TEXT-BOX:Of course, it is entirely possible to create a martial art designed expressly for use by non-human forms. A race of weres, for instance, may well develop two styles of Karate: one for their base form and another for their alternate. Such specialized combat styles would count as separate skills (perhaps defaulting to each other at -4 or more). See <BI>GURPS Martial Arts<\$> for details on customizing martial arts styles.

((END BOX))

@D-HEAD:Copies Personality +100%

@D-HEAD:Prerequisite: Telereceive or the "Needs Sample" limitation.

@TEXT:(Morphs only.) In addition to acquiring a target's shape, the morph also gains sufficient knowledge of memories and personality traits to eliminate the need for the Acting skill while impersonating him. The morph does not have access to anything beyond personality information and memories of friendships; he will know, for instance, how to greet a friend the target has known since childhood, but won't know the combination to the safe in the target's office. This knowledge is only available while in the appropriate form, and only as long as that form is one of your memorized shapes.

@TEXT:If the GM allows it, acquiring the <I>complete<I> memories and personality of the target is an additional +100% (and may take much longer <\#208> again, GM's option). This

can include some skills <\#208> Area Knowledges and some social skills are good candidates, but most scientific and physical skills are not. Skills are acquired at the target's level or the morph's appropriate attribute, <I>whichever is lower.<I> Access to the target's knowledge in other forms adds +50% to the cost. The ability to retain this knowledge after removing the form from your "morph memory" is another +100%, and <I>all subsequent earned experience must be dedicated to paying for any skills or skill levels acquired in this manner!<I>

@TEXT:In either case, you <I>temporarily<I> acquire all the target's mental advantages and disadvantages, and all his quirks, for as long as you retain his shape. If necessary, you can turn them off and revert to your own personality, but by default they are dominant and control your behavior. They <I>do not<I> replace or remove your own existing mental traits; instead they simply take precedence for as long as you let them.

@D-HEAD:Fast Change +25%

@TEXT:You shift your shape faster than others of your kind. Weres change form in a single turn. Morphs change instantly, as a free action (see p. B97), although they may only change shape once in a turn.

@TEXT:This enhancement cannot be combined with the Morph Continuum or Takes Extra Time (p. CI112) limitations.

((START BOX))

@C-BOXHEAD:The Change

@TEXT-BOX:While a morph takes but a single second to shift his shape, the default were change lasts 2d6 seconds, during which the were can do nothing else. (However, see the Active Change enhancement, p. 00.) An involuntary change (Cyclic, Triggered) in progress cannot be halted or reversed by any means; it must run its course, no matter what. The same is true of a <I>voluntary<I> change except under the most unusual circumstances (GM's option, but at the barest minimum, a successful roll against Change Control should be required).

@TEXT-BOX:A were's change is a strange and terrifying process. Witnesses who have never seen a change before, or didn't know the character was a were, must make an immediate Fright Check. The GM may require those who succeed to make a Will roll or else stop what they're doing and stare in fascination until the change is complete. (This is a non-magical fascination, and won't prevent someone from defending himself or providing for his own safety, but it might make both sides of a combat break off while the change is happening, and it would certainly make an enemy easier to surprise.) Of course, friends and family may grow used to the change; the GM may allow them to ignore both the Fright Check and the fascination if they've witnessed the character change often enough. This is by no means an absolute, though <\#208> see Innocuous Change (p. 00) and Horrifying Change (p. 00).

((END BOX))

@D-HEAD:Genetic Match +50%/+100%

@D-HEAD:Prerequisite: The "Needs Sample" limitation at no less than -15%, or the Improvised Forms enhancement.

@TEXT:(Morphs only.) As part of your change, you generate a "shell" of flesh, skin and/or hair whose cells exactly mimic the physical and genetic structure of the original model whose form you are copying. You can also produce matching bodily fluids as needed for blood tests and the like. Any samples taken from you and any remote genetic scanning performed on you will thus register you as "genuine". (Biopsies and other deep samples will still reveal your real genetic structure.)

@TEXT:This layer of skin also generates all the proper scents and pheromones for the individual or racial type which you are duplicating, and reacts automatically to irritants and allergens as the original would. If you need to, you can suppress these functions with an IQ roll.

@TEXT:Note that the production of body fluids is <I>not<I> an automatic function, nor can you store such altered fluids in your body any longer than is needed for taking a sample. For example, if your blood is normally green, and you are shot while mimicking a human, you'll still bleed green, not red.

@TEXT:At the +100% level, your entire body replicates the original target's genetic code

and physical structure, "hiding" your true nature all the way down to a cellular level throughout your body. Only some means of actually scanning cell structure in detail will reveal your real cells "masquerading" as mitochondria or other organelles.

@TEXT:Morphs with both this and the Improvised Forms enhancement (see below) automatically produce a valid generic DNA signature for the race or species as which they are masquerading <\#208> even if that race is imaginary or a chimeric blend!

(Unfortunately, it can't be used to make clones or for genetic engineering of any sort.)

Otherwise, the character must have some way of acquiring a sample to duplicate.

@TEXT:This enhancement is of reduced utility in any setting where genotyping is unknown or unreliable; halve its value if bloodtyping and other simple checks are all that are available, and disallow it entirely if not even that is possible.

@D-HEAD:Improvised Forms . . . +75%/+100%

@TEXT:(Morphs only.) You are not limited to the forms you have memorized. At the +75% level, with a successful Change Control roll you can mix and match parts from your memorized shapes to create a hybrid form. At the +100% level you can, with a successful roll, create new shapes out of your imagination, although you cannot acquire abilities that do not have a completely physical origin (for example, a dragon's flaming breath). In either case, in order to keep the new form after its first use, you still need a free morph "slot" to hold it.

@TEXT:If you have both Improvised Forms and Genetic Match, you automatically generate a valid but inspecific genetic signature appropriate to the creature type you are impersonating. (If that happens to be an imaginary creature, the DNA so produced may be shocking to geneticists, but will prove unviable for cloning or other purposes.)

@D-HEAD:Innocuous Change . . . +5%

@TEXT:Your transformation between forms is so mild in appearance that it inspires neither dazed fascination nor Fright Checks in those not used to it (see box, p. 00). You may be cloaked in golden haze that hides you from prying eyes, or you may "blip" suddenly from one shape to another, with no intervening stages. This enhancement does not alter the <I>time<I> it takes you to shift, simply the appearance of the process.

@TEXT:This enhancement is not compatible with Slow Change or the "painful" level of Fatiguing Change.

@D-HEAD:Shapestealer . . . +100%

@D-HEAD:Prerequisite: The "Needs Sample" limitation.

@TEXT:(Morphs only.) You literally steal the shapes you take. The process of copying someone's form leaves the victim a fluid mass of jelly-like protoplasm. They lose all identifying characteristics, even down to species and order, and are rendered comatose. If you have the "Cannot Reuse Forms" limitation, the victim regains their shape (and consciousness) as soon as you stop using it; otherwise, they only regain their shape when you drop it from your repertoire. Ultratech methods, Weird Science or Weird Magic may also be able to restore your victims' shapes (or give them new ones), but nothing else will.

@TEXT:Because of the potential for abuse in this enhancement, GMs may require the "Cannot Reuse Forms" limitation <I>must<I> be taken with it.

((START BOX))

@C-BOXHEAD:Shifters and Mana

@TEXT-BOX:Magical shapechangers will normally revert to their base form in a no-mana area. Once they leave the no-mana zone their ability to change will usually return. However, if this is inconvenient for the campaign, the GM may rule that all magical shifters must possess the basic 25-point level of the Mana Enhancer advantage (p. CI40), making them mobile low-mana zones, capable of shifting <I>anywhere.<\$>

((END BOX))

@C-HEAD:Limitations

@D-HEAD:Cannot Reuse Forms . . . -50%

@TEXT:(Morphs only.) Each form you copy can be used only once. You have no time limit on how long you can use it <\#208> or on how long you can wait <I>before<I> you use it <\#208> but once you shift to something else, it's no longer available to you.

@D-HEAD:Cannot Use Change Control . . . -5%

@TEXT:The character cannot blend aspects of his various forms (be they Morph slots or were-forms) using the Change Control skill <\#208> his shapeshifting is always all-or-nothing. He cannot even learn the skill.

@D-HEAD:Cure/Cursebreak variable

@TEXT:(Weres only.) Your were-form is unwanted, maybe even dangerous to the people around you, and there is some way to get rid of it <\#208> or perhaps it's a gift with strings attached. Either way, if some special condition is fulfilled, your shapeshifting ability will go away. This is a limitation because it is a drastic vulnerability for the were-form <\#208> enemies will try to exploit it, and well-meaning friends may try to accomplish it for you regardless of your wishes in the matter.

@TEXT:Cures may range from relatively simple (renounce the cult you serve, or undergo an exorcism) to difficult (bathe in the water of a particular spring in a remote province of China) to the nearly-impossible (a lost Hermetic ritual during which the were must hold a piece of moon rock). Alternately, a cure might risk (or guarantee!) harm to the were; a good example is the tradition that states amputating a limb will cure a were. The easier it is to break the curse, or the less harm the cure inflicts, the more this limitation is worth, from -50% for simple or harmless conditions to -5% for impossible and/or potentially fatal ones.

@TEXT:<I>Add<I> an additional -5% to the value if the cure is easily discovered through research or folklore, or -15% if it is common knowledge.

@TEXT:<I>Reduce<I> the value by -10% (minimum final value 0%) if the cure only works if the victim cooperates.

@TEXT:If the cure is only <I>temporary,<I> halve the final value of the limitation (rounding down) and define the conditions under which the were-form will return.

@TEXT:If the character has more than one were-form, it is not necessary to apply this limitation to all the forms, although it would be appropriate if they are linked thematically.

@TEXT:Furthermore, if the nature of the cure is such that it would normally cause damage either directly or indirectly, and the were-form possesses Invulnerability or Vampiric Invulnerability, the were-form <I>must<I> take a Vulnerability to the cure!

@TEXT:It is up to the GM whether the points spent on the were-form(s) either disappear or are available for some other use by the player when the curse is broken. (Of course, this does not apply to were-forms with "temporary" cures.) In the case of "educational" minor curses (see p. 00), it is certainly allowable for the PC to buy off the offending disadvantage(s) with the points so freed.

(((START BOX)))

@C-BOXHEAD:Searching For A Cure

@TEXT-BOX>Note that just because the were-form has a cursebreak, it does not automatically follow that the character knows what it is, or even that it exists! More than a few weres in fiction spent a great deal of their time and energy on finding out whether or not their condition had a cure. GMs wishing to maintain any amount of suspense over this issue may wish to obfuscate the precise enhancements and limitations applied to were-forms (particularly infectious or latent ones) in their campaign. One possibility would be to simply give the player an aggregated modifier value along with as large or small a list of known "features" as the GM wishes. As the player spends time in his were-form, more information about it can be doled out as is necessary.

@TEXT-BOX>Note that this option is more appropriate for a character who has acquired a were-form than for a member of a shapeshifting race (unless the latter has grown up ignorant of his abilities).

(((END BOX)))

@D-HEAD:Cyclic Change variable

@TEXT:(Weres only.) The character is forced to assume his were-form on a regular basis. He has no choice in the matter; he changes automatically at the appropriate time. He must also remain in the were form for a certain minimum amount of time.

@TEXT:The base discount depends on the frequency of the change:

@TEXT:Less than once a year no discount

@TEXT:Annually or Semi-annually -5%

@TEXT:Quarterly/seasonally -10%

@TEXT:Monthly -15%

@TEXT:Full Moon Special (see box)

@TEXT:Weekly -30%

@TEXT:Daily -40%

@TEXT:Cycles more frequent than "Daily" are possible, but are virtually unplayable.

@TEXT:The change period need not be strictly linked to the clock or calendar, as long as it is invariably regular. The GM may interpolate a value for an unusual period (as with the lunar cycle, above), or simply assess it at the smaller of the values between which it falls.

@TEXT:These values assume that the were is able to change at will at all other times. If the cyclic change is the <I>only<I> way he can change, it is worth an additional -25% to the limitation value.

@TEXT:Weres with a Cyclic Change must have a Minimum Duration as well <\#208> see p. 00.

((START BOX))

@C-BOXHEAD:Lunar Changes

@TEXT-BOX:All references to lunar-linked changes here assume Earth's moon or one with a similar cycle. Earth's lunar month is shorter than a calendar month, and the full moon usually spans two to three successive nights. This is a slightly special case for the Cyclic Change limitation (p. 00), worth -20%; the shifter is compelled to change not once at the "peak" of the cycle, but once per night during that peak.

@TEXT-BOX:In settings with a different lunar cycle or more than one moon, this value will vary, perhaps wildly. Single moons are simple; choose or interpolate a value from the table in Cyclic Change that reflects the appropriate frequency; adjust appropriately for the duration of the full moon. Multiple moons can be a bit more complicated. Does the were change with <I>any<I> full moon, or just one of them? The latter case is obviously another simple cycle. But in the former case, if there are enough moons that the appropriate phase could happen at almost any time, use an External Trigger (p. 00) instead. Alternately, divide the number of days in a month by the total number of full moons in a month, and use the resulting averaged figure as the length of a cycle for the purposes of determining the limitation value.

@TEXT-BOX:Try not to link a Cyclic Change to a moon with an extremely short period <\#208> it will be far more trouble to both GM and player than it is worth.

((END BOX))

@D-HEAD:External Trigger variable

@TEXT:(Weres only.) Some environmental condition triggers your change, whether you want to or not. Some weres have triggers which toggle their change on and off. Others have a trigger that forces a shift only in one direction. Some weres have <I>two<I> triggers <\#208> one to change, and one to change <I>back.<I>

@TEXT:The value of a trigger is based on how common the trigger condition is:

@TEXT:Very Common (sunlight, cold water, darkness) -30%

@TEXT:Common (a particular type of garden plant, a specific emotional or physical state, electrical fields in a technological setting) -20%

@TEXT:Occasional (a given range of normal air temperature, a certain food, a specific mineral) -10%

@TEXT:Rare (a tropical plant, a special drug, radiation) -5%

@TEXT:These values also assume that the were is able to change at will at other times. If the external trigger is the <I>only<I> way he can change, it is worth an additional -25% to the limitation value.

@TEXT:If the trigger only works for a change in one direction, halve its value.

@TEXT:Weres with an External Trigger often have a Minimum Duration as well <\#208> see p. 00.

((START BOX))

@C-BOXHEAD:Using and Abusing External Triggers

@TEXT-BOX:Enterprising players will attempt to manipulate an External Trigger to their

advantage, to gain as much control over their conditions as possible. Some of this is acceptable; for instance, a Dark Ages were whose change is triggered by the smell of roses need not be restrained from running to the nearest bower if the Vikings attack his village. On the other hand, if the same were took to carrying a packet of dried rose petals with him, to sniff whenever his were-form might come in handy, it is no longer precisely an External Trigger, but something closer to an item-based change (see box, p. 00). The GM may declare that his were-change has become triggered only by dried rose petals, or worse, only by that <I>particular<I> packet of rose petals, and no other will do. Since item-based changes tend to be cheaper than other versions, this has no immediate negative impact on the character beyond lowering his point value <\#208> until the first time the packet is lost or stolen.<!s>.<!s>.

((END BOX))

@D-HEAD:Fatiguing Change -10%/-20%

@TEXT:The shifter finds the change physically exhausting or even excruciating. At the -10% level, he loses 1d Fatigue each time he changes (which cannot reduce his Fatigue below 0) and suffers an equal <I>shock<I> penalty on the turn following the change, per p. B126. Fatigue lost due to the change may only be regained by rest. At the -20% level, <I>Painful Change,<I> he is also Mentally Stunned for 2d rounds following the change, and must make a Will roll for each form into or through which he changes (see Form Continuum, p. 00) to avoid crying out in pain.

@TEXT:A character who suffers from Painful Change may need to make a Will roll to change in a non-emergency situation. Characters with Cowardice or Low Pain Threshold will have to make a Will Roll at -5 to change voluntarily at all.

@D-HEAD:Flawed -10%/-35%/-50%

@TEXT:(Morphs only.) While you may copy a person's shape, there is always an error or flaw in the result: the wrong eye color, a double navel, missing (or extra) scars or birthmarks, a tell-tale tattoo, or a finger may not bend properly. (It could even be something non-structural, like a constant vague smile or an inability to feel strong emotion.) The flaw is determined at character creation, and manifests in every form that you take, including (optionally) your native one. If the target form already has the same flaw on its own, you are in luck; otherwise, it's a pointer to the fact that something's wrong.

@TEXT:At the higher levels, the copied form is not just Flawed, it is <I>Crude<I> <\#208> it only vaguely resembles the original (-35%, impersonation attempts at -10), and may only vaguely resemble its <I>species<I> (-50%, specific impersonations are impossible, and Horrific Appearance may apply). All character traits unrelated to appearance are unaffected by a Crude transformation.

@TEXT:Some characters may start with a Crude transformation and gradually improve it through practice. Halve the value of this limitation; now for every ten uses of a particular form, its level of accuracy improves by one step, to a maximum of Flawed. Quarter the value of this limitation for five-use steps, or for the ability to reach a perfect representation.

@D-HEAD:Genetic Trait -0%

@TEXT:(Weres only.) Your were nature is encoded in your genes as a dominant trait; you received it from your parents, and you will pass it on to your children.

@TEXT:A genetic were-form can be either active or latent. If it is active, then this "limitation" is nothing more than a special effect <\#208> your shifting gift is "switched on." A character with a latent were-form, though, cannot use it until he is exposed to a trigger condition, at which time the were-form becomes available for use. The trigger is determined by the GM at character creation (see the adjacent box for inspiration), but to be fair it should be something the character has a chance to encounter.

@TEXT:A genetic were-form cannot have a permanent cursebreak (see p. 00), although temporary "cures" are perfectly acceptable. They rarely, if ever, have Infectious Attacks or Lycanthropic Dominance. Most other change-related traits are available, although common sense should rule in their choice and use.

((START BOX))

@C-BOXHEAD:How To Become A Were

@TEXT-BOX:If you're not a were by virtue of birth or bloodline, or your genetic were gift requires a "trigger" turn it on, legends list any number of ways to gain the ability to shift in addition to the traditional bite. While most of these are specific to werewolves, there's no reason (beyond a GM's ruling, that is) they cannot be used for any variety of were.

@TEXT-BOX:<\#165> Annoy (or please) a wizard, sorceress, or god.

@TEXT-BOX:<\#165> Be called by an animal spirit, or take a specific animal as your spiritual totem in the proper ritual.

@TEXT-BOX:<\#165> Drink water or eat dust from a wolf's footprint.

@TEXT-BOX:<\#165> Drink water from certain springs, especially in the Harz Mountains in Germany.

@TEXT-BOX:<\#165> Drink downstream from wolves.

@TEXT-BOX:<\#165> Possess and wear a moonstone.

@TEXT-BOX:<\#165> Eat a wolf's brain.

@TEXT-BOX:<\#165> Sleep at night in the open with the moon on your face on a certain Wednesday or Friday in summer.

@TEXT-BOX:<\#165> In a medieval Christian setting, be denounced from the altar and remain impenitent. Or be excommunicated for seven years. Or do not get shriven or use holy water for ten years.

@TEXT-BOX:<\#165> Pluck and wear a rare white marsh flower from the Balkans.

@TEXT-BOX:<\#165> Anoint yourself with a special ointment (recipe available in the grimoire of your choice).

@TEXT-BOX:<\#165> Wear the enchanted skin of a dead wolf or werewolf.

@TEXT-BOX:<\#165> Wear a belt made of wolf's leather (or human skin, especially the skin of a hanged man), adorned with the signs of the zodiac, and with seven tongues on the buckle which must be put into the ninth hole.

((END BOX))

@D-HEAD:Horriifying Change -5%/level

@TEXT:The manner in which you transform is particularly gruesome; perhaps you shred your previous shape in an explosion of flesh and gore, or maybe between your forms you melt into a pulsing mass of flesh accompanied by wet and disgusting sound effects. Whatever happens, it is far a more terrifying sight than an ordinary shift (see box, p. 00). For each level of this limitation you have, witnesses to your change take a -2 penalty to their Fright Checks. Furthermore, companions and family will <I>never<I> become inured to the change, and must always make Fright Checks at the specified penalty.

@D-HEAD:Linked Curses -25%

@TEXT:(Weres only.) Also known as the "Ladyhawke" option. You and another person (or persons, although it is most commonly a pair) are jointly afflicted with were-forms whose activations are connected. Whenever one of you changes, no matter how far apart you are, you force the <I>other<I> to change at the same time. The link may be synchronized (you both shift into were-form and back together) or inverted (only one of you can be human <\#208> or whatever base species you are <\#208> at a time). The type of link is determined at character creation and cannot be changed afterwards.

@TEXT:Although their animal templates need not be the same, both characters must have otherwise identical were packages. These usually include a Cyclic Change (with the two characters' periods complementing each other), an obscure and difficult Cursebreak, and, of course, this limitation.

((START BOX))

@C-BOXHEAD:Item-Based Shifting

@TEXT-BOX:A common trope in myth is the shifter whose change is facilitated by some item. Such an item can be virtually anything, but usually involves some symbolic or physical link to the animal template (for weres) or the model being copied (morphs). Normally, the item becomes part of the new form, reappearing only upon the change back. A typical example is the skinchanger from myths the world over <\#208> a were who dons a complete hide of the appropriate animal template to take his were-form, and who can't change without it.

@TEXT-BOX:Item-based shifting combined with an Addiction or a Dependency on the change can make for an interesting character.

@SB-SUBHEAD:Item Modifiers

@TEXT-BOX:Shapechange items are built using the super equipment rules found on pp. SU68-70. The heart of these rules are a set of enhancements and limitations that are applied to the alternate form to specify its characteristics as a device. All shapechange items must take the modifiers <I>Can Be Stolen<I> and <I>Unique<I> in addition to any others the player may choose. Item-based modifiers are applied separately to the alternate form after any other enhancements and limitations the player may have chosen.

@TEXT-BOX:The following is an abbreviated list of gadget modifiers. See <BI>Supers<\$> for complete listings.

@TEXT-BOX:<BI>Awkward -10%<\$>

@TEXT-BOX:The item, like many skins and hides, is bulkier than a wadded-up trenchcoat.

@TEXT-BOX:<BI>Breakable -5%/-10%<\$>

@TEXT-BOX:This item can be damaged; repairable items can be fixed if not totally destroyed.

@TEXT-BOX:DR 15 or less <I>and<I> it has 75 or less hit points: -15%

@TEXT-BOX:DR 16+, and/or 76+ hit points: -5%

@TEXT-BOX:If irreparable, add an additional -15%.

@TEXT-BOX:<BI>Can Be Hit varies<\$>

@TEXT-BOX:The item is obvious and can be targeted in combat. It must be Breakable. The penalty on the attacker's to hit roll determines the value: No penalty: -25%. -2: 20%. -4: 15%. -6: -10%. -8: 5%. -10 or more: No bonus.

@TEXT-BOX:If the item has a -5% Breakable modifier, divide the value by 4. If the item is absorbed in the change, halve the value.

@TEXT-BOX:<BI>Can Be Stolen varies<\$>

@TEXT-BOX:The item can be taken away from you. The difficulty determines the value:

@TEXT-BOX:Easily snatched with DX roll: -40%

@TEXT-BOX:Needs Contest of DX or ST: -30%

@TEXT-BOX:Requires stealth or trickery: -10%

@TEXT-BOX:Halve the value if the object is inobvious or is absorbed in the change.

@TEXT-BOX:Halve the value if the object would not work for the person who took it.

@TEXT-BOX:Halve the value if the item is absorbed during the change.

@TEXT-BOX:<BI>Not Absorbed in Change -5% or -15%<\$>

@TEXT-BOX:The item does not become part of the were-form, and must be carried or protected against future use. If the item is not needed for the change back (see below), this modifier is worth only -5%; otherwise it is -15%.

@TEXT-BOX:<BI>Not Needed For Change To/From Base Form +25%<\$>

@TEXT-BOX:The item, while required for the change in one direction, is not needed for the opposite change.

@TEXT-BOX:This modifier can only be applied to items which are not absorbed in the user's change.

@TEXT-BOX:<BI>Unique -25%<\$>

@TEXT-BOX:Once this item is gone, that's it. No replacement is possible. Character points spent on it are lost.

(((END BOX)))

@D-HEAD:Maximum Duration Variable

@TEXT:The character cannot stay in his shifted form longer than a given amount of time. If he tries, he automatically changes back to his base form. (Unless he also has a Minimum Duration, he can change back at any time before that.)

@TEXT:The shorter the duration, the more this limitation is worth:

@TEXT:Less than 30 seconds -75%

@TEXT:30 seconds to 1 minute -65%

@TEXT:1 to 10 minutes -50%

@TEXT:10 to 30 minutes -25%

@TEXT:30 minutes to 1 hour -10%

@TEXT:Sunrise to sunset or vice versa 7%

@TEXT:1 to 12 hours -5%

@TEXT:Greater than 12 hours -0%

@TEXT:A character with a Maximum Duration may not have a Minimum Duration longer than the Maximum.

@TEXT:This limitation cannot be combined with Cyclic Change.

@TEXT:<I>Note to GMs:<I> This limitation is open to abuse by "combat monster" shifters who do nothing in their alternate form(s) but fight. Feel free to disallow it if necessary.

@D-HEAD:Minimum Duration Variable

@TEXT:The character must remain in his shifted form for some minimum amount of time before he can change back for any reason.

@TEXT:Less than 1 hour +0%

@TEXT:1 to 8 hours -5%

@TEXT:8 to 12 hours, one night or equivalent -10%

@TEXT:12 to 24 hours -15%

@TEXT:1 day to 1 week -20%

@TEXT:1 week to 1 month -25%

@TEXT:Greater than one month -30%

@TEXT:A were with a Cyclic Change must also have a Minimum Duration. This minimum is variable, but cannot be longer than one-half the cycle length.

@TEXT:A character with a Minimum Duration may not have a Maximum Duration shorter than the Minimum.

@D-HEAD:Morph Continuum -30%

@TEXT:(Morphs only.) Similar to the Form Continuum disadvantage for weres, this limitation forces a Morph to progress sequentially through his memorized forms in order to shift from one to another, at the usual rate of one form per turn. The player should maintain an ordered list of the "slots" in which the PC's memorized forms are kept.

@TEXT:This limitation cannot be combined with the Fast Change enhancement.

@D-HEAD:Needs Sample variable

@TEXT:(Morphs only.) You cannot copy a person's shape without sampling them in some way. The exact value of this limitation varies with the extent of the sample required: simply touching the target is worth -5%, a fingernail, drop of blood, strand of hair or scrap of flesh is -15%, and consuming the target whole is worth -50% <#208> and you'd better have some way of absorbing or eating the victim <I>quickly<\$> <#208> if a sample requires flesh or other organic materials, it must be fresh and undecayed.

((START BOX))

@C-BOXHEAD:Nuisance Effect: Temporary Disadvantage

@TEXT-BOX:<BI>EDITOR:<\$> Please insert this limitation from pp. BIO137-8 here.

((END BOX))

@D-HEAD:Projected Were-form -25%/-50%

@TEXT:(Weres only.) Your were-form is actually your soul, traveling outside your body in a manner similar (but not identical) to astral projection. While it does so, your "real" body goes into a trance. If your physical body is killed while you are in your other shape, both it and your were-form will usually die together, unlike regular astral projection. Also unlike regular astral travel, your were-form is just as solid and physical as your "real" body, and has no range limits and no duration limits other than your ability to last out a trance. When you leave the trance, the were-form vanishes.

@TEXT:When you go into your were-form, you do not have to manifest it at the same location as your physical body. You can make it appear anywhere within direct line of sight, or at a location within IQ<f"symbol"><#180><f\$>10 yards that is well enough known to you that you can visualize it clearly. Similarly, you do not have to return to the location of your unconscious form to dismiss your were-shape.

@TEXT:At the -25% level, you are still "in" your physical body even when using your were-form. (You are effectively operating it by remote control.) It still takes a great deal of your attention and energy, though, and you are only barely aware of your surroundings. You can hold slow, halting conversations with someone nearby, be led around, make Passive Defense rolls, or even be carried (gently). Any great shock or distraction (such as a successful attack or a vigorous attempt to "wake you up") can break you out of your trance and cause the were-form to vanish <#208> make a Will roll

to ignore anything short of receiving a wound.

@TEXT:At the -50% level, you fall into a deathlike coma while in your were-form, as your soul completely leaves your body. You must take special precautions to protect or hide your body, as you are vulnerable and can be mistaken for a corpse (a Physician roll is needed to determine that you aren't really dead).

@TEXT:<I>Surviving Death.<I> While a character with a projected were-form will usually die if his base form is killed while he is projecting, a critical success on a Will roll at the moment of death will allow him to survive in his alternate form. Although the surviving form is corporeal, it is actually a kind of ghost, and as an undead creature it is subject to all the weaknesses thereof as defined in the particular campaign: vulnerability to the Banishment spell and to exorcisms, Compulsive Behaviors and so on; see <BI>GURPS Undead<\$> for ideas and guidelines. So-called "angry ghost" weres (see p. 00) are frequently created in this manner.

@TEXT:For characters whose "normal" astral bodies are animals, see the box on p. 00.

((START BOX))

@C-BOXHEAD:True Astral Were-Forms

@TEXT-BOX:In some traditions (particularly those of a shamanic nature), the were-form is an entirely spiritual construct. Unlike weres built with the <I>Projected Were-form<I> limitation (p. 00), this kind of were-form is never physical and rarely if ever interacts with the corporeal world. It is instead used to communicate with spirits of nature and the dead, in the appropriate realms. (Strictly speaking, it isn't even really a "true" were-form as defined by this book.<!s>.<!s>.)

@TEXT-BOX:This is simply the psionic power Astral Projection (p. P10-11), with a special enhancement: <I>Astral Body Is An (animal type).<I> For +10%, you may use any animal template costing up to 0 points as the basis for your astral body. While in astral form, you possess all the "physical" attributes of an "average" animal of that type and any of its mental advantages, but retain your IQ and all your mental traits. For animal templates above 0 points in cost, add another +10% to the enhancement value for every 50 additional points or fraction thereof that the template is worth.

@TEXT-BOX:The template's physical characteristics directly translate into astral equivalents: The animal's ST, DX, HT, hit points and Dodge supercede the human values. Claws and teeth cause extra damage in astral combat. Natural PD and DR are <I>cumulative<I> with that granted by the power (astral PD is of course subject to the usual limit of 6). Tracking abilities, Discriminatory Smell and the like allow pursuit in astral space where it would normally be impossible. And as a bonus, flying and swimming animals add their Speed to the character's Power level to determine Astral Speed.

@TEXT-BOX:The specific animal template is chosen at character creation and cannot be changed. (In an explicitly shamanic context, it will often represent the character's totem animal.) However, if the GM allows, the character may buy more than one template, either at creation or with earned experience. Each template so purchased is a separate enhancement, as well as a separate form <\#208> attributes of two different templates may not be combined; the Shapeshifting and Change Control skills <I>cannot<I> be applied to this kind of were. Furthermore, the psi by default cannot change forms in the middle of an astral journey; he must choose one form at the start and remains in that form until he returns to his body.

@TEXT-BOX:For an additional +5% per template, an animal astral body can be made <I>switchable<I>, allowing the psi to change at will from it to a "normal" astral form or any other switchable template he might possess, without having to return to his body first.

@TEXT-BOX>Please note that while the above description refers exclusively to astral bodies and astral travel, this enhancement is also available for any other ability that allows a character to project their spirit into an alternate metaphysical plane <\#208> such as the Marches of <BI>GURPS In Nomine<\$> or even some varieties of cyberspace. It does <I>not<I> apply to any power or gift which allows a physical transition to such a plane!

((END BOX))

@D-HEAD:Slow Change -10%/-25%

@TEXT:The character's changes take longer than usual. At -10%, the change time is measured in minutes instead of seconds. At -25%, it is measured in hours. If the character also has a Cyclic Change, the time to change plus any Minimum Duration must <I>always<I> be shorter than half the cycle length!

@TEXT:At the GM's option, change times can be much more flexible. Under this option, the -10% level can make the change take from one minute up to an hour, while the -25% could last a whole day. The GM and the player should determine the exact duration <\#208> and whether there is any random element involved <\#208> at character creation.

@D-HEAD:Template Susceptibility variable

@TEXT:(Morphs only.) You are not in full control of your shapechanging ability. Any time you come into contact with someone with a Will equal to or greater than your own, you must win a Contest of Will to avoid changing your shape to theirs. You are not affected by other shapeshifters, though.

@TEXT:The base value for this limitation is -20%, and you only need a Contest of Will upon physical contact. For an additional -5%, the target need not touch you, but merely be in the same hex. Each additional -5% expands this area by a one-hex radius. If more than one such individual is in your radius at a time, roll Contests in descending order of target Will until you either change or run out of templates. Choose randomly between templates with equal Wills.

@TEXT:If you have no available morph slots, you must immediately replace your least-used form with the new form you have been forced to take.

@TEXT:Once you win a Contest of Will with an individual, you don't have to run another one until the next time you meet them (base version) or the next time they enter your radius. If you become intimately familiar with an individual <\#208> roommate, spouse <\#208> you automatically resist their template unless they come upon you unawares and surprise or alarm you.

@TEXT:Once you copy a form, you will not be susceptible to another template for (Will) minutes.

@TEXT:Template Susceptibility is not compatible with Unstable (below).

@D-HEAD:Unstable -25%

@TEXT:Your hold on your alternate form is tenuous, either because you are just learning how to manifest it, or because it is very difficult to maintain. If you are surprised or shocked while changed, you must make a Will roll or immediately revert to your base form. (A critical success means you need not check again for the duration of the current encounter regardless of what happens; a critical failure indicates you may not return to your were form for a like amount of time.) Combat for which you are prepared does not usually require a roll, although <I>unexpected<I> damage as from an ambush or accident does. You also automatically revert to base form if you fall asleep or unconscious while shifted.

@TEXT:If one of your forms (base or other) has the Unfazeable advantage, it cannot be forced by surprise or shock to yield control, and need not make a Will roll.

@TEXT:While more suitable for weres, this limitation can also be used with Morph; in such a case, it applies to <I>all<I> the forms the morph can take. It cannot be used with an exclusive Cyclic Change, or where an External Trigger is needed to transform back to the base form.

@TEXT:The GM should allow the player to buy off this limitation without any special explanation, especially if it represents inexperience with shapeshifting. Optionally, it may be bought off <I>incrementally,<I> with each -5% eliminated with earned points granting a +1 on the Will roll until the entire limitation is removed.

@TEXT:<I>Option: War of Wills.<I> In a character with Split Personality, Unstable can be used to represent a constant struggle between personalities for control of the body. There is no change in the limitation value, but the Will Roll now applies to <I>all<I> forms; it becomes a Quick Contest of Will between the personalities, modified (at the GM's option) by how strongly the contesting minds feel about matters at hand. This use of Unstable should <I>not<I> be bought off easily, if at all.

@TEXT:Unstable is not compatible with Template Susceptibility (above).

(((START BOX)))

@C-BOXHEAD:"Once Only" Shifting

@TEXT-BOX:This is optional rule, inspired by the Zerg from the game "Starcraft" as well

as any number of comic books, movies and cartoons. The character possesses a reserve of points which he may use *once* to radically alter his form and abilities.

@TEXT-BOX:At character creation, the player sets aside a block of points, unused. He then buys a "placeholder" change advantage at a cost of one point for every 10 points reserved (minimum 1 point). As long as the block remains unused, he can add to it with earned experience, should he so choose. For every 10 points or fraction thereof added to the block, he must spend one additional point on the placeholder. (This is, in effect, a +10% enhancement.)

@TEXT-BOX:At any time during play, the player can invoke the change. He "spends" the placeholder, losing its points permanently. The block of reserved points then becomes available. He can use these points to raise his attributes and buy or upgrade advantages (and, at the GM's option, skills).

@TEXT-BOX:With the GM's approval, the player may "buy back" some existing advantages (Appearance, for instance) and use those points as well. He can also take any number of Disadvantages appropriate to the new form or abilities, but these are considered "acquired in play" and do not give any points back.

@TEXT-BOX:Any character trait that has no point cost (details of appearance like hair and skin color, for example) may be freely changed at this time as well.

@TEXT-BOX:Once the changes have been determined, they are applied to the character permanently. Any unspent points are lost. Multiple blocks and placeholders can be bought, but only at character creation time, and of course, each set is that many points by which the character is weaker than other PCs *until* he uses them.

@D-BOXHEAD:Predefined Changes

@TEXT-BOX:If desired, one-time shifts can be predefined; by sacrificing flexibility, the player can save *sometimes* substantially *on* point cost. This can be quite useful for describing races that undergo periodic metamorphosis as part of their lifecycle, similar to butterflies.

@TEXT-BOX:Add up *all* changes to the character, including the costs of new disadvantages acquired with the form, as if it were a racial package. This total *must* be positive. There must be a net improvement in the character; a predefined change *cannot* reduce a character's point total except by the amount of the "placeholder," which is still paid as above. The final total becomes the block of points set aside.

@D-BOXHEAD:Typical Limitations

@TEXT-BOX:Obvious modifiers the GM may impose include "incubation" or "metamorphosis" times, perhaps with an actual cocoon involved; requiring the new abilities be specifically related to the situation which triggered the change; requiring the new form to always be Ugly, Hideous or Monstrous; requiring two or more predefined changes to be sequential, building on one another; and so on. Limitations discount the reserved block *only* *the* "placeholder" is never discounted, and is always based on the "true" point value of the change, not the limited value.

@TEXT-BOX:The GM should be aware that the potential for abuse exists in this rule *which* is why it is optional.

((END BOX))

@B-HEAD:Varieties and Flavors

@TEXT:No two shapeshifters are exactly alike. This section explores some of the themes and special effects a player can employ in customizing a shapechanger to make him unique and different *even* among a race of similar beings.

@TEXT:Some are related to the special enhancements and limitations found on pp. 00-00, insofar as they are specific applications thereof. Others are more in the line of "color," without specific game mechanics but a lot of flavor.

((START BOX))

@C-BOXHEAD:Paradigms

@TEXT-BOX:When creating a shapechanger, it's important to select the source of your changing ability. While this usually has no direct effect on point costs, it *can* have considerable impact on both character design and game play.

@TEXT-BOX:<I>Magic.<I> Your shifting talent is a spell, curse or other sorcerous process affecting you. Unless otherwise specified (see the box on p. 00), it can be suppressed or dispelled with countermagic, it will deactivate in no-mana zones, and may misbehave in high-mana zones.

@TEXT-BOX:One variety of the Magic paradigm, the <I>magic item<I> works just like inherent magic, except all the power to change is invested in a gadget. Unlike most of the other paradigms described here, this <I>can<I> change your point costs <\#208> see the box "Item-Based Shifting" on p. 00.

@TEXT-BOX:<I>Psi.<I> Your ability to shift is a function of the extraordinary power of your mind. Anti-psi prevents your change, as do any drugs which dull your thought processes. You are likely to be limited to forms roughly your own mass and size. Your mental traits may cause odd side effects to your change.

@TEXT-BOX:<I>Natural.<I> This is the way you were born, possibly because your race evolved this way. (In most cases, though, magical and psionic races should be considered those types.) Unless the game world is <I>very<I> strange, you probably can't gain or lose mass in a shift, and you need to pay attention to most other relevant laws of physics. On the other hand, you are unaffected by mana level or anti-psi. Changing may take a long time for you, though, as you have to let "normal" bodily processes take their course. Your shift may also be subject to environmental or hormonal factors, and maybe special poisons.

@TEXT-BOX:<I>Technology.<I> Some scientific mechanism, be it internal or external, allows you to shapechange. (This need not be a literal device; it could be a genemod, surgical procedure or other process derived from science, be it current tech or advanced.) Tech shifts are similar to "Natural" above, in that you're probably limited to your own body mass and you have to be "realistic" in other regards (although this is not a hard and fast requirement, especially with classic "rubber science"). Under some conditions, the mechanism may be jammed or run out of power. If it is an actual physical device, it may be taken away from you, and like the magic item, this can affect your point costs <\#208> again, see "Item-Based Shifting".

@TEXT-BOX:<I>Super.<I> The catch-all paradigm. Although the "typical" Super shapechange is an inherent power unaffected by countermagic, mana level, or anti-psi, it can also resemble any of the other paradigms. In all but the most realistic settings, though, it lacks most of their weaknesses, but it may well suffer from its own more exotic vulnerabilities. The primary drawback, though, is that you need to be playing in a <BI>Supers<\$> game.<!s>.<!s>.

(((END BOX)))

@C-HEAD:Curses and Enchantments

@TEXT:Most of the classic were-creatures of myth and media are victims of curses or enchantments. This is a long tradition dating back to prehistory, best exemplified in the werewolves of Arthurian lore, French medieval myth, and horror movies from the middle of the 20th Century.

@TEXT:Such a victim usually suffers a complete split personality with an inimical or savage were-form at the worst, or a bestial one at the best. This type of curse is usually imposed as a punishment or an act of revenge, usually by a skilled spellcaster who specializes in such things, or by a supernatural source. Note that the current victim need not have been the offender <\#208> a particularly aggrieved party may turn the curse into a genetic trait afflicting generations of descendants.

@TEXT:On the other hand, a particularly evil person may well embrace a truly monstrous curse and revel in it. Seeing it as a tool for sowing terror and chaos, or simply to inflict revenge on those whom he thinks wronged him, such a character may be so intouch with his own bestial nature that he may not suffer a Split Personality when he enters into his were-form. Such was the primary view of werewolves in the medieval church.

(((START BOX)))

@C-BOXHEAD:What Makes A Curse?

@TEXT-BOX:While the main text discusses curses in the literal sense of the word, a curse need not be a malicious magic. A "curse" can be metaphorical rather than literal <\#208> Dr. Jekyll's Mr. Hyde was born of science, but the impact Hyde had on the doctor's life

certainly qualified him as a curse!

@TEXT-BOX:A literal magical curse need not be malicious, either. Christian apocrypha is filled with stories of curses cast by saints as tools of moral instruction and correction. One example is the werewolves of Ossory, Ireland, who were cursed for their wickedness by St. Natalis, and "compelled to take two by two a wolf-shape for seven years, returning to their own form at the end of that time." While that particular case is almost certainly not suitable for player characters, this kind of shapeshifting curse can be anything from campaign background color to a convenient plot element.

((END BOX))

@D-HEAD:"Minor" Curses

@TEXT:Less severe curses are also possible. Far from being fodder for horror stories, these "minor" curses may be imposed to teach a moral or social lesson to the victim; by giving the victim a form subject to problems and stresses usually alien to him, he may learn empathy for others or simply much-needed etiquette. Often these shapes are no more than simply inconvenient, either due to their trigger(s), cycles, or time limit(s), or due to the attributes of the were-form.

@TEXT:Such a character usually has one or more mental disadvantages that encompass the behavior being punished. Odious Personal Habits, Intolerances, Greed and other "deadly sins" all make good candidates.

@TEXT:Examples of such curses can be found in many medieval tales of Christian saints, as well as in some modern light fiction.

@D-HEAD:Breaking A Curse

@TEXT:Implicit in the concept of a curse is the prospect of breaking it. This is rarely a simple prospect <\#208> else what would be the value of a curse as revenge or a lesson? For "minor" curses, the break could simply be learning the lesson or behavior intended <\#208> which may be just as difficult as finding the rare Gila-gila herb in the jungles of the Amazon, depending on the character.

@TEXT:One authentic cure for lycanthropy found in medieval records is simple to effect, but may not appeal to most players: according to several early texts, the amputation of a hand/paw immediately and permanently destroys the character's shapechanging abilities. Naturally, this is contradicted for gruesome dramatic effect in later folklore and fiction; the GM is, as always, final arbiter.

@TEXT:The player and the GM should jointly determine the were-form's cure. Properly defined, the cursebreak could add an entire level of structure to a campaign even if the were never takes a central role in the game, by virtue of the underlying search motif it imposes. For "educational" curses, they are built-in tools and goals for character development.

@TEXT:Several cures from various cultures can be found in the box on p. 00.

((START BOX))

@C-BOXHEAD:Shapeshifting and Childbearing

@TEXT-BOX:The effects of a shapechange upon a child in the womb vary with the nature of the shifter. If the character is a member of a shapeshifting race, there is no problem <\#208> the child automatically shifts with the parent. Similarly, if the talent is an inheritable genetic trait, the child matches the parent's form. Any change that is the result of ultratechnology should allow for this situation as well. Magical changes may or may not know what to do about a pregnancy <\#208> the GM must decide these on a case-by-case basis. But a shift from human to animal that doesn't take a fetus with it is a tragedy waiting to happen.

@TEXT-BOX:And of course, all this assumes the character remains the same gender between forms. But this isn't necessarily the case. A female-to-male change, especially where no genetic component is involved, could be disastrous for both parent and child. Possibly worse, the fetus may simply disappear when the parent is in the "wrong" form, put "on hold" until the parent becomes female again <\#208> with the side effect of possibly extending a pregnancy for weeks or even months!

((END BOX))

@C-HEAD:Hengeyokai <\#208> Reverse Weres

@TEXT:Mythologies the world over are rife with the mirror image of the were-creature: tales of animals that can change into humans can be found in almost every culture. Japanese myth and legend are particularly rich in this regard <\#208> and from them comes the name used here for this class of creature: <I>hengeyokai<I> (which can be translated as "changing spirit"). Perhaps the best known example of the hengeyokai is the Kitsune (see p. 00).

@TEXT:Hengeyokai (also called simply "henge") always have at least two forms <\#208> their natural animal body, and a fully human alternate form. Additionally, some species have a third, intermediate form combining aspects of the other two. In Asian and other myths, the human form also retains some obvious feature that is indicative of the henge's animal nature <\#208> tails that must be hidden, hair coloration similar to fur patterns, sharp noses that resemble a bird's beak, and so on.

@TEXT:Almost any animal may be a hengeyokai. Cats who can become human are common in both Asian and European folklore, although in the latter they tend to have a demonic characterization. In Asian myth, hengeyokai birds, fish, shellfish, dogs, rats, spiders, and monkeys have also all appeared.

@TEXT:What makes a henge different from other animals of its kind varies widely in myth. For many there is no explanation; they simply <I>are.<I> Others are spirits, possessing or incarnated into an otherwise ordinary animal. Some, like the Japanese <I>kitsune<I> and <I>tanuki,<I> are <I>both<I> <\#208> an ordinary animal that is at the same time a spirit of great power. For the GM wishing to insert this kind of shapeshifter into his campaign, virtually any rationale is plausible.

@D-HEAD:Playing Hengeyokai

@TEXT:Such "reverse weres" make for entertaining characters. Because this is more a trope than a specific creature, no definitive single <I>hengeyokai<\$> package is practical. There are many general traits such creatures have in common, though. They are built like any other were, except that the animal template is used as a racial package for the base form. Tote up the changes that are needed to adjust from the animal template to the desired human form into PPT and NPT and calculate the cost of the form as noted on p. 00. Note that almost universally, hengeyokai are considered creatures of magic; most if not all will probably possess at least the 25-point version of the Mana Enhancer advantage (p. CI40), Magery and a variety of innate spells. Most frequently these will be from the Illusion and Creation college.

(((START BOX)))

@C-BOXHEAD:Transferring Damage Between Were-Forms

@TEXT-BOX:Unless the character possesses the Non-Reciprocal Damage advantage (p. CI41), damage taken by one form will be expressed in all other forms. Damage is carried over <I>proportionally,<I> based on the ratio of the two forms' hit points. Divide damage suffered by the ratio when changing to a form with fewer hit points, and multiply it when going to one with more.

@TEXT-BOX:<I>Example:<I> Tory has HT 12 in her human form and HT 12/6 as a were-fox; her hit point ratio is 2 (12 divided by 6). If she takes 4 points of damage as a human and then shifts, her fox form manifests with (4 / 2) or 2 points of damage. Tory-fox then takes another 3 points of damage before she returns to human; she is now down 10 points <\#208> (5 <f"symbol"><\#180><f\$> 2).

@D-BOXHEAD:Death and Dismemberment

@TEXT-BOX:A were killed in were-form will normally revert to his base form at the time of death. If the were loses a limb, that limb will immediately change back to the base form.

(((END BOX)))

@C-HEAD:Psionics

@TEXT:The psi with a strong enough Psychokinetic talent and a keen awareness of his own body structure may well be able adjust that structure at will. Strictly speaking, this is more of a choice of special effect than anything else, but designing a shifter using only "realistic" limitations can be an intriguing challenge and can result in an unusual character who can fit into all but the hardest-science games without overwhelming them.

@TEXT:An astral shifter of either variety is the easiest to justify, especially since the

"True Astral Were" found in the box on p. 00 <I>is<I> a psionic to begin with. For those players desiring a more physical experience, both morphs and weres can be in-genre with suitable modifications, the former more so than the latter. In each case, the same "theoretical" basis underlies their power; but while the morph has complete mastery over the shape of his body, the were represents someone who has mastered one alternate form and has come to a dead end.

@TEXT:Except in the most rubber-science settings, psionic shapechangers of a physical nature are limited by a variety of "real-world" considerations. Chief among these would be the requirement that they cannot change their basic skeletal structure. This is normally a -15% limitation (although GMs whose campaigns include a large number of physically different races should feel free to increase its value). Such shifters can hide limbs within their flesh, but cannot form new ones. (Optionally, the GM may allow the creation of non-structural "cosmetic" limbs held rigid by cartilage or tensed muscle instead of bone. Such limbs would only be for show, and would be incapable of carrying any amount of weight.)

@TEXT:Similarly, the GM may require that the shifter's total mass remain constant. There are exceptions, though <#208> shapechangers in the <BI>GURPS Wild Cards<\$> setting (whose powers are all psionic in origin) can often change their mass, either by the temporary inclusion of so-called "virtual particles" or by absorbing nearby matter for the duration of the shift.

@TEXT:Other typical limitations for the psionic shifter would emphasize the mental roots of the ability. To begin with, if the GM disallows psi-based shifting as a solo "wild talent", it will require the prerequisites of both Psychic Healing along with enough Telekinesis to lift one's own body. Beyond that, it would not be out of place for a <I>physical<I> psionic shifter to have a need for concentration, or a Fatiguing or Slow Change. Telepathic shifters could easily have Copies Personality. For increased realism, require the Needs Sample limitation. And in the grand tradition of anime shapeshifters, a Flawed or Horrifying Change is always appropriate.

@C-HEAD:Shapeshifting Races

@TEXT:As interesting as individual shapeshifters can be, an entire race of them can be even more interesting <#208> or more terrifying. From the Garou of <BI>GURPS Werewolf: The Apocalypse<\$> to the doppelg<#138>ngers and mimics of classic fantasy gaming to the many shape-changing races of science fiction, a race of shifters almost always poses a threat to <I>someone<I> <#208> a threat that can drive a campaign.

((START BOX))

@C-BOXHEAD:Fictional Were-Race: J.R.R. Tolkien's "Beornings"

@TEXT-BOX:One of the models for the were-bear of modern fantasy gaming, Beorn and his people appear in chapter 7 of <I>The Hobbit.<I> Descended from the Edain of the First Age (among whose number were skinchangers, the <I>Silmarillion<I> states authoritatively), Beorn learned how to take the form of a bear and passed this gift on to generations of his descendants.

@TEXT-BOX:The Beornings were a forest folk, living as woodsmen. Like the bears whose forms they could assume, they were big, bulky, and heavily muscled. To a one they were black-haired and shaggy, the men sporting heavy beards that emphasized their ursine appearance. The coarse woolen clothing they wore only added to the effect.

@TEXT-BOX:In addition to their were-form, the Beornings were known to be berserkers, fearsome axe-men, and skilled foresters. Beorn himself was a vegetarian, but it is unknown if this trait extended to others of his people. While the Beornings were more a tribe (or later a nation, in the Native American sense) than a truly separate race, they certainly could be given a unique racial package, considering their differences from mainstream humanity.

((END BOX))

@TEXT:When designing a race with shape-changing ability, never forget to ask, "Why?" Even magical races have a reason for their shapeshifting. Is it in response to environmental pressures? For protective coloration? Or to better sneak up on their prey? Perhaps they are a race of warriors or infiltrators. Were they artificially created, or did they evolve naturally? Answer these questions, and the race practically designs itself <#208>

mental and physical attributes immediately become obvious, and possible plotlines begin to form.

@TEXT:Don't overlook diversity within the race, though. Subcultures and subraces can not only provide helpful verisimilitude, they can also keep players on their toes.

@TEXT:If not a naturally magical race, such creatures will have to respect the laws of physics to a certain degree. As with psionic shifters, there may be limits to the sizes and shapes they can take, and the degree of change that they can undergo. Remember, though, that even if major skeletal changes aren't allowed, a biped is not that far from that of quadruped <\#208> especially if a race's proportions are different from humanity's.

@TEXT:For players, the advantage of being a member of a shapeshifting race is that their characters need not feel the isolation of being a unique or nearly unique creature, possibly unnatural <\#208> unless they are unaware of their heritage, which in itself can drive a storyline for a campaign.

((START BOX))

@C-BOXHEAD:"What Do You Mean, You Ate While You Were a Mouse?"

@TEXT-BOX:One of the more annoying issues raised with weres is the effect of meals across

forms. Can a thimbleful of seeds eaten by a were-mouse adequately nourish his human form?

@TEXT-BOX:If a were-form's animal template includes the Reduced Life Support advantage, then a meal eaten in the were-form will remain filling and completely nutritious when the character returns to his larger base form. However, the inverse is not true. A large were-form possessing the Increased Life Support disadvantage is <I>not<I> sufficiently fed by a meal taken in base form. Buying off either of these traits during character creation will negate their respective effects; in this case, the larger form will only suffer from some degree of hunger immediately upon a change to it only if the base form was hungry.

@TEXT-BOX:This rule of thumb obviously does not pass the reality check for any kind of "scientific" shapeshifting. The GM seeking "realism" may impose hunger upon <I>any<I> change to a larger form regardless of the Life Support trait(s) possessed. (It's not recommended that the GM enforce the opposite conditions in <I>any<I> setting <\#208> most players won't appreciate having their were-squirrel character explode because they changed too soon after a hearty meal.)

((END BOX))

@C-HEAD:Shifter Supers

@TEXT:While the Transformation advantage (p. CI68) exists for use by super-types, and Morph had its genesis as a leveled advantage in <BI>GURPS Supers<\$> (p. SU63), it is possible to use the rules for weres to handle some varieties of shape-changing metahumans. Leaving aside those elements of horror fiction and film which have infiltrated the super-hero genre, many character concepts could just as easily be implemented as were-forms as any other way.

@TEXT:The Incredible Hulk is an almost archetypal example of the were super, even if the Hulk's <I>body<I> isn't animalistic. It's even more telling that the earliest version of the Hulk had a Cyclic Change, trading control with Bruce Banner at sunset and sunrise. Wolvesbane from the New Mutants is explicitly a werewolf, although one who suffers from no automatic shift. And while the owner of the Guyver (from the manga, anime and live film of the same name) technically activates a battlesuit, that battlesuit is a living part of his body; he effectively becomes a different order of being when it wraps itself around him. His primary foes <\#208> the Zoanids and their ilk <\#208> are certainly weres, able to tap into ancient genetic potential to turn into monstrous beasts.

@TEXT:On the other hand, morphs have an equally long history in comics, dating back to Chameleon Boy (and his villainous counterpart, Chameleon King) from DC's <I>The Legion of Super-Heroes<I>, and even further. They are more frequently found as villains (or villains' minions) than as heroes, but depending on the tone of the campaign, they can make excellent team players.

@TEXT:These few examples barely scratch the surface. A surprising number of character concepts work as well with a were-form as with any other mechanism; don't overlook this option when trying to implement that obscure design. Supers require less justification

than most other varieties of shifter, which allows for greater flexibility.
@TEXT:Of course, genre considerations do come into play. External triggers for weres and the need for samples for morphs are both common. Super weres often suffer from extreme cases of split personality; super morphs are often insane, ranging from relatively simple megalomania (based on the "obvious" fact that if they can be anyone at all, they <I>must<I> be better than everyone) to a near-schizoid depression (if I can become anyone, is there really a <I>me</>?).

((START BOX))

@C-BOXHEAD:Shapeshifting and the Absorb Super-skills

@TEXT-BOX:<BI>GURPS Supers<\$> includes among its many options three super-skills which may be of interest to players trying to implement a unique or unusual design. <I>Absorb Attribute<I> (p. SU55), <I>Drain Skill<I> (p. SU59) and <I>Drain Super Ability<I> (p. SU60) all allow the character to "borrow" abilities from other characters. It is possible and in some cases desirable <\#208> to Link (p. CI00) a shapeshifting advantage to one of these skills. Doing so can turn the super-skill into a "power supply" or catalyst for the change. This can take two forms: In the first, the character may only shapechange when he is "charged up" with absorbed points. A morph using this option may be required to steal points from someone whose shape he wants to copy. In some ways, this would be similar to applying the "Cannot Reuse Forms" and "Needs Sample" limitations. In the second option, the character automatically changes into his alternate form upon absorbing the points, and cannot change back until the absorbed points have worn off. For even more confusion, characters with multiple forms may have a different Absorb superskill linked to each one.
@TEXT-BOX:Players considering this combination should note that the three superskills have radically different durations spanning several orders of magnitude, and should design their characters accordingly.

((END BOX))

@C-HEAD:Weremachines

@TEXT:Ultratech and ultramagic societies may seek to fuse a pleasing form with necessary function by creating creatures who can become needed tools and machines at will or need. Such beings are called weremachines. They are as much companions as equipment; in some ultramagic civilizations they are often engineered to be familiars as well. They are sometimes unique creatures (suitable as McGuffins in the appropriate plots), but in some settings they will be mass-produced.

@TEXT:Each "species" or model will have a specific machine form that it can assume. These are rarely small and simple devices <\#208> one does not design an expensive bioengineered creature simply to become a toaster. Rather, they turn into large machines that can benefit from ease of maintenance and portability during their downtimes: cars, starships, or weapons, for example. Some are specialty equipment <\#208> sensors, professional tools, and other devices which are small, valuable, and frequently fragile, which could profit from a sturdier alternate form. A few are bodyguard robots or escape pods. They will rarely be any kind of device that is static and unmoving, like a refrigeration unit.

@TEXT:A culture making extensive use of weremachines could possibly have dozens or hundreds of varieties living among them, either as pets or as almost-wildlife, available to any to use. Depending on the culture's viewpoint on such things, they may be sterile or fertile; fertile weremachines will not only breed, but evolution and natural selection will improve both the animal <I>and<I> the machine forms. It will be rare, however, for different kinds of fertile weremachines to be interfertile, because the results will be unpredictable <\#208> the thought of what might result should the howitzer-cat and the lynx-guardian breed can intimidate even the most anarchic of biodesigners.

@TEXT:For the convenience of their masters, they are often sentient. As such, they can make good player characters <\#208> or at the very least dependents and allies. Character weremachines should build their machine form using the rules found on pp. 5-52 and 82-91 of <BI>GURPS Robots<\$>, treating their "model package" like an animal template (p. 00).

@TEXT:Machine forms are built with a cyborg brain; the "natural" brain of the base form carries over into the machine. Weremachines will also almost always have a skill appropriate to their mechanical function, such as driving or piloting for those which

turn into vehicles, or a combat skill for those which become weapons.

@TEXT:Base animal forms are best based on some variety of small mammal: cats, dogs, ferrets and rabbits all make good starting places. Restrictive cultures may build them with Slave Mentality, Dependencies, and other disadvantages that would ensure control over them.

@TEXT:The definitive example of a weremachine in fiction is Ryo-Ohki from the various versions of the anime <I>Tenchi-Muyo!:<\$> a hand-sized cat-rabbit hybrid which can turn into powerful, beweaponed starship and back again. In one edition of the story, she is a unique ultratech creation; in another, she is one of a breeding species. In yet a third, she turns not into a starship, but a humanoid mecha. Certainly a most versatile creature.<!s>.<!s>.

((START BOX))

@C-BOXHEAD:Spellcasting While Changed

@TEXT-BOX:Shamanic shifters, hengeyokai, and other varieties of shapechangers may have the desire or need to cast spells while in an animal form. If the gameworld does not allow the optional Spell Ritual rules (p. B00), they're out of luck unless the GM grants them special dispensation. If the Spell Ritual rules <I>are<I> in effect, the were must possess a sufficient level of skill in the desired spell to perform it within the limitations of his animal form (Mute and/or No Fine Manipulators usually being the deciding factors).

@TEXT-BOX:In either situation, some GMs may allow unencumbered spellcasting by weres whose animal forms are sufficiently close to human <\#208> simians such as apes or yeti, primarily, but generally anything with functional hands and a voice should qualify.

@TEXT-BOX:Spellcasting shifters whose base forms are have no manipulators, are mute or both (such as some varieties of Hengeyokai <\#208> see pp. 00-00) will almost always possess spells which can be cast without difficulty in those forms. Any shifter with <I>innate<I> spells will also suffer no penalties for their use in any of their shapes.

((END BOX))

@C-HEAD:Undead and Shapeshifting

@TEXT:Traditionally, vampires are shapeshifters as well as undead; wolves and bats are the two animals into which they most frequently change. While the <BI>GURPS<\$> standard vampire package already accounts for such abilities, GMs or players may choose to create their own custom variants. In such a case, combining the vampire's basic abilities with a full were-form or two <\#208> or worse, Morph <\#208> can result in a subtle and deadly character <\#208> or foe.

@TEXT:Other undead-were connections can be found; possibly best known is the undead state of the victims of a werewolf described in the film <I>An American Werewolf in London.<I> But many traditions provide a more immediate link.

@D-HEAD:The Werewolf-Vampire Connection

@TEXT:In Eastern Europe and other parts of the world, were-creatures and the local variety of vampires are often intimately connected. The "standard" movie (and gaming) vampire can shift into a wolf, and even today the Greek and the Slavic languages frequently use the word <I>vryk<\#151>lakas<I> or its cognates to refer to both creatures. In Gypsy folkore vampires and werewolves are related, though two different beasts. Similarly, the Filipino <I>aswang,<I> the Portuguese <I>bruxsa<I> and <I>cucubuth,<I> and the Serbian <I>wurdalak<I> all display vampiric traits. The latter, though, is emblematic of the most typical belief in many regions: a werewolf is <I>guaranteed<I> to become a vampire upon its death.

@TEXT:Returning as a vampire <\#208> perhaps as one of the more exotic varieties found in <BI>GURPS Bloodtypes<\$> rather than the default <BI>GURPS<\$> vampire <\#208> may be an attractive option for some players of were-characters. Of course, the newly-undead PC will find he possesses far different priorities than he used to have. If the GM chooses to implement this bit of folklore in his campaign, it is best to cloak it in as much confusion and contradiction as possible, to prevent exploitation by his players.

@D-HEAD:Werewolves and Ghosts.<!s>.<!s>.

@TEXT:In Western Europe, were-creatures <\#208> particularly werewolves <\#208> were sometimes called "angry ghosts." A typical example is the case of the Werewolf of

Ansbach, who plagued that German city in 1685 and was rumored to be the town's dead mayor. If such a creature were to appear in a game, it would likely have a ghost, revenant or similar being as its base form. (See <BI>GURPS Undead<\$> for complete racial packages describing many possible candidates). Additionally, the undead/werecreature would have to have a <I>very<I> good reason <\#208> at least in its own opinion <\#208> for coming back to prey upon the living in such a manner.

@TEXT:Alternately, the ghost-were may well be the lingering shifted form of an individual who was employing a Projected Were-form (see main text, p. 00) when he passed away. Depending on the manner in which he died, such a ghost may or may not be angry <\#208> but either way, it probably will have a serious agenda to pursue.

@TEXT:Those that do would tend to be Obsessed or suffer from Compulsive Behaviors, like many other ghosts. They may not always be the best company <\#208> and any other characters had best be sure that they are not included among the people central to the ghost's particular motivation!

@C-HEAD:"Scientific" Shifting

@TEXT:Besides the nanosystems and other possibilities expressed in <BI>GURPS Biotech,<\$> there are other ways to quantify shapeshifting in a scientific or pseudo-scientific manner. Most of these fall properly in the realm of "rubber science," but as such are perfectly valid in any but the most restrictive "hard science" game. Genres from modern (<I>X-Files<I>-style) conspiracy through <BI>Atomic Horror<\$> all the way to any of a million varieties of <BI>Space<I> and <BI>Cyberpunk<I> can accept weres and morphs with the proper hand-waving.

@TEXT:Most of the possibilities for "scientific" shape-changing revolve around an odd, damaged or enhanced metabolism. Again, the GM and the player should collaborate on the specifics <\#208> controlled cyclic forms of cancer, the ability to activate traits encoded in the character's introns (the genetic "dead space" in his DNA), "atavistic regression" using biofeedback methods, an engineered body exchanged with the natural one using a dimensional shunting system.<!s>.<!s>. the possibilities are only limited by your grasp of technobabble.

@TEXT:The intent to remain "scientific" will of course demand more rigorous attention to realism when designing the shifter. If there is a noticeable difference in mass between forms, special effects and disadvantages representing the need to absorb and dispose of that mass may be needed. The change may impose strange biological processes or needs that may be expressed as Dependencies, Vulnerabilities and Life Support issues. Worse, shifting that comes from odd metabolic traits or strange diseases may also carry along "timebomb" disadvantages like Terminally Ill.

@TEXT:No matter the cause of the change, it is certain that mind-body interface issues will impose personality changes on the character. These may be large enough to merit quantification with mental disadvantage such as Split Personality, Overconfidence, or (at the very worst) the retention of an animal template's Bestial and Presentient traits. The precise changes are of course dependent upon the shifter's base personality and the nature of his alternate form(s).

Shapeshifting

Well, I like you. You're nice, and you're funny. And you don't smoke. Yeah, okay, werewolf, but that's not all the time. I mean, three days out of the month I'm not much fun to be around either.

-- Willow to Oz, in *Buffy the Vampire Slayer*

Over thousands of years of myth, legend and fiction, mankind has created a vast variety of creatures and beings of variable form. Despite their apparent differences, certain common themes and mechanisms can be found among them, regardless of their origins.

((START BOX))

@C-BOXHEAD>About This Chapter

@TEXT-BOX:The rules in this chapter supplement and in some cases supercede those found in *Compendium I*'s various shifting advantages and disadvantages. Specifically, the game effects described for Animal Form (p. CI33), Shapeshifter (pp. CI43-44), and Untrained Shapechanging (p. CI100) are now subsumed under the were-form rules in the main text on pp. 00-00. Similarly, as far as weres are concerned, Multiple Forms (p. CI62), Transformation (p. CI68) and Uncontrolled Change (p. CI105) no longer apply.

((END BOX))

Taxonomy

When stripped of their special effects and their unique stories, virtually all the shapeshifters in fiction and myth -- and in gaming -- can be reduced to two distinct varieties: the *morph* and the *were*.

The Morph

The *Morph* is the creature of a thousand forms. Whether or not it possesses a "native" shape matters little -- it survives day-to-day with its ability to assume almost any other form. It may do so either for protection or predation; it may require a simple visual contact, or genetic samples, or wholesale consumption to acquire a pattern to duplicate. It may acquire the original's memories, or simply its appearance. But in the end, it can be anything or anyone, and in some cases, all of them at once.

Examples of the morph include "Odo" from *Star Trek: Deep Space Nine*, The Thing from the 1982 John Carpenter movie of the same name (as well as "Who Goes There?", the John W. Campbell story on which the film was based), and the T-1000 "liquid metal" terminator in the film *Terminator 2*.

The Were

The *Were* (short for "were-creature" -- see the glossary, p. 00) is a being which alternates between a fixed set of two or more pre-defined bodies -- none of which are necessarily human. Its ability to change may be entirely voluntary, or completely out of its control. Unlike the morph, it often demonstrates different

personality traits and even different personalities in its different bodies.

The majority of shapeshifters in myth and legend are weres. Furthermore, this definition is very broad and includes many types of shapeshifters who at first glance may not appear to be the same type of creature as a werewolf; but any being which possesses two or more distinct, predefined bodies, no matter the reason or mechanism, is a were.

Examples of the were range from the classic werewolf of legend and its various cousins from the world over, through its more monstrous incarnations in horror films, to such apparently unlikely candidates as Dr. Jekyll/Mr. Hyde and victims of the Jusenkyo curses of the Japanese manga/anime *Ranma 1/2*.

That Thing You Do -- Basic Mechanisms

Excluding spells and certain magic items, there are two primary mechanisms for creating shapeshifting characters in *GURPS*. Which to choose depends on the nature of the character being designed.

Remember, all that matters on the game level is *how* those changes are quantified, not *why* they happen. So a person under a shapechanging curse (as in *Ladyhawke* or *Ranma 1/2*) is as much a were as a Garou from *GURPS Werewolf: The Apocalypse*; and any creature that can steal or copy another's shape (*DS9*'s "Founders", "The Thing") is a morph. Another good rule of thumb is that (by default) a morph never undergoes a personality change no matter what form he takes, while a were frequently does.

((START BOX))

@C-BOXHEAD:Spells and Devices

@BODY:Shapechanging via "outside" means such as spells and magic items is not really shifting as defined by this book. No matter how "internalized" his spell and his mana are, a mage with a Shapeshift spell is simply *not* a morph or a were.

@BODY:But Ensorcelled Shapeshifts (see p. G39) and items which grant similar effects are gray areas. There's little functional difference between a person Ensorcelled with Great Shapeshifting, and a Morph with a Cure/Cursebreak limitation. Likewise, no few creatures of myth that would otherwise be defined as standard weres resemble ordinary people with extraordinary magic items.

@BODY:When it comes to items, if the item works only for the individual -- like the skins of Selkies (p. 00) and the feathered cloaks of Swan Mays (p. 00) -- the character is a shifter. If anyone with the correct knowledge and the Fatigue to spend can trigger the effect, then the owner is just someone with a standard magic item.

@BODY:The use of a Shapeshift spell in the usual manner does not make a were or morph of the recipient. But Ensorcelled versions are a different matter; if the problem of dwindling IQ is somehow defeated where necessary, they effectively turn the recipient *into* the appropriate kind of shapeshifter. The GM should feel free to calculate the point total for an equivalent shapechanging advantage -- and Unusual Background, if needed in the campaign -- and assess that cost against the character.

((END BOX))

Building A Morph

In *GURPS*, a morph character is built with the super advantage of the same name, found on p. 61 of *GURPS Compendium I*. (This is a generic, "baseline" morph ability; if more flexibility is desired, consult the version found on p. 63 of *GURPS Supers*. While it is a bit more expensive and has its own limitations, it is also far more flexible in terms of the range of sizes and shapes possible.)

Variations on the basic Morph ability -- such as changes in the number of or need for memorized forms, access to a subject's memories, and the like -- are handled with the standard enhancement/limitations rules found on pp. CI107-112. Some new morph-specific enhancements and limitations can be found on pp. 00-00.

Morph characters may also find the Change Control (p. CI138) skill useful.

For the most part, Morph characters are simple and straightforward in design. As a result, there is little need to cover the process of their creation in detail. However, this should not be taken to mean that all morphs are alike -- quite the contrary. Several examples of Morph-based characters and races are provided in Chapter 3 in order to demonstrate the range of possibilities available to the player. Don't be fooled into thinking that one morph is like any other morph!

By default, a morph has the following characteristics: He can memorize any form which he has seen, whether in person or at a remove, such as via television or a photograph. None of the original model's knowledge is acquired -- only appearance. Within the size/mass limits of the Morph advantage, the copied form is a perfect duplicate, visually, but the morph's internal structure and genetic code (if any) do not change. He has complete control over his changes to and from his memorized forms, with no involuntary or compulsive aspects to the shift, but cannot blend or mix forms. The change is limited to the body; clothing is not acquired or lost in the transformation, although it *can* be simulated as an integral part of a memorized shape.

Building A Were

Compared to a morph, building a were character is somewhat more complicated. The Quick-and-Dirty creation rules provided on p. 98 of *Bestiary, Third Edition* (and reproduced in the box on p. 00) describe the basics of the process, but they result in only the simplest of weres -- specifically, those with a change to animal form that is always under the character's control.

At the heart of the Quick-and-Dirty rules is the process of turning an alternate form into an advantage (or, in some cases, a disadvantage), which can be then added to a character's point total. The alternate form itself is usually a combination of an animal template (see pp. BE104-113) and any additional character traits needed to define the form properly. (In some cases, though, the template may not be for an animal, but for a human or some other sentient race. See the sample character "Ripper" in the sidebar on p. BE98.)

The alternate form is, in effect, an "overlay." It is the sum of all the differences between the base form and the were-form, differences that come into play only when the alternate form is activated. It is not a full character in and of itself, even if it possesses a Split Personality. It is, rather, a Switchable advantage, built from a number of subsidiary advantages and attribute boosts, with a set of attendant Temporary

Disadvantages (a Nuisance Effect limitation, as described on pp. BIO137-9 and in the box on p. 00).

By default, a Quick-and-Dirty were has the following characteristics: The shifter has complete control over his changes to and from the were-form, with no involuntary or compulsive aspect to the shift. The change is limited to his body -- clothing and equipment must be removed first, or risk entanglement or damage. Unless otherwise altered at creation, the animal form will have an animal's IQ, mental limitations, and priorities. And finally, the character will normally possess no special vulnerabilities or weaknesses except those normally possessed by the template animal.

Like the morph, some weres will find the Change Control skill useful to their character conception.

((START BOX))

@C-BOXHEAD:Quick-and-Dirty Shapeshifting

@TEXT-BOX:The following "rule of thumb" for fast creation of a character with a were-form comes from p. 98 of *GURPS Bestiary, Third Edition*. It assumes the simplest case: an animal wereform with completely voluntary control over the change.

@TEXT-BOX:Treat an alternate form as an *advantage*, with the point cost calculated as follows:

@TEXT-BOX:**1.** Create the beast form as you would any character. (*GURPS Compendium I* lists many traits suitable for beasts. *GURPS Bestiary, Third Edition* lists a number of animal templates suitable for were-forms.) *Exclude* any physical traits the base form already possesses (for example, Combat Reflexes).

@TEXT-BOX:**2.** Total everything with a positive cost to produce a "positive point total" (PPT). Total all negative values to get "negative point total" (NPT). For changes in attribute levels and existing traits, use the *difference* in the costs between the forms (e.g., a ST 11 human who has ST 15 in beast form adds 50 points to PPT; a Wealthy human who turns into a Dead Broke beast adds -45 points to NPT).

@TEXT-BOX:**3.** Apply NPT as a percentage limitation on PPT (e.g., NPT -40 becomes a -40% limitation on PPT). The limitation cannot exceed -75%, regardless of NPT (e.g., NPT -100 would give only a -75% limitation). Moreover, the point savings due to the limitation cannot exceed 80% of NPT (e.g., NPT -50 and PPT 100 would result in a -50% limitation, normally worth -50 points, but since this would exceed 80% of -50 points, or -40 points, it is reduced to -40 points). (This is the Nuisance Effect: Temporary Disadvantage limitation; see sidebar, p. 00.)

((END BOX))

Going Beyond Quick-And-Dirty

While this may be perfectly acceptable to many players, some may want more control over the specifics of their PCs' shapechanging abilities. To this end, new disadvantages, enhancements, and limitations specific to the shapeshifting character are provided on pp. 00-00.

The Template

The first step in the process of designing a were is to select what creature is the basis for the were-form, and define it as a template -- a "racial package" for a specific type of animal. Several sample animal templates are found in Chapter 4, and many more can be found in the *Bestiary*. If the species you want isn't among these, you can build your own from scratch using Chapter 5 of *Bestiary*, or you can use the ones in this book as models.

A template for a natural animal will normally include many traits that may be inappropriate or unwanted in the final character, such as Bestial and Presentient. Do *not* remove these from the template. They contribute to the final proper cost of the "racial package," and even if they are just going to be bought off later, eliminating them at this point can often be a false economy. *Keep the template self-contained.*

Exceptions: One exception to this is, as noted above, any template trait already possessed by the base form which is desired in the were-form. Although it fails the "reality check" for a racial package, it is less trouble to simply leave it out of the template than to buy it twice and buy it back once.

Another exception is a hybrid form, like the classic wolf-man. These can frequently get far too complicated and inefficient when built off an animal template. In such cases, it is enough to simply delineate all the changes without worrying about modifying a pre-existing package.

Fleshing Out the Were-Form

At this point, the were-form *is* the animal template. For players seeking a no-frills, no-complications were, this will be sufficient, but the were-form will then be little more than a normal animal who has a vague memory of having been human. Many players will want to change this.

The were-form is not modified by changing the animal template, but by tabulating the desired changes separate from but alongside of it. Remember, the template is like a racial package -- traits are not removed from the package, simply bought off or modified in the individual character.

The most common changes will be raising the form's IQ and buying off the more severe mental disadvantages like Bestial, Presentient and Innumerate. Certain physical advantages and disadvantages are also inappropriate to a were-form and should be bought off in all but the most unusual circumstances. Early Maturation and Short Lifespan in particular, because most were-forms are not limited by the animal template's life cycle and lifespan, but anything else that would be nonsensical or contradictory should be eliminated.

Exception: If the character is a child, Early Maturation could be retained to describe a were-form that matures faster than the base form.

((START BOX))

@C-BOXHEAD: You Turn Into WHAT?

@TEXT-BOX: Most gamers will be aware that were-creatures are by no means limited to wolves. However, as counterintuitive as it might appear, the alternate form of a were need not be an animal. In fact, it need not even be a different species from the base form. Fiction is filled with people who change into different human bodies: Saotome Ranma from Takahashi Rumiko's *Ranma 1/2* is one example; Dr.

Jekyll/Mr. Hyde (from the story by Robert Louis Stevenson) can be interpreted as another.

@TEXT-BOX: Alternate forms may also be other intelligent races, as in the case of the legends of dragon shifters who frequently took human form. But the options do not stop there. Japanese anime and manga are particularly rich sources of unusual weres: *Ranma 1/2* has (among others) Pansuto-Tarou, whose shifting curse incorporated a half-dozen different animals into a single hybrid monster, and the girl Rouge, who turned into an animated (and malevolent) statue of a Hindu demon. *Birdy The Mighty* postulates a symbiotic relationship between a human and an alien sharing a body that alternates between their two forms (and genders!). *Tenchi Muyo!* demonstrates the *weremachine* (p. 00) in the form of Ryo-ohki -- a rabbit-sized creature that can turn into a giant crystalline starship. And even more exotic possibilities can be found. If you can build it with points and play it as a character, you can turn it into a were-form.

((END BOX))

Raising Attributes

Remember that when raising or lowering attributes from the animal template's levels, you are buying off an advantage or disadvantage and pay points accordingly. Bringing a were-form's IQ, for example, up from 4 to 10 costs 50 points, not 80.

Other Changes

Buy back any of the animal template's other traits that are not wanted in the final were-form, although these will probably be few. Similarly, any traits of the base form which are not wanted in the were-form should be bought off or back as well.

This is also the time to add new features specific to the were-form, starting with the mundane and extending up into such supernatural or racial traits as the traditional Vulnerability and/or Weakness to silver, an Infectious Attack, and so on. If the base form is subject to some infirmity -- such as One Hand or Lameness: Crippled Leg -- that is not desired in the were-form, buy it off at this time, too. However, some traits -- such as Split Personality, Reciprocal Rest and Non-Reciprocal Damage -- should actually be taken by the base form.

Calculating Costs

After assembling the final collection of changes that will comprise were-form, the next steps are the same as in the Quick-and-Dirty rules. Add up everything with a positive point cost to come up with the "positive point total" (PPT). Do the same for items with a negative point cost to produce the "negative point total" (NPT).

Example: Alison is building a wereleopard. After she finishes customizing the were-form, it has a PPT of 205 and an NPT of -183.

Next, apply NPT as a percentage limitation on PPT (e.g., NPT -40 becomes a -40% limitation on PPT). The limitation cannot exceed -75%, regardless of NPT (e.g., NPT -100 would give only a -75% limitation). Moreover, the point savings due to the limitation cannot exceed 80% of NPT (e.g., NPT -50 and PPT 100 would result in a -50% limitation, normally worth -50 points, but since this would exceed

80% of -50 points, or -40, it is reduced to -40 points).

Example: Alison calculates costs. NPT -183 is larger than -75, so it becomes a -75% limitation. -75% of the PPT is -154 points. But that's larger than 80% of NPT, which is -146 points. The final discount is -146 points, for a were-form cost of 205 - 146 = 59 points.

((START BOX))

@C-BOXHEAD:Morph or Were?

@TEXT-BOX:Whether adapting a shifter from an outside source or creating a new character from scratch, at some point the question will be raised: is this a morph or a were?

@TEXT-BOX:As self-evident as this might seem, it is not always clear from the source or concept. One example would be the so-called "true were," from Spider Robinson's later *Callahan's* stories, who turned into whatever he was closest to when the full moon rose. Despite the name, this character was clearly a morph (at least in *GURPS* terms), as he had no predefined alternate form.

((END BOX))

Modifying The Were-form

The final step, above and beyond the Quick-and-Dirty rules, is to modify the entire were-form itself. At this point the player may choose to apply enhancements and limitations that affect the accessibility and usefulness of the were-form as a whole. For example, a traditionalist may decide that his character is subject to a Cyclic Change, being forced to shift with every full moon. Another may make his character's change Absorptive, so he need not worry about clothing and equipment.

Example: Alison wants her wereleopard to have to change on the full moon. Going with the default minimum duration of one hour, this is a -20% limitation (see box, p. 00), which makes the final cost 59 points less 20% = 48 points.

Advantages and Disadvantages

Under these rules, certain existing *GURPS* advantages and disadvantages have special applications. Others are overruled entirely. In addition, there are a number of new traits that apply only to shapechangers.

Existing Advantages

Animal Form p. C133

This advantage has been superceded by these rules.

Lycanthropic Dominance p. C160

This advantage must be purchased by the base form, and cannot be bought off during the construction of were-forms. *Exception:* If the were-form is a Split Personality, *it* may buy this advantage instead of the

base form.

Multiple Forms p. C162

Usage for were-creatures superceded by these rules.

Non-Reciprocal Damage p. C141

This should be purchased by the base form. It may be "bought off" in any were-form the character possesses, if the player so chooses; in that case, the selected were-form and the base form share any damage suffered.

Reciprocal Rest p. C143

This should be purchased by the base form. It may be "bought off" in any were-form the character possesses, if the player so chooses; in that case, the selected were-form does not rest when not in use.

Reputation p. B17

In settings where weres and morphs are part of the established social or religious order, or where they are seen as representatives of and/or messengers from totem spirits or gods, they will have a positive Racial Reputation.

Shapeshifter pp. C143-44

Superceded by these rules.

Transformation p. C168

Usage for were-creatures superceded by these rules.

Unusual Background p. B23

In many campaigns, being a were will require an Unusual Background. The point cost is paid by the base form. Also, while it is not part of the were-form, this advantage may not be bought off as part of its construction.

Vampiric Invulnerability p. C170

Certain types of weres -- including (but not limited to) the Garou from *GURPS Werewolf: The Apocalypse*, demonstrate an ability to shrug off the effects of vast amounts of damage. Use Vampiric Invulnerability to represent this. The built-in weakness to fire can be retained or changed to another attack form (usually silver) at the player's (or GM's) choice.

((START BOX))

@C-BOXHEAD:Animal Template: Wolf

@TEXT-BOX:Adapted from p. BE112, this is a standard, "natural" wolf.

@TEXT-CSTATS:*Attributes*: ST -1 [-10]; DX +4 [45]; IQ -5 [-40]; HT +2 [20].

@TEXT-CSTATS:*Advantages*: Acute Hearing +4 [8]; Acute Taste and Smell +4 [8]; Alertness +5 [25]; Claws [15]; Combat Reflexes [15]; Discriminatory Smell (Works as Empathy within 2 hexes, +50%) [23]; Enhanced Dodge [15]; Enhanced Move ¥1/2 [5]; Four Legs [5]; Penetrating Call [5]; Sharp Teeth [5]; Thick Fur [29]; Ultrahearing [5].

@TEXT-CSTATS:*Disadvantages*: Bestial [-10]; Chummy [-5]; Color Blindness [-10]; Dull [-1]; Gluttony [-5]; Horizontal [-10]; Innumerate [-5]; Mute [-25]; No Fine Manipulators [-30]; Poverty (Dead Broke) [-25]; Presentient [-20]; Short Lifespan ¥5 [-50]; Sleepy (50%) [-10]; Social Stigma (Barbarian) [-15]; Staid [-1].

@TEXT-CSTATS:*Skills*: Brawling-DX [1]; Running-HT [4]; Stealth-DX [2].

@TEXT-BOX:PPT: +235; NPT: -272. Cost as a racial template: -37 points. Cost as a Quick-and-Dirty wereform: 59 points. Note that if used "as-is" for a wereform, the character becomes a beast in mind as well as body, with only the broadest strokes of his personality remaining when changed. He will retain all his memories, indecipherable as they may be to his wolf-mind, as well as his feelings for friends and enemies.

@TEXT-BOX:While this is consistent with some werewolves in myth and fiction, it may be less than enjoyable for some players. Feel free to revise the template as necessary to fit the player's conception of the wereform.

((END BOX))

Existing Disadvantages

Addiction p. B30

A were might be addicted to a drug which caused (or prevented!) his change -- or to the change itself!

Code of Honor p. B31

A character who can change shape because of his religious or cultural heritage (see pp. 00-00 and the Jaguar Warrior, pp. 00-00) may possess a Code of Honor defining the proper and improper uses of his shifting talent. Gross violation of that code may restrict or prevent his use of the talent, depending on its source.

Compulsive Behavior p. B32

If a were-form possesses any kind of Compulsive Behavior, it must be indulged at least once each time the were-form manifests.

Morally Opposed: A were-form which is one part of a Split Personality may have a Compulsive Behavior to act in a manner opposite to the base form's moral and ethical leanings. This does not automatically make the were-form an NPC (see p. 00), but it does make it an excellent candidate for that optional rule. -10 points.

Lifewrecker: Like "Morally Opposed" but worse. The were-form not only acts opposite to the base form's moral and ethical code, it goes out of its way to do harm to the base form's life and friends. This can range from mysterious animal deaths that point suspiciously at the base form to killing the base form's friends and lovers. In the most extreme case, if the were-form is reasonably invulnerable, it will leave incontrovertible evidence that it *is* the base form where authorities (or perhaps just villagers with torches and pitchforks) can find it. -15 points.

Delusions p. B32

One obvious delusion is "I am not a shapeshifter." While this could be bought off in were-form, it may be amusing and fun to play someone in an animal form *and* in denial about it at the same time.

Another might be, "There is a cure for my were-form." This can be paired with an appropriate Obsession for a particularly single-minded character.

A morph might suffer from the delusion "I really am who I appear to be," or its inverse, "My base form is just another shape I can take; I have no real identity of my own."

Of course, a shifter who insists on discussing his ability in an otherwise mundane setting will have a delusion in the eyes of others -- which he must take in the base form.

Duty p. B39

A character who is shapechanger because of his religious or cultural heritage (see pp. 00-00 and the Jaguar Warrior, pp. 00-00) may have a duty to an institution or organization that endorsed or provided his alternate form(s). Failure to live up to that duty might result in the reduction or elimination of his accessibility to those forms.

Enemies p. B39

Most weres would all-too-likely have special enemies -- the police, monster-hunters, rival weres, the Church in medieval Europe, and so on. Even in cultures where shifters are accepted or even respected, they may have enemies in the form of citizens or agents of enemy nations or members of opposed religions.

Infectious Attack p. C197

This disadvantage can be taken only by were-forms, not the base form.

Lecherousness p. B34

When possessed by a were-form, this could be either of two different behaviors. First, the were-form could have a strong physical desire for the opposite sex of the same animal template as the were. If the base form and the were-form share the same mind, the were will pursue and enjoy his liaisons while in were-form, but may feel quite differently about it when back in his normal shape!

The second option is classically cinematic: the were-form, no matter what its animal template, has an inordinate fondness for attractive members of its base species' opposite sex.

Odious Personal Habit p. B26

In most game worlds, "Eats Sentients" is a 15-point Odious Personal Habit. Note that if all weres are thought to eat humans, that's a Reputation. If all weres *do* eat humans, that's an Odious *Racial* Habit ... and possibly a Dependency, depending on *why*.

Reputation p. B17

In settings where weres and morphs are portrayed as bogeymen, or actually *are* creatures of evil, they will have a bad Racial Reputation unless they are completely underground.

Split Personality p. B37

Were-creatures traditionally suffer from some level of Split Personality, and particularly "enthusiastic" morphs may also display this disadvantage. At the -10 point level, the forms are all aware of each other and each can access vague, fuzzy memories of what the other forms did. At the -15-point level, each form suffers complete blackouts during the time another form is in control, memories are rigidly compartmentalized between the forms, and the character may not even be *aware* that he is a shapeshifter.

See the box for details on how to handle the standard Split Personality mechanic within the context of a were character.

((START BOX))

@C-BOXHEAD:Split Personality and Were-Forms

@TEXT-BOX:The Split Personality disadvantage normally results in multiple character sheets whose point totals must *average* out to the campaign starting value. However, were characters already have their alternative character sheets "rolled into" their main sheet, albeit in a highly-compressed form.

@TEXT-BOX:If he wants to, a player certainly can use the Split Personality mechanic and build separate characters. But it's unnecessarily cumbersome. It's simpler to take Split Personality in the base form; the were-form(s) automatically becomes one of the personalities.

@D-BOXHEAD:Optional Rule: NPC Were-forms

@TEXT-BOX:If the player so desires, the were-form can be an NPC, under the complete control of the GM -- often appropriate for games set in or inspired by classic horror films. This normally requires the -15-point level of Split Personality, as well as a good in-character reason (demonic possession, an especially nasty curse, or the were-form is an otherwise normal animal are all good rationales). If the GM approves, make the final point value negative and take the were-form as a disadvantage.

((END BOX))

Uncontrolled Change p. C105

Usage for were-creatures is superceded by these rules.

Untrained Shapechanging p. C100

Superseded by these rules.

Unusual Background p. B23

In many campaigns, being a shapechanger will require an Unusual Background. The cost can vary widely, depending on the nature of the campaign and the power of the shifter. It must be paid by the base form.

New Disadvantages

Form Continuum -5 points/Alternate Form

Prerequisite: 2 or more were-forms

(Weres only.) The shifter has more than one were-form, but he cannot access them directly; he must move through a predefined sequence to reach the form he wants, taking the usual change time for each one. The player selects the sequence at character creation; once defined, it will never change. If for any reason he acquires a new form, he must select a place for it in the continuum. He must also take another level of this disadvantage, although as with any disadvantage gained during play, it is not actually worth any more points.

The Garou of *GURPS Werewolf: The Apocalypse* have a five-step Form Continuum.

Special Limitation: Random selection. You cannot choose which of your were-forms you'll take when you shift out of base form, or (if you have more than two) from one were-form to another. Determine the new form randomly, but you'll never get the form you started from. -30%. If the base form is included in the random determination: -45%.

This disadvantage must be taken by the base form, and cannot be bought off in any of the were-forms.

Morphs can suffer a similar restriction; see the "Morph Continuum" limitation on p. 00.

((START BOX))

@C-BOXHEAD:Signs of Being A Were

@TEXT-BOX:Folklore and fiction are filled with "markers" which indicate that an individual is a shapeshifter of some sort:

@TEXT-BOX:• Born "differently:" with a caul (especially on Christmas or the Winter Solstice); after an unusually long pregnancy; to a woman who died in childbirth; Caesarean birth; feet-first (breech birth); with teeth; the seventh son of a seventh son.

@TEXT-BOX:• Born during the twelve nights between December 24 and January 6 (Epiphany).

@TEXT-BOX:• Conceived at the new moon.

@TEXT-BOX:• Possesses hairy palms, or their eyebrows meet in the middle.

@TEXT-BOX:• Has six fingers on one hand or an extra vertebra.

@TEXT-BOX:• Has fur growing "on the inside."

@TEXT-BOX:• A woman with extra nipples may be a werejaguar, in Brazilian lore.

@TEXT-BOX:Which, if any, of these indicators are true in any given campaign is, of course, up to the GM.

((END BOX))

Revealing Trait Variable

Something about you is sufficiently strange or different that an average person might guess that you are a shapeshifter even without seeing you change. Mirrors might reflect your other form instead of the one you're in, your presence may spook nearby animals, or you may simply have some physical characteristic(s) in either/any of your forms which local folklore associates with shapechangers (see the box on p. 00 for some examples). While *Revealing Trait* can represent a unique and new characteristic, it can also subsume such existing disadvantages as No Reflection, No Shadow (both p. CI103), Frightens Animals (p. CI97) and under the right conditions even Social Stigma (p. B27); when creating a new trait, use these disadvantages as guidelines for determining its point value.

((START BOX))

@C-BOXHEAD:Skills and Were-Forms

@TEXT-BOX:Any skills possessed by the base form are retained by a were-form -- *always*. Unlike advantages and disadvantages, skills *cannot* be bought back in the process of building a were-form. Even if the alternate form cannot make use of them (Running for a were-eagle, for instance) they remain present and (at least theoretically) available. *Exceptions:* A were who retains the Presentient disadvantage (p. CI103) in his alternate form loses access to all M/A and harder skills when in that form, and his M/E skills are limited to his IQ. And a were with Split Personality can buy completely different skill sets for each personality.

((END BOX))

Shiting-Related Skills

GURPS Compendium I lists two skills that relate directly to shape-changing.

Change Control (Mental/Hard) p. CI138

There are no alterations to the use of Change Control under these rules, except that morphs as well as weres are explicitly allowed to possess and employ it.

Note that morphs may include a target's clothing as part of a copied shape, and such clothing is actually part of the morph's body. The GM may, at his option, allow a morph with the this skill to "swap" outfits between different memorized forms on a successful skill roll, as though they possessed the Improvised Forms enhancement. Differences in relative sizes may be handled automatically, or the GM may use the degree of success on the Change Control roll as an indicator of how well the "new" clothes "fit".

Not being able to use the Change Control skill is a limitation on your were-form or your Morph power. See p. 00.

Note: If you have the leveled super-power variety of Morph from p. SU63 instead of the version found in *Compendium I*, you don't need the Change Control skill. Use your skill level for the super-power instead.

Shapeshifting (Mental/Hard) p. CI144

This skill was originally published in *GURPS Voodoo* (p. VO57) and applied only to spirits which could manifest in the physical world. Its availability to morphs in *Compendium I* is an error and should be ignored. (Use Change Control instead.) It is still available to planar travelers of various types, but note that its use causes only a cosmetic change in the character. For more substantive alterations to an astral or dream body, see "True Astral Were-Forms" on p. 00.

New Enhancements and Limitations for Shifters

Various special enhancements and limitations are available for both the Morph advantage and were-forms, in order to fine-tune how they work for a given character. Some of the following are suitable for both types of shifters, while others are specific to one or the other and will be so noted. Of course, shifter characters are not limited to only these; many of the existing enhancements and limitations found on pp. CI00-00 and SU49-54 can also be applied to a shapechanging talent.

Enhancements

Absorptive Change +5% to +25%

(Weres only.) When a shifter changes forms, his clothes don't normally change with him. This can have results ranging from the comic to the tragic, depending on the resilience of the clothing and the size of the were-form. This advantage allows the shifter to absorb clothes and carried items when he changes form; they return intact and in place when he shifts back. The cost is +5% per Encumbrance level that can be absorbed: +5% for No Encumbrance, +10% for Light, and so on through to +25% for Extra Heavy Encumbrance.

As noted, the Absorptive Change is on one direction of change only. It need not be on the transition from base form to were-form; if the player so chooses, it can be on the change *back* to base form, especially if there is a great difference in relative sizes. Buy this enhancement *twice* to handle changes in both directions; in such a case, the encumbrance levels need not be the same.

Active Change +10%/+20%

(Weres only.) The shifter can remain active during his change. At +10%, he can move and react to his surroundings, but cannot run, fight, cast spells or use any skill. The were can roll to Dodge attacks while changing, but only succeeds on a 3 or a 4. At +20%, the shifter can use any skill or ability possessed by both forms.

((START BOX))

@C-BOXHEAD:Shifters and Martial Arts

@TEXT-BOX:A character can know and use Karate or Judo, and even more advanced martial arts abilities, in his shifted form, provided the form's IQ is 7 or higher. (Below that, the were just doesn't have enough brainpower for anything beyond simple brawling.) However, since such most martial arts were designed for human beings, only humanoid shapes with hands can use these skills effectively.

@TEXT-BOX:Of course, it is entirely possible to create a martial art designed expressly for use by non-human forms. A race of weres, for instance, may well develop two styles of Karate: one for their base form and another for their alternate. Such specialized combat styles would count as separate skills (perhaps defaulting to each other at -4 or more). See *GURPS Martial Arts* for details on customizing martial arts styles.

((END BOX))

Copies Personality +100%

Prerequisite: Telereceive or the "Needs Sample" limitation.

(Morphs only.) In addition to acquiring a target's shape, the morph also gains sufficient knowledge of memories and personality traits to eliminate the need for the Acting skill while impersonating him. The morph does not have access to anything beyond personality information and memories of friendships; he will know, for instance, how to greet a friend the target has known since childhood, but won't know the combination to the safe in the target's office. This knowledge is only available while in the appropriate form, and only as long as that form is one of your memorized shapes.

If the GM allows it, acquiring the *complete* memories and personality of the target is an additional +100% (and may take much longer -- again, GM's option). This can include some skills -- Area Knowledges and some social skills are good candidates, but most scientific and physical skills are not. Skills are acquired at the target's level or the morph's appropriate attribute, *whichever is lower*. Access to the target's knowledge in other forms adds +50% to the cost. The ability to retain this knowledge after removing the form from your "morph memory" is another +100%, and *all subsequent earned experience must be dedicated to paying for any skills or skill levels acquired in this manner!*

In either case, you *temporarily* acquire all the target's mental advantages and disadvantages, and all his quirks, for as long as you retain his shape. If necessary, you can turn them off and revert to your own personality, but by default they are dominant and control your behavior. They *do not* replace or remove your own existing mental traits; instead they simply take precedence for as long as you let them.

Fast Change +25%

You shift your shape faster than others of your kind. Weres change form in a single turn. Morphs change instantly, as a free action (see p. B97), although they may only change shape once in a turn.

This enhancement cannot be combined with the Morph Continuum or Takes Extra Time (p. CI112) limitations.

((START BOX))

@C-BOXHEAD:The Change

@TEXT-BOX:While a morph takes but a single second to shift his shape, the default were change lasts 2d6 seconds, during which the were can do nothing else. (However, see the Active Change enhancement, p. 00.) An involuntary change (Cyclic, Triggered) in progress cannot be halted or reversed by any means; it must run its course, no matter what. The same is true of a *voluntary* change except under the most unusual circumstances (GM's option, but at the barest minimum, a successful roll against Change Control should be required).

@TEXT-BOX:A were's change is a strange and terrifying process. Witnesses who have never seen a change before, or didn't know the character was a were, must make an immediate Fright Check. The GM may require those who succeed to make a Will roll or else stop what they're doing and stare in fascination until the change is complete. (This is a non-magical fascination, and won't prevent someone from defending himself or providing for his own safety, but it might make both sides of a combat break off while the change is happening, and it would certainly make an enemy easier to surprise.) Of course, friends and family may grow used to the change; the GM may allow them to ignore both the Fright Check and the fascination if they've witnessed the character change often enough. This is by no means an absolute, though -- see Innocuous Change (p. 00) and Horrifying Change (p. 00).

((END BOX))

Genetic Match +50%/+100%

Prerequisite: The "Needs Sample" limitation at no less than -15%, or the Improvised Forms enhancement.

(Morphs only.) As part of your change, you generate a "shell" of flesh, skin and/or hair whose cells exactly mimic the physical and genetic structure of the original model whose form you are copying. You can also produce matching bodily fluids as needed for blood tests and the like. Any samples taken from you and any remote genetic scanning performed on you will thus register you as "genuine". (Biopsies and other deep samples will still reveal your real genetic structure.)

This layer of skin also generates all the proper scents and pheromones for the individual or racial type which you are duplicating, and reacts automatically to irritants and allergens as the original would. If you need to, you can suppress these functions with an IQ roll.

Note that the production of body fluids is *not* an automatic function, nor can you store such altered fluids in your body any longer than is needed for taking a sample. For example, if your blood is normally green, and you are shot while mimicking a human, you'll still bleed green, not red.

At the +100% level, your entire body replicates the original target's genetic code and physical structure, "hiding" your true nature all the way down to a cellular level throughout your body. Only some means of actually scanning cell structure in detail will reveal your real cells "masquerading" as mitochondria or other organelles.

Morphs with both this and the Improvised Forms enhancement (see below) automatically produce a valid generic DNA signature for the race or species as which they are masquerading -- even if that race is imaginary or a chimeric blend! (Unfortunately, it can't be used to make clones or for genetic engineering of any sort.) Otherwise, the character must have some way of acquiring a sample to duplicate.

This enhancement is of reduced utility in any setting where genotyping is unknown or unreliable; halve its value if bloodtyping and other simple checks are all that are available, and disallow it entirely if not even that is possible.

Improvised Forms +75%/+100%

(Morphs only.) You are not limited to the forms you have memorized. At the +75% level, with a successful Change Control roll you can mix and match parts from your memorized shapes to create a hybrid form. At the +100% level you can, with a successful roll, create new shapes out of your imagination, although you cannot acquire abilities that do not have a completely physical origin (for example, a dragon's flaming breath). In either case, in order to keep the new form after its first use, you still need a free morph "slot" to hold it.

If you have both Improvised Forms and Genetic Match, you automatically generate a valid but inspecific genetic signature appropriate to the creature type you are impersonating. (If that happens to be an imaginary creature, the DNA so produced may be shocking to geneticists, but will prove unviable for cloning or other purposes.)

Innocuous Change +5%

Your transformation between forms is so mild in appearance that it inspires neither dazed fascination nor Fright Checks in those not used to it (see box, p. 00). You may be cloaked in golden haze that hides you from prying eyes, or you may "blip" suddenly from one shape to another, with no intervening stages. This enhancement does not alter the *time* it takes you to shift, simply the appearance of the process.

This enhancement is not compatible with Slow Change or the "painful" level of Fatiguing Change.

Shapestealer +100%

Prerequisite: The "Needs Sample" limitation.

(Morphs only.) You literally steal the shapes you take. The process of copying someone's form leaves the victim a fluid mass of jelly-like protoplasm. They lose all identifying characteristics, even down to species and order, and are rendered comatose. If you have the "Cannot Reuse Forms" limitation, the victim regains their shape (and consciousness) as soon as you stop using it; otherwise, they only regain their shape when you drop it from your repertoire. Ultratech methods, Weird Science or Weird Magic may also be able to restore your victims' shapes (or give them new ones), but nothing else will.

Because of the potential for abuse in this enhancement, GMs may require the "Cannot Reuse Forms" limitation *must* be taken with it.

((START BOX))

@C-BOXHEAD:Shifters and Mana

@TEXT-BOX:Magical shapechangers will normally revert to their base form in a no-mana area. Once they leave the no-mana zone their ability to change will usually return. However, if this is inconvenient for the campaign, the GM may rule that all magical shifters must possess the basic 25-point level of the Mana Enhancer advantage (p. CI40), making them mobile low-mana zones, capable of shifting

anywhere.

((END BOX))

Limitations

Cannot Reuse Forms -50%

(Morphs only.) Each form you copy can be used only once. You have no time limit on how long you can use it -- or on how long you can wait *before* you use it -- but once you shift to something else, it's no longer available to you.

Cannot Use Change Control -5%

The character cannot blend aspects of his various forms (be they Morph slots or were-forms) using the Change Control skill -- his shapeshifting is always all-or-nothing. He cannot even learn the skill.

Cure/Cursebreak variable

(Weres only.) Your were-form is unwanted, maybe even dangerous to the people around you, and there is some way to get rid of it -- or perhaps it's a gift with strings attached. Either way, if some special condition is fulfilled, your shapeshifting ability will go away. This is a limitation because it is a drastic vulnerability for the were-form -- enemies will try to exploit it, and well-meaning friends may try to accomplish it for you regardless of your wishes in the matter.

Cures may range from relatively simple (renounce the cult you serve, or undergo an exorcism) to difficult (bathe in the water of a particular spring in a remote province of China) to the nearly-impossible (a lost Hermetic ritual during which the were must hold a piece of moon rock). Alternately, a cure might risk (or guarantee!) harm to the were; a good example is the tradition that states amputating a limb will cure a were. The easier it is to break the curse, or the less harm the cure inflicts, the more this limitation is worth, from -50% for simple or harmless conditions to -5% for impossible and/or potentially fatal ones.

Add an additional -5% to the value if the cure is easily discovered through research or folklore, or -15% if it is common knowledge.

Reduce the value by -10% (minimum final value 0%) if the cure only works if the victim cooperates.

If the cure is only *temporary*, halve the final value of the limitation (rounding down) and define the conditions under which the were-form will return.

If the character has more than one were-form, it is not necessary to apply this limitation to all the forms, although it would be appropriate if they are linked thematically.

Furthermore, if the nature of the cure is such that it would normally cause damage either directly or indirectly, and the were-form possesses Invulnerability or Vampiric Invulnerability, the were-form *must* take a Vulnerability to the cure!

It is up to the GM whether the points spent on the were-form(s) either disappear or are available for some

other use by the player when the curse is broken. (Of course, this does not apply to were-forms with "temporary" cures.) In the case of "educational" minor curses (see p. 00), it is certainly allowable for the PC to buy off the offending disadvantage(s) with the points so freed.

((START BOX))

@C-BOXHEAD:Searching For A Cure

@TEXT-BOX>Note that just because the were-form has a cursebreak, it does not automatically follow that the character knows what it is, or even that it exists! More than a few weres in fiction spent a great deal of their time and energy on finding out whether or not their condition had a cure. GMs wishing to maintain any amount of suspense over this issue may wish to obfuscate the precise enhancements and limitations applied to were-forms (particularly infectious or latent ones) in their campaign. One possibility would be to simply give the player an aggregated modifier value along with as large or small a list of known "features" as the GM wishes. As the player spends time in his were-form, more information about it can be doled out as is necessary.

@TEXT-BOX>Note that this option is more appropriate for a character who has acquired a were-form than for a member of a shapeshifting race (unless the latter has grown up ignorant of his abilities).

((END BOX))

Cyclic Change variable

(Weres only.) The character is forced to assume his were-form on a regular basis. He has no choice in the matter; he changes automatically at the appropriate time. He must also remain in the were form for a certain minimum amount of time.

The base discount depends on the frequency of the change:

Less than once a year no discount

Annually or Semi-annually -5%

Quarterly/seasonally -10%

Monthly -15%

Full Moon Special (see box)

Weekly -30%

Daily -40%

Cycles more frequent than "Daily" are possible, but are virtually unplayable.

The change period need not be strictly linked to the clock or calendar, as long as it is invariably regular. The GM may interpolate a value for an unusual period (as with the lunar cycle, above), or simply assess it at the smaller of the values between which it falls.

These values assume that the were is able to change at will at all other times. If the cyclic change is the *only* way he can change, it is worth an additional -25% to the limitation value.

Weres with a Cyclic Change must have a Minimum Duration as well -- see p. 00.

((START BOX))

@C-BOXHEAD:Lunar Changes

@TEXT-BOX:All references to lunar-linked changes here assume Earth's moon or one with a similar cycle. Earth's lunar month is shorter than a calendar month, and the full moon usually spans two to three successive nights. This is a slightly special case for the Cyclic Change limitation (p. 00), worth -20%; the shifter is compelled to change not once at the "peak" of the cycle, but once per night during that peak.

@TEXT-BOX:In settings with a different lunar cycle or more than one moon, this value will vary, perhaps wildly. Single moons are simple; choose or interpolate a value from the table in Cyclic Change that reflects the appropriate frequency; adjust appropriately for the duration of the full moon. Multiple moons can be a bit more complicated. Does the were change with *any* full moon, or just one of them? The latter case is obviously another simple cycle. But in the former case, if there are enough moons that the appropriate phase could happen at almost any time, use an External Trigger (p. 00) instead. Alternately, divide the number of days in a month by the total number of full moons in a month, and use the resulting averaged figure as the length of a cycle for the purposes of determining the limitation value.

@TEXT-BOX:Try not to link a Cyclic Change to a moon with an extremely short period -- it will be far more trouble to both GM and player than it is worth.

((END BOX))

External Trigger variable

(Weres only.) Some environmental condition triggers your change, whether you want to or not. Some weres have triggers which toggle their change on and off. Others have a trigger that forces a shift only in one direction. Some weres have *two* triggers -- one to change, and one to change *back*.

The value of a trigger is based on how common the trigger condition is:

Very Common (sunlight, cold water, darkness) -30%

Common (a particular type of garden plant, a specific emotional or physical state, electrical fields in a technological setting) -20%

Occasional (a given range of normal air temperature, a certain food, a specific mineral) -10%

Rare (a tropical plant, a special drug, radiation) -5%

These values also assume that the were is able to change at will at other times. If the external trigger is the *only* way he can change, it is worth an additional -25% to the limitation value.

If the trigger only works for a change in one direction, halve its value.

Weres with an External Trigger often have a Minimum Duration as well -- see p. 00.

((START BOX))

@C-BOXHEAD:Using and Abusing External Triggers

@TEXT-BOX:Enterprising players will attempt to manipulate an External Trigger to their advantage, to gain as much control over their conditions as possible. Some of this is acceptable; for instance, a Dark Ages were whose change is triggered by the smell of roses need not be restrained from running to the nearest bower if the Vikings attack his village. On the other hand, if the same were took to carrying a packet of dried rose petals with him, to sniff whenever his were-form might come in handy, it is no longer precisely an External Trigger, but something closer to an item-based change (see box, p. 00). The GM may declare that his were-change has become triggered only by dried rose petals, or worse, only by that *particular* packet of rose petals, and no other will do. Since item-based changes tend to be cheaper than other versions, this has no immediate negative impact on the character beyond lowering his point value -- until the first time the packet is lost or stolen...

((END BOX))

Fatiguing Change -10%/-20%

The shifter finds the change physically exhausting or even excruciating. At the -10% level, he loses 1d Fatigue each time he changes (which cannot reduce his Fatigue below 0) and suffers an equal *shock* penalty on the turn following the change, per p. B126. Fatigue lost due to the change may only be regained by rest. At the -20% level, *Painful Change*, he is also Mentally Stunned for 2d rounds following the change, and must make a Will roll for each form into or through which he changes (see Form Continuum, p. 00) to avoid crying out in pain.

A character who suffers from Painful Change may need to make a Will roll to change in a non-emergency situation. Characters with Cowardice or Low Pain Threshold will have to make a Will Roll at -5 to change voluntarily at all.

Flawed -10%/-35%/-50%

(Morphs only.) While you may copy a person's shape, there is always an error or flaw in the result: the wrong eye color, a double navel, missing (or extra) scars or birthmarks, a tell-tale tattoo, or a finger may not bend properly. (It could even be something non-structural, like a constant vague smile or an inability to feel strong emotion.) The flaw is determined at character creation, and manifests in every form that you take, including (optionally) your native one. If the target form already has the same flaw on its own, you are in luck; otherwise, it's a pointer to the fact that something's wrong.

At the higher levels, the copied form is not just Flawed, it is *Crude* -- it only vaguely resembles the original (-35%, impersonation attempts at -10), and may only vaguely resemble its *species* (-50%, specific impersonations are impossible, and Horrific Appearance may apply). All character traits unrelated to appearance are unaffected by a Crude transformation.

Some characters may start with a Crude transformation and gradually improve it through practice. Halve the value of this limitation; now for every ten uses of a particular form, its level of accuracy improves by one step, to a maximum of Flawed. Quarter the value of this limitation for five-use steps, or for the ability to reach a perfect representation.

Genetic Trait -0%

(Weres only.) Your were nature is encoded in your genes as a dominant trait; you received it from your parents, and you will pass it on to your children.

A genetic were-form can be either active or latent. If it is active, then this "limitation" is nothing more than a special effect -- your shifting gift is "switched on." A character with a latent were-form, though, cannot use it until he is exposed to a trigger condition, at which time the were-form becomes available for use. The trigger is determined by the GM at character creation (see the adjacent box for inspiration), but to be fair it should be something the character has a chance to encounter.

A genetic were-form cannot have a permanent cursebreak (see p. 00), although temporary "cures" are perfectly acceptable. They rarely, if ever, have Infectious Attacks or Lycanthropic Dominance. Most other change-related traits are available, although common sense should rule in their choice and use.

((START BOX))

@C-BOXHEAD:How To Become A Were

@TEXT-BOX:If you're not a were by virtue of birth or bloodline, or your genetic were gift requires a "trigger" turn it on, legends list any number of ways to gain the ability to shift in addition to the traditional bite. While most of these are specific to werewolves, there's no reason (beyond a GM's ruling, that is) they cannot be used for any variety of were.

@TEXT-BOX:• Annoy (or please) a wizard, sorceress, or god.

@TEXT-BOX:• Be called by an animal spirit, or take a specific animal as your spiritual totem in the proper ritual.

@TEXT-BOX:• Drink water or eat dust from a wolf's footprint.

@TEXT-BOX:• Drink water from certain springs, especially in the Harz Mountains in Germany.

@TEXT-BOX:• Drink downstream from wolves.

@TEXT-BOX:• Possess and wear a moonstone.

@TEXT-BOX:• Eat a wolf's brain.

@TEXT-BOX:• Sleep at night in the open with the moon on your face on a certain Wednesday or Friday in summer.

@TEXT-BOX:• In a medieval Christian setting, be denounced from the altar and remain impenitent. Or be excommunicated for seven years. Or do not get shriven or use holy water for ten years.

@TEXT-BOX:• Pluck and wear a rare white marsh flower from the Balkans.

@TEXT-BOX:• Anoint yourself with a special ointment (recipe available in the grimoire of your choice).

@TEXT-BOX:• Wear the enchanted skin of a dead wolf or werewolf.

@TEXT-BOX:• Wear a belt made of wolf's leather (or human skin, especially the skin of a hanged man), adorned with the signs of the zodiac, and with seven tongues on the buckle which must be put into the

ninth hole.

((END BOX))

Horrorifying Change -5%/level

The manner in which you transform is particularly gruesome; perhaps you shred your previous shape in an explosion of flesh and gore, or maybe between your forms you melt into a pulsing mass of flesh accompanied by wet and disgusting sound effects. Whatever happens, it is far a more terrifying sight than an ordinary shift (see box, p. 00). For each level of this limitation you have, witnesses to your change take a -2 penalty to their Fright Checks. Furthermore, companions and family will *never* become inured to the change, and must always make Fright Checks at the specified penalty.

Linked Curses -25%

(Weres only.) Also known as the "Ladyhawke" option. You and another person (or persons, although it is most commonly a pair) are jointly afflicted with were-forms whose activations are connected. Whenever one of you changes, no matter how far apart you are, you force the *other* to change at the same time. The link may be synchronized (you both shift into were-form and back together) or inverted (only one of you can be human -- or whatever base species you are -- at a time). The type of link is determined at character creation and cannot be changed afterwards.

Although their animal templates need not be the same, both characters must have otherwise identical were packages. These usually include a Cyclic Change (with the two characters' periods complementing each other), an obscure and difficult Cursebreak, and, of course, this limitation.

((START BOX))

@C-BOXHEAD:Item-Based Shifting

@TEXT-BOX:A common trope in myth is the shifter whose change is facilitated by some item. Such an item can be virtually anything, but usually involves some symbolic or physical link to the animal template (for weres) or the model being copied (morphs). Normally, the item becomes part of the new form, reappearing only upon the change back. A typical example is the skinchanger from myths the world over -- a were who dons a complete hide of the appropriate animal template to take his were-form, and who can't change without it.

@TEXT-BOX:Item-based shifting combined with an Addiction or a Dependency on the change can make for an interesting character.

Item Modifiers

@TEXT-BOX:Shapechange items are built using the super equipment rules found on pp. SU68-70. The heart of these rules are a set of enhancements and limitations that are applied to the alternate form to specify its characteristics as a device. All shapechange items must take the modifiers *Can Be Stolen* and *Unique* in addition to any others the player may choose. Item-based modifiers are applied separately to the alternate form after any other enhancements and limitations the player may have chosen.

@TEXT-BOX:The following is an abbreviated list of gadget modifiers. See *Supers* for complete listings.

@TEXT-BOX:*Awkward -10%*

@TEXT-BOX:The item, like many skins and hides, is bulkier than a wadded-up trenchcoat.

@TEXT-BOX:*Breakable -5%/-10%*

@TEXT-BOX:This item can be damaged; repairable items can be fixed if not totally destroyed.

@TEXT-BOX:DR 15 or less *and* it has 75 or less hit points: -15%

@TEXT-BOX:DR 16+, and/or 76+ hit points: -5%

@TEXT-BOX:If irreparable, add an additional -15%.

@TEXT-BOX:*Can Be Hit varies*

@TEXT-BOX:The item is obvious and can be targeted in combat. It must be Breakable. The penalty on the attacker's to hit roll determines the value: No penalty: -25%. -2: 20%. -4: 15%. -6: -10%. -8: 5%. -10 or more: No bonus.

@TEXT-BOX:If the item has a -5% Breakable modifier, divide the value by 4. If the item is absorbed in the change, halve the value.

@TEXT-BOX:*Can Be Stolen varies*

@TEXT-BOX:The item can be taken away from you. The difficulty determines the value:

@TEXT-BOX:Easily snatched with DX roll: -40%

@TEXT-BOX:Needs Contest of DX or ST: -30%

@TEXT-BOX:Requires stealth or trickery: -10%

@TEXT-BOX:Halve the value if the object is inobvious or is absorbed in the change.

@TEXT-BOX:Halve the value if the object would not work for the person who took it.

@TEXT-BOX:Halve the value if the item is absorbed during the change.

@TEXT-BOX:*Not Absorbed in Change -5% or -15%*

@TEXT-BOX:The item does not become part of the were-form, and must be carried or protected against future use. If the item is not needed for the change back (see below), this modifier is worth only -5%; otherwise it is -15%.

@TEXT-BOX:*Not Needed For Change To/From Base Form +25%*

@TEXT-BOX:The item, while required for the change in one direction, is not needed for the opposite change.

@TEXT-BOX:This modifier can only be applied to items which are not absorbed in the user's change.

@TEXT-BOX:*Unique -25%*

@TEXT-BOX:Once this item is gone, that's it. No replacement is possible. Character points spent on it are lost.

((END BOX))

Maximum Duration Variable

The character cannot stay in his shifted form longer than a given amount of time. If he tries, he automatically changes back to his base form. (Unless he also has a Minimum Duration, he can change back at any time before that.)

The shorter the duration, the more this limitation is worth:

Less than 30 seconds -75%

30 seconds to 1 minute -65%

1 to 10 minutes -50%

10 to 30 minutes -25%

30 minutes to 1 hour -10%

Sunrise to sunset or vice versa 7%

1 to 12 hours -5%

Greater than 12 hours -0%

A character with a Maximum Duration may not have a Minimum Duration longer than the Maximum.

This limitation cannot be combined with Cyclic Change.

Note to GMs: This limitation is open to abuse by "combat monster" shifters who do nothing in their alternate form(s) but fight. Feel free to disallow it if necessary.

Minimum Duration Variable

The character must remain in his shifted form for some minimum amount of time before he can change back for any reason.

Less than 1 hour +0%

1 to 8 hours -5%

8 to 12 hours, one night or equivalent -10%

12 to 24 hours -15%

1 day to 1 week -20%

1 week to 1 month -25%

Greater than one month -30%

A were with a Cyclic Change must also have a Minimum Duration. This minimum is variable, but cannot be longer than one-half the cycle length.

A character with a Minimum Duration may not have a Maximum Duration shorter than the Minimum.

Morph Continuum -30%

(Morphs only.) Similar to the Form Continuum disadvantage for weres, this limitation forces a Morph to progress sequentially through his memorized forms in order to shift from one to another, at the usual rate of one form per turn. The player should maintain an ordered list of the "slots" in which the PC's memorized forms are kept.

This limitation cannot be combined with the Fast Change enhancement.

Needs Sample variable

(Morphs only.) You cannot copy a person's shape without sampling them in some way. The exact value of this limitation varies with the extent of the sample required: simply touching the target is worth -5%, a fingernail, drop of blood, strand of hair or scrap of flesh is -15%, and consuming the target whole is worth -50% -- and you'd better have some way of absorbing or eating the victim *quickly* -- if a sample requires flesh or other organic materials, it must be fresh and undecayed.

((START BOX))

@C-BOXHEAD:Nuisance Effect: Temporary Disadvantage

@TEXT-BOX:**EDITOR:** Please insert this limitation from pp. BIO137-8 here.

((END BOX))

Projected Were-form -25%/-50%

(Weres only.) Your were-form is actually your soul, traveling outside your body in a manner similar (but not identical) to astral projection. While it does so, your "real" body goes into a trance. If your physical body is killed while you are in your other shape, both it and your were-form will usually die together, unlike regular astral projection. Also unlike regular astral travel, your were-form is just as solid and physical as your "real" body, and has no range limits and no duration limits other than your ability to last out a trance. When you leave the trance, the were-form vanishes.

When you go into your were-form, you do not have to manifest it at the same location as your physical body. You can make it appear anywhere within direct line of sight, or at a location within IQ¥10 yards that is well enough known to you that you can visualize it clearly. Similarly, you do not have to return to the location of your unconscious form to dismiss your were-shape.

At the -25% level, you are still "in" your physical body even when using your were-form. (You are effectively operating it by remote control.) It still takes a great deal of your attention and energy, though, and you are only barely aware of your surroundings. You can hold slow, halting conversations with someone nearby, be led around, make Passive Defense rolls, or even be carried (gently). Any great shock or distraction (such as a successful attack or a vigorous attempt to "wake you up") can break you out of

your trance and cause the were-form to vanish -- make a Will roll to ignore anything short of receiving a wound.

At the -50% level, you fall into a deathlike coma while in your were-form, as your soul completely leaves your body. You must take special precautions to protect or hide your body, as you are vulnerable and can be mistaken for a corpse (a Physician roll is needed to determine that you aren't really dead).

Surviving Death. While a character with a projected were-form will usually die if his base form is killed while he is projecting, a critical success on a Will roll at the moment of death will allow him to survive in his alternate form. Although the surviving form is corporeal, it is actually a kind of ghost, and as an undead creature it is subject to all the weaknesses thereof as defined in the particular campaign: vulnerability to the Banishment spell and to exorcisms, Compulsive Behaviors and so on; see *GURPS Undead* for ideas and guidelines. So-called "angry ghost" weres (see p. 00) are frequently created in this manner.

For characters whose "normal" astral bodies are animals, see the box on p. 00.

((START BOX))

@C-BOXHEAD:True Astral Were-Forms

@TEXT-BOX:In some traditions (particularly those of a shamanic nature), the were-form is an entirely spiritual construct. Unlike weres built with the *Projected Were-form* limitation (p. 00), this kind of were-form is never physical and rarely if ever interacts with the corporeal world. It is instead used to communicate with spirits of nature and the dead, in the appropriate realms. (Strictly speaking, it isn't even really a "true" were-form as defined by this book...)

@TEXT-BOX:This is simply the psionic power Astral Projection (p. P10-11), with a special enhancement: *Astral Body Is An (animal type)*. For +10%, you may use any animal template costing up to 0 points as the basis for your astral body. While in astral form, you possess all the "physical" attributes of an "average" animal of that type and any of its mental advantages, but retain your IQ and all your mental traits. For animal templates above 0 points in cost, add another +10% to the enhancement value for every 50 additional points or fraction thereof that the template is worth.

@TEXT-BOX:The template's physical characteristics directly translate into astral equivalents: The animal's ST, DX, HT, hit points and Dodge supercede the human values. Claws and teeth cause extra damage in astral combat. Natural PD and DR are *cumulative* with that granted by the power (astral PD is of course subject to the usual limit of 6). Tracking abilities, Discriminatory Smell and the like allow pursuit in astral space where it would normally be impossible. And as a bonus, flying and swimming animals add their Speed to the character's Power level to determine Astral Speed.

@TEXT-BOX:The specific animal template is chosen at character creation and cannot be changed. (In an explicitly shamanic context, it will often represent the character's totem animal.) However, if the GM allows, the character may buy more than one template, either at creation or with earned experience. Each template so purchased is a separate enhancement, as well as a separate form -- attributes of two different templates may not be combined; the Shapeshifting and Change Control skills *cannot* be applied to this kind of were. Furthermore, the psi by default cannot change forms in the middle of an astral journey; he must choose one form at the start and remains in that form until he returns to his body.

@TEXT-BOX:For an additional +5% per template, an animal astral body can be made *switchable*, allowing the psi to change at will from it to a "normal" astral form or any other switchable template he might possess, without having to return to his body first.

@TEXT-BOX>Please note that while the above description refers exclusively to astral bodies and astral travel, this enhancement is also available for any other ability that allows a character to project their spirit into an alternate metaphysical plane -- such as the Marches of *GURPS In Nomine* or even some varieties of cyberspace. It does *not* apply to any power or gift which allows a physical transition to such a plane!

((END BOX))

Slow Change -10%/-25%

The character's changes take longer than usual. At -10%, the change time is measured in minutes instead of seconds. At -25%, it is measured in hours. If the character also has a Cyclic Change, the time to change plus any Minimum Duration must *always* be shorter than half the cycle length!

At the GM's option, change times can be much more flexible. Under this option, the -10% level can make the change take from one minute up to an hour, while the -25% could last a whole day. The GM and the player should determine the exact duration -- and whether there is any random element involved -- at character creation.

Template Susceptibility variable

(Morphs only.) You are not in full control of your shapechanging ability. Any time you come into contact with someone with a Will equal to or greater than your own, you must win a Contest of Will to avoid changing your shape to theirs. You are not affected by other shapeshifters, though.

The base value for this limitation is -20%, and you only need a Contest of Will upon physical contact. For an additional -5%, the target need not touch you, but merely be in the same hex. Each additional -5% expands this area by a one-hex radius. If more than one such individual is in your radius at a time, roll Contests in descending order of target Will until you either change or run out of templates. Choose randomly between templates with equal Wills.

If you have no available morph slots, you must immediately replace your least-used form with the new form you have been forced to take.

Once you win a Contest of Will with an individual, you don't have to run another one until the next time you meet them (base version) or the next time they enter your radius. If you become intimately familiar with an individual -- roommate, spouse -- you automatically resist their template unless they come upon you unawares and surprise or alarm you.

Once you copy a form, you will not be susceptible to another template for (Will) minutes.

Template Susceptibility is not compatible with Unstable (below).

Unstable -25%

Your hold on your alternate form is tenuous, either because you are just learning how to manifest it, or

because it is very difficult to maintain. If you are surprised or shocked while changed, you must make a Will roll or immediately revert to your base form. (A critical success means you need not check again for the duration of the current encounter regardless of what happens; a critical failure indicates you may not return to your were form for a like amount of time.) Combat for which you are prepared does not usually require a roll, although *unexpected* damage as from an ambush or accident does. You also automatically revert to base form if you fall asleep or unconscious while shifted.

If one of your forms (base or other) has the Unfazeable advantage, it cannot be forced by surprise or shock to yield control, and need not make a Will roll.

While more suitable for weres, this limitation can also be used with Morph; in such a case, it applies to *all* the forms the morph can take. It cannot be used with an exclusive Cyclic Change, or where an External Trigger is needed to transform back to the base form.

The GM should allow the player to buy off this limitation without any special explanation, especially if it represents inexperience with shapeshifting. Optionally, it may be bought off *incrementally*, with each -5% eliminated with earned points granting a +1 on the Will roll until the entire limitation is removed.

Option: War of Wills. In a character with Split Personality, Unstable can be used to represent a constant struggle between personalities for control of the body. There is no change in the limitation value, but the Will Roll now applies to *all* forms; it becomes a Quick Contest of Will between the personalities, modified (at the GM's option) by how strongly the contesting minds feel about matters at hand. This use of Unstable should *not* be bought off easily, if at all.

Unstable is not compatible with Template Susceptibility (above).

((START BOX))

@C-BOXHEAD:"Once Only" Shifting

@TEXT-BOX:This is optional rule, inspired by the Zerg from the game "Starcraft" as well as any number of comic books, movies and cartoons. The character possesses a reserve of points which he may use *once* to radically alter his form and abilities.

@TEXT-BOX:At character creation, the player sets aside a block of points, unused. He then buys a "placeholder" change advantage at a cost of one point for every 10 points reserved (minimum 1 point). As long as the block remains unused, he can add to it with earned experience, should he so choose. For every 10 points or fraction thereof added to the block, he must spend one additional point on the placeholder. (This is, in effect, a +10% enhancement.)

@TEXT-BOX:At any time during play, the player can invoke the change. He "spends" the placeholder, losing its points permanently. The block of reserved points then becomes available. He can use these points to raise his attributes and buy or upgrade advantages (and, at the GM's option, skills).

@TEXT-BOX:With the GM's approval, the player may "buy back" some existing advantages (Appearance, for instance) and use those points as well. He can also take any number of Disadvantages appropriate to the new form or abilities, but these are considered "acquired in play" and do not give any points back.

@TEXT-BOX:Any character trait that has no point cost (details of appearance like hair and skin color,

for example) may be freely changed at this time as well.

@TEXT-BOX:Once the changes have been determined, they are applied to the character permanently. Any unspent points are lost. Multiple blocks and placeholders can be bought, but only at character creation time, and of course, each set is that many points by which the character is weaker than other PCs -- until he uses them.

@D-BOXHEAD:Predefined Changes

@TEXT-BOX:If desired, one-time shifts can be predefined; by sacrificing flexibility, the player can save -- sometimes substantially -- on point cost. This can be quite useful for describing races that undergo periodic metamorphosis as part of their lifecycle, similar to butterflies.

@TEXT-BOX:Add up *all* changes to the character, including the costs of new disadvantages acquired with the form, as if it were a racial package. This total *must* be positive. There must be a net improvement in the character; a predefined change *cannot* reduce a character's point total except by the amount of the "placeholder," which is still paid as above. The final total becomes the block of points set aside.

@D-BOXHEAD:Typical Limitations

@TEXT-BOX:Obvious modifiers the GM may impose include "incubation" or "metamorphosis" times, perhaps with an actual cocoon involved; requiring the new abilities be specifically related to the situation which triggered the change; requiring the new form to always be Ugly, Hideous or Monstrous; requiring two or more predefined changes to be sequential, building on one another; and so on. Limitations discount the reserved block *only* -- the "placeholder" is never discounted, and is always based on the "true" point value of the change, not the limited value.

@TEXT-BOX:The GM should be aware that the potential for abuse exists in this rule -- which is why it is optional.

((END BOX))

Varieties and Flavors

No two shapeshifters are exactly alike. This section explores some of the themes and special effects a player can employ in customizing a shapechanger to make him unique and different -- even among a race of similar beings.

Some are related to the special enhancements and limitations found on pp. 00-00, inasfar as they are specific applications thereof. Others are more in the line of "color," without specific game mechanics but a lot of flavor.

((START BOX))

@C-BOXHEAD:Paradigms

@TEXT-BOX:When creating a shapechanger, it's important to select the source of your changing ability. While this usually has no direct effect on point costs, it *can* have considerable impact on both character

design and game play.

@TEXT-BOX:*Magic*. Your shifting talent is a spell, curse or other sorcerous process affecting you. Unless otherwise specified (see the box on p. 00), it can be suppressed or dispelled with countermagic, it will deactivate in no-mana zones, and may misbehave in high-mana zones.

@TEXT-BOX:One variety of the Magic paradigm, the *magic item* works just like inherent magic, except all the power to change is invested in a gadget. Unlike most of the other paradigms described here, this *can* change your point costs -- see the box "Item-Based Shifting" on p. 00.

@TEXT-BOX:*Psi*. Your ability to shift is a function of the extraordinary power of your mind. Anti-psi prevents your change, as do any drugs which dull your thought processes. You are likely to be limited to forms roughly your own mass and size. Your mental traits may cause odd side effects to your change.

@TEXT-BOX:*Natural*. This is the way you were born, possibly because your race evolved this way. (In most cases, though, magical and psionic races should be considered those types.) Unless the game world is *very* strange, you probably can't gain or lose mass in a shift, and you need to pay attention to most other relevant laws of physics. On the other hand, you are unaffected by mana level or anti-psi. Changing may take a long time for you, though, as you have to let "normal" bodily processes take their course. Your shift may also be subject to environmental or hormonal factors, and maybe special poisons.

@TEXT-BOX:*Technology*. Some scientific mechanism, be it internal or external, allows you to shapechange. (This need not be a literal device; it could be a genemod, surgical procedure or other process derived from science, be it current tech or advanced.) Tech shifts are similar to "Natural" above, in that you're probably limited to your own body mass and you have to be "realistic" in other regards (although this is not a hard and fast requirement, especially with classic "rubber science"). Under some conditions, the mechanism may be jammed or run out of power. If it is an actual physical device, it may be taken away from you, and like the magic item, this can affect your point costs -- again, see "Item-Based Shifting".

@TEXT-BOX:*Super*. The catch-all paradigm. Although the "typical" Super shapechange is an inherent power unaffected by countermagic, mana level, or anti-psi, it can also resemble any of the other paradigms. In all but the most realistic settings, though, it lacks most of their weaknesses, but it may well suffer from its own more exotic vulnerabilities. The primary drawback, though, is that you need to be playing in a *Supers* game...

((END BOX))

Curses and Enchantments

Most of the classic were-creatures of myth and media are victims of curses or enchantments. This is a long tradition dating back to prehistory, best exemplified in the werewolves of Arthurian lore, French medieval myth, and horror movies from the middle of the 20th Century.

Such a victim usually suffers a complete split personality with an inimical or savage were-form at the worst, or a bestial one at the best. This type of curse is usually imposed as a punishment or an act of revenge, usually by a skilled spellcaster who specializes in such things, or by a supernatural source. Note that the current victim need not have been the offender -- a particularly aggrieved party may turn the curse into a genetic trait afflicting generations of descendants.

On the other hand, a particularly evil person may well embrace a truly monstrous curse and revel in it. Seeing it as a tool for sowing terror and chaos, or simply to inflict revenge on those whom he thinks wronged him, such a character may be so in touch with his own bestial nature that he may not suffer a Split Personality when he enters into his were-form. Such was the primary view of werewolves in the medieval church.

((START BOX))

@C-BOXHEAD:What Makes A Curse?

@TEXT-BOX:While the main text discusses curses in the literal sense of the word, a curse need not be a malicious magic. A "curse" can be metaphorical rather than literal -- Dr. Jekyll's Mr. Hyde was born of science, but the impact Hyde had on the doctor's life certainly qualified him as a curse!

@TEXT-BOX:A literal magical curse need not be malicious, either. Christian apocrypha is filled with stories of curses cast by saints as tools of moral instruction and correction. One example is the werewolves of Ossory, Ireland, who were cursed for their wickedness by St. Natalis, and "compelled to take two by two a wolf-shape for seven years, returning to their own form at the end of that time." While that particular case is almost certainly not suitable for player characters, this kind of shapeshifting curse can be anything from campaign background color to a convenient plot element.

((END BOX))

"Minor" Curses

Less severe curses are also possible. Far from being fodder for horror stories, these "minor" curses may be imposed to teach a moral or social lesson to the victim; by giving the victim a form subject to problems and stresses usually alien to him, he may learn empathy for others or simply much-needed etiquette. Often these shapes are no more than simply inconvenient, either due to their trigger(s), cycles, or time limit(s), or due to the attributes of the were-form.

Such a character usually has one or more mental disadvantages that encompass the behavior being punished. Odious Personal Habits, Intolerances, Greed and other "deadly sins" all make good candidates.

Examples of such curses can be found in many medieval tales of Christian saints, as well as in some modern light fiction.

Breaking A Curse

Implicit in the concept of a curse is the prospect of breaking it. This is rarely a simple prospect -- else what would be the value of a curse as revenge or a lesson? For "minor" curses, the break could simply be learning the lesson or behavior intended -- which may be just as difficult as finding the rare Gila-gila herb in the jungles of the Amazon, depending on the character.

One authentic cure for lycanthropy found in medieval records is simple to effect, but may not appeal to most players: according to several early texts, the amputation of a hand/paw immediately and permanently destroys the character's shapechanging abilities. Naturally, this is contradicted for gruesome dramatic effect in later folklore and fiction; the GM is, as always, final arbiter.

The player and the GM should jointly determine the were-form's cure. Properly defined, the cursebreak could add an entire level of structure to a campaign even if the were never takes a central role in the game, by virtue of the underlying search motif it imposes. For "educational" curses, they are built-in tools and goals for character development.

Several cures from various cultures can be found in the box on p. 00.

((START BOX))

@C-BOXHEAD:Shapeshifting and Childbearing

@TEXT-BOX:The effects of a shapechange upon a child in the womb vary with the nature of the shifter. If the character is a member of a shapeshifting race, there is no problem -- the child automatically shifts with the parent. Similarly, if the talent is an inheritable genetic trait, the child matches the parent's form. Any change that is the result of ultratechnology should allow for this situation as well. Magical changes may or may not know what to do about a pregnancy -- the GM must decide these on a case-by-case basis. But a shift from human to animal that doesn't take a fetus with it is a tragedy waiting to happen.

@TEXT-BOX:And of course, all this assumes the character remains the same gender between forms. But this isn't necessarily the case. A female-to-male change, especially where no genetic component is involved, could be disastrous for both parent and child. Possibly worse, the fetus may simply disappear when the parent is in the "wrong" form, put "on hold" until the parent becomes female again -- with the side effect of possibly extending a pregnancy for weeks or even months!

((END BOX))

Hengeyokai -- Reverse Weres

Mythologies the world over are rife with the mirror image of the were-creature: tales of animals that can change into humans can be found in almost every culture. Japanese myth and legend are particularly rich in this regard -- and from them comes the name used here for this class of creature: *hengeyokai* (which can be translated as "changing spirit"). Perhaps the best known example of the hengeyokai is the Kitsune (see p. 00).

Hengeyokai (also called simply "henge") always have at least two forms -- their natural animal body, and a fully human alternate form. Additionally, some species have a third, intermediate form combining aspects of the other two. In Asian and other myths, the human form also retains some obvious feature that is indicative of the henge's animal nature -- tails that must be hidden, hair coloration similar to fur patterns, sharp noses that resemble a bird's beak, and so on.

Almost any animal may be a hengeyokai. Cats who can become human are common in both Asian and European folklore, although in the latter they tend to have a demonic characterization. In Asian myth, hengeyokai birds, fish, shellfish, dogs, rats, spiders, and monkeys have also all appeared.

What makes a henge different from other animals of its kind varies widely in myth. For many there is no explanation; they simply *are*. Others are spirits, possessing or incarnated into an otherwise ordinary animal. Some, like the Japanese *kitsune* and *tanuki*, are *both* -- an ordinary animal that is at the same time a spirit of great power. For the GM wishing to insert this kind of shapeshifter into his campaign, virtually any rationale is plausible.

Playing Hengeyokai

Such "reverse weres" make for entertaining characters. Because this is more a trope than a specific creature, no definitive single *hengeyokai* package is practical. There are many general traits such creatures have in common, though. They are built like any other were, except that the animal template is used as a racial package for the base form. Tote up the changes that are needed to adjust from the animal template to the desired human form into PPT and NPT and calculate the cost of the form as noted on p. 00. Note that almost universally, hengeyokai are considered creatures of magic; most if not all will probably possess at least the 25-point version of the Mana Enhancer advantage (p. CI40), Magery and a variety of innate spells. Most frequently these will be from the Illusion and Creation college.

((START BOX))

@C-BOXHEAD:Transferring Damage Between Were-Forms

@TEXT-BOX:Unless the character possesses the Non-Reciprocal Damage advantage (p. CI41), damage taken by one form will be expressed in all other forms. Damage is carried over *proportionally*, based on the ratio of the two forms' hit points. Divide damage suffered by the ratio when changing to a form with fewer hit points, and multiply it when going to one with more.

@TEXT-BOX:*Example:* Tory has HT 12 in her human form and HT 12/6 as a were-fox; her hit point ratio is 2 (12 divided by 6). If she takes 4 points of damage as a human and then shifts, her fox form manifests with (4 / 2) or 2 points of damage. Tory-fox then takes another 3 points of damage before she returns to human; she is now down 10 points -- (5 ¥ 2).

@D-BOXHEAD:Death and Dismemberment

@TEXT-BOX:A were killed in were-form will normally revert to his base form at the time of death. If the were loses a limb, that limb will immediately change back to the base form.

((END BOX))

Psionics

The psi with a strong enough Psychokinetic talent and a keen awareness of his own body structure may well be able adjust that structure at will. Strictly speaking, this is more of a choice of special effect than anything else, but designing a shifter using only "realistic" limitations can be an intriguing challenge and can result in an unusual character who can fit into all but the hardest-science games without overwhelming them.

An astral shifter of either variety is the easiest to justify, especially since the "True Astral Were" found in the box on p. 00 *is* a psionic to begin with. For those players desiring a more physical experience, both morphs and weres can be in-genre with suitable modifications, the former more so than the latter. In each case, the same "theoretical" basis underlies their power; but while the morph has complete mastery over the shape of his body, the were represents someone who has mastered one alternate form and has come to a dead end.

Except in the most rubber-science settings, psionic shapechangers of a physical nature are limited by a

variety of "real-world" considerations. Chief among these would be the requirement that they cannot change their basic skeletal structure. This is normally a -15% limitation (although GMs whose campaigns include a large number of physically different races should feel free to increase its value). Such shifters can hide limbs within their flesh, but cannot form new ones. (Optionally, the GM may allow the creation of non-structural "cosmetic" limbs held rigid by cartilage or tensed muscle instead of bone. Such limbs would only be for show, and would be incapable of carrying any amount of weight.)

Similarly, the GM may require that the shifter's total mass remain constant. There are exceptions, though -- shapechangers in the *GURPS Wild Cards* setting (whose powers are all psionic in origin) can often change their mass, either by the temporary inclusion of so-called "virtual particles" or by absorbing nearby matter for the duration of the shift.

Other typical limitations for the psionic shifter would emphasize the mental roots of the ability. To begin with, if the GM disallows psi-based shifting as a solo "wild talent", it will require the prerequisites of both Psychic Healing along with enough Telekinesis to lift one's own body. Beyond that, it would not be out of place for a *physical* psionic shifter to have a need for concentration, or a Fatiguing or Slow Change. Telepathic shifters could easily have Copies Personality. For increased realism, require the Needs Sample limitation. And in the grand tradition of anime shapeshifters, a Flawed or Horrifying Change is always appropriate.

Shapeshifting Races

As interesting as individual shapeshifters can be, an entire race of them can be even more interesting -- or more terrifying. From the Garou of *GURPS Werewolf: The Apocalypse* to the doppelgängers and mimics of classic fantasy gaming to the many shape-changing races of science fiction, a race of shifters almost always poses a threat to *someone* -- a threat that can drive a campaign.

((START BOX))

@C-BOXHEAD:Fictional Were-Race: J.R.R. Tolkien's "Beornings"

@TEXT-BOX:One of the models for the were-bear of modern fantasy gaming, Beorn and his people appear in chapter 7 of *The Hobbit*. Descended from the Edain of the First Age (among whose number were skinchangers, the *Silmarillion* states authoritatively), Beorn learned how to take the form of a bear and passed this gift on to generations of his descendants.

@TEXT-BOX:The Beornings were a forest folk, living as woodsmen. Like the bears whose forms they could assume, they were big, bulky, and heavily muscled. To a one they were black-haired and shaggy, the men sporting heavy beards that emphasized their ursine appearance. The coarse woolen clothing they wore only added to the effect.

@TEXT-BOX:In addition to their were-form, the Beornings were known to be berserkers, fearsome axe-men, and skilled foresters. Beorn himself was a vegetarian, but it is unknown if this trait extended to others of his people. While the Beornings were more a tribe (or later a nation, in the Native American sense) than a truly separate race, they certainly could be given a unique racial package, considering their differences from mainstream humanity.

((END BOX))

When designing a race with shape-changing ability, never forget to ask, "Why?" Even magical races have a reason for their shapeshifting. Is it in response to environmental pressures? For protective coloration? Or to better sneak up on their prey? Perhaps they are a race of warriors or infiltrators. Were they artificially created, or did they evolve naturally? Answer these questions, and the race practically designs itself -- mental and physical attributes immediately become obvious, and possible plotlines begin to form.

Don't overlook diversity within the race, though. Subcultures and subraces can not only provide helpful verisimilitude, they can also keep players on their toes.

If not a naturally magical race, such creatures will have to respect the laws of physics to a certain degree. As with psionic shifters, there may be limits to the sizes and shapes they can take, and the degree of change that they can undergo. Remember, though, that even if major skeletal changes aren't allowed, a biped is not that far from that of quadruped -- especially if a race's proportions are different from humanity's.

For players, the advantage of being a member of a shapeshifting race is that their characters need not feel the isolation of being a unique or nearly unique creature, possibly unnatural -- unless they are unaware of their heritage, which in itself can drive a storyline for a campaign.

((START BOX))

@C-BOXHEAD:"What Do You Mean, You Ate While You Were a Mouse?"

@TEXT-BOX:One of the more annoying issues raised with weres is the effect of meals across forms. Can a thimbleful of seeds eaten by a were-mouse adequately nourish his human form?

@TEXT-BOX:If a were-form's animal template includes the Reduced Life Support advantage, then a meal eaten in the were-form will remain filling and completely nutritious when the character returns to his larger base form. However, the inverse is not true. A large were-form possessing the Increased Life Support disadvantage is *not* sufficiently fed by a meal taken in base form. Buying off either of these traits during character creation will negate their respective effects; in this case, the larger form will only suffer from some degree of hunger immediately upon a change to it only if the base form was hungry.

@TEXT-BOX:This rule of thumb obviously does not pass the reality check for any kind of "scientific" shapeshifting. The GM seeking "realism" may impose hunger upon *any* change to a larger form regardless of the Life Support trait(s) possessed. (It's not recommended that the GM enforce the opposite conditions in *any* setting -- most players won't appreciate having their were-squirrel character explode because they changed too soon after a hearty meal.)

((END BOX))

Shifter Supers

While the Transformation advantage (p. CI68) exists for use by super-types, and Morph had its genesis as a leveled advantage in *GURPS Supers* (p. SU63), it is possible to use the rules for weres to handle some varieties of shape-changing metahumans. Leaving aside those elements of horror fiction and film which have infiltrated the super-hero genre, many character concepts could just as easily be implemented as were-forms as any other way.

The Incredible Hulk is an almost archetypal example of the were super, even if the Hulk's *body* isn't animalistic. It's even more telling that the earliest version of the Hulk had a Cyclic Change, trading control with Bruce Banner at sunset and sunrise. Wolvesbane from the New Mutants is explicitly a werewolf, although one who suffers from no automatic shift. And while the owner of the Guyver (from the manga, anime and live film of the same name) technically activates a battlesuit, that battlesuit is a living part of his body; he effectively becomes a different order of being when it wraps itself around him. His primary foes -- the Zoanids and their ilk -- are certainly weres, able to tap into ancient genetic potential to turn into monstrous beasts.

On the other hand, morphs have an equally long history in comics, dating back to Chameleon Boy (and his villainous counterpart, Chameleon King) from DC's *The Legion of Super-Heroes*, and even further. They are more frequently found as villains (or villains' minions) than as heroes, but depending on the tone of the campaign, they can make excellent team players.

These few examples barely scratch the surface. A surprising number of character concepts work as well with a were-form as with any other mechanism; don't overlook this option when trying to implement that obscure design. Supers require less justification than most other varieties of shifter, which allows for greater flexibility.

Of course, genre considerations do come into play. External triggers for weres and the need for samples for morphs are both common. Super weres often suffer from extreme cases of split personality; super morphs are often insane, ranging from relatively simple megalomania (based on the "obvious" fact that if they can be anyone at all, they *must* be better than everyone) to a near-schizoid depression (if I can become anyone, is there really a *me*?).

((START BOX))

@C-BOXHEAD:Shapeshifting and the Absorb Super-skills

@TEXT-BOX:**GURPS Supers** includes among its many options three super-skills which may be of interest to players trying to implement a unique or unusual design. *Absorb Attribute* (p. SU55), *Drain Skill* (p. SU59) and *Drain Super Ability* (p. SU60) all allow the character to "borrow" abilities from other characters. It is possible and in some cases desirable -- to Link (p. CI00) a shapeshifting advantage to one of these skills. Doing so can turn the super-skill into a "power supply" or catalyst for the change. This can take two forms: In the first, the character may only shapechange when he is "charged up" with absorbed points. A morph using this option may be required to steal points from someone whose shape he wants to copy. In some ways, this would be similar to applying the "Cannot Reuse Forms" and "Needs Sample" limitations. In the second option, the character automatically changes into his alternate form upon absorbing the points, and cannot change back until the absorbed points have worn off. For even more confusion, characters with multiple forms may have a different Absorb superskill linked to each one.

@TEXT-BOX:Players considering this combination should note that the three superskills have radically different durations spanning several orders of magnitude, and should design their characters accordingly.

((END BOX))

Weremachines

Ultratech and ultramagic societies may seek to fuse a pleasing form with necessary function by creating creatures who can become needed tools and machines at will or need. Such beings are called weremachines. They are as much companions as equipment; in some ultramagic civilizations they are often engineered to be familiars as well. They are sometimes unique creatures (suitable as McGuffins in the appropriate plots), but in some settings they will be mass-produced.

Each "species" or model will have a specific machine form that it can assume. These are rarely small and simple devices -- one does not design an expensive bioengineered creature simply to become a toaster. Rather, they turn into large machines that can benefit from ease of maintenance and portability during their downtimes: cars, starships, or weapons, for example. Some are specialty equipment -- sensors, professional tools, and other devices which are small, valuable, and frequently fragile, which could profit from a sturdier alternate form. A few are bodyguard robots or escape pods. They will rarely be any kind of device that is static and unmoving, like a refrigeration unit.

A culture making extensive use of weremachines could possibly have dozens or hundreds of varieties living among them, either as pets or as almost-wildlife, available to any to use. Depending on the culture's viewpoint on such things, they may be sterile or fertile; fertile weremachines will not only breed, but evolution and natural selection will improve both the animal *and* the machine forms. It will be rare, however, for different kinds of fertile weremachines to be interfertile, because the results will be unpredictable -- the thought of what might result should the howitzer-cat and the lynx-guardian breed can intimidate even the most anarchic of biodesigners.

For the convenience of their masters, they are often sentient. As such, they can make good player characters -- or at the very least dependents and allies. Character weremachines should build their machine form using the rules found on pp. 5-52 and 82-91 of *GURPS Robots*, treating their "model package" like an animal template (p. 00).

Machine forms are built with a cyborg brain; the "natural" brain of the base form carries over into the machine. Weremachines will also almost always have a skill appropriate to their mechanical function, such as driving or piloting for those which turn into vehicles, or a combat skill for those which become weapons.

Base animal forms are best based on some variety of small mammal: cats, dogs, ferrets and rabbits all make good starting places. Restrictive cultures may build them with Slave Mentality, Dependencies, and other disadvantages that would ensure control over them.

The definitive example of a weremachine in fiction is Ryo-Ohki from the various versions of the anime *Tenchi-Muyo!*: a hand-sized cat-rabbit hybrid which can turn into powerful, bewepioned starship and back again. In one edition of the story, she is a unique ultratech creation; in another, she is one of a breeding species. In yet a third, she turns not into a starship, but a humanoid mecha. Certainly a most versatile creature...

(((START BOX)))

@C-BOXHEAD:Spellcasting While Changed

@TEXT-BOX:Shamanic shifters, hengeyokai, and other varieties of shapechangers may have the desire

or need to cast spells while in an animal form. If the gameworld does not allow the optional Spell Ritual rules (p. B00), they're out of luck unless the GM grants them special dispensation. If the Spell Ritual rules *are* in effect, the were must possess a sufficient level of skill in the desired spell to perform it within the limitations of his animal form (Mute and/or No Fine Manipulators usually being the deciding factors).

@TEXT-BOX:In either situation, some GMs may allow unencumbered spellcasting by weres whose animal forms are sufficiently close to human -- simians such as apes or yeti, primarily, but generally anything with functional hands and a voice should qualify.

@TEXT-BOX:Spellcasting shifters whose base forms are have no manipulators, are mute or both (such as some varieties of Hengeyokai -- see pp. 00-00) will almost always possess spells which can be cast without difficulty in those forms. Any shifter with *innate* spells will also suffer no penalties for their use in any of their shapes.

((END BOX))

Undead and Shapeshifting

Traditionally, vampires are shapeshifters as well as undead; wolves and bats are the two animals into which they most frequently change. While the *GURPS* standard vampire package already accounts for such abilities, GMs or players may choose to create their own custom variants. In such a case, combining the vampire's basic abilities with a full were-form or two -- or worse, Morph -- can result in a subtle and deadly character -- or foe.

Other undead-were connections can be found; possibly best known is the undead state of the victims of a werewolf described in the film *An American Werewolf in London*. But many traditions provide a more immediate link.

The Werewolf-Vampire Connection

In Eastern Europe and other parts of the world, were-creatures and the local variety of vampires are often intimately connected. The "standard" movie (and gaming) vampire can shift into a wolf, and even today the Greek and the Slavic languages frequently use the word *vrykólakas* or its cognates to refer to both creatures. In Gypsy folklore vampires and werewolves are related, though two different beasts. Similarly, the Filipino *aswang*, the Portuguese *bruxsa* and *cucubuth*, and the Serbian *wurdalak* all display vampiric traits. The latter, though, is emblematic of the most typical belief in many regions: a werewolf is *guaranteed* to become a vampire upon its death.

Returning as a vampire -- perhaps as one of the more exotic varieties found in *GURPS Bloodtypes* rather than the default *GURPS* vampire -- may be an attractive option for some players of were-characters. Of course, the newly-undead PC will find he possesses far different priorities than he used to have. If the GM chooses to implement this bit of folklore in his campaign, it is best to cloak it in as much confusion and contradiction as possible, to prevent exploitation by his players.

Werewolves and Ghosts...

In Western Europe, were-creatures -- particularly werewolves -- were sometimes called "angry ghosts."

A typical example is the case of the Werewolf of Ansbach, who plagued that German city in 1685 and was rumored to be the town's dead mayor. If such a creature were to appear in a game, it would likely have a ghost, revenant or similar being as its base form. (See *GURPS Undead* for complete racial packages describing many possible candidates). Additionally, the undead/werecreature would have to have a *very* good reason -- at least in its own opinion -- for coming back to prey upon the living in such a manner.

Alternately, the ghost-were may well be the lingering shifted form of an individual who was employing a Projected Were-form (see main text, p. 00) when he passed away. Depending on the manner in which he died, such a ghost may or may not be angry -- but either way, it probably will have a serious agenda to pursue.

Those that do would tend to be Obsessed or suffer from Compulsive Behaviors, like many other ghosts. They may not always be the best company -- and any other characters had best be sure that they are not included among the people central to the ghost's particular motivation!

"Scientific" Shifting

Besides the nanosystems and other possibilities expressed in *GURPS Biotech*, there are other ways to quantify shapeshifting in a scientific or pseudo-scientific manner. Most of these fall properly in the realm of "rubber science," but as such are perfectly valid in any but the most restrictive "hard science" game. Genres from modern (*X-Files*-style) conspiracy through *Atomic Horror* all the way to any of a million varieties of *Space* and *Cyberpunk* can accept weres and morphs with the proper hand-waving.

Most of the possibilities for "scientific" shape-changing revolve around an odd, damaged or enhanced metabolism. Again, the GM and the player should collaborate on the specifics -- controlled cyclic forms of cancer, the ability to activate traits encoded in the character's introns (the genetic "dead space" in his DNA), "atavistic regression" using biofeedback methods, an engineered body exchanged with the natural one using a dimensional shunting system... the possibilities are only limited by your grasp of technobabble.

The intent to remain "scientific" will of course demand more rigorous attention to realism when designing the shifter. If there is a noticeable difference in mass between forms, special effects and disadvantages representing the need to absorb and dispose of that mass may be needed. The change may impose strange biological processes or needs that may be expressed as Dependencies, Vulnerabilities and Life Support issues. Worse, shifting that comes from odd metabolic traits or strange diseases may also carry along "timebomb" disadvantages like Terminally Ill.

No matter the cause of the change, it is certain that mind-body interface issues will impose personality changes on the character. These may be large enough to merit quantification with mental disadvantage such as Split Personality, Overconfidence, or (at the very worst) the retention of an animal template's Bestial and Presentient traits. The precise changes are of course dependent upon the shifter's base personality and the nature of his alternate form(s).

@A-HEAD: Campaigns

@TEXT:<I>Stormrider nodded to the two hunters who served this week as the guards to Runs-With-Deer's tent. They returned the nod and stepped aside to allow him to enter. @TEXT:The shaman looked up at him as Stormrider pushed aside the tentflap and stepped into the darkened interior. Thickly-scented smoke swirled around Runs-With-Deer as he returned his attention to the brazier before him. "Are they ready?"

@TEXT:Stormrider blinked away the stinging the smoke brought to his eyes. "Yes. The hunting party is in place."

@TEXT:Wordlessly, Runs-With-Deer rose and exited the tent. Stormrider followed him as the shaman made his way into the forest, out of sight of the encampment. "Here," he said simply, and Stormrider grunted in agreement.

@TEXT:"I'll have the herd in the meadow by mid-morning," the shaman continued. "I'll see you then. Good hunt, Stormrider."

@TEXT:"Good hunt, Runs-With-Deer." The two men clasped hands, then the shaman backed off. He closed his eyes. There was a swirl of light, and in his place stood a magnificent stag. The stag inclined its great antlered head to Stormrider once, turned, and vanished into the forest.<I>

@TEXT:While shapechangers can be plunked down into virtually any campaign setting as bogeymen and opponents, that's far from the most satisfying course in anything but horror/mystery campaigns <\#208> especially for PC shifters. History, myth and fiction all show far more complex and interesting possibilities of which a GM can make use.

@B-HEAD: Shifters In Society and Religion

@TEXT:In Western lore, shifters are usually outcasts of one form or another, divorced from the society and religion that spawned them. However, as often as not, shifters in other cultures are integral parts of their communities, and even intrinsic to their structures and rituals. For the GM willing to do the minimal work, it is possible to incorporate shapechangers into large societies with complex religious structures <\#208> in a role other than "boogeyman."

@C-HEAD: Privilege and Power

@TEXT:Perhaps the easiest way a culture can make use of shapechangers is to make them a part of the power elite. Perhaps the best example of this approach are the Jaguar Warriors prominent in many Pre-Columbian South and Central American cultures. (A fantasy variant on the jaguar warriors can be found on pp.00-00.) A definitive science fiction model would be the "Founders" of the Dominion in <I>Star Trek: Deep Space 9.<I>

@TEXT:In such a system, shifters will be a special caste or class within the society, often with specific ritual or governmental functions. If the ability to change shapes does not naturally appear within the population, the authorities, be they secular or religious, will likely have some ability to grant it. In either case, there will often be regular "examinations" to find new candidates for the caste. Embracing and empowering shifters turns potential rebels and enemies into staunch supporters of the status quo.

@TEXT:Of course, in some societies, only the <I>right<I> kind of shifter may be favored. Other varieties may be shunned or even actively hunted. Justification for such biases may be historical, political or religious, as needed by the GM.

@TEXT:Since the ability to shift into the appropriate form(s) is <I>de facto<I> proof of a person's membership in the privileged caste, magic or technology which duplicates the caste's shifting abilities is an issue that the GM must address. In repressive or especially static societies, or those where the gift is inherited, the use of such magic may well be outlawed with severe, perhaps fatal, penalties for violators. Alternatively, some cultures may view the ability to cast such spells as evidence of one's fitness for the caste.

@TEXT:In such a system, Status will be a mandatory part of a shifter package, as well as Wealth. If the shapechangers take an active role in government and society, Leadership and Administration may be needed, and/or various other military skills. If the character is of the "wrong" type, Enemy, Social Stigma, and other disadvantages would be required.

(((START BOX)))

@C-BOXHEAD: Shapes of the Gods

@TEXT-BOX:The idea of shifters as an elite class can be taken to its logical extreme by setting them up as objects of worship <\#208> representatives or even avatars of gods with animal aspects. Perhaps the most striking of the historical examples available is

the Arcadian cult of the Wolf-Zeus (also known as Zeus-Lycaeus), in ancient Greece. @TEXT-BOX:As told in Ovid's <I>Metamorphoses,<I> Lycaon, King of Arcadia, sought to test the divinity of a disguised Jupiter by feeding him a "hash of human flesh", and was turned into a wolf in punishment. In historical times, Mount Lycaeus in Arcadia became the home of a cult of wolf-worshippers. According to contemporary accounts, the priests prepared an annual sacrificial feast that echoed the mythic events by including human flesh blended with more ordinary meat. Legend said that whoever tasted it became a wolf and could not turn back into a man unless he abstained from human flesh for nine years. Other accounts, among them one written by Plato, describe a somewhat different rite: one where a wolf was instead sacrificed and eaten; its "essence" was said to be absorbed by the cult's devotees who became one with it and called themselves <I>Lukoi<I> (wolves). @TEXT-BOX:The conflicting, contradictory accounts of the wolf-cult make it an excellent inspiration for any number of similar religions a GM may want to establish in his campaign. Are weres running the cult as a front to gain themselves a safe haven? Or are they indeed god-touched? Do participants only symbolically become wolves? Or is the cult a "breeding ground" through which an infectious variety of shifting is passed to new recipients? Is cannibalism actually a part of the ceremonies, or is it, too, symbolic? Or some combination? GMs are directed to <BI>GURPS Religion<\$> for further advice and suggestions for constructing cults.

((END BOX))

@C-HEAD:Independent Shifters

@TEXT:A privileged class of shapechangers does not necessarily need either ecclesiastic or temporal authority to exist within a given society. The Viking <I>ulfhe<t-42f"Times-Italic">d<t-4b3.5f\$>-<b\$>nar<I> and <I>beserkrs<I> (sic) are good examples. These wolf- and bear-skin warriors constituted a highly-regarded, autonomous fighter class within Viking society, recruiting and fighting but answering to no authority but their own. While their reputation as skinchangers was (at least in the real world) either age-distorted folklore or clever propaganda, they are an excellent example of how an independent but not malicious group of weres could function in a campaign setting.

@TEXT:In settings such as these, shapechangers must take at least one level of Status or Military Rank, depending on the requirements of the culture. Some combination of Duties, Codes of Honor, Patron, Sense of Duty and Vows would probably be required; those societies which <I>create<I> their shifter elite would probably do so with a Cursebreak (p. 00) or an Ensorcellment condition that would destroy the talent if the recipient betrays them in some way. Alternately, they may pamper and indulge the shifter, buying and ensuring his loyalty with with all manner of luxuries and indulgences. The GM may count this as Wealth, or as a higher level of Patron. Ally Group is particularly appropriate, as well.

@TEXT:Groups without any official sanction won't receive as much in the way of advantages. Status and/or Rank would still be present, albeit probably lower than for the equivalent state- or church-backed group. Resources and Patronage would be much less, but Ally Group may well be higher in level and in frequency of appearance.

@TEXT:Either variety will of course possess all necessary skills for their function. Whether this is military, religious or something else entirely, a level of 12 or the appropriate Attribute is a bare minimum. Reputations <\#208> especially among their usual enemies <\#208> are also common.

@C-HEAD:Skin-Changers and Other Shamanic Manifestations

@TEXT:Less advanced or complex societies may not institutionalize castes of shifters, but they can still have critical roles within the culture. In tribal, nomadic or other early civilizations, a shapechanger may be particularly suited to the role of shaman.

@TEXT:In many shamanic traditions, it is part of the function of the shaman to take on metaphorically the form of an animal of which the tribe has need, either as a lure or as an appeasement. In other views, the shaman directly represents the totem animal of the tribe with metaphoric trappings. In magically active worlds <\#208> that is, worlds with shapechangers <\#208> this need not be metaphor. Two options present themselves:

@TEXT:<I>The shaman as Morph.<I> Those with the talent learn to become animal(s) as needed. They defend the tribe with the shapes of dangerous beasts, use acquired knowledge and instinct to help with hunts, and so on. Morphs are seen as blessed and in touch with

the powers of nature. This best works with animist and pantheist religions, but can also be blended with totemism (see <BI>GURPS Religion,<\$> pp. 126-9).

((START BOX))

@C-BOXHEAD:Modern Shamans

@TEXT-BOX:Shamanism survives to this day in a number of guises. There is, of course, the assiduously "reconstructed" shamanism found in many varieties of Neo-Paganism. Most varieties content themselves with emulating American Indian beliefs, or attempting to extrapolate the long-forgotten shamanic traditions of Europe. A small subset of these, though, explicitly tie lycanthropy into their belief systems, although it is most usually employed as a metaphor for the shamanic empathy/sympathy with animal spirits.

@TEXT-BOX:A number of other religions show distinctly shamanistic elements. In particular, Santeria and its sister belief systems from the many syncretic Afro-Caribbean cultures can frequently involve channelling animal spirits in a manner reminiscent of the earliest duties of the shaman.

@TEXT-BOX:Assuming that a shamans' ability to communicate with spirits is a real part of the game world, then if these religions and any others with similar features are present, they should be considered "shamanistic", at least for the purpose of determining who can reach the other side and who cannot.

((END BOX))

@TEXT:<I>The shaman as Were.<I> Whether granted the ability with the position, or the position because of the ability, the shaman can take the form of a specific totem animal. In a parallel with Voudoun tradition, the totem may then "incarnate" into the shifted shaman. (This may be either a Split Personality or an actual spiritual contact, depending on the game world.) Or the shaman may symbolically "share" the totem's strength with the tribe through ritual or more literal means.

@TEXT:In either scenario, competition and conflict may be common, with the "wrong" kind of shifter automatically an enemy within a given tribe or village. Politics between totems (or the shamans thereof) <#208> alliances, neutralities and enmities <#208> will affect relations between villages/tribes and between individual weres. Of course, there will also be certain totems known to be neutral or friendly to all. But pity the were born in a village or tribe where he's the "wrong type."

((START BOX))

@C-BOXHEAD:Shifting Drugs

@TEXT-BOX:In Victorian literature (among other sources), drugs and potions of all types have been known to cause shifting or shifting-like behavior. <BI>GURPS Steampunk<\$> lists one such drug, based on the mysterious mixture consumed by Henry Jekyll in Robert Louis Stevenson's <I>The Strange Case of Dr. Jekyll and Mr. Hyde:<I> Atavismine, the use of which can result in permanent <I>ethomorphism<I> (see pp. 00-00).

@TEXT-BOX:Not all such compounds need have so drastic a set of side effects; presumably drugs which cause shapechange-like effects will be safer and more controllable as the biosciences progress. The fact that the manufacture of such compounds as Atavismine are even possible at TL5, though, may mean that they have as much in common with primitive or medieval magics as science. Folk traditions abound in mystic and mysterious mixtures which grant shapeshifting abilities to their users. Whether such are true magics or misunderstood "natural" sciences is up to the GM and the campaign.

@TEXT-BOX:<BI>Attention Editor:<\$> I received the following text directly from the author of Steampunk; please replace if it differs from what made it into print.

@D-BOXHEAD:Atavismine

@TEXT-BOX:This drug produces temporary evolutionary regression to a more primitive state ruled by impulse. A character who takes it, such as the unfortunate Henry Jekyll, acquires a temporary Split Personality at the 15-point level. Basic IQ is unchanged, but psychological traits that reflect self-control and humanity are lost (for example, Empathy, Code of Honor, and Sense of Duty), while traits that reflect impulsiveness and brutality become worse (for example, Bad Temper to Berserk) and new ones may be acquired. Finally, the character's appearance changes, making him unrecognizable; in the process he

becomes one level less attractive through a subtle quality of deformity. A Will roll is required each time the drug is taken; on a failure the character becomes addicted, on a critical failure the character becomes vulnerable to flashbacks (treat as Split Personality), and on a natural 18 the atavistic personality becomes the baseline personality. Cost is \$0.05 per dose.

((END BOX))

@D-HEAD:Investment

@TEXT:How much divine power is actually associated with shifting talents is up to the GM. Obviously, in a world with no gods or no visible gods, shifters have only their innate talents available. This may or may not include spell-casting <\#208> shamans are traditionally users of magic in many forms, and spells are among them.

@TEXT:Potentially more interesting is a world with active gods. GMs have a wide variety of options for equipping shamans with "clerical magic": <BI>GURPS Voodoo, GURPS Magic<\$> and <BI>GURPS Religion<\$> all have useful information and suggestions. The spirit-based magic "path" system in <BI>Voodoo<\$> lends itself especially well to shamanic-style magic. And of course the shamanic system found in <BI>GURPS Old West<\$> is tailor-made for this situation. In the face of all these options, however, do not forget that the primary qualification of a shaman is his ability to shift. The attentions of the gods/spirits/totems and the gifts they grant will be in some way related to his talent, supplementing or extending it to better serve both them and their people.

@TEXT:<I>Other traits.<I> In addition to any such gifts the character may or may not possess, he will certainly have an appropriate Theology skill at 12 or IQ, whichever is higher. In addition, Psychology, Herbalism, Naturalist, Physician, Tracking and any number of other skills appropriate to a shaman are recommended. The character also will possess at least one level of Status. Any rivalries/alliances with other totems or tribes that may directly affect him should be expressed as a combination of Allies, Enemies, and Reputations.

@TEXT:In those settings where the shaman's gods/spirits are real and active, Clerical Investment, Duties, Vows and Patrons will also play a major role in the design of the character.

((START BOX))

@C-BOXHEAD:The Werewolf and Medieval Christianity

@TEXT-BOX:In one of those peculiar developments that seem at times to all but define Roman Catholicism during the Middle Ages, the Church became somewhat fixated upon the topic of werewolves. Along with witches <\#208> with which they were usually conflated <\#208> werewolves were at the top of the Church's list of active works of the Devil on Earth. So firmly was this anchored in the medieval Catholic mindset that doubting or denying the existence of werewolves was considered heresy and, in some areas, grounds for an Inquisitorial visit.

@TEXT-BOX:Any church or denomination which preserves and preaches medieval Catholic dogma <\#208> either by descent from Roman Catholicism, or through some mechanism of parallel development <\#208> is likely to include these beliefs among their teachings. Oddly enough, the Church in Yrth appears to be somewhat <I>more<I> relaxed on the subject than its forebear, in spite of (or perhaps because of) the presence of actual weres among the population. (This may be because it was founded by individuals who were transported to Yrth <I>before<I> the medieval Christian werewolf paranoia reached its peak.)

((END BOX))

@C-HEAD:Were-Forms As Punishments From The Gods

@TEXT:In some campaigns, there will no "fortunate" weres; they will always be victims of curses or their own lusts for power or wealth. (This is not an option that supports Morphs easily, for obvious reasons.) The medieval Catholic church espoused this opinion, and most horror films have followed its model. While obviously well suited for campaigns set in a "realistic" medieval Europe or some derivative thereof, it plays equally well in other settings. Oddly enough, there need not be active gods in the campaign for this option; the punishment can be an automatic consequence of the sin, and curses may be

inflicted upon the innocent by a perfectly worldly source.

@TEXT:To the modern way of thinking there is a clear qualitative difference between someone like the mythical medieval witch who takes on a were-form as a means of sowing chaos and mayhem, and a person on whom an animal shape is inflicted as a torment. Religious authorities may not see things that way, though. One religion may differentiate a curse victim from a servant of evil, seeking to save the one and destroy the other. Another religion may see no difference whatsoever, regarding both as tainted with darkness and sin, and both as deserving of whatever measures are prescribed in their dogma.

@TEXT:And simply trusting to the mercies of an "enlightened" religion may not help; even sympathetic religions may see execution as the only possible mercy in the case of the cursed.

@TEXT:Worse yet may be the case where both types of were are known in folklore and popular myth <\#208> falsely. Only one type may actually exist <\#208> and only the weres know for sure which. Imagine the possibilities for mayhem if only evil shifters existed, yet folklore insists that some shifters are innocents trapped by the machinations of evil. And imagine the potential for tragedy in the opposite case.

@D-HEAD:Mechanics

@TEXT:Under this option, weres are reduced to two different varieties. Note that these characterizations are by no means definitive;

@TEXT:<I>The Cursed<I> have a Split Personality with an inimical were-form. Their change is Cyclic or Triggered, and they have no ability to shift at will. If they are lucky, there is a Cursebreak, but it is rare, dangerous, uncertain, or some combination of all three. The alternate form may be of any species; it is pure animal, or it may have Bestial and/or Presentient bought off and IQ equivalent to the base form. In either case, it will usually possess some compulsion to do harm to others ranging from the inconvenient (chasing off and/or killing local livestock) to the deadly (hunting the base form's family and friends). A highly ethical or strong-willed were will try to lock himself away when the Change comes upon him; this will not always be successful, given the cunning and intelligence of the average curse were-creature.

@TEXT:The source of the curse can vary <\#208> a hereditary condition or an Infectious Attack, perhaps, or it could have been deliberately inflicted. In the latter case, who, why and how all are excellent campaign hooks.

@TEXT:<I>The Evildoer<I> has an agenda: terror, chaos or just personal profit. They will possess one or more of the classic "evil" disadvantages <\#208> they are usually selfish, greedy or sadistic, at the very least. Certainly they have a lust for power which has grown dangerously large, for they have called upon some form of supernatural Evil to grant them their desires. Depending on the involvement of the divine in the campaign, they may have made a pact with Dark Forces, or they might simply possess certain banned grimoires. Either way, they have acquired the ability to shift.

@TEXT:The Evildoer's change is also a were-form. It is almost always at will <\#208> although it would be more than fitting for the Evildoer to also be Cursed as part of his power. Medieval European myth specifies that this variety of were normally takes the form of a cat or a wolf, and their change is often linked to some item <\#208> an ointment which is applied to the skin, or a belt or skin (of the appropriate beast, of course) which is worn when the power is invoked. They always have full possession of their faculties in their alternate forms, although they may be seized by odd compulsions or obsessions. Judging from testimony given to the Inquisition, they would specifically attack and terrorize those persons whom they felt had harmed or inconvenienced them in some way <\#208> even when doing so was blatantly self-destructive.

(((START BOX)))

@C-BOXHEAD:"Real" Lycanthropy

@TEXT-BOX:Assuming for the sake of argument that weres do not exist in the "real world", what inspired the legends? Setting aside the half-remembered remainders of shamanic traditions the world over, there may well be other sources. A number of medical professionals have suggested certain genuine conditions that may have contributed to the myth. GMs running a "totally realistic" medieval game can use these diseases to add an unexpected flavor of surprise, horror and danger to the campaign without having to incorporate fantasy elements which might be out of place. Or perhaps a werewolf attack in

Yrth or another fantasy setting may turn out to be a far different prospect.<!s>.<!s>.
@TEXT-BOX:<I>Dementia.<I> There is a specific variety of mental illness called "lycanthropic disorder," whose sufferers believe that they turn into wolves (or, less frequently, other animals). They experience full-sensory hallucinations of changing physical form, are given to outbursts of inexplicable violence, and feel insatiable cravings to drink blood. GMs and players can quantify this condition as a combination of Flashbacks, Delusions, and the Compulsive Behaviors of Violence and Drink Blood. Sadism is sometimes appropriate. Also, such a character will never have any form of Pacifism, Empathy, or similar traits.

@TEXT-BOX:<I>Rabies.<I> Of the options presented here, rabies is probably the best candidate for a "realistic" encounter with an apparent were-creature. There is a historic correlation in medieval Europe between rabies epidemics in both humans and animals, and concurrent werewolf trials. According to reliable contemporary accounts, rabid wolves were known to travel long distances, besiege villages, and fearlessly attack all humans in their path. They showed no fear and charged relentlessly, decimating settlements and terrorizing peasant and noble alike with the hair-raising sounds they made with their disease-paralyzed larynxes.

@TEXT-BOX:Similarly, there is a correlation in behaviors between human rabies sufferers and the "traditional" werewolf: victims of rabies are said to rage deliriously, howl, and go into frenzies, attacking nearby persons and frequently biting them. And, the better for inserting a note of horror into an otherwise "mundane" setting, rabies is just as contagious as any infectious were curse <\#208> and more destructive of its victim.

@TEXT-BOX:In game terms, a character bitten or scratched by a rabid animal contracts the disease unless he makes a HT-5 roll. Incubation time can be anywhere from 10 days to two <I>years,<I> but for most victims it will be one to three (HT/5) months. The first perceptible symptoms after incubation are a fever and a general sense of unwellness. After two or three days of feeling ill, the victim becomes irrational as his brain cells begin to die (-3 to IQ, Bestial, Berserk, Compulsive Behavior: Bite People, Paranoia, and the GM's choice of other mental disadvantages, including buying off Pacifism and other "good" disadvantages) and he suffers from violent mouth and throat spasms. Although victims are also intensely thirsty, the spasms worsen if the victim tries to drink water. At this point, death occurs within the next few days <\#208> there is no HT roll to recover, and victims lose 1d-1 HT (minimum 1) per day once the spasms start.

@TEXT-BOX:Untreated, rabies is almost 100% fatal. However, rabies treatments are available starting in TL5 <\#208> it was one of the first vaccines ever developed, first used in 1888 by Louis Pasteur. Unlike many vaccines, it can be administered effectively <I>after<I> infection. Before late TL7, treatment was a series of 8 to 20 injections to the deltoid muscle; after 1980, this had been reduced to one vaccination into the wound itself, followed by five more in the deltoid. Late TL7 treatments are almost 100% effective; earlier treatments are somewhat less so. Individuals who are promptly treated recover with no long-term ill effects.

@TEXT-BOX:<I>Porphyria.<I> Most commonly proposed as the "real" source of vampire myths, congenital porphyria has also been suggested for werewolfism. It is a rare inherited disease caused by an abnormality in the blood's hemoglobin. The symptoms vary, but the most extreme cases include severe psychological disorders such as manic-depression, extraordinary sensitivity of the skin to light (with subsequent discoloration, blistering, and mutilation), discoloration of the teeth, and occasional cravings for blood or other substances. While it cannot be contracted like an infectious disease, it can be latent and triggered by alcohol, barbituates, pregnancy or even just too much sunlight. Sufferers have a Weakness to sunlight (Very Common, 1d per 30 minutes). Every time they take more than HT/2 points of damage from sunlight in one exposure, they must make a HT roll or permanently lose one level of Appearance; Appearance <I>can<I> be reduced to Monstrous or Horrific in this manner. They also possess Chronic Depression or Manic-Depressive (or up to -25 points of other mental disadvantages, if the GM approves), and Compulsive Behavior: Unnatural Food Cravings.

@TEXT-BOX:There is no cure for porphyria, nor even a treatment to suppress its effects.

@TEXT-BOX:<I>Congenital Generalized Hypertrichosis.<I> Also called "Werewolf Syndrome." Another hereditary disease, hypertrichosis is an extremely rare genetic condition which leaves its victims covered in dense hair. Like porphyria, it cannot be contracted except by inheriting it. Characters with hypertrichosis grow hair all over their body, unless they take pains to shave or otherwise remove it. There are no other effects. In game

terms, this is a maximum Appearance of Unattractive; in settings where it is important to look "normal" or like a certain racial/cultural ideal (such as medieval or even modern Japan), Monstrous or Horrific may be the maximum. A Social Stigma or other negative reaction modifiers may also apply.

((END BOX))

@B-HEAD:Detecting and Thwarting Shifters

@TEXT:Whether as the good guys or the bad guys, there will eventually come a time when the shapechangers in a campaign will want to be someplace where they are not supposed to be, and will use their abilities to get there. Naturally enough, there will also be those who want to catch them at it.

@TEXT:Depending on the paradigm(s) under which shapechanging operates in a given campaign, there may be many ways to discover a shifter, or none. Before introducing any variety of shapechanger to his campaign world, the GM should think carefully about the countermeasures available for use against them. The herb moly (see box, p. 00), for instance, is a low-tech method from classical literature, but requires the user discover the shifter via other means. (It probably also requires the shifter be magical in nature <\#208> although that is not necessarily so. Imagine a carefully orchestrated infiltration of high-tech morphs into a low-tech society foiled because a rare herb disrupts their changing mechanism!)

((START BOX))

@C-BOXHEAD:Moly

@TEXT-BOX:<I>Black was its root, but milky-white the blossom that it bore.<I>

@TEXT-BOX:<I>The Immortals call it 'Moly' <\#208> to dig it where it springs<I>

@TEXT-BOX:<I>Is hard for a mortal man; but the Gods can do all things.<I>

@TEXT-BOX:<\#208> Homer, <I>The Odyssey<I>

@TEXT-BOX:Given to Ulysses by Mercury to protect him from Circe's magic, moly is better known as "sorcerer's garlic," although the variety of wild garlic known by that name today bears little resemblance to the black-rooted, white-flowered herb of myth. In addition to being a medicinal plant sovereign against "blights, mildews, and damps" according to one source, it is best known for its ability to thwart charms and enchantments. As a member of the garlic and onion family, it has a pungent odor which is somewhat unpleasant, and its leaves taste quite bad. The flavor of moly root is not described in ancient texts, but it is probably not unlike cultivated garlic.

@TEXT-BOX:<BI>GURPS Magic Items<\$> describes both an alchemical elixir called "Moly" and an amulet of the same name (p. MI113 and pp. MI116-7, respectively). The effects given in their entries, though, are inconsistent with descriptions given in the Odyssey and other texts, being both rather weak and overbroad, so the following alternative is offered to the GM.

@TEXT-BOX:A sprig of moly can be used, just as Ulysses did, as a shield against transformation spells. (When employed in this manner, treat it as an appropriate Counterspell of power 20.) It can also be used to dispel any magic which changes its subject's shape <\#208> a single leaf, intact, placed in the mouth and held there, will undo any shapechanging spell and force weres and morphs back into their base forms, taking 1d seconds to do so. Furthermore, an alchemist or herbalist can use moly to brew a foul-tasting elixir that can suppress the Change in an inherent or inherited were for 1d months, and will cure an acquired infectious were-state outright. This elixir (available only in potion form) is compounded of a sprig of moly plus other ingredients costing a minimum of \$1,000; it requires an alchemist who is familiar with the Circe elixir as well as shapeshifting and/or shapeshifters, and who possesses a skill level of at least 18. It takes five weeks to brew.

@TEXT-BOX:Moly's virtue lasts only as long as it is fresh; once it wilts (usually within a day or two), it loses its power. It cannot be preserved in any way that maintains its magical power except for its potion form, which remains efficacious for six months after brewing.

@TEXT-BOX:White-flowered moly is rare and difficult to harvest without destroying its inherent magic. ("Moly-Harvesting" is a MVH skill for those characters who absolutely must have it.) Fresh sprigs sell for \$2,500 each <\#208> more in areas plagued by

were-creatures or hostile magic.

((END BOX))

@TEXT:The majority of the following suggestions assume that the "opposition" is a morph, although some should be just as applicable to weres. Many of the suggestions tend more toward the (pseudo-)scientific end of the spectrum, but there is no reason why that should make them any less valid in a more fantastic setting. As always, the GM should tightly control this information. Some "folklore" or "common knowledge" might be available, but it can easily be wildly inaccurate, misleading, or even hazardous!

@TEXT:Note, by the way, that this is not necessarily <I>just<I> a checklist of ideas for player characters besieged by shifter enemies. Sufficiently clever NPCs should think of any (or all!) of these methods should the PCs be the ones doing the besieging!

@C-HEAD:Anticipation and Suspicion

@TEXT:Outside of a high fantasy campaign, where just about anything might be expected, or a horror game where those involved know what they're up against, a shapechanger may well come as a complete surprise. Still, there are ways to anticipate the possibility.

@TEXT:If the shifter is a natural part of an unfamiliar ecosystem, be it another planet, a different plane, or simply an isolated ecology in some "lost" part of the world, it's likely other creatures around it will have similar abilities. Witnessing a flock of grazing animals suddenly turning into birds to escape a predator would be a good indicator <#208> and may reveal useful clues to their nature. Even more telling would be the predator similarly changing shape to pursue its prey! If the ecosystem favors morphs, having an unintelligent morphing creature attempt (however inadequately) to duplicate one of the outsiders can be humorous or disturbing, depending on how the GM plays it <#208> and can set the stage for a far more competent interloper later.

@TEXT:If the shifter is an infiltrator, its feeding habits may give it away. Predators are far more likely to be shapechangers (and vice versa) than prey species for a number of reasons both scientific and mythological. A sudden increase in predation rates (especially among skittish herd animals or protected domestic beasts) with no apparent increase in the natural predator population may well indicate something out of the ordinary has inserted itself into the food chain. Sentient shapechangers might give themselves away by showing too much intelligence and planning in their kills, or conversely, excessive sadism or bloodlust.

((START BOX))

@C-BOXHEAD:Vulnerabilities

@TEXT-BOX:It is usual in both legend and cinema for werewolves and other shapechangers to be invulnerable to all forms of damage <#208> save for silver. Similarly, a curable were who is immune to all other forces must be vulnerable to the means or methods of his cure! While this is far from universal in legends and stories across the globe, it does raise the question: what are the frequencies of appearance for various countermeasures, so Vulnerabilities (p. CI106) can be properly priced at character creation?

@TEXT-BOX:<I>Silver.<I> The traditional weakness of werewolves is available at TL 1. Although it is a precious metal, it is easily acquired in almost every culture that has metal-working; it is not, however, omnipresent. Silver is an <I>Occasional<I> substance, worth -10 points per level as a Vulnerability.

@TEXT-BOX:<I>Holy or blessed objects.<I> When cited in myth, this almost always refers to items consecrated to the dominant religion in the region. In such a case it's likely that, as in medieval Europe, almost every town and village will have at least one priest and sanctuary of that religion serving its people. Assuming no other complications (disbelief in weres, legal strictures, and so on) cloud the issue, getting or making consecrated items will be relatively easy, making them <I>Common,<I> and worth -15 points per level.

@TEXT-BOX:<I>Alchemical compounds.<I> Any mixture of ingredients that is intended to be applied to the were, whether or not it is actually prepared by a real, magically-gifted alchemist, falls under this heading. These recipes can vary wildly from legend to legend; the rarest item in the ingredient list sets the availability level of the mixture itself.

@TEXT-BOX:<I>Other.<I> For everything else, this rule of thumb may be helpful:

@TEXT-BOX:<#165> If you can't walk down the street without running into it, it's

<I>Common<I>.

@TEXT-BOX:<\#165> If you can walk into a stranger's house or a mall and be pretty sure you'll find it, it's <I>Occasional<I>.

@TEXT-BOX:<\#165> If you can only find it by going to a nearby specialty store, or if it costs a lot of money, it's <I>Rare<I>.

@TEXT-BOX:<\#165> If you can only get it by mail order from a distant dealer, or it costs vast amounts of money, it's <I>Very Rare<I>.

((END BOX))

@C-HEAD:Tactics and Countermeasures, Or, Finding The Infiltrator

@TEXT:Regardless of the justification for a shapechanger's abilities, at least one of the following strategies is likely to prove a fruitful avenue of investigation when it comes time to find a way to detect the creature:

@D-HEAD:Energy

@TEXT:<I>Shapeshifting may require a large amount of energy, especially if it is "complete to the atomic level". Look for the burst of waste heat that accompanies the shift. Or conversely, sudden and unexpected cold spots, if the change requires the <I>absorption<I> of energy from the local environment to initiate or complete the process.

@TEXT:In a high-tech setting, a computer-controlled environment system could be programmed to monitor the thermostat sensors in each room, allowing a shape-shifting event to be tagged in time and location. Either way, a temporarily elevated body temperature can indicate a person who has been duplicated (it will probably take some time to cool down to "normal" after a shift).

@TEXT:Look for the internal features unique to the shapeshifter. A duplicate can't be <I>completely<I> identical to the original, or it would be unable to ever change again (since the original can't change). So it must retain the shapeshifting mechanism, and (unless it can somehow draw on external power) the energy storage that fuels it. Does it have energetic nitrogen molecules suffusing its internal organs? Does it have extra mitochondria, or excess ATP?

@TEXT:Look for the energy recharge mechanism. Does the shapechanger have an incredibly voracious appetite after shifting? Does it chow down on candy bars or even raw sugar? Or plug in to a nearby electric outlet? Does it bask in front of a microwave beam? Fantasy shifters are notoriously dependent upon local mana <\#208> perhaps the mana level around them drops precipitously for a short time during the change, or for as long as they're in their alternate form (making them even more of a threat than usual to spellcasters). Some shifters have the Mana Enhancer advantage <\#208> the local magic level might go <I>up<I> when they're around.

@TEXT:Similarly, shifters may have identifiable <I>patterns<I> to their energies, even if they don't appear to consume or radiate excess power in the wake of their changes. Psionic shapechanging will probably have its own specific signature which a Sniffer or other sensitive might detect, for example. Fantasy shifters who are otherwise well-cloaked may be revealed by the proper use of Analyze Magic. And so on.

@D-HEAD:Structural/Biological Traits

@TEXT:As noted above, if the shifter retains the ability to change, that mechanism has to be present <I>somewhere<I> in the body. By extension, so must the "original plans" for the creature. Does it keep two sets of DNA? Or does it rearrange the introns ("dead," inactive sequences) in its DNA and swap which parts are turned on and off? Genetic testing would probably detect the first, although the second would probably confuse both experts and software unfamiliar with the phenomenon.

@TEXT:Unless it also undergoes a complete personality shift as well, its brain structure can't change too radically. A CAT scan or MRI might reveal the truth, as might an EEG. On the other hand, the brain inside the copied skull might be a "dummy", with the real one hidden somewhere else in the body, perhaps disguised as another organ. (X-rays or other non-intrusive procedures may or may not detect such a hidden brain.) Natural shifters will rarely have such an extreme ability, but it may well be a "standard feature" for <I>manufactured<I> shapechangers, especially those designed to infiltrate other races.

@TEXT:Any replication that is less than cell-for-cell perfect may mimic the <I>form,<I> but not all the functions. Detection may rely upon the fact that certain reflexes or body processes might not be copied, or copied imperfectly. For example, in John W. Campbell's

Golden Age SF story "The Brain Stealers Of Mars", space travelers discovered the alien morph among them in just that way: presented with pepper up the nose, the alien couldn't duplicate a reflex that involved some 500 sets of muscles and an autonomic nervous system tuned by millions of years of earthly evolution <\#208> the sneeze.

@D-HEAD:Mental/Social

@TEXT:Against those morph types who do not gain an extensive copy of their target's memories, non-body-specific identifiers may be sufficient. These include various social behaviors <\#208> such as religious rites, idiosyncratic behaviors and cultural preferences <\#208> and obscure skills or items from personal history, specifically catalogued for just this purpose, which a morph undergoing a simple body-only change will find hard or impossible to duplicate.

@C-HEAD:Knowing Your Own

@TEXT:Opposition that knows what it's facing may develop some explicit method of identification that can't or won't be copied by any kind of change. This is possible in many worlds, regardless of background or technology. For example, it's possible in virtually any TL 6+ setting to give vulnerable personnel regular doses of stable but uncommon isotopes (Carbon 13 and Nitrogen 15 would be a good bet). Upon their return from field missions, personnel would be quarantined until the isotope ratio could be confirmed by whatever means is at hand, be it mass spectroscopy or a multiscanner. Someone <I>without<I> the isotopes, or with the isotopes in the wrong quantities, would be examined far more carefully <\#208> or even summarily executed.

@TEXT:Magic can provide similar benefits. Use Ensorcel from p. 39 of <BI>GURPS Grimoire<\$> to imbue possible targets with a minor spell (possibly a custom one developed for the purpose), using an unlikely but simple spell-break provision to make the process as cheap as possible. Using Mage Sight or even Identify Magic, scan personnel on a regular basis, and examine anyone who has been in the field immediately upon their return. Anyone who is found to be lacking their ensorcelment is, of course, a possible morph.

@TEXT:Sufficiently-motivated players or GMs can no doubt come up with even more effective methods, regardless of the setting.

((START BOX))

@C-BOXHEAD:Traditional Cures For Werewolves

@TEXT-BOX:Both film and folklore hold out hope of a cure for those suffering from a shapeshifting curse. However, as if to further exacerbate the horror in which these sufferers must live their lives, these cures are often breathtakingly rare or all but impossible to accomplish.

@TEXT-BOX:Alternately, these can be seen as weaknesses to exploit when attacking an evil shapeshifter. However, some folklore claims that for any cure to work, the were must sincerely want to be cured. Without that, even the most powerful working will fail. Worse yet (for player character weres, at least), some of the most extreme cures work by killing the sufferer to save his soul.

@D-BOXHEAD:Traditional Cursebreaks

@TEXT-BOX:The following is a list of traditional cures for lycanthropy, as testified to by folklore and legend. It's anything but exhaustive, being more a sampler extracted from the most common myths, but players and GMs alike should find it useful and inspirational. It is, as always, up to the GM if any, all, or none of these work, for how long and for which weretypes; and it is quite within the GM's purview to allow a were-form with a Cursebreak (p. 00), but <I>not tell the player what the cursebreak is.<I>

@TEXT-BOX:<I>Exorcism.<I> A traditional Church solution to all seriously evil problems. The justification is that the were-form is actually a malevolent spirit possessing the victim (or cooperating with a witch). A priest can perform the full "bell, book and candle" ritual; for the unordained, simple prayer, sprinkling holy water, and proper invocations of the victim's baptismal name in the name of the Trinity are said to be efficacious. (The GM may require True Faith or another "holy" advantage for an "informal" exorcism to succeed, though). In the case of calling the victim's name, three repetitions in the presence of the animal form is the prescribed ritual.

@TEXT-BOX:<I>Alchemical/magical approaches.<I> Some of these operate on the same principles as exorcism, being attempts to expel a hostile spirit. Others treat lycanthropy as a spell that has to be broken or dispelled. However it is approached, though, the

process usually requires a great number of odd and unusual ingredients combined according to an improbable recipe, and/or a complex ritual that would put a full Catholic mass to shame.

@TEXT-BOX:<I>Doctrine of Opposites.<I> To the mind versed in medieval European thought, the world was balanced in many ways. For every evil there was an opposing good to be found somewhere <\#208> a natural counter, remedy or antidote, thoughtfully provided by God. In the case of lycanthropy, there was wolfsbane, or even moly (see p. 00).

Wolfsbane's reputation is evenly split between poison and cure; the latter seems more common as part of an alchemical formulation. Some claim that the fruit of <I>Rauwolfia serpentina,<I> a woody shrub native to Thailand and India and which has dozens of legitimate medical uses, can also cure lycanthropy and even suppress morphing talents.

@TEXT-BOX:<I>Physical trauma.<I> The poor man's exorcism; the idea is to break the spell or drive out the lycanthropic spirit by damaging the body of the victim until the magic can no longer reside in it. This can range from simple beatings, through more complicated tortures up to and including coating the victim with a boiling mixture of molten tar, sulfur and various poisonous herbs (which of course overlaps with the alchemical cure), to simply killing the victim outright in order to save his soul. (By similar logic, suicide will also break the curse according to some traditions. One must be careful with this "cure", though <\#208> other equally sincere traditions claim this guarantees the individual will <I>return<I> as a werewolf.)

@TEXT-BOX:One particular version of this method which has strong support in folklore is amputation. A number of folktales cite it, and it was pivotal in at least one "historical" case of lycanthropy, that of Raimbaud de Pinetum, the infamous "Werewolf of Auvergne." In order to free himself of his lycanthropy, Raimbaud had a woodcutter chop off one of his paws <\#208> "For they say that amputation of a limb frees such men from their calamitous condition."

@TEXT-BOX:Note that not just <I>any<I> damage will have the desired effect, but only that inflicted for the sole purpose of ending the victim's lycanthropy. This method possesses the dubious virtue that it can be performed by unskilled labor using tools and materials immediately available at any farm or blacksmith's shop, which no doubt contributed to its popularity.

@TEXT-BOX:<I>Self-control.<I> The lycanthrope must restrain himself from attacking humans for some period of time, usually nine years. This is best suited for weres who retain some fraction of their mind and/or personality while in their alternate form, while at the same time suffering from a reduced impulse control or compulsions to do violence.

@TEXT-BOX:<I>Blood.<I> Another method requires the highly dangerous task of extracting 3 drops of blood from the lycanthrope while he is in animal form. Boiling a king's tooth in werewolves' blood and molten silver is also reputed to be an effective cure, but how this mixture is to be employed is not specified; hopefully, it is not intended to be swallowed.<!s>.<!s>.

@TEXT-BOX:<I>Cinematic cures.<I> Of course, movies and TV have added their own inventions to the mix over the years. Universal's first werewolf movie, 1935's <I>The Werewolf of London,<I> has its were, Dr. Wilfred Glendon, dependent upon "marifasa" (a rare Indian flower that only blooms during the full moon) to suppress his transformation.

Unfortunately, it works only for one night at a time. The gothic soap opera <I>Dark Shadows<I> had the "moon poppy", which when eaten while in were-form would end the affliction forever. It also had gypsy spells capable (at great cost, of course) of curing lycanthropy.

@TEXT-BOX:<I>Bloodline cures.<I> In stories where lycanthropy can be transmitted via a bite, a cure usually involves the specific creature that infected you. The most dangerous of these options involve hunting down and killing the "parent" beast; some cures require eating its heart as well. A somewhat more disgusting but less life-threatening cure specifies mixing the saliva of the were with water from an English moor, but whether the combination is to be drunk or applied to the wound is not clear. One thing is certain <\#208> this cure must be mixed and applied before the first dawn after the attack, or it is ineffective!

@TEXT-BOX:<I>Utterly random.<I> According to several Germanic tales, throwing a hat at a werewolf can cure him. Other stories say hitting him on the forehead with a key will do the trick. Similarly, the afflicted person could strike his own forehead three times with a knife.

((END BOX))

@B-HEAD:Prejudice and Pride: Lions of The Pure

@C-HEAD:A Sample Shapeshifter Campaign

@TEXT:Following is a brief concept for a campaign incorporating shapeshifters as a major element. It demonstrates how a were-creature element can be added to a campaign in progress, in this case a historical or otherwise non-magical, low tech setting (although it can also be used as the basis for a stand-alone game).

@C-HEAD:.<!s>.<!s>.And In Paradise They Dwelt

@TEXT:<I>In the blessed name of Mevek, may He watch ever over us, amen.<!s>.<!s>.<I>

@TEXT:<I>The invaders called themselves Glinizi. They fell upon us in the thirteenth year of the reign of our lamented King Ta'an, bearing the sticks of fire against which no mortal man could stand. From the sea did they come, in swarms like locusts from out their great ships, and they overran all the lowlands. They enslaved our people and called it "liberation"; they seized Nilesch Mithana, the capital, and set themselves up as rulers over all the people of Chanarkesh.<I>

@TEXT:<I>As part of their tyranny, the Glinizi forbade the worship of Mevek (blessed be His name!). When the king and the priests protested, the Glinizi murdered them, desecrating the altar of Mevek with their blood. When the people rose up in protest, the Glinizi slaughtered them in the streets.<I>

@TEXT:<I>Knowing they could not stand against the Glinizi and their sticks of fire, One Hundred of the faithful of Mevek (blessed be His name!) escaped to the Vangkesh Hills. There they made supplication unto Mevek and prayed for a way to deliver our land and our people from the invaders. And Mevek (blessed be His name!) heard their prayers and answered them.<!s>.<!s>.

@TEXT:A peaceful subtropical nation. An occupying army with a technology beyond that of the natives. And a vengeful god who emphasizes personal initiative and responsibility. Three ingredients whose combination has had unexpected results <\#208> for the invaders.

((START BOX))

@C-BOXHEAD:Adapting The Setting

@TEXT-BOX:This campaign seed was inspired by (but should not be construed to <I>represent<I>) some aspects of the Anglo-Sikh Wars of the 1850-60s. As such, the intended flavor of this setting is British Colonial India circa the middle of the 19th Century (albeit leavened by a kind of hybrid Thai/Cambodian aesthetic).

@TEXT-BOX:Even so, no details here are exclusively specific to that place and time; this campaign seed can be adapted for any game set somewhere between TL3 and TL5. The primary ingredients needed for this are a distant, aggressive imperial nation, a tropical native population in a land colonized or conquered by that nation, a suitable wilderness zone, and an appropriate religion. The military forces fielded by the empire should be technologically advanced (at least +1 TL) compared the natives, making them apparently invincible.

@TEXT-BOX:As written, this setting can be dropped into almost any standard fantasy game, as well as more historical settings. All that will be necessary may be changing the names and perhaps some of the politics, and the nature of the Glinizi "firesticks". If the world background is ostensibly non-magical with distant and uninvolved (or non-existent) deities, all the better.

@TEXT-BOX:With a little research and effort, the GM can even quickly adapt this material back into its inspiration, turning a more conventional British India campaign into something out of Rudyard Kipling's darker nightmares. While it can serve as an interesting twist to a "real world" game, it can also work in a gameworld with active magic, especially if the GM leaves misleading clues about the nature of the natives' ability to change.

@D-BOXHEAD:Protagonists and Antagonists

@TEXT-BOX:The setting is also written such that either side (or both!) can be played as the "good guys", depending on the needs of the game. In fact, it works best if neither the Chanarkeshi weres nor the Glinizi invaders are portrayed as outright evil, but rather responding as best they can to a complicated situation. While it is possible to reduce either side to predatory stereotypes preying upon the valiant forces "liberating" their land, no small amount of the flavor of this setting will be lost.

(((END BOX)))

@C-HEAD:Chanarkesh

@TEXT:Located in a fertile subtropical zone, Chanarkesh is a land of lush farmlands, moist rain forests, and wooded, rocky hills. The innumerable family farms dotting the well-watered lowlands provide bountiful crops, while the upland forests produce a wide variety of woods for carving and building. Add to it the fine stonework Chanarkeshi craftsmen have learned over centuries of building elaborate temples, and you have the three primary exports of this small but rich coastal nation, whose sea-going tradition includes both merchants and fisherman.

@TEXT:The Chanarkeshi are said to produce fishermen, farmers, traders and scholars in equal proportion; they live under a clan system capped by the combined power of the king and the priests of Mevek, the lion-god whom they have worshiped since time immemorial. Mevek is distant but benevolent, paternally encouraging both individual achievement and loyalty to clan and nation. It has been hundreds of years since Mevek took a direct hand in the affairs of Chanarkesh, but this does not discourage his followers. Instead, they point to it proudly as evidence they have followed his commandments <\#208> Mevek only intervenes when the people have turned from him, or if utter catastrophe looms.

(((START BOX)))

@C-BOXHEAD:Inside The Chanarkeshi

@TEXT-BOX:While they are learned and peaceful people, the Chanarkeshi are also stagnant. This may be partially by design <\#208> Mevek certainly favors stability and predictability, despite his aspect of a wild animal. However, what works for Mevek doesn't necessarily work as well for Chanarkesh <\#208> the land is steeped in, and choking from, highly respected tradition and an increasingly hidebound caste system. Chanarkeshi bards love to tell the tales of famous heroes of yore who climbed the social ladder from dirt farmer to king, but anyone trying to emulate them today is more likely to be imprisoned for breaking his caste than honored for the effort.

@TEXT-BOX:This is particularly encouraged by the priesthood of Mevek, who enjoy a comfortable (and all-but-hereditary) position at the top of the social ladder. Not surprisingly, they are going to be hostile to the very idea of the lion-men. Commoners approaching Mevek without their intercession, indeed!

@TEXT-BOX:The truth is, despite its prosperity and comfort (or perhaps because of it), Chanarkesh is headed for social collapse. The civilization is stagnant and petrifying, with entirely too much focus on past glories and self-congratulatory festivals. A growing underclass (one is always allowed to move to a <I>lower<I> caste, after all) is finding itself more and more marginalized even as it shoulders more and more of the country's day-to-day support.

@TEXT-BOX:If Chanarkesh is to survive, it needs to be shaken up <I>badly<I> <\#208> and the Glinizi just may be the thing to do it. If they don't destroy the country first.

(((END BOX)))

@D-HEAD:Geography

@TEXT:Chanarkesh is a roughly trapezoidal nation, set on a peninsula extending southwest out of the main body of the continent of which it is part. Its western coast, running north-northwest to south is the trapezoid's longest side at just over 300 miles; the southern coast stretches for 200 miles almost due west until it intersects the main continent. Wrapping around the other two "sides" is a long chain of steep, rocky hills spotted with light forest, which mark a border with two of Chanarkesh's neighbors and are in fact the foothills of an impressive mountain range somewhat further inland. Known to the Chanarkeshi as the Vangkesh Hills, a number of passes run through them, linking Chanarkesh with its inland neighbors.

@TEXT:The Vangkesh Hills are inhospitable and, while arable, not worth the effort of farming with so much moist, fertile land to the south. A number of rivers flow through the hills from the mountains beyond, but they do so with great force through deep chasms cut into the bedrock, making them all but unusable for agriculture. There are several Chanarkeshi settlements in the hills <\#208> they are home to a dozen or more quarries

and hundreds of mines <\#208> but nothing to match the towns and cities in the lowlands. @TEXT:At the base of the hills, most of the rivers spread out, delta-style, into broad, wet zones <\#208> all but swamps, really <\#208> threaded with creeks and streams. Rooted deep into this moist land and getting the most benefit from the water there, is the band of lush, semitropical rainforest from which Chanarkesh harvest the exotic woods employed by their craftsmen.

((START BOX))

@C-BOXHEAD>About Mevek

@TEXT-BOX:The lion-headed god of the Chanarkeshi, Mevek claims Chanarkesh as his sphere of influence. He is said to know all things that happen in the land, and all things that may affect it. He does not often choose to interfere in mortal matters, though, for in addition to basic moral laws (called the Rules of Just Behavior), his teachings emphasize what have become known as The Five Virtues: Wisdom, Strength, Truthful Insight, Self-sufficiency, and Loyalty to Clan and Nation. He has made it clear in the past that he does not want weak, fawning children for worshippers, but strong, independent adults, worthy of being partners to a god.

@D-BOXHEAD:Orthodox Mevekism

@TEXT-BOX:In the three or so centuries since the last known physical manifestation of Mevek, his church has collected and standardized the stories and teachings of their god. In addition to the Rules of Just Behavior and the Five Virtues, Orthodox Mevekism teaches the following as articles of faith: that Mevek is supreme over all other deities (the Law of Primacy); that the role one is born to in the world may not be improved (the Law of Caste); that any challenge to the social and political order is an affront to Mevek, who made it so (the Law of Earthly Perfection); and that the only proper mediator between mortal man and Mevek is the priesthood (the Law of Intercession).

((END BOX))

@TEXT:Once out of the rainforest, the rivers settle down again into single great streams, broad and shallow and easily tapped for irrigation. These are the fertile lowlands, home to most of the Chanarkeshi. It is also home to thousands of square miles of farms, dotted with villages and towns, and threaded through with worked stone roads that have served the land for centuries. Here are found the great cities of Chanarkesh, which can be seen for miles around in the broad, flat plains.

@TEXT:Through the center of Chanarkesh runs the River Asariaz, the greatest river in the land, sometimes reaching five miles in width. After dropping precipitously over the Davisad Falls at the center of the Vangkesh Hills to the north, the Asariaz meanders gently southward along the center line of the nation, spreading finally into a river delta at the southmost tip of the land, where the city of Sanjit Kumahal was built to as a trade gateway between sea-going traders and Chanarkeshi merchants. The Asariaz holds special meaning to the Chanarkeshi; it is said to be lifeblood of the land, and that he who controls the Asariaz controls the nation. This is why Nilesh Mithana, the capital city, was built at the exact midpoint between the Davisad Falls and the sea, to symbolize its position at the heart of Chanarkesh.

@TEXT:Today, the Glinizi control all the major cities on the Asariaz, and have actually renamed Sanjit Kumahal to Port Dilaz. A Glinizi presence can be found in every other coastal city, but Port Dilaz is the port of entry for all Glinizi coming to Chanarkesh, and can be considered <I>their<I> capital for the land.

@C-HEAD:The Glinizi

@TEXT:Although Chanarkesh has lived in relative peace with its neighbors <\#208> themselves equally prosperous and peaceful <\#208> for centuries, this was not to last. The peaceful land was thrust into war when invaders came from over the sea.

@TEXT: The exact origin of the Glinizi is a mystery to the Chanarkeshi; "far away over the sea" is all anyone has learned. They came in great ships unlike any the Chanarkeshi or their neighbors built; they came with weapons of fire and steel against which none could stand. They came to steal the land of Chanarkesh.

@TEXT:Within three months of their first appearance on the beaches of Chanarkesh, the Glinizi had penetrated deep into the interior. Overwhelming all opposition with ease, they marched on the capital city of Nilesh Mithana, and after a two-day siege, captured

it, the king and the highest levels of the priesthood of Mevek.

@TEXT:Since then, they have all but conquered the land, although they neither call it that, nor (to be honest) see it that way. The Glinizi <\#208> most of them, at least <\#208> sincerely believe that they are to oversee Chanarkesh on behalf of the natives, for their own good. Of course, at the same time they have systematically plundered the country, shipping resources back to their own homeland on a vast scale. While Chanarkesh has not yet been rendered a pit of abject poverty, many Chanarkeshi think it's only a matter of time. And when the Chanarkeshi have objected, they have been brutally suppressed <\#208> the death toll from one such "pacification" reached into the thousands.

((START BOX))

@C-BOXHEAD:Inside The Glinizi

@TEXT-BOX:A young and vital empire based on another continent some two months' sail away, the Glinizi have been in an expansionist phase for the last two centuries. With their prosperous economy, advanced technology and vast holdings, they have developed something of a cultural/racial superiority complex, and see themselves as far above the "primitive" peoples of the lands they have expanded into.

@TEXT-BOX:Unfortunately for the Glinizi, about twenty years ago, they encountered another, older empire <\#208> the Pueranlo. Located on the opposite side of Glinizi lands from Chanarkesh, the Pueranlo were slightly more advanced in technology and viewed the Glinizi as another future province to acquire. Since the beginning of active hostilities between the two empires five years ago, the Glinizi have been desperately seeking supplies of raw materials and manpower not already claimed by the Pueranlo in order to bolster their war effort. The conflict has not been going well for the Glinizi, and they are starting to panic. This panic is in part responsible for some of the atrocities the Glinizi have committed when putting down potential rebellions.

((END BOX))

@C-HEAD:The Creation of the Jayagat Tendrab

@TEXT:In order to accomplish their task of stripping the country bare as quickly as possible, the Glinizi have taken to impressing young Chanarkeshi men into forced servitude. This practice is slavery in all but name; no one knows any man taken by the Glinizi who has been freed, although many know of one or more who has dropped dead from the labor.

@TEXT:It is not surprising then that many young men, not the least of which were the educated and low-level military officers, chose to flee to the hills. The Glinizi have little concern for that region; they do not need the stone, and the mines produce none of the metals they need. A small Glinizi force based in Dilak Divatri, at the base of the Davisad Falls, "pacifies" the hills, but is in truth far too small to police the whole of the chain.

@TEXT:It is thus that the hills have become home to a unique resistance movement. As young educated men <\#208> those who might have been called "radicals" by the elder compatriots in the temples and schools <\#208> made their way there, they met up with one another and formed something of a fellowship. In their common despite of the Glinizi, their hope for their land's eventual liberation, and in their radical views on religion (and other social issues), they found a unity and a purpose <\#208> and a leader: Jevon Afari, the third son of a cadet branch of a lesser clan of the aristocracy, a compelling speaker, and a natural commander of men.

@TEXT:It was at Afari's suggestion that they made the experiment. According to the elder priests it was heresy <\#208> the priesthood was Man's intermediary with Mevek, and only a priest could address Mevek; for someone impure, uninitiated to dare address the god was inviting his wrath not only upon the offender, but upon all of Chanarkesh. But Afari and his companions reasoned, somewhat impiously, that Chanarkesh was already suffering the Glinizi's wrath, and that Mevek's couldn't be much worse. So he issued the request <\#208> that all who dared, petition Mevek for aid against the Glinizi. In one great night of prayer and fasting, one hundred men and women called upon Mevek and begged for his help.

@TEXT:Mevek heard <\#208> and answered.

@TEXT:Taking the physical form of a massive lion-headed man, Mevek appeared before the Hundred and praised them for their courage and their devotion to their land. He acknowledged the threat the Glinizi posed to his people, and he granted them a gift <\#208> the ability to fight in his image. Mevek bade them swear oaths that bound them to him in purity, and promised that as long as they kept those vows, his power was theirs. Finally, he commanded them that as a sign of the compact that they had made with their god, each was to take a new name, and as part of that name should be the word <I>Maimat,<I> meaning "Lion" for men, and <I>Gilan<I> "Lioness" for women.

((START BOX))

@C-BOXHEAD:The Vows of the Jayagat

@TEXT-BOX:<\#165> Serve Mevek with all one's heart, and embody the Rules of Just Behavior and the Five Virtues.

@TEXT-BOX:<\#165> Defend the people of Chanarkesh from all that would harm them.

@TEXT-BOX:<\#165> Never use the Maimat (lion-form) for personal gain or for any purpose offensive in the eyes of Mevek.

@TEXT-BOX:<\#165> Purify one's self in a ritual bath at least once a week.

@TEXT-BOX:<\#165> Abstain from alcohol.

@TEXT-BOX:The Vows of the Jayagat constitute a -10-point Discipline of Faith.

((END BOX))

@TEXT:Each of the Hundred so swore, and Jevon Afari became the first to take his new name, calling himself "Asudhri Dhavik Maimat" <\#208> "New Lion of the Dawn". And as each swore and took his name, the power of Mevek filled them, and each became a being that partook of both lion and man. Mevek then foretold how others would join their cause, and instructed the Hundred in how to purify and prepare newcomers to also gain the power. With a final benediction, the god then departed.

@TEXT:The Hundred then rejoiced, and declared themselves to be the <I>Jayagat Tendrab<I> <\#208> the Company of the Pure.

@D-HEAD:The Jayagat Today

@TEXT:It is under that name that they have come to strike fear in the hearts of the Glinizi. Against the invaders of their land, they fight a guerilla war, invisible until the moment they strike. Their numbers grew quickly as word of Mevek's intercession spread among the people, and now there are at least a thousand Maimat and Gilan striking at the Glinizi, either alone or at the head of bands of brave folk who chose to follow them.

@TEXT:There would be more Jayagat, save for an unexpected enemy <\#208> the surviving priests of Mevek. Accustomed to <\#208> and profiting from <\#208> their monopoly on mediating between mortals and Mevek, the church is openly hostile to any who dare challenge its position and power. They brand the accounts of Mevek's appearance to the Hundred as lies and heresy, and the Maimat as blasphemous forgeries born of dark sorcery. Not every priest shares this view, but those that don't are few and far between, and most dare not challenge the church's pronouncements.

@TEXT:This conflict with the established church is a bigger problem than it seems <\#208> for some ineffable reason, Mevek left his warrior avatars vulnerable to weapons consecrated by his priests!

@TEXT:The Maimat form of a Jayagat warrior takes the form of a giant (minimum 7 feet) human with a lion's head. (Calculate the Maimat's height based on the strength of the human form, not the Maimat's Enhanced ST. Calculate weight normally.) His hands and feet are heavily clawed, and his body is covered with tawny fur. The shape of a lion's mouth is not conducive to speech, but they manage, although the sound is often quite frightening.

@TEXT:When applied to a Jagayat character, the Maimat takes a Cure/Cursebreak limitation: Simple condition, requires cooperation, -40%; and External Trigger: Worshipper of Mevek in danger, -10%, for a final discount of -50%. A Jayagat has complete control over his changes <I>unless<I> he witnesses a worshipper of Mevek in danger, in which case the power of Mevek forces him to change in order to fulfil the second term of his vows.

((START BOX))

@C-BOXHEAD:Player Characters

@TEXT-BOX:PCs can be from either side of the Chanarkeshi conflict. Glinizi troops range from 75-point infantry to 150-point officers. Ordinary Chanarkeshi guerillas will range anywhere from 50 to 125 points. A Jayagat warrior will always be a minimum of 150 points, and a member of the Hundred will likely be 200 points or more. If for any reason Pueranlo troops appear, treat them as Glinizi troops save for the +1 in TL.

@D-BOXHEAD:Tech Levels

@TEXT-BOX:For the purposes of this campaign seed, the Chanarkeshi are considered the base TL. Glinizi characters must take the High Technology advantage at 20 points, and Pueranlo characters must take it at the 50-point level! If the GM does not find that appealing, make the Glinizi the base TL. The Chanarkeshi then get one level of Primitive, and the Pueranlo must only pay 20 points for their High Technology.

((END BOX))

@C-HEAD:Ultimate Outcome

@TEXT:Despite the fact that the Jayagat are tailored for warfare, there is another possible result here than the wholesale slaughter of one side by the other. Under the right conditions, and with the right people in the right places, the Glinizi-Chanarkeshi conflict could turn into a partnership rather than a conquerer-conquered relationship. If this happens, both sides win <\#208> Chanarkesh is reinvigorated and stagnation/collapse avoided, and the Glinizi get not only resources but a cadre of unstoppable warriors to help with the effort against the Pueranlo. If the GM wants, this has been Mevek's plan all along <\#208> because Mevek is also one of the primary gods of the Glinizi under another guise. Or maybe he's approached the Glinizi pantheon about a divine merger. Or perhaps someone in the Pueranlo pantheon insulted or offended him.

Campaigns

Stormrider nodded to the two hunters who served this week as the guards to Runs-With-Deer's tent. They returned the nod and stepped aside to allow him to enter.

The shaman looked up at him as Stormrider pushed aside the tentflap and stepped into the darkened interior. Thickly-scented smoke swirled around Runs-With-Deer as he returned his attention to the brazier before him. "Are they ready?"

Stormrider blinked away the stinging the smoke brought to his eyes. "Yes. The hunting party is in place."

Wordlessly, Runs-With-Deer rose and exited the tent. Stormrider followed him as the shaman made his way into the forest, out of sight of the encampment. "Here," he said simply, and Stormrider grunted in agreement.

"I'll have the herd in the meadow by mid-morning," the shaman continued. "I'll see you then. Good hunt, Stormrider."

"Good hunt, Runs-With-Deer." The two men clasped hands, then the shaman backed off. He closed his eyes. There was a swirl of light, and in his place stood a magnificent stag. The stag inclined its great antlered head to Stormrider once, turned, and vanished into the forest.

While shapechangers can be plunked down into virtually any campaign setting as bogeymen and opponents, that's far from the most satisfying course in anything but horror/mystery campaigns -- especially for PC shifters. History, myth and fiction all show far more complex and interesting possibilities of which a GM can make use.

Shifters In Society and Religion

In Western lore, shifters are usually outcasts of one form or another, divorced from the society and religion that spawned them. However, as often as not, shifters in other cultures are integral parts of their communities, and even intrinsic to their structures and rituals. For the GM willing to do the minimal work, it is possible to incorporate shapechangers into large societies with complex religious structures -- in a role other than "boogeyman."

Privilege and Power

Perhaps the easiest way a culture can make use of shapechangers is to make them a part of the power elite. Perhaps the best example of this approach are the Jaguar Warriors prominent in many Pre-Columbian South and Central American cultures. (A fantasy variant on the jaguar warriors can be found on pp.00-00.) A definitive science fiction model would be the "Founders" of the Dominion in *Star Trek: Deep Space 9*.

In such a system, shifters will be a special caste or class within the society, often with specific ritual or governmental functions. If the ability to change shapes does not naturally appear within the population, the authorities, be they secular or religious, will likely have some ability to grant it. In either case, there

will often be regular "examinations" to find new candidates for the caste. Embracing and empowering shifters turns potential rebels and enemies into staunch supporters of the status quo.

Of course, in some societies, only the *right* kind of shifter may be favored. Other varieties may be shunned or even actively hunted. Justification for such biases may be historical, political or religious, as needed by the GM.

Since the ability to shift into the appropriate form(s) is *de facto* proof of a person's membership in the privileged caste, magic or technology which duplicates the caste's shifting abilities is an issue that the GM must address. In repressive or especially static societies, or those where the gift is inherited, the use of such magic may well be outlawed with severe, perhaps fatal, penalties for violators. Alternatively, some cultures may view the ability to cast such spells as evidence of one's fitness for the caste.

In such a system, Status will be a mandatory part of a shifter package, as well as Wealth. If the shapechangers take an active role in government and society, Leadership and Administration may be needed, and/or various other military skills. If the character is of the "wrong" type, Enemy, Social Stigma, and other disadvantages would be required.

((START BOX))

@C-BOXHEAD:Shapes of the Gods

@TEXT-BOX:The idea of shifters as an elite class can be taken to its logical extreme by setting them up as objects of worship -- representatives or even avatars of gods with animal aspects. Perhaps the most striking of the historical examples available is the Arcadian cult of the Wolf-Zeus (also known as Zeus-Lycaeus), in ancient Greece.

@TEXT-BOX:As told in Ovid's *Metamorphoses*, Lycaon, King of Arcadia, sought to test the divinity of a disguised Jupiter by feeding him a "hash of human flesh", and was turned into a wolf in punishment. In historical times, Mount Lycaeus in Arcadia became the home of a cult of wolf-worshippers. According to contemporary accounts, the priests prepared an annual sacrificial feast that echoed the mythic events by including human flesh blended with more ordinary meat. Legend said that whoever tasted it became a wolf and could not turn back into a man unless he abstained from human flesh for nine years. Other accounts, among them one written by Plato, describe a somewhat different rite: one where a wolf was instead sacrificed and eaten; its "essence" was said to be absorbed by the cult's devotees who became one with it and called themselves *Lukoi* (wolves).

@TEXT-BOX:The conflicting, contradictory accounts of the wolf-cult make it an excellent inspiration for any number of similar religions a GM may want to establish in his campaign. Are weres running the cult as a front to gain themselves a safe haven? Or are they indeed god-touched? Do participants only symbolically become wolves? Or is the cult a "breeding ground" through which an infectious variety of shifting is passed to new recipients? Is cannibalism actually a part of the ceremonies, or is it, too, symbolic? Or some combination? GMs are directed to ***GURPS Religion*** for further advice and suggestions for constructing cults.

((END BOX))

Independent Shifters

A privileged class of shapechangers does not necessarily need either ecclesiastic or temporal authority to exist within a given society. The Viking *ulfhed-nar* and *beserks* (sic) are good examples. These wolf- and bear-skin warriors constituted a highly-regarded, autonomous fighter class within Viking society, recruiting and fighting but answering to no authority but their own. While their reputation as skinchangers was (at least in the real world) either age-distorted folklore or clever propaganda, they are an excellent example of how an independent but not malicious group of weres could function in a campaign setting.

In settings such as these, shapechangers must take at least one level of Status or Military Rank, depending on the requirements of the culture. Some combination of Duties, Codes of Honor, Patron, Sense of Duty and Vows would probably be required; those societies which *create* their shifter elite would probably do so with a Cursebreak (p. 00) or an Ensorcellment condition that would destroy the talent if the recipient betrays them in some way. Alternately, they may pamper and indulge the shifter, buying and ensuring his loyalty with with all manner of luxuries and indulgences. The GM may count this as Wealth, or as a higher level of Patron. Ally Group is particularly appropriate, as well.

Groups without any official sanction won't receive as much in the way of advantages. Status and/or Rank would still be present, albeit probably lower than for the equivalent state- or church-backed group. Resources and Patronage would be much less, but Ally Group may well be higher in level and in frequency of appearance.

Either variety will of course possess all necessary skills for their function. Whether this is military, religious or something else entirely, a level of 12 or the appropriate Attribute is a bare minimum. Reputations -- especially among their usual enemies -- are also common.

Skin-Changers and Other Shamanic Manifestations

Less advanced or complex societies may not institutionalize castes of shifters, but they can still have critical roles within the culture. In tribal, nomadic or other early civilizations, a shapechanger may be particularly suited to the role of shaman.

In many shamanic traditions, it is part of the function of the shaman to take on metaphorically the form of an animal of which the tribe has need, either as a lure or as an appeasement. In other views, the shaman directly represents the totem animal of the tribe with metaphoric trappings. In magically active worlds -- that is, worlds with shapechangers -- this need not be metaphor. Two options present themselves:

The shaman as Morph. Those with the talent learn to become animal(s) as needed. They defend the tribe with the shapes of dangerous beasts, use acquired knowledge and instinct to help with hunts, and so on. Morphs are seen as blessed and in touch with the powers of nature. This best works with animist and pantheist religions, but can also be blended with totemism (see *GURPS Religion*, pp. 126-9).

((START BOX))

@C-BOXHEAD:Modern Shamans

@TEXT-BOX:Shamanism survives to this day in a number of guises. There is, of course, the assiduously "reconstructed" shamanism found in many varieties of Neo-Paganism. Most varieties content themselves with emulating American Indian beliefs, or attempting to extrapolate the long-forgotten shamanic traditions of Europe. A small subset of these, though, explicitly tie lycanthropy into their belief systems, although it is most usually employed as a metaphor for the shamanic empathy/sympathy with animal spirits.

@TEXT-BOX:A number of other religions show distinctly shamanistic elements. In particular, Santeria and its sister belief systems from the many syncretic Afro-Caribbean cultures can frequently involve channelling animal spirits in a manner reminiscent of the earliest duties of the shaman.

@TEXT-BOX:Assuming that a shamans' ability to communicate with spirits is a real part of the game world, then if these religions and any others with similar features are present, they should be considered "shamanistic", at least for the purpose of determining who can reach the other side and who cannot.

((END BOX))

The shaman as Were. Whether granted the ability with the position, or the position because of the ability, the shaman can take the form of a specific totem animal. In a parallel with Voudoun tradition, the totem may then "incarnate" into the shifted shaman. (This may be either a Split Personality or an actual spiritual contact, depending on the game world.) Or the shaman may symbolically "share" the totem's strength with the tribe through ritual or more literal means.

In either scenario, competition and conflict may be common, with the "wrong" kind of shifter automatically an enemy within a given tribe or village. Politics between totems (or the shamans thereof) -- alliances, neutralities and enmities -- will affect relations between villages/tribes and between individual weres. Of course, there will also be certain totems known to be neutral or friendly to all. But pity the were born in a village or tribe where he's the "wrong type."

((START BOX))

@C-BOXHEAD:Shifting Drugs

@TEXT-BOX:In Victorian literature (among other sources), drugs and potions of all types have been known to cause shifting or shifting-like behavior. *GURPS Steampunk* lists one such drug, based on the mysterious mixture consumed by Henry Jekyll in Robert Louis Stevenson's *The Strange Case of Dr. Jekyll and Mr. Hyde*: Atavismine, the use of which can result in permanent *ethomorphism* (see pp. 00-00).

@TEXT-BOX:Not all such compounds need have so drastic a set of side effects; presumably drugs which cause shapechange-like effects will be safer and more controllable as the biosciences progress. The fact that the manufacture of such compounds as Atavismine are even possible at TL5, though, may mean that they have as much in common with primitive or medieval magics as science. Folk traditions abound in mystic and mysterious mixtures which grant shapeshifting abilities to their users. Whether such are true magics or misunderstood "natural" sciences is up to

the GM and the campaign.

@TEXT-BOX:Attention Editor: I received the following text directly from the author of Steampunk; please replace if it differs from what made it into print.

@D-BOXHEAD:Atavismine

@TEXT-BOX:This drug produces temporary evolutionary regression to a more primitive state ruled by impulse. A character who takes it, such as the unfortunate Henry Jekyll, acquires a temporary Split Personality at the 15-point level. Basic IQ is unchanged, but psychological traits that reflect self-control and humanity are lost (for example, Empathy, Code of Honor, and Sense of Duty), while traits that reflect impulsiveness and brutality become worse (for example, Bad Temper to Berserk) and new ones may be acquired. Finally, the character's appearance changes, making him unrecognizable; in the process he becomes one level less attractive through a subtle quality of deformity. A Will roll is required each time the drug is taken; on a failure the character becomes addicted, on a critical failure the character becomes vulnerable to flashbacks (treat as Split Personality), and on a natural 18 the atavistic personality becomes the baseline personality. Cost is \$0.05 per dose.

((END BOX))

Investment

How much divine power is actually associated with shifting talents is up to the GM. Obviously, in a world with no gods or no visible gods, shifters have only their innate talents available. This may or may not include spell-casting -- shamans are traditionally users of magic in many forms, and spells are among them.

Potentially more interesting is a world with active gods. GMs have a wide variety of options for equipping shamans with "clerical magic": *GURPS Voodoo*, *GURPS Magic* and *GURPS Religion* all have useful information and suggestions. The spirit-based magic "path" system in *Voodoo* lends itself especially well to shamanic-style magic. And of course the shamanic system found in *GURPS Old West* is tailor-made for this situation. In the face of all these options, however, do not forget that the primary qualification of a shaman is his ability to shift. The attentions of the gods/spirits/totems and the gifts they grant will be in some way related to his talent, supplementing or extending it to better serve both them and their people.

Other traits. In addition to any such gifts the character may or may not possess, he will certainly have an appropriate Theology skill at 12 or IQ, whichever is higher. In addition, Psychology, Herbalism, Naturalist, Physician, Tracking and any number of other skills appropriate to a shaman are recommended. The character also will possess at least one level of Status. Any rivalries/alliances with other totems or tribes that may directly affect him should be expressed as a combination of Allies, Enemies, and Reputations.

In those settings where the shaman's gods/spirits are real and active, Clerical Investment, Duties, Vows and Patrons will also play a major role in the design of the character.

((START BOX))

@C-BOXHEAD:The Werewolf and Medieval Christianity

@TEXT-BOX:In one of those peculiar developments that seem at times to all but define Roman Catholicism during the Middle Ages, the Church became somewhat fixated upon the topic of werewolves. Along with witches -- with which they were usually conflated -- werewolves were at the top of the Church's list of active works of the Devil on Earth. So firmly was this anchored in the medieval Catholic mindset that doubting or denying the existence of werewolves was considered heresy and, in some areas, grounds for an Inquisitorial visit.

@TEXT-BOX:Any church or denomination which preserves and preaches medieval Catholic dogma -- either by descent from Roman Catholicism, or through some mechanism of parallel development -- is likely to include these beliefs among their teachings. Oddly enough, the Church in Yrth appears to be somewhat *more* relaxed on the subject than its forebear, in spite of (or perhaps because of) the presence of actual weres among the population. (This may be because it was founded by individuals who were transported to Yrth *before* the medieval Christian werewolf paranoia reached its peak.)

(((END BOX)))

Were-Forms As Punishments From The Gods

In some campaigns, there will no "fortunate" weres; they will always be victims of curses or their own lusts for power or wealth. (This is not an option that supports Morphs easily, for obvious reasons.) The medieval Catholic church espoused this opinion, and most horror films have followed its model. While obviously well suited for campaigns set in a "realistic" medieval Europe or some derivative thereof, it plays equally well in other settings. Oddly enough, there need not be active gods in the campaign for this option; the punishment can be an automatic consequence of the sin, and curses may be inflicted upon the innocent by a perfectly worldly source.

To the modern way of thinking there is a clear qualitative difference between someone like the mythical medieval witch who takes on a were-form as a means of sowing chaos and mayhem, and a person on whom an animal shape is inflicted as a torment. Religious authorities may not see things that way, though. One religion may differentiate a curse victim from a servant of evil, seeking to save the one and destroy the other. Another religion may see no difference whatsoever, regarding both as tainted with darkness and sin, and both as deserving of whatever measures are prescribed in their dogma.

And simply trusting to the mercies of an "enlightened" religion may not help; even sympathetic religions may see execution as the only possible mercy in the case of the cursed.

Worse yet may be the case where both types of were are known in folklore and popular myth -- falsely. Only one type may actually exist -- and only the weres know for sure which. Imagine the possibilities for mayhem if only evil shifters existed, yet folklore insists that some shifters are innocents trapped by the machinations of evil. And imagine the potential for tragedy in the opposite case.

Mechanics

Under this option, weres are reduced to two different varieties. Note that these characterizations are by no means definitive;

The Cursed have a Split Personality with an inimical were-form. Their change is Cyclic or Triggered, and they have no ability to shift at will. If they are lucky, there is a Cursebreak, but it is rare, dangerous, uncertain, or some combination of all three. The alternate form may be of any species; it is pure animal, or it may have Bestial and/or Presentient bought off and IQ equivalent to the base form. In either case, it will usually possess some compulsion to do harm to others ranging from the inconvenient (chasing off and/or killing local livestock) to the deadly (hunting the base form's family and friends). A highly ethical or strong-willed were will try to lock himself away when the Change comes upon him; this will not always be successful, given the cunning and intelligence of the average curse were-creature.

The source of the curse can vary -- a hereditary condition or an Infectious Attack, perhaps, or it could have been deliberately inflicted. In the latter case, who, why and how all are excellent campaign hooks.

The Evildoer has an agenda: terror, chaos or just personal profit. They will possess one or more of the classic "evil" disadvantages -- they are usually selfish, greedy or sadistic, at the very least. Certainly they have a lust for power which has grown dangerously large, for they have called upon some form of supernatural Evil to grant them their desires. Depending on the involvement of the divine in the campaign, they may have made a pact with Dark Forces, or they might simply possess certain banned grimoires. Either way, they have acquired the ability to shift.

The Evildoer's change is also a were-form. It is almost always at will -- although it would be more than fitting for the Evildoer to also be Cursed as part of his power. Medieval European myth specifies that this variety of were normally takes the form of a cat or a wolf, and their change is often linked to some item -- an ointment which is applied to the skin, or a belt or skin (of the appropriate beast, of course) which is worn when the power is invoked. They always have full possession of their faculties in their alternate forms, although they may be seized by odd compulsions or obsessions. Judging from testimony given to the Inquisition, they would specifically attack and terrorize those persons whom they felt had harmed or inconvenienced them in some way -- even when doing so was blatantly self-destructive.

(((START BOX)))

@C-BOXHEAD:"Real" Lycanthropy

@TEXT-BOX:Assuming for the sake of argument that weres do not exist in the "real world", what inspired the legends? Setting aside the half-remembered remainders of shamanic traditions the world over, there may well be other sources. A number of medical professionals have suggested certain genuine conditions that may have contributed to the myth. GMs running a "totally realistic" medieval game can use these diseases to add an unexpected flavor of surprise, horror and danger to the campaign without having to incorporate fantasy elements which might be out of place. Or perhaps a werewolf attack in Yrth or another fantasy setting may turn out to be a far different prospect...

@TEXT-BOX:*Dementia*. There is a specific variety of mental illness called "lycanthropic disorder," whose sufferers believe that they turn into wolves (or, less frequently, other animals).

They experience full-sensory hallucinations of changing physical form, are given to outbursts of inexplicable violence, and feel insatiable cravings to drink blood. GMs and players can quantify this condition as a combination of Flashbacks, Delusions, and the Compulsive Behaviors of Violence and Drink Blood. Sadism is sometimes appropriate. Also, such a character will never have any form of Pacifism, Empathy, or similar traits.

@TEXT-BOX:*Rabies*. Of the options presented here, rabies is probably the best candidate for a "realistic" encounter with an apparent were-creature. There is a historic correlation in medieval Europe between rabies epidemics in both humans and animals, and concurrent werewolf trials. According to reliable contemporary accounts, rabid wolves were known to travel long distances, besiege villages, and fearlessly attack all humans in their path. They showed no fear and charged relentlessly, decimating settlements and terrorizing peasant and noble alike with the hair-raising sounds they made with their disease-paralyzed larynxes.

@TEXT-BOX:Similarly, there is a correlation in behaviors between human rabies sufferers and the "traditional" werewolf: victims of rabies are said to rage deliriously, howl, and go into frenzies, attacking nearby persons and frequently biting them. And, the better for inserting a note of horror into an otherwise "mundane" setting, rabies is just as contagious as any infectious were curse -- and more destructive of its victim.

@TEXT-BOX:In game terms, a character bitten or scratched by a rabid animal contracts the disease unless he makes a HT-5 roll. Incubation time can be anywhere from 10 days to two *years*, but for most victims it will be one to three (HT/5) months. The first perceptible symptoms after incubation are a fever and a general sense of unwellness. After two or three days of feeling ill, the victim becomes irrational as his brain cells begin to die (-3 to IQ, Bestial, Berserk, Compulsive Behavior: Bite People, Paranoia, and the GM's choice of other mental disadvantages, including buying off Pacifism and other "good" disadvantages) and he suffers from violent mouth and throat spasms. Although victims are also intensely thirsty, the spasms worsen if the victim tries to drink water. At this point, death occurs within the next few days -- there is no HT roll to recover, and victims lose 1d-1 HT (minimum 1) per day once the spasms start.

@TEXT-BOX:Untreated, rabies is almost 100% fatal. However, rabies treatments are available starting in TL5 -- it was one of the first vaccines ever developed, first used in 1888 by Louis Pasteur. Unlike many vaccines, it can be administered effectively *after* infection. Before late TL7, treatment was a series of 8 to 20 injections to the deltoid muscle; after 1980, this had been reduced to one vaccination into the wound itself, followed by five more in the deltoid. Late TL7 treatments are almost 100% effective; earlier treatments are somewhat less so. Individuals who are promptly treated recover with no long-term ill effects.

@TEXT-BOX:*Porphyria*. Most commonly proposed as the "real" source of vampire myths, congenital porphyria has also been suggested for werewolfism. It is a rare inherited disease caused by an abnormality in the blood's hemoglobin. The symptoms vary, but the most extreme cases include severe psychological disorders such as manic-depression, extraordinary sensitivity of the skin to light (with subsequent discoloration, blistering, and mutilation), discoloration of the teeth, and occasional cravings for blood or other substances. While it cannot be contracted like an infectious disease, it can be latent and triggered by alcohol, barbituates, pregnancy or even just too much sunlight. Sufferers have a Weakness to sunlight (Very Common, 1d per 30 minutes). Every

time they take more than HT/2 points of damage from sunlight in one exposure, they must make a HT roll or permanently lose one level of Appearance; Appearance *can* be reduced to Monstrous or Horrific in this manner. They also possess Chronic Depression or Manic-Depressive (or up to -25 points of other mental disadvantages, if the GM approves), and Compulsive Behavior: Unnatural Food Cravings.

@TEXT-BOX:There is no cure for porphyria, nor even a treatment to suppress its effects.

@TEXT-BOX:*Congenital Generalized Hypertrichosis*. Also called "Werewolf Syndrome." Another hereditary disease, hypertrichosis is an extremely rare genetic condition which leaves its victims covered in dense hair. Like porphyria, it cannot be contracted except by inheriting it. Characters with hypertrichosis grow hair all over their body, unless they take pains to shave or otherwise remove it. There are no other effects. In game terms, this is a maximum Appearance of Unattractive; in settings where it is important to look "normal" or like a certain racial/cultural ideal (such as medieval or even modern Japan), Monstrous or Horrific may be the maximum. A Social Stigma or other negative reaction modifiers may also apply.

((END BOX))

Detecting and Thwarting Shifters

Whether as the good guys or the bad guys, there will eventually come a time when the shapechangers in a campaign will want to be someplace where they are not supposed to be, and will use their abilities to get there. Naturally enough, there will also be those who want to catch them at it.

Depending on the paradigm(s) under which shapechanging operates in a given campaign, there may be many ways to discover a shifter, or none. Before introducing any variety of shapechanger to his campaign world, the GM should think carefully about the countermeasures available for use against them. The herb moly (see box, p. 00), for instance, is a low-tech method from classical literature, but requires the user discover the shifter via other means. (It probably also requires the shifter be magical in nature -- although that is not necessarily so. Imagine a carefully orchestrated infiltration of high-tech morphs into a low-tech society foiled because a rare herb disrupts their changing mechanism!)

((START BOX))

@C-BOXHEAD:Moly

@TEXT-BOX:*Black was its root, but milky-white the blossom that it bore.*

@TEXT-BOX:*The Immortals call it 'Moly' -- to dig it where it springs*

@TEXT-BOX:*Is hard for a mortal man; but the Gods can do all things.*

@TEXT-BOX:-- Homer, *The Odyssey*

@TEXT-BOX:Given to Ulysses by Mercury to protect him from Circe's magic, moly is better known as "sorcerer's garlic," although the variety of wild garlic known by that name today bears

little resemblance to the black-rooted, white-flowered herb of myth. In addition to being a medicinal plant sovereign against "blights, mildews, and damps" according to one source, it is best known for its ability to thwart charms and enchantments. As a member of the garlic and onion family, it has a pungent odor which is somewhat unpleasant, and its leaves taste quite bad. The flavor of moly root is not described in ancient texts, but it is probably not unlike cultivated garlic.

@TEXT-BOX:*GURPS Magic Items* describes both an alchemical elixir called "Moly" and an amulet of the same name (p. MI113 and pp. MI116-7, respectively). The effects given in their entries, though, are inconsistent with descriptions given in the *Odyssey* and other texts, being both rather weak and overbroad, so the following alternative is offered to the GM.

@TEXT-BOX:A sprig of moly can be used, just as Ulysses did, as a shield against transformation spells. (When employed in this manner, treat it as an appropriate Counterspell of power 20.) It can also be used to dispel any magic which changes its subject's shape -- a single leaf, intact, placed in the mouth and held there, will undo any shapechanging spell and force weres and morphs back into their base forms, taking 1d seconds to do so. Furthermore, an alchemist or herbalist can use moly to brew a foul-tasting elixir that can suppress the Change in an inherent or inherited were for 1d months, and will cure an acquired infectious were-state outright. This elixir (available only in potion form) is compounded of a sprig of moly plus other ingredients costing a minimum of \$1,000; it requires an alchemist who is familiar with the Circe elixir as well as shapeshifting and/or shapeshifters, and who possesses a skill level of at least 18. It takes five weeks to brew.

@TEXT-BOX:Moly's virtue lasts only as long as it is fresh; once it wilts (usually within a day or two), it loses its power. It cannot be preserved in any way that maintains its magical power except for its potion form, which remains efficacious for six months after brewing.

@TEXT-BOX:White-flowered moly is rare and difficult to harvest without destroying its inherent magic. ("Moly-Harvesting" is a MVH skill for those characters who absolutely must have it.) Fresh sprigs sell for \$2,500 each -- more in areas plagued by were-creatures or hostile magic.

((END BOX))

The majority of the following suggestions assume that the "opposition" is a morph, although some should be just as applicable to weres. Many of the suggestions tend more toward the (pseudo-)scientific end of the spectrum, but there is no reason why that should make them any less valid in a more fantastic setting. As always, the GM should tightly control this information. Some "folklore" or "common knowledge" might be available, but it can easily be wildly inaccurate, misleading, or even hazardous!

Note, by the way, that this is not necessarily *just* a checklist of ideas for player characters besieged by shifter enemies. Sufficiently clever NPCs should think of any (or all!) of these methods should the PCs be the ones doing the besieging!

Anticipation and Suspicion

Outside of a high fantasy campaign, where just about anything might be expected, or a horror game where those involved know what they're up against, a shapechanger may well come as a complete surprise. Still, there are ways to anticipate the possibility.

If the shifter is a natural part of an unfamiliar ecosystem, be it another planet, a different plane, or simply an isolated ecology in some "lost" part of the world, it's likely other creatures around it will have similar abilities. Witnessing a flock of grazing animals suddenly turning into birds to escape a predator would be a good indicator -- and may reveal useful clues to their nature. Even more telling would be the predator similarly changing shape to pursue its prey! If the ecosystem favors morphs, having an unintelligent morphing creature attempt (however inadequately) to duplicate one of the outsiders can be humorous or disturbing, depending on how the GM plays it -- and can set the stage for a far more competent interloper later.

If the shifter is an infiltrator, its feeding habits may give it away. Predators are far more likely to be shapechangers (and vice versa) than prey species for a number of reasons both scientific and mythological. A sudden increase in predation rates (especially among skittish herd animals or protected domestic beasts) with no apparent increase in the natural predator population may well indicate something out of the ordinary has inserted itself into the food chain. Sentient shapechangers might give themselves away by showing too much intelligence and planning in their kills, or conversely, excessive sadism or bloodlust.

(((START BOX)))

@C-BOXHEAD:Vulnerabilities

@TEXT-BOX:It is usual in both legend and cinema for werewolves and other shapechangers to be invulnerable to all forms of damage -- save for silver. Similarly, a curable were who is immune to all other forces must be vulnerable to the means or methods of his cure! While this is far from universal in legends and stories across the globe, it does raise the question: what are the frequencies of appearance for various countermeasures, so Vulnerabilities (p. CI106) can be properly priced at character creation?

@TEXT-BOX:*Silver*. The traditional weakness of werewolves is available at TL 1. Although it is a precious metal, it is easily acquired in almost every culture that has metal-working; it is not, however, omnipresent. Silver is an *Occasional* substance, worth -10 points per level as a Vulnerability.

@TEXT-BOX:*Holy or blessed objects*. When cited in myth, this almost always refers to items consecrated to the dominant religion in the region. In such a case it's likely that, as in medieval Europe, almost every town and village will have at least one priest and sanctuary of that religion serving its people. Assuming no other complications (disbelief in weres, legal strictures, and so on) cloud the issue, getting or making consecrated items will be relatively easy, making them *Common*, and worth -15 points per level.

@TEXT-BOX:*Alchemical compounds*. Any mixture of ingredients that is intended to be applied to the were, whether or not it is actually prepared by a real, magically-gifted alchemist, falls under this heading. These recipes can vary wildly from legend to legend; the rarest item in the ingredient list sets the availability level of the mixture itself.

@TEXT-BOX:*Other*. For everything else, this rule of thumb may be helpful:

@TEXT-BOX:• If you can't walk down the street without running into it, it's *Common*.

@TEXT-BOX:• If you can walk into a stranger's house or a mall and be pretty sure you'll find it, it's *Occasional*.

@TEXT-BOX:• If you can only find it by going to a nearby specialty store, or if it costs a lot of money, it's *Rare*.

@TEXT-BOX:• If you can only get it by mail order from a distant dealer, or it costs vast amounts of money, it's *Very Rare*.

((END BOX))

Tactics and Countermeasures, Or, Finding The Infiltrator

Regardless of the justification for a shapechanger's abilities, at least one of the following strategies is likely to prove a fruitful avenue of investigation when it comes time to find a way to detect the creature:

Energy

Shapeshifting may require a large amount of energy, especially if it is "complete to the atomic level". Look for the burst of waste heat that accompanies the shift. Or conversely, sudden and unexpected cold spots, if the change requires the *absorption* of energy from the local environment to initiate or complete the process.

In a high-tech setting, a computer-controlled environment system could be programmed to monitor the thermostat sensors in each room, allowing a shape-shifting event to be tagged in time and location. Either way, a temporarily elevated body temperature can indicate a person who has been duplicated (it will probably take some time to cool down to "normal" after a shift).

Look for the internal features unique to the shapeshifter. A duplicate can't be *completely* identical to the original, or it would be unable to ever change again (since the original can't change). So it must retain the shapeshifting mechanism, and (unless it can somehow draw on external power) the energy storage that fuels it. Does it have energetic nitrogen molecules suffusing its internal organs? Does it have extra mitochondria, or excess ATP?

Look for the energy recharge mechanism. Does the shapechanger have an incredibly voracious appetite after shifting? Does it chow down on candy bars or even raw sugar? Or plug in to a nearby electric outlet? Does it bask in front of a microwave beam? Fantasy shifters are notoriously dependent upon local mana -- perhaps the mana level around them drops precipitously for a short time during the change, or for as long as they're in their alternate form (making them even more of a threat than usual to spellcasters). Some shifters have the Mana Enhancer advantage -- the local magic level might go *up* when they're around.

Similarly, shifters may have identifiable *patterns* to their energies, even if they don't appear to consume or radiate excess power in the wake of their changes. Psionic shapechanging will probably have its own specific signature which a Sniffer or other sensitive might detect, for example. Fantasy shifters who are otherwise well-cloaked may be revealed by the proper use of Analyze Magic. And so on.

Structural/Biological Traits

As noted above, if the shifter retains the ability to change, that mechanism has to be present *somewhere* in the body. By extension, so must the "original plans" for the creature. Does it keep two sets of DNA? Or does it rearrange the introns ("dead," inactive sequences) in its DNA and swap which parts are turned on and off? Genetic testing would probably detect the first, although the second would probably confuse both experts and software unfamiliar with the phenomenon.

Unless it also undergoes a complete personality shift as well, its brain structure can't change too radically. A CAT scan or MRI might reveal the truth, as might an EEG. On the other hand, the brain inside the copied skull might be a "dummy", with the real one hidden somewhere else in the body, perhaps disguised as another organ. (X-rays or other non-intrusive procedures may or may not detect such a hidden brain.) Natural shifters will rarely have such an extreme ability, but it may well be a "standard feature" for *manufactured* shapechangers, especially those designed to infiltrate other races.

Any replication that is less than cell-for-cell perfect may mimic the *form*, but not all the functions. Detection may rely upon the fact that certain reflexes or body processes might not be copied, or copied imperfectly. For example, in John W. Campbell's Golden Age SF story "The Brain Stealers Of Mars", space travelers discovered the alien morph among them in just that way: presented with pepper up the nose, the alien couldn't duplicate a reflex that involved some 500 sets of muscles and an autonomic nervous system tuned by millions of years of earthly evolution -- the sneeze.

Mental/Social

Against those morph types who do not gain an extensive copy of their target's memories, non-body-specific identifiers may be sufficient. These include various social behaviors -- such as religious rites, idiosyncratic behaviors and cultural preferences -- and obscure skills or items from personal history, specifically catalogued for just this purpose, which a morph undergoing a simple body-only change will find hard or impossible to duplicate.

Knowing Your Own

Opposition that knows what it's facing may develop some explicit method of identification that can't or won't be copied by any kind of change. This is possible in many worlds, regardless of background or technology. For example, it's possible in virtually any TL 6+ setting to give vulnerable personnel regular doses of stable but uncommon isotopes (Carbon 13 and Nitrogen 15 would be a good bet). Upon their return from field missions, personnel would be quarantined until the isotope ratio could be confirmed by whatever means is at hand, be it mass spectroscopy or a multiscanner. Someone *without* the isotopes, or with the isotopes in the wrong quantities, would be examined far more carefully -- or even summarily executed.

Magic can provide similar benefits. Use *Ensorcel* from p. 39 of *GURPS Grimoire* to imbue possible targets with a minor spell (possibly a custom one developed for the purpose), using an unlikely but simple spell-break provision to make the process as cheap as possible. Using *Mage Sight* or even *Identify Magic*, scan personnel on a regular basis, and examine anyone who has been in the field immediately upon their return. Anyone who is found to be lacking their ensorcelment is, of course,

a possible morph.

Sufficiently-motivated players or GMs can no doubt come up with even more effective methods, regardless of the setting.

((START BOX))

@C-BOXHEAD:Traditional Cures For Werewolves

@TEXT-BOX:Both film and folklore hold out hope of a cure for those suffering from a shapeshifting curse. However, as if to further exacerbate the horror in which these sufferers must live their lives, these cures are often breathtakingly rare or all but impossible to accomplish.

@TEXT-BOX:Alternately, these can be seen as weaknesses to exploit when attacking an evil shapeshifter. However, some folklore claims that for any cure to work, the were must sincerely want to be cured. Without that, even the most powerful working will fail. Worse yet (for player character weres, at least), some of the most extreme cures work by killing the sufferer to save his soul.

@D-BOXHEAD:Traditional Cursebreaks

@TEXT-BOX:The following is a list of traditional cures for lycanthropy, as testified to by folklore and legend. It's anything but exhaustive, being more a sampler extracted from the most common myths, but players and GMs alike should find it useful and inspirational. It is, as always, up to the GM if any, all, or none of these work, for how long and for which weretypes; and it is quite within the GM's purview to allow a were-form with a Cursebreak (p. 00), but *not tell the player what the cursebreak is*.

@TEXT-BOX:*Exorcism*. A traditional Church solution to all seriously evil problems. The justification is that the were-form is actually a malevolent spirit possessing the victim (or cooperating with a witch). A priest can perform the full "bell, book and candle" ritual; for the unordained, simple prayer, sprinkling holy water, and proper invocations of the victim's baptismal name in the name of the Trinity are said to be efficacious. (The GM may require True Faith or another "holy" advantage for an "informal" exorcism to succeed, though). In the case of calling the victim's name, three repetitions in the presence of the animal form is the prescribed ritual.

@TEXT-BOX:*Alchemical/magical approaches*. Some of these operate on the same principles as exorcism, being attempts to expel a hostile spirit. Others treat lycanthropy as a spell that has to be broken or dispelled. However it is approached, though, the process usually requires a great number of odd and unusual ingredients combined according to an improbable recipe, and/or a complex ritual that would put a full Catholic mass to shame.

@TEXT-BOX:*Doctrine of Opposites*. To the mind versed in medieval European thought, the world was balanced in many ways. For every evil there was an opposing good to be found somewhere -- a natural counter, remedy or antidote, thoughtfully provided by God. In the case of lycanthropy, there was wolvesbane, or even moly (see p. 00). Wolvesbane's reputation is evenly split between poison and cure; the latter seems more common as part of an alchemical formulation. Some claim that the fruit of *Rauwolfia serpentina*, a woody shrub native to Thailand and India and which has dozens of legitimate medical uses, can also cure lycanthropy and even suppress morphing talents.

@TEXT-BOX:*Physical trauma.* The poor man's exorcism; the idea is to break the spell or drive out the lycanthropic spirit by damaging the body of the victim until the magic can no longer reside in it. This can range from simple beatings, through more complicated tortures up to and including coating the victim with a boiling mixture of molten tar, sulfur and various poisonous herbs (which of course overlaps with the alchemical cure), to simply killing the victim outright in order to save his soul. (By similar logic, suicide will also break the curse according to some traditions. One must be careful with this "cure", though -- other equally sincere traditions claim this guarantees the individual will *return* as a werewolf.)

@TEXT-BOX:One particular version of this method which has strong support in folklore is amputation. A number of folktales cite it, and it was pivotal in at least one "historical" case of lycanthropy, that of Raimbaud de Pinetum, the infamous "Werewolf of Auvergne." In order to free himself of his lycanthropy, Raimbaud had a woodcutter chop off one of his paws -- "For they say that amputation of a limb frees such men from their calamitous condition."

@TEXT-BOX:Note that not just *any* damage will have the desired effect, but only that inflicted for the sole purpose of ending the victim's lycanthropy. This method possesses the dubious virtue that it can be performed by unskilled labor using tools and materials immediately available at any farm or blacksmith's shop, which no doubt contributed to its popularity.

@TEXT-BOX:*Self-control.* The lycanthrope must restrain himself from attacking humans for some period of time, usually nine years. This is best suited for weres who retain some fraction of their mind and/or personality while in their alternate form, while at the same time suffering from a reduced impulse control or compulsions to do violence.

@TEXT-BOX:*Blood.* Another method requires the highly dangerous task of extracting 3 drops of blood from the lycanthrope while he is in animal form. Boiling a king's tooth in werewolves' blood and molten silver is also reputed to be an effective cure, but how this mixture is to be employed is not specified; hopefully, it is not intended to be swallowed...

@TEXT-BOX:*Cinematic cures.* Of course, movies and TV have added their own inventions to the mix over the years. Universal's first werewolf movie, 1935's *The Werewolf of London*, has its were, Dr. Wilfred Glendon, dependent upon "marifasa" (a rare Indian flower that only blooms during the full moon) to suppress his transformation. Unfortunately, it works only for one night at a time. The gothic soap opera *Dark Shadows* had the "moon poppy", which when eaten while in were-form would end the affliction forever. It also had gypsy spells capable (at great cost, of course) of curing lycanthropy.

@TEXT-BOX:*Bloodline cures.* In stories where lycanthropy can be transmitted via a bite, a cure usually involves the specific creature that infected you. The most dangerous of these options involve hunting down and killing the "parent" beast; some cures require eating its heart as well. A somewhat more disgusting but less life-threatening cure specifies mixing the saliva of the were with water from an English moor, but whether the combination is to be drunk or applied to the wound is not clear. One thing is certain -- this cure must be mixed and applied before the first dawn after the attack, or it is ineffective!

@TEXT-BOX:*Utterly random.* According to several Germanic tales, throwing a hat at a werewolf can cure him. Other stories say hitting him on the forehead with a key will do the trick. Similarly,

the afflicted person could strike his own forehead three times with a knife.

((END BOX))

Prejudice and Pride: Lions of The Pure

A Sample Shapeshifter Campaign

Following is a brief concept for a campaign incorporating shapeshifters as a major element. It demonstrates how a were-creature element can be added to a campaign in progress, in this case a historical or otherwise non-magical, low tech setting (although it can also be used as the basis for a stand-alone game).

...And In Paradise They Dwelt

In the blessed name of Mevek, may He watch ever over us, amen...

The invaders called themselves Glinizi. They fell upon us in the thirteenth year of the reign of our lamented King Ta'an, bearing the sticks of fire against which no mortal man could stand. From the sea did they come, in swarms like locusts from out their great ships, and they overran all the lowlands. They enslaved our people and called it "liberation"; they seized Niles Mithana, the capital, and set themselves up as rulers over all the people of Chanarkesh.

As part of their tyranny, the Glinizi forbade the worship of Mevek (blessed be His name!). When the king and the priests protested, the Glinizi murdered them, desecrating the altar of Mevek with their blood. When the people rose up in protest, the Glinizi slaughtered them in the streets.

Knowing they could not stand against the Glinizi and their sticks of fire, One Hundred of the faithful of Mevek (blessed be His name!) escaped to the Vangkesh Hills. There they made supplication unto Mevek and prayed for a way to deliver our land and our people from the invaders. And Mevek (blessed be His name!) heard their prayers and answered them...

A peaceful subtropical nation. An occupying army with a technology beyond that of the natives. And a vengeful god who emphasizes personal initiative and responsibility. Three ingredients whose combination has had unexpected results -- for the invaders.

((START BOX))

@C-BOXHEAD:Adapting The Setting

@TEXT-BOX:This campaign seed was inspired by (but should not be construed to *represent*) some aspects of the Anglo-Sikh Wars of the 1850-60s. As such, the intended flavor of this setting is British Colonial India circa the middle of the 19th Century (albeit leavened by a kind of hybrid Thai/Cambodian aesthetic).

@TEXT-BOX:Even so, no details here are exclusively specific to that place and time; this campaign seed can be adapted for any game set somewhere between TL3 and TL5. The primary ingredients needed for this are a distant, aggressive imperial nation, a tropical native population in

a land colonized or conquered by that nation, a suitable wilderness zone, and an appropriate religion. The military forces fielded by the empire should be technologically advanced (at least +1 TL) compared the natives, making them apparently invincible.

@TEXT-BOX:As written, this setting can be dropped into almost any standard fantasy game, as well as more historical settings. All that will be necessary may be changing the names and perhaps some of the politics, and the nature of the Glinizi "firesticks". If the world background is ostensibly non-magical with distant and uninvolved (or non-existent) deities, all the better.

@TEXT-BOX:With a little research and effort, the GM can even quickly adapt this material back into its inspiration, turning a more conventional British India campaign into something out of Rudyard Kipling's darker nightmares. While it can serve as an interesting twist to a "real world" game, it can also work in a gameworld with active magic, especially if the GM leaves misleading clues about the nature of the natives' ability to change.

@D-BOXHEAD:Protagonists and Antagonists

@TEXT-BOX:The setting is also written such that either side (or both!) can be played as the "good guys", depending on the needs of the game. In fact, it works best if neither the Chanarkeshi weres nor the Glinizi invaders are portrayed as outright evil, but rather responding as best they can to a complicated situation. While it is possible to reduce either side to predatory stereotypes preying upon the valiant forces "liberating" their land, no small amount of the flavor of this setting will be lost.

((END BOX))

Chanarkesh

Located in a fertile subtropical zone, Chanarkesh is a land of lush farmlands, moist rain forests, and wooded, rocky hills. The innumerable family farms dotting the well-watered lowlands provide bountiful crops, while the upland forests produce a wide variety of woods for carving and building. Add to it the fine stonework Chanarkeshi craftsman have learned over centuries of building elaborate temples, and you have the three primary exports of this small but rich coastal nation, whose sea-going tradition includes both merchants and fisherman.

The Chanarkeshi are said to produce fishermen, farmers, traders and scholars in equal proportion; they live under a clan system capped by the combined power of the king and the priests of Mevek, the lion-god whom they have worshiped since time immemorial. Mevek is distant but benevolent, paternally encouraging both individual achievement and loyalty to clan and nation. It has been hundreds of years since Mevek took a direct hand in the affairs of Chanarkesh, but this does not discourage his followers. Instead, they point to it proudly as evidence they have followed his commandments -- Mevek only intervenes when the people have turned from him, or if utter catastrophe looms.

((START BOX))

@C-BOXHEAD:Inside The Chanarkeshi

@TEXT-BOX:While they are are learned and peaceful people, the Chanarkeshi are also stagnant.

This may be partially by design -- Mevek certainly favors stability and predictability, despite his aspect of a wild animal. However, what works for Mevek doesn't necessarily work as well for Chanarkesh -- the land is steeped in, and choking from, highly respected tradition and an increasingly hidebound caste system. Chanarkeshi bards love to tell the tales of famous heroes of yore who climbed the social ladder from dirt farmer to king, but anyone trying to emulate them today is more likely to be imprisoned for breaking his caste than honored for the effort.

@TEXT-BOX:This is particularly encouraged by the priesthood of Mevek, who enjoy a comfortable (and all-but-hereditary) position at the top of the social ladder. Not surprisingly, they are going to be hostile to the very idea of the lion-men. Commoners approaching Mevek without their intercession, indeed!

@TEXT-BOX:The truth is, despite its prosperity and comfort (or perhaps because of it), Chanarkesh is headed for social collapse. The civilization is stagnant and petrifying, with entirely too much focus on past glories and self-congratulatory festivals. A growing underclass (one is always allowed to move to a *lower* caste, after all) is finding itself more and more marginalized even as it shoulders more and more of the country's day-to-day support.

@TEXT-BOX:If Chanarkesh is to survive, it needs to be shaken up *badly* -- and the Glinizi just may be the thing to do it. If they don't destroy the country first.

((END BOX))

Geography

Chanarkesh is a roughly trapezoidal nation, set on a peninsula extending southwest out of the main body of the continent of which it is part. Its western coast, running north-northwest to south is the trapezoid's longest side at just over 300 miles; the southern coast stretches for 200 miles almost due west until it intersects the main continent. Wrapping around the other two "sides" is a long chain of steep, rocky hills spotted with light forest, which mark a border with two of Chanarkesh's neighbors and are in fact the foothills of an impressive mountain range somewhat further inland. Known to the Chanarkeshi as the Vangkesh Hills, a number of passes run through them, linking Chanarkesh with its inland neighbors.

The Vangkesh Hills are inhospitable and, while arable, not worth the effort of farming with so much moist, fertile land to the south. A number of rivers flow through the hills from the mountains beyond, but they do so with great force through deep chasms cut into the bedrock, making them all but unusable for agriculture. There are several Chanarkeshi settlements in the hills -- they are home to a dozen or more quarries and hundreds of mines -- but nothing to match the towns and cities in the lowlands.

At the base of the hills, most of the rivers spread out, delta-style, into broad, wet zones -- all but swamps, really -- threaded with creeks and streams. Rooted deep into this moist land and getting the most benefit from the water there, is the band of lush, semitropical rainforest from which Chanarkesh harvest the exotic woods employed by their craftsmen.

((START BOX))

@C-BOXHEAD>About Mevek

@TEXT-BOX:The lion-headed god of the Chanarkeshi, Mevek claims Chanarkesh as his sphere of influence. He is said to know all things that happen in the land, and all things that may affect it. He does not often choose to interfere in mortal matters, though, for in addition to basic moral laws (called the Rules of Just Behavior), his teachings emphasize what have become known as The Five Virtues: Wisdom, Strength, Truthful Insight, Self-sufficiency, and Loyalty to Clan and Nation. He has made it clear in the past that he does not want weak, fawning children for worshippers, but strong, independent adults, worthy of being partners to a god.

@D-BOXHEAD:Orthodox Mevekism

@TEXT-BOX:In the three or so centuries since the last known physical manifestation of Mevek, his church has collected and standardized the stories and teachings of their god. In addition to the Rules of Just Behavior and the Five Virtues, Orthodox Mevekism teaches the following as articles of faith: that Mevek is supreme over all other deities (the Law of Primacy); that the role one is born to in the world may not be improved (the Law of Caste); that any challenge to the social and political order is an affront to Mevek, who made it so (the Law of Earthly Perfection); and that the only proper mediator between mortal man and Mevek is the priesthood (the Law of Intercession).

((END BOX))

Once out of the rainforest, the rivers settle down again into single great streams, broad and shallow and easily tapped for irrigation. These are the fertile lowlands, home to most of the Chanarkeshi. It is also home to thousands of square miles of farms, dotted with villages and towns, and threaded through with worked stone roads that have served the land for centuries. Here are found the great cities of Chanarkesh, which can be seen for miles around in the broad, flat plains.

Through the center of Chanarkesh runs the River Asariaz, the greatest river in the land, sometimes reaching five miles in width. After dropping precipitously over the Davisad Falls at the center of the Vangkesh Hills to the north, the Asariaz meanders gently southward along the center line of the nation, spreading finally into a river delta at the southmost tip of the land, where the city of Sanjit Kumahal was built to as a trade gateway between sea-going traders and Chanarkeshi merchants. The Asariaz holds special meaning to the Chanarkeshi; it is said to be lifeblood of the land, and that he who controls the Asariaz controls the nation. This is why Nilesch Mithana, the capital city, was built at the exact midpoint between the Davisad Falls and the sea, to symbolize its position at the heart of Chanarkesh.

Today, the Glinizi control all the major cities on the Asariaz, and have actually renamed Sanjit Kumahal to Port Dilaz. A Glinizi presence can be found in every other coastal city, but Port Dilaz is the port of entry for all Glinizi coming to Chanarkesh, and can be considered *their* capital for the land.

The Glinizi

Although Chanarkesh has lived in relative peace with its neighbors -- themselves equally prosperous and peaceful -- for centuries, this was not to last. The peaceful land was thrust into war when invaders came from over the sea.

The exact origin of the Glinizi is a mystery to the Chanarkeshi; "far away over the sea" is all

anyone has learned. They came in great ships unlike any the Chanarkeshi or their neighbors built; they came with weapons of fire and steel against which none could stand. They came to steal the land of Chanarkesh.

Within three months of their first appearance on the beaches of Chanarkesh, the Glinizi had penetrated deep into the interior. Overwhelming all opposition with ease, they marched on the capital city of Nilesh Mithana, and after a two-day siege, captured it, the king and the highest levels of the priesthood of Mevek.

Since then, they have all but conquered the land, although they neither call it that, nor (to be honest) see it that way. The Glinizi -- most of them, at least -- sincerely believe that they are to oversee Chanarkesh on behalf of the natives, for their own good. Of course, at the same time they have systematically plundered the country, shipping resources back to their own homeland on a vast scale. While Chanarkesh has not yet been rendered a pit of abject poverty, many Chanarkeshi think it's only a matter of time. And when the Chanarkeshi have objected, they have been brutally suppressed -- the death toll from one such "pacification" reached into the thousands.

(((START BOX)))

@C-BOXHEAD:Inside The Glinizi

@TEXT-BOX:A young and vital empire based on another continent some two months' sail away, the Glinizi have been in an expansionist phase for the last two centuries. With their prosperous economy, advanced technology and vast holdings, they have developed something of a cultural/racial superiority complex, and see themselves as far above the "primitive" peoples of the lands they have expanded into.

@TEXT-BOX:Unfortunately for the Glinizi, about twenty years ago, they encountered another, older empire -- the Pueranlo. Located on the opposite side of Glinizi lands from Chanarkesh, the Pueranlo were slightly more advanced in technology and viewed the Glinizi as another future province to acquire. Since the beginning of active hostilities between the two empires five years ago, the Glinizi have been desperately seeking supplies of raw materials and manpower not already claimed by the Pueranlo in order to bolster their war effort. The conflict has not been going well for the Glinizi, and they are starting to panic. This panic is in part responsible for some of the atrocities the Glinizi have committed when putting down potential rebellions.

(((END BOX)))

The Creation of the Jayagat Tendrab

In order to accomplish their task of stripping the country bare as quickly as possible, the Glinizi have taken to impressing young Chanarkeshi men into forced servitude. This practice is slavery in all but name; no one knows any man taken by the Glinizi who has been freed, although many know of one or more who has dropped dead from the labor.

It is not surprising then that many young men, not the least of which were the educated and low-level military officers, chose to flee to the hills. The Glinizi have little concern for that region; they do not need the stone, and the mines produce none of the metals they need. A small Glinizi force based in Dilak Divatri, at the base of the Davisad Falls, "pacifies" the hills, but is in truth far

too small to police the whole of the chain.

It is thus that the hills have become home to a unique resistance movement. As young educated men -- those who might have been called "radicals" by the elder compatriots in the temples and schools -- made their way there, they met up with one another and formed something of a fellowship. In their common despite of the Glinizi, their hope for their land's eventual liberation, and in their radical views on religion (and other social issues), they found a unity and a purpose -- and a leader: Jevon Afari, the third son of a cadet branch of a lesser clan of the aristocracy, a compelling speaker, and a natural commander of men.

It was at Afari's suggestion that they made the experiment. According to the elder priests it was heresy -- the priesthood was Man's intermediary with Mevek, and only a priest could address Mevek; for someone impure, uninitiated to dare address the god was inviting his wrath not only upon the offender, but upon all of Chanarkesh. But Afari and his companions reasoned, somewhat impiously, that Chanarkesh was already suffering the Glinizi's wrath, and that Mevek's couldn't be much worse. So he issued the request -- that all who dared, petition Mevek for aid against the Glinizi. In one great night of prayer and fasting, one hundred men and women called upon Mevek and begged for his help.

Mevek heard -- and answered.

Taking the physical form of a massive lion-headed man, Mevek appeared before the Hundred and praised them for their courage and their devotion to their land. He acknowledged the threat the Glinizi posed to his people, and he granted them a gift -- the ability to fight in his image. Mevek bade them swear oaths that bound them to him in purity, and promised that as long as they kept those vows, his power was theirs. Finally, he commanded them that as a sign of the compact that they had made with their god, each was to take a new name, and as part of that name should be the word *Maimat*, meaning "Lion" for men, and *Gilan* "Lioness" for women.

(((START BOX)))

@C-BOXHEAD:The Vows of the Jayagat

@TEXT-BOX:• Serve Mevek with all one's heart, and embody the Rules of Just Behavior and the Five Virtues.

@TEXT-BOX:• Defend the people of Chanarkesh from all that would harm them.

@TEXT-BOX:• Never use the Maimat (lion-form) for personal gain or for any purpose offensive in the eyes of Mevek.

@TEXT-BOX:• Purify one's self in a ritual bath at least once a week.

@TEXT-BOX:• Abstain from alcohol.

@TEXT-BOX:The Vows of the Jayagat constitute a -10-point Discipline of Faith.

(((END BOX)))

Each of the Hundred so swore, and Jevon Afari became the first to take his new name, calling himself "Asudhri Dhavik Maimat" -- "New Lion of the Dawn". And as each swore and took his

name, the power of Mevek filled them, and each became a being that partook of both lion and man. Mevek then foretold how others would join their cause, and instructed the Hundred in how to purify and prepare newcomers to also gain the power. With a final benediction, the god then departed.

The Hundred then rejoiced, and declared themselves to be the *Jayagat Tendrab* -- the Company of the Pure.

The Jayagat Today

It is under that name that they have come to strike fear in the hearts of the Glinizi. Against the invaders of their land, they fight a guerilla war, invisible until the moment they strike. Their numbers grew quickly as word of Mevek's intercession spread among the people, and now there are at least a thousand Maimat and Gilan striking at the Glinizi, either alone or at the head of bands of brave folk who chose to follow them.

There would be more Jayagat, save for an unexpected enemy -- the surviving priests of Mevek. Accustomed to -- and profiting from -- their monopoly on mediating between mortals and Mevek, the church is openly hostile to any who dare challenge its position and power. They brand the accounts of Mevek's appearance to the Hundred as lies and heresy, and the Maimat as blasphemous forgeries born of dark sorcery. Not every priest shares this view, but those that don't are few and far between, and most dare not challenge the church's pronouncements.

This conflict with the established church is a bigger problem than it seems -- for some ineffable reason, Mevek left his warrior avatars vulnerable to weapons consecrated by his priests!

Jayagat Package 120 points

@TEXT-CSTATS:*Advantages*: Maimat Were-form [181] (Cure/Cursebreak: Violate Disciplines of Faith (Easy, must cooperate): -40%; External Trigger: Worshipper of Mevek in danger: -10%).

@TEXT-CSTATS:*Disadvantages*: Disciplines of Faith (Jayagat, see box, p. 00) [-10]; Enemy: Glinizi [-15] (Roll: 6 or less, ¥1/2); Enemy: Priesthood of Mevek [-10] (Roll: 6 or less, ¥1/2); Fanaticism [-15]; Intolerance: Glinizi [-5]; Minority Group [-10] (Reaction: -2/+2).

@TEXT-CSTATS:*Skills*: Theology (Mevekite, Reformed)-10 [4].

Maimat/Gilan ("Lion-man"/"Lion-woman") Form 361 points

(PPT: +422, NPT: -77)

@TEXT-CSTATS:*Attributes*: ST +24 (Natural -40%) [87]; DX +3 [30]; HT +5 [60]

@TEXT-CSTATS:*Advantages*: Alertness +8 [40]; Claws [15] (Damage: cr 2d+3); Combat Reflexes [15] (Fright Check: 12); Fur [4]; Night Vision [10]; Reputation +3 (to Chanarkeshi, as Divine warrior) [7] (Reaction: +3; Recognized by: Large class, ¥1/2); Temperature Tolerance ¥1 [0] (Zone Center: 63; Min. Temperature: 27 1/2; Max. Temperature: 97 1/2); Vampiric Invulnerability [150].

@TEXT-CSTATS:Disadvantages: Appearance (Monstrous) [-25] (Reaction: -5); Attentive [-1]; Bloodlust [-10]; Disturbing Voice [-10] (Reaction: -2); Gigantism [-10]; Reputation -3 (among Glinizi, as vicious supernatural monster) [-5] (Reaction: -3; Recognized by: Small class, ¥1/3); Vulnerability ¥1 (Items consecrated to Mevek) (Common) [-15].

@TEXT-CSTATS:Quirks: Feline mannerisms. [-1]

@TEXT-CSTATS:Skills: Brawling-DX+1 [4].

The Maimat form of a Jayagat warrior takes the form of a giant (minimum 7 feet) human with a lion's head. (Calculate the Maimat's height based on the strength of the human form, not the Maimat's Enhanced ST. Calculate weight normally.) His hands and feet are heavily clawed, and his body is covered with tawny fur. The shape of a lion's mouth is not conducive to speech, but they manage, although the sound is often quite frightening.

When applied to a Jagayat character, the Maimat takes a Cure/Cursebreak limitation: Simple condition, requires cooperation, -40%; and External Trigger: Worshipper of Mevek in danger, -10%, for a final discount of -50%. A Jayagat has complete control over his changes *unless* he witnesses a worshipper of Mevek in danger, in which case the power of Mevek forces him to change in order to fulfil the second term of his vows.

((START BOX))

@C-BOXHEAD:Player Characters

@TEXT-BOX:PCs can be from either side of the Chanarkeshi conflict. Glinizi troops range from 75-point infantry to 150-point officers. Ordinary Chanarkeshi guerillas will range anywhere from 50 to 125 points. A Jayagat warrior will always be a minimum of 150 points, and a member of the Hundred will likely be 200 points or more. If for any reason Pueranlo troops appear, treat them as Glinizi troops save for the +1 in TL.

@D-BOXHEAD:Tech Levels

@TEXT-BOX:For the purposes of this campaign seed, the Chanarkeshi are considered the base TL. Glinizi characters must take the High Technology advantage at 20 points, and Pueranlo characters must take it at the 50-point level! If the GM does not find that appealing, make the Glinizi the base TL. The Chanarkeshi then get one level of Primitive, and the Pueranlo must only pay 20 points for their High Technology.

((END BOX))

Ultimate Outcome

Despite the fact that the Jayagat are tailored for warfare, there is another possible result here than the wholesale slaughter of one side by the other. Under the right conditions, and with the right people in the right places, the Glinizi-Chanarkeshi conflict could turn into a partnership rather than a conquerer-conquered relationship. If this happens, both sides win -- Chanarkesh is reinvigorated and stagnation/collapse avoided, and the Glinizi get not only resources but a cadre of unstoppable warriors to help with the effort against the Pueranlo. If the GM wants, this has been

Mevek's plan all along -- because Mevek is also one of the primary gods of the Glinizi under another guise. Or maybe he's approached the Glinizi pantheon about a divine merger. Or perhaps someone in the Pueranlo pantheon insulted or offended him.

@A-HEAD:.<!s>.<!s>.Of All Shapes and Sizes.<!s>.<!s>.

@TEXT:In this chapter are sample shapechangers from a variety of genres. Where appropriate, notes on crossover and multigenre uses are provided, expanding the range of settings in which they can be used.

@B-HEAD:The Arthurian Werewolf

@TEXT:<I>.<!s>.<!s>.Sir Marrok, the good knight that was betrayed with his wife, for she made him seven year a werewolf,.<!s>.<!s>.<I>

@TEXT:<I><\#208> Sir Thomas Mallory, Le Morte D'Arthur, Book XIX, Chapter 11<I>

@TEXT:Among the many tales of King Arthur and Camelot, there can be found two references to werewolves. Sir Marrok and Sir Gorlagon, two knights of honor, were both afflicted with lycanthropy. Gorlagon was the victim of a unique magic item with ties to his family lineage, but Marrok was a were more along the usual lines. Through the machinations of his unfaithful wife, Sir Marrok found himself trapped in his wolf form for seven years. When he finally was able to return to human shape, he took his revenge upon the woman. Despite this, Sir Marrok was honored with a seat at the Round Table, where he served the king for many years, including as one of his personal honor guard.

@TEXT:<BI>GURPS Camelot<\$> contains a description of werewolves like Sir Marrok, but it is based more on the werewolves of Yrth than the actual legends, which describe a condition notably different in some ways from the "typical" gaming werewolf. The following description is closer to the spirit of the original tales, and may be used in a <BI>Camelot<\$> campaign instead of the version found in that volume.

@TEXT:Arthurian werewolves are ordinary wolves in their were-form except for their IQ, which is always at least 10, and usually the same as their human form's IQ. They rarely if ever suffer from Split Personality, so they are usually in control of their wolf forms. For the same reason, most quirks, mental disadvantages and mental skills from the human form will also be possessed by the were-form.

@TEXT:Only one source gives details on the specifics of their change: <I>Bisclavret,<I> a medieval <I>lai<I> by Marie de France (a contemporary of Chr<\#142>tien de Troyes). It is the tale of a werewolf knight, the eponymous Bisclavret. Bisclavret may well also be Sir Marrok of the Round Table, given the similarities of their stories. (The fact that "bisclavret" is simply the Breton word for "werewolf" lends some indirect support to this assertion.) Therein it tells how Bisclavret is forced to leave his wife for three days and nights each week when he changes into a wolf. This is clearly a Cyclic Change with a period of one week and a Minimum Time of half that.

@TEXT:Before he can change, an Arthurian werewolf must remove all his clothes. This is an absolute requirement <\#208> the were cannot change while dressed! Furthermore, he must hide and protect his clothing carefully, because unless he has the clothing he was wearing before his change to wolf form, he cannot change back! Sir Marrok's wife hid his clothing and forced the knight to remain a wolf for seven years, until he could find his clothes. The werewolf doesn't need to do anything with the clothes, just stand in the same hex with them. They must be reasonably intact <\#208> a few holes won't affect the change, but being sliced to ribbons will! Although an Arthurian were cannot change while wearing armor, the armor is not considered part of the clothing that must be present for the change back. Arthurian weres must change at the full moon for an entire night, even when it does not occur during their usual three-night cycle; they can change at will at other times.

@TEXT:Unlike the traditional werewolf, the Arthurian were does not transmit its shapeshifting ability through its bite. Weredom is more likely to be the result of a curse or (less commonly) some form of penance. The GM should require PC weres to explain how they came to acquire the ability to change. Depending on the cause, it can make an excellent Secret.

@C-HEAD:Building the Arthurian Were

@TEXT:The Arthurian werewolf uses the Wolf template (see box, p. 00), with the following modifiers: Buy back IQ to the character's normal level. Also buy back Bestial [10]; Presentient [20]; and Short Lifespan <f"symbol"><\#180><f\$>5 [50]. Don't forget to account for any losses of Status, Wealth, Reputation and other social advantages that a wolf would not possess.

@TEXT:The following modifiers are then applied to the were-form advantage: an Accessibility limitation for the change itself, Cannot Change to Were-Form While Wearing Clothes, -20%; Cyclic Change (Weekly), -30%; and Minimum Time: 72 hours, -20%. The clothing requirement for the transformation back makes it an item-based change. The item

is generic clothing, with the following modifiers: Not Needed For Change to Were Form +25%, Awkward -10%, Breakable (DR 0, HP 2) -15%, Not Absorbed in Change -15%, Can Be Stolen by Stealth or Trickery -10% and Unique -25% (although clothes are easily replaced and different sets will count as this item at different times, once the change is made only the one set will allow the were to change back!). This exceeds the maximum limitation value of -75%, so becomes that value; the final cost for the wolf form (assuming the theoretical character cited above) is 21 points.

@TEXT:The Arthurian were is subject to an unusual combination of a Cyclic Change and an Accessibility Limitation that can prevent the change. This does <I>not<I> mean that the character can avoid changing simply by never taking off his clothes. Instead, the character suffers a growing compulsive <I>need<I> to change that comes to occupy his thoughts completely. The character must make a Will roll every hour to resist the compulsion, at a penalty equal to the number of hours elapsed since the change should have taken place. If the roll is failed, he must make another Will roll at the same penalty to avoid simply ripping off his clothing and changing on the spot, regardless of location and/or witnesses. When the victim finally changes, his cycle resets accordingly.

@TEXT:Note that the wolf form has <I>no<I> special protections or vulnerabilities; neither silver nor holy objects affect it adversely, and all manner of weapons wound it without difficulty. It is, in all ways except intelligence and behavior, a normal wolf. A cursebreak (p. 00) is implied by the source material, but no details are ever given. GMs and players may wish to skip this aspect; if not, make sure that the cure remains faithful to the original genre. Exorcism or a difficult, pious quest would be in keeping with the source material. And of course, at the very least drinking from the Grail should unflinching expunge the curse!

((START BOX))

@C-BOXHEAD:Lost or Destroyed Clothing

@TEXT-BOX:Possibly the worst fate that can befall an Arthurian werewolf is the loss or destruction of his clothing while he is in his wolf form. By the strictest interpretation of <I>Bisclavret<I> and Mallory, he is then forevermore trapped as a wolf. However, the average PC wouldn't care for such a fate <#208> nor would his player. In the absence of magic that can undo the curse (as is the usually case in Arthurian England), the GM may be inclined to relax the conditions of the enchantment slightly.

@TEXT-BOX:Completely lifting the clothing restriction saps the Arthurian werewolf of his unique flavor and reduces him to an "ordinary" were; this is not recommended. However, the GM may feel free to allow <I>other<I> sets of clothes to satisfy the terms of the curse. These must be clothing belonging to the character and worn by him on a regular basis <#208> more than once or twice. A brand-new suit of clothing, never worn by anyone, would be useless, and recently-acquired or rarely-worn garb almost as bad. If the GM feels that this is still too lenient, further requirements, such as the proper phase of the moon and perhaps a Will roll, can be applied.

((END BOX))

@C-HEAD:Campaign Use

@TEXT:While of course in-genre for Mythic and Cinematic <BI>Camelot<\$> campaigns, the Arthurian werewolf is out of place in a purely realistic Historical setting. If for some reason the GM wants to put weres in an otherwise Historical game, the Arthurian werewolf is both subtle enough and sufficiently low-powered so as not to seem too out of place. But unlike in other Camelot settings (see below), a werewolf character is likely to become the target of a vigorous hunt, even if his supernatural nature is never revealed.

@TEXT:When used in a Mythic/Cinematic Camelot game, being this variety of werewolf brings no negative Reputation or Social Stigma. It is regarded as something that is done <I>to<I> a person, not something the person <I>is.<I> Like any other evil enchantment a knight might suffer, it is a challenge to be overcome and from which to gain glory thereby. (Of course, when it is a commoner who is afflicted with the curse, opinions may differ greatly.<!s>.<!s>.)

@TEXT:The only exception to this tolerance would be those knights who find they take a dark and perverse pleasure in being a wolf and preying upon the innocent. These knights' souls are damned, especially if they have tasted human blood and/or flesh while in wolf

form.

@TEXT:Despite all this, in the <I>Morte d'Arthur,<I> lycanthropy is little more than a background detail that distinguishes one knight from scores of other knights. GMS can continue this convention, or depart from it by making the curse and its cure a more prominent part of the campaign.

@D-HEAD:Other Settings

@TEXT:In addition to Arthurian and standard fantasy campaigns, this variety of werewolf is suitable for any game where a touch of magic is not out of place, but where horrific prowling monsters of the movie variety simply do not belong. The Arthurian weres' simple wolf-nature, with no extraordinary abilities other than their change, allows them to blend into many "hidden magic" and similar settings. They fit quite well into such close-to-reality milieux as <I>X-Files-<I>style worlds as well, precisely because they are, in general, so low key. A GM who wants to shake up his players' preconceptions might even work one into an ostensibly "realistic" setting <#208> supported with a suitable pseudoscientific explanation, of course.

@TEXT:They work less well in high fantasy and outright horror worlds, because while they are supernatural, they are far more subtle and considerably lower in power than the other creatures around them. Their small advantages over humans may give them a false, perhaps misleading, sense of confidence. Of course, if that's what the GM wants to foster.<!s>.<!s>.

((START BOX))

@C-HEAD:Sample Character: Sir Marrok 250 Points

@D-HEAD:The Werewolf Knight of the Round Table

@TEXT:Male; age 35; 5'11''; 160 lbs.; a well-built man of middle age with salt-and-pepper hair and grey eyes.

@TEXT-CSTATS:ST 14 [45]; DX 13 [30]; IQ 10 [0]; HT 12 [20]

@TEXT-CSTATS:Speed 6.25; Move 6.

@TEXT-CSTATS:Dodge 6; Block 7; Parry 7.

@TEXT-CSTATS:Damage: <I>Punch:<I> 1d-1; <I>Kick:<I> 1d+1; <I>Thrust<I> 1d; <I>Swing<I> 2d

@TEXT-CSTATS:<I>Advantages:<\$> Companion of the Round Table [15]; Knighthood [20];

Reputation +3 [5] (Reaction: +3; Recognized by (Britain): Large class, <f"symbol"><#180><f\$>1/2; 1 level free from Companion); Status 3 (3 levels free from Companion, Knighthood and Wealth) [0]; Strong Will +4 [16] (Will: 16); Wealth (Wealthy) [20] (Starting Wealth: \$5,000); Werewolf (Arthurian, as described on p. 00) [23].

@TEXT-CSTATS:<I>Disadvantages:<\$> Chivalric Code of Honor [-15]; Extremely Hazardous Duty (member of Arthur's Bodyguard) [-20]; Sense of Duty to Arthur and the Round Table [-10].

@TEXT-CSTATS:<I>Quirks:<\$> Body-shy; Distrustful of women; Fiercely loyal to Arthur; Gentle and courteous. [-4].

@TEXT-CSTATS:<I>Skills:<\$> Animal Handling-10 [1]; Area Knowledge (Britain)-14 [4]; Axe/Mace-14 [2] (Parry: 7); Brawling-14 [1] (Parry: 9); Broadsword-15 [4] (Parry: 7); Falconry-10 [1]; Flail-13 [2] (Parry: 6); Heraldry-10 [1/2]; Knife-13 [1/2] (Parry: 5); Lance-15 [4] (Parry: 7); Riding (Horse)-15 [4]; Savoir-Faire (Britain)-14 [0]; Savoir-Faire (Elsewhere)-12 [0]; Shield-15 [2] (Block: 7); Survival (English Countryside)-15 [8]; Tracking-15 [8].

@TEXT-CSTATS:<I>Languages:<\$> English (native)-14 [2]; French-11 [1].

@TEXT:The werewolf knight of the Round Table, Sir Marrok is mentioned twice in Mallory. The first was in Book V, Chapter 8 as part of Arthur's personal bodyguard during the war with Emperor Lucius (one of five knights so trusted <#208> Lancelot and Kay were two of the others). The other citation is quoted on p. 00; it comes from the list of knights who tried to heal Sir Urr<#142> of Hungary. As noted elsewhere, given the similarities in their stories, it seems likely he is also the knight called Bisclavret in Marie de France's <I>lai<I> of the same name.

@TEXT:The exact origin of his curse is unknown, as is whether there were a cure for it or not. Oddly, this lack of information seems to have bothered nobody. It in fact delighted his wife, who used the transformation against him; loving another knight better than he, she stole the clothes Marrok needed in order to return to human shape, and forced him to remain a wolf for seven years.

@TEXT:His return to human form came about when the King, out hunting, was taken with a

wolf who acted like a loyal servant in his presence; forbidding his retinue to kill the beast, Arthur brought the wolf back home to Camelot with him. There, the wolf was gentle and friendly, showing the qualities of a good knight to all persons save two <\#208> Marrok's unfaithful wife and her lover. The king, noticing this, questioned the pair until they confessed. Upon recovery of the hidden clothing by the king's men, Marrok was able to return to human form, and Arthur banished the wife and her lover.

@TEXT:In the years after his ordeal, Marrok devoted himself fully to the service of his king and his country, eventually earning a place in Arthur's personal bodyguard. He survived the Grail Quest, unlike so many other Companions, which points to great faith, great self-control, or both. While he is not mentioned by Mallory after the healing of Urr<\#142> in AD 462, it seems reasonable to assume that he continued in the service of his king to the very end of Arthur's reign.

((END BOX))

@B-HEAD:Benandanti <\#208> The Witchhunter Werewolves

@TEXT:<I>Questioned: How does one enter this company of the benandanti?<I>

@TEXT:<I>He replied: All those who have been born with the caul belong to it, and when they reach the age of twenty they are summoned by means of a drum the same as soldiers, and they are obliged to respond.<I>

@TEXT:<I><\#208> testimony of Battista Moduco before the Inquisition, June 27, 1580<I>

@TEXT:Born with a caul, born to answer a call, they were the <I>Benandanti<I> <\#208> the "Good Walkers." Indistinguishable from their countrymen in the regions around the Baltic and Mediterranean seas, these undercover werewolves were protectors, not predators; on the behalf of their friends, families and neighbors they took on the forces of Hell <\#208> <I>strige<I> and <I>stregoni,<I> sorcerors, undead, and demons of all descriptions.

@C-HEAD:Benandanti were-form . . . variable

@TEXT-CSTATS:<I>Attributes:<\$> ST 10 [+10] DX 14 [0] IQ 10 [+40] HT 12 [0] (Costs may vary depending on human form.)

@TEXT-CSTATS:<I>Advantages:<\$> Magic Resistance +2 [4]; Strong Will +4 [16]. Remove Four Legs [-5].

@TEXT-CSTATS:<I>Disadvantages:<\$> Wolf Template (p. 00) [-37]. Duty: Fight the Devil and the Forces of Hell (Utterly Formidable Group, Appears Rarely) [-20]; Enemy: Forces of Hell [-20] (Roll: 6 or less, <f"symbol"><\#180><f\$>1/2); Sense of Duty to fellow Benandanti [-5]; Sense of Duty to Humanity [-15]. Remove Bestial [+10]; Horizontal [+10]; No Fine Manipulators [+30]; Presentient [+20]; Short Lifespan <f"symbol"><\#180><f\$>5 [+50]; Sleepy (50%) [+10]. Optionally, include Enemy: Inquisition, werewolf hunters, etc. (Large Group, Appears Rarely) [-15] in the appropriate milieu.

@TEXT-CSTATS:<I>Skills:<\$> Whip (Iron Whip)-DX [2]

@TEXT-CSTATS:<I>Basic Cost:<\$> Without Enemy: Inquisition, PPT: +302, NPT: -202; basic cost 140 points. With Enemy: Inquisition, PPT: +302, NPT: -217; basic cost 128 points. These must be adjusted to reflect the character's attributes before final point cost is calculated.

@TEXT:If the character is a part of the traditional Benandanti "army" (see below), the resulting were-form advantage is then modified with an External Trigger: Quarterly call to arms (Only to were-form, occasional, not exclusive, -50%). In historic medieval campaigns set in the Baltic and Mediterranean regions, Benandanti will also possess a Reputation: usually +2 in their home village, where they are recognized all the time, and +1 elsewhere in territory with active Benandanti, recognized rarely (4 points total), along with an Unusual Background (Born with a Caul), worth 5 points. The GM may also require that Benandanti in later periods take a -20 point Secret.

@TEXT:(Please note that this is the template for a physical-change Theiss/Friuli-style Benandante, based on testimony from the relevant Inquisition records. Many variations are possible and likely; see the text below.)

@C-HEAD:Werewolves of God

@TEXT:Marked at birth by a caul <\#208> a fetal membrane enclosing their head <\#208> the Benandanti (singular Benandante) were called to battle the beings called variously

<I>Malandanti<I> (the Evil Walkers), <I>strige<I> (witches) and <I>stregoni<I> (sorcerers): the forces of darkness who cursed harvests and poisoned seeds. Although the Benandanti of northeastern Italy's province of Friuli are the best known of these obscure bands, similar groups existed all over Southern and Eastern Europe during the Middle Ages. The members of these groups believed that they had been called by divine forces to act as the guardians of their neighbors.

@TEXT:Thought to be the historical remnants of prehistoric shamanic and/or fertility cults, these groups (predictably) varied from one another in the details of their beliefs and traditions, but on one thing they all agreed: in order to accomplish their "mission," they had been granted the power to turn into wolf-human hybrids. Using these forms, they engaged the servants of Hell in direct physical combat on a regular basis. Because of these fundamental similarities, scholars have tended to call all these groups "benandanti" after the Friuli tradition, although many bands had other names for themselves.

@TEXT:As they were firmly entrenched in their local cultures and folklore as forces for Good, the many bands of Benandanti saw no reason to hide. Their membership was an open secret, and they enjoyed the respect and gratitude of the people they protected. In Friuli and in other areas, they even coexisted peacefully with the Church, whose local representatives were (at least at first) more interested in learning about their beliefs than supressing them.

@D-HEAD:The Inquisition, What A Show.<!s>.<!s>.

@TEXT:Inevitably, though, such enthusiastic deviation from medieval Catholic dogma attracted the notice of the Inquisition <\#208> quite a bit of it, in fact. For more than a century, agents of the Inquisition pursued, captured and tried members of the Benandanti from all over eastern and south-eastern Europe, accusing them of all manner of heresies and specifically of witchcraft. It is through their records, in fact, that much of the extant information on the Benandanti comes.

@TEXT:In these self-proclaimed werewolves, though, the Inquisition ultimately met its match. Put to the test and commanded to confess to witchcraft, Benandanti across Europe insisted that they <I>fought<I> witches, confusing their inquisitors and threatening to overturn the entire structure of medieval Catholic dogma. After a century of this Inquistorial effort, the Friuli Benandanti in particular eventually admitted to being witches, but insisted (to the consternation of their Inquisitors) that they were in fact <I>God's<I> witches. It is a testament to the Benandanti's devotion to their beliefs that the Inquisition never broke fully them. While individuals may have given in to the torture, the Benandanti as a whole outlasted the Inquisition, which effectively gave up on them <\#208> both individually and collectively.

@C-HEAD:The Nature of the Beast

@TEXT:While there were almost as many variations on the Benandanti beliefs as there were bands, certain core elements remained more or less constant. Perhaps the most detailed and evocative account of the Benandanti beliefs comes from the Inquisitorial records of an eighty-year-old man known only as "Theiss." Theiss lived in the Livonian town of Jurgensburg, on the eastern side of the Baltic Sea. During 1692, in one of their last public efforts, the Inquisition put him on trial on charges of being a witch and a werewolf. Theiss didn't deny the accusations made of him; instead, he volunteered a detailed confession that threatened to demolish utterly the Inquisition's werewolf orthodoxy.

@TEXT:Theiss claimed that he and other Eastern European werewolves of both genders gathered three times a year to do battle with the forces of the Devil. On the feast nights of Saint Lucia, Pentecost and Saint John (the seasonal changes), they would storm the gates of Hell. There, armed with iron whips (a unique detail in werewolf lore), these self-styled "hounds of God" would do battle with the Devil and his army of sorcerers, witches and assorted undead beings; most of these were were inexplicably armed with broomsticks wrapped with horsetails. Theiss testified that an undead witch named Skeistan had actually broken his nose with one such weapon.

@TEXT:According to Theiss, these "witches" (who actually included among their number assorted undead beings) annually tried to filch freshly-sprouted shoots of grain from the fields both in order to steal the crops for Hell and to inflict a famine upon the land. To restore the fertility of the fields, Theiss and other werewolves would form a legion of their own and mount a counterattack. If, however, the Benandanti were slow in their response, the witches would successfully bar the gates of Hell, and the crops, livestock,

and even the fishing catch would suffer. The "hounds of God" helped mankind by preventing the Devil and his forces from carrying off the bounty of the earth.

@TEXT:And his band was not alone in their efforts. Theiss emphasized that there were werewolves in Germany and Russia who also also fought Satan and his witches. They were all part of a great (if somewhat anarchic) army that protected Earth and the common folk from the depredations of hellspawn.

@TEXT:Theiss' testimony astounded the inquisitors who heard his case; the degree to which it clashed with medieval Catholic orthodoxy regarding werewolves was beyond their experience. By necessity they tried to force Theiss into their paradigm, but the old man held up under their questioning. When asked what became of the souls of the werewolves, Theiss said they went to heaven. In the face of accusations to the contrary, he denied that he had ever signed a pact with the Devil. He also refused to see the parish priest who was sent for to chastise him, saying that he was a better man than any priest.

@TEXT:Despite considerable pressure from the judges and interrogators, Theiss never recanted, and only yielded to their cosmology so far as to admit that Hell was underground instead of "at the end of the sea" as he had initially declared. At a complete loss as to what to do with someone who wouldn't play by their werewolf rules, the judges sentenced Theiss to a mere ten lashes for acts of idolatry and superstitious beliefs.

((START BOX))

@C-BOXHEAD:Variations on the Theme

@TEXT-BOX:Other accused Baltic werewolves of the same period told much the same story as Theiss. Details varied <#\208> the number and schedule of "battle days" in a year (four, at the solstices and equinoxes, being more common than Theiss' three), different periods of activity (often centered upon the span between Christmas and Pentecost), the presence or absence of a "leader" figure who summoned them to battle, and so on.

@TEXT-BOX:The use of weapons was a point of wide variance <#\208> some bands used none, while the Friuli Benandanti in particular were said to employ iron whips like Theiss' group. The role of women was another; in some bands they fought alongside the men, while in others they were dreamwalkers, acting as much as scouts as seers. The greatest deviation between groups of Benandanti, though, was in the very nature of the shifting gift. For some it was explicitly physical, in the medieval Catholic and later folkloric tradition. For others, though, it was purely spiritual <#\208> an astral phenomenon where battles were fought on some metaphysical plane between ghostly forms. (The latter were often the same groups whose women were dreamwalkers.)

@TEXT-BOX:One detail, in addition to their shifting ability, was almost universal: the majority of active Benandanti, the forces who directly engaged the powers of Hell, were between the ages of 20 and 40. Those younger than 20 did not "hear the call", although they were usually aware of their potential. And given the nature of both their mission and life expectancies in the Middle Ages, few lived to reach 40. Those that did probably served as advisors, non-combatant strategists, or perhaps even as rear guards. Theiss was unusual in that he claimed still to be active even in his eighties.

@TEXT-BOX:For all their differences, though, there is still a remarkable unity of theme and description between these often widespread and certainly unconnected accounts. The fossil remains of the ancient fertility rituals which spawned the Benandanti are clearly visible within the stories and traditions in which they feature. Later accounts make them out to be more buffoonish than heroic <#\208> roaming about in rowdy bands, breaking into cellars to steal wine and beer <#\208> but no matter the period, the Baltic werewolf/Benandanti is dramatically different from the malevolent, cannibalistic werewolf of Gallic legend which became the model for Western folklore and Hollywood alike.

((END BOX))

@C-HEAD:Psychology

@TEXT:Unlike his counterparts farther to the west, the Baltic werewolf is more the pack predator than the solitary hunter. Devoted to the community in which he dwells, he is dedicated to the protection of humanity as a whole, and immersed in a support group of similar beings with a long-standing set of traditions. A Benandante is usually a social being, well-adjusted and comfortable with his dual nature, which he has known about since

his birth. He has no reason to hide and is in fact a respected member of his community, well regarded by his neighbors whether he is the mayor or a dirt farmer.

@TEXT:Between his holy charge and his long membership in the group, the Benandante (at least during the medieval period and earlier) is almost always an ethical being, rarely if ever using his shifting abilities for personal advantage. Some Benandanti never shift except when called to do battle; others may make limited use of their abilities in more mundane situations. In any case, a sense of responsibility toward their neighbors tends to govern their behavior, in wolf form or not.

@C-HEAD:Ecology

@TEXT:Despite their special abilities, Benandanti are born from normal humans, and these almost exclusively from eastern and southeastern European ethnic groups; northern Italy and the eastern reaches of Germany are as far west as the Benandanti ever ranged, and far more were based around the Baltic Sea. (In a modern or future setting, of course, a Benandante can appear virtually <I>anywhere<I> <\#208> often without any idea what he is.)

@TEXT:The Benandanti shifting talent is not a dominant trait and rarely if ever runs in families. It is far more likely for them to appear at random among families of every social and political station, marked at birth by the caul, making necessary the Benandanti's close relationship to the midwives and other healers of their communities.

@C-HEAD:Culture

@TEXT:The Benandanti consider themselves part of the culture in which they are born, and although they do form cohesive groups, they do not consider themselves separate from the other humans in their communities. They live ordinary lives among those without the gift, working hard, going to church, making friends and choosing wives and husbands from among "normal" people. They maintain especially strong ties to the midwives and other folk-healers who may be called upon to oversee births, so as to ensure that all with the gift are identified as soon as possible.

@TEXT:Any suggestion that they form their own Benandanti-only communities would be met with puzzlement at best and derision at worst. They do not see themselves as a race apart, but simply as humans with a special gift that allows them to protect their neighbors.

@TEXT:They do maintain a body of detailed oral tradition about their natures and duties, though, and thoroughly transmit these traditions to new members. A young Benandante will usually have other Benandanti from the local band as godparents, who will see to his education at the proper time. He is usually made aware of his talent and fellows about the time he can talk.

@TEXT:All Benandanti will be at least nominally Christian. While there are no Jewish Benandanti in the historical setting, in later, more cosmopolitan milieux intermarriage may produce Benandanti of almost any religious and ethnic background <\#208> particularly in those unaware of their heritage.

@C-HEAD:Politics

@TEXT:While any given Benandante may be as political as he cares to be about his local community, Benandanti groups as a whole are apolitical. They serve and protect the people against the forces of Hell; in comparison to that, interhuman conflicts are petty squabbles unworthy of consideration. It would take a regime or individual of extraordinary evil (at least as bad as the <I>strige<I> and <I>stregoni<I>) to make the Benandanti even consider using their gifts against other humans.

@C-HEAD:Benandanti in the Campaign

@TEXT:Benandanti are a natural addition to a <BI>GURPS Russia<\$> campaign, and can be added to just about any other game set in medieval Europe. A strictly historical setting can make use of the Benandanti, either as a deluded fertility-cult holdover or as a surprise "colony" of real magic. In either case, they will be an open secret wherever they operate, supported by farmers (who benefit, theoretically, from their efforts), midwives (who identify the next generation as they are born), and (on occasion) by sympathetic members of the clergy (who either are aware of the war they fight, or are simply tolerant of what they see as harmless peasant traditions). The average peasant will probably know of them, but anyone higher socially than the local mayor or town priest will probably be unaware of the Benandanti's existence <\#208> unless they have roots or connections in the lowest levels of society.

(((START BOX)))

@C-BOXHEAD:Other Settings

@TEXT-BOX:In addition to historical Earth (where they may or may not actually have shapechanging abilities), Benandanti are easily inserted into any medieval (or earlier) setting with an appropriate Good-Evil polarization in the local religions.

@TEXT-BOX:<BI>GURPS Fantasy:<\$> Yrth, for example, is a perfect candidate; the Banestorm simply swept up a pack of Benandanti along with all its other Earthly transportees. Whether or not the mysterious "commander" cited by some groups exists in or can reach Yrth is up to the GM's intent and his interpretation of the Benandanti's testimony. If the "commander" is a supernatural being, he may be able to oversee two groups in two different universes at once, or perhaps the Benandanti have died out in modern Earth and he has turned to their extraplanar descendants. Or perhaps another master entirely has adopted the Yrth Benandanti.<!s>.<!s>.

@TEXT-BOX:The relationship between the Benandanti and the various Earth-born religions in Yrth remains the same <\#208> both Christian and Muslim orthodoxy revile them, and Jews will treat them with suspicion. The attitude of the bizarre Shinto-Buddhist-Zen-Monty-Python hybrid religion of Sahud is less clear; in general, though, the Sahudese seem to regard the Benandanti (and other weres, as well) as <I>hengeyokai</I> (see pp. 00-00), and thus a fact of life which is either ignored or placated as needed.

@TEXT-BOX:<BI>GURPS WWII:<\$> The Nazis were perhaps the greatest evil to arise in Europe in centuries, and the impact they had on Eastern Europe.<!s>.<!s>. The Benandanti who had survived to the Twentieth Century may well have said, "These <I>are<I> the forces of Hell," and founded, joined, or simply aided the Resistance in every Nazi dominated country where they dwelt. But powerful as they are, the Benandanti are not immune to bullets, so the fight is more balanced than it may seem at first. Add in the mysterious SS "Werwolf" troopers, and the struggle may be even harder. This kind of campaign can range from a "straight" WWII setting with the Benandanti as the only outre element, all the way to a "High Weirdness" WWII incorporating SS werewolves, Nazi sorcerors and even a quest for the Spear of Destiny.

@TEXT-BOX:<BI>Modern settings:<\$> In worlds like those of <BI>GURPS Black Ops<\$> or <I>The X-Files,<I> the Benandanti can make for unsuspected neutrals or even surprise allies, depending on the level and type of conflict the players encounter. The Company and its operatives would unfortunately suffer a certain level of prejudice against the Benandanti, though, leading to at best a tense state of detente between the two groups and at worst a war of extermination.

(((END BOX)))

@TEXT:Depending on the player characters involved, the Benandanti can be Patron or pursued, friend or foe. Parties with strong connections to the Catholic Church (or the campaign equivalent) can find themselves tracking down the werewolves on behalf of the Inquisition. Whatever their role in the campaign, though, the Benandanti will most likely remain hidden in plain sight, like a random-dot stereogram <\#208> invisible unless and until one looks for them in just the right way.

@D-HEAD:All Benandanti, All The Time

@TEXT:An innovative GM may choose to run an all-Benandanti campaign. Such a game could have much in common with "team espionage" campaigns, as the PCs attempt to dodge both the Inquisition and agents of Hell while still fulfilling their obligations to the simple farmers who rely upon their protection. While historically the Benandanti tended to be more or less permanently based in supportive communities, the classic "wandering do-gooders" campaign model could still be employed without fatally disrupting the core paradigm. In either case, the game can be tuned from meticulously realistic to mythic with ease; the primary concern being finding the right mix of goals and opposition for the party to face. At one end of the scale, the flavor can be rather like an odd medieval pulp/noir novel, as the possessors of hidden and strange power work for the good of Mankind amidst the shadows of a hostile world. At the other end, the game may grow to resemble <BI>GURPS Werewolf: The Apocalypse,<\$> only without the oppressive, fatalistic air of imminent doom.

(((START BOX)))

@C-BOXHEAD:Benandanti in <BI>GURPS In Nomine:<\$>

@TEXT-BOX:In the world of the War Between Heaven and Hell, the Benandanti are the forgotten Soldiers of Uriel, established by him shortly before the Purification Crusade as Earth's last defense against the creatures of myth. Knowing his attention would be turned elsewhere for a long time, Uriel arranged for membership in his mortal forces to be hereditary, and the groups themselves self-perpetuating and self-governing.

@TEXT-BOX:Partly as a sop to Jordi (who was already up in arms over his ethereal activities), Uriel patterned the organization of his Soldiers after wolfpacks, and gave them the secret Corporeal <I>Song of Wolf,<I> (see box) which turns its singer into a man-beast fighting machine. He also provided them with the Corporeal Song of Dreams, with which they were intended to communicate with Uriel's "base camp" in the Marches.

@TEXT-BOX:Uriel's long-term plan was to hand command of the Benandanti over to Jordi outright in exchange for a reduction or cessation of Jordi's hostility toward the Archangel of Purity. But Uriel never got around to presenting his "peace offering" to Jordi, and told no one else but his loyal lieutenants about the Benandanti, before he was recalled into the Higher Heavens.

@TEXT-BOX:And no one told the Benandanti that Uriel was gone. During the Middle Ages, the occasional Tsayadite would appear to dispatch orders to the Benandanti. In recent centuries, though, this has dwindled off as the Tsayadim grew more and more concerned with the Marches. But the Benandanti persevere, maintaining their traditions and loyalties. Meanwhile, their uncounted, ignorant descendants may be found not only in Europe, but scattered across the globe, simply awaiting the proper Song to awaken fully to their heritage. Not every person born to a Benandanti bloodline has to potential to become a Soldier, but those that do are far more common than in the rest of humanity.

@TEXT-BOX:It is perhaps the ultimate irony that in his bid to create a final line of defense against the old creatures of myth, Uriel effectively created a <I>new<I> creature of myth.

@TEXT-BOX:Benandanti in <BI>GURPS In Nomine<\$> will usually have a minimum of 150 points (and frequently more). They do <I>not<I> use the "racial" package given on pp. 00-00, but instead use the following alternate template:

@C-BOXHEAD:Benandante 69 points plus the skill cost of the Song.

@TEXT-CSTATS:<I>Attributes:<\$> ST +2 [20]; HT +2 [20].

@TEXT-CSTATS:<I>Advantages:<\$> Awareness (Symphony) [15]; Essence Control/8 [23] (minimum); Power Investiture (Corporeal)/2 [20] (minimum); Unusual Background (Benandanti) [5].

@TEXT-CSTATS:<I>Disadvantages:<\$> Duty to Heaven (originally Uriel) (6 or less) [-2]; Enemy: Forces of Hell [-20] (Roll: 6 or less, <f"symbol"><\#180><f\$>1/2); Sense of Duty to Humanity [-15].

@TEXT-CSTATS:<I>Skills:<\$> Whip (Iron Whip)-DX [4].

@TEXT-CSTATS:<I>Songs:<\$> The Corporeal Song of Wolf-19 (an effective level of 16 on the Corporeal plane) [variable]

@TEXT-CSTATS:<I>Quirks:<\$> Congenial [-1].

@TEXT-BOX:The Unusual Background cost represents being born into a Benandanti bloodline. (The requirement of a caul is mere folklore in this setting.) While the Iron Whip skill is automatically acquired upon "awakening" (it is encoded into the Benandante genes), an actual iron whip is not. Such whips are Corporeal or Ethereal artifacts forged by the few remaining Tsayadite crafters of such objects.

@TEXT-BOX:"Unawakened" Benandanti are unaware of or otherwise distanced from their heritage, and have not learned the Song of Wolf, nor do they have the Duty to Heaven/Uriel or the Enemy. Their Awareness and Investiture often lead them into "mystical" occupations and hobbies, and they occasionally become Soldiers for other Archangels. (Not surprisingly, these Soldiers serve Jordi more often than any other Superior.) It is also possible for an unawakened Benandante to become a Soldier of Hell <\#208> in such a case, though, they permanently lose all ability to use the Song of Wolf.

@TEXT-BOX:An Aware Benandante can detect a potential or active Benandante Soldier with a simple IQ roll if he is within one hex.

@C-BOXHEAD:Song of Wolf

@D-BOXHEAD:Corporeal Only (Secret)

@TEXT-BOX:This Song was created by Uriel in the middle of the sixth century AD for the

sole use of the Benandanti, the special Soldiers he created in the early part of the Christian era. The Song seems to be keyed specifically to some hereditary trait possessed by the Benandanti; those without this trait cannot successfully perform it. At the present time, only those Benandanti who still follow the old ways know and teach the Song; it is unknown to any existing Celestial except perhaps a select very few of the Tsayadim.

@TEXT-BOX: Briefly, the Song of Wolf turns its singer into a humanoid wolf-man of fearsome countenance and impressive combat ability. To accomplish this, it seems to combine the features of several other Songs into a single composite result. Not surprisingly, it costs a large amount of Essence, with a corresponding Disturbance in the Symphony. The "flavor" of the Song's Disturbance is unique and easily-recognized, although few Celestials have ever encountered it, and fewer still know what it <I>is.<I>

@TEXT-BOX: The Song of Wolf appears to combine Corporeal Form, Numinous Corpus Fangs, and Numinous Corpus Claws, along with an undeniably unique Numinous Corpus Ornamental which is responsible for the majority of the user's physical transformation. The singer sprouts fur and muscle, his head and face become notably canine, and his feet and legs become digitigrade, adding an apparent six to ten inches to his height from the reconfiguration of the ankles and toes. The hands remain human in form, allowing tool (and weapon) use.

@TEXT-BOX: <I>Affiliation: <I> Purity, Animals

@TEXT-BOX: <I>Base Cost to Perform: <I> 5; 3.

@TEXT-BOX: <I>Duration: <I> (Degree of success) <f"symbol"><\#180><f\$> ten minutes

@TEXT-BOX: <I>Additional Disturbance: <I> the Degree of Success, <I>after<I> the user returns to human form.

(((END BOX)))

@C-HEAD: Variations

@TEXT: As noted elsewhere, some historical Benandanti described their transformations as spiritual, not physical. To represent this, add the <I>Projected Were-form<I> limitation (p. 00) at the -25% level to the package described on p. 00.

@TEXT: Most such bands which claimed a spiritual transformation also had gender-linked abilities for their members. While men were capable of the wolf form, women were dreamwalkers. In such a case, female Benandanti could be quantified either with Astral Projection, or with the Path of Dreams from <BI>GURPS Voodoo<\$> (p. VO74-74). Note that dreamwalkers who use Astral Projection may also possess True Astral wereforms (see box, p. 00).

@TEXT: Finally, modify or remove the Duty, Enemy and External trigger value as needed for campaigns that do not use a medieval European setting or some facsimile thereof.

@D-HEAD: Benandanti Characters

@TEXT: Benandanti characters work best in campaigns with a point total of at least 150 and preferably more. At the lower end, a basic Benandante will probably be a typical medieval villager, other than for his gift <\#208> one or two attributes raised slightly, a small range of skills at good levels, including one profession at a somewhat higher level <\#208> competent, but not exceptional, even in were-form. Campaigns with higher point budgets will allow more flexibility and more impressive performance, but may tend to crowd non-Benandanti out of the picture unless equally exotic options are available for other character types.

@TEXT: Remember, too, that Benandanti are undercover special agents for a force that transcends mortal authority. In almost all cases they will be productive and outgoing members of whatever society into which the GM sees fit to insert them, often model citizens; whether their role as supernatural protectors is known to their neighbors depends on the setting as well.

@TEXT: Whether publicly-known or not, Benandanti in more modern or future settings will tend toward professions in which they protect and serve others <\#208> police, military, medical (particularly paramedics and other emergency personnel), even security guards and private investigators. In less sophisticated game worlds, they are more likely to be farmers, blacksmiths, and other occupations that do not take them on the road; they prefer to stay in the communities where they grew up and where they know all their neighbors.

@TEXT: This assumes the Benandanti in question are aware of their heritage. If they are not, they can be in almost any trade, and may not discover their ability to change until

time of great stress or during exposure to great evil. In a campaign with sufficient points and a compatible background, the Benandanti shapeshifting talent would make an excellent Secret Advantage (p. CI16).

((START BOX))

@C-BOXHEAD:Sample Character: Carlo Ravelli 150 points

@D-BOXHEAD:Blacksmith and Benandante

@TEXT-BOX:Age 29; 5'9"; 170 lbs.; a homely fellow with a ready grin, curly black hair, brown eyes and an olive complexion.

@TEXT-CSTATS:ST 14 [45]; DX 11 [10]; IQ 10 [0]; HT 12 [20]

@TEXT-CSTATS:Speed 5.75; Move 5.

@TEXT-CSTATS:Dodge 5; Parry 8.

@TEXT-CSTATS:Damage: <I>Punch:<I> 1d-1; <I>Kick:<I> 1d+1; <I>Thrust<I> 1d; <I>Swing<I> 2d

@TEXT-CSTATS:<I>Advantages:<\$> Animal Empathy [5] (Reaction: +2/+4); Benandante were-form [65] (External Trigger: Quarterly call to arms, only to were-form, occasional, not exclusive: -50%); Reputation: Benandante, among other Benandanti +2 [1] (Reaction: +1; Recognized by: Small class, <f"symbol"><\#180><f\$>1/3; Frequency of Recognition: Sometimes (10-), <f"symbol"><\#180><f\$>1/2); Reputation: Benandante, in home village +2 [3] (Reaction: +2; Recognized by: Small class, <f"symbol"><\#180><f\$>1/3); Unusual Background: Born with a caul [5].

@TEXT-CSTATS:<I>Disadvantages:<\$> Appearance (Unattractive) [-5] (Reaction: -1); Bloodlust [-10]; Compulsive Generosity [-5]; Enemy: Inquisition [0] (Roll: 6 or less, <f"symbol"><\#180><f\$>1/2; Included in Benandante package); Pacifism (Cannot Harm Innocents) [-10]; Post-Combat Shakes [-5]; Sense of Duty: Villagers and nearby farmers [-5].

@TEXT-CSTATS:<I>Quirks:<\$> Careful; Congenial; Prays before every meal; Quietly proud of his smithcraft; Speaks slowly and carefully. [-5]

@TEXT-CSTATS:<I>Skills:<\$> Animal Handling-12 [1]; Area Knowledge: Home Village-12 [4]; Area Knowledge: Local Countryside-12 [4]; Axe/Mace-12 [4] (Parry: 6); Blacksmith/TL4-14 [10]; Brawling-12 [2] (Parry: 8); Hidden Lore (Benandanti)-12 [6]; Intimidation-10 [1]; Iron Whip-11 [0] (Parry: 5; Included in Benandante package); Leadership-12 [5]; Lifting-11 [1/2]; Packing-11 [1/2]; Swimming-10 [1/2]; Teamster-13 [1]; Veterinary/TL4-11 [1/2].

@TEXT-CSTATS:<I>Languages:<\$> Italian (native)-11 [1];

@TEXT-BOX:Carlo Ravelli is an accomplished blacksmith living in a small village in the north of Italy during the late 17th century. He is also a Benandante <\#208> a werewolf appointed by the forces of heaven to protect the crops and lives of the peasants in his area from the depredations of the forces of Hell. In this alternate, secret-magic Earth, those forces are very real, and so is Carlo's ability to transform into a 6'6" wolf-human hybrid.

@TEXT-BOX:For nine years, Carlo has been a member of a small band of Benandanti based in his village. Numbering seven all told, it formerly numbered eight, but in the last winter raid upon the gates of Hell, the band's last nominal leader was killed by one of the cursed <I>stregoni<I>. Forced by circumstances to rally his band in the midst of the combat, Carlo has since found himself stuck with the job of leader by the general acclimation of his fellows. Even though he is unsure he wants the job, he has learned quickly and well, and none of the other Benandanti in the group has had any complaints about his performance. Of course, he rarely has to do <I>anything<I>, but that suits the others just fine.

@TEXT-BOX:Carlo has a slow and careful way with words that sometimes deceives strangers into thinking he's dull-witted <\#208> an opinion often reinforced by his willingness to give his last lira to a friend or neighbor in need. While not the most skilled of blacksmiths, he still turns out quality work in which he takes a quiet, private pleasure. He is a widower, having lost his young wife to smallpox several years back. Despite his homeliness, several young ladies in the village would eagerly become his second wife, but he still mourns and shuns any suggestion he should remarry.

((END BOX))

@B-HEAD:Bionitech F2-ATV Biodroid

@TEXT:New for this season! The F2-ATV Biodroid is the go-anywhere, do-anything accessory of the year! Sleek styling and classic fur patterning combine with Bionitech's patented Multi-Form technology to produce a delightful accessory-pet that is both sophisticated and rugged. Equally at home in the drawing room and on a mountain trail, the F2-ATV is the premiere biomorphic companion/vehicle on the market today!

@TEXT:<#208> Fall 2157 Bionitech (LLC) Advertising Flyer

@TEXT:In one distant future, technology has advanced extraordinarily far in both the materials and biological sciences, until an unexpected common ground was found between them. This surprising synergy revolutionized dozens of fields, not the least of which were robotics and transportation.

@TEXT:The Bionitech Corporation is the premiere commercial organization exploiting these discoveries; the introduction of its first "biodroid" made the company an overnight success. It was the first manufacturer to successfully merge inorganic and organic technologies into a seamless, shapechanging whole.

@TEXT:Its most recent release is the high-end F2-ATV <#208> an off-road sport/utility vehicle which is also a handsome and charming pet suitable for almost any household. Described in the sales brochures as "attractively bimorphic," the F2-ATV spends its "down time" in a form that is constructed from a combination of the most attractive features of both cats and ferrets. Low-maintenance and "conveniently pre-housebroken," the F2's bioform is safe around children and furniture, is easy to train, and is extremely loyal and affectionate.

@TEXT:If that were all there were to the F2-ATV, though, it would be far from a top-of-the-line bio-engineered product. What sets the F2 apart from any number of other chimeric and cloned pets is its ability to turn into a full-featured off-road vehicle. The F2's SUV form is a far cry from the 4x4s of the 20th Century, though. Its smooth organic lines emphasize its flexible segmented chassis. Combine that with its four independent axles, eight wheels and a top-of-the-line gyrobalance system, and the F2-ATV is clearly a vehicle designed for the rough-and-tumble requirements of the true outdoorsman.

(((START BOX)))

@C-BOXHEAD: Campaign Roles

@TEXT-BOX: A good example of the weremachine, the F2-ATV is, by design, something of a cross between a tool and a Dependent. The intended effect is Lassie incarnated as a Jeep.

@TEXT-BOX: Most of the time, the F2 will be an NPC, run by the GM. Such a character will of a necessity be relegated <#028> <I>usually<I> <#208> to a support role. Fortunately, this is not the sole case. An F2-ATV, like any other character, earns character points, and can improve itself thereby. The "apocryphal" stories of independent-minded F2s are not urban legends, but accounts of those vehicles which were able to buy off their Slave Mentality disadvantages and which chose to remain loyal to kind owners. Such a character, particularly among open-minded compatriots, could become a very valuable member of an adventuring party.

@TEXT-BOX: On the other end of the spectrum, it is possible for an F2-ATV to "go bad." As a result of any number of traumas and stresses, an F2 could acquire mental disadvantages that would effectively break its Slave Mentality and let it go "rogue". (The GM is directed to the films "Christine" and "Duel" for inspiration here.) The result can be an unpredictable "bug hunt" adventure, spent chasing a shapeshifting SUV across every type of inconvenient terrain the GM desires.

@TEXT-BOX: A variant on this adventure seed would be to present an ostensibly "rogue" F2-ATV, seemingly attacking people at random in its vehicle form; but if the PCs take the time to determine just what drove it rogue, they will find the murder of a beloved owner or some other injustice that it feels it needs to redress in its own limited way.

@TEXT-BOX: Possibly more interesting (and unexpected) would be the inverse of this situation <#208> an F2-ATV continuously in the background of the apparent main action, acting in all ways normal and seemingly on innocent business, but which turns out to be a rogue of unusual intelligence and subtlety. By maintaining the appearance of its usual routine, it hides a secret that may be the key to the matter at hand <#208> or to an intriguing subplot.

nonhuman appearance per p. R050.)

@TEXT:While some potential buyers may feel that its near-quarter-million-dollar price tag is unnecessarily exorbitant, Bionitech hurries to disagree. The company is quick to point out that the price of a comparable high-end off-road vehicle from a manufacturer such as Land Rover or BMW-Rolls can match or exceed that of the F2-ATV yet still lack the unique dual nature that makes the F2-ATV so distinctive.

@C-HEAD:Personality

@TEXT:The F2 is designed to be as much a companion as transportation, and to that end, the model has been engineered to be as compatible with humans as possible. They are affectionate and gregarious, and while they demonstrate a cat's independence and ability to care for itself, they have none of the typical feline aloofness. Furthermore, they have been known to "imprint" or "bond" with their owners, demonstrating an almost canine loyalty that has surprised their designers. Playful and frolicsome in pet form, the F2 is all business when it turns into a vehicle <\#208> those that aren't never make it out of the manufactory.

@TEXT:It is known that individual vehicles often develop widely divergent personalities. While much of this can be attributed to the random factors involved in the use of an organic brain, clearly just as much comes from the "life experience" of the vehicle. And of course, the effects of environment and experience do much to shape the vehicles' "minds."

@TEXT:Nowhere is this last more pronounced than in the case of gender identification. Although technically neuter, F2s often acquire an ersatz gender identity, if only by association from the terms of address used by their owners. Since the majority of owners tend to refer to their vehicles as "she," most F2s view themselves as female. Oddly enough, despite the lack of any biochemical cues one way or another, significant and consistent <\#208> some say stereotypical <\#208> behavioral differences emerge, with "females," "males," and the few who retain a neuter identity all developing radically different styles of interaction with their owners and other F2s.

((START BOX))

@C-HEAD:Names

@TEXT:F2-ATVs are almost always named by their owners; the kind of person who <I>wouldn't<I> name at least the pet form would not buy this product. As F2s have no "native" culture of their own, there is precious little consistency among their naming save that imposed by the demographics of their owners. Their names can range from the distressingly cute to the bluntly macho to the coyly pretentious, depending on the social status of the owner and the primary use to which the vehicle is put. The listing of entrants in a cat or dog show <\#208> both full names and nicknames <\#208> can be a useful resource for naming one or a flock of F2-ATVs.

((END BOX))

@C-HEAD:Performance

@TEXT:Bionitech understands the special bond between pet and owner, and with this in mind (according to their literature) has avoided so-called "planned obsolescence" in the design of the F2-ATV. Using as their base the "natural" lifespan of the bio-engineered cat-ferret hybrid that makes up the "pet" form of the vehicle, Bionitech engineers created a vehicle design that, with regular care and maintenance, should provide exceptional service for at least 15 years. Owners are warned, though, that once the pet form reaches the end of its lifespan, the vehicle will cease to be operational. This is an unfortunate consequence of the F2-ATV's dual nature; despite the apparent mechanical construction of the vehicle form, it is in all regards as "alive" as the pet form, and despite the great difference in appearance and abilities, it is <I>not<I> a separate entity distinct from the "pet." It is, as the corporation's bioengineering department says, simply a different expression of the same potentials.

@TEXT:And, as Bionitech so aptly demonstrates, that expression can be controlled. The F2-ATV <\#208> as delivered <\#208> has no ability to shift from one form to the other on its own initiative <\#208> it can only do so at the request of its owner. That owner is the individual or individuals to whom the "pet" form has bonded, and to whom it displays loyalty. The pet can split its loyalty between at most two persons, facilitating both

joint ownership and resale. In the latter case, while "command rights" are immediately transferred to the new owner, the actual bond of loyalty takes several weeks to shift <\#208> an unavoidable consequence of using an organic brain as part of the system.
@TEXT:Another control built into the vehicle is a safety interlock that prevents a transformation to pet form while living creatures (greater than 1 pound in weight) are in any of the seats. The F2-ATV "takes along" any cargo it is carrying with its vehicle form whenever it assumes pet shape, obviating the need to unpack the trunk just to deactivate the vehicle. While in theory this "storage" should have no detrimental effects on living beings, and the safety of nonliving objects has been clearly demonstrated, prudence (and the Bionitech legal department) suggested the necessity of a safety interlock to prevent unfortunate and unforeseen accidents.

@TEXT:Of course, with any vehicle as revolutionary as the F2-ATV, there are bound to be rumors, stories and even urban legends circulating about it. Apocryphal tales tell of F2s with near-human intelligence and the ability to transform at will; that have retained a doglike devotion to their original owners despite being sold or traded away; of individuals in the <I>trunk<I> of a vehicle during a shift.<!s>.<!s>. and what happened to them. Bionitech takes no stand on such tales except to discount them as unfounded stories unworthy of serious consideration. However, privately, certain engineers within the corporation's design division are concerned about those such incidents which are well-documented; others express delight at the creation exceeding the creator's intent.

(((START BOX)))

@C-BOXHEAD:Settings

@TEXT-BOX:In the form described here, the F2-ATV can be found in any setting that supports both engineering and biotechnology at TL10. As the sample character below shows, it's a perfect adjunct to a colony or other "primitive" settlement on a distant world; it can also be a rich man's toy in more "civilized" milieux. The GM who feels that TL10 is not advanced enough for such a "technomagical" device should feel free to raise the minimum tech level needed before the F2 can be created; however, it will require redesign so that it properly reflects its new native TL. And of course, the F2 can always be the product of Weird Science at virtually any tech level above 6 (5, if the GM is twisted enough to set a self-willed steam engine loose upon his world).

@TEXT-BOX:Similarly, the inverse corollary to Clarke's Third Law (sufficiently advanced magic is indistinguishable from technology) can apply here: a vehicle like the F2-ATV can be the product of concentrated long-term effort by a large circle of enchanters <\#208> or one of their backfires. Or it can be the result of a single warped genius with a sufficient grasp of Weird Magic. In either case, it is far more likely to be a unique artifact rather than a mass-produced item, making it all the more valuable and more likely to be a McGuffin than a simple piece of equipment <\#208> assuming it's not a character in its own right.

(((END BOX)))

@C-HEAD:F2-ATV Characters

@TEXT:As noted elsewhere, a "stock" F2 is probably best employed in the "native bearer" role, especially if the campaign starting point total is below 150. With higher starting points, and a suitably cinematic mindset, there is no reason an F2 can't be a full member of an adventuring party in its own right. (Whether or not this is actually <I>known<I> by the other members of the party is up to the GM and player; a "secret" PC can be fun to play.<!s>.<!s>.)

@TEXT:At a starting total of 150 points, it would be hard to play an F2, but not impossible. An older vehicle near the end of its life, one in need of minor repairs, or possessing unusual personality quirks, could work at this level. A 175-point budget would be more workable, but the F2-ATV character really comes into its own at 200 points and higher. Here the character can buy off Slave Mentality at creation and still have the points for a wide variety of expanded abilities. (If well-treated, though, most such F2s will take a Sense of Duty to their owner and his family in place of the Slave Mentality.) It is even possible for an F2 to buy off the Bestial disadvantage, although this is a rarity; it represents a radical change in the "wiring" of the organic brain and the GM

may feel free to disallow it without sufficient in-game explanation.

@TEXT:Despite the Bestial disadvantage, F2-ATVs can buy all manner of skills; many simply cannot be used while in pet form. It is not uncommon for professionals who own an F2 to teach it something of their field so that it can act as an informal assistant. F2s have also demonstrated the ability to pick up skills entirely on their own. (Some of the more obscure or difficult skills, or those far divorced from its basic nature, may require an Unusual Background cost. As always, such determinations are up to the GM.)

(((START BOX)))

@C-BOXHEAD:Sample Character: Rockhound 200 points

@TEXT-BOX:Independent F2-ATV, 6 years old, 22 feet long, 1654 lbs., cream-colored in both forms.

@TEXT-CSTATS:ST 4 [0]; DX 14 [0]; IQ 10 [30]; HT 13/5 [0]

@TEXT-CSTATS:Speed 6.75; Move 6.

@TEXT-CSTATS:Dodge 6.

@TEXT-CSTATS:Damage: <I>Punch:<I> 0d; <I>Kick:<I> 0d; <I>Thrust<I> 0d; <I>Swing<I> 0d

@TEXT-CSTATS:<I>Advantages:<\$> Bought off Slave Mentality [+40]. F2-ATV Racial package [179]; Reputation +1 (Among colonists as heroic, trustworthy near-person, all the time) [5].

@TEXT-CSTATS:<I>Disadvantages:<\$> Brontophobia (Mild) [-10]; Combat Paralysis [-15]; Sense of Duty to {owner} and family [-5]; Sense of duty to colonial survey team [-5]; Stubbornness [-5].

@TEXT-CSTATS:<I>Quirks:<\$> Chatty while in vehicle form; Fiercely protective of "her people"; Can't get enough of the local "tikka" fruit; Vaguely uncomfortable with the Bestial aspect of her pet form; Hides the fact that she has the Change Control skill. [-5]

@TEXT-CSTATS:<I>Skills:<\$> Area Knowledge (Colony Settlement)-12 [4]; Area Knowledge (Surrounding terrain)-13 [4]; Change Control-10 [4]; Geology/TL10-9 [2]; Planetology (Earthlike)-9 [1]; Prospecting-10 [2]; Savoir-Faire (Colony)-10 [1]; Surveying/TL10-9 [1].

@TEXT-BOX:"Rockhound" is an F2-ATV technically owned by Dr. Clothilde Pollotta, geologist, planetologist and surveyor currently settled in the new colony on Kessler's World, an earthlike (though geologically active) planet with great potential mineral wealth. As the leader of the colony's survey and exploration team, Dr. Pollotta (and by extension her family) was granted effective ownership rights to one of three F2-ATVs assigned to the settlement.

@TEXT-BOX:Actual ownership rights vanished quickly. In the rough-and-tumble early years of the colony, colonists gained experience and expertise quickly <\#208> and so did their F2s. Named "Rockhound" by Clothilde's then-12-year-old daughter Emily, this particular F2 demonstrated unusual intelligence and an eagerness to serve.

@TEXT-BOX:But it was only when an unexpected natural gas blowout during a survey left most of the team injured and forced Rockhound to rescue them on her own initiative that the F2 shattered the artificial bonds on its personality and will. Tossing aside the remains of her Slave Mentality, Rockhound pushed herself far beyond her operational limits and discovered that she could draw upon aspects of one form while in another. By blending features from both pet and vehicle forms, she was able to bring the team to safety as she radioed the colony for help. Although the incident left her with a mild fear of loud noises, the respect and praise she received in its wake has only helped solidify her new personality into its current helpful, energetic form.

@TEXT-BOX:Since then, Rockhound has surprised Clothilde by being an enthusiastic (if not always stellar) student in the fields in which she finds herself most commonly employed. She has learned quite a bit from accompanying Dr. Pollotta on surveys and exploration runs, and once Clothilde discovered this, she decided to tutor Rockhound directly to turn her into a more useful asset. While Rockhound in no way is capable of acting as a professional in her own right, she knows enough to be an able assistant. Furthermore, her independence and high intelligence allow her to run errands and perform chores that the other F2s in the colony are as yet incapable of handling on their own.

@TEXT-BOX:So far, no one has really noticed that Rockhound has broken free of her Slave Mentality, and it's arguable whether at this time anyone in the colony would care if they

knew. She is known and trusted throughout the colony, and in fact is appreciated all the more for her initiative and common sense.

@TEXT-BOX:GMs please note that Rockhound is built on the assumption that all action takes place on Kessler's World. If for any reason the action leaves the colony planet, her point value will drop as her Reputation base will change from "Everyone in the campaign setting" to "Small group."

(((END BOX)))

@B-HEAD:Bioprobes

@TEXT:<I>NASA Communications Transcript, Ceres I Asteroid Belt Mission, 28 June 2036:

@TEXT:Ceres: Say, Houston, we got an anomaly on the infrared.

@TEXT:Capcom: Say again, Ceres?

@TEXT:Ceres: Houston, we've got a hot spot on the dark side of this rock. Scope says the damn' thing is almost a hundred degrees C.

@TEXT:Capcom: We copy, Ceres. You are authorized to investigate.

@TEXT:Ceres: Roger that, Capcom. Firing maneuvering thrusters and turning on the headlights. ETA 20 seconds.

@TEXT:Capcom: Acknowledged, Ceres.

@TEXT:Ceres: What the [expletive deleted]? Look at that!

@TEXT:Ceres: Houston? You're not going to believe this. There's something eating the asteroid.

@TEXT:Capcom: Say again, Ceres?

@TEXT:Ceres: There's something on the asteroid, Houston, and it's alive...<I>

@TEXT:The first of their kind speared on the hubward edge of settled space no more than 70 standard years ago. Since then, their numbers have grown in periodic bursts.

@TEXT:With rare exceptions, they do not communicate with anything other than their own kind. Face-to-face diplomatic efforts are ignored, or worse, "harvested." Attempts at telepathic contact invariably fail, running into a blank, black wall of psionic vacuum. And while it's clear that they are intelligent, after a fashion, it's not at all certain that they <I>think<I> in any way recognizable to us.

@TEXT:They arrive singly and depart en masse, consuming voluminous resources in the process <\#208> resources that start with asteroids and sometimes extend to unlucky spaceships, orbital colonies and their occupants, as well as the occasional remote settler <\#208> resources that some have chosen to defend, to their detriment. The mere arrival of one in a system is justification for a military deployment on a scale sufficient to repel an interplanetary invasion. They are hated, feared, dissected, studied.

@TEXT:They have no name of their own that galactic civilization is aware of. Spacers call them "asteroid termites," "star moles," and "those damned things." Colonists have called them "wolf-locusts." Certain governments call them "the plague." Biologists call them living machines, bioengineered lifeforms designed to live their lives in vacuum and microgravity, traveling from star to star. The general public knows them as "bioprobes."

@TEXT:They are an unknown civilization's answer to the problem of exploring the galaxy <\#208> a civilization that either didn't know or didn't care that there may be others already making use of the resources their probe-creatures would covet. They consume the flotsam of solar systems and reproduce themselves, swarming in all directions with the apparent intent to fill the observable universe. And woe to anyone who tries to stop them.<!s>.<!s>.

@TEXT:If their remote ancestors ever had a single specific homeworld, its characteristics cannot be determined from their biology. Between the adaptations that suit them for life in deep space and the wild changes individuals can undertake at a moment's notice, it is not likely any of their original genotype survives in quantities sufficient to plot their world of origin.

@C-HEAD:Advantages and Disadvantages

@TEXT:There are three distinct varieties of bioprobe, corresponding to the stages in their lifecycle and utilizing the optional "once only shifter" rules found in the sidebar on p. 00:

@D-HEAD:Larval Form 423 points

@TEXT-CSTATS:<I>Attributes:<\$> Enhanced ST 40 [180]; HT +2 [20]; Extra Hit Points +10

[50].
@TEXT-CSTATS:<I>Advantages:<\$> Claws [40]; Clinging (Requires 0 G, - 50%) [13]; Collected [5]; Damage Resistance +5 [15]; Disease-Resistant [5]; Doesn't Sleep [20]; Flight (Space Acceleration 1G, +25%; inertialess) [50]; Mindshare (Hivemind, intelligent drones, system-wide, 100-999 drones) [95]; Once-Only Shapeshift plus "placeholder" [33]; Predefined Once-Only Shapeshift to Factory/Mother form (Only usable in Rover form, -5%) plus "placeholder" [10]; Predefined Once-Only Shapeshift to Rover form plus "placeholder" [10]; Single-Minded [5]; Six Legs [10]; Tunnel [40]; Unaging [15]; Vacuum Support [40].
@TEXT-CSTATS:<I>Disadvantages:<\$> Acceleration Weakness [-5]; Bad Grip [-10]; Callous [-6]; Centauroid [0]; Clueless [-10]; G-Intolerance [-20]; Hidebound [-5]; Illiteracy [-10]; Increased Life Support <f"symbol"><\#180><f\$> 4 (vacuum-and-microgravity organism with exotic silicon biochemistry) [-40]; Mute [-25]; No Sense of Humor [-10]; Odious Racial Habit: Treats Other Sentients as Animals and Raw Materials -3 [-15]; Reclusive [-10]; Reputation -4 (Dangerous, unpredictable monsters, known throughout galactic civilization, all the time) [-20]; Staid [-1]; Sterile [-3]; Stubbornness [-5]; Weakness: Cold, 1d/30 minutes [-10]; Weakness: Free Oxygen, 1d/minute [-40].
@TEXT-CSTATS:<I>Skills:<\$> Survival (deep space) at IQ+1 [4]; Engineer/TL1 (Mining) at IQ+2 [8].
@TEXT:"Pre-adapted" larvae (see p. 00) use the absolute minimum number of points necessary to adjust to their birth environment. Any points left over are retained as a smaller Once-Only Shapeshift of proportionally lower utility.
@D-HEAD:Rover Form 9 points
@TEXT:As larva, but with following changes:
@TEXT-CSTATS:<I>Attributes:<\$> Apply -40% "No Fine Manipulators" limitation to ST [-72].
@TEXT-CSTATS:<I>Advantages:<\$> Remove Placeholder for change to Rover form [-1, doesn't count against Rover total]; Six Legs [-10]; Tunnel [-40]. Add Damage Resistance +5 [15]; Doesn't Eat or Drink [10]; Hyperflight [50]; Passive Defense +2 [50]; Super Flight <f"symbol"><\#180><f\$> 2 [40]; 3D Spatial Sense [10].
@TEXT-CSTATS:<I>Disadvantages:<\$> Remove Bad Grip [+10]; Centauroid [0]. Add No Manipulators [-50]; Short Arms [-10].
@TEXT-CSTATS:<I>Skills:<\$> Add Astrogation (Hyperflight) at IQ+2 [6].
@TEXT:Like larvae, rovers may be "pre-adapted."
@D-HEAD:Factory/Mother Form 8 points
@TEXT:As rover, but with the following changes:
@TEXT-CSTATS:<I>Attributes:<\$> Although DX becomes meaningless, points spent on it do not change and are not reallocated. Extra Hit Points +20 (Sessile, -75%) [25].
@TEXT-CSTATS:<I>Advantages:<\$> Remove Doesn't Eat or Drink [-10]; Claws [-40]; Flight [-40]; Hyperflight [-50]; Placeholder for change to Factory form [-1, doesn't count against Factory total]; Super Flight [-40]; 3D Spatial Sense [-10]. Add Damage Resistance +15 [45]; Extra Arms (4, +2 hex length, plus +2 hex length on default arms) [160]; Fangs [10]; Passive Defense +1 [25].
@TEXT-CSTATS:<I>Disadvantages:<\$> Remove No Manipulators [+50]; Short Arms [+10]; Sterile [+3]. Add No Fine Manipulators [-30]; Sessile [-50]; Terminally Ill [-50].
@TEXT:If the GM allows player character bioprobes, they are always <I>rogues<I> <\#208> see p. 00.
@D-HEAD:Rogue Larva 285 points
@TEXT:As larva, but with following differences:
@TEXT-CSTATS:<I>Advantages:<\$> Remove Mindshare [-95] and the Predefined Once-Only Shapeshift to Factory/Mother form plus its "placeholder" [-10]. Add Psionic Resistance +10 [20].
@TEXT-CSTATS:<I>Disadvantages:<\$> Add Enemy: Other Bioprobes, 6 or less [-20]; Total Amnesia [-25].
@TEXT-CSTATS:<I>Skills:<\$> Remove Engineer/TL1 (Mining) [-8].
@D-HEAD:Rogue Rover 284 points
@TEXT:As rover, but with following differences:
@TEXT-CSTATS:<I>Advantages:<\$> Remove Mindshare [-95]; Predefined Once-Only Shapeshift to Factory/Mother form plus "placeholder" [-10]. Add Psionic Resistance +10 [20].
@TEXT-CSTATS:<I>Disadvantages:<\$> Add Enemy: Other Bioprobes, 6 or less [-20]; Total Amnesia [-25].
@TEXT-CSTATS:<I>Skills:<\$> Remove Engineer/TL1 (Mining) [-8].
@TEXT:There have been as yet no known cases of rogue factory/mothers; rogues appear to

lose the ability to metamorphose into the final stage of the bioprobe lifecycle. Some experts believe that this is because they have been cut off from a theoretical "meta-hivemind" that presumably approves and triggers colony formation.

@TEXT:Rogues' Psionic Resistance represents the last vestiges of the lost hive mind's impenetrability to telepathy. The Enemy is because ordinary bioprobes treat rogues as cancerous "cells" to be ruthlessly exterminated.

((START BOX))

@C-BOXHEAD:Names

@TEXT-BOX:The bioprobes are a race of hiveminds. Individual larvae and rovers have no need of personal names, unless they are rogues. Each colony may well have a unique personal designation, but as they do not communicate with other species, this is unknown. Galactic civilization refers to individual colonies by the name of the system they have infested. What, if any, racial name the entire species of bioprobes calls itself is unknown.

@TEXT-BOX:Rogues tend to be eclectic and somewhat random in their choices once they understand the need for names. "Fred," "Licorice Mauve," "Watering Can," and "Puppy 39" are examples of self-selected rogue names.

((END BOX))

@C-HEAD:Psychology

@TEXT:If normal bioprobes have any kind of sophisticated psychology, it isn't apparent to any of the trained observers who have attempted to deduce it. That they are indeed some variety of hivemind has been determined through a long series of field experiments. Direct observation has revealed behaviors that seem indicative of human-level intelligence, but experience warns that one sentient's "intelligence" is frequently another sentient's "instinct."

@TEXT:One thing they certainly possess is a well-defined sense of property and ownership. Unlike animals such as the jackdaw and the packrat, which gather collections of shiny items, bioprobes are apparently able to enumerate and distinguish between individual objects. Evidence suggests they "inventory" the materials they acquire for the mother/factory's use, especially if those materials are stockpiled instead of fed directly into its consuming maw. They understand theft (at least theft from themselves), and will unflaggingly pursue thieves to the best of their ability (which can be substantial, since the hivemind allows all bioprobes of a colony to identify the stolen items and those who took them). There are accounts of larvae bioprobes attacking starships whose owners had managed to recover "scavenged" equipment and remount it.

@TEXT:Unfortunately for many asteroid miners and the inhabitants of several O'Neill colonies, sentient beings of all kinds <#\#208> and their dwellings <#\#208> are occasionally considered "raw materials."

@C-HEAD:Ecology

@TEXT:While almost nothing is known about their psychology, the biology of the bioprobes is at least partially understood. They are a silicon-based lifeform with a body temperature close to 100<#\#161> Celsius. Unlike most silicon species, though, their bodies are not constructed around the stonelike oxides of silicon, but rather from many varieties of silicone polymers. They do possess a rocky outer skin, but it is analogous to the armor of an armadillo rather than indicative of their internal structure. The combination gives them extraordinary flexibility and speed for a species not based on carbon, as well as remarkable durability; they are disturbingly hard to kill.

@TEXT:Their physical structure, as one noted researcher has commented, is "mostly coiled potential." Although analogies are at best fraught with inaccuracies, the best comparison to be made suggests that many, maybe even most, of a bioprobe's cell-like organelles ride constantly on a point equivalent to the threshold of cell specialization in a fetus. Any given organelle, at the proper electrochemical signal, can immediately specialize as needed, becoming connective tissue, bone, new organs <#\#208> literally anything that the organism needs. Even more importantly, the creature's physical organization on that level is such that drastic changes can be implemented in seconds without apparent harm. Several universities and biotech firms are studying bioprobes in the hopes of discovering a way to reproduce this startling ability in carbon-based creatures.

@TEXT:Secondly, as noted elsewhere, the bioprobes are clearly an <I>engineered<I> race, as evidenced by the self-destruct mechanism in the factory/mothers and a concise, efficient genetic structure that lacks introns <\#208> the accumulated "garbage code" that naturally-evolved species possess in abundance. They were designed to spend their entire (rather substantial) lives in vacuum and microgravity <\#208> in their default forms, bioprobes die when exposed to anything approaching "normal" (Earthlike) conditions: their internal organs collapse under their own weight in a gravitational field greater than .1G (their native flight abilities are inertialess and thus do not stress their bodies); they burst into flames when exposed to free atmospheric oxygen (a consequence of their silicon biochemistry); and they tend to "freeze" to death in any environment that allows them to radiate their excess body heat faster than they do in the insulation of vacuum.

@TEXT:However, because of the race's remarkable adaptability, individuals and groups have been encountered who have overcome one or more of these restrictions. Occasionally a rover manages to reach a planetary surface by adapting to oxygen and gravity even as it undergoes re-entry. Obviously, on many worlds they may not even have to deal with oxygen, making survival that much easier. And settlers on May's World have reported encountering a colony of bioprobes which had taken up residence in a tropical ocean basin.

@D-HEAD:Rogues

@TEXT:Occasionally, the bioprobes' adaptability works against them. Some very small fraction (biologists estimate approximately 1 in 100,000) of the creatures mutate into independent sentient beings. These rogues are normally killed and "recycled" by their compatriots, but occasionally one escapes. Those which have survived their initial contact with galactic civilization (they tend to be targets of opportunity in many locales) have unfortunately been unable to shed any further light on the workings of the hivemind; they are always <I>tabulae rasae,<I> devoid of pre-independence memories and lacking the ability to tap into the group mind network.

@TEXT:Player character bioprobes will always be rogues.

((START BOX))

@C-BOXHEAD:Bioprobes in the Campaign

@TEXT-BOX:As written, bioprobes can function as a combination villain/natural hazard. The exact proportion between the two is dependant, of course, on the needs of the campaign, but the GM can easily tune a colony's personality anywhere between mindless ants and malicious monsters.

@TEXT-BOX:Although intended for <BI>GURPS Space,<\$> with tweaking the bioprobes can be used in other settings. Both <BI>Atomic Horror<\$> and <I>X-Files<I>-style settings can exploit probes which have adapted themselves to planetary surfaces. It's recommended that larval Flight abilities be removed to provide a more traditional "ground war against the monsters" type of campaign; however, retaining their ability to fly and even leave the atmosphere makes for a greater challenge. <BI>Cyberpunk<\$> and other SF settings that do not normally deal with creatures from outer space would also be good targets for a probe infestation; "business as usual" it most certainly will <I>not<I> be.

@TEXT-BOX:On a completely different front, little needs to be changed to turn them into magical monsters suitable for anything from a standard <BI>Fantasy<\$> game through <BI>GURPS Mage: The Ascension<I> into <BI>Cthulhupunk.<\$> The GM may wish to alter their nature and origin <\#208> be it to a previously-unknown Umbral denizen or some variety of Elder spawn <\#208> or decline to explain them at all, leaving them shrouded in mystery and paranoia.

@TEXT-BOX:In any case, GMs planning on using bioprobes as invaders or monsters may want to consult <BI>GURPS War Against the Chtorr<\$> for useful advice and inspiration.

((END BOX))

@D-HEAD:Lifecycle

@TEXT:Being adapted to deep space, bioprobes normally spend their entire life cycle in hard vacuum and microgravity. Their usual "habitat," to use the term loosely, is an asteroid or protocomet belt (Oort cloud). They show a general preference for rocky asteroids, but make frequent use of metallic asteroids as well, which frequently earns them the enmity of beltters and miners.

@TEXT:Their primary "foodstuffs" are raw silicates and metallic ores. However, they appear to require a wide variety of trace compounds, based on the many unusual "harvests" that have been reported. Witnesses have seen larvae target and acquire starship and habitat parts, depleted radioisotopes, dead powercells, discarded plastics, water contaminated with pesticides, fertile topsoil, and any number of organic compounds, including meat, blood and even entire animals.

@TEXT:There are three basic stages to the life of a bioprobe:

@TEXT:<I>Larvae.<I> Bioprobes start their lives as larvae spawned by a factory/mother. Larvae are insectoid creatures, vaguely centaur-like in structure, approximately 8 feet long and three high when on all sixes. Their front two legs are adapted for cutting and crushing, with bioceramic blades hard and sharp enough to slice through light body armor, but they also have rudimentary hands with which they can grasp and lift. Additionally, they have a vacuum-tight "pouch" capable of holding volumes up to one cubic yard; gasses held in the pouch can reach a maximum pressure of 60 PSI. Materials harvested are stored in the pouch until they can be returned to the factory/mother, where they are consumed.

@TEXT:The larval bioprobe is a combination warrior/worker, capable of both defending the colony and gathering its supplies with equal ease. Lightly armored and as strong as five men, it can survive both a mine cave-in and small arms fire, and cut its way out of both dangers. It also possesses a low-powered pseudo-organic inertialess drive, allowing it to travel across an entire solar system in search of the raw materials the colony needs. Sometimes these raw materials include samples from gas giants; larvae have been witnessed making long, skimming flights through the upper reaches of such planets' atmospheres.

@TEXT:In addition to defense and "harvesting," some larvae appear to be information gatherers. Dispatched throughout the host solar system, their behavior suggests that they are exploring and investigating. Some larvae have been known to orbit planets for weeks at a time, and to tag along with intrasystem space traffic. These have been apparently entirely passive save for their motive systems, and unlike other larvae prefer to flee rather than fight.

@TEXT:<I>Rovers.<I> Eventually, the factory/mother reaches what is thought to be a saturation point. What triggers this is unknown, but when it happens, the factory ceases to create new larvae, and recalls its spawn. All larvae abandon their current tasks and return to the mother one last time; exactly why this is done is unknown, as there is no contact or exchange between the two. There each one undergoes a transformation into the form commonly called a "rover." Rovers are roughly cigar-shaped, and measure about nine feet long by three across. They are completely enclosed by a thick, rocky shell. Their six legs remain in a vestigial form, with just enough strength to anchor a rover to a surface in zero-g. They retain any adaptations they may have undergone while in larval form. The primary feature of the rover, however, is its stardrive <#208> the bioprobe rover is one of the few creatures known to be capable of FTL speeds under its own power. As far as can be determined, their top speed is twice that of light.

@TEXT:Upon their transformation, the rovers all launch into deep space. One rover always returns back along the factory/mother's original arrival trajectory. (It is believed that this is a report to the probes' unknown creators, but tracing the full route back to them has never been attempted.)

@TEXT:The rovers have a tropism for starlight, and target a random star in their field of view when engaging their interstellar drive. Months or years later, they arrive at their destination. If no suitable raw materials are found, or if an existing factory/mother is detected, it surveys the system briefly. Then a new star is selected from the field of view and the rover continues onward. A rover which was "pre-adapted" by its factory/mother will tend to favor its birth environment, but will not reject a "standard" habitat outright.

@TEXT:This ability to adapt is the common feature of the larva and rover that makes them both so dangerous and so successful at their mission. In addition to the form changes they undergo as part of their lifecycle, immature bioprobes are able to make drastic and dramatic changes to their biochemistry and physical structure in order to respond to danger or a hostile environment. They can only do this once before exhausting the potential of their ductile forms, but the changes are virtually instantaneous and always appropriate to the conditions.

(((START BOX)))

@C-BOXHEAD:Bioprobe Player Characters

@TEXT-BOX:As noted elsewhere, all PC bioprobes must be rogues. This is mainly because there is no such thing as an individual bioprobe when it is connected to the system mass-mind, and that mind is going to be far too alien to interact meaningfully with other characters.

@TEXT-BOX:The biggest challenge facing a bioprobe character is communication. Being both mute and resistant to psionic contact makes it hard to interact meaningfully with other species. Gesture or Sign Language is an option for larvae, and both larvae and rovers can easily use minicomps for text transmissions. Lacking these, some rovers have had to resort to slates and chalk. The latter two options, of course, require the PC to buy off the species' Illiteracy.

@TEXT-BOX:A second challenge is the automatic enmity from "normal" bioprobes that every rogue faces. Any time a rogue ventures into territory known to be the home of a bioprobe colony, it risks a mass attack.

@TEXT-BOX:Assuming a typical <BI>Space<\$> campaign, rogue bioprobe PCs would probably be best suited as part of the staff of an orbital outpost. Given their relatively slow FTL speed, they would not make good additions to a campaign based on any but the slowest starship, unless it were feasible to provide the life support mechanisms needed to carry them aboard the ship. (This of course assumes that they do not use their adaptive change to reduce their life support requirements.) As part of a survey ship, they'd be invaluable for their ability to travel quickly through a system under their own power while carrying a relatively large load of instrumentation.

@TEXT-BOX:In a campaign with relativistic star travel or very slow FTL, a rogue bioprobe could become a scout, searching out new systems for the colony ship with which it was affiliated. In an interstellar war, they can be spies, scouts and forward observers. And how better to approach an invasion plot than with a turncoat on your side?

@TEXT-BOX:Even in a setting without starflight like <BI>Terradyne<\$> or <BI>Transhuman Space<\$>, a bioprobe PC is possible. The most likely scenario would make the rogue a solitary visitor to an inhabited system unfamiliar with the race. For a GM intrigued by the possibilities of an invasion plot, however, the probe PC could be an escapee from an in-system infestation like that found in the opening vignette.

(((END BOX)

@TEXT:<I>Factory/Mother.<I> If a suitable source of raw materials is found, be it in an asteroid or protocomet belt around the star, or in another environment (such as a planetary surface) to which the rover is already adapted, the cycle begins anew. The rover affixes itself firmly to the chosen object, and metamorphoses into a factory/mother. This is the final stage in the bioprobe lifecycle, a pseudo-organic manufacturing plant capable of churning out larvae as fast as it can be fed the raw materials needed to spawn them. It is also the hub of the system-wide bioprobe hivemind.

@TEXT:A factory/mother resembles nothing more than a dome of rock some thirty to forty feet across, permanently anchored into the substance of an asteroid or protocomet. At one end is a circular maw approximately five feet in diameter, lined with sharp teeth on jaws that can spiral shut like the iris of a camera. The six legs of the original larva reappear as tentacle-like limbs three yards long, spaced equidistantly around the mouth. Its stony shell provides armor that is proof against both attackers and the inevitable micrometeorites. It also retains any "wild card" adaptations it made in larval or rover state, which can conceivably allow it to base itself in otherwise hostile terrains.

@TEXT:Approximately 35 hours after transforming, the factory/mother spawns its first larva, spending a significant fraction of its own mass to do so. Once the larva starts feeding it, the factory consumes voraciously and produces continuously <\#208> one larva every 35 hours for anywhere from one to two and a half standard years. (Larvae spawned by a factory/mother adapted to and living in an otherwise hostile environment <\#208> such as the aquatic probes on May's World <\#208> are "pre-adapted" for that environment by the factory/mother. If the factory/mother is operating in a "standard" vacuum/microgravity environment, its larvae receive no "pre-adaption".)

@TEXT:At the end of its productive period, the factory/mother issues a recall to its spawn as noted above, and begins a shutdown process. When all the larvae have changed to rovers and have launched, the factory/mother dies, usually within 2-4 weeks. At the moment of death, acid sacs strategically positioned within its body burst, destroying its

internal structure.

@TEXT:Larvae and rovers are technically neuter; factory/mothers are effectively female.

((START BOX))

@C-BOXHEAD:Sample Character: "Worthington Blue Vanilla" . . . 400 points

@TEXT-BOX:Age 12; 8'10" long; 700 lbs.; Rogue Bioprobe Rover, a bluish-black rocky ellipsoid with metallic highlights.

@TEXT-CSTATS:ST 44 [2]; DX 12 [20]; IQ 13 [30]; HT 12/22 [0]

@TEXT-CSTATS:Speed 6.00; Move 6.

@TEXT-CSTATS:Dodge 6.

@TEXT-CSTATS:Damage: <I>Punch:<I> 4d; <I>Kick:<I> n/a; <I>Thrust<I> 4d+2; <I>Swing<I> 7d

@TEXT-CSTATS:<I>Advantages:<\$> Extra points in Once-Only Shapeshift plus "placeholder" [22]; Literate [10]; Patron (Galactic Survey Service), 6 or less [20]; Rank 4 [20]; Reputation +1 (Service members, all the time) [2]; Rogue Bioprobe Rover [284]; Status 1 [free from Rank].

@TEXT-CSTATS:<I>Disadvantages:<\$> Curious [-10]; Duty to Survey Service, 15 or less [-15]; Gullibility [-10]; Sense of Duty to crewmates [-5].

@TEXT-CSTATS:<I>Quirks:<\$> Enjoys human literature, particularly late 19th- to early 20th-century British; Affects 19th-century British "vocal" mannerisms; Aware of his Gullibility and is trying hard to learn enough to offset it; Wants to be a writer of great, universal literature; Endlessly debates using his Once-Only Shapeshift to adapt to normal atmosphere and gravity. [-5]

@TEXT-CSTATS:<I>Skills:<\$> Area Knowledge (Known Space)-15 [4]; Astrogation (Hyperflight)-15 [0]; Brawling-12 [1]; Chess-17 [4, hobby skill]; Computer Operation/TL-15 [4]; Electronics Operation (Communications)/TL-15 [6]; Electronics Operation (Sensors)/TL-15 [6]; English-13 [2]; Literature-13 [4]; Planetology-14 [4]; Savoir-Faire (Survey Service)-13 [1]; Writing- 13 [2].

@TEXT-CSTATS:<I>Languages:<\$> Galactic Standard-13 [2].

@TEXT-BOX:"Worthy," as his crewmates call "him," is the only rogue bioprobe in the Galactic Survey Service, and as such enjoys a certain amount of notoriety among his fellow Service members, not to mention a certain degree of latitude from his commanders. The Service as a whole clearly appreciates his worth, as it has repeatedly fitted the ships on which he has served with quarters and accessways designed for his exclusive use <\#208> that is to say, in vacuum with no artificial gravity. Of necessity, he is physically isolated from his crewmates, but thanks to a keyboard-equipped com unit permanently affixed to his rocky shell he can keep up a steady stream of "conversation" from almost anywhere in the ship.

@TEXT-BOX:Worthington certainly earns his way in the Service. Being able to flit about a system under his own power and without the need for expensive life support means a substantial savings in the budget for any ship on which he serves. Able to carry hundreds of pounds of equipment, he frequently wears a custom-built scanner unit that feeds directly to the ship's main computer, letting him function as the equivalent to a one-man scoutship at a tiny fraction of its cost.

@TEXT-BOX:Personality-wise, Worthington is still coming to terms with both his own independence and the existence of other sentients. He is especially fascinated by humans and their literature; Kipling and his contemporaries have caught his imagination to the point that his "speech" has picked up many stereotypical British mannerisms from the period between the Raj and the First World War. This is not because of any desire to be humorous <\#208> Worthington, like virtually all bioprobes, does not understand humor <\#208> but because of an inexplicable feeling of kinship with and admiration for the British explorers, conquerors and settlers of that period.

@TEXT-BOX:His greatest weakness, in Worthington's own opinion, is his lack of experience and knowledge about the peoples and cultures of the Galaxy. Combined with his general trusting nature, this manifests as a Gullibility that he despises, and which he is working to eliminate with a thorough education.

((END BOX))

@B-HEAD:The Cinematic "Monster" Werewolf

@TEXT:<I>Jack: Now, I'm really sorry to be upsetting you, but I have to warn you.
@TEXT:David: Warn me?
@TEXT:Jack: We were attacked by a werewolf.
@TEXT:David: I'm not listening to this!
@TEXT:Jack: On the moors, we were attacked by a lycanthrope, a werewolf. I was murdered, an unnatural death, and now I walk the earth in limbo until the werewolf's curse is lifted.
@TEXT:David: Shut up!
@TEXT:Jack: The wolf's bloodline must be severed; the last remaining werewolf must be destroyed. It's you, David.
@TEXT:<#208> from An American Werewolf in London, 1981<I>
@TEXT:As sympathetic as many recent portrayals have been, some weres are still monsters. This is one such. Inspired not as much by classic Universal horror films as by more recent movies like <I>Wolfen<I> and <I>An American Werewolf in London,<I> this is the original Werewolf From Hell: 200-plus pounds of snarling death and infectious curse, three or more feet high at the shoulder and splattered with the blood of its innocent victims. It would make an excellent villain in a <BI>Horror<\$> or <BI>Supers<\$> campaign.
@TEXT:A were this terrifying should probably not be inflicted upon a PC as a curse unless the characters are very tough, or the were-form manifests very seldom (once a month or less). The unfortunate soul who suffers from this were-form almost never will be in control of it. The -15-point level of Split Personality is the norm, and if the optional NPC were-form rule (see sidebar, p. 00) is used, the player will <I>never<I> have any control over it. The character will simply black out, then wake up the next morning in a cave or a cellar, soaked in someone else's blood.
@C-HEAD:The Werewolf From Hell
@TEXT:(PPT: +449, NPT: -152, to be adjusted for the character who suffers from this were-form before final point cost calculated.)
@TEXT-CSTATS:<I>Attributes:<\$> ST 14 [0] DX 12 [0] IQ 8 [+45] HT 15 [0]
@TEXT-CSTATS:<I>Advantages:<\$> Dire Wolf Template (see box, p. 00) [28]. Change Claws to 40-point level [+25]; Sharp Teeth to Fangs [+5]. Danger Sense [15]; Dark Vision [25]; High Pain Threshold [10]; Immunity to Poison [15]; Increased Speed <f"symbol"><#180><f\$> 2 [50]; Magic Resistance +5 [10]; Recovery [10]; Regular Regeneration [25]; Silence +3 [15]; Vampiric Invulnerability (vulnerable to silver instead of fire) [150].
@TEXT-CSTATS:<I>Disadvantages:<\$> Appearance: Monstrous [-25]; Bad Temper [-10]; Berserk [-15]; Bloodlust [-10]; Compulsive Behavior: Spread terror and bloodshed [-15]; Dread: Wolfsbane, 2-hex radius [-6]; Frightens Animals [-5]; Gigantism [-10]; Odious Racial Habit: eats humans [-15]; Overconfidence [-10]; Vulnerability: Silver/3 [-30].
@TEXT-CSTATS:<I>Quirks:<\$> Prefers to focus on people and places known to its human form [-1].
@TEXT-CSTATS:<I>Skills:<\$> Intimidation at IQ+3 [8]; Jumping at DX [1]; Shadowing at IQ+2 [6]; Tracking at IQ+2 [6].

((START BOX))

@D-BOXHEAD:Dire Wolf Template 28 points
@TEXT-CSTATS:<BI>Attributes:<\$> ST +4 [45]; DX +2 [20]; IQ -6 [-50]; HT +5 [60].
@TEXT-BOX:PPT: +300; NPT: -272.
@TEXT-BOX:In all other ways save size (approximately as big as a Shetland Pony) the dire wolf template is identical to the wolf template found in the box on p. 00.

((END BOX))

@D-HEAD:Required and Optional Traits
@TEXT:In keeping with the movie traditions, the cinematic werewolf's were-form is limited with a Cyclic Change on a Lunar schedule, for a -20% point cost modifier (but see the box on p. 00, if it's not being used in a campaign set on Earth). A temporary Cure/Cursebreak (p. 00) is commonly found in these weres, and in many cases, the Genetic Trait limitation (p. 00) will apply. Those without Genetic Trait will normally have an Infectious Attack (-5 points, p. CI97).
@TEXT:The Cinematic Werewolf is also a good candidate for the optional "NPC Were-form"

rule found in the sidebar on p. 00. At the very least, it will likely have the Compulsive Behavior "Morally Opposed" or "Lifewrecker" (p. 00).

@D-HEAD:Requirements for the Base Form

@TEXT:As noted above, the character who suffers from this were-form should take Split Personality at the -15-point level. (Exception: a truly evil person who takes great pleasure in the damage he does to other might have complete conscious control over the were-form.) The Non-Reciprocal Damage and Reciprocal Rest advantages are highly recommended as being particularly in-genre, but they are not mandatory. If the intended flavor is more "classic monster movie" than "modern monster movie", do not use Non-Reciprocal Damage. And of course, a Secret is always appropriate.

@C-HEAD:The Classic Background

@TEXT:A good cinematic monster always needs a backstory. Surprisingly, the cinematic monster werewolf is just the latest incarnation of a proud tradition stretching back hundreds of years. In many cultures, were-creatures are at the best shy and harmless, and at the worse no more bloodthirsty than any other natural predator. However, the medieval French developed a truly despicable variety of were. Vicious, willfully evil, and gleefully cannibalistic, the French *loup-garou* became the yardstick by which the Inquisition measured all the shapeshifter traditions it encountered around the world. (See pp. 00-00.)

@TEXT:In its translation from folklore to film, the *loup-garou* became, if anything, even more monstrous. All but invulnerable and implacably murderous, it was usually a parasitic entity imposed as a curse upon an otherwise good man. Invariably, he who was forced to watch as it destroyed everyone and everything he loved, one moonlit night at a time.

(((START BOX)))

@C-BOXHEAD:The Cinematic Werewolf in the Campaign

@TEXT-BOX:The cinematic werewolf is probably best suited for use as a "monster" to be countered and ultimately defeated. Although hunting down and killing such a creature is certainly one option, the plot need not be quite so literal. Discovering that the beast's alter ego is a clueless innocent may transform the goal from a "bug-hunt" to a mad search for the ingredient or ingredients necessary to cure (or at the very least suppress) the change. Or perhaps an academic has become convinced that the monster is actually a "fossil" lifeform, a dire wolf inexplicably surviving into the modern age, and has contracted the party to recover it alive.

@TEXT-BOX:While it's likely that a cinematic werewolf is more likely to be a "one-off" opponent in most games, one whose human side is in complete accord with the bestial nature of his were-form could make for a good recurring villain for a Horror, Atomic Horror, Weird Modern/X-Files or even a Black Ops campaign.

(((END BOX)))

@TEXT:In keeping with the source material, this were-form usually appears in one of two modes. The first is the *ancestral curse*, identifiable by the Genetic Trait limitation (p. 00) applied to the were-form. Some remote ancestor of the character offended someone extremely powerful so powerful that they planted a small gift into the family's genetic code to make their lives miserable for generations to come. The second is the *infectious werewolf*, where the curse spreads like rabies to individuals who otherwise would have had no inclination towards shapeshifting. Appearing most rarely are those cases which combine the two a genetic predisposition that requires the bite of an active werewolf to "awaken".

@C-HEAD:Psychology

@TEXT:The monster werewolf usually has little in the way of psychology above and beyond a compulsion to inflict terror and death on everyone it encounters. It almost never shares any of its hosts' better qualities (although an evil host may well embrace it and vice versa). To the extent that it can think about itself at all, it sees itself as the top of the food chain, the rightful predator upon humans. Those who are an inflicted curse, especially when they possess the "Lifewrecker" Compulsive Behavior (p. 00), see the base form, his friends and his loved ones as toys to play with for their pleasure.

((START BOX))

@SB-HEAD:Cinematic Monster PCs

@TEXT-BOX:In general, it would be a bad idea to allow a player character to suffer from this particular curse unless, of course, the point of the game is to kill all the other members of the party or turn them into werewolves, too. Even so, the resulting game might not be to the liking of most players, even with its supernatural overtones.

@TEXT-BOX:However, one possibility may be for the GM to conspire with a player to bring in an PC afflicted with this were-form <I>unknown to the other players<I>. This would work best if the "ringer" is or has been in the game for some time before the character's advent. A single adventure or an entire campaign could then flow from the undue attention the party members find focused upon themselves in the wake of the were-form's predations in their vicinity. Only, as their own investigations begin to bear fruit, they realize evidence points to one of their own number.<!s>.<!s>.

((END BOX))

@C-HEAD:Ecology

@TEXT:The cinematic werewolf doesn't truly have an ecological role in the world. As an unnatural beast, it is imposed upon the existing order without properly being part of it. (Certain abilities will reveal this to the observer: Awareness does so automatically, as will an Occultism or Weird Magic roll. A suitably open-minded Naturalist might also detect something "wrong" about a cinematic werewolf on a roll -4.)

@TEXT:That being said, it is first and foremost a predator of awesome power and appetite. Even more so than its closest natural counterpart, the now-extinct dire wolf, it is a formidable killing machine, and it regards almost every living creature as potential prey. Even were it not driven by its bloodthirstiness and antipathy toward life, it would be dangerous to encounter; as it is, the creature is absolutely deadly. Furthermore, these weres <I>do<I> need to eat, as their massive bodies consume far more energy than their hosts are able to provide, and their hunger drives them just as much as their inimical intent.

@TEXT:Being a creature of magical origins, it does not reproduce in the usual way and thus has no mating drive. Those varieties which possess an infectious bite do not normally seek victims for the purpose of spreading the infection; this is usually a side effect of an unsuccessful attack (i.e., one in which the victim escaped).

((START BOX))

@C-HEAD:Sample Character: David Henry Heresford 200 points

@TEXT:Male; Age 32; 5'7''; 145 lbs.; blonde and blue-eyed British male whose slightly roadworn appearance belies his cultured speech and behavior

@TEXT-CSTATS:ST 10 [0]; DX 11 [10]; IQ 13 [30]; HT 12 [20]

@TEXT-CSTATS:Speed 5.75; Move 6.

@TEXT-CSTATS:Dodge 5; Parry 7.

@TEXT-CSTATS:Damage: <I>Punch:<I> 1d-3; <I>Kick:<I> 1d-1; <I>Thrust<I> 1d-2; <I>Swing<I> 1d

@TEXT-CSTATS:<I>Advantages:<\$> Cinematic "Monster" Werewolf [154] (Percent (Temporary Cure: Must perform an act of contrition at a Celtic holy site; relapse triggered by lying or oathbreaking): -15%; Percent (Cyclic Change, Exclusive, Lunar): -45%); Status 1 (Lawyer) [5]; Wealth (Comfortable) [10] (Starting Wealth: \$10,000).

@TEXT-CSTATS:<I>Disadvantages:<\$> Enemy: Scotland Yard [-10] (Roll: 6 or less, <f"symbol"><#180><f\$>1/2); Guilt Complex [-5]; Secret (He's a werewolf) [-30]; Split Personality [-15].

@TEXT-CSTATS:<I>Quirks:<\$> Cultured and polite in his speech; Determined to prove himself innocent of his fiancée's murder; Is developing a loathing for all things Celtic; Tries hard not to be an oathbreaker; Twitchy and nervous. [-5]

@TEXT-CSTATS:<I>Skills:<\$> Acting-12 [1]; Area Knowledge (England)-14 [2]; Bicycling-11 [1]; Boxing-10 [1] (Parry: 6); Brawling-11 [1] (Parry: 7); Climbing-10 [1]; Detect Lies-11 [1]; Escape-8 [1/2]; Fast-Talk-13 [2]; Guns (Pistol)/TL6-14 [2]; Lifting-10 [4]; Law-15 [8]; Hidden Lore (Celtic curses)-12 [1]; Riding (Horse)-11 [2]; Running (Move: 6.875)-9 [1/2]; Savoir-Faire-14 [2]; Stealth-11 [2]; Streetwise-12 [1]; Survival (British

Countryside)-12 [1]; Swimming-11 [1].

@TEXT-CSTATS:<I>Languages:<\$> English (native)-13 [0]; French-11 [1/2]; Latin-11 [1/2].

@TEXT-BOX:Much to David Henry Heresford's despair, one of his distant ancestors was a Saxon thief, an honorless rogue whose oathbreaking and lies offended a powerful Druid. The Druid, not one to waste an opportunity, cursed the thief and his descendants to become ravening wolfbeasts whenever their truthless nature came to the fore, then had him returned, drugged into unconsciousness, to the village of invaders from which he came. There, he hoped, one of the Saxons' own would be their undoing.

@TEXT-BOX:Centuries later, the thief's descendants had apparently either died out or learned their lesson <\#208> until the latest (and only) scion of the clan, David Heresford, became a lawyer in 1925. Still, he was a reasonably honest man, and it took several years of working civil cases before he found himself tempted to take liberties with the truth <\#208> and awoke the ancient curse buried in his genes.

@TEXT-BOX:At the next full moon, the beast emerged and ran rampant through London, ending its spree by slaying his fiancée, Amelia. Since then David has been on the run from Scotland Yard, which wants him for her murder (they believe the marks of the beast's attack on her were cleverly faked). For the last two years, he has roamed the length and breadth of England evading the police and searching for a permanent cure to his "condition". In discovering the misdeeds of his distant, unnamed ancestor, he has also found a temporary respite: performing a ritual of contrition at a Celtic holy spot will suppress the beast <\#208> but only until he utters his next lie or false oath. Unfortunately, given the fugitive life he lives, that's never far away, and the surviving holy places are few and far between.<!s>.<!s>.

@TEXT-BOX:Although David is a 200-point character, most of that is the cost of his were-form, which is also responsible (through its actions) for most of his disadvantages. Without the were-form, David would not be out of place in a 100-point campaign. The were-form possesses the Compulsive Behavior: Lifewrecker disadvantage in addition to the others in its package, and delights in destroying utterly anything into which David has invested any affection. To minimize its depredations, he tries not to form any ties with people or places, and takes care to be in the open countryside at the full moon.

@TEXT-BOX:David is designed for a 1920s-30s era <BI>Horror<\$> campaign that focuses more on individual terrors than Lovecraftian Things From Beyond. With some stretching of the setting, he could be usable in a <BI>Cliffhangers<\$> game, and almost no changes are needed to relocate him to any post-Medieval European setting. It would take some alteration to fit him into a game set in any later period, but it <I>is<I> possible <\#208> he is almost the prototypical <I>X-Files<I> monster-of-the-week, for example.

(((END BOX)))

@B-HEAD:Doppelg<\#138>nger

@TEXT:<I>Liodan nodded blandly as he apologized and wrenched her cart free from the other shopper's, but within she was a quivering mass of nerves. There were too many templates, too strong, surrounding her, and her control was fraying rapidly. She should have waited until midnight and gone to a convenience store, but her hunger had grown beyond her ability to ignore it.<I>

@TEXT:<I>Stifling her mounting agitation, Liodan waited patiently through the express checkout and then wheeled her purchase out to the van. With a studied casualness that belied the panic coursing through her veins, she carefully transferred the bags from the cart to the back of the vehicle, then climbed in after them. She shut the doors with a solid thud.<I>

@TEXT:<I>Inside, in the dark, she relaxed; the unassuming facade of the blonde suburban soccer mom melted away to reveal her true form. As she ripped open a bag of potato chips, Liodan gave silent thanks for the van's heavily tinted windows.<I>

@TEXT:They call themselves the Tsir'lech, but to those few humans who know of their existence, they are known by the names they acquired in myth and legend: Shapestealer. Skinwalker. Fetch.

@TEXT:Doppelg<\#138>nger.

@TEXT:They haunt human society, living among us but not of us. Some are timid, living in terror of discovery by humans <\#208> or by something else they fear so greatly that they never speak its name. Others are hunters, stalking the humans whose form they mimic and devouring their lifeforce at the moment of death. Sister species and interfertile, they

are a culture hidden deep beneath the surface of our own.

@D-HEAD: Hider Doppelg<\#138>nger . . . -2 points

@TEXT-CSTATS:<I>Attributes:<\$> IQ +2 [20]; HT -1 [-10].

@TEXT-CSTATS:<I>Advantages:<\$> Cultural Adaptability [25]; Morph (Only humanoid forms -40%, Cannot copy another doppelg<\#138>nger's "natural" form -5%, Template Susceptibility -20%) [14].

@TEXT-CSTATS:<I>Disadvantages:<\$> Broadminded [-1]; Careful [-1]; Combat Paralysis [-15]; Edgy [-5]; Obsession: Hiding [-15]; Secret: doppelg<\#138>nger [-20].

@TEXT-CSTATS:<I>Skills:<\$> Acting at IQ+3 [6].

@D-HEAD: Hunter Doppelg<\#138>nger . . . 22 points

@TEXT-CSTATS:<I>Attributes:<\$> ST +1 [10]; IQ +2 [20]; HT -1 [-10].

@TEXT-CSTATS:<I>Advantages:<\$> Combat Reflexes [15]; Cultural Adaptability [25]; Morph (Only humanoid forms -40%, Cannot copy another doppelg<\#138>nger's "natural" form -5%) [22].

@TEXT-CSTATS:<I>Disadvantages:<\$> Broadminded [-1]; Dependency: Human Death, Weekly (Occasional, Illegal) [-30]; Loner [-5]; Obsession: Hiding [-15]; Secret: doppelg<\#138>nger [-20];

@TEXT-CSTATS:<I>Skills:<\$> Acting at IQ+2 [4]; Brawling at DX [1]; Shadowing at IQ [2]; Stealth at DX [2]; Any melee weapon at DX [2].

@C-HEAD: General Description

@TEXT: In their rarely-seen "natural" form, doppelg<\#138>ngers are humanoids similar in size and build to human beings, except that their skins are uniformly gray and hairless, with almost no variation between individuals. Their eyes are large and seem to be a muddy hue from a distance; at close range, though, it is clear that their eyes are surprisingly beautiful, with irises composed of every color of the rainbow scattered in glittering swirls.

@TEXT: Their internal structure is sufficiently close to human that most doctors won't realize that they are a different species unless they administer an extraordinarily thorough examination. Any variety of surgery, x-rays, MRI or other medical scanning will reveal small but telling differences almost immediately, although most doctors won't realize what they are seeing at first.

@C-HEAD: Psychology

@TEXT: Doppelg<\#138>ngers are completely geared, mentally and physically, toward camouflage and concealment. Although technically they hide "in plain sight" thanks to their morph abilities, mere physical disguise is not enough. They demonstrate a remarkable ability to adapt to any human society in which they find themselves. (Possibly <I>too<I> remarkable; anywhere they are actively hunted by the people among whom they hide, such as in the world of <BI>GURPS Black Ops,<\$> such ease of transition between cultures is often used as a flag to indicate <\#208> not always successfully, of course <\#208> those who might be other than they seem.)

@TEXT: Unlike their extraterrestrial counterparts, the Xenomorphs (see p. A126-7), doppelg<\#138>ngers don't actually deceive themselves into believing that they are the human beings they pretend to be. They are, however, consummate actors. Furthermore, they rarely attempt to impersonate specific individuals (although they can do so, when necessary). Instead, they become an entirely new person. Although this task has grown more and more difficult as time goes on and government (and corporate) records grow increasingly comprehensive and detailed, the doppelg<\#138>ngers have coped; it is believed that they have made a policy of insinuating themselves into jobs where they can falsify the records needed to establish identities.

@TEXT: As part of their disguise, doppelg<\#138>ngers take part in almost all aspects of human society. They hold jobs, they take hobbies, they socialize to a limited extent. They try to amass sufficient wealth and/or power to ensure their own safety and comfort. They even date, court and marry <\#208> usually humans and not members of their own species <\#208> become parents, and raise children. (Of course, those children will have to be adopted if the doppelg<\#138>nger has taken on a male role.<!s>.<!s>.)

@TEXT: Beyond this point, though, the psychologies of the two varieties of doppelg<\#138>nger diverge.

@TEXT:<I>Hider doppelg<\#138>ngers<I> are concerned with preserving their own safety and secrecy. They are more likely to throw themselves into relationships and activities that provide them with "protective coloration" while staying away from anything that could draw attention specifically to them. Because of cultural and social forces, they have

historically taken female roles of middle class or above unless no other choices were open to them; up until the last few decades this has given them a reason to be relatively reclusive while still appearing a "proper" part of society as a whole. It also allowed them to reproduce unquestioned.

@TEXT:Central to the Hiders' psychology is the need to remain hidden. This appears to be a genetically-encoded imperative, as even doppelg<\#138>ngers raised by humans feel compelled to disguise themselves and blend in once they understand their abilities. In some individuals, this need is frequently magnified and accompanied by full-blown paranoia. In other cases, such as the famous "Human Chameleon" of the 1930s, the compulsion becomes an uncontrollable reflex, although usually in a less obvious manner than his.

@TEXT:Those who do not have a "steady" role, such as a human's spouse, often leap from identity to identity every few years. These Hiders more than any others make use of the informal network of co-racialists insinuated into record-keeping jobs.

@TEXT:Exactly <I>why<I> they feel compelled to hide is unclear. It's certainly not to avoid contact with their "cousins," the so-called "Hunter" doppelg<\#138>ngers (see below); the Hunters apparently cannot feed off of other doppelg<\#138>ngers, and do not seem to have any real antipathy towards the Hiders. Nor does humanity really have any (known) history of persecuting them, even in the secret records to which Argus and The Company have access in the <BI>Black Ops<\$> world. What little has been learned from the Hiders themselves is tantalizing but sketchy: <I>Something<I> pursues them, and sometimes catches them. Just what, though, Argus has yet to learn.

@TEXT:(This unknown pursuer of the Hiders is left to the GM <\#208> and any Hider players <\#208> to define. It may be a racial Delusion, or it may be real. If real, however, it is powerful and itself hidden from both human and doppelg<\#138>nger sight.)

@TEXT:<I>Hunter doppelg<\#138>ngers<I> are predators, plain and simple. Although for the most part they subsist on a diet similar to that of humans and Hider Dops, they must frequently supplement it with what can only be described as the death energies of human (or humanoid) beings (excluding other doppelg<\#138>ngers). Feeding in this manner leaves a corpse with psychic "marks" not unlike those found on a victim of a Soul-dog or other similar creature, leading some to suspect that the Hunters are actually eating souls.

@TEXT:They prefer to kill their prey themselves, but this is not a requirement <\#208> several Hunters have been found working in emergency rooms and on ambulance teams. If they cannot make use of such opportunities, modern Hunters prefer to kill with weapons, especially in urban areas; however, it is believed that in more primitive times they used their retractable claws and then disguised their kills as victims of violent animal attacks.

@TEXT:They are less inclined to be paranoid, although they are equally compulsive about hiding themselves. They always know at least one and frequently several melee weapon skills, despite the fact that they can easily kill with their claws. They often have a wide variety of Thief/Spy skills in addition to their racial Shadowing and Stealth. Most will try to vary their kills to avoid easy detection, but in recent times some have taken pride in being serial killers, to the point of having Trademarks and other possibly self-destructive behaviors.

@TEXT:Hunter doppelg<\#138>ngers appear to have no preferences for their apparent gender and chosen social class.

@C-HEAD:Ecology

@TEXT:It is unclear whether doppelg<\#138>ngers are relatives of humanity or not. Doppelg<\#138>nger physical structure is very close to the human norm. Their basic diet, regardless of subspecies, appears to be if not identical to then at least not incompatible with that of humans. They seem to need (or prefer) the same environmental conditions as well, which suggests that if they are not related to us, then they and humanity evolved under much the same conditions.

@TEXT:There are more differences than similarities, though. In particular, doppelg<\#138>ngers are all parthenogenetic females. They do not need to exchange genetic material in order to reproduce, although they will do so as a matter of course when encountering another doppelg<\#138>nger in an appropriately private setting. The "mating" process of the species is distinctly unlike that of humans, and is somewhat disturbing to witness. (A Fright Check is required for non-doppelg<\#138>ngers who stumble upon one in progress.)

@TEXT:Gestation is nine months, like humans, and all children are parthenogenetic females

like their mother. Single births are the rule; twins and other multiple births are almost unheard of. Still, a doppelgänger can display remarkable fecundity, and large broods are not unknown. (In fact, families with three or more daughters and no sons are another indicator The Company uses to detect a suspected Dop.)

@TEXT:A doppelgänger's children are always born female, in a form matching that which the mother is holding at the time of birth. (Few dop children are actually born in the race's "natural" form.) They remain "locked" in that shape until puberty, usually ignorant of their true nature. Only when their morph abilities unlock does the mother inform and instruct them; if the mother has died before then, it is not unheard of for the young morphs to continue through their lives ignorant of both their own nature and doppelgänger society.

@C-HEAD:Culture

@TEXT:As far as can be determined, doppelgängers have no "native" culture of their own. (Whether it dwindled away in the face of their proclivities to hide, or it was abandoned, or if it never existed at all is a point of contention among those few academics who are aware of them and debate such issues.) Instead, they adopt necessarily, as part of their roles the culture of whatever species or individual they are imitating.

@TEXT:As mentioned above, they do maintain an informal network among themselves. This is more for the aid of those Dops who need documentation to support a new identity than for any kind of cultural continuity. If they have any coherent body of history or myth among themselves, it is unknown to Argus and other observers. Likewise, most pay at least lip service to human religions; if they have a religion of their own, it is even better hidden than they are. They retain some fragments of their original language including their racial name but they rarely use it, and only a dozen words in the tongue are known to The Company's Science division.

@C-HEAD:Politics

@TEXT:Doppelgängers mimic human politics along with everything else. If they have internal factions beyond the Hunters and the Hiders, they have not been discovered.

((START BOX))

@C-HEAD:Doppelgänger Names

@TEXT:Although they clearly have their own language, doppelgängers do not take names in it. Those born into roles bear the names given them at birth for human society; those who jump roles always do so into new human identities, and again take human names.

((END BOX))

@C-HEAD:Doppelgängers in the Campaign

@TEXT:Doppelgängers as described here are natives of the world of <BI>GURPS Black Ops.</BI> There, Argus learned of their existence only ten years ago, at which time it set a dedicated Science team to study them thoroughly. The information given in this description, plus a binder full of confusing medical data, is the sum total of Argus' information on the race.

@TEXT:Although some ops lump them in with the vampires and the so-called "werewolves," Argus officially considers them a separate category of creature. Hunter Dops are priority targets when they are discovered which, unfortunately for the Hunters, is more frequently than they believe. Psi-ops with Psychometry or Sense Aura can, if they have seen a Hunter victim before or have been shown what to look for, determine if a dead body has had its soul eaten by a Hunter (and not, say, a Soul Dog) with a simple touch and a skill roll.

@TEXT:Hiders are a different story informal Argus policy is to observe but not to bother them. There are certain concerns that Hunters and Hiders may be the same species in two different stages of life, but Argus is more concerned about what the Hiders are afraid of. If it's something more than just humanity or one of the various other species of which Argus is already aware, if it's something new and nasty, Argus wants to know about it and as much about it as possible, as soon as possible.

@TEXT:As with other shapeshifters, the Science department is intensely interested in the mechanisms by which doppelgängers of either stripe perform their changes. However, unlike the "werewolves," the secret of whose shapeshifting still eludes them, Science

thinks they have something of an idea how the Dops do it. Of course, they need more research, and more Dops, to test and refine their theories.<!s>.<!s>.

((START BOX))

@C-BOXHEAD:Other Settings

@TEXT-BOX:It goes without saying that doppelg<\#138>ngers fall easily into the "creature" slot in any given campaign. Hiders are good in the role of the "monster that isn't," being (usually) shy and inoffensive. Hunters are good for real "monsters," especially in campaigns where they would be unexpected. Either variety could spawn an exceptional representative suitable as a Patron or Enemy, as well, depending on the party.

@TEXT-BOX:<BI>Horror:<\$> The monster masquerading as human is a classic horror trope. Hunter Dops work best for the traditional implementation, leaving Hiders completely out of the picture to simplify the good-evil polarization. Then again, the GM may choose to use a Hider as a red herring in a complex plot <\#208> clearly a non-human "monster," but a timid one innocent of any wrong-doing.

@TEXT-BOX:<BI>Atomic Horror:<\$> Two words: Pod People. Add the "Copies Personality" enhancement (p. 00) to their Morph for an effect closer to any number of classic B-movies.

@TEXT-BOX:<BI>Fantasy:<\$> Classic fantasy roleplaying games have long included creatures which could mimic human and humanoid forms. Both Hunter and Hider doppelg<\#138>ngers could be dropped into a <BI>GURPS Fantasy<\$> campaign unaltered to provide the same kind of experience and challenge.

@TEXT-BOX:<BI>Illuminati:<\$> As noted elsewhere, the doppelg<\#138>ngers can be a powerful conspiracy, especially if the other power blocs in the Illuminated world are unaware of them.<!s>.<!s>.

@TEXT-BOX:<BI>Old West:<\$> Hunter doppelg<\#138>ngers can be the malevolent skinchangers of Amerind myth, such as the skinwalkers of whom the Navajo tell tales. These creatures could take the form of <I>anything<I> <\#208> up to and including teepees and wigwams. Stories are told of warriors who left their possessions in what they thought were their own tents, only to find the tent missing upon their return, and all their goods stolen by the shapeshifter who had deceived them. While inimical to man, they are not homicidal <\#208> except to protect their secret existences. Remove the humanoid limitation on Morph, and the dependency on human death. Also, skinwalkers should use the leveled version of Morph from <BI>GURPS Supers,<\$> (p. SU63) with a Power of at least 15 and probably higher. Add "improvised forms" to Morph, and Kleptomaniac to disadvantages. Add the racial quirk "Will kill to protect their secret." Finally, they are carnivores.

((END BOX))

@D-HEAD:Doppelg<\#138>nger Characters

@TEXT:As NPCs, doppelg<\#138>ngers can be <I>anyone<\$> <\#208> even a character the PCs have known for years. And any "ordinary" NPC encounter can operate on two different levels with a doppelg<\#138>nger hidden within the character.

@TEXT:Players wishing to design a doppelg<\#138>nger PC have several options. The simplest is to play a Dop who is ignorant of his heritage, for whatever reason. Early death of the doppelg<\#138>nger parent is usually the cause in such cases, but the GM may want to develop more interesting (or sinister!) reasons. Such a character may or may not be aware of his morph abilities. The Partial Amnesia disadvantage would be a useful tool for this kind of character; he's not actually amnesiac, just unaware of certain facts and implications about his life.

@TEXT:A particularly sneaky GM may turn this around <\#208> and make a PC who has taken Partial Amnesia a Doppelg<\#138>nger without the player knowing at all.<!s>.<!s>. Similarly, a character with a Secret Disadvantage (see p. CI75) may be a Doppelg<\#138>nger <\#208> the secret disadvantage being a combination of the racial cost and a complementing Secret.

@TEXT:Another option is to conspire with the GM. Doppelg<\#138>ngers will not normally be introduced into a campaign without some overarching reason <\#208> being as they are almost an entire conspiracy in and of themselves, they likely will be serving some long-term plot goal, especially in an otherwise mundane campaign. A Dop character designed in conjunction with the GM can operate on both levels <\#208> as a PC, and as

part of the vast Doppelgänger Conspiracy. Carefully handled and subtly played, the Dop character can aid or hinder his companions as needed, and can even impersonate (or actually be!) some of the NPCs they encounter.

((START BOX))

@C-BOXHEAD:Sample Character: Sgt. Patricia MacNichol 100 Points
@D-BOXHEAD:Police/Hunter Doppelgänger
@TEXT:Age 27; 5'7"; 120 lbs.; Usual form: intense-seeming Anglo woman with auburn hair and hazel eyes, slender and tightly-strung.
@TEXT-CSTATS:ST 11 [0] DX 12 [20] IQ 12 [0] HT 10 [10]
@TEXT-CSTATS:Speed 5.5; Move 5.
@TEXT-CSTATS:Dodge 5; Parry 8.
@TEXT-CSTATS:Damage: <I>Punch:<I> 1d-3; <I>Kick:<I> 1d-1; <I>Thrust<I> 1d-1;
<I>Swing<I> 1d+1
@TEXT-CSTATS:<I>Advantages:<\$> Hunter Doppelgänger (see text) [22]; Legal Enforcement Powers [5]; Patron (Police Department, 9 or less) [10]; Rank/2 (Police Sergeant) [10]; Wealth (Comfortable) [-10].
@TEXT-CSTATS:<I>Disadvantages:<\$> Hunter Doppelgänger (see text), plus: Cannot Harm Innocents [-10]; Duty to Police Department, 12 or less [-10]; Honesty [-10]; No Sense of Humor [-10].
@TEXT-CSTATS:<I>Quirks:<\$> Turns down desk jobs and promotions that would take her off the street; Prefers to feed off the mortally wounded rather than hunt her own prey; Resents suggestions by other doppelgängers that she is a "carrion eater"; Honestly cares about the people in her precinct; Prefers to work night shifts. [-5]
@TEXT-CSTATS:<I>Skills:<\$> Acting-14 [racial]; Area Knowledge (City)-14 [4]; Area Knowledge (Precinct)-14 [4]; Brawling-12 [racial]; Computer Operation/TL8-13 [2]; Criminology/TL8-15 [8]; Detect Lies-12 [4]; Driving-12 [2]; Forensics-13 [6]; Gun (.38 Revolver)-14 [1]; Judo-13 [8]; Knife-12 at DX [racial]; Law-13 [6]; Shadowing-12 [racial]; Shortsword (Baton)-12 [2]; Stealth-12 [racial]; Streetwise-14 [6]; Tonfa-12 [4].
@TEXT-CSTATS:<I>Languages:<\$> English (native)-12 [0];
@TEXT-CSTATS:<I>Maneuvers:<\$> Arm Lock (Judo)-15 [1].
@TEXT-BOX:Sgt. Patricia MacNichol is a decorated 10-year veteran in the police force of a major city some time during the early years of the 21st Century. Dedicated and concerned, she is a model police officer who has resisted all attempts to promote or transfer her off the street.
@TEXT-BOX:She is also a hunter doppelgänger who feeds off the dying victims of urban violence.
@TEXT-BOX:Unlike most of her fellow Hunters, Patricia sees the humans among whom she lives as more than just cattle. Still, she is realistic about her own needs. She reconciles the two by serving as a street-level police officer, protecting the masses while still coming into contact with enough dying humans to feed on as needed without having to kill. While this earns her the occasional accusation of "scavenger" and "carrion eater" from the other Hunters she has encountered, it allows her to sleep at night. If forced by circumstances to hunt, she will exclusively target violent criminals.
@TEXT-BOX:Her identity is solidly-anchored and, as far as she is concerned, permanent. However, she has no qualms about using her shapeshifting abilities to further her investigations <#208> she is, in effect, the ultimate undercover officer, even if her superiors don't know it.
@TEXT-BOX:Patricia is a 100-point character designed for any kind of contemporary, near-future or recent past campaign, and is suitable for use as a PC. As an NPC, she can serve as an Ally, Contact or even a Patron; if the PCs are on the other side of the law, she can be a formidable Enemy.

((END BOX))

@B-HEAD:The Enynn
@TEXT:<I>Improvise. Adapt. Overcome.
@TEXT:<#208>Sergeant Tom Highway (Clint Eastwood), in Heartbreak Ridge (1986)<I>
@TEXT:Evolution, when presented with a difficulty which it must overcome, can take two

routes: specialization or generalization. Specialization leaves a species uniquely suited to overcome the problem at hand. But generalization leaves a species suited to overcome <I>anything.<I>

@TEXT:The Enyyn are the absolute embodiment of that principle.

@TEXT:Their homeworld is Go'h'elaan <\#208> a cold 2 G rockball a bit larger than Earth, with a methane/nitrogen atmosphere. It orbits a binary star whose whipsawing gravitational fields leave the planet a seething cradle of tidal-spawned volcanic activity. The blend of radiations from the mutually-orbiting red giant and white dwarf would have rendered any other world sterile, and make the planet's entire atmosphere glow with a permanent, world-wide <I>aurora borealis.<I> Sharp upthrust outcroppings of igneous rock form much of the landscape, and are constantly battered by violent storms. Shallow ocean basins with vast tide plains, filled with ammonia seas, make up the rest of the surface. The plants are difficult to distinguish from the rocks, and the animals are difficult to distinguish, period.

@TEXT:It is stark, beautiful, and deadly. And it is home to a race of peaceful philosophers.

@D-HEAD:Enyyna 465 points

@TEXT-CSTATS:<I>Attributes:<\$> IQ +3 [30]; DX +2 [20]; HT +4 [45]; Extra Hit Points +4 [20];

@TEXT-CSTATS:<I>Advantages:<\$> Damage Resistance +50 [100]; Doesn't Breathe [20]; Extra Flexibility [10]; Immortality [140]; Injury Tolerances (No Brain, No Neck, No Vitals) [15]; Morph (Genetic Match, +50%; Improvised Forms, full, +100%) [100]; Radiation-Resistant [5]; Reputation +2 (philosophers and deep thinkers, galaxy-wide) [10]; Temperature Tolerance/5 [5]; 360-Degree Vision [25]; Unfazeable [15]; Universal Digestion [15].

@TEXT-CSTATS:<I>Disadvantages:<\$> Appearance: Monstrous [-25]; Attentive [-1]; Broad-minded [-1]; Charitable [-15]; Chummy [-5]; Edgy [-5]; Staid [-1]; Invertebrate [-20]; Late Maturation <f"symbol"><\#180><f\$>4 [-12]; Pacifism (Total Non-violence) [-30]; Reduced Move <f"symbol"><\#180><f\$>3 [-15]; Undiscriminating [-1].

@TEXT-CSTATS:<I>Skills:<\$> +2 to Philosophy (Any) [3]; +1 to Soft Science subgroup [6].

@TEXT:Enyyn "sports" replace the racial Pacifism with Megalomania [-10] and Fanaticism (Self) [-15], for a racial cost of 470 points.

@C-HEAD:General Description

@TEXT:When completely relaxed, the Enyyn (singular Enyyna) resemble yard-wide hemispheres of brightly-colored jelly in which is embedded blobs and strands of contrasting colors and textures. However, they are almost never completely relaxed. Even in the depths of the most profound meditation, an Enyyn's form is constantly shifting and flowing, responding unconsciously to environmental changes and stresses; unfortunately, the resulting changes in appearance and form are disturbing and in fact somewhat nauseating to most other races (effectively a Monstrous Appearance). They weigh an average of 160 pounds.

@TEXT:An Enyyna will have a diameter of 3.5 inches for every point of ST (minimum diameter 2 feet), and will weigh 4.5 pounds for every inch of diameter.

@TEXT:Enyyn who dwell among offworlders tend to pick an offworlder shape which they wear by default in their neighbors' presence.

((START BOX))

@C-HEAD:Names

@TEXT:The Enyyn language is a complex combination of sounds and quickly-varying skin colorations, and as such is not easily spoken or transcribed by offworlders (M/VH for non-Enyyn, with a maximum skill of 12). As a result, the names which Enyyn use among offworlders are either abbreviated "nicknames" which employ only those sounds easily vocalized by other races, or are "usernames" adopted from the language of another species. (The subset of the Enyyn language useable by other races is heavy on hard consonants and voiced sibilants, with short, punchy vowels.) "Native" Enyyn names are formed from a one- to three-syllable personal identifier (Narzhal, Vog, Ketelek) and the rough equivalent of a patronymic. The latter always begins with the particle "av" and combines the first syllables from the names of each parent; given the species' mating habits, this produces a surname anywhere from two to six syllables long (av'Oronad, av'Kegaz, av'Paquatamacol).

@TEXT:Among themselves, true Enyyn names are long, complex, and uniquely identifying

<\#208> they are never repeated among members of subsequent generations.

((END BOX))

@C-HEAD:Psychology

@TEXT:Born and raised in an environment given to extreme shifts from hour to hour <\#208> and unaffected by most of it <\#208> the Enyyn are mellow almost to the point of anesthesia. If it's not an immediate threat, it's not worth worrying about. If it <I>is<I> an immediate threat, deal with it as quickly as possible and then get back to something more important, like formulating an internally-consistent system of ethical behavior for a hypothetical 5-dimensional lifeform that subsists solely on decayed quarks and stale donuts. Almost nothing bothers an Enyyna short of a planetary catastrophe or an apparently unsolvable philosophical conundrum.

@TEXT:Their basic biology rendering them at ease in the most dangerous of environments, the Enyyn expend almost all their efforts in intellectual pursuits. They tend to focus on philosophy, but no small number of Enyyn pursue the "soft" sciences such as psychology, history and the like; furthermore, they do not limit themselves to their own species, but include the efforts of other races in those disciplines. Some actively specialize in other races; most off-world cultures number several Enyyn among their most noted ethicists, legal scholars and psychoanalysts. Those few Enyyn who enter the hard sciences are almost equally exceptional.

@TEXT:For all their mental and physical adaptability, though, the Enyyn are not completely immune to insanity. The race produces extremely rare psychotic "sports" <\#208> some believe them to be throwbacks to a more violent stage of their evolution <\#208> who are incapable of cooperating with other Enyyn and often seek to gain power over their fellows. Most are successfully treated by Enyyn psychiatric professionals. The few remaining are not only incurable, but usually the most extreme cases. Forbidden by their own racial ethics to kill such dangerous individuals even in the face of their mounting violence and hostility, the Enyyn usually exile them <\#208> with sufficient warning to Galactic civilization <\#208> and allow other races to punish or try to cure or rehabilitate the outcast as appropriate. <I>Exile<I> for an Enyyna is a -5 point disadvantage similar in cost and application to Excommunicated (p. CI78).

@C-HEAD:Ecology

@TEXT:Like the rest of their ecosystem, the Enyyn are nominally carbon-based, although in this (as in just about everything else) they have been known to be surprisingly flexible. Their actual evolutionary precursors are uncertain; they share significant characteristics with both the coelenteroid and mollusc-like analogue lifeforms found in the seas of Go'h'elaan, but are almost exclusively land-bound. On the other hand, no less than one-quarter of their body mass is undifferentiated protoplasm, which makes them similar in structure to their world's analogues of amoebae. All of an Enyyna's physical functions, from digestion to cognition, are handled on a distributed basis throughout its entire body with no function permanently fixed in any one location or organ, making the comparison to an amoeba even more apt.

@TEXT:Even more remarkable than their unique structure is the degree of control they have over it. At will, Enyyn can change color and texture, extrude limbs of remarkable dexterity and strength or incredible delicacy and fineness, create sensory organs, and even turn into into any variety of creature, real or imaginary. When imitating a specific race, they are frighteningly accurate and cannot always be told from the genuine article; with sufficient knowledge they can even form proper (if not necessarily functional) internal organs and bodily fluids as needed. Their sole limitation in this regard is that their total body mass is invariable and, of course, they are not genetically compatible with true members of the species in question. (There are persistent Galactic legends, though, that tell of Enyyn who <I>could<I> interbreed with other races. These, of course, have never been confirmed.)

@TEXT:They are omnivores in the truest sense, able to eat just about anything from any kind of carbon-based biosphere and thrive on it. Unlike most races, they have no manner of respiration and produce little to no wastes; some fringe xenobiologists have suggested that the Enyyn are actually biological total conversion reactors, possibly engineered by a long-gone Precursor race as living garbage disposals.

@TEXT:Like many other things about the Enyyn, their mating habits are unique. Although they are monosexual, they do exchange genetic material; anywhere from two to six Enyyn

can join in an act of mating. Mating partners flow together to form a single mass of protoplasm, which then consumes almost its own weight in foodstuffs (usually brought by the participants). Anywhere from 24 to 72 hours later, the conjoined Enynn split back apart into the original participants plus an equal number of half-sized "newborns." Each parent then raises one child, who possesses a random genetic heritage from all the participating parents.

@TEXT:Mating and offspring are rare, though. Xenobiologists note that nothing organic seems to prevent them from reproducing as often as possible. However, the Enynn try to keep their population as close to a steady state as they can while still maintaining a positive growth; it is not uncommon for individuals to go centuries or even millenia between offspring. When asked about their abstinence, Enynn simply note that carefully managing one's resources and living space is the only ethical choice as well as simple common sense. At the moment, the race is believed to number close to a million individuals on their homeworld, and approximately 10,000 more off-planet.

@TEXT:Perhaps as a side effect of the drastic environmental stresses the race lives through, no less than one in 20 Enynn are psionically active. The vast majority of Enynn psionics possess either telepathy or ESP or both; a fewer number are telekinetics. Even rarer still are all the other psionic gifts; occasional individuals may manifest them, but they are considered almost freakishly unusual.

((START BOX))

@C-BOXHEAD:Enynn Characters

@TEXT-BOX:Enynn characters are best built on a minimum of 500 points, but 1,000 points or even far more would not be uncommon for a particularly old Enynna, some of whom might be well over a quarter of a million years in age. Add psionics to the mix, and the point budget can rise even higher. This obviously puts player character Enynn out of the range of any but the most cinematic of campaigns. NPC Enynn, on the other hand.<!s><!s>.

@TEXT-BOX:Also remember that even though they are immortal and adaptable, that doesn't mean Enynn can't be quirky and odd. Unlike the Engai, who edit antisocial tendencies out of themselves, Enynn <I>can<I> be bad-tempered, prejudiced (if such prejudice doesn't conflict with their particular philosophical specialization), and even bizarrely deluded without being one of the psychotics they exile. However, the GM should remember that no matter what, Enynn are intellectual and logical, and any strangeness they exhibit should be supported by a chain of logical reasoning <\#208> however spurious! <\#208> drawn from their experiences and studies.

((END BOX))

@C-HEAD:Culture

@TEXT:Unlike some of the other immortal races such as the Engai (pp. A108-111), the Enynn have not retreated to hedonism in order to cope with their endless existence. Instead, they have turned to a life of focused intellectual investigation. Primarily this is approached through the study of philosophy. In what approaches a racial obsession, each Enynna chooses one branch or category of philosophy to pursue during the course of its life. This may be as general or as specialized as they care to make it. Alternately, individuals may also pursue any of the "soft" sciences <\#208> theology, sociology, anthropology, psychology, and the like. By the time of their first contact with other races, the Enynn had developed a sophisticated ethical system which had become the accepted foundation for not only all their dealings with each other, but for their relations with Galactic civilization.

@TEXT:First contact several thousand years ago proved to be intellectually profitable for the Enynn, as they absorbed the myriad philosophies, ideologies, theologies and other organized systems of thought available in the galaxy and began to explore them. After a disastrous first attempt to offer their conclusions back to one of their offworld sources, though, the Enynn no longer volunteer the fruits of their thoughts. They will, however, willingly and enthusiastically entertain questions brought to them.

@TEXT:Enynn society appears to run, for the most part, on a system of ethical anarchy and enlightened self-interest. Some have likened it to the various communistic and socialistic systems proposed at one time or another by members of every civilization, with certain notable differences: one, it appears to have evolved organically as an

outgrowth of the Enyyn's ethical pursuits rather than having been imposed; two, the Enyyn don't have anything approaching an economy as most races know it; and three, it works. It appears also to serve a further purpose in detecting the rare antisocial "sport" simply by making their maximally-selfish behavior extremely obvious after a reasonably short time (relative to the Enyyn lifespan, that is).

@TEXT:Outside of enough psi-tech to build a world-web (to repel both invaders and returning revenge-driven exiles), the Enyyn have shown no real interest in importing off-world technology. Most of it <\#208> even most military field-grade equipment <\#208> is simply too fragile to survive the conditions on Go'h'elaan; native devices are both sturdier and rarely obvious, looking like opaque crystals or pieces of the landscape. Enyyn technologists do acquire and study individual devices produced by other races in order to reverse engineer them, recreating them using local materials and methods.

@TEXT:Additionally, archaeologists have discovered the remains of an earlier technological Enyyn civilization on Go'h'elaan, dating to no less than 350,000 years ago. Many experts believe that this civilization collapsed at approximately the same time the Enyyn immortality gene complex manifested in the species. (The Enyyn themselves have been uncharacteristically reticent on the subject of these remains.) Occasional caches of ancient Enyyn tech <\#208> as durable and long-lived as its makers, and ranging anywhere from TL9 to TL12 <\#208> are discovered every few decades.

@C-HEAD:Politics

@TEXT:The Enyyn have no national or planetary politics. The Enyyn have no appreciable political system. This being said, they tend to be cordial to almost all species, partly because their ethics require it, and partly because their ability to adapt and survive allows them to view even the most dangerous races with a sanguine equanimity. However, the Enyyn are not guileless naifs, exploited by the galaxy at large. They <I>understand<I> politics possibly better than any other race <\#208> after all, they've been studying the subject, in both native and off-world varieties, with typical Enyyn singlemindedness for millenia.

@TEXT:As a result, the Enyyn frequently find themselves in the roles of advisers and consultants. More often than not this requires that the supplicant actually go to Go'h'elaan and find the right Enyyna to ask <\#208> usually an adventure in itself. However, a growing number of Enyyn can be found in universities and capitols across the galaxy, acting as researchers, arbiters and teachers. Since they make little distinction between races, alliances and politics, they frequently raise the ire of nationalist and/or chauvinist groups.

@TEXT:The Enyyn are aware of the Markann's cloaked presence amid Galactic civilization. They have had their own encounters with this hidden race of mad scientists in the distant past, encounters that usually left the Markann involved enraged and frustrated <\#208> the Enyyn are particularly well-suited to not only survive the Markann's brand of destructive testing, but then turn into a piece of innocuous lab equipment and escape behind their backs, all the while studying <I>them.<I> After several centuries of futile effort, the Markann could no longer tolerate the very concept of a race they could not break. They erased their own knowledge of the Enyyn and declared Enyyn space off-limits under pain of death. Of late, certain Enyyn have noticed patterns in their studies that suggest their old nemeses are at work in the galaxy at large, but have not done anything about it yet <\#208> they've only just begun to gather the data, after all, and it will take a few decades of evaluation at least before they can produce any useful conclusions to share with the other races.

(((START BOX)))

@C-BOXHEAD:Variations

@TEXT-BOX:As designed, the Enyyn are intended for use with <BI>GURPS Space<\$> settings, but they can easily be adapted (or imported untouched) to other milieux.

@TEXT-BOX:<BI>GURPS Lensmen:<\$> A race of pacifist philosophers would fit in quite well in the civilized sectors of this Universe. While obviously unsuitable for the Patrol because of their nonviolence, they can still serve in their usual roles of sage and adviser.

@TEXT-BOX:<BI>Fantasy:<\$> The Enyyn can be imported with or without explanation as the GM sees fit. Thaumatology is added to the fields they include in their ruminations, making them some of the greatest experts on magical theory in the world, although few (if any)

of them are active mages. Their psionic potential should probably be eliminated unless the game world mixes magic and psi.

@TEXT-BOX:<BI>Atomic Horror, Black Ops,<\$> and similar settings: The Enynn make an excellent "good-guy" race, able to work among humans without setting off their prejudices (unless their true form is discovered.<!s>.<!s>.) and willing to share their expertise to help this primitive race in its fight against more powerful alien opponents. As pacifists they refuse to do any of the fighting themselves, leaving human characters in the forefront of any action, but they are more than capable of specializing in <I>military<I> philosophy and advising their allies on strategy and tactics. In a <BI>Black Ops<\$> game, Enynn PCs are easily possible, but they will never be Ops themselves and may suffer some degree of mistrust or outright prejudice from all levels of The Company, despite their status as allies.

((END BOX))

@C-HEAD:Enynn in the Campaign

@TEXT:Where any kind of "soft" science is concerned, especially matters of philosophy or ethics, the Enynn are the people to see. They are sages, consultants, archivists and theoreticians; there's often at least one in the capitol city of every spacegoing culture, and any large organization concerned with law or ethics usually attracts an Enynn employee or officer. Many universities boast an Enynn on staff, frequently (but not exclusively) in the Philosophy department. They also make good librarians, and are as often found in this position as professor when encountered in a college environment.

@TEXT:Enynn adventurers are rare but not unheard of; they frequently have a field of interest that cannot be adequately investigated using archival materials, or which by its nature <\#208> such as xenology <\#208> requires you to go to the subject matter rather than vice versa. For obvious reasons, the Survey Service, the Patrol, many militaries, and a number of intelligence agencies all actively seek to recruit Enynn members; however, if the job does not offer an intellectual challenge to match the obvious physical challenges for which they are desired, they will pass. And no normal Enynn will take a front-line military role.

@TEXT:The rare Enynn psychotic can make a very good master villain. Their typical megalomania usually leads them into areas where they can gain power through the exercise of their personal abilities, be they physical or mental: white collar criminal, revolutionary, anarchist, mercenary. While not as obsessed with intellectual fulfillment as his brothers, the Enynn sport is still a specialist in his chosen field, and often many others. He more than capable of planning hypercompetently for all contingencies. (The GM seeking a lighter touch may want to quantify the Enynna's madness by letting his intellect go all the way <I>through<I> competency to come out the other side.<!s>.<!s>.)

@TEXT:Whether he is a classic "spider in a vast web" or a solo operator, he will not be brought down easily, and will always have a hidden exit through which to escape, be it literal or metaphorical. Unless he is an out-and-out revolutionary, he will usually be cloaked in respectability, often several layers; multiple IDs (and shapes) are common as well, to allow him to work at differing levels within his organization (if any). Some sports seek out pre-First Contact civilizations and seek to remake them in their own warped image.

((START BOX))

@C-BOXHEAD:Sample Character: Narzhal av'Oronad, aka "Conqueror" 875 points

@D-BOXHEAD:Exiled Enynn Megalomaniac

@TEXT:Age 2270; 36" diameter; 158 lbs.; as "Richard Carey"/"Conqueror" he appears to be a robust middle-aged human male, 5'8", 140 lbs., with piercing blue eyes and black hair greying at the temples.

@TEXT-CSTATS:ST 12 [20] DX 14 [20] IQ 15 [20] HT 16/20 [20]

@TEXT-CSTATS:Speed 7.5; Move 7 (human form), 4 (natural form).

@TEXT-CSTATS:Dodge 8; Parry 12.

@TEXT-CSTATS:Damage: <I>Punch:<I> 1d-2; <I>Kick:<I> 1d; <I>Thrust<I> 1d-1; <I>Swing<I> 1d+2

@TEXT-CSTATS:<I>Advantages:<\$> Charisma +3 [15] (Reaction: +3); ; Combat Reflexes [15]; Enynn "Sport" (see text) [470]; Status 8 (Ruler of most of Earth) [40]; Strong Will +3

[12] (Will: 18).

@TEXT-CSTATS:<I>Disadvantages:<\$> Exiled [-5]; Extravagance [-10]; Glory Hound [-15]; Guilt Complex [-5]; Jealousy [-10]; Obsession: Revenge himself on the Enynn for his exile [-15]; Secret: He's an alien, not a mutated human [-5].

@TEXT-CSTATS:<I>Quirks:<\$> Habitually wears the form of a human male of indeterminate middle European extraction; Sincerely cares about the welfare of the people he rules; Still suffers nightmares about the world accidentally destroyed by his research programs; Dotes on his wife and adopted daughter; Responsive. [-5]

@TEXT-CSTATS:<I>Powers:<\$> Telepathy 10 [50].

@TEXT-CSTATS:<I>Skills:<\$> Acting-18 [8]; Administration-17 [6]; Anthropology-15 [2]; Area Knowledge (Earth)-18 [6]; Area Knowledge (Galaxy)-14 [2]; Area Knowledge (Go'h'elaan)-17 [4]; Astrogation/TL11-15 [2]; Axe/Mace-15 [4]; Bard-21 [8]; Beam Weapons/TL8-17 [2]; Beam Weapons/TL11-17 [2]; Biochemistry/TL8-13 [2]; Brawling-17 [8] (Parry: 11); Broadsword-15 [4] (Parry: 7); Chemistry/TL8-14 [2]; Computer Operation/TL8-16 [2]; Computer Operation/TL11-17 [4]; Detect Lies-18 [10]; Diplomacy-15 [4]; Fast-Draw (Pistol)-16 [2]; Free Fall/TL11-13 [1]; Genetics/TL8-15 [8]; Genetics/TL9-15 [8]; Guns (Revolver)/TL8-16 [1]; Guns (Rifle)/TL8-17 [2]; Guns (Semi-automatic Pistol)/TL8-18 [4]; Intimidation-18 [8]; Knife-15 [2] (Parry: 6); Leadership-21 [8]; Merchant-17 [6]; Philosophy (Nietzschean)-18 [6]; Piloting (Starship)/TL11-14 [2]; Politics-19 [10]; Psychology (Human)- 16 [4]; Savoir-Faire (Earth)-17 [0]; Savoir-Faire (Galactic Civilization)-15 [0]; Strategy (Air)-18 [10]; Strategy (Land)-18 [10]; Strategy (Naval)-18 [10]; Strategy (Space)-15 [4]; Swimming-14 [1]; Tactics-15 [4]; Xenology/TL11-16 [4].

@TEXT-CSTATS:<I>Psi Skills:<\$> Emotion Sense-16 [6] (Fatigue: 0, Range: 100 yd, Area: subject, Maintain: infinite, Resist: MS, Page: P20); Mental Blow-17 [8] (Fatigue: 1, Range: 100 yd, Area: subject, Resist: MS, Page: P21); Mind Shield-18 [10]; Telereceive-18 [10] (Fatigue: 0, Range: 100 yd, Area: subject, Maintain: min., Resist: Will+MS, Page: P25); Telesend-18 [10] (Fatigue: 0, Range: 100 yd, Area: subject, Maintain: min., Resist: MS, Page: P26).

@TEXT-CSTATS:<I>Languages:<\$> English-15 [2]; Enynn (native)-15 [0].

@TEXT-BOX:Narzhal av'Oronad is an Enynn psychotic exiled from Go'h'elaan in the early 1700s, and who has sworn to return and decimate the world of his birth. In his native timeline (an alternate version of the <BI>GURPS International Super Teams<\$> setting), he has completely reshaped Earth into his chosen tool of vengeance.

@TEXT-BOX:After spending several decades planning and studying in the civilized sectors of the galaxy, Narzhal struck out into unexplored space to find a primitive planet to turn into a machine of vengeance upon his homeworld. Dinalvar, the first such world he conquered, was accidentally destroyed by a runaway doomsday weapon test. After a narrow escape in his dilapidated starship, Narzhal made his way to Earth, where he crashlanded in 1896.

@TEXT-BOX:Over the next 100 years, using a human form, the identity of "Richard Carey," and scavenged equipment from his wrecked starship, Narzhal became a driving force in American industry and politics. With the advent of the first supers in the 1930s, he used his ship's computer to develop a serum which activated latent powers, and bartered it at the start of the Second World War for a commission as a general in the US military. Leading the Allies' 10,000-man metahuman task force, he significantly altered the course of WWII. When London and Washington were simultaneously destroyed by Nazi atom bombs in 1943, he used the opportunity to orchestrate a takeover of both nations to form the British-American Hegemony.

@TEXT-BOX:From this merger of the British Empire and the United States, he slowly expanded his influence, absorbing nations either by military conquest (through which he gained the sobriquet by which he is now best known), or voluntary annexation. By the end of the 1980s the increasingly-repressive Hegemony, ruled by a metahuman elite and decidedly fascist in its politics, controlled over 80% of the globe -- and Narzhal controlled <I>it,<I> with an iron hand.

@TEXT-BOX:Narzhal/Carey himself is an intriguing mix of contradictions. Ruthless and sociopathic when it comes to the destruction of the Enynn, he honestly cares about the beings he rules. (Of course, he sees them more as useful, intelligent <I>pets<I> than real people, but still.<!s>.<!s>.) Although he has drastically curtailed civil liberties in the Hegemony and his regional lieutenants often have bloody and violent domestic policies, he tries to ensure that no one is hungry, homeless or unhealthy, and not just

because he plans to deploy almost every able-bodied human in a massive invasion force against Go'h'elaan; he unabashedly seeks the best for his subjects and wants them to love him. (And many do.) He is still haunted by the destruction of Dinalvar, and the billions of lives lost to the runaway hellbomb prototype which reduced the planet to slag.

((END BOX))

@B-HEAD:Ethomorph

@TEXT:<I>Now the hand of Henry Jekyll (as you have often remarked) was professional in shape and size: it was large, firm, white, and comely. But the hand which I now saw, clearly enough, in the yellow light of a mid-London morning, lying half shut on the bed-clothes, was lean, corded, knuckly, of a dusky pallor and thickly shaded with a swart growth of hair. It was the hand of Edward Hyde.<I>

@TEXT:<I>I must have stared upon it for near half a minute, sunk as I was in the mere stupidity of wonder, before terror woke up in my breast as sudden and startling as the crash of cymbals; and bounding from my bed, I rushed to the mirror. At the sight that met my eyes, my blood was changed into something exquisitely thin and icy. Yes, I had gone to bed Henry Jekyll, I had awakened Edward Hyde.<I>

@TEXT:<I><\#208> from The Strange Case of Dr. Jekyll and Mr. Hyde, by Robert Louis Stevenson<I>

@TEXT:For those who believe the ancient rede that the form without reflects the spirit within, the Ethomorph is the defining example: one individual, who oscillates between two shapes with opposing personalities and appearances. One form, usually unattractive or even deformed, embodies all the individual's darker emotions and desires, manifesting as an almost demoniacal depravity; the other, handsome and noble, is home to a nearly saintly virtue.

@C-HEAD:Ethomorph . . . variable

@TEXT-CSTATS:<I>Attributes:<\$> Variable; ethomorphic alternate forms tend to be more physically powerful than their base form, as well as more resistant to the debilitating effects of their chosen vices <\#208> ST and HT are often higher than those of the base form.

@TEXT-CSTATS:<I>Advantages:<\$> Remove any Appearance, Empathy and Animal Empathy, and any Social advantages intimately linked to personal identity (for example, Reputation). Add Combat Reflexes [15]; Fearlessness +4 [8]; No Hangover [5]; Strong Will +2 [4]. Toughness and Extra Hit Points are common.

@TEXT-CSTATS:<I>Disadvantages:<\$> Remove any "positive" disadvantages such as Code of Honor, Sense of Duty, Honesty and so on. Add Appearance (Unattractive) [-5] or worse; Bad Temper [-10]; Bully [-10]; Callous [-6]; Frightens Animals [-5/-10]; Gluttony [-5]; Lecherousness [-15]; Overconfidence [-10]; Sadism [-15]; Vicious Drunk [-1]. Odious Personal Habits, Compulsive Behaviors and Obsessions are also appropriate.

@TEXT-CSTATS:<I>Quirks:<\$> Invert or replace any quirks that suggest polite, ethical or moral behavior. Dislikes may be elevated to loathings or even full-blown Intolerances. Behavioral quirks may be retained to provide acquaintances with a disturbing sense of familiarity, or may be exaggerated or removed entirely.

@TEXT-CSTATS:<I>Skills:<\$> Brawling-DX [1], Sex Appeal-HT or 14, whichever is better, if the base form did not already have them, along with any other skills that may augment the were-form's favorite modes of debauchery.

@TEXT:This example is derived specifically from <I>Dr. Jekyll and Mr. Hyde.<I> It assumes a character of average or better morality/ethics, with a dark ethomorphic form. This is the most common variant. Alternately, a predominantly evil/immoral character may have a were-shape which lacks all his negative traits and possesses instead many positive ones.

((START BOX))

@C-BOXHEAD:Ethomorphs and Split Personality

@TEXT-BOX:In the case of an ethomorph, the -10-point level of the Split Personality disadvantage represents an individual still capable of enjoying both forms as separate vessels for his singular identity, no matter how variant their personalities. The -15-point level indicates that each form is its own person. In all cases, though, the alternate form is always aware of the base form, although its opinion of him is rarely high.

@TEXT-BOX:Note, however, that those characters who start with the -10-point level of the disadvantage will inevitably escalate to the -15-point version. The GM should determine the point at which this occurs based upon the frequency with which the character changes and how different the two forms are (based on the advantages and disadvantages that are "abandoned" in the shift). The greater the difference between the two, and the more frequent the base form's "indulgence", the faster the escalation should be. The additional level of Split Personality, when it finally manifests, is treated as a disadvantage acquired in play and does not provide any additional character points.

((END BOX))

@TEXT:Also, as shown in many recent movies, such physical factors as body mass, height and gender need not remain constant between forms.

@TEXT:PPT and NPT must be determined individually for the specific character, as they will vary widely depending on the traits he possesses, loses and/or acquires. In addition, almost all ethomorphs will have the Unstable limitation (-25%) applied. Depending on the character concept, this may or may not take the form of the <I>War of Wills<I> option (see p. 00). Additionally, the were-form must possess the <I>Cannot Use Change Control<I> limitation (p. 00). Ethomorphism is a strictly binary form of shapeshifting <\#208> neither form normally wants anything to do with the other.

@TEXT:The base form <I>must<I> take Split Personality, at either level. Ethomorphs are <I>not<I> required to take Compulsive Behavior: Morally Opposed, although it is appropriate. They sometimes possess the Delusion that they are entirely separate people.

@TEXT:Ethomorphs are usually limited to the base form and one alternate form, which embodies either moral/ethical extreme. However, it is possible (though rare) for an ethomorph to possess alternate forms and personalities for <I>both<I> extremes <\#208> angel and devil both, with the base personality/form caught between them.

((START BOX))

@C-BOXHEAD:Ethomorphs in the Campaign

@TEXT-BOX:The obvious inspiration for ethomorphism is <I>The Strange Case of Dr. Jekyll and Mr. Hyde,<I> by Robert Louis Stevenson, a relentlessly Victorian work in its extremely polarized view of both morality and society. However, the ethomorph need not be permanently relegated to such a strict milieu.

@TEXT-BOX:<BI>Atomic Horror, Lensman, Steampunk<\$> and similar: A little Weird Science is all you need for a well-meaning scientist to accidentally time-share his body with a maniac, regardless of the native Tech Level.

@TEXT-BOX:<BI>Black Ops:<\$> An unusual variety of "werewolf", Argus may be more inclined to capture and study an ethomorph than the other kinds of shapeshifter it has encountered in the past.

@TEXT-BOX:<BI>Horror,<\$> Weird Modern and similar games: An ethomorph would work as both villain and/or McGuffin <\#208> especially if the base form is someone the party trusts.

@TEXT-BOX:And finally, the ultimate possibility: the <BI>GURPS Goblins<\$> version of Mr. Hyde: A celibate, teetotaling Biblethumper whose straitlaced morality and handsome features horrify all those who come in contact with him, even as he fascinates them with his inarguable charisma. Or maybe he's <I>worse<I> than any <I>ten<I> other goblins combined.<!s>.<!s>.

((END BOX))

@C-HEAD:A Polarized Persona

@TEXT:A uniquely Victorian variety of shapechanger, the ethomorph is usually a shifter who has relegated all his perceived "negative", "immoral" or "unhealthy" mental traits into a separate physical form, which often possesses its own mind and personality. This process can either be accidental (as in <I>The Strange Case of Dr. Jekyll and Mr. Hyde<I>) or intentional (the work of an evil genius seeking allies or servants of a like mind).

@TEXT:The mechanisms by which such a physical and mental polarization are accomplished can vary widely. For some, it is a result of meditation and careful self-control; for others, an application of magic; yet others make their way through a scientific path,

either with a drug like Atavismine (see p. STM00 or sidebar, p. 00) or more exotic means. In almost all cases, though, the manifestation of the banished emotions and motivations as their own "person" is an error or unforeseen side-effect of the process employed. Most ethomorphs originally intended to suppress or expel those traits they found inconvenient or offensive, only to find them fighting back in a most distressingly physical manner.

((START BOX))

@C-BOXHEAD:Ethomorph PCs

@TEXT-BOX:Player characters suffering from ethomorphism are affordable at 100 points and even below, as long as the alternate form does not far outstrip the base form in power. The primary differences between the two sides of an ethomorph are, after all, matters of personality and appearance; few ethomorphs manifest an alter ego that is hugely more powerful than they are. As long as the GM can justify the ability to change between forms within the campaign's genre, or warp the campaign to suit, an ethomorph PC can probably be built to fit.

@TEXT-BOX:An ethomorph need not be created from scratch, though <\#208> under the right conditions, the GM may be able to turn an existing PC into an ethomorph. (Obviously this will only work in a game with a fantasy or weird science element, or which can accommodate its inclusion.) It will require collaboration with the player in question, but if the character is already working towards a moral or ethical improvement in himself, the relegation of his darker drives to their own personality within a timeshared body can provide an excellent set of plot hooks <\#208> as well as drive the other players crazy.

@TEXT-BOX:If the genre allows, this may be the best way to plant a traitor in the midst of a tightly-knit party. Of course, it requires cooperation on the part of the player, but as long as he can keep his transformation out of sight of the other characters. Even better would be leaving the base form ignorant of his new condition for as long as possible.

((END BOX))

@D-HEAD:Body.<!s>.<!s>.

@TEXT:The physical change that an ethomorph undergoes is far from extensive, although it can be dramatic. The base species does not change, although in the most extreme cases it can seem that way. Instead, the were appears to become a different person, usually with no resemblance whatsoever to his base form. The appearance of this "other person" corresponds to the ethical extreme which it embodies. A form born of the were's negative traits is usually unattractive <\#208> deformed, bestial and often unhealthy in appearance; its opposite number is attractive, clean-limbed and charismatic. Both extremes often induce a fascination in the opposite sex, no matter what their appearance.

@TEXT:It is extremely rare, but not impossible, for an ethomorphic were-form to swap genders as part of its transformation. In such a case, a dark ethomorph will often take the appearance of the base form's ideal member of the opposite sex. Despite their often extreme beauty, these dark were-forms will still have a sinister and threatening air to them, and will be no less debauched and evil than their less-attractive cousins.

@TEXT:In any case, the alter ego is usually more powerful, physically, than the base form; in extreme cases they can demonstrate inhuman strength. They also tend to be remarkably resilient, enduring with equal ease both the debilitating effects of their vices as well as the attacks of those hostile to them. In the case of dark ethomorphs, this is usually explained as a result of their atavistic resemblance to some great beast; in bright ethomorphs, their proximity to an angelic ideal is usually credited.

@TEXT:Pre-existing physical traits from the base form, such as damaged limbs and missing eyes, are usually maintained. If so, their effect is exaggerated to match the form. For example, consider a missing eye. In a dark ethomorph, it will be a visible, disturbing deformity that only serves to increase the were-form's sinister appearance. In a bright ethomorph, it gives the were-form a rakish, romantic air that endears him to all he meets.

@TEXT:In either case, the ethomorph undergoes sufficient change that he appears to be a completely different person. Bright ethomorphs may bear a distinct resemblance to their other side, enough to be thought a relative, possibly a cousin or even a sibling (a misapprehension of which the were-form will often take advantage). Darklings tend to

become too bestial to seem similar to their base form <\#208> their snarling, animalistic visages often drive all thought of comparison from the minds of their viewers.
@TEXT:Subsequently, any and all traits that rely upon or modify personal identity <\#208> Reputations, Social Stigmas, even Wealth <\#208> are unavailable to the ethomorph. In those cases where the base form is to some degree aware of his alter ego's existence and activity, arrangements may be made for its use <\#208> Henry Jeckyll, for instance, instructed his servants that Edward Hyde was a guest in his house, and saw to it that cash was available for his use. But beyond that, the ethomorph is unable to benefit <\#208> or suffer <\#208> from his base form's social and financial presence.

((START BOX))

@C-HEAD:Going To (Different) Extremes

@TEXT-BOX>Note that the exaggerated personality traits which ethomorphic were-forms embody are usually the result of a more-or-less normal person <\#208> someone in the middle third or so of the moral-ethical bellcurve <\#208> undergoing whatever triggering process the GM has defined for the campaign. The results would be somewhat different if an unabashedly diabolic or extremely saintly person were to experience the same process. A particularly debauched individual may manifest a were-form whose moral values are barely above (but <I>are<I> above, nonetheless) average. Similarly, a nearly-angelic individual may manifest a "dark" side who might be able to manage being naughty every once in a while, but no more. In either case, though, the were-form may well be a severe embarrassment or even a fatal liability.<!s>.<!s>.

((END BOX))

@D-HEAD:.<!s>.<!s>.and Soul

@TEXT:The corresponding personality shifts are even more dramatic than the physical changes. In the case of a dark ethomorph, all of the character's positive traits are either buried or inverted. This can turn an average man into a debauched libertine, an extorting miser, or even a vicious serial killer, based both on his moral and ethical beliefs, and on the deepest secrets of his soul which he cannot admit even to himself. When it is not simply enjoying its excesses and debauches, a dark ethomorph will often take on the role of its base form's personal tempter and/or destroyer. In such a case, the were-form will do its best to leave its base form in situations designed to appeal to his remaining darker urges, in the hopes of dragging him down. If it fails to corrupt him (or simply chooses not to bother with that course of action), the were-form will sometimes try actively to destroy its host's reputation and life. In either case, it does this as much out of a desire for a "partner in crime" as out of malice for the base form.
@TEXT:At the other end of the spectrum, the bright ethomorph embodies all the lost or hidden nobility a fallen man may have thought lost to him. It is normally a far better person than its host. Depending on the attitude of the character's native culture to the redemption or rehabilitation of criminals and other debased individuals, a bright ethomorph may despise and ignore his base form, or do the best it can to improve his lot. The more altruism is seen as a virtue in the culture, the more energetically the were-form will toil on its host's behalf; some individuals may discover their lives, reputations and bankbooks improving for no apparent reason.<!s>.<!s>. At the same time, the were-form will not ignore itself entirely, but it will (of course) do no more for its own benefit than is proper.

((START BOX))

@C-BOXHEAD:Sample Character: James William Dennison 125 Points

@TEXT-BOX:Male; Age 31; 5'10''; 155 lbs.; American with ash-blond hair and haunted blue eyes.

@TEXT-CSTATS:<I>Skills:<\$> As Dennison, except as follows: Improve Brawling-14 [+3] (Parry: 9); Knife-14 [+3] (Parry: 7); Sex Appeal-15 [+10]. Add Disguise-12 [2]; Fast-Talk-13 [4]; Shadowing-13 [4]; Stealth-13 [4].

@TEXT-CSTATS:<I>Languages:<\$> As Dennison.

@TEXT-CSTATS:PPT: +150, NPT: -183. Basic cost: 38 points. Cannot use Change Control, -5%; Unstable/War of Wills, -25%. Final Cost: 27 points.

@TEXT-BOX:James William Dennison was a seeker of enlightenment. From the end of WWI to the middle of the 1920s, this well-to-do American spent much of his considerable inheritance roaming the world. Seeking out guru after master after mysterious teacher, he studied with every one in a desperate attempt to find peace for his tortured soul. Driving him was guilt over his participation in the Great War <\#208> a war in which he served with wild and bloodthirsty abandon. With the end of the war came shame at the dark side he had unleashed in his nation's service, and a vow to expunge from his soul the gleeful delight he had taken in killing and rapine <\#208> a delight that still tempted him to destroy his obstacles (human or otherwise) whenever he felt frustrated or angry.

@TEXT-BOX:After more than a decade of searching and studying, his efforts seemed to bear fruit; the teachings of a lama in the far reaches of Tibet seemed to bring him inner peace. Overjoyed and believing himself expunged of his dark urges, he returned to his native Chicago, leaving his instruction under the lama incomplete.

@TEXT-BOX:This was his undoing, though. Lacking its final step, the regimen of meditation and herbal potions he learned did not eliminate his darker impulses <\#208> it merely <I>displaced<I> them to the far reaches of his subconscious mind, where they festered and sought release .<!s>.<!s>. and revenge. Less than a year after his triumphant return to

Chicago high society, Dennison began suffering from blackouts, ranging from hours to sometimes days in length. Soon, he began to suffer from nightmares that would wake him, screaming, in the middle of the night.

@TEXT-BOX:Not long after that, at the height of the Roaring Twenties, Chicago began to experience a series of unexplained murders, each more vicious and savage than the one before it. As the populace started to slide into a state of disbelieving terror and the newspapers blared the details of each new killing, even the city's notorious gangsters have offered to help the police find the fiend responsible for the deaths.

@TEXT-BOX:And James Dennison has begun to fear that it is he.

@TEXT-BOX:<I>The Hun<I> is Dennison's ethomorphonic alter ego. Cast in the image of some of the worst of the German soldiers that Dennison faced in WWI France, it embodies all of his rage and bloodlust. By turns snarling and charming, it seeths and lusts and slinks through the night world of Roaring 20s Chicago looking for victims to feed its murderous psychosexual desires. With all of Dennison's military skills plus a few more of its own at its disposal, it stalks men and women alike, killing each in a unique, grisly fashion. It prefers women, often charming them into following it to a secluded location, but will not hesitate to kill a man if the need is strong. Whenever possible, it leaves a trademark behind at each killing: symbols from a code used by Dennison in his childhood. It's careful to leave nothing that by itself is a coherent message, but it knows that Dennison is beginning to suspect something is amiss, and is delighting in his growing horror, which it reinforces with horrific nightmares which it inflicts upon him.

@TEXT-BOX:James William Dennison/The Hun is a 125-point character designed for use in a <BI>GURPS Cliffhangers<\$> game. With fairly minor modifications (for instance, changing WWI to Vietnam), he can be inserted into just about any 20th-century setting.

@TEXT-CSTATS:<I>Skills:<\$> Acting-IQ+2 [6]; Stealth-DX+1 [4].

@TEXT-CSTATS:<I>Languages:<\$> English-IQ (native) [0].

@TEXT-CSTATS:<I>Taboo Traits:<\$> Hawkshaw bioroids cannot have any trait that suggests excitability or extreme emotion of any kind, nor can they have any mental or physical disadvantage that is caused or influenced by a genetic factor (for example. epilepsy or manic-depressive).

@TEXT:This is a base-model Hawkshaw, fresh out of the growth tank. Variations are

possible, as with natural species, plus all Hawkshaws receive extensive special ops-style training before they are deployed on their first mission (see box, p. 00). It will be extremely unlikely for anyone outside of the Alesandese Group to encounter a Hawkshaw that possesses nothing but its racial abilities. Special models may have better attributes and higher levels of Appearance and Silence, as well as any other traits their designer may deem necessary.

@TEXT:Hawkshaws are always attractive women, apparently human in appearance. They tend to be Amazonian in size, though <\#208> generate height as for a human male and add one inch, then determine weight normally for a female.

((START BOX))

@C-BOXHEAD:The Typical Hawkshaw Skill Set

@TEXT-BOX:The training a Hawkshaw bioroid undergoes after their decanting is brutal and extensive. The Alesandese Group employs some of the best teachers of military and espionage skills available in the world, and they drive the bioroids through an intense, sometimes deadly, one-year course of study that turns a fresh clone into a walking weapon. The following list of skills is the bare minimum a Hawkshaw can be expected to possess upon "graduating" to active agent status, and many are more skilled when they complete their training. It goes without saying that once they are active agents, they continue to improve and expand their skills.

@TEXT-BOX:<I>Hawkshaw "Basic Training:"<I> Acrobatics-DX [4]; Beam Weapons/TL9 (pistol)-DX+3 [4]; Camouflage-IQ+2 [4]; Computer Operation/TL9-IQ+2 [4]; Demolition/TL9-IQ+1 [4]; Garrote-DX+2 [4]; Guns/TL9 (Pistol)-DX+3 [4]; Guns/TL9 (Rifle)-DX+3 [4]; Holdout-IQ+1 [4]; Jumping-DX+1 [2]; Karate-DX [4]; Knife-DX+1 [2]; Knife Throwing-DX+1 [2]; Lip Reading-IQ [2]; Pickpocket-DX [4]; Poisons-IQ [4]; Running-HT [4]; Savoir-Faire-IQ+2 [4]; Sex Appeal-IQ+1 [4]; Shadowing-IQ+1 [4]; Survival (Urban)-IQ [2]; Swimming-DX+1 [2]; Tactics-IQ+1 [6]; Traps/TL9-IQ+1 [4].

@TEXT-BOX:The "basic training" package is worth 96 points; after undergoing it, an absolutely average Hawkshaw bioroid is usually one year old and a 158-point character.

((END BOX))

@C-HEAD:General Description

@TEXT:Uniformly female, the Hawkshaw-class bioroids (named after the corporate security officer on whom their core genotype was originally based) are designed to be infiltrators, spies and assassins. Their inherent gifts make them not only stealthy, but capable of assuming the shape of anyone from whom they can acquire a tiny genetic sample. To the delight of their engineers, they have an ability to copy a target's personality which seems almost psychic at times. It wasn't in the design specs, and no one seems to know where it came from, but every Hawkshaw so far has had it, and no one at Alesandese is complaining.

@TEXT:Although their primary purpose has always been as agents to be deployed in covert operations against rival corporations, Hawkshaws have found other roles within Alesandese. No small number are employed as bodyguards for various executive officers, and a number serve in the corporate Security department. The vast majority, however, remain part of the black program which spawned them.

@TEXT:There is no such thing as an average or unattractive Hawkshaw; they are designed to be pleasing to the eye, and many specialty models are stunningly gorgeous. This reflects more upon the aesthetics of the Alesandese Group's genetic engineers than any sexist tendencies in either them or society at large, although some have admitted to being influenced by the stories of <I>femmes fatales<I> of the past, like Mata Hari. All racial types, and variations therein, are found among their numbers, although given their shapeshifting abilities, it's not always certain that the appearance a Hawkshaw is wearing is necessarily her own. The only exception to this endless selection are the "elite" models, who are clones of exceptionally successful predecessors. No variation is allowed in them; they are all identical to their distinguished "ancestor".

@TEXT:The first Hawkshaws were decanted almost three decades ago; only the executives in charge of the black division where they are made know exactly how many have been deployed in the years since. There are usually 20 or 30 undergoing "basic training" at any given time, but the exact number currently active in the field is a secret classified at the

highest corporate levels.

@C-HEAD:Psychology

@TEXT:Being a race subject to a slave mentality, Hawkshaw bioroids need either constant supervision, or flexible long-term orders. (Typically, the latter might be something like, "Keep yourself in fighting trim through regular exercise and sparring, eat and sleep properly, and undertake new training whenever the opportunity is presented.") Unlike most so-called "slave races", though, the Hawkshaws are capable of considerable individual initiative <\#208> but only when they are ordered to demonstrate it, which is almost always as part of a mission. This limited independence lasts only as long as the Hawkshaw's mission is considered incomplete. It continues even if a designated "master" is in her presence, unless that master terminates the mission, allowing her to operate at peak efficiency even in situations where other slave races would fall on their faces groveling at their masters' feet.

@TEXT:While they have been known to be devoted to their masters and trainers, Hawkshaws have a reputation within the company as "the Ice Maidens". Although not actively hostile to one another or humans, Hawkshaws are not communal beings, and prefer to be alone if given a choice. They are not subject to much in the way of emotion, as that was considered a liability during field operations. They are, in fact, untroubled by almost all extremes of emotion and present a phlegmatic, unmoved face to the world unless the needs of a mission require otherwise. They do have a tendency to focus on their tasks to the exclusion of anything else, and lack both a strong sense of self-identity and any real empathy for other beings. Only their slave mentality prevents them from being active sociopaths.

((START BOX))

@C-BOXHEAD:Hawkshaw Names

@TEXT-BOX:Hawkshaw bioroids are not so much named as designated. Basic Hawkshaws have inception numbers, made up of a two-letter prefix (the first indicates the production facility, the second the growth tank) separated by a hyphen by a four-digit number indicating the year and month the bioroid was decanted (for example, GT-0212).

@TEXT-BOX:Hawkshaws who get the attention and favor of their trainers are often given use-names and nicknames <\#208> usually (but not limited to) common female first names. If a particular Hawkshaw proves to be exceptional, she may be used as the "seed" for a new, "elite" production line, whose members which will then be identified with her use-name plus a number indicating the order in which they were cloned: Alysse-12, Miranda-5.

@TEXT-BOX:Of course, when on a mission, a Hawkshaw uses whatever name is appropriate to the identity she has been assigned or which she has assumed with her morph powers.

((END BOX))

@C-HEAD:Ecology

@TEXT:Although they appear to be human, and in fact share in large part the same basic genetic structure, Hawkshaws and humans have less in common than humans and chimpanzees.

@TEXT:To make them more tractable, and to minimize long-term "disposal" problems, the Alesandese Group has had them built with both a slave mentality and a drastically-shortened lifespan that ends in a rapid breakdown of their systems. Even if their development were not accelerated using forced growth tanks, they would mature in a mere three years; their operating lifespan from the time they reach maturity is only eight years. After that, they die of old age.<!s>.<!s>. quickly.

@TEXT:Not surprisingly, they are consequently not interfertile with humans <\#208> or any other known humanoid race <\#208> again, by design. Given their short operating lifespan, allowing them to carry a child and give birth naturally (despite its savings in production costs) would be an unprofitable waste of time. Therefore, even though they are physically compatible with human males, they are sterile and completely lack anything in the way of a libido <\#208> although, once again, they are expert at simulating one should a mission call for it.

@TEXT:When not out on assignment, most of the current Hawkshaw population lives in a comfortably-appointed complex hidden beneath one of the larger buildings on the Alesandese headquarters campus. In addition to the "barracks", this complex houses the

production and growth facilities as well as the training areas. While the population fluctuates, what with production runs, basic training, individual lifecycles, and casualties on the outside, there are usually around 80 to 100 Hawkshaws present at all times.

@C-HEAD:Hawkshaws in the Campaign

@TEXT:The Hawkshaw-Class Infiltration Bioroid was designed for use in a TL9 campaign with a strong cyberpunk flavor. As is usual for this kind of world, powerful corporations are battling, both in the marketplace and in the dark of night, for dominance. Mechanical and electronic technologies, be they from a single monolithic megacorporation or from a large number of struggling competitors, currently enjoy the lion's share of the economy. And a single visionary biotech company is hoping to upset the status quo.

@TEXT:Hawkshaw bioroids are the Alesandese Group's answer to the challenge. Alesandese deploys the Hawkshaws on missions ranging from simple espionage, through seduction and blackmail, to the sabotage of corporate assets and the assassination and/or replacement of inconvenient executives and government officials.

@TEXT:Unless the party is a team in the employ of Alesandese, they are most likely to encounter one or more Hawkshaws while the latter are deployed on a mission. Whether they meet as enemies or not depends on the goals of both sides <\#208> and whether or not the Hawkshaw thinks she can better accomplish her goals by masquerading as one of the party members.<!s>.<!s>.

@TEXT:A Hawkshaw could be anywhere. Anyone from a government official who recently changed his anti-biotech stance to the security guard who's in the wrong sector during his shift could be a Hawkshaw. She could be the cute college grad who wants a drunken executive to help her get a job, or who offers to be his mistress <\#208> at least long enough to get him alone. If there is anything certain about Hawkshaws, it's that no one outside of Alesandese has any idea they exist, and (for the moment) they're leaving other biotech firms alone.

((START BOX))

@C-BOXHEAD:Model Variations and Competitors' Knock-Offs

@TEXT-BOX:The Hawkshaw bioroid is a lifeform engineered and grown from scratch to serve as a corporate espionage agent. In addition to the "basic" model as described in the main text, custom bioroids built to a mission (or executive's) specifications are possible. The Alesandese Group's genetic engineers can add almost any trait that is not occult or supernatural in nature. Certain "super" traits are also possible, as evidenced by the Hawkshaw's morph abilities, but the GM should take care to limit exactly what is available, lest the campaign turn into a supers game.

@TEXT-BOX:Some organizations may want to have agents like the Hawkshaws but will not have quite Alesandese's level of technology available to them. Companies like this may have had to settle for rebuilding existing human beings (either "recruited" or kidnapped outright), especially if they're in a relative hurry.

@TEXT-BOX:Modified humans will not usually be as exceptional as an engineered lifeform unless the organization in question has access to such advanced means as a Metamorphosis Virus (see p. BT79-84). Attribute increases may be lower or fewer, the number of added Advantages may be smaller, and most importantly, the Self-Destruct/Short Lifespan/Slave Mentality combination will be replaced by the less complicated but almost as effective tactic of implanting a Cortex Bomb and subjecting the new agent to a barrage of powerful psychological conditioning. One advantage re-engineered humans hold over a Hawkshaw or its equivalent is that they tend to be noticeably more personable, and are able to function better on missions that require extensive social functions.

@TEXT-BOX:Above and beyond the differences in one's raw materials, individual agents can be customized for different mission profiles, especially if they are grown to order by an organization like the Alesandese Group.

((END BOX))

@D-HEAD:Other Settings

@TEXT:A lower tech level \#208> something closer to the traditional cyberpunk world, perhaps <\#208> can be accommodated if the GM wishes by the expedient of noting that the Alesandese Group is an innovative biotech firm which is reputed to be <I>in advance<I> of

the cutting edge as the rest of the industry sees it. Why this is can be a campaign hook or an unsolved mystery.<!s>.<!s>.

@TEXT:If a cyberpunk of biopunk flavor is not preferred, the Hawkshaws could work in any post-human/heavy-bio-engineering setting, such as <BI>GURPS Transhuman Space.<\$> They would also not be out of place in a world like <BI>Terradyne.<\$>

@TEXT:Worlds with higher tech levels than 10, though, are problematic for these shifters. The Proteus Virus becomes available at TL11, with full Metamorphic Virii common at TL12; with the kind of changes either can impose on a pre-existing organism, there would be little need to specifically engineer a new one to do the Hawkshaw's job.

@TEXT:Of course, the GM need not feel constrained to technological worlds. In Yrth, or the earth of <BI>GURPS Technomancer<\$>, Hawkshaws could be summoned beings, manifested spirits, or even truly ground-breaking golems. In a Lovecraft-style <BI>Horror<\$> game, they may be some kind of Elder Spawn, aiding a fine old New England firm for what are sure to be dark and disturbing reasons of their own. And finally, in <BI>GURPS In Nomine,<\$> they might actually be Lilim (possessing the Celestial Song of Form, of course), responding to rituals cast by would-be corporate sorcerers and playing along with the gag until they've racked up enough favors to make it worth all the effort.

(((START BOX)))

@C-BOXHEAD:Hawkshaw Characters

@TEXT-BOX:A typical bioroid fresh out of "basic training" and deployed on her first mission would be a 150-point character; assuming she spent the bare minimum on her "standard skills" (see box, p. 00), that would leave her player with a few points with which to customize the character <\#208> more, if she took some disadvantages above and beyond those in the racial package.

@TEXT-BOX:More experienced Hawkshaws could reach 200 or even possibly 250 points in their brief lifespans, making them either opponents to be feared or allies to be coveted.

@TEXT-BOX:Despite the fact that they are engineered, variations are still common among Hawkshaw bioroids. Remember that the racial package is still just a template, a starting point, even though these beings are effectively mass-produced. Appearance, skill set, even attributes and leveled advantages can vary away from the racial norm.

@TEXT-BOX:For a Hawkshaw PC, the GM should note that the frequency of appearance for the Alesandese Group Patron represents not any inherent difficulty in reaching the company, but in the company's ability to get help to a highly secret, ultimately deniable agent.

@D-BOXHEAD:Free Hawkshaws

@TEXT-BOX:The GM should consider the following option if he wants to encourage Hawkshaw PCs, or wants to create a truly challenging Hawkshaw enemy. Instead of being specifically engineered into the Hawkshaw genotype, their slave mentality is instead a conditioned behavior imposed on the bioroids' developing minds during the forced growth process (which explains their limited ability to switch it "on and off"). Although it is extremely difficult, that conditioning <I>can<I> be broken. In other words, any Hawkshaw with enough available character points can buy off the Slave Mentality disadvantage outright.

@TEXT-BOX:Most Hawkshaws who do break their conditioning usually escape from the company's service by faking their deaths on a mission and slipping into the population at large, relying on their morphing abilities to hide them. They usually find work in the fields that they know well, such as mercenary or security, although some have become criminals, others business persons, and at least one became an artist of no small repute.

@TEXT-BOX:Those that choose not to escape (some stay, trying to help others achieve independence) must take a -30-point Secret to cover their free will. (A "rogue" Hawkshaw is an immediate target for termination.)

@TEXT-BOX:In a campaign employing this option, the highest echelons of Alesandese are aware of the deserter Hawkshaws, and is justifiably paranoid about them. Unless they buy off more of their disadvantages, they are effectively sociopaths <\#208> very dangerous sociopaths who might well bear a grudge against the company.

(((END BOX)))

(((START BOX)))

@C-BOXHEAD:Sample Character: Miranda-5 200 points
@TEXT-BOX:Female; Age 5; 5'11''; 150 lbs.; Black hair, grey eyes, porcelain complexion, sleekly muscled with a feline grace.

@TEXT-CSTATS:Speed 6.25; Move 7.
@TEXT-CSTATS:Dodge 7; Parry 10.
@TEXT-CSTATS:Damage: <I>Punch:<I> 1d-1; <I>Kick:<I> 1d+2; <I>Thrust<I> 1d-1; <I>Swing<I> 1d+1
@TEXT-CSTATS:<I>Advantages:<\$> Absolute Timing [5]; Alertness +2 [10]; Appearance (Beautiful) [10]; Combat Reflexes [15] (Fright Check: 14); Hawkshaw Racial Package [52]; Silence +2 [10] (Total Stealth Bonus (Moving): 4; Stealth Bonus (Motionless): 8).
@TEXT-CSTATS:<I>Disadvantages:<\$> No Sense of Humor [-10]; Stubbornness [-5]; Vow: Always complete her mission or die trying [-15].
@TEXT-CSTATS:<I>Quirks:<\$> Doesn't like assuming male forms; Doesn't like the idea of being another "cookie cutter" clone product; Easily distracted by beauty and aesthetics; Non-conformist in her limited way; Quiet and thoughtful when not on a mission. [-5]
@TEXT-CSTATS:<I>Skills:<\$> Acrobatics-14 [4]; Acting-14 [6]; Beam Weapons (Blaster pistol)/TL9-18 [4]; Camouflage-14 [4]; Climbing-13 [1]; Computer Operation/TL9-14 [4]; Demolition/TL9-13 [4]; Garrote-16 [4]; Guns (Pistol)/TL9-18 [4]; Guns (Rifle)/TL9-18 [4]; Holdout-13 [4]; Jumping-15 [2]; Karate-14 [4] (Parry: 10); Knife-15 [2] (Parry: 7); Knife Throwing-15 [2]; Lip Reading-13 [4]; Lockpicking/TL9-11 [1]; Mechanic/TL9-12 [2]; Pickpocket-14 [4]; Poisons-12 [4]; Running (Move: 7.625)-11 [4]; Savoir-Faire-14 [4]; Sex Appeal-11 [2]; Shadowing-13 [4]; Stealth-15 [4]; Streetwise-11 [1]; Survival (Urban)-13 [4]; Swimming-15 [2]; Tactics-13 [6]; Traps/TL9-13 [4].
@TEXT-CSTATS:<I>Languages:<\$> English (native)-12 [0].
@TEXT-BOX:Miranda is the fifth clone spawned from the original Miranda, and like her forebear she is a skilled and deadly assassin. At five years old, Miranda has been serving Alesandese for four years, and has just entered "middle age" for a Hawkshaw. In that time, she has racked up an impressive record of kills, including five politicians, three consumer activists, a half-dozen assorted executives, and the entire board of directors for a robotics firm whose products were becoming too organic in appearance and construction for the peace of mind of several of Alesandese's upper executives.
@TEXT-BOX:She is silent, deadly and implacable when aimed at a target, displaying an inventiveness in her methods that is both playful and artistic without being in the least sadistic. She doesn't hesitate to stoop to cruder methods if their employment guarantees efficiency and comprehensive results, but if time and her orders allow, she will choose demises tailored for the individual targets. A case in point is the aforementioned board of directors, who all died within 48 hours of each other, with causes ranging from a simple automobile accident to mis-prepared blowfish sushi. Her primary on-the-job quirk is a tendency to avoid taking on male shapes when she must use her morph abilities.
@TEXT-BOX:Outside of missions, she is quiet and thoughtful, and as non-conformist as her slave mentality allows, making her the "goth" of the Hawkshaws <\#208> a trait which she shares with all her predecessors, ironically enough. She is attracted by objects which appeal to her (somewhat quirky) sense of beauty and aesthetics, and has had to restrain herself on more than one occasion when this attraction manifested during a mission.
@TEXT-BOX:Of late, Miranda's individualism has been running up hard against the walls of her slave mentality. In campaigns where this is a conditioned state and not a genetic one, Miranda has begun to wear away at her conditioning (in game terms, she has accumulated 20 or so character points toward buying off the disadvantage, above and beyond the 200 in her character total). If she were to break it down completely, she just might vanish into the night in the middle of her next mission.
@TEXT-BOX:Miranda-5 is a 200-point character suitable for use in a TL9 <BI>GURPS Cyberpunk<\$> game (or its <BI>Biotech<\$> equivalent). GMs looking to expand on her hand-to-hand fighting ability should feel free to upgrade her Karate to a full roster of <BI>GURPS Martial Arts<\$> maneuvers and skills.

(((END BOX)))

@B-HEAD:Jaguar Warrior

@TEXT:<I>.<!s>.<!s>.and as we cantered up through the marsh we saw the jaguar high among the forked limbs of a taruman tree. It was a beautiful picture <\#208> the spotted coat

of the big, lithe, formidable cat fairly shone as it snarled defiance.<!s>.<!s>.<I>
@TEXT:<I><\#208> Theodore Roosevelt, Through the Brazilian Wilderness.<I>
@TEXT:The Jaguar Warrior knows nothing but violence. His only pastime is death, his only
love war. The elite shock troops of an ancient and savage Bronze-Age empire, the Jaguar
Warriors are bound by vows and magic to serve their emperor, and in doing so gain a
divine power <\#208> the ability to change into fierce jungle predators. By donning the
skin of a jaguar that each wears as a cape (their only garment in battle, except for a
weapons harness), they may take the shape of a jaguar in order to destroy their nation's
enemies.

@TEXT:Not surprisingly, the nations bordering on the Empire (with whom it is constantly
at war), as well as the many and varied enemies of both the Empire and its priesthood,
look upon the Jaguar Warriors with a superstitious but not unjustified fear.

(((START BOX)))

@C-BOXHEAD:The Jaguar Warriors: Historical Origins

@TEXT-BOX:Although the main text is intentionally vague as to the home and ethnicity of
the Jaguar Warriors, they are in fact based on material from the historical record. As
the Spanish discovered when conquering the New World, the Aztec armies were liberally
supplied with warriors from two rival orders of "knights": the Jaguars and the Eagles.
(There is some evidence <\#208> particularly the murals at the monastery of Ixmiquilpan
<\#208> of a third warrior order, the Coyotes.)

@TEXT-BOX:Like their fantasy counterparts in the main text, the Jaguar and Eagle Knights
were elite shock troops, fierce and savage in battle. Unlike their fantasy counterparts
here, they were quite numerous, comprising entire armies at times. They were also, it
should go without saying, <I>not<I> shapeshifters.

@TEXT-BOX:Although they were clearly respected and feared, there appears to be some
confusion about the status of the Jaguar Knights within Aztec society. A number of
sources (including <BI>GURPS Aztecs<\$>) describe them and their Eagle counterparts as the
lowest orders of knighthood, and as such open to commoners. Other sources paint them as
aristocratic elites to which only seasoned warriors or noblemen were offered membership.

@TEXT-BOX:The few surviving images and records suggest that they were a sight of fierce,
colorful beauty to see. Over red loincloths, they wore tanned jaguar pelts, which, if the
Ixmiquilpan murals are accurate, were tailored into something like bodysuits, with the
tail hanging free behind them. Over this they wore red cloaks or layered robes. On their
heads were plumed headresses and helmets, while arm-rings and other jewelry adorned them.
Finally, they were armed with jade warclubs or obsidian swords (despite the name, little
more than clubs themselves) and bore <I>chimalli<I> (small, round war shields).

@TEXT-BOX:Unfortunately, they were no match for the Spaniards, who slaughtered them to a
man. By the time the Ixmiquilpan frescos were painted, a mere 50 years after the conquest
of the former Aztec empire, the real Jaguar warriors and their fellows were a quietly
fading memory.

@TEXT-BOX:GMs who would like to recreate the Spanish conquest using shapeshifting
warriors, or who simply want to present the Empire with greater verisimilitude, should
consult <BI>GURPS Aztecs.<\$> In particular, a sidebar on p. AZ49 covers both equipment
and Troop Strength for both Jaguars and Eagles.

(((END BOX)))

@C-HEAD:Sons of the Empire

@TEXT:Every spring throughout the Empire, at a special ritual, the priests of the
Empire's bloodthirsty gods inspect all the male children, both highborn and low, who
celebrated their sixth birthday during the previous year. No one knows what the priests
look for, but every parent hopes that their child possesses the mysterious quality which
indicates the gods' favor <\#208> the quality that signifies their son's destiny to
become a Jaguar Warrior.

@TEXT:The priests select approximately one in every three hundred boys. These youths
immediately become wards of the state and are referred to as "Sons of the Empire". Taken
with much celebration from their proud families, they are sent to one of several
temple-run training towns, hidden deep in the jungle hearland of the Empire. There they
are raised by a mix of priests and veteran soldiers, their old lives and social status

forgotten as they embrace their new family in the Imperial army.

@TEXT:Their new lives are harsh and overwhelming, with every waking moment unending preparation for their role as elite Imperial troops. Their young lives are filled with a combination of fierce exercise and combat training, and an even more punishing regimen of religious and ceremonial instruction. More than three-quarters die before they can receive their jaguar skin at age 17 <\#208> victims of the brutal training or their own teachers, who are more than eager to slay the recruits in their charge for any perceived weakness or soft-heartedness. The goal is to turn these boys into the ultimate human fighting machines, heartless, bloodthirsty and more than capable of striking fear into the hearts of the Empire's enemies.

@TEXT:Those who survive their training become all that and more.

@TEXT:In their seventeenth year, each surviving Son of the Empire swears dark and fearful oaths of loyalty to the Emperor and the gods, and having done so receives his jaguar skin. An item of great magic, it is made specifically for him; when wearing it, he may take on the shape of one of the great jungle cats.

((START BOX))

@C-BOXHEAD:The Psychology of a Jaguar Warrior

@TEXT-BOX:In addition to the physical conditioning his training imparts, a potential Jaguar Warrior undergoes no small amount of <I>mental<I> conditioning as well. The goal is to pair the peak of human perfection with a mind focused entirely on warfare, bloodshed and brutality. Friendships between boys any deeper than simple alliances are discouraged, often by publicly executing one of the friends and holding the other up to scorn in front of his peers. Violent resolutions to the smallest conflicts are encouraged and rewarded; bullies and those that fight dirty often become their instructors' favorites.

@TEXT-BOX:Any trace of empathy, compassion or affection is systematically ground out of the trainees by methods ranging from simple ridicule to near-fatal beatings. In extreme cases where a boy is otherwise promising, the priests may resort to various potions and spells to permanently alter his personality.

@TEXT-BOX:The ultimate result of this "training" is a soldier who is all but psychopath or sociopath, living and breathing only for violence and bloodshed. In some cases, only the fear of the gods and the power of their priests keeps a Jaguar Warrior from simply killing his way through the population at large <\#208> that, and the Imperial policy of catering to the every need of the Jaguar Warriors.

@TEXT-BOX:It might be possible for a non-psychopath to survive the training and conditioning and emerge relatively sane, but he'd have to be both an extraordinary actor and anything but squeamish.

((END BOX))

@C-HEAD:My Life As A Jaguar

@TEXT:After a final month of training in the use of both their skins and their feline shapes, the new Jaguars leave the towns where they have lived for twelve years, and join the ranks of the Imperial Warrior Elite wherever they may be stationed. There they live lives of intense training alternating with sybaritic pleasure; they are pampered and indulged by the Empire which depends upon their ferocity and puissance in battle. Their days consist of constant training and contests of strength and skill against each other. Their nights are flush with the best food and wine the Empire can provide, with their every need seent to by comely, willing servants. All this and more is theirs for the asking for as long as they are able to fight in the Imperial service.

@C-HEAD:At the Front.<!s>.<!s>.

@TEXT:Although their numbers could form a small army, the Jaguar Warriors specialize instead in small-unit tactics. Armed with spears and wearing only their enchanted skins, they enter battles as skirmishers, supporting the main force of regulars by attacking the enemy's flank and rear, either alone or in small groups.

@TEXT:Not surprisingly given their training, the Jaguar Warriors attack with a single-minded viciousness, but they do not hesitate to flee when the battle is hopeless. A common tactic is for about a dozen Jaguar Warriors to attack in human form. Then, if the battle starts to go against them, they will throw their spears and transform,

continuing the fight in were-form. Often the shock of witnessing the change is enough to completely demoralize the enemy. The Jaguar Warriors do not all change at once; rather one warrior will cover one or two of his comrades while they transform, then the jaguar will protect his former guardian while he changes.

@C-HEAD:.<!s>.<!s>.And Elsewhere

@TEXT:Formal battles are not the only venue in which Jaguar Warriors can be found. As almost every major settlement in the Empire houses at least a few Jaguars, they occasionally are seen supplementing (or completely supplanting) the regular forces who act as the Empire's "police". Such duties are almost never left entirely in their hands, though, as they have a tendency to lose interest if there is insufficient bloodshed.

@TEXT:The Jaguars are also the Emperor's counter-revolutionary forces. Whether it is a newly-conquered province or a rebellious village in the heart of the Empire, if there are challenges to Imperial control, the Jaguar Warriors are usually deployed to suppress it. Setting a dozen or so loose, especially after depriving them of their accustomed pleasures for a day or two, is guaranteed to "pacify" the most troublesome region.

((START BOX))

@C-BOXHEAD:Rivalries

@TEXT-BOX:The Jaguars are not the only shapeshifting warriors available to the Empire. Just like their real-world counterparts (see box, p. 00), they have a standing rivalry with the Eagle Warriors. This order, as their name implies, are were-eagles, and are selected, raised and trained in much the same manner as the Jaguars. As were-eagles, they have a less direct involvement in battles, acting mainly as lookouts and air support and only rarely dive-bombing a choice target.

@TEXT-BOX:Naturally, this prompts a great deal of insults; the Jaguars call the Eagles cowardly and useless in a fight, while the Eagles counter by calling the Jaguars thickheaded brawlers with no grace. At times the rivalry can grow violent or even deadly; no love is lost between the orders, and the Empire goes to great lengths to keep them separated, even up to the point when a battle is engaged.

@TEXT-BOX:In addition to the Eagles, there may also be a third faction, in an equal rivalry with the other two. The Coyote Warriors are, as their name indicates, were-coyotes. They can operate either as scouts or as front-line troops, and as such come under fire from both other sides, who additionally taunt them for indecisiveness. Their rivalries with the other two orders is somewhat less acrimonious than that between the Jaguars and the Eagles, but it is just as vociferous.

((END BOX))

@TEXT:These impromptu twelve-man "squads" are the highest level of organization the Jaguars ever bother with, and they tend to form (and disband) spontaneously. Other than the wizard-priests who watch over them (not to mention the Emperor himself), they have no command structure to speak of. Among the Jaguars, Reputation substitutes for Rank, with the most violent and bloodthirsty of their number being the best known, the most respected, and the closest thing the order has to true officers.

@TEXT:Perhaps the greatest testament to their skill and power is their survival rate. Unlike many other weres, the Jaguars have no supernatural immunities to weaponry, nor are they any more resistant to damage and wounding than a natural jaguar. Yet even in the thick of battle they suffer fewer casualties than the regulars at whose sides they sometimes fight.

@C-HEAD:Building a Jaguar Warrior

@TEXT:All Jaguars are at least 175-point characters, heavily specialized in combat skills. They can be used as enemies, or as rather one-dimensional player characters.

((START BOX))

@C-BOXHEAD:Jaguar Template 170 points

@TEXT-BOX:(PPT: +384, NPT: -268)

@TEXT-CSTATS:<BI>Attributes:<\$> Enhanced ST +13 (No Fine Manipulators) [78]; DX +4 [45]; IQ -6 [-50]; HT +5 [60]; Reduced Hit Points -1 [-5].

((END BOX))

@D-HEAD:Jaguar Warrior Template

@TEXT:Unlike the Arthurian werewolf (pp. 00-00), there is more to a Jaguar Warrior than a simple wereform. In the box on p. 00 can be found a basic package for building a Jaguar. It is not a full character in and of itself, but can be used as the foundation on which to build one.

@TEXT:Note that Jaguar Warriors do not lose their Status and other social advantages when they take jaguar form. Imperial citizens assume that any jaguar found in settled areas is a Warrior on his business, and treat him with cautious respect and courtesy.

((START BOX))

@C-BOXHEAD:Jaguar Warrior Training

@TEXT-BOX:In addition to their skin-based change, Jaguar Warriors all have the following traits (at least) upon achieving their skins:

@D-BOXHEAD:Jaguar Warrior Training Package 38 points plus were-form

@TEXT-CSTATS:<I>Advantages:<\$> Alertness +2 [10]; Combat Reflexes [15]; Legal Enforcement Powers [10]; Status 2 [10].

@TEXT-CSTATS:<I>Disadvantages:<\$> Bloodlust [-10]; Callous [-6]; Duty to Empire and Emperor [-10]; Selfish [-5]; Vow to always serve the Empire and the gods faithfully, and to not to misuse jaguar form [-10]; Uncongenial [-1].

@TEXT-CSTATS:<I>Skills:<\$> Axe/Mace-DX+1 [4]; Brawling-DX+2 [4]; Running-HT [4]; Shield-DX+1 [2]; Spear-DX+1 [4]; Spear Thrower-DX+1 [4]; Spear Throwing-DX+1 [4]; Survival (Jungle)-IQ+2 [6]; Tactics-IQ [4].

@TEXT-CSTATS:<I>Quirks:<\$> Lives for fighting and bloodshed.

@TEXT-CSTATS:<I>Taboo Traits:<\$> Empathy, Pacifism; Savoir-Faire and most other social skills.

@TEXT-BOX:<I>Notes:<I> Jaguar Warriors are not known for their intellectual agility, even in the limited theatre of strategy and tactics. It is not uncommon for Jaguars to have IQ 9 or lower, although at IQ 7 or less they become more trouble to the priests than they are worth.

@TEXT-BOX:The average TL for the Empire and the Jaguar Warriors is 1 (Bronze Age) and any TL skills will reflect this.

((END BOX))

@D-HEAD:Jaguar Skin

@TEXT:The enchanted pelt which gives a Jaguar Warrior his ability to shift is a item-based were-form (q.v., p. 00). It starts with the basic Jaguar template (see box, p. 00), but Jaguar Warriors must buy the were-form's IQ back up to their human form's level (usually +50 points).

@TEXT:To the basic animal form add the following limitations: Slow Change at -10% and a Cure/Cursebreak, which in this case represents a usage restriction. The Jaguar is "cured" (which is to say, his ability to change is rescinded) if he ever breaks the Vows listed in the character template. This is a fairly easy condition (-40%) which is commonly known (an additional -15%). However, the "cure" is temporary; the warrior can regain his shapechanging abilities by demonstrating sincere repentance and undergoing a reconsecration by a priest. This halves the value of the Cure/Cursebreak to -32%. Combined with the Slow Change, that discounts the were-form by -42%.

@TEXT:Finally, apply the modifiers for an item-based shift. The jaguar skin has the

modifiers Awkward [-10%], Breakable and Irreparable (DR 1, HP 10) [-30%], Can Be Hit at -2 [-20%], and Can Be Stolen by Stealth or Trickery (Not usable by others, absorbed in change) [-2%], for a total modifier of -62%. (Jaguar skins are <I>not<I> Unique; if a Warrior's skin is destroyed, the wizard-priests can make a new one for him.) The jaguar skin is absorbed in the change, and is only useable by the warrior for whom it was made.

((START BOX))

@C-BOXHEAD:Sample Character: IxokMun 175 Points

@TEXT-BOX:Age 25; 7'4''; 320 lbs.; A hulking brute with shaggy brown hair and brown eyes.

@TEXT-CSTATS:ST 14 [45]; DX 10 [0]; IQ 9 [-10]; HT 12 [20].

@TEXT-CSTATS:Dodge 6; Parry 9; Block 7.

@TEXT-CSTATS:<I>Advantages:<\$> Combat Reflexes [15] (Fright Check: 11); Jaguar Warrior Training Package [38]; Patron: Villac Uma, Priest (9 or less) [15] (Equipment: Standard, +5); Reputation as a great warrior among the Jaguars +3 [5] (Reaction: +3; Recognized by: Small class, <f"symbol"><\#180><f\$>1/3); Were-form: Jaguar [76].

@TEXT-CSTATS:<I>Disadvantages:<\$> Appearance (Ugly) [-10] (Reaction: -2); Bully [-10]; Gigantism [-10]; Overconfidence [-10].

@TEXT-CSTATS:<I>Quirks:<\$> Collects the severed ears of his opponents; Irritated by references to a play with a character who shares his name; Lives for fighting and bloodshed; Prefers to be called "Bal<\#135>m" ("Jaguar"). [-4]

@TEXT-CSTATS:<I>Skills:<\$> Area Knowledge (Empire)-10 [2]; Axe/Mace-12 [4*] (Parry: 7); Brawling-13 [4*] (Parry: 9); Intimidation-10 [2]; Leadership-9 [0]; Running (Move: 7)-12 [*]; Shield-12 [*] (Block: 6); Spear-11 [*] (Parry: 6); Spear Thrower-11 [*]; Spear Throwing-12 [*]; Survival (Jungle)-11 [*]; Tactics-9 [*]. (*Included in Jaguar Warrior Training Package.)

@TEXT-CSTATS:<I>Languages:<\$> Nahuatl (native)-9 [0].

@TEXT-BOX:IxokMun is a giant of a man who has survived 8 years of near-constant battle as one of the Jaguar Warriors. A giant of a man who is always eager to plunge into the thickest part of the battle, he has gained a substantial reputation among his fellow Jaguars, and never seems to have a problem organizing a warband. Even so, he has few close associates among the Jaguar Warriors, as he takes a positive delight in intimidating and bullying them. With his size and strength, there is rarely anyone who can stand up to him.

@TEXT-BOX:The only thing he has that is close to a friend is Villac Uma, a powerful priest who took the boy IxokMun under his wing, and who watches over him even to this day. While Villac Uma is frequently traveling among the temples of the Empire, and thus hard to contact, he is always willing to give aid to his proteg<\#142>.

@TEXT-BOX:As a bully, he takes full advantage of his Gigantism to intimidate and overbear most of the other Jaguar Warriors with whom he associates. Surprisingly, this serves him in good stead when in battle, for his behavior is seen to be indicative of a great war leader, and many Warriors clamor to be part of any band he decides to organize. Furthermore, his great size in human form translates directly over to his feline shape when he takes it, producing a jaguar easily the size of a lion. In either form he will always stop to take an ear from an opponent he has killed; he has gathered quite a collection <\#208> not all of them enemy soldiers.

@TEXT-BOX:Off-duty, he takes full advantage of all the comforts and pleasures the Empire provides to the Jaguar Warriors. He rarely sees the same woman twice, though <\#208> usually at the request of the women, whom he bullies and abuses even worse than he does fellow warriors.

@TEXT-BOX:IxokMun shares his name with a lesser character in a play that has long been popular in the Empire, although he is unaware of this fact <\#208> theatrical presentations more sophisticated than crude physical comedy and suggestive dancing bore him. Attempts to make references and jokes to the play pass completely over his head; with the frequency with which it occurs, such jesting now angers him almost to violence, especially since he doesn't "get" the jokes. It has gotten to the point where he now wants people to refer to him simply as "Bal<\#135>m" ("Jaguar") instead of his real name.

((END BOX))

@B-HEAD:Kitsune

@TEXT:<I>Kitsune is an animal supposed to be mysterious, fascinating, and mischievous. And he is believed to be very grateful for the kindness done to him, as seen in many tales, and is also affectionate as revealed in some dramas.<!s>.<!s>.<!s>. He is endowed with the subtle art of metamorphosis, and he is able to bewitch men in the guise of a charming girl. An exceedingly interesting and entertaining beast Kitsune is.<I>

@TEXT:<I><\#208> from Kitsune: Japan's Fox of Mystery, Romance, and Humour, by Kiyoshi Nozaki<I>

@TEXT:The definitive hengeyokai, the <I>kitsune<I> (or fox-spirit) is a common figure in Japanese myth and folk tales. It is a shapeshifter with three forms: fox, hybrid fox-human, and human, although in the latter form there is always a detail that reveals its true nature. Mercurial and passionate, kitsune can range from mischievous practical jokers to incandescent beings of godlike power. Most are neutral, if not actually friendly, toward mankind, but there are some which are darker and far more fearsome.

@C-HEAD:Kitsune 262 points

@TEXT-CSTATS:<I>Attributes:<\$> ST -7 [-60]; DX +4 [45]; IQ +2 [20]; HT +2 [20]; Extra Fatigue (Spellcasting only) +9 [18]; Reduced HP -6 [-30].

@TEXT-CSTATS:<I>Advantages:<\$> Acute Hearing +2 [4]; Acute Taste and Smell +2 [4]; Appearance (Attractive) [5]; Combat Reflexes [15]; Decreased Life Support [10]; Discriminatory Smell (Sense emotional state. +50%) [23]; Early Maturation <f"symbol"><\#180><f\$>1 [5]; Enhanced Move <f"symbol"><\#180><f\$>1/2 [5]; Four Legs [5]; Fur [4]; Magery 1 [15]; Mana Enhancer [25]; Sharp Teeth [5]; Status 1 [5]; Ultrahearing [5]; Unaging [15]; Were-form: Fox-headed Humanoid Female (Absorptive Change to base form, Light Encumbrance +10%) [92]; Were-form: Human Female (Absorptive Change to base form, Light Encumbrance +10%) [120]

@TEXT-CSTATS:<I>Disadvantages:<\$> Bad Temper [-10]; Code of Honor (Always return a favor or a good deed, punish those who deserve it, always keep one's word and promises) [-10]; Horizontal [-10]; Lecherousness [-15]; Mute [-25]; Odious Racial Habit: Prankster [-10]; No Fine Manipulators [-30]; Short Arms [-10]; Sleepy (50%) [-10].

@TEXT:<BI>Racial Quirks:<\$> Amoral [-1].

@TEXT:<I>Skills:<\$> Running at DX [4]; Savoir-Faire (Kitsune society) at IQ+2 [default from Status]; Savoir-Faire (Mortal society) at IQ [default from Status]; Stealth at DX [2].

@TEXT:<BI>Innate Spells:<\$>Sound [2]; Simple Illusion [2]; Know Illusion [2]; Illusion Disguise [2]; Illusion Shell [2]; Complex Illusion [2].

@D-HEAD:Kitsune Humanoid Form (female) 83 points

@TEXT:(PPT: +165, NPT: -54)

@TEXT-CSTATS:<I>Attributes:<\$> Change ST to 10 [60] and Extra Fatigue to +2 [-14]; remove Reduced Hit Points [+30].

@TEXT-CSTATS:<I>Advantages:<\$> Remove Combat Reflexes [-15]; Decreased Life Support [-10]; Four Legs [-5].

@TEXT-CSTATS:<I>Disadvantages:<\$> Add Unnatural Features (fox's head, fox tail) [-10]. Remove Horizontal [+10]; Mute [+25]; No Fine Manipulators [+30]; Short Arms [+10].

@D-HEAD:Kitsune Human Form (female) 109 points

@TEXT-CSTATS:(PPT: +175, NPT: -83)

@TEXT-CSTATS:<I>Attributes:<\$> Change ST to 10 [60] and Extra Fatigue to +2 [-14]; remove Reduced Hit Points [+30].

@TEXT-CSTATS:<I>Advantages:<\$> Add Appearance (Beautiful) [+10]. Remove Combat Reflexes [-15]; Decreased Life Support [-10]; Discriminatory Smell [-15]; Four Legs [-5]; Fur [-4]; Sharp Teeth [-5]; Ultrahearing [-5].

@TEXT-CSTATS:<I>Disadvantages:<\$> Add Unnatural Feature (fox tail) [-10]. Remove Horizontal [+10]; Mute [+25]; No Fine Manipulators [+30]; Short Arms [+10].

@TEXT:This racial package defines the avatar of a one-tailed kitsune. More powerful kitsune are built by first adding additional tails (and the corresponding age), then by increasing Status, Magery, skills and spell selection. Appearance will also improve, and various protective and defensive advantages will be acquired. Ultimately, their magical abilities will expand to include almost everything involving illusion and creation, fire and light.

@TEXT:The prices for the above forms assume a character with average attributes for a kitsune. Different base form attributes <\#208> or customized attributes in either or both bipedal forms <\#208> can change the racial package cost.

@TEXT:Note that the Unnatural Feature possessed by the human form always indicates the kitsune's true nature. Traditionally this feature will be a fox-like tail as noted in the package, but others are possible, including pointed ears, eyes that are too much like those of a fox in color or reflectivity, unusual hair coloration (red with a white stripe), and so on. This feature should be selected at the time of character creation and will not change.

@C-HEAD:General description

@TEXT:Sometimes called the "goblin fox" and the fox-spirit, as well as "Hu-Ching" in China, the kitsune (the word is both singular and plural) is probably the best-known creature of Japanese myth in the Western world. The name itself is built from two Japanese words: "kitsu", meaning either a fox or the yelps of a fox, and "ne", an affectionate feeling. Like the euphemistic "Good Folk" for the European faerie, this naming may well be a ploy to maintain the good graces of these powerful but amoral supernatural beings; Japanese mythology looks upon them with a confusing mixture of mild fear and outright affection.

@TEXT:Odd dichotomies and paradoxes abound when kitsune are concerned. Firstly, a kitsune is a fox <\#208> a <I>natural<I> fox. In fact, <I>all<I> foxes are actually kitsune. However, even though a kitsune is a "natural" fox, it is also a spirit, with a non-corporeal aspect. While their spirit-nature is the source of their power, their natural state is fully physical. They are as much creatures of the corporeal world as humans. Even so, the kitsune is a being that in the original myths can range from a low-powered trickster to a being of nearly godlike puissance, depending on its age and nature.

@TEXT:The vast majority of kitsune are female or prefer female shapes; the default alternate forms above reflect this. There are male kitsune (or at least kitsune who take male forms), but even they are effeminate. The templates above are valid for either gender and need not be changed.

@TEXT:Native-form kitsune are identical to ordinary foxes in appearance and size. Determine height and weight as normal for their human and humanoid forms.

((START BOX))

@C-BOXHEAD:Kitsune Magic

@TEXT-BOX:As embodied spirits, Kitsune are quite naturally creatures of magic. Because of this, they can buy additional levels of both Magery and Mana Enhancer (p. CI40) as they grow older.

@TEXT-BOX:Furthermore, by dint of both basic nature and scholarship, they are all illusionists. Kitsune start with a basic grounding in the Illusion and Creation college, and most expand on that as they grow older; it is a rare kitsune who does not have full mastery of the college by their 200th year. Few bother to learn much magic beyond that, but it is possible (and indeed likely in the case of the eldest and most-tailed) for a kitsune to be a gifted and versatile mage.

@TEXT-BOX:Their skill with illusions is legendary. According to some of the legends about them, even the most basic of kitsune illusions are not <I>just<I> illusions <\#208> they are in fact actually <I>real<I> for their duration, being more transformations than seemings.

@TEXT-BOX:Above and beyond illusions, kitsune are known to favor the Fire College and the Light and Darkness College.

@D-BOXHEAD:Resisting Magic

@TEXT-BOX:As if this weren't enough, kitsune are said to be resistant to magic used on <I>them<I> by others, as well. This simply may be the result of high attributes (and corresponding resistance rolls), but the GM may want to consider allowing kitsune to purchase Magic Resistance despite also possessing Magery. In such a case, the Magic Resistance doesn't affect their spellcasting, and will not function against spells cast with the kitsune's True Name (see box, p. 00).

((END BOX))

@C-HEAD:Psychology

@TEXT:Perhaps the most definitive characteristic of the kitsune psychology is the overall feminine nature of the race. Even though the genders are equally represented in their

population, most male kitsune are noticeably effeminate when compared to male humans, and prefer to take female shapes and roles when interacting with mortals. Even those males who prefer to assume male forms are still <I>bishonen<I> <\#208> vaguely feminine in both appearance and behavior.

@TEXT:Like many other supernatural creatures, kitsune are first and foremost tricksters and pranksters. While it is a major component of their psychology, they are not necessarily compulsive about it; myth and legend describe no small number of kitsune who were tirelessly devoted to causes or friends, or who were willing to labor long, prankless hours for the good of their neighbors or villages. However, the majority of kitsune have nothing resembling human morals, and entertain themselves with practical jokes and elaborate deceptions upon unwary mortals.

((START BOX))

@C-BOXHEAD:Kitsune Names

@TEXT-BOX:While in Western mythology most non-human creatures drift namelessly through their appearances, individual kitsune are usually referred to by name in the tales where they appear. Not surprisingly, a kitsune's name is evocative of both its personality and the role it has chosen to play. It is also the legacy that they leave to posterity, whether that posterity is mortals or other kitsune. Often slyly descriptive of the kitsune's preferred form or favorite prank, or indicative of its usual role in the community in which it lives, these names are not unlike those that humans would take.

@TEXT-BOX:GMs looking to name kitsune characters should remember that in Japanese (unlike English) names have meanings, usually descriptive and often poetic, which are obvious to those who speak the language. GMs seeking proper verisimilitude may want to consult an online or paper Japanese-English dictionary in order to find or construct appropriate names.

@D-BOXHEAD:True Names

@TEXT-BOX:However, the name a kitsune gives to mortals is simply a use-name. Like so many other supernatural creatures, they have secret true names which, if discovered, can be used to bind, banish or manipulate them. While it's possible to magically coerce a kitsune without its true name, it is difficult and potentially deadly <\#208> the stronger the kitsune, the more dangerous it is to make the attempt without the name handy.

@TEXT-BOX:Kitsune resist normally any spells cast upon them without the use of their true names. If a spell is cast using her true name, a kitsune has a penalty of -(10-number of tails) to any resistance rolls. If she successfully resists, or the spell fails to incapacitate her, the kitsune will be hostile to the caster and his companions (if she wasn't already) and will immediately counterattack to the best of her ability.

((END BOX))

@D-HEAD:Testing and Tempting

@TEXT:This is not just random behavior, though. Like many other beings in myths around the globe, the kitsune can be said to test mortals, and mete out rewards or punishments accordingly. The "help" they provide to an immoral or unethical person is usually to urge them along a path of self-destruction; there is no element of compulsion in these urgings, and if their target resists, there may be hope for him yet. Lesser flaws are aggravated and enhanced, until they become visible to the target's friends and neighbors, at which point mortal mechanisms take over. In some cases, the kitsune will take a direct hand in punishing an individual, as in those tales where the kitsune "steals" the woman of an ignoble samurai.

@TEXT:To those they judge to be good or moral, kitsune are far better. They offer friendship and aid to good persons, helping them through adversity and difficulty. But since no mortal is perfect, a kitsune will seek to improve her friend by various means, usually by offering a lesson in humility by way of pranks or revealing a hidden flaw in the person.

@TEXT:In all these tests, the kitsune judges by <I>her<I> ethics, not the human's. Although the kitsune ethical system is amoral and borderline alien to humans, it is not incompatible with most Eastern religions, and the results are generally not discordant. Still, where the views of kitsune and human diverge, there may well be a failure by each

side to comprehend what the other thinks it's doing.

@D-HEAD:A Semi-Divine Viewpoint

@TEXT:Not surprisingly, kitsune are considered lesser <I>kami<I> <\#208> divine spirits similar to the Western concept of the <I>genius loci<I>. Being such, they are expected to serve and help the people near whom they live, in exchange for prayers and gifts. In such cases they reserve their worst pranks and tricks for oathbreakers, the impious, and unwary invaders of their domains. Also, as kami, they are bound by their nature and cannot cause serious or permanent harm to any human, as long as that human follows tradition and properly propitiates them.

@TEXT:Honor is one of the strongest bonds restricting the kitsune. In particular, promises have a special hold on them. If they make a promise or give their word on any matter, they <I>must<I> follow through, overturning heaven and earth in order to adhere not just to the word but to the spirit of the agreement. Furthermore, they expect the same behavior from those with whom they deal. A kitsune who breaks her word or fails to keep a promise, no matter how trivial, becomes virtually suicidal; and someone who breaks a promise made to a kitsune gains an implacable enemy.

@TEXT:Emotional Rollercoasters

@TEXT:These excessive responses are not unusual; kitsune are vulnerable to other extremes of emotion, as well. They are notorious for their bad temper, flashing into anger at the slightest provocation. They hold grudges against those whom they consider enemies, nursing them over years and often planning (and executing) extreme acts of revenge in retaliation for whatever slight first caused the bad blood. Along similar lines, regret or despair can kill a kitsune who gives herself over to it.

@TEXT:On the other hand, amoral as they are, kitsune are good and loyal friends to those who have earned their trust. They will go through all manner of difficulties to aid someone whom they have befriended without thought of recompense. Be aware, though, that it is a difficult task to gain the friendship of a kitsune.

@TEXT:Kitsune are very proud in one regard; they will rarely ask for help, no matter how much they need it. Beyond that, they will not accept help from someone compelled or persuaded against their will to offer it. The offer must be sincere and truly what the one offering wishes to do, of their free will.

@C-HEAD:Ecology

((START BOX))

@C-BOXHEAD:Fox-Spirit Possession

@TEXT-BOX:Potential kitsune who do not have a corporeal body are known as "fox-spirits", and are almost as plentiful as the physical kitsune themselves. Fox-spirits can remain purely ethereal beings for as long as they like, and they have options other than incarnating into a fox body and becoming a kitsune. Some have been known to possess humans instead.

@TEXT-BOX:These spirits tend to be more malevolent than the kitsune, carelessly driving their mortal hosts mad with their alien outlooks and priorities. Fox-spirit possession is not always a state of complete control <\#208> the spirit may simply lurk in the back of the victim's mind as it slowly comes apart, instead of seizing complete control of the body. In either case, though, a proper exorcism will drive the spirit out.

@TEXT-BOX:If the process of incarnating into a fox, gaining physical and magical power, and dying is indeed a vital subset of some unknown spiritual life-cycle, then the fox-spirits may well represent an immature, larval form of the kitsune.

((END BOX))

@TEXT:Kitsune are unusual (at least when compared to Western shifters) in that they have a proper niche in both the spiritual and the corporeal ecosystems. As foxes, they take the role of small predators. As spirits, they are charged with testing and rewarding (or punishing) mortals (see p. 00)

@TEXT:Kitsune usually live anywhere from 900 to 1,000 years. This is purchased as the Unaging advantage (p. CI69), but kitsune do age and develop throughout their lifespans, and lack the ability to select their apparent age (other than through their illusions). They mature at an early age compared to humans, but do not begin making aging rolls until they are 750 years old. However, kitsune do not cease to exist when their physical forms

die; evidence suggests that incarnation into a fox-body is a necessary part of a larger lifecycle which continues when the deceased kitsune-spirit advances into the celestial realms.

@TEXT:Kitsune start their lives with one tail. Every hundred years of life, they usually gain an additional tail <\#208> and with it status and other benefits as noted on p. 00.

((START BOX))

@C-BOXHEAD:Earning and Granting Tails

@TEXT-BOX:It is possible for a kitsune to gain a new tail as a reward or gift from another, more exalted kitsune. In such a case the newly-entailed kitsune must dedicate his subsequently-earned character points toward improving his various traits to match his new position in kitsune society.

@TEXT-BOX:The exact mechanism of granting a new tail is left up to the GM, but if a kitsune PC wants to reward a kitsune NPC in this manner, there's no reason not to let it happen simply by fiat. Of course, a kitsune cannot give <I>itself<I> a new tail. Additionally, an especially strict GM may require that the gift come from among the giver's own tails <\#208> and may bring along with it any number of traits (and, of course, their character points).

((END BOX))

@C-HEAD:Culture

@TEXT:Kitsune possess a heavily-organized, stratified culture which is mostly invisible to human eyes. Since most humans deal with one kitsune, or at most a small family, at any given time, this is not too surprising.

@TEXT:There are nine levels of political and supernatural power within the kitsune social structure, based upon the age of the kitsune. These levels are equivalent to Status, with even the lowest kitsune possessing Status 1. (This is within kitsune society; knowledgeable humans of any Status will act respectfully to <I>any<I> kitsune they meet.) Furthermore, a kitsune's status is immediately visible to all who see him <\#208> he possesses a number of tails equal to his Status. The very oldest kitsune are 1,000 years old and are called <I>Tenko<I>; they have 9 tails, but their fur has a golden rather than reddish hue. They are also devastatingly powerful <\#208> easily the equal of a demigod or godling.

@TEXT:Also, as kitsune gain in power and age, they also tend to polarize morally. Their outlook remains technically amoral, but their tendencies when making ethical choices diverge strongly. Nominally "good" kitsune retain their racial name and serve as messengers from Inari, the Japanese fox deity. "Evil" kitsune become <I>nogitsune,<I> their prankish nature expanded into cruelty and torment. Select appropriate advantages and disadvantages to reflect this differentiation.

@C-HEAD:Politics

@TEXT:Kitsune do not involve themselves with human governments or organizations larger than a family or clan. They prefer to interact with individual humans, and rarely (if ever) categorize larger groups in any meaningful way. In this regard, they are effectively apolitical.

@TEXT:On the spiritual plane, things may well be different, but not much information is available. Kitsune are godlike spirits and garner a great deal of power and respect from both mortal and immortal alike, but beyond that, how they interact and deal with other <I>kami<I> is virtually unknown.

((START BOX))

@C-BOXHEAD:Kitsune Characters

@TEXT-BOX:Unless the campaign is one of supernatural creatures and mythic heroes, a kitsune PC, even one of the weakest variety, is probably out of the question. A one-tailed kitsune will be built on no less than 250 points, and most will probably be in the 400 to 500 point range, with the majority of those points being invested in magical abilities and other advantages. Nine-tailed kitsune are all but gods, and may as well be, for all their playability. A good rule of thumb for the GM who absolutely <I>must<I> point-budget the more powerful kitsune would be to give them 200 points plus 250 points

per tail. (To fully quantify the near-godlike abilities of the oldest kitsune, the GM may wish to consult <BI>GURPS Mage: The Ascension</I> or Wizards of the Coast's <I>The Primal Order</I>.)

@TEXT-BOX: Assuming a kitsune PC is possible, their role in the party is quite simple: trickster mage. The more tails the kitsune has, the more certain it is that their racial Odious Racial Habit will be supplemented by the Trickster disadvantage (p. CI94); a clever party will make that work for them. Beyond that stereotype, kitsune are excellent spies and infiltrators, although they must often stifle their racial compulsions and habits in order to succeed. They also make good <I>femmes fatales</I>, especially if their Unnatural Feature is relatively minor or inconspicuous <\#208> or can be cloaked effectively with an illusion.

((END BOX))

@C-HEAD: Kitsune in the Campaign

@TEXT: Kitsune are designed for use in a <BI>GURPS Japan</I> campaign, particularly one with a strong "mythic" flavor. They can also be employed in other medieval fantasy games, either as-is or suitably changed to fit the preferred campaign flavor. Kitsune could only be PCs in a heroic-level campaign, and even then might overpower it, but they can easily serve as Patrons, Enemies and/or Allies at almost any power level.

@TEXT: Don't rule out a non-medieval setting, though <\#208> a kitsune on the loose in <I>modern</I> Japan (or better, modern Europe or America) would make an excellent hook for either a single game or a whole campaign, as long as the players are capable of dealing with her. Depending on the tone the GM sets for the campaign, maybe even if they aren't <\#208> kitsune can be played for humor value as easily as for darker purposes.

((START BOX))

@C-BOXHEAD: Variations

@TEXT-BOX: The kitsune package can be used almost as-is for the other definitive hengeyokai, the tanuki. A raccoon-like creature in its animal form, the tanuki is not the trickster the kitsune is, but otherwise is much the same, at least on the game mechanics level.

((END BOX))

@D-HEAD: Other Settings

@TEXT: Kitsune can be easily transplanted into a number of other settings.

@TEXT: <I>Urban Fantasy/Weird Modern/Technomancer</I>: <I>Kitsune</I> can be dropped into a modern setting with no changes whatsoever, and should be able to function just fine. Ancient ones unfamiliar with modern ways might need the Primitive disadvantage, but younger ones are almost certain to be fully versed in the ways of the 21st Century. <BI>Technomancer</I> kitsune are probably a variety of Seelie, although some witnesses say they claim otherwise. Either way, they continue as they always have <\#208> teasing and tempting their human neighbors.

@TEXT: <I>Yrth</I>: <I>The Banestorm</I> scooped up some kitsune along with everything else it dropped in Sahud. They are now a fact of life in that strange land despite their rarity, and are placated eagerly. However, the Sahudese being who they are, they have bolstered the original simple respects with a baroque encrustation of irrelevant and incomprehensible rituals and ceremonies <\#208> and only the kitsune know for sure any more exactly what is really necessary and what is not. And when kitsune start showing up in Megalos.<!s>.<!s>.

@TEXT: <I>Black Ops</I>: <I>The Company</I> has records of kitsune encounters going back almost fifty years, and after several disastrous confrontations in the 1960s, the official policy became "hands off". In recent years, several ops teams have found unexpected allies in kitsune (particularly near Chinatowns and Little Tokyos). And in an incident so highly classified that some senior commanders don't know about it, a seven-tailed kitsune once appeared before Argus, where she requested (and received) an ops team to help her deal with a nogitsune that had allied itself with the Greys.

@TEXT: <I>Illuminati University</I>: <I>The Metaphysics Department</I> suspects that several kitsune live on the campus grounds, given the "punishments" that have been inflicted on

some of the frat boys in recent months. But it's hard to tell the difference between them and the import dates from other colleges. <I>Something's<I> been eating the CIAgulls, though, and there's a big chunk of woods that even the Archdean's cats won't enter.<!s>.<!s>.

@TEXT-BOX:(The attributes, height and weight given above are for Mitzuki's human female

form, in which she spends most of her time. They also apply to her fox-woman form, which she has rarely used since moving to L.A. Her fox form is ST 3/11 DX 14 IQ 15 HT 12/6, about two feet long plus tail and 20 pounds in weight.)

@TEXT-BOX:Mitzuki Gizensha is a two-tailed Kitsune based in Los Angeles' Little Tokyo district, sometime in the late 1990s. Her human form is a familiar sight to her neighbors, with her fox-pelt hair, her revealing outfits, her late hours and her ready smile. Most of the older residents know or suspect she's a kitsune, and some of the younger ones can tell there's something special about her. Everyone likes her and seems to know her by name, and she returns the favor as she wends her way through the neighborhood with a ready smile and wave for all. Imagine a Japanese version of Marlo Thomas as "That Girl", only with a punk hair-do. Her family name means "a fox in a lamb's skin", which describes her perfectly.

@TEXT-BOX:Most of her neighbors <\#208> especially those who know kitsune and their ways <\#208> think she's a high-priced call girl, or maybe a nightclub entertainer. They're wrong. She's not only the resident kitsune, but the neighborhood's biggest landlord and its general protector. She actually owns many of the residential and commercial properties in the district and keeps the rents affordable as part of her duty to help the people there. She uses a variety of illusions and front companies to appear to be several different landlords, both men and female.

@TEXT-BOX:To the best of her knowledge, she is the only kitsune in all of Southern California. She originally came to Los Angeles in the 1930s to escape the growing militarization of her homeland. Once settled in, she established her "territory" then began protecting (and punishing) its inhabitants. She escaped the WWII internment of Japanese-Americans by masquerading as an Anglo woman, but then relocated to a small town near the camp in Owens Valley, California so as to help her people during their imprisonment. When they were finally released, she saw to it that they got their homes and businesses back.

@TEXT-BOX:In the years since, she has built a good-sized financial empire while treating the people in Little Tokyo with respect and dignity. Having few physical needs above the minimum required to maintain her masquerade, she reinvests most of her profits back into the properties she owns, continuously improving them while still keeping the rents affordable. She also endows a number of scholarships for Japanese-American students.

@TEXT-BOX:On occasion she also takes the time to make Yakuza and other organized crime operations in Little Tokyo unprofitable. Not because it's against the law, but because her people would ultimately suffer while the criminals got rich. She considers herself their enemy for that reason, although she will not usually pursue criminals beyond Little Tokyo.

@TEXT-BOX:Occasionally she disguises her fox form with the illusion of a stray dog and checks up on "her people" incognito. When she needs to shed her human guise and relax, Mitzuki spends her time roaming the Hollywood Hills as a fox. When for some reason the Hills are a bad idea, she amuses herself by hanging out in the fox displays at the L.A. Zoo. And when she needs to let off a little steam with some pranks and tricks, she goes clubbing in Hollywood and targets the hypocrites and unethical among the crowds.

@TEXT-BOX:Her human form's Unnatural Feature is fox-colored hair <\#208> brick red with a black streak and white tips. She used to keep it hidden with an illusion, but not any more; in 1990s L.A., no one thinks it is at all unusual.

@TEXT-BOX:Mitzuki Gizensha is a 700-point character suitable for use as a patron or a <I>very</I> dangerous enemy in a campaign set in the late 20th Century. She also makes for a very interesting surprise in a <BI>GURPS Werewolf: The Apocalypse<\$> game. With some minor changes, she could be found in many near-future or recent-past settings <\#208> anything from <BI>GURPS WWII<\$> to <BI>GURPS Terradyne<\$>. If the campaign is a generally non-magical setting (as is the case here), her patronage is worth an extra 5 points.

(((END BOX)))

@B-HEAD:Medieval European Werewolf

@TEXT:(FIND GOOD QUOTE)

@TEXT:There were almost as many kinds of werewolf as there were people talking about them during the Middle Ages, and the Inquisition gleefully hunted all of them. One of the most insidious, at least as far as the Inquisition was concerned, was the shifter who appeared

to sleep peacefully while his soul left his body and wreaked havoc on the countryside in wolf form. Invulnerable to all harm save by silver and blessed weapons, this hell-born monster indulged its sadistic desires upon his neighbors every night.

((START BOX))

@C-BOXHEAD:Werewolves and the Inquisition

@TEXT-BOX:From the Middle Ages all the way into the beginnings the Enlightenment, the Catholic Church <\#208> and by extension the Inquisition <\#208> were as obsessed with the subject of werewolves as they were with witches. In fact, as far as Catholic doctrine was concerned, the two were virtually interchangeable; being able to change into an animal was a standard ability of the witch. It should come as no surprise, then, that the Inquisition's standards of proof for lycanthropy were just as lax as those for witchcraft.

@TEXT-BOX:The type of werewolf described here was perhaps the most convenient variety found in the Inquisition's lexicon of shapeshifters, especially when it came to heretics, dissenters and other inconvenient persons. All that was required was a few nocturnal animal attacks and an accusation <\#208> and officially-sanctioned torture would produce the confession that proved the case.

@TEXT-BOX:As distasteful as such proceedings were to modern sensibilities, and as ignorant as the dogma involved appears to modern eyes, the main text assumes the literal truth of the matter. This is an expressly <I>evil<I> were, and unlike such beasts as the Cinematic "Monster" Werewolf (see pp. 00-00), it is directly powered by whatever embodied force of supernatural Evil is present in the campaign.

((END BOX))

@C-HEAD:Building the Sleeping Werewolf

@TEXT:Start with the Wolf template (PPT: 235, NPT: -272, p. 00). Like all classic Western European werewolves, the wolf form is <\#208> more or less <\#208> a normal wolf, save for its intelligence, its invulnerability to normal weapons, and its implacable desire to inflict death and destruction upon its neighbors. In keeping with the usual traditions, it will also be able to harm anyone protected by their faith in the Church, and can be cured by an exorcism <\#208> if the were cooperates..

((START BOX))

@C-BOXHEAD:Other Templates

@TEXT-BOX:While wolves were the most common shifter type in European folklore, especially in regards to Church dogma, they were far from the only one. The construction guidelines in the main text can be applied to a number of different of other animal templates to produce "historically" accurate were-creatures. Cats (p. BE108) were the second-most-likely choice for the Hell-aligned were's animal shape, but dogs (also p. BE108) and virtually any other predator species might also serve.

((END BOX))

@TEXT:Raise the wolf form's IQ until it matches that of the base form, and add adjustments for other attributes as necessary. Buy back Bestial, Innumerate, Presentient and Short Lifespan. Add Vampiric Invulnerability [150] (p. CI70) to its advantages. To its disadvantages, add one level each of Vulnerability to Silver [-10] and "holy/blessed" objects [-15]. Also add "Dread: Persons with True Faith" [-10].

@TEXT:Furthermore, in keeping with the usual behavior of Western European werewolves, add Odious Personal Habit: Eats Humans [-15], along with any other traits desired to round out the were-form.

@TEXT:Finally, calculate the point value for the wereform per the rules on p. 00. Then apply the following limitations: Projected Were-form limitation (p. 00) at the -50% level, and the Cure/Cursebreak limitation (p. 00) <\#208> the cure is exorcism (a simple process in medieval Europe) and the were must cooperate, for a final limitation value of -40%. Since the total limitation value is over the usual maximum, the latter is used for a -75% final discount on the were-form.

@D-HEAD:Other Traits

@TEXT:The classic medieval werewolf, at least as painted by the Roman Catholic Church, was always a person who had willingly given himself over to the forces of Hell. Assuming this to be accurate, such an individual is likely to have any number of "evil" disadvantages, Sadism and Megalomania among them. At the very least Callous and/or Solipsist are appropriate, although a simple desire to harm a perceived enemy or set of enemies (as expressed in a Vow, Obsession or even a Higher Purpose) is acceptable. (This latter opens up the possibility of someone who has bargained with Hell for lycanthropic powers in order to ultimately do Good <\#208> or at least what he perceives to be Good.) He will <I>not<I> have a Split Personality, however; he <I>is<I> the wolf, and the wolf is <I>him,<I> and he delights in all the evil done in and by that shape.

@TEXT:On the other hand, he cannot be so evil and twisted that he cannot function in society. Such werewolves can be considered as "sleeper agents" (no pun intended) buried in the fabric of medieval society. Intended for long-term operations, they must be able to successfully masquerade as innocent bystanders or even victims; the ability to be in two places at the same time certainly helps here. Acting skill is paramount, as well as Fast-Talk and Diplomacy.

@TEXT:This variety of werewolf will almost always have a Patron <\#208> a demon or some other such being <\#208> who is the were's contact with Hell and, effectively, his commanding officer. Similarly, he will have either an Enemy or a Secret, depending on whether or not the locals have figured out that they are the prey of a werewolf. The Enemy will be the Church and/or the Inquisition <\#208> a large, overwhelmingly powerful organization with vast resources; its level of appearance will depend on how flamboyant or careless the werewolf has been. Secrets will almost always be of the "Possible Death" variety <\#208> the Church was <I>not<I> forgiving of werewolves <\#208> and will turn into an Enemy as above, plus bad Reputations and more as needed.

@TEXT:Obviously, such a character will not have Empathy or any other advantage or disadvantage that requires him to in any way feel for his victims.

@TEXT:Finally, in addition to his various mental and social problems, the base form will usually have Reciprocal Rest (p. CI43).

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:The "sleeping werewolf" was just the most convenient version of the beast, as far as the Inquisition was concerned, but as is described elsewhere, there were other varieties. Here are two of the most common. Like the werewolf in the main text, both are built on the standard wolf template, to which has been added Vampiric Invulnerability (p. CI70), the Vulnerabilities to Silver and "holy/blessed" objects, and an IQ boost to bring it back to the base form's level.

@D-BOXHEAD:Alchemical

@TEXT-BOX:This werewolf may have an inherent ability to change, but it requires a trigger <\#208> smearing upon his body a foul ointment composed of a number of unpleasant ingredients, some of which are guaranteed to earn the user a death sentence or worse, excommunication. Once changed, the user cannot remain in wolf form beyond the next sunrise or sunset, although he can change back to human at any time he cares to before then.

@TEXT-BOX:<I>Creating the "alchemical" werewolf.<I> To the basic package described above, add an External Trigger: the ointment (rare, exclusive, from human to wolf only) -15%, and Maximum Duration (Sun to sun) -7%.

@TEXT:Alchemical weres may have an Addiction to the ointment, if only because of the effects of the psychoactive plants usually cited in authentic medieval recipes.

@D-BOXHEAD:Skinchanger

@TEXT-BOX:This version covers a wide selection of werewolves, all of whom must don some item of clothing made from wolf skin in order to change. This can range from a pair of gloves, to a broad belt to an entire skin worn as a cloak. (See p. 00 for some other examples.) Upon donning the item, he changes; he can change back at any time.

@TEXT-BOX:<I>Creating the skinchanger.<I> Turn the basic werewolf package above with an item-based change (see box, p. 00) with the following modifiers: Can be stolen with stealth or trickery, only usable by owner, -5%; Unique -25%. Breakable and Can Be Hit are appropriate, but the values will vary depending on what form the item takes. Finally, if

the item is large enough, add Awkward (-10%).

((END BOX))

@C-HEAD: Motivations and Psychology

@TEXT: As an active agent of Evil, the werewolf is usually charged with sowing fear among the people of a village or town. This it does by random property destruction and the slaughter of the occasional unwary person. The overall goal is not simple terror, although that is an important side-effect. It is, rather, the sowing of anger and despair, both of which serve Hell's purposes admirably.

@TEXT: Then, too, the werewolf need not be serving Hell from any devotion or dedication to its agenda. He could as easily be an individual with a Murder Addiction (p. CI98) or pure simple Sadism, or possessing an unslakeable thirst for revenge upon his neighbors for some slight imagined or real. By agreeing to further the plans of Hell he receives a means towards his own personal goals <\#208> a good deal by any measure, if the recipient is of the right mind.

@C-HEAD: Settings

@TEXT: While this particular werewolf archetype is lifted directly from medieval Catholic dogma, and is designed for use in a campaign set in medieval Europe, there's no reason it can't be used in other milieux. It is most easily transplanted to into settings which bear a close resemblance to its origin, but nothing about it is fundamentally incompatible with anything but the most rationalist of worlds.

@TEXT: In particular, this werewolf type is appropriate not only to standard fantasy campaigns, but also non-cinematic modern horror, urban fantasy or <I>X-files<I> type games. While they are a trifle underpowered for <BI>Black Ops,<I> they could be counted among the "werewolves" that Company ops must occasionally face, and may make for interesting flunkies for demons. Cosmetic alterations (such as changing species from wolf to, say, dingo or hyena) would allow them to enter non-European milieux <\#@08> but don't forget to change the Power backing them accordingly.

@TEXT: Even in campaigns with no active supernatural presence it is possible to employ this variety of shifter. The projected were-form may be the result of weird science (or weird magic), possibly cloaked in the trappings of devil worship to confuse and deceive a gullible recipient. The Patron would not be the Devil (although the werewolf might think it was), but someone who has his own reasons for letting loose a raging, murderous beast upon the land.

@TEXT: <I>Yrth.<I> Arguably the closest setting to medieval Europe without actually being a part of it, Yrth is a natural home for these Hell-powered shifters <\#208> and includes their natural enemy in the form of the Yrth branch of the Catholic Church. The confusion between these werewolves and the more morally-neutral weres "native" to Yrth (see pp. 00-00) no doubt led to much of the bad press from which the latter suffer.<!s>.<!s>.

@TEXT-BOX:Once upon a time, in 12th-century France, there was a prosperous merchant with a large, loving family, who lived in a fine house just outside of the town of Mende. Abban Galdemar was his name, and the town council of Mende despised him because they envied his good fortune, and because he did not bribe them as much as they thought was their due. But because Galdemar technically lived outside the town, they could not exert any more pressure on him than they already did <\#208> not and lose his trade to another town. They would sooner see him dead.

@TEXT-BOX:Then one day, that became a real option. A large party of bandits came upon Mende. The town fathers, having no stomach for a fight, paid off the bandits from the treasury rather than have the understaffed town guard engage them. Laying an extra bag of coins in the bandit chieftain's hand, they pointed him in the direction of "rich pickings" <\#208> Galdemar's home.

@TEXT-BOX:The bandits besieged his fine house and took it over. They beat Galdemar mercilessly until he revealed the location of his money box. They raped his wife Marie. After they finished sacking the estate, the bandits put the beautiful building to the torch. Then they rode off with his sons Luc and Marc, the chieftain laughing a ransom demand over his shoulder.

@TEXT-BOX:The tragedy only compounded. Marie, in shame, hanged herself, and was refused last rites and Christian burial by the Church. Unable to pay his creditors, he was bankrupted, and was unable to pay the ransom on his sons; their bodies were dumped unceremoniously upon the ashes of his home. He was finally reduced to begging on the streets of Mende, where the elders who had once envied him now delighted in spitting on him as they passed.

@TEXT-BOX:When the beggar Galdemar overheard the elders laughing about how they had arranged his fall, his despair and anger and new-born hatred crystallized in his chest. He cursed the name of God for subjecting him to the conspiracy and ill-fortune that had taken away all that he had ever loved, and swore he would take his revenge not only on the bandits, but on the Church, and on the townsfolk who caused it all.

@TEXT-BOX:No sooner had he uttered this oath than a dark man in fine clothes of black silk offered him the power to get his revenge, and more. Galdemar agreed instantly.

@TEXT-BOX:Today, Abban Galdemar is once more a prosperous merchant, fortune having smiled upon him again. He lives in Mende now, where he has been taking an active role in the council ever since several of the elders were killed by a wild animal attack, one of many this bleak winter. He refuses to remarry, and dresses only in black, in memory of his wife. Yes, Abban Galdemar is a successful man.<!s>.<!s>.

@TEXT-BOX:<!s>.<!s>.and he is a werewolf. Since making his bargain with the Devil, Galdemar has hunted down and slaughtered the bandits who destroyed his life. He used their ill-gotten gains to rebuild his business and buy a home in Mende. In the months since, he has killed several of the elders, and has begun preying upon the children of the town even as he has taken up a role in its governance. He keeps up the appearance of a devout man in permanent mourning, and has gained much respect in Mende for the dignity and strength with which he survived his adversity. No one knows he is also the ravenous beast who has killed so many over the past two seasons.<!s>.<!s>.

@TEXT-BOX:Abban Galdemar is a 200-point character suitable for use as a "secret mastermind" type of opponent in a medieval setting, be it standard fantasy or ostensibly historical. He will usually ignore strangers to Mende unless they seem to be allying themselves with the remaining town elders, or if they are in the service of the Church. He is clever enough to simply lie low if Inquisitors or their agents appear in the town, but may be willing to attack secular werewolf hunters.

@TEXT-BOX:Galdemar's were form is a normal-sized wolf with ST 9, DX 14, IQ 13, HT 12. It takes no permanent damage from anything but silver and/or consecrated items. Galdemar has developed a liking for human flesh when in wolf-form, and never fails to indulge that liking when he kills; unfortunately, the wolf template's Gluttony has almost led to his discovery on several occasions. He is otherwise cautious, though; when he sends his soul roaming in wolf-form, he never manifests (or dismisses) it near his home.

((END BOX))

@B-HEAD:The Metamorphic Invader

@TEXT:<I>I know I'm human. And if you were all these things, then you'd just attack me right now, so some of you are still human. This thing doesn't want to show itself, it wants to hide inside an imitation. It'll fight if it has to, but it's vulnerable out in the open. If it takes us over, then it has no more enemies, nobody left to kill it. And then it's won.<I>

@TEXT:<I><\#208> MacReady (Kurt Russell), in The Thing (1982)<I>

@TEXT:No one knows where they come from. No one knows how many of them there are.

@TEXT:And no one knows how many of us are actually <I>them.<I>

@TEXTThe scientists have a name for them, twenty syllables in Latin and five more in Ancient Greek, that no one uses. Everyone else who knows about them simply calls them .<!s>.<!s>. the Invaders.

@C-HEAD:Metamorphic Invader 350 points

@TEXT-CSTATS:<I>Attributes:<\$> ST +10 (Natural ST -40%) [66]; HT +2; Extra Hit Points +2 [10].

@TEXT-CSTATS:<I>Advantages:<\$> Fangs [10] (Impaling damage; see p. B140); Hard to Kill <f"symbol"><\#180><f\$>5 [25] (Note: +5 to HT for Survival Rolls); Injury Tolerances (No Brain, No Impaling Bonus, No Neck, No Vitals) [35]; Stretching <f"symbol"><\#180><f\$>3 [60].

@TEXT-CSTATS:<I>Disadvantages:<\$> Appearance (Horrific) [-30] (Reaction: -6); Bad Sight (Nearsightedness) [-25]; Invertebrate [-20]; No Sense of Humor [-10]; Obsession: Hunt, kill, reproduce [-15]; Odious Racial Habit (Eats sentients) [-15] (Reaction: -3); Reduced Move <f"symbol"><\#180><f\$>2 [-10] (Speed (running): 3 1/2); Solipsist [-10]; Undiscriminating [-1]; Unusual Biochemistry [-5]; Vulnerability: Alcohol <f"symbol"><\#180><f\$>4 (Occasional) [-40].

@TEXT-CSTATS:<I>Racial Quirk:<I> Uncongenial. [-1]

@TEXT-CSTATS:<BI>Taboo Traits:<\$> Immune to the Riders [0] (see pp. A119-21).

@TEXT-CSTATS:<I>Powers:<I> Morph-19 (10) [306] (Max. Mass: +100%; Min. Mass: -90%; Genetic match: +100%; Improvised Forms: +75%; Horrifying Change <f"symbol"><\#180><f\$>5: -25%; Needs Sample: -50%; Copies Personality: +100%; Slow Change (1d+4 minutes): -10%; Doesn't Need Morph Memory: +100%).

@TEXT:Because the Invaders use the leveled super-power version of Morph found in <BI>GURPS Supers<\$> (p. SU63), they use their Morph skill level in place of Change Control for blending of forms or other shifting tasks.

@C-HEAD:General description

@TEXT:In their natural form <\#208> which has been seen from time to time by shaken witnesses <\#208> the Metamorphic Invaders have been likened to "latex sacks filled with gelatin". Roughly man-sized in height, they are horrific greenish-black ellipsoids whose upper ends are marked by two large eyes and an enormous fanged mouth. Most individuals who see this much rarely live to report it, as the Invaders use that maw to attack, and to swallow prey whole. They normally take a shape with legs in order to move quickly; when in natural form they must move either inchworm-style or by repeatedly stretching and contracting their bodies.

@TEXT:If the Invaders have a name for themselves <\#208> indeed, if they even have a native language <\#208> it is unknown.

@TEXT:Use one-half of a Metamorphic Invader's ST to determine its height, which is both the length of its body's long axis and the base height against which is different-sized morphs are measured. Weight is 75 pounds more than a human of equivalent "height".

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:As described, the Invader is a creature not unlike the Thing from the 1982 John Carpenter movie, with a liberal lacing of the Alien from the film of the same name. With alterations ranging from minor to major, though, it can take on a number of alternate roles.

@TEXT-BOX:<I>The Lernaen Metamorph.<I> Not only do the Invaders reproduce as described in the main text, cutting damage just turns them into smaller versions of themselves! To the

Metamorphic Invader template add Duplication (p. SU00), with the modifiers HT and ST are split (-00%), Duplication is Permanent (??%), and Only When Subjected To Cutting Damage (-00%). Whenever an Invader takes cutting damage, instead of suffering a wound the Invader becomes <I>two<I> Invaders <\#208> one with at many HT as the attack inflicted, the other with whatever HT remains. (Treat cutting damage equal to or greater than the Invader's HT as HT/2 <\#208> effectively dividing the creature into two equal halves.)

@TEXT-BOX:Recalculate ST for each new Invader based on the distribution of HT. For example, a ST 20, HT 10 Invader has been cut into a HT 4 and a HT 6 Invader. The former would have a ST of 4/10 <f"symbol"><\#180><f\$> 20, or 8; the other would have the balance, or 12.

@TEXT-BOX:This option is not recommended in the unlikely event of Metamorphic Invader PCs.

@TEXT-BOX:<I>Rakshasa.<I> A carnivorous, shape-shifting demon from the mythology of the Indian subcontinent, rakshasa resemble tiger-human hybrids when in what is believed to be their "natural" form. They are fiendishly intelligent, frightfully strong, and prone to all manner of vices, though they hide them well. They delight in obstructing the good works of others, and work to undermine individuals, communities, organizations and even entire governments with rumor, innuendo, direct corruption and outright murder. This latter they enjoy greatly, as they love the taste of human flesh. They are often very subtle, sowing distrust and fear and letting humanity's own worse nature do most of the work for them. They often spur groups of humans to slaughter each other, and then feast upon the bodies of the slain.

@TEXT-BOX:To turn the Invader template into a Rakshasa package, make the following changes:

@TEXT-BOX:Set IQ to +4, and add DX +3 [30] and HT +5 [60]. Remove Stretching and Injury Tolerances from Advantages, and add Talons [40].

@TEXT-BOX:Replace Disadvantages with Appearance (Monstrous) [-25] (Reaction: -5); Bad Temper [-10]; Bloodlust [-10]; Bully [-10]; Callous [-6]; Compulsive Lying [-15]; Greed [-15]; Inconvenient Size (Over 8 feet tall) [-10]; Lecherousness [-15] (Roll: Will: -5/Beautiful, -10/Very Beautiful); Odious Racial Habit (Eats sentients) [-15] (Reaction: -3); Sadism [-15]. The Rakshasa Compulsive Lying disadvantage represents their willingness to spread lies about other people, not about themselves

@TEXT-BOX:Remove the Copies Personality, Genetic Match, Needs Sample, and Slow Change modifiers from Morph, reducing its cost to 196 points.

@TEXT-BOX:To skills, add Acting-IQ [6], Fast-Talk-IQ [6], Intimidation-IQ [2], and Sex Appeal-HT [6].

@TEXT-BOX:Lastly, replace the racial quirk with "Prefers to appear as a very beautiful/very handsome human".

@TEXT-BOX:Final racial cost for Rakshasa is 345 points. In addition to this basic racial package, Rakshasa can also have Magery and a wide variety of spells, often specializing in the Illusion and Creation and the Mind Control colleges.

((END BOX))

@C-HEAD:Psychology

@TEXT:Move. Kill. Feed. Reproduce.

@TEXT:The Metamorphic Invaders are to their remote cousins the Xenomorphs as smilodons are to housecats. Where the Xenomorph makes himself one with the community, the Metamorphic Invader seeks to make the community one with himself.

@TEXT:Although they appear to be as intelligent as humans, it is believed that their minds work in a dramatically different way. Attempts to communicate with them have all failed, even when the Invader was in a form demonstrated to be capable of intelligible speech and social interaction; they either maintain their roles or ignore their interrogators. They will not "break character" unless they lose the shape, either due to environmental pressures or because of excessive damage.

@TEXT:It appears from their behavior that they are solipsists to the point of psychopathy <\#208> <I>no one<I> matters to an Invader other than himself; everyone and everything else, even other Invaders, exist solely as either tools or food, or both, in that order. Groups of Invaders <I>can<I> cooperate when working for a common goal, and can do so even for extended periods, but in the final analysis each one is using the others, and intends to consume them. Not surprisingly, they have no parenting instinct, nor any consistent

shared culture.

@TEXT:Even though they are such a cipher to investigators and researchers, some of their racial imperatives can be deduced from their behavior. First and foremost, they are predators <\#208> fearsome, cunning and most of all <I>intelligent<I> predators. They study their prey extensively. They will lay traps and plan ahead for contingencies, and know when to abandon a hopeless cause. They can be subtle and inhumanly patient. They know what technology is, and use it adeptly (as evidenced by their ability to pilot between systems), although what little of their own native technology has been found has proven to be impenetrable to researchers.

@TEXT:They are also <I>colonizers<I>. By virtue of their biology, they have a constantly expanding population. Wherever they have had the technology to do so, Invaders (individually or in groups) have continued on to adjacent stars to seek out more fertile hunting grounds. Where they have not, Invaders have contrived to catch rides with unwary visitors, usually by impersonating one or more of them.

@TEXT:Whether it is something they are consciously aware of or not, it is clear that their ultimate goal is the conversion of all the organic matter they can reach into Metamorphic Invaders, resulting in a universe of constant cannibalistic struggle that must inevitably taper off into a dwindling death at the hands of the laws of thermodynamics.

((START BOX))

@C-BOXHEAD:Metamorphic Invaders in the Campaign

@TEXT-BOX:Invaders are probably best used as a "monster" race, in the tradition of any number of horror films. Like the Riders, they can be subtle when infiltrating a population base; unlike the Riders, once they determine they have reached some critical threshold, they abandon subtlety and explode into an orgy of consumption and reproduction. Discovering a world just about to reach that threshold can make for a terrifying adventure for a <BI>Space<\$> campaign, although players would probably prefer a discovery somewhat earlier in the infiltration, so that they have a chance to stop it.

@TEXT-BOX:Invader PCs are a bad idea, unless the GM actually <I>wants<I> all the other PCs to eventually become Invaders and fight among themselves to the death.

((END BOX))

@C-HEAD:Ecology

@TEXT:Metamorphic Invaders are predators, capable of surviving on the flesh of nearly any carbon-based creature. They are cautious and cunning, preferring to hunt more like a trap-door spider than a lion. They live about the same span as humans, but because of their reproductive cycle, they spend almost all of it as active adults. Essentially a macro-scale version of cellular division, the process self-triggers every six to eight weeks, and rarely takes more than 24 hours. An Invader about to reproduce consumes its own weight in meat (creatures so consumed cannot be used as a shape template), and then finds a secluded lair. When the division process completes, there are two competent (if somewhat smaller) adults where before there was one <\#208> Metamorphic Invaders waste no time on childhood. (Both "offspring" inherit the "parent"'s memorized forms, as well.)

@TEXT:The exact source of their morphing abilities is unknown. What is known is that it is unpleasant to see <\#208> the Invaders' shapechange is slow and disturbing. Those few witnesses who have dared to stay for the entire process have likened it to "wet, rotting meat sculpting itself, one paper-thin layer at a time."

@D-HEAD:A Living Doomsday Weapon

@TEXT:Because the combination of their physical powers and psychological attitudes seems unlikely to have evolved naturally (the very existence of a cannibalistic, solipsistic race sends some xenobiologists and xenologists into fits), many experts believe that the Invaders were genetically engineered. The commonly-accepted theory is that they are a biological doomsday weapon which was either used or accidentally released, and which turned out to be much better at long-term survival than its creators intended.

@TEXT:There is a great deal of evidence to support this view. Firstly, for an ostensibly sentient race, they are driven by a number of hard-wired biological imperatives that prevent them from developing anything approaching a civilization. Among these is reproduction <\#208> unlike virtually all other sentient races, Invader reproduction is

completely involuntary, and extraordinarily rapid, and is clearly geared toward producing more Invaders <I>fast<I>.

@TEXT:Secondly, they are (despite their large eyes) near-sighted, unable to see clearly anything farther away than 30 feet or so, effectively forcing them to focus on their next victim or their next task. Finally, while Invaders are carbon-based (and capable of consuming almost any carbon-based flesh), they react badly to alcohol; this may have been an attempt at a control mechanism in case the Invaders ran wild.

@TEXT:Another odd vulnerability is that other shapeshifters don't agree with them. If a Metamorphic Invader consumes a Xenomorph, Enyyn or other shapechanger, the Invader will almost immediately go into spasms lasting 2d+10 minutes, during which it loses control of its own Morph power and shifts randomly every 1d seconds.

@TEXT:Fortunately for the already rattled peace-of-mind of those who are aware of them, Metamorphic Invaders are immune to the Riders.

@C-HEAD:Culture

@TEXT:The Invaders have no native culture; they are unable to cooperate long enough to create one, and appear to have no interest in doing so even if they could.

((START BOX))

@C-BOXHEAD:Names

@TEXT-BOX:Like their pseudo-cousins the Xenomorphs, the Invaders don't seem to take any personal names other than those of the individuals whose shape they've adopted. Indeed, it's unknown if they have a language at all.

((END BOX))

@C-HEAD:Politics

@TEXT:Metamorphic Invaders have no political relations with any other race in the galaxy. They don't even acknowledge other members of their own race as sentients, let alone other races. For all practical purposes, there is a permanent state of war between the Invaders and every other species in the Galaxy.

@TEXT:It is a highly-classified secret, but the Galactic Survey Service has discovered <I>entire planets<I> populated by nothing but Metamorphic Invaders, endlessly stalking and devouring each other; every such world has been sterilized for the sake of galactic civilization.

@B-HEAD:Selkies

@TEXT:<I>[Ursilla] went at early morning and sat on a rock at high-tide mark, and when it was high tide she shed seven tears in the sea. People said they were the only tears she ever shed. But you know this is what one must do if she wants speech with the selkie folk. Well, as the first glimpse of dawn made the waters grey, she saw a big selkie swimming for the rock.<I>

@TEXT:<I>He raised his head, and says he to her, "What's your will with me, fair lady?"<I>

@TEXT:<I>She likely told him what was in her mind; and he told her he would visit her at the seventh stream (spring tide), for that was the time he could come in human form.<I>

@TEXT:<I>So, when the time was come, he came; and they met over and over again. And, doubtless, it was not for good that they met so often. Anyway, when Ursilla's bairns were born every one of them had web hands and webbed feet, like the paws of a selkie.<I>

@TEXT:<I>And did not that tell a tale?<I>

@TEXT:<I><#208> Orcadian folkore, recounted by Walter Traill<I> Dennison, in the <I>Scottish Antiquary<I> (1893)

@TEXT:Selkies (also called "Selchies"; the word means "seal" in the Orcadian dialect) are a European variety of <I>hengeyokai<I> <#208> intelligent animals who can take on a human form. In the folklore of the Orkney Islands at the extreme northern end of Scotland, all seals are selkies, and vice versa. In their dealings with humans they are neutral leaning towards benevolent, and will appear to do favors for those who know the right summoning ritual (see the vignette above).

@TEXT:Their native form is that of a seal, but they can remove their sealskin and become human. This they do rarely, usually only in the most secluded inlets, or at the behest of a human who has summoned them with tears. Like all such skinchangers, they need their sealskin to return to their native form (and the sea). Their human forms are always

exceptionally attractive.

@TEXT-BOX:While Selkies are built based on the Seal template, they don't actually use it directly. They are <I>similar<I> to "ordinary" mundane seals, but they are not identical.

((END BOX))

@C-HEAD:General description

@TEXT:In their base form, selkies are indistinguishable from "normal" seals; in fact, in some milieux, they <I>are<I> the "normal" seals and there are <I>no<I> non-intelligent, non-shapechanging seals! In human form, they invariably possess stunningly good looks; the attraction their human forms hold for land-dwellers is legendary.

@TEXT:Selkies are approximately as long in seal form as they are tall in human form <\#208> generate a height normally for the character's ST and use it for both forms. Generate weight from height for the human form as normal; multiply that figure by 2.25 to get the weight of the seal form. They may have virtually any eye, hair or skin color available to humans, although they will almost always match the coloration of the ethnic group nearest to them. They have their own tongue, a Mental Average language.

@C-HEAD:Psychology

@TEXT:The most obvious aspect of selkie psychology, at least to outsiders, is that they are hedonists. Account after account makes this clear: In human form, they dance on beaches in the moonlight, they sun themselves during the day, they engage humans in both romantic and casual liaisons. In the water, they are as playful as otters or porpoises. The selkie mindset seems to lack the concepts of work, toil and all that is related.

@TEXT:There is some kind of long-standing bond between selkies and humans, although its precise origins have been lost in the mists of time. While in general the two races leave each other alone, they are not averse to each other's company. Selkie men have been known to court and/or seduce human women <\#208> but generally only those women who make it clear that such attentions are welcome.

@TEXT-BOX:Selkie women are seldom as casual about human males, as there is a long history of the latter acquiring brides by stealing their skins.

((START BOX))

@C-BOXHEAD:Summoning a Selkie

@TEXT-BOX:As mentioned in the vignette, there is a simple ritual, handed down in folklore, with which one may summon a selkie. It appears that only human women may invoke this ritual, but that may well be because human men tend to acquire the attentions of selkie women through somewhat more confrontational means.<!s>.<!s>.

@TEXT-BOX:If a woman should desire to meet with a selkie male, she need only stand at the edge of the ocean at high tide and shed seven tears into the water. If there is a male selkie within a mile, he will immediately respond by swimming directly to the woman. (If more than one selkie is within range, the closest one responds; in the case of ties, the faster/stronger swimmer wins.) Upon his arrival, the selkie will inquire what the woman would ask of him, and will attempt to fulfil the request to the best of his ability. Since most such requests are for sexual congress, granting them is usually quite easy for the selkie.

((END BOX))

@TEXT:Although adapted to both, selkies prefer the sea, when given a choice. This preference can become an overwhelming drive, particularly in selkie women tricked into marriage; invariably, upon regaining their ability to take seal form, they will abandon husband, home, children <\#208> everything <\#208> in their haste to return to the sea. Some of this may well be a desire to be among others of their own kind again, though <\#208> selkies are a communal people, and the females especially are extremely social.

@C-HEAD:Ecology

@TEXT:Selkies (at least in their were-forms) are close enough to humans that the two races can interbreed. The offspring of a human and a selkie are almost always landbound, taking after the human parent, but they often demonstrate selkie characteristics <\#208> webbed hands and feet, most frequently <\#208> for generations afterward. This interfertility has led to speculation that the selkies are actually a magical sub-race of humanity who have learned how to change into seals.

@TEXT:While an attractive theory, it is belied by the fact that selkies grow their own skins instead of acquiring them from slaughtered "real" seals. A selkie child whose skin is taken away from him while he is young, so that he is not allowed to change, will eventually outgrow his skin and lose forever the ability to shift!

@TEXT:Like seals, selkies are mostly carnivorous, with fish making up the majority of their diet. In human form they are omnivorous, and can survive quite well on whatever the local humans eat.

@TEXT:Most selkies are native to salt water, but a freshwater variety is known to exist, preferring large lakes and deep waterways for their homes.

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:<I>"When angels fell, some fell on the land, some on the sea. The former are the faeries and the latter were often said to be the seals." <\#208> Anonymous Orcadian<I>

@TEXT-BOX:As usual, while a theoretical "typical" selkie can be derived from the legends of the Orkney Isles, there are a number of different interpretations. GMs may wish to consider these as options with which to tweak his selkies, the better to keep players on their toes.

@TEXT-BOX:<I>Intolerance.<I> In almost every tale, selkies are described as friendly towards humans. This need not always be the case. Selkies as described in <BI>GURPS Bestiary, Second Edition<\$> were far more antagonistic than friendly, and harbored a general Intolerance of land-dwellers. If a band of selkies have been the target of seal hunters, general human animosity (or just mistreatment based on ignorance), they may well grow hostile and no longer honor whatever ancient agreement originally bound them and humans together.

@TEXT-BOX:<I>Seasonal Changes.<I> In the tale of Ursilla, quoted above, the selkie she summons says he cannot take human form until "the seventh stream" (spring tide). In other tales it was once a year, usually on Midsummer's Eve (referred to as Johnsmas Eve). This is a special case of Cyclic Change, where the cycle doesn't trigger the change, but instead simply makes it available for use <\#208> select a period for the cycle, as usual, but halve its discount value.

@TEXT-BOX:<I>Faerie Folk.<I> Selkies are sometimes reputed to be a branch of the Sidhe. Faerie selkies will have Immortality and Mana Enhancer, and will probably be mages of some variety as well.

@TEXT-BOX:<I>"Tripped" Angels.<I> Some Orcadian folklore says that selkies are angels cast out of Heaven during Satan's revolt. Unlike demons, they didn't do anything bad enough to merit Hell, so they were trapped in the mortal world instead. Their benevolent attitude towards humans comes from their angelic nature, and the knowledge that they may yet be forgiven by God and return to Heaven. Like faerie selkies, angelic selkie are Immortal; they also have an Obsession: Get forgiven and go back to Heaven.

((END BOX))

@D-HEAD:Selkie Skins

@TEXT:It should come as no surprise that selkie skins are extraordinarily magical; they bind up the essence of the selkie's true shape and hold it in abeyance against the need of the selkie to return to the sea. Each one is unique, and can only be used by its owner <\#208> it is, after all, a part of his body. There is no fatigue cost to either doff or don one's skin, but the process is not instantaneous; the Slow Change limitation on the selkie were-form represents the time needed to unfold a skin and put it on properly (or vice versa).

@TEXT:According to some sources, there is one further magick bound into a selkie skin. According to these tales, a skin is enchanted such that, if lost, it will always find its way back to its owner. It may take a hundred years, but it will do so. Such a skin does not travel under its own power, but by gently "nudging" probability in its favor, influencing who carries it and where. Skins deliberately hidden cannot use this trick.

@TEXT:If a selkie dies while separated from his skin, the skin loses all its magic, and is rendered nothing more than a "mundane" sealskin. (A clever wizard may still be able to make use of such a skin, though.<!s>.<!s>.)

@TEXT:There is some confusion over what happens to a selkie if his skin is destroyed. Some say the selkie will die; others claim he or she is forever locked as a human, unable to return to the sea and miserable for the rest of his life..

@C-HEAD:Culture

@TEXT:Selkies possess a communal society, living and traveling in large social groups. While individual males might be found out and about on their own, it is far more likely for someone to discover a dozen or more selkies making merry on some isolated beach.

@TEXT:In general they are nomadic, cycling through several different underwater, coastal "camps" in a year. In general, they survive as undersea hunter-gatherers, living mostly off of fish which they trap or hunt, depending on the season and the location. Tribes living in shallow waters have begun some efforts toward a simple agriculture both in the sea and on land, mostly in response to seeing its success among humans, but these gardens (they are generally too small to be called "farms") are usually seasonal, and are abandoned for several months at a time when the tribe moves on in its circuit. Even when they are more continuously maintained, selkies seldom have legal title to suitably arable land an hour's travel or less from the sea shore.

@TEXT:Selkies are functionally TL 0. Even though they can operate out of the water as well as humans, they have not developed their own metallurgy yet. Instead, they trade with humans for the few items they need that can be made from gold, silver, and other metals that will not corrode or rust in seawater. Failing that, they fall back on tried and true methods <\#208> stone spear and axe heads attached to wooden shafts scavenged from dry land.

((START BOX))

@C-BOXHEAD:Selkie Names

@TEXT-BOX:Selkies names are composed of a personal identifier and either a patronymic ("child of White Gull", for example) or a descriptive epithet (like "Shark-teaser" or "Crooked-fin"). Personal identifiers tend to be descriptive or imitative terms relating to their environment ("White Gull", "Coral"). Sometimes an epithet can displace a personal name entirely, becoming a new one in the process.

@TEXT-BOX:When dealing with land-dwellers, these are usually translated into the local dialect, producing an often poetically primitive effect.

((END BOX))

@C-HEAD:Politics

@TEXT:Selkies lack any kind of centralized organization larger than a tribe, and as such are rarely on any kind of terms with human organizations much larger than a town. They sometimes make trading agreements with human settlements, but that is usually the extent of their group-level interactions. Since the selkies want to spend as little time as possible on the unentertaining business of trade and diplomacy, they frequently don't bother even contacting the humans on the land near their camps.

@TEXT:This can cause problems, especially if the selkie group is one that is trying its hand at dry-land agriculture. Such efforts are often made on land already owned by a human, and if discovered, the selkies are frequently viewed as squatters. Depending on how local officials approach the matter, this can cause undue tension between the humans and the selkies.

@TEXT:Selkies infamously have little patience for humans who hunt seals, and if there are no non-selkie seals in the campaign, then it will reach actual hostility. Male selkies are more inclined to "police" the local waters than the females, and they are known to damage the boats of hunters. (Some folklore even assigns them the power to summon storms against hunters.) It goes without saying that actions along these lines will also strain human-selkie relations in the region.

@TEXT:That being said, though, the truth is that most selkie-human relations take place on the individual level.

@C-HEAD:Selkies in the Campaign

@TEXT:Unless the campaign is sea-going or even undersea, selkies as a whole will generally be limited to providing background "fantasy flavor". Their almost compulsive need to return to the sea makes it unlikely that they will be seen more than an hour inland unless they are of the freshwater variety, in which case they will be found nearly anywhere close to a sufficiently deep river or large lake.

@TEXT:The role they play depends largely on the variation(s) and situation the GM has chosen. If they lack any kind of threat, such as seal-hunters or angry land-owners, selkies will be generally well-disposed towards humans, and may turn out to be allies if

dealt with fairly and openly. On the other hand, the proper tensions can cause matters to escalate all the way up to outright warfare between land and sea.

@TEXT:It's also possible that PCs might have selkie spouses, especially if the GM presents them with one of the classic opportunities!

((START BOX))

@C-BOXHEAD:Selkie Characters

@TEXT-BOX:Selkies can be built on 100 points and still provide a competent character, despite their relatively high cost. Remember that the gender-based traits are <I>not<I> part of the racial template, and the disadvantages therein do count against the character's allotted total. Heroic selkies <\#208> tribal leaders, most adventurers in the dry world <\#208> start at 125 points, with a few truly exceptional individuals reaching 150 points.

@TEXT-BOX:Although they best adapted to the water, their amphibious nature allows them to operate nearly anywhere humans can <\#208> although they might not always be happy about it.

@TEXT-CSTATS:<I>Languages:<\$> Gaelic-IQ [2]; Selkie-IQ (native) [0].

@TEXT-BOX:In the middle of the sixteenth century, a woman of Scotland seeks what has been taken from her <\#208> not to avenge herself for its theft, but so that she can return to the sea she loves. The woman now known as "Moirira Seabourne" was originally a selkie bride, "courted" and married in the traditional manner (that is to say, her skin was stolen while she was sunning herself on a beach), by her late husband, one Angus Macheath.

@TEXT-BOX:Macheath, aware of all the old stories, hid her skin well. She took a human

name, and for ten years she was his wife, obedient in most things and bearing him two healthy children. Moira had a reputation as a bit of a shrew, but she and Angus seemed happy enough.<!s>.<!s>.

@TEXT-BOX:Until the day she came back from market-day to find her home ransacked, her children huddled in the stable, and her husband dying of a gunshot wound. As he bled to death, Angus told her of the band of thieves who had shot him and taken everything of value that they had owned.

@TEXT-BOX:Including her seal-skin.

@TEXT-BOX:Angus died in her arms, and although she could never truly say she had loved the man, she was still the dutiful wife. She saw to his wake and burial. She gathered her few possessions. She gave her son and her daughter into the keeping of her husband's family.

@TEXT-BOX:Then she went a-hunting for the thieves who had stolen her life. She vowed to retrieve her skin or die trying.

@TEXT-BOX:In the year since then, she has learned a great deal <\#208> weapons, riding, tracking. She has become a force to be reckoned with as she tracks down highwaymen, bandits, thugs and thieves, each time hoping that <I>this<I> band of cutthroats is the right one. Unbeknownst to her, stories of her activities are starting to be told, and she is starting to gain a reputation as "The Selkie Widow", a figure of supernatural vengeance hunting the murderers of her husband.

@TEXT-BOX:She knows her seal-skin hasn't been destroyed <\#208> she'd feel it if it were. And she knows she's finally close to finding the unprintable scum that are holding on to it. She just hopes that none of them make the connection between her and it, or she'll end up an unwilling bride <I>again.<I>

@TEXT-BOX:Once she recovers the skin, her intent is to return to the sea, but of late she's had her doubts about that goal; she has found that she enjoys the adventuring life, and is wondering if she'd be happy for very long if she were to return to the ocean.

@TEXT-BOX:If Moira ever recovers her skin, her seal form will be 63 inches long and will weigh 270 pounds, with dark glossy fur which is almost black in color.

@TEXT-BOX:Moira Seabourne is a 150-point character suitable for use in a <BI>Swashbucklers<\$> campaign, particularly one with a strong fantasy flavor. With some minor changes to her background, she can be used in Yrth or any other medieval fantasy world.

@B-HEAD:Swan May
@TEXT:<I>After the swan maidens had bathed and sported to their heart's delight, they came back to the bank wishing to put on their feather robes again; and the six eldest found theirs, but the youngest could not find hers. They searched and they searched until at last the dawn began to appear, and the six sisters called out to her, "We must away; 'tis the dawn; you meet your fate whatever it be." And with that they donned their robes and flew away, and away, and away.<I>
@TEXT:<I>When the hunter saw them fly away he came forward with the feather robe in his hand; and the swan maiden begged and begged that he would give her back her robe. He gave her his cloak but would not give her her robe, feeling that she would fly away. And he made her promise to marry him, and took her home, and hid her feather robe where she

could not find it.<I>

@TEXT:<I><\#208> from The Swan Maidens, as recounted by Joseph Jacobs<I>

@TEXT:INCOMPLETE -- TO BE FINISHED

@TEXT:(Australian aboriginal swan mays have black feathers)

@TEXT:(Following text is from Bestiary 2nd article and is outdated)

@TEXT:The Swan Mays are an ancient sisterhood of humans with the ability to turn into swans by donning feathered cloaks. They are dedicated to the preservation and defense of the wild places of the world and the innocent folk who live there. Many Swan Mays are warriors, mages or both.

@TEXT:(Variations on this myth are found in Persian, Indian, Japanese, Indonesian, Australian and Zulu folk tales.)

@TEXT:The power of the Swan May is threefold. There is a genetic component <\#208> a Swan May must be the daughter of a Swan May. Next, she must be wearing her cloak of feathers. Many of the cloaks are very ancient, passed down from mother to daughter for countless generations. The secret of maintaining, repairing and (presumably) creating the cloaks is a closely-guarded secret of the oldest and most powerful Swan Mays. Finally, there is a moral and cultural part to the Swan May's power. Each Swan May is raised to honor nature and defend the innocent, and if they fail in this duty through cowardice, greed or carelessness, they will lose their powers. (Repentance might be possible, at the GM's option, but it would certainly require a long and dangerous service to regain a lost transformation power.)

@TEXT:Though deadly when their charges are threatened, most of the time Swan Mays are beautiful and merry. It is part of a Swan May's duty to her kind to eventually marry an honorable man and produce a daughter to carry on the legacy. They are greatly sought after as wives, and many of the noblest houses have Swan May blood. But they cannot be bought or coerced to wed. A Swan May marries only at her pleasure, and only for love.

@TEXT:Even in war, Swan Mays usually go unarmored. Their usual gear includes a plain, light shift, a bow and a few arrows or a light spear, and a knife. They do not like to be encumbered with more than can be absorbed in their change.

@C-HEAD:Swan May Characters

@TEXT:Human Form: All Swan Mays have a gadget-based Were Form advantage, with the enhancement Absorptive Change (No Encumbrance), for a base cost of 11 points. The gadget modifiers for their cloaks of feathers are Awkward, Can Be Stolen by Stealth or Trickery and Unique, for a final modifier of -40%. This makes the final cost of the cloak 7 points. Swan May cloaks are usable only by their owners, but may be transferred from mother to daughter.

@B-HEAD:The Were-Creatures of Yrth

@TEXT:<I>I'm the moon's indentured servant.<I>

@TEXT:<I><\#208> from Thor, by Wayne Smith<I>

@TEXT:INCOMPLETE -- TO BE FINISHED

@TEXT:Redefinition of the six basic Yrth were types in this system.

@TEXT:All Yrth weres have as part of their were-forms the following: Slow Regeneration (Presence of silver deactivates, -30%) [7]; and Vulnerability to Silver (Occasional) <f"symbol"><\#180><f\$>2 [-20]. At the GM's option, some also have Infectious Attack [-5]. Evil persons with a Yrth were-form also have Compulsive Behavior: Commit Atrocities [-15].

@TEXT:The basic Yrth were-form has a Cyclic Change: Monthly, Exclusive, for -40% and Minimum Duration: One Night, -10%, for a total discount of -50%. Some weres can change at will in addition to their monthly change; this eliminates the Minimum Duration limitation and the Exclusive option, reducing the limitation value to -15%.

((START BOX))

@C-HEAD:Backwards Compatibility

@TEXT-BOX:It should be obvious that the costs for these six were-types do not match those found in <BI>GURPS Fantasy<\$> and <BI>Compendium I<\$>. The simple truth is that these pre-existing costs were assigned arbitrarily, long before <BI>GURPS<\$> had anything approaching a consistent were-creature system. They were also assigned with the express intent of allowing a standard 100-point character to be a were.

@TEXT-BOX:Yes, we're aware that these revised were-forms will break many long-time characters. But it should be pointed out that the were-forms for all six Yrth types were really not fully fleshed out, being more idealized images of their particular animals than actual examples thereof. Also, these were-forms were great bargains, giving the player by implication and for no points a number of advantages that later weres had to pay for <\#208> Sharp Teeth, just to cite one rather inexpensive example. It's long past time that they were brought into compatibility with the rest of <BI>GURPS<\$>.

@TEXT-BOX:That doesn't mean you, as GM, have to use them. You can always stay with the earlier versions. That's your privilege as GM. But if you do, you should avoid mixing them with weres built with the rules in this book, if only to let the players all remain on the same point basis.

@B-HEAD:The Xigana
@TEXT:Lemme tell ya one thing, kid, don't ever come on to a Xigana woman.
@TEXT:Nah, their men ain't jealous. Hell, the men pay hardly any attention to the women
as women, if'n y'know what I mean. Now, Xigana women, they're real easy to look at, if
you're not a Pure Earther fanatic, but you make one move on'em, and they'll spear you,
like, with their eyes. It's like you stop bein' people to them, that you've sunk
below animal and down to dirt.
@TEXT:Coldest damned thing I ever seen.
@TEXT:<\#208> Overheard in Rohvin's Place, Eridani Free Port
@C-HEAD:Cool, Collected, Sophisticated...
@TEXT:Among the races of the civilized galaxy, the Xigana are known for their
sophistication, their fashionable aloofness, and their taste for tropical resorts and
homes. Natives of a planet with a large axial tilt, they escape the fierce, frigid
winters of their homeworld by moving to the warmest locales they can find, where they
invariably find their way into the <I>ne plus ultra<I> of society. This isn't always the
upper classes <\#208> but it <I>is<I> always somewhere both low-key and intense. Xigana
are frequently patrons of the arts; those who aren't are often the artists themselves, or
at least their agents and promoters. A poor Xigana is a rare sight, which many feel is
some small recompense for the fact that their race is dying out.
@TEXT:What the Xigana go to great pains to hide from the rest of the galaxy is that they
are a metamorphic race. Much as earthly creatures like the weasel/ermine change color
with the onset of winter, the Xigana change <I>form<I> in response to sustained cold
weather <\#208> from humanoid omnivore to great, shaggy carnivorous quadrupeds. This (to
them) betrayal of their exalted status as sentients is more than an embarrassment, it is
an obscenity, for humanoid Xigana are sterile and virtually non-sexual <\#208> only their
beast forms are capable of reproduction. Their entire culture is based around denying
this aspect of themselves, and as a result, the Xigana are a dying race.

@C-HEAD:General description

@TEXT:Xigana (the word is both plural and singular) are a race on the far end of the humanoid scale. Slender and smooth-skinned, they are deceptively fragile in appearance. Their skin color tends ranges between ivory and a pale blue, and their eyes are generally blue, green or golden. Xigana are completely hairless, without even eyebrows or eyelashes.

@TEXT:Their long, delicate fingers are tipped with thick, almost horn-like nails which both males and females carve and paint. Their mouths and noses protrude into something close to, but not quite, a snout. They have broad, flat (some say an herbivore's) teeth, but rarely smile.

@TEXT:Xigana are mammalian, the females possessing breasts similar to a human's.

@TEXT:Determine a Xigana's humanoid height normally for his ST; their weight is 20 pounds less than human normal for their height. In their four-legged "wintershape," their body weight remains the same as their humanoid form, and they measure about 40% of their humanoid height at the shoulder. The Xigana wintershape has thick, shaggy fur, a more prominent snout and ears, and distinct claws. Fur color will match the "summershape" skin color, or, less frequently, be a shade or two lighter; eye color remains the same.

@C-HEAD:Ecology

@TEXT:The Xigana are native to Gyrris, an earthlike planet fourth from its yellow G-Type star, with a gravity of .9 G. Gyrris has a 27-hour day, and orbits its sun every 510 of its days. Its surface is split equally between land ocean, but the shorelines vary wildly with the seasons.

@TEXT:Gyrris has an axial tilt almost double that of Earth, which results in extreme seasons that seesaw between conditions almost unimaginable to humans, despite the fact that the planetary average temperature is almost exactly the same as Earth's. Its weather patterns are wild and chaotic, and a large percentage of the planet's water is caught up in its endless storm cycles. Winters on Gyrris are bitterly cold and wracked by almost constant blizzards; summers combine the temperature of Death Valley and the humidity of a swamp with daily thunderstorms, punctuated by frequent monsoons and hurricanes. Its polar icecaps expand and recede visibly over the course of the year.

@TEXT:The Xigana's niche in their world's ecology is roughly equivalent to humanity's on Earth, even excluding the obvious parallels between intelligent species. Their shapechanging biology is not unique <\#028> more than a dozen other species on their homeworld (most of them unrelated to the Xigana) shapechange in response to the cycle of seasons. As might be guessed, Gyrris attracts a large number of xenobiologists and other researchers.

@TEXT:The Xigana's change, like that of the other shifters on Gyrris, is environmentally

triggered. If a humanoid Xigana is exposed to temperatures below 40<\#161> Fahrenheit for at least two hours, a change to wintershape begins; if there is a potential mate present at the same time, the individual will also feel a compulsion to begin a mating ritual (see below). Predator-form Xigana have an opposite trigger: two or more hours' exposure to a temperature of 70<\#161> F or higher returns a Xigana to his humanoid form. The shift between forms takes about one Gyrrisan day, during most of which the individual remains active (though sluggish). The final four hours of change, though, completely incapacitate him.

@TEXT:Because of subtle nutritional and hormonal requirements, a Xigana should go through at least one pair of changes per year. Failure to do so has no immediate ill effects, although apostate Xigana medical researchers (whose work has long since been suppressed) believed that regular changes could prevent certain varieties of cancers and several other diseases that operate by systemic disruption.

@D-HEAD:Reproduction

@TEXT:Wintershape females are always fertile; couples mate for life and do not stray when in predator form. Gestation lasts 200 days, during which the female's body produces hormones that prevent reversion to summershape should the weather change; the production of these hormones tapers off approximately six weeks after giving birth.

@TEXT:Xigana offspring are born exclusively in wintershape, in litters of two to four. "Pups" are able to walk and function within three weeks of their birth, although this precocity does not carry over into summershape; in fact, Xigana children take longer to learn to walk on two legs than most biped species, possibly because of their ingrained quadruped instincts. They do not gain the ability to take biped form until they are six weeks old.

@TEXT:Xigana are mammalian and can nurse their young in either form.

@C-HEAD:Pyschology

@TEXT:Although to the galaxy in general Xigana seem well-adjusted if somewhat effete and snobbish, they are in fact a mire of repression and denial. Inordinately proud of their position at the top of their world's evolutionary ladder, they deny to themselves (and hide from the galaxy at large) the fact that they shapechange into what they see as an inferior animal form.

@TEXT:Worse yet, from their point of view, is that their humanoid forms are sterile; they can only reproduce in wintershape. Combine this fact with an almost universal Xigana disgust with their "animal" alter egos, and the result is a race with deep-seated neuroses and sexual repression. To the average Xigana, the fact that they are required to turn into an animal in order to reproduce is an unspeakable obscenity; subsequently they have tarred <I>all<I> romantic and sexual behavior <\#208> up to and including the most innocent flirting <\#208> with their disgust at their wintershapes. Other aspects of life are likewise affected; for example, while technically omnivorous, nearly all humanoid Xigana follow a vegetarian diet, looking down upon the consumption of meat as "unclean" and "animalistic."

@TEXT:Many Xigana take this to another extreme, looking upon the world that bore them and which requires of them the change as something to escape. As soon as they are able, these Xigana leave their homeworld, migrating and resettling somewhere <\#208> <I>anywhere<I> <\#208> where the local temperature never drops below 70<\#161> F. Those that can't resettle in warmer climes, or who for reason of employment or other obligation must make do with locations that suffer cold weather, are known for the remarkable extremes to which they go to remain warm during the winter: anything from the simple expedient of never leaving their homes, to the latest in temperature-maintaining arctic gear. The only option of which they do not make use is fur clothing, be it real or artificial <\#208> the very idea disgusts them.

@C-HEAD:Culture

@TEXT:Attitudes like these have been cemented into Xigana culture over millennia by their inclusion in all the major Xigana religions. Even more significantly, the Xigana language itself attempts to deny and obfuscate their dual nature. The language (a M/H skill for non-Xigana) uses complicated tenses, pronouns and euphemisms to refer to their two forms, with the wintershape invariably treated (if it must be discussed at all) as an utterly different creature with which one has an unfortunate and reprehensible connection. One who has succumbed to wintershape is always "away" or "unavailable"; and offworlders who know better never, <I>ever<I> inquire about childbearing and offspring <\#208> the only words for pregnancy and sex in the Xigana language are either obscenities, euphemisms or

(rarely) obscure medical terminology.

@TEXT:Complicating matters is the fact that the Xigana possess a long, complex and heavily stylized mating ritual, at least partially instinctive in nature. As noted above, it is triggered by dropping temperatures, combined with the proximity of an individual of the opposite sex. An hours-long dance, equal parts touching intimacy and astounding savagery, it is strongly reminiscent of similar behaviors in earthly animals. Initiated while in humanoid form, the ritual ends with the act of mating anywhere from 24 to 48 hours later in predator form. While the change can occur without the ritual, the ritual <I>includes<I> the change and cannot complete without it.

@TEXT:Not surprisingly, the mating ritual is perhaps the greatest taboo in Xigana culture. It is never spoken of, even between a mated/mating pair. Native medical and psychological texts are maddeningly elliptical in their oblique attempts to refer to it without actually talking about it. And in every Xigana culture, any hint of its performance in a settled area is enough to have the offending couple arrested and executed <\#208> if they aren't dragged off by a howling mob and lynched first.

@TEXT:Childrearing is another delicate matter. "Pups" remain with their parents until their first transformation, which is usually some time in their first six months. After that, though, parents will hand over children to be raised in government- or church-run institutions, then go their separate ways, as often as not. The "nuclear family," as it is understood by humans, is an entirely alien concept to the Xigana.

@TEXT:Outside observers have noted that, as far as the cultural treatment of sexuality is concerned, the Xigana combine the worst aspects of Calvinism, Victorian prudery, and the most oppressive, reactionary branches of Islam. Even so, there are small, quiet rebel factions, trying to change the dominant social paradigm and shatter the racial denial. It will not come as a surprise to learn that these groups are almost universally outlawed on Gyrris, with execution the most common penalty for membership and activism. Additionally, rebels and social activists who attempt to operate off-planet and thus threaten the racial secret are often the targets of assassination squads dispatched by churches, government or even groups of "civic-minded" private citizens.

@C-HEAD:Politics

@TEXT:Although snobbish and standoffish, the Xigana freely mix in Galactic society. They do tend to treat reptilian races and races possessing significant amounts of hair or fur with substantially more disdain than they offer other races, and they will ignore non-bipeds entirely as being "animals" and thus beneath them. They similarly categorize tiny races like the Cidi. They can be at a bit of a loss upon first encountering races that do not fit easily into their pat worldview (the Traders, Liook Sujan), but usually accord them "non-animal" status. <I>Any<I> race with no discernable romantic or sexual behaviors, such as (again) the Liook Sujan, often become objects of great respect.

@TEXT:Their government has no particularly special allies or enemies among the Galactic civilizations save for the usual suspects. Even so, they are happy to engage in commerce with any civilization <\#208> even those they consider "animals", if a willing middleman can be found <\#208> and have parlayed their world's mineral riches and their own skills into a vast wealth.

((START BOX))

@C-HEAD:Xigana Names

@TEXT:Adult Xigana names are usually composed of a personal name followed by an occupational surname. Personal names are two to five syllables long, each syllable being a consonant-vowel pair, plus an optional terminal consonant; sounds which are diphthongs and digraphs in English ("ae," "th," and so on) are common in the various dialects. Tegore, Kurathal, Rawonam and Namapra are all common Xigana given names. There is no distinction between male and female names.

@TEXT:Occupational surnames may be as generic as "Baker," "Astrogator" and "Engineer," or they can become so complex that they are almost titles: "Chief Partner in Trade with Erapis IV," "Senior Regional Administrator for Evet Continent." As one might expect, such epithets can change many times in an individual's life.

@TEXT:There are no family or clan names. Immature Xigana are known by a given name and use the name of the institution in which they were raised as their surname. An adult Xigana with an institutional surname or no surname at all is regarded as shiftless and lazy. There are no honorifics or surnames indicating marriage/mating status, in the

manner of the English "Miss"/"Mrs."

((END BOX))

@C-HEAD:Xigana in the Campaign

@TEXT:As a race, the Xigana can be great fun for the GM: supercilious, obnoxious and snobbish, without being at all evil. Many Xigana hold positions of power or influence throughout the galaxy, either because of wealth or because they are often good at imposing and/or managing hierarchies. A Xigana would make a good "manager you love to hate" for a group of player characters who share a Patron. Similarly, Xigana make good "shades of grey" opposition <\#208> evil-seeming though not evil, simply unconcerned with what "lesser races" think is legal and illegal.

@TEXT:On the other manipulator, a renegade or insane Xigana can provide a sudden and unexpected plunge into a <BI>Horror<\$> scenario for players expecting a more conventional <BI>Space<\$> encounter: the mysterious, murderous beast that stalks an unsuspecting town or city in the depths of winter. Although their long shift times don't allow the kind of instant disappearance that makes a traditional werewolf story all the more creepy, the presence of a large, shaggy, and most importantly <I>intelligent<I> carnivore where one ought not to be can make for an adventure interesting not just for its combats with the beast, but for the investigation done to find out just what it is and where it is from. To add an extra fillip to such a scenario, have a team dispatched from Gyrris to hunt down the "dangerous animal" that they claim was illegally exported from their world.

@D-HEAD:Other Settings

@TEXT:While obviously designed for use in a <BI>GURPS Space<\$> campaign, the Xigana can be used as-is in a number of other settings. As always, <BI>Atomic Horror, Black Ops,<\$> and similar settings can make use of an apparent werewolf, especially if the more obnoxious aspects of the Xigana racial personality are tuned down a bit; the "monster-that-isn't" is an useful device, especially if players need to learn that shooting first isn't always the best tactic.

@TEXT:With a little modification, the Xigana can become a <BI>Fantasy<\$> race. The "scientific" justification for their shifting abilities must be discarded, of course, unless the game world is extremely un-Earthlike. Alternatively, it would not be hard to make them a magical race from the distant Northern or Southern sub-arctic regions of the world. For further complications, they could be mistaken for more conventional were-creatures. If such weres are evil, that may well be why the Xigana are hiding their nature.

@D-HEAD:Xigana Characters

@TEXT:Because their shifting abilities are so slow and are all but involuntary, shapechanging will probably not be the primary reason one would choose to play a Xigana. Their complex suite of motivations, behaviors and beliefs, though, make them a intriguing roleplaying challenge.

@TEXT:Xigana characters can fit easily into a standard 100-point campaign, but the GM should be aware that unless there is a reason (or repeated reasons) to threaten the racial secret, much of the point cost of this race is wasted on a player character in an exploration/survey or interstellar war campaign. And after the third or fourth time, threats to the secret will not only grow old or repetitive, but will increasingly appear engineered.

@TEXT:Player character Xigana are probably better off as rebels and social activists in a more political campaign. Working quietly with a few trusted friends on several goals including liberalizing their repressed homeworld, they can reveal or conceal their shifting abilities as they see fit. Such characters often have an Enemy in the rest of the Xigana; their frequency of appearance is entirely dependant upon how vocal an activist the character is.<!s>.<!s>

@TEXT:The GM may find Xigana NPCs easier to work with. They function well as patrons for any sort of treasure hunter, particularly those specializing in fine artworks. Others may support assassin teams aimed at off-world activists. Away from Patrons, the lone Xigana immigrant who seemingly has nothing to do with a mysterious "Werewolf" serial killer is a good campaign seed, if the GM can justify the necessary temperature extremes.

((START BOX))

@C-BOXHEAD:Sample Character: Tegore Inquisitor 100 points
@TEXT:Xigana male, age 00; 0'00"; 000 lbs.; brief description.
@TEXT-CSTATS:ST 9 [0] DX 13 [20] IQ 14 [20] HT 10 [0]
@TEXT-CSTATS:<I>Advantages:<\$> Clerical Investment/5 [25]; Xigana [21]; Patron:
Genevarian Church, 12 or less [30]; Reputation +2 as Defender of the Faith, Genevarian
Church [4]; Status +2 [10].
@TEXT-CSTATS:<I>Disadvantages:<\$> Duty to Church [-10]; Fanaticism: Genevarian Church
[-15]; Lameness: Crippled Leg [-15].
@TEXT-CSTATS:<I>Quirks:<\$> Dislikes offworlders [-1]; Intensely devout [-1]; Only uses
stainless-steel canes [-1]; Peppers his speech with "near-miss" almost-swearing [-1];
Prides himself on organizing the best "Orthodoxy Teams" in the church [-1].
@TEXT-CSTATS:<I>Skills:<\$> Administration-14 [2]; Bard-14 [2]; Beam Weapons/TL-16 [2];
Computer Operation/TL-14 [1]; Detect Lies-14 [4]; Diplomacy-14 [4]; Flower Arranging-15
[2]; Guns/TL-16 [2]; Intelligence Analysis-14 [4]; Interrogation-14 [2]; Intimidation-14
[2]; Karate-14 [8]; Knife-14 [2]; Performance (Instinctive Xigana Mating Ritual)-14 [0];
Performance/Ritual (Xigana/Genevarian)-16 [4]; Professional Skill (Genevarian Cleric)-16
[6]; Psychology (Xigana)-14 [4]; Savoir-Faire (Xigana)-16 [1]; Strategy-14 [4];
Streetwise-14 [2]; Tactics-14 [4]; Theology (Xigana/Genevarian)-16 [6].
@TEXT-CSTATS:<I>Languages:<\$> Standard-14 [2]; Xigana-14 [0].
@TEXT-BOX:Tegore Inquisitor is one of several "enforcers of orthodoxy" in the largest
Xigana denomination, the Genevarians. While he administers to a local "diocese" as part
of his duties, his primary job is the creation, dispatch and coordination of so-called
"Orthodoxy Teams." These small "special forces"-like groups are assigned the task of
capturing or assassinating those heretics who wish to drag the Xigana's secret shame into
the sight of the debased Galactic culture.
@TEXT-BOX:A one-time officer in the Xigana planetary military retired with pay due to
injury, Tegore entered a Genevarian seminary, and now uses his skills to build the
well-trained bands of troopers which protect the Xigana secret. He also makes frequent
use of offworlder mercenary teams, who know little (and care less) about his reasons and
their targets.
@TEXT-BOX:In person he is charming and friendly, with an endearing habit of starting to
swear, catching himself, and instead saying something else innocuous and inoffensive. If
forced into his "military" persona he suddenly becomes cold and intimidating <#\#208>
although he still catches and corrects his swearing.
@TEXT-BOX:Tegore is not an adventuring character, and would not make a good PC unless the
campaign is both political and based on Gyrris. As a frequent employer of off-worlders
for shady operations, he would be better used as a Contact or even a Patron (as a
representative of the Genevarian Church). For characters less than sympathetic to the
orthodox cause, Tegore is also a prime candidate for the "mastermind" behind their
opposition; the fact that he is quite likeable and not even particularly evil can add an
extra level of complication to an adventure/campaign resolution.

(((END BOX)))

...Of All Shapes and Sizes...

In this chapter are sample shapechangers from a variety of genres. Where appropriate, notes on crossover and multigenre uses are provided, expanding the range of settings in which they can be used.

The Arthurian Werewolf

...*Sir Marrok, the good knight that was betrayed with his wife, for she made him seven year a werewolf,*...

-- *Sir Thomas Mallory, **Le Morte D'Arthur**, Book XIX, Chapter 11*

Among the many tales of King Arthur and Camelot, there can be found two references to werewolves. Sir Marrok and Sir Gorlagon, two knights of honor, were both afflicted with lycanthropy. Gorlagon was the victim of a unique magic item with ties to his family lineage, but Marrok was a were more along the usual lines. Through the machinations of his unfaithful wife, Sir Marrok found himself trapped in his wolf form for seven years. When he finally was able to return to human shape, he took his revenge upon the woman. Despite this, Sir Marrok was honored with a seat at the Round Table, where he served the king for many years, including as one of his personal honor guard.

GURPS Camelot contains a description of werewolves like Sir Marrok, but it is based more on the werewolves of Yrth than the actual legends, which describe a condition notably different in some ways from the "typical" gaming werewolf. The following description is closer to the spirit of the original tales, and may be used in a **Camelot** campaign instead of the version found in that volume.

Arthurian werewolves are ordinary wolves in their were-form except for their IQ, which is always at least 10, and usually the same as their human form's IQ. They rarely if ever suffer from Split Personality, so they are usually in control of their wolf forms. For the same reason, most quirks, mental disadvantages and mental skills from the human form will also be possessed by the were-form.

Only one source gives details on the specifics of their change: *Bisclavret*, a medieval *lai* by Marie de France (a contemporary of Chrétien de Troyes). It is the tale of a werewolf knight, the eponymous Bisclavret. Bisclavret may well also be Sir Marrok of the Round Table, given the similarities of their stories. (The fact that "bisclavret" is simply the Breton word for "werewolf" lends some indirect support to this assertion.) Therein it tells how Bisclavret is forced to leave his wife for three days and nights each week when he changes into a wolf. This is clearly a Cyclic Change with a period of one week and a Minimum Time of half that.

Before he can change, an Arthurian werewolf must remove all his clothes. This is an absolute requirement -- the were cannot change while dressed! Furthermore, he must hide and protect his clothing carefully, because unless he has the clothing he was wearing before his change to wolf form, he cannot change back! Sir Marrok's wife hid his clothing and forced the knight to remain a wolf for seven years, until he could find his clothes. The werewolf doesn't need to do anything with the clothes, just stand in the same hex with them. They must be reasonably intact -- a few holes won't affect the change, but being sliced to ribbons will! Although an Arthurian were cannot change while wearing armor, the armor is not considered part of the clothing that must be present for the change back. Arthurian weres must change at the full moon for an entire night, even when it does not occur during their usual three-night cycle; they

can change at will at other times.

Unlike the traditional werewolf, the Arthurian were does not transmit its shapeshifting ability through its bite. Weredom is more likely to be the result of a curse or (less commonly) some form of penance. The GM should require PC weres to explain how they came to acquire the ability to change. Depending on the cause, it can make an excellent Secret.

Building the Arthurian Were

The Arthurian werewolf uses the Wolf template (see box, p. 00), with the following modifiers: Buy back IQ to the character's normal level. Also buy back Bestial [10]; Presentient [20]; and Short Lifespan ¥5 [50]. Don't forget to account for any losses of Status, Wealth, Reputation and other social advantages that a wolf would not possess.

The following modifiers are then applied to the were-form advantage: an Accessibility limitation for the change itself, Cannot Change to Were-Form While Wearing Clothes, -20%; Cyclic Change (Weekly), -30%; and Minimum Time: 72 hours, -20%. The clothing requirement for the transformation back makes it an item-based change. The item is generic clothing, with the following modifiers: Not Needed For Change to Were Form +25%, Awkward -10%, Breakable (DR 0, HP 2) -15%, Not Absorbed in Change -15%, Can Be Stolen by Stealth or Trickery -10% and Unique -25% (although clothes are easily replaced and different sets will count as this item at different times, once the change is made only the one set will allow the were to change back!). This exceeds the maximum limitation value of -75%, so becomes that value; the final cost for the wolf form (assuming the theoretical character cited above) is 21 points.

The Arthurian were is subject to an unusual combination of a Cyclic Change and an Accessibility Limitation that can prevent the change. This does *not* mean that the character can avoid changing simply by never taking off his clothes. Instead, the character suffers a growing compulsive *need* to change that comes to occupy his thoughts completely. The character must make a Will roll every hour to resist the compulsion, at a penalty equal to the number of hours elapsed since the change should have taken place. If the roll is failed, he must make another Will roll at the same penalty to avoid simply ripping off his clothing and changing on the spot, regardless of location and/or witnesses. When the victim finally changes, his cycle resets accordingly.

Note that the wolf form has *no* special protections or vulnerabilities; neither silver nor holy objects affect it adversely, and all manner of weapons wound it without difficulty. It is, in all ways except intelligence and behavior, a normal wolf. A cursebreak (p. 00) is implied by the source material, but no details are ever given. GMs and players may wish to skip this aspect; if not, make sure that the cure remains faithful to the original genre. Exorcism or a difficult, pious quest would be in keeping with the source material. And of course, at the very least drinking from the Grail should unfailingly expunge the curse!

((START BOX))

@C-BOXHEAD:Lost or Destroyed Clothing

@TEXT-BOX:Possibly the worst fate that can befall an Arthurian werewolf is the loss or destruction of his clothing while he is in his wolf form. By the strictest interpretation of *Bisclavret* and Mallory, he is then forevermore trapped as a wolf. However, the average PC wouldn't care for such a fate -- nor would his player. In the absence of magic that can undo the curse (as is the usually case in Arthurian England),

the GM may be inclined to relax the conditions of the enchantment slightly.

@TEXT-BOX:Completely lifting the clothing restriction saps the Arthurian werewolf of his unique flavor and reduces him to an "ordinary" were; this is not recommended. However, the GM may feel free to allow *other* sets of clothes to satisfy the terms of the curse. These must be clothing belonging to the character and worn by him on a regular basis -- more than once or twice. A brand-new suit of clothing, never worn by anyone, would be useless, and recently-acquired or rarely-worn garb almost as bad. If the GM feels that this is still too lenient, further requirements, such as the proper phase of the moon and perhaps a Will roll, can be applied.

((END BOX))

Campaign Use

While of course in-genre for Mythic and Cinematic *Camelot* campaigns, the Arthurian werewolf is out of place in a purely realistic Historical setting. If for some reason the GM wants to put weres in an otherwise Historical game, the Arthurian werewolf is both subtle enough and sufficiently low-powered so as not to seem too out of place. But unlike in other Camelot settings (see below), a werewolf character is likely to become the target of a vigorous hunt, even if his supernatural nature is never revealed.

When used in a Mythic/Cinematic Camelot game, being this variety of werewolf brings no negative Reputation or Social Stigma. It is regarded as something that is done *to* a person, not something the person *is*. Like any other evil enchantment a knight might suffer, it is a challenge to be overcome and from which to gain glory thereby. (Of course, when it is a commoner who is afflicted with the curse, opinions may differ greatly...)

The only exception to this tolerance would be those knights who find they take a dark and perverse pleasure in being a wolf and preying upon the innocent. These knights' souls are damned, especially if they have tasted human blood and/or flesh while in wolf form.

Despite all this, in the *Morte d'Arthur*, lycanthropy is little more than a background detail that distinguishes one knight from scores of other knights. GMs can continue this convention, or depart from it by making the curse and its cure a more prominent part of the campaign.

Other Settings

In addition to Arthurian and standard fantasy campaigns, this variety of werewolf is suitable for any game where a touch of magic is not out of place, but where horrific prowling monsters of the movie variety simply do not belong. The Arthurian weres' simple wolf-nature, with no extraordinary abilities other than their change, allows them to blend into many "hidden magic" and similar settings. They fit quite well into such close-to-reality milieux as *X-Files*-style worlds as well, precisely because they are, in general, so low key. A GM who wants to shake up his players' preconceptions might even work one into an ostensibly "realistic" setting -- supported with a suitable pseudoscientific explanation, of course.

They work less well in high fantasy and outright horror worlds, because while they are supernatural, they are far more subtle and considerably lower in power than the other creatures around them. Their small advantages over humans may give them a false, perhaps misleading, sense of confidence. Of course, if that's what the GM wants to foster...

((START BOX))

Sample Character: Sir Marrok 250 Points

The Werewolf Knight of the Round Table

Male; age 35; 5'11"; 160 lbs.; a well-built man of middle age with salt-and-pepper hair and grey eyes.

@TEXT-CSTATS:ST 14 [45]; DX 13 [30]; IQ 10 [0]; HT 12 [20]

@TEXT-CSTATS:Speed 6.25; Move 6.

@TEXT-CSTATS:Dodge 6; Block 7; Parry 7.

@TEXT-CSTATS:Damage: *Punch*: 1d-1; *Kick*: 1d+1; *Thrust* 1d; *Swing* 2d

@TEXT-CSTATS:Advantages: Companion of the Round Table [15]; Knighthood [20]; Reputation +3 [5] (Reaction: +3; Recognized by (Britain): Large class, ¥1/2; 1 level free from Companion); Status 3 (3 levels free from Companion, Knighthood and Wealth) [0]; Strong Will +4 [16] (Will: 16); Wealth (Wealthy) [20] (Starting Wealth: \$5,000); Werewolf (Arthurian, as described on p. 00) [23].

@TEXT-CSTATS:Disadvantages: Chivalric Code of Honor [-15]; Extremely Hazardous Duty (member of Arthur's Bodyguard) [-20]; Sense of Duty to Arthur and the Round Table [-10].

@TEXT-CSTATS:Quirks: Body-shy; Distrustful of women; Fiercely loyal to Arthur; Gentle and courteous. [-4].

@TEXT-CSTATS:Skills: Animal Handling-10 [1]; Area Knowledge (Britain)-14 [4]; Axe/Mace-14 [2] (Parry: 7); Brawling-14 [1] (Parry: 9); Broadsword-15 [4] (Parry: 7); Falconry-10 [1]; Flail-13 [2] (Parry: 6); Heraldry-10 [1/2]; Knife-13 [1/2] (Parry: 5); Lance-15 [4] (Parry: 7); Riding (Horse)-15 [4]; Savoir-Faire (Britain)-14 [0]; Savoir-Faire (Elsewhere)-12 [0]; Shield-15 [2] (Block: 7); Survival (English Countryside)-15 [8]; Tracking-15 [8].

@TEXT-CSTATS:Languages: English (native)-14 [2]; French-11 [1].

The werewolf knight of the Round Table, Sir Marrok is mentioned twice in Mallory. The first was in Book V, Chapter 8 as part of Arthur's personal bodyguard during the war with Emperor Lucius (one of five knights so trusted -- Lancelot and Kay were two of the others). The other citation is quoted on p. 00; it comes from the list of knights who tried to heal Sir Urré of Hungary. As noted elsewhere, given the similarities in their stories, it seems likely he is also the knight called Bisclavret in Marie de France's *lai* of the same name.

The exact origin of his curse is unknown, as is whether there were a cure for it or not. Oddly, this lack of information seems to have bothered nobody. It in fact delighted his wife, who used the transformation against him; loving another knight better than he, she stole the clothes Marrok needed in order to return to human shape, and forced him to remain a wolf for seven years.

His return to human form came about when the King, out hunting, was taken with a wolf who acted like a loyal servant in his presence; forbidding his retinue to kill the beast, Arthur brought the wolf back home to Camelot with him. There, the wolf was gentle and friendly, showing the qualities of a good

knight to all persons save two -- Marrok's unfaithful wife and her lover. The king, noticing this, questioned the pair until they confessed. Upon recovery of the hidden clothing by the king's men, Marrok was able to return to human form, and Arthur banished the wife and her lover.

In the years after his ordeal, Marrok devoted himself fully to the service of his king and his country, eventually earning a place in Arthur's personal bodyguard. He survived the Grail Quest, unlike so many other Companions, which points to great faith, great self-control, or both. While he is not mentioned by Mallory after the healing of Urré in AD 462, it seems reasonable to assume that he continued in the service of his king to the very end of Arthur's reign.

((END BOX))

Benandanti -- The Witchhunter Werewolves

Questioned: How does one enter this company of the benandanti?

He replied: All those who have been born with the caul belong to it, and when they reach the age of twenty they are summoned by means of a drum the same as soldiers, and they are obliged to respond.

-- testimony of Battista Moduco before the Inquisition, June 27, 1580

Born with a caul, born to answer a call, they were the *Benandanti* -- the "Good Walkers." Indistinguishable from their countrymen in the regions around the Baltic and Mediterranean seas, these undercover werewolves were protectors, not predators; on the behalf of their friends, families and neighbors they took on the forces of Hell -- *strige* and *stregoni*, sorcerors, undead, and demons of all descriptions.

Benandanti were-form variable

@TEXT-CSTATS:*Attributes*: **ST** 10 [+10] **DX** 14 [0] **IQ** 10 [+40] **HT** 12 [0] (Costs may vary depending on human form.)

@TEXT-CSTATS:*Advantages*: Magic Resistance +2 [4]; Strong Will +4 [16]. Remove Four Legs [-5].

@TEXT-CSTATS:*Disadvantages*: Wolf Template (p. 00) [-37]. Duty: Fight the Devil and the Forces of Hell (Utterly Formidable Group, Appears Rarely) [-20]; Enemy: Forces of Hell [-20] (Roll: 6 or less, ¥1/2); Sense of Duty to fellow Benandanti [-5]; Sense of Duty to Humanity [-15]. Remove Bestial [+10]; Horizontal [+10]; No Fine Manipulators [+30]; Presentient [+20]; Short Lifespan ¥5 [+50]; Sleepy (50%) [+10]. Optionally, include Enemy: Inquisition, werewolf hunters, etc. (Large Group, Appears Rarely) [-15] in the appropriate milieu.

@TEXT-CSTATS:*Skills*: Whip (Iron Whip)-DX [2]

@TEXT-CSTATS:*Basic Cost*: Without Enemy: Inquisition, PPT: +302, NPT: -202; basic cost 140 points. With Enemy: Inquisition, PPT: +302, NPT: -217; basic cost 128 points. These must be adjusted to reflect the character's attributes before final point cost is calculated.

If the character is a part of the traditional Benandanti "army" (see below), the resulting were-form advantage is then modified with an External Trigger: Quarterly call to arms (Only to were-form,

occasional, not exclusive, -50%). In historic medieval campaigns set in the Baltic and Mediterranean regions, Benandanti will also possess a Reputation: usually +2 in their home village, where they are recognized all the time, and +1 elsewhere in territory with active Benandanti, recognized rarely (4 points total), along with an Unusual Background (Born with a Caul), worth 5 points. The GM may also require that Benandanti in later periods take a -20 point Secret.

(Please note that this is the template for a physical-change Theiss/Friuli-style Benandante, based on testimony from the relevant Inquisition records. Many variations are possible and likely; see the text below.)

Werewolves of God

Marked at birth by a caul -- a fetal membrane enclosing their head -- the Benandanti (singular Benandante) were called to battle the beings called variously *Malandanti* (the Evil Walkers), *strige* (witches) and *stregoni* (sorcerers): the forces of darkness who cursed harvests and poisoned seeds. Although the Benandanti of northeastern Italy's province of Friuli are the best known of these obscure bands, similar groups existed all over Southern and Eastern Europe during the Middle Ages. The members of these groups believed that they had been called by divine forces to act as the guardians of their neighbors.

Thought to be the historical remnants of prehistoric shamanic and/or fertility cults, these groups (predictably) varied from one another in the details of their beliefs and traditions, but on one thing they all agreed: in order to accomplish their "mission," they had been granted the power to turn into wolf-human hybrids. Using these forms, they engaged the servants of Hell in direct physical combat on a regular basis. Because of these fundamental similarities, scholars have tended to call all these groups "benandanti" after the Friuli tradition, although many bands had other names for themselves.

As they were firmly entrenched in their local cultures and folklore as forces for Good, the many bands of Benandanti saw no reason to hide. Their membership was an open secret, and they enjoyed the respect and gratitude of the people they protected. In Friuli and in other areas, they even coexisted peacefully with the Church, whose local representatives were (at least at first) more interested in learning about their beliefs than supressing them.

The Inquisition, What A Show...

Inevitably, though, such enthusiastic deviation from medieval Catholic dogma attracted the notice of the Inquisition -- quite a bit of it, in fact. For more than a century, agents of the Inquisition pursued, captured and tried members of the Benandanti from all over eastern and south-eastern Europe, accusing them of all manner of heresies and specifically of witchcraft. It is through their records, in fact, that much of the extant information on the Benandanti comes.

In these self-proclaimed werewolves, though, the Inquisition ultimately met its match. Put to the test and commanded to confess to witchcraft, Benandanti across Europe insisted that they *fought* witches, confusing their inquisitors and threatening to overturn the entire structure of medieval Catholic dogma. After a century of this Inquistorial effort, the Friuli Benandanti in particular eventually admitted to being witches, but insisted (to the consternation of their Inquisitors) that they were in fact *God's* witches. It is a testament to the Benandanti's devotion to their beliefs that the Inquisition never broke fully them. While

individuals may have given in to the torture, the Benandanti as a whole outlasted the Inquisition, which effectively gave up on them -- both individually and collectively.

The Nature of the Beast

While there were almost as many variations on the Benandanti beliefs as there were bands, certain core elements remained more or less constant. Perhaps the most detailed and evocative account of the Benandanti beliefs comes from the Inquisitorial records of an eighty-year-old man known only as "Theiss." Theiss lived in the Livonian town of Jurgensburg, on the eastern side of the Baltic Sea. During 1692, in one of their last public efforts, the Inquisition put him on trial on charges of being a witch and a werewolf. Theiss didn't deny the accusations made of him; instead, he volunteered a detailed confession that threatened to demolish utterly the Inquisition's werewolf orthodoxy.

Theiss claimed that he and other Eastern European werewolves of both genders gathered three times a year to do battle with the forces of the Devil. On the feast nights of Saint Lucia, Pentecost and Saint John (the seasonal changes), they would storm the gates of Hell. There, armed with iron whips (a unique detail in werewolf lore), these self-styled "hounds of God" would do battle with the Devil and his army of sorcerers, witches and assorted undead beings; most of these were were inexplicably armed with broomsticks wrapped with horsetails. Theiss testified that an undead witch named Skeistan had actually broken his nose with one such weapon.

According to Theiss, these "witches" (who actually included among their number assorted undead beings) annually tried to filch freshly-sprouted shoots of grain from the fields both in order to steal the crops for Hell and to inflict a famine upon the land. To restore the fertility of the fields, Theiss and other werewolves would form a legion of their own and mount a counterattack. If, however, the Benandanti were slow in their response, the witches would successfully bar the gates of Hell, and the crops, livestock, and even the fishing catch would suffer. The "hounds of God" helped mankind by preventing the Devil and his forces from carrying off the bounty of the earth.

And his band was not alone in their efforts. Theiss emphasized that there were werewolves in Germany and Russia who also also fought Satan and his witches. They were all part of a great (if somewhat anarchic) army that protected Earth and the common folk from the deprivations of hellspawn.

Theiss' testimony astounded the inquisitors who heard his case; the degree to which it clashed with medieval Catholic orthodoxy regarding werewolves was beyond their experience. By necessity they tried to force Theiss into their paradigm, but the old man held up under their questioning. When asked what became of the souls of the werewolves, Theiss said they went to heaven. In the face of accusations to the contrary, he denied that he had ever signed a pact with the Devil. He also refused to see the parish priest who was sent for to chastise him, saying that he was a better man than any priest.

Despite considerable pressure from the judges and interrogators, Theiss never recanted, and only yielded to their cosmology so far as to admit that Hell was underground instead of "at the end of the sea" as he had initially declared. At a complete loss as to what to do with someone who wouldn't play by their werewolf rules, the judges sentenced Theiss to a mere ten lashes for acts of idolatry and superstitious beliefs.

(((START BOX)))

@C-BOXHEAD: Variations on the Theme

@TEXT-BOX: Other accused Baltic werewolves of the same period told much the same story as Theiss. Details varied <#\208> the number and schedule of "battle days" in a year (four, at the solstices and equinoxes, being more common than Theiss' three), different periods of activity (often centered upon the span between Christmas and Pentecost), the presence or absence of a "leader" figure who summoned them to battle, and so on.

@TEXT-BOX: The use of weapons was a point of wide variance -- some bands used none, while the Friuli Benandanti in particular were said to employ iron whips like Theiss' group. The role of women was another; in some bands they fought alongside the men, while in others they were dreamwalkers, acting as much as scouts as seers. The greatest deviation between groups of Benandanti, though, was in the very nature of the shifting gift. For some it was explicitly physical, in the medieval Catholic and later folkloric tradition. For others, though, it was purely spiritual -- an astral phenomenon where battles were fought on some metaphysical plane between ghostly forms. (The latter were often the same groups whose women were dreamwalkers.)

@TEXT-BOX: One detail, in addition to their shifting ability, was almost universal: the majority of active Benandanti, the forces who directly engaged the powers of Hell, were between the ages of 20 and 40. Those younger than 20 did not "hear the call", although they were usually aware of their potential. And given the nature of both their mission and life expectancies in the Middle Ages, few lived to reach 40. Those that did probably served as advisors, non-combatant strategists, or perhaps even as rear guards. Theiss was unusual in that he claimed still to be active even in his eighties.

@TEXT-BOX: For all their differences, though, there is still a remarkable unity of theme and description between these often widespread and certainly unconnected accounts. The fossil remains of the ancient fertility rituals which spawned the Benandanti are clearly visible within the stories and traditions in which they feature. Later accounts make them out to be more buffoonish than heroic -- roaming about in rowdy bands, breaking into cellars to steal wine and beer -- but no matter the period, the Baltic werewolf/Benandanti is dramatically different from the malevolent, cannibalistic werewolf of Gallic legend which became the model for Western folklore and Hollywood alike.

((END BOX))

Psychology

Unlike his counterparts farther to the west, the Baltic werewolf is more the pack predator than the solitary hunter. Devoted to the community in which he dwells, he is dedicated to the protection of humanity as a whole, and immersed in a support group of similar beings with a long-standing set of traditions. A Benandante is usually a social being, well-adjusted and comfortable with his dual nature, which he has known about since his birth. He has no reason to hide and is in fact a respected member of his community, well regarded by his neighbors whether he is the mayor or a dirt farmer.

Between his holy charge and his long membership in the group, the Benandante (at least during the medieval period and earlier) is almost always an ethical being, rarely if ever using his shifting abilities for personal advantage. Some Benandanti never shift except when called to do battle; others may make limited use of their abilities in more mundane situations. In any case, a sense of responsibility toward their neighbors tends to govern their behavior, in wolf form or not.

Ecology

Despite their special abilities, Benandanti are born from normal humans, and these almost exclusively from eastern and southeastern European ethnic groups; northern Italy and the eastern reaches of Germany are as far west as the Benandanti ever ranged, and far more were based around the Baltic Sea. (In a modern or future setting, of course, a Benandante can appear virtually *anywhere* -- often without any idea what he is.)

The Benandanti shifting talent is not a dominant trait and rarely if ever runs in families. It is far more likely for them to appear at random among families of every social and political station, marked at birth by the caul, making necessary the Benandanti's close relationship to the midwives and other healers of their communities.

Culture

The Benandanti consider themselves part of the culture in which they are born, and although they do form cohesive groups, they do not consider themselves separate from the other humans in their communities. They live ordinary lives among those without the gift, working hard, going to church, making friends and choosing wives and husbands from among "normal" people. They maintain especially strong ties to the midwives and other folk-healers who may be called upon to oversee births, so as to ensure that all with the gift are identified as soon as possible.

Any suggestion that they form their own Benandanti-only communities would be met with puzzlement at best and derision at worst. They do not see themselves as a race apart, but simply as humans with a special gift that allows them to protect their neighbors.

They do maintain a body of detailed oral tradition about their natures and duties, though, and thoroughly transmit these traditions to new members. A young Benandante will usually have other Benandanti from the local band as godparents, who will see to his education at the proper time. He is usually made aware of his talent and fellows about the time he can talk.

All Benandanti will be at least nominally Christian. While there are no Jewish Benandanti in the historical setting, in later, more cosmopolitan milieux intermarriage may produce Benandanti of almost any religious and ethnic background -- particularly in those unaware of their heritage.

Politics

While any given Benandante may be as political as he cares to be about his local community, Benandanti groups as a whole are apolitical. They serve and protect the people against the forces of Hell; in comparison to that, interhuman conflicts are petty squabbles unworthy of consideration. It would take a regime or individual of extraordinary evil (at least as bad as the *strige* and *stregoni*) to make the Benandanti even consider using their gifts against other humans.

Benandanti in the Campaign

Benandanti are a natural addition to a *GURPS Russia* campaign, and can be added to just about any other game set in medieval Europe. A strictly historical setting can make use of the Benandanti, either as a deluded fertility-cult holdover or as a surprise "colony" of real magic. In either case, they will be an open secret wherever they operate, supported by farmers (who benefit, theoretically, from their efforts), midwives (who identify the next generation as they are born), and (on occasion) by sympathetic members of the clergy (who either are aware of the war they fight, or are simply tolerant of what they see as harmless peasant traditions). The average peasant will probably know of them, but anyone higher socially than the local mayor or town priest will probably be unaware of the Benandanti's existence -- unless they have roots or connections in the lowest levels of society.

((START BOX))

@C-BOXHEAD:Other Settings

@TEXT-BOX:In addition to historical Earth (where they may or may not actually have shapechanging abilities), Benandanti are easily inserted into any medieval (or earlier) setting with an appropriate Good-Evil polarization in the local religions.

@TEXT-BOX:*GURPS Fantasy*: Yrth, for example, is a perfect candidate; the Banestorm simply swept up a pack of Benandanti along with all its other Earthly transportees. Whether or not the mysterious "commander" cited by some groups exists in or can reach Yrth is up to the GM's intent and his interpretation of the Benandanti's testimony. If the "commander" is a supernatural being, he may be able to oversee two groups in two different universes at once, or perhaps the Benandanti have died out in modern Earth and he has turned to their extraplanar descendants. Or perhaps another master entirely has adopted the Yrth Benandanti...

@TEXT-BOX:The relationship between the Benandanti and the various Earth-born religions in Yrth remains the same -- both Christian and Muslim orthodoxy revile them, and Jews will treat them with suspicion. The attitude of the bizarre Shinto-Buddhist-Zen-Monty-Python hybrid religion of Sahud is less clear; in general, though, the Sahudese seem to regard the Benandanti (and other weres, as well) as *hengeyokai* (see pp. 00-00), and thus a fact of life which is either ignored or placated as needed.

@TEXT-BOX:*GURPS WWII*: The Nazis were perhaps the greatest evil to arise in Europe in centuries, and the impact they had on Eastern Europe... The Benandanti who had survived to the Twentieth Century may well have said, "These *are* the forces of Hell," and founded, joined, or simply aided the Resistance in every Nazi dominated country where they dwelt. But powerful as they are, the Benandanti are not immune to bullets, so the fight is more balanced than it may seem at first. Add in the mysterious SS "Werwolf" troopers, and the struggle may be even harder. This kind of campaign can range from a "straight" WWII setting with the Benandanti as the only outre element, all the way to a "High Weirdness" WWII incorporating SS werewolves, Nazi sorcerors and even a quest for the Spear of Destiny.

@TEXT-BOX:*Modern settings*: In worlds like those of *GURPS Black Ops* or *The X-Files*, the Benandanti can make for unsuspected neutrals or even surprise allies, depending on the level and type of conflict the players encounter. The Company and its operatives would unfortunately suffer a certain level of prejudice against the Benandanti, though, leading to at best a tense state of detente between the two groups and at worst a war of extermination.

((END BOX))

Depending on the player characters involved, the Benandanti can be Patron or pursued, friend or foe. Parties with strong connections to the Catholic Church (or the campaign equivalent) can find themselves tracking down the werewolves on behalf of the Inquisition. Whatever their role in the campaign, though, the Benandanti will most likely remain hidden in plain sight, like a random-dot stereogram -- invisible unless and until one looks for them in just the right way.

All Benandanti, All The Time

An innovative GM may choose to run an all-Benandanti campaign. Such a game could have much in common with "team espionage" campaigns, as the PCs attempt to dodge both the Inquisition and agents of Hell while still fulfilling their obligations to the simple farmers who rely upon their protection. While historically the Benandanti tended to be more or less permanently based in supportive communities, the classic "wandering do-gooders" campaign model could still be employed without fatally disrupting the core paradigm. In either case, the game can be tuned from meticulously realistic to mythic with ease; the primary concern being finding the right mix of goals and opposition for the party to face. At one end of the scale, the flavor can be rather like an odd medieval pulp/noir novel, as the possessors of hidden and strange power work for the good of Mankind amidst the shadows of a hostile world. At the other end, the game may grow to resemble *GURPS Werewolf: The Apocalypse*, only without the oppressive, fatalistic air of imminent doom.

((START BOX))

@C-BOXHEAD:Benandanti in *GURPS In Nomine*:

@TEXT-BOX:In the world of the War Between Heaven and Hell, the Benandanti are the forgotten Soldiers of Uriel, established by him shortly before the Purification Crusade as Earth's last defense against the creatures of myth. Knowing his attention would be turned elsewhere for a long time, Uriel arranged for membership in his mortal forces to be hereditary, and the groups themselves self-perpetuating and self-governing.

@TEXT-BOX:Partly as a sop to Jordi (who was already up in arms over his ethereal activities), Uriel patterned the organization of his Soldiers after wolfpacks, and gave them the secret Corporeal *Song of Wolf*, (see box) which turns its singer into a man-beast fighting machine. He also provided them with the Corporeal Song of Dreams, with which they were intended to communicate with Uriel's "base camp" in the Marches.

@TEXT-BOX:Uriel's long-term plan was to hand command of the Benandanti over to Jordi outright in exchange for a reduction or cessation of Jordi's hostility toward the Archangel of Purity. But Uriel never got around to presenting his "peace offering" to Jordi, and told no one else but his loyal lieutenants about the Benandanti, before he was recalled into the Higher Heavens.

@TEXT-BOX:And no one told the Benandanti that Uriel was gone. During the Middle Ages, the occasional Tsayadite would appear to dispatch orders to the Benandanti. In recent centuries, though, this has dwindled off as the Tsayadim grew more and more concerned with the Marches. But the Benandanti persevere, maintaining their traditions and loyalties. Meanwhile, their uncounted, ignorant descendants may be found not only in Europe, but scattered across the globe, simply awaiting the proper Song to

awaken fully to their heritage. Not every person born to a Benandanti bloodline has to potential to become a Soldier, but those that do are far more common than in the rest of humanity.

@TEXT-BOX:It is perhaps the ultimate irony that in his bid to create a final line of defense against the old creatures of myth, Uriel effectively created a *new* creature of myth.

@TEXT-BOX:Benandanti in *GURPS In Nomine* will usually have a minimum of 150 points (and frequently more). They do *not* use the "racial" package given on pp. 00-00, but instead use the following alternate template:

@C-BOXHEAD:Benandante 69 points plus the skill cost of the Song.

@TEXT-CSTATS:*Attributes*: ST +2 [20]; HT +2 [20].

@TEXT-CSTATS:*Advantages*: Awareness (Symphony) [15]; Essence Control/8 [23] (minimum); Power Investiture (Corporeal)/2 [20] (minimum); Unusual Background (Benandanti) [5].

@TEXT-CSTATS:*Disadvantages*: Duty to Heaven (originally Uriel) (6 or less) [-2]; Enemy: Forces of Hell [-20] (Roll: 6 or less, ¥1/2); Sense of Duty to Humanity [-15].

@TEXT-CSTATS:*Skills*: Whip (Iron Whip)-DX [4].

@TEXT-CSTATS:*Songs*: The Corporeal Song of Wolf-19 (an effective level of 16 on the Corporeal plane) [variable]

@TEXT-CSTATS:*Quirks*: Congenial [-1].

@TEXT-BOX:The Unusual Background cost represents being born into a Benandanti bloodline. (The requirement of a caul is mere folklore in this setting.) While the Iron Whip skill is automatically acquired upon "awakening" (it is encoded into the Benandante genes), an actual iron whip is not. Such whips are Corporeal or Ethereal artifacts forged by the few remaining Tsayadite crafters of such objects.

@TEXT-BOX:"Unawakened" Benandanti are unaware of or otherwise distanced from their heritage, and have not learned the Song of Wolf, nor do they have the Duty to Heaven/Uriel or the Enemy. Their Awareness and Investiture often lead them into "mystical" occupations and hobbies, and they occasionally become Soldiers for other Archangels. (Not surprisingly, these Soldiers serve Jordi more often than any other Superior.) It is also possible for an unawakened Benandante to become a Soldier of Hell -- in such a case, though, they permanently lose all ability to use the Song of Wolf.

@TEXT-BOX:An Aware Benandante can detect a potential or active Benandante Soldier with a simple IQ roll if he is within one hex.

@C-BOXHEAD:Song of Wolf

@D-BOXHEAD:Corporeal Only (Secret)

@TEXT-BOX:This Song was created by Uriel in the middle of the sixth century AD for the sole use of the Benandanti, the special Soldiers he created in the early part of the Christian era. The Song seems to be keyed specifically to some hereditary trait possessed by the Benandanti; those without this trait cannot successfully perform it. At the present time, only those Benandanti who still follow the old ways know and teach the Song; it is unknown to any existing Celestial except perhaps a select very few of the

Tsayadim.

@TEXT-BOX: Briefly, the Song of Wolf turns its singer into a humanoid wolf-man of fearsome countenance and impressive combat ability. To accomplish this, it seems to combine the features of several other Songs into a single composite result. Not surprisingly, it costs a large amount of Essence, with a corresponding Disturbance in the Symphony. The "flavor" of the Song's Disturbance is unique and easily-recognized, although few Celestials have ever encountered it, and fewer still know what it *is*.

@TEXT-BOX: The Song of Wolf appears to combine Corporeal Form, Numinous Corpus Fangs, and Numinous Corpus Claws, along with an undeniably unique Numinous Corpus Ornamental which is responsible for the majority of the user's physical transformation. The singer sprouts fur and muscle, his head and face become notably canine, and his feet and legs become digitigrade, adding an apparent six to ten inches to his height from the reconfiguration of the ankles and toes. The hands remain human in form, allowing tool (and weapon) use.

@TEXT-BOX: *Affiliation:* Purity, Animals

@TEXT-BOX: *Base Cost to Perform:* 5; 3.

@TEXT-BOX: *Duration:* (Degree of success) ¥ ten minutes

@TEXT-BOX: *Additional Disturbance:* the Degree of Success, *after* the user returns to human form.

((END BOX))

Variations

As noted elsewhere, some historical Benandanti described their transformations as spiritual, not physical. To represent this, add the *Projected Were-form* limitation (p. 00) at the -25% level to the package described on p. 00.

Most such bands which claimed a spiritual transformation also had gender-linked abilities for their members. While men were capable of the wolf form, women were dreamwalkers. In such a case, female Benandanti could be quantified either with Astral Projection, or with the Path of Dreams from *GURPS Voodoo* (p. VO74-74). Note that dreamwalkers who use Astral Projection may also possess True Astral wereforms (see box, p. 00).

Finally, modify or remove the Duty, Enemy and External trigger value as needed for campaigns that do not use a medieval European setting or some facsimile thereof.

Benandanti Characters

Benandanti characters work best in campaigns with a point total of at least 150 and preferably more. At the lower end, a basic Benandante will probably be a typical medieval villager, other than for his gift -- one or two attributes raised slightly, a small range of skills at good levels, including one profession at a somewhat higher level -- competent, but not exceptional, even in were-form. Campaigns with higher point budgets will allow more flexibility and more impressive performance, but may tend to crowd non-Benandanti out of the picture unless equally exotic options are available for other character types.

Remember, too, that Benandanti are undercover special agents for a force that transcends mortal

authority. In almost all cases they will be productive and outgoing members of whatever society into which the GM sees fit to insert them, often model citizens; whether their role as supernatural protectors is known to their neighbors depends on the setting as well.

Whether publicly-known or not, Benandanti in more modern or future settings will tend toward professions in which they protect and serve others -- police, military, medical (particularly paramedics and other emergency personnel), even security guards and private investigators. In less sophisticated game worlds, they are more likely to be farmers, blacksmiths, and other occupations that do not take them on the road; they prefer to stay in the communities where they grew up and where they know all their neighbors.

This assumes the Benandanti in question are aware of their heritage. If they are not, they can be in almost any trade, and may not discover their ability to change until time of great stress or during exposure to great evil. In a campaign with sufficient points and a compatible background, the Benandanti shapeshifting talent would make an excellent Secret Advantage (p. CI16).

((START BOX))

@C-BOXHEAD:Sample Character: Carlo Ravelli 150 points

@D-BOXHEAD:Blacksmith and Benandante

@TEXT-BOX:Age 29; 5'9"; 170 lbs.; a homely fellow with a ready grin, curly black hair, brown eyes and an olive complexion.

@TEXT-CSTATS:**ST** 14 [45]; **DX** 11 [10]; **IQ** 10 [0]; HT 12 [20]

@TEXT-CSTATS:Speed 5.75; Move 5.

@TEXT-CSTATS:Dodge 5; Parry 8.

@TEXT-CSTATS:**Damage:** *Punch:* 1d-1; *Kick:* 1d+1; *Thrust* 1d; *Swing* 2d

@TEXT-CSTATS:*Advantages:* Animal Empathy [5] (Reaction: +2/+4); Benandante were-form [65] (External Trigger: Quarterly call to arms, only to were-form, occasional, not exclusive: -50%); Reputation: Benandante, among other Benandanti +2 [1] (Reaction: +1; Recognized by: Small class, ¥1/3; Frequency of Recognition: Sometimes (10-), ¥1/2); Reputation: Benandante, in home village +2 [3] (Reaction: +2; Recognized by: Small class, ¥1/3); Unusual Background: Born with a caul [5].

@TEXT-CSTATS:*Disadvantages:* Appearance (Unattractive) [-5] (Reaction: -1); Bloodlust [-10]; Compulsive Generosity [-5]; Enemy: Inquisition [0] (Roll: 6 or less, ¥1/2; Included in Benandante package); Pacifism (Cannot Harm Innocents) [-10]; Post-Combat Shakes [-5]; Sense of Duty: Villagers and nearby farmers [-5].

@TEXT-CSTATS:*Quirks:* Careful; Congenial; Prays before every meal; Quietly proud of his smithcraft; Speaks slowly and carefully. [-5]

@TEXT-CSTATS:*Skills:* Animal Handling-12 [1]; Area Knowledge: Home Village-12 [4]; Area Knowledge: Local Countryside-12 [4]; Axe/Mace-12 [4] (Parry: 6); Blacksmith/TL4-14 [10]; Brawling-12 [2] (Parry: 8); Hidden Lore (Benandanti)-12 [6]; Intimidation-10 [1]; Iron Whip-11 [0] (Parry: 5; Included in Benandante package); Leadership-12 [5]; Lifting-11 [1/2]; Packing-11 [1/2];

Swimming-10 [1/2]; Teamster-13 [1]; Veterinary/TL4-11 [1/2].

@TEXT-CSTATS:*Languages*: Italian (native)-11 [1];

@TEXT-BOX:Carlo Ravelli is an accomplished blacksmith living in a small village in the north of Italy during the late 17th century. He is also a Benandante -- a werewolf appointed by the forces of heaven to protect the crops and lives of the peasants in his area from the depredations of the forces of Hell. In this alternate, secret-magic Earth, those forces are very real, and so is Carlo's ability to transform into a 6'6" wolf-human hybrid.

@TEXT-BOX:For nine years, Carlo has been a member of a small band of Benandanti based in his village. Numbering seven all told, it formerly numbered eight, but in the last winter raid upon the gates of Hell, the band's last nominal leader was killed by one of the cursed *stregoni*. Forced by circumstances to rally his band in the midst of the combat, Carlo has since found himself stuck with the job of leader by the general acclimation of his fellows. Even though he is unsure he wants the job, he has learned quickly and well, and none of the other Benandanti in the group has had any complaints about his performance. Of course, he rarely has to do *anything*, but that suits the others just fine.

@TEXT-BOX:Carlo has a slow and careful way with words that sometimes deceives strangers into thinking he's dull-witted -- an opinion often reinforced by his willingness to give his last lira to a friend or neighbor in need. While not the most skilled of blacksmiths, he still turns out quality work in which he takes a quiet, private pleasure. He is a widower, having lost his young wife to smallpox several years back. Despite his homeliness, several young ladies in the village would eagerly become his second wife, but he still mourns and shuns any suggestion he should remarry.

((END BOX))

Bionitech F2-ATV Biodroid

New for this season! The F2-ATV Biodroid is the go-anywhere, do-anything accessory of the year! Sleek styling and classic fur patterning combine with Bionitech's patented Multi-Form™ technology to produce a delightful accessory-pet that is both sophisticated *and* rugged. Equally at home in the drawing room and on a mountain trail, the F2-ATV is the premiere biomorphic companion/vehicle on the market today!

-- Fall 2157 Bionitech (LLC) Advertising Flyer

In one distant future, technology has advanced extraordinarily far in both the materials and biological sciences, until an unexpected common ground was found between them. This surprising synergy revolutionized dozens of fields, not the least of which were robotics and transportation.

The Bionitech Corporation is the premiere commercial organization exploiting these discoveries; the introduction of its first "biodroid" made the company an overnight success. It was the first manufacturer to successfully merge inorganic and organic technologies into a seamless, shapechanging whole.

Its most recent release is the high-end F2-ATV -- an off-road sport/utility vehicle which is also a handsome and charming pet suitable for almost any household. Described in the sales brochures as "attractively bimorphic," the F2-ATV spends its "down time" in a form that is constructed from a combination of the most attractive features of both cats and ferrets. Low-maintenance and "conveniently

pre-housebroken," the F2's bioform is safe around children and furniture, is easy to train, and is extremely loyal and affectionate.

If that were all there were to the F2-ATV, though, it would be far from a top-of-the-line bio-engineered product. What sets the F2 apart from any number of other chimeric and cloned pets is its ability to turn into a full-featured off-road vehicle. The F2's SUV form is a far cry from the 4x4s of the 20th Century, though. Its smooth organic lines emphasize its flexible segmented chassis. Combine that with its four independent axles, eight wheels and a top-of-the-line gyrobalance system, and the F2-ATV is clearly a vehicle designed for the rough-and-tumble requirements of the true outdoorsman.

(((START BOX)))

@C-BOXHEAD: Campaign Roles

@TEXT-BOX: A good example of the weremachine, the F2-ATV is, by design, something of a cross between a tool and a Dependent. The intended effect is Lassie incarnated as a Jeep.

@TEXT-BOX: Most of the time, the F2 will be an NPC, run by the GM. Such a character will of a necessity be relegated *usually* -- to a support role. Fortunately, this is not the sole case. An F2-ATV, like any other character, earns character points, and can improve itself thereby. The "apocryphal" stories of independent-minded F2s are not urban legends, but accounts of those vehicles which were able to buy off their Slave Mentality disadvantages and which chose to remain loyal to kind owners. Such a character, particularly among open-minded compatriots, could become a very valuable member of an adventuring party.

@TEXT-BOX: On the other end of the spectrum, it is possible for an F2-ATV to "go bad." As a result of any number of traumas and stresses, an F2 could acquire mental disadvantages that would effectively break its Slave Mentality and let it go "rogue". (The GM is directed to the films "Christine" and "Duel" for inspiration here.) The result can be an unpredictable "bug hunt" adventure, spent chasing a shapeshifting SUV across every type of inconvenient terrain the GM desires.

@TEXT-BOX: A variant on this adventure seed would be to present an ostensibly "rogue" F2-ATV, seemingly attacking people at random in its vehicle form; but if the PCs take the time to determine just what drove it rogue, they will find the murder of a beloved owner or some other injustice that it feels it needs to redress in its own limited way.

@TEXT-BOX: Possibly more interesting (and unexpected) would be the inverse of this situation -- an F2-ATV continuously in the background of the apparent main action, acting in all ways normal and seemingly on innocent business, but which turns out to be a rogue of unusual intelligence and subtlety. By maintaining the appearance of its usual routine, it hides a secret that may be the key to the matter at hand -- or to an intriguing subplot.

(((END BOX)))

F2-ATV Biodroid (TL10) 179 points

F2-ATV Off-Road Robot Model Package 402 points

Brain: Normal cyborg brain (small bioengineered animal, .33 lbs., .01 cf, \$12,500, 80 points); companion brain is standard with sentient and +2 DX booster options (10 lbs., 0.2 cf, \$33,750, 0 points with cyborg), Complexity 5.

Sensors: Basic sensors with radar imaging/1 (1 lb., .02 cf., \$3150, LR6, 50 points).

Communicator: Basic communicator (.25 lb., 0.005 cf., LR6, \$125, 15 points).

Drivetrain: Wheeled drivetrain with 15 KW motive power (52.5 lbs., 1.05 cf, \$1050, 15 KW).

Accessories: Gyrobalance (\$1250, 15 points); Inertial Navigation System (10 lbs., 0.2 cf, \$12,500, 5

points); Spotlight (2.5 lbs., 0.05 cf, \$25).

Power: Power requirement 15 KW. One TL10 hydrogen fuel cell with 15 KW output (100 lbs., 2 cf., \$500). Five-gallon self-sealing fuel tank gives an endurance of 22.22 hours (0 points).

Subassemblies: Eight wheels.

Body Design: Body houses all components except wheels, including eight exposed normal passenger seats (320 lbs., 160 cf, \$800) and a 10 cf trunk.

Wheel Design: Eight wheels (3.4705 cf).

Surface Area: Body 200, wheels 14.

Structure: Standard medium, biomechanical and flexible, 642 lbs., \$160,500.

Hit Points: Body 300, wheels 5 each.

Armor: DR 3 ablative (7.704 lbs., \$61.63, LR 6, PD 2, 58 points). Waterproof (\$428).

Other: Safety interlock prevents transformation back to pet form if a living creature greater than 1 lb. in weight is in any of the seats. Option packages available.

Statistics: 1,653.78 lbs. (2,651.73 lbs. with eight passengers and full trunk), 177 cf (22' long), MSRP: \$226,840.13. Body ST 600 (No Fine Manipulators, -40%) (276 points); DX 13 (30 points); IQ 8 {-15 points); HT 12/300 (1460 points). Ground speed: empty: 34.07 (71.75 mph); loaded: 26.9 (56.65 mph) (35 points). Floats. Legality Class 6. Model Point Cost: 402 points. (Model point cost divided by 5 for completely nonhuman appearance per p. RO50.)

While some potential buyers may feel that its near-quarter-million-dollar price tag is unnecessarily exorbitant, Bionitech hurries to disagree. The company is quick to point out that the price of a comparable high-end off-road vehicle from a manufacturer such Land Rover or BMW-Rolls can match or exceed that of the F2-ATV yet still lack the unique dual nature that makes the F2-ATV so distinctive.

Personality

The F2 is designed to be as much a companion as transportation, and to that end, the model has been engineered to be as compatible with humans as possible. They are affectionate and gregarious, and while they demonstrate a cat's independence and ability to care for itself, they have none of the typical feline aloofness. Furthermore, they have been known to "imprint" or "bond" with their owners, demonstrating an almost canine loyalty that has surprised their designers. Playful and frolicsome in pet form, the F2 is all business when it turns into a vehicle -- those that aren't never make it out of the manufactory.

It is known that individual vehicles often develop widely divergent personalities. While much of this can be attributed to the random factors involved in the use of an organic brain, clearly just as much comes from the "life experience" of the vehicle. And of course, the effects of environment and experience do much to shape the vehicles' "minds."

Nowhere is this last more pronounced than in the case of gender identification. Although technically neuter, F2s often acquire an ersatz gender identity, if only by association from the terms of address used

by their owners. Since the majority of owners tend to refer to their vehicles as "she," most F2s view themselves as female. Oddly enough, despite the lack of any biochemical cues one way or another, significant and consistent -- some say stereotypical -- behavioral differences emerge, with "females," "males," and the few who retain a neuter identity all developing radically different styles of interaction with their owners and other F2s.

((START BOX))

Names

F2-ATVs are almost always named by their owners; the kind of person who *wouldn't* name at least the pet form would not buy this product. As F2s have no "native" culture of their own, there is precious little consistency among their naming save that imposed by the demographics of their owners. Their names can range from the distressingly cute to the bluntly macho to the coyly pretentious, depending on the social status of the owner and the primary use to which the vehicle is put. The listing of entrants in a cat or dog show -- both full names and nicknames -- can be a useful resource for naming one or a flock of F2-ATVs.

((END BOX))

Performance

Bionitech understands the special bond between pet and owner, and with this in mind (according to their literature) has avoided so-called "planned obsolescence" in the design of the F2-ATV. Using as their base the "natural" lifespan of the bio-engineered cat-ferret hybrid that makes up the "pet" form of the vehicle, Bionitech engineers created a vehicle design that, with regular care and maintenance, should provide exceptional service for at least 15 years. Owners are warned, though, that once the pet form reaches the end of its lifespan, the vehicle will cease to be operational. This is an unfortunate consequence of the F2-ATV's dual nature; despite the apparent mechanical construction of the vehicle form, it is in all regards as "alive" as the pet form, and despite the great difference in appearance and abilities, it is *not* a separate entity distinct from the "pet." It is, as the corporation's bioengineering department says, simply a different expression of the same potentials.

And, as Bionitech so aptly demonstrates, that expression can be controlled. The F2-ATV -- as delivered -- has no ability to shift from one form to the other on its own initiative -- it can only do so at the request of its owner. That owner is the individual or individuals to whom the "pet" form has bonded, and to whom it displays loyalty. The pet can split its loyalty between at most two persons, facilitating both joint ownership and resale. In the latter case, while "command rights" are immediately transferred to the new owner, the actual bond of loyalty takes several weeks to shift -- an unavoidable consequence of using an organic brain as part of the system.

Another control built into the vehicle is a safety interlock that prevents a transformation to pet form while living creatures (greater than 1 pound in weight) are in any of the seats. The F2-ATV "takes along" any cargo it is carrying with its vehicle form whenever it assumes pet shape, obviating the need to unpack the trunk just to deactivate the vehicle. While in theory this "storage" should have no detrimental effects on living beings, and the safety of nonliving objects has been clearly demonstrated, prudence (and the Bionitech legal department) suggested the necessity of a safety interlock to prevent unfortunate and

unforeseen accidents.

Of course, with any vehicle as revolutionary as the F2-ATV, there are bound to be rumors, stories and even urban legends circulating about it. Apocryphal tales tell of F2s with near-human intelligence and the ability to transform at will; that have retained a doglike devotion to their original owners despite being sold or traded away; of individuals in the *trunk* of a vehicle during a shift... and what happened to them. Bionitech takes no stand on such tales except to discount them as unfounded stories unworthy of serious consideration. However, privately, certain engineers within the corporation's design division are concerned about those such incidents which are well-documented; others express delight at the creation exceeding the creator's intent.

(((START BOX)))

@C-BOXHEAD:Settings

@TEXT-BOX:In the form described here, the F2-ATV can be found in any setting that supports both engineering and biotechnology at TL10. As the sample character below shows, it's a perfect adjunct to a colony or other "primitive" settlement on a distant world; it can also be a rich man's toy in more "civilized" milieux. The GM who feels that TL10 is not advanced enough for such a "technomagical" device should feel free to raise the minimum tech level needed before the F2 can be created; however, it will require redesign so that it properly reflects its new native TL. And of course, the F2 can always be the product of Weird Science at virtually any tech level above 6 (5, if the GM is twisted enough to set a self-willed steam engine loose upon his world).

@TEXT-BOX:Similarly, the inverse corollary to Clarke's Third Law (sufficiently advanced magic is indistinguishable from technology) can apply here: a vehicle like the F2-ATV can be the product of concentrated long-term effort by a large circle of enchanters -- or one of their backfires. Or it can be the result of a single warped genius with a sufficient grasp of Weird Magic. In either case, it is far more likely to be a unique artifact rather than a mass-produced item, making it all the more valuable and more likely to be a McGuffin than a simple piece of equipment -- assuming it's not a character in its own right.

(((END BOX)))

F2-ATV Characters

As noted elsewhere, a "stock" F2 is probably best employed in the "native bearer" role, especially if the campaign starting point total is below 150. With higher starting points, and a suitably cinematic mindset, there is no reason an F2 can't be a full member of an adventuring party in its own right. (Whether or not this is actually *known* by the other members of the party is up to the GM and player; a "secret" PC can be fun to play...)

At a starting total of 150 points, it would be hard to play an F2, but not impossible. An older vehicle near the end of its life, one in need of minor repairs, or possessing unusual personality quirks, could work at this level. A 175-point budget would be more workable, but the F2-ATV character really comes into its own at 200 points and higher. Here the character can buy off Slave Mentality at creation and still have the points for a wide variety of expanded abilities. (If well-treated, though, most such F2s will take a Sense of Duty to their owner and his family in place of the Slave Mentality.) It is even possible for an F2 to buy off the Bestial disadvantage, although this is a rarity; it represents a radical change in the "wiring"

of the organic brain and the GM may feel free to disallow it without sufficient in-game explanation.

Despite the Bestial disadvantage, F2-ATVs can buy all manner of skills; many simply cannot be used while in pet form. It is not uncommon for professionals who own an F2 to teach it something of their field so that it can act as an informal assistant. F2s have also demonstrated the ability to pick up skills entirely on their own. (Some of the more obscure or difficult skills, or those far divorced from its basic nature, may require an Unusual Background cost. As always, such determinations are up to the GM.)

(((START BOX)))

@C-BOXHEAD:Sample Character: Rockhound 200 points

@TEXT-BOX:Independent F2-ATV, 6 years old, 22 feet long, 1654 lbs., cream-colored in both forms.

@TEXT-CSTATS:**ST** 4 [0]; **DX** 14 [0]; **IQ** 10 [30]; HT 13/5 [0]

@TEXT-CSTATS:Speed 6.75; Move 6.

@TEXT-CSTATS:Dodge 6.

@TEXT-CSTATS:**Damage:** *Punch:* 0d; *Kick:* 0d; *Thrust* 0d; *Swing* 0d

@TEXT-CSTATS:*Advantages:* Bought off Slave Mentality [+40]. F2-ATV Racial package [179]; Reputation +1 (Among colonists as heroic, trustworthy near-person, all the time) [5].

@TEXT-CSTATS:*Disadvantages:* Brontophobia (Mild) [-10]; Combat Paralysis [-15]; Sense of Duty to {owner} and family [-5]; Sense of duty to colonial survey team [-5]; Stubbornness [-5].

@TEXT-CSTATS:*Quirks:* Chatty while in vehicle form; Fiercely protective of "her people"; Can't get enough of the local "tikka" fruit; Vaguely uncomfortable with the Bestial aspect of her pet form; Hides the fact that she has the Change Control skill. [-5]

@TEXT-CSTATS:*Skills:* Area Knowledge (Colony Settlement)-12 [4]; Area Knowledge (Surrounding terrain)-13 [4]; Change Control-10 [4]; Geology/TL10-9 [2]; Planetology (Earthlike)-9 [1]; Prospecting-10 [2]; Savoir-Faire (Colony)-10 [1]; Surveying/TL10-9 [1].

@TEXT-BOX:"Rockhound" is an F2-ATV technically owned by Dr. Clothilde Pollotta, geologist, planetologist and surveyor currently settled in the new colony on Kessler's World, an earthlike (though geologically active) planet with great potential mineral wealth. As the leader of the colony's survey and exploration team, Dr. Pollotta (and by extension her family) was granted effective ownership rights to one of three F2-ATVs assigned to the settlement.

@TEXT-BOX:Actual ownership rights vanished quickly. In the rough-and-tumble early years of the colony, colonists gained experience and expertise quickly -- and so did their F2s. Named "Rockhound" by Clothilde's then-12-year-old daughter Emily, this particular F2 demonstrated unusual intelligence and an eagerness to serve.

@TEXT-BOX:But it was only when an unexpected natural gas blowout during a survey left most of the team injured and forced Rockhound to rescue them on her own initiative that the F2 shattered the artificial bonds on its personality and will. Tossing aside the remains of her Slave Mentality, Rockhound pushed herself far beyond her operational limits and discovered that she could draw upon aspects of one

form while in another. By blending features from both pet and vehicle forms, she was able to bring the team to safety as she radioed the colony for help. Although the incident left her with a mild fear of loud noises, the respect and praise she received in its wake has only helped solidify her new personality into its current helpful, energetic form.

@TEXT-BOX:Since then, Rockhound has surprised Clothilde by being an enthusiastic (if not always stellar) student in the fields in which she finds herself most commonly employed. She has learned quite a bit from accompanying Dr. Pollotta on surveys and exploration runs, and once Clothilde discovered this, she decided to tutor Rockhound directly to turn her into a more useful asset. While Rockhound in no way is capable of acting as a professional in her own right, she knows enough to be an able assistant. Furthermore, her independence and high intelligence allow her to run errands and perform chores that the other F2s in the colony are as yet incapable of handling on their own.

@TEXT-BOX:So far, no one has really noticed that Rockhound has broken free of her Slave Mentality, and it's arguable whether at this time anyone in the colony would care if they knew. She is known and trusted throughout the colony, and in fact is appreciated all the more for her initiative and common sense.

@TEXT-BOX:GMs please note that Rockhound is built on the assumption that all action takes place on Kessler's World. If for any reason the action leaves the colony planet, her point value will drop as her Reputation base will change from "Everyone in the campaign setting" to "Small group."

(((END BOX)))

Bioprobes

NASA Communications Transcript, Ceres I Asteroid Belt Mission, 28 June 2036:

Ceres: Say, Houston, we got an anomaly on the infrared.

Capcom: Say again, Ceres?

Ceres: Houston, we've got a hot spot on the dark side of this rock. Scope says the damn' thing is almost a hundred degrees C.

Capcom: We copy, Ceres. You are authorized to investigate.

Ceres: Roger that, Capcom. Firing maneuvering thrusters and turning on the headlights. ETA 20 seconds.

Capcom: Acknowledged, Ceres.

Ceres: What the [expletive deleted]? Look at that!

*Ceres: Houston? You're not going to believe this. There's something **eating** the asteroid.*

Capcom: Say again, Ceres?

Ceres: There's something on the asteroid, Houston, and it's alive...

The first of their kind speared on the hubward edge of settled space no more than 70 standard years ago. Since then, their numbers have grown in periodic bursts.

With rare exceptions, they do not communicate with anything other than their own kind. Face-to-face diplomatic efforts are ignored, or worse, "harvested." Attempts at telepathic contact invariably fail, running into a blank, black wall of psionic vacuum. And while it's clear that they are intelligent, after a fashion, it's not at all certain that they *think* in any way recognizable to us.

They arrive singly and depart en masse, consuming voluminous resources in the process -- resources that start with asteroids and sometimes extend to unlucky spaceships, orbital colonies and their occupants, as well as the occasional remote settler -- resources that some have chosen to defend, to their detriment. The mere arrival of one in a system is justification for a military deployment on a scale sufficient to repel an interplanetary invasion. They are hated, feared, dissected, studied.

They have no name of their own that galactic civilization is aware of. Spacers call them "asteroid termites," "star moles," and "those damned things." Colonists have called them "wolf-locusts." Certain governments call them "the plague." Biologists call them living machines, bioengineered lifeforms designed to live their lives in vacuum and microgravity, traveling from star to star. The general public knows them as "bioprobes."

They are an unknown civilization's answer to the problem of exploring the galaxy -- a civilization that either didn't know or didn't care that there may be others already making use of the resources their probe-creatures would covet. They consume the flotsam of solar systems and reproduce themselves, swarming in all directions with the apparent intent to fill the observable universe. And woe to anyone who tries to stop them...

If their remote ancestors ever had a single specific homeworld, its characteristics cannot be determined from their biology. Between the adaptations that suit them for life in deep space and the wild changes individuals can undertake at a moment's notice, it is not likely any of their original genotype survives in quantities sufficient to plot their world of origin.

Advantages and Disadvantages

There are three distinct varieties of bioprobe, corresponding to the stages in their lifecycle and utilizing the optional "once only shifter" rules found in the sidebar on p. 00:

Larval Form 423 points

@TEXT-CSTATS:*Attributes*: Enhanced ST 40 [180]; HT +2 [20]; Extra Hit Points +10 [50].

@TEXT-CSTATS:*Advantages*: Claws [40]; Clinging (Requires 0 G, - 50%) [13]; Collected [5]; Damage Resistance +5 [15]; Disease-Resistant [5]; Doesn't Sleep [20]; Flight (Space Acceleration 1G, +25%; inertialess) [50]; Mindshare (Hivemind, intelligent drones, system-wide, 100-999 drones) [95]; Once-Only Shapeshift plus "placeholder" [33]; Predefined Once-Only Shapeshift to Factory/Mother form (Only usable in Rover form, -5%) plus "placeholder" [10]; Predefined Once-Only Shapeshift to Rover form plus "placeholder" [10]; Single-Minded [5]; Six Legs [10]; Tunnel [40]; Unaging [15]; Vacuum Support [40].

@TEXT-CSTATS:*Disadvantages*: Acceleration Weakness [-5]; Bad Grip [-10]; Callous [-6]; Centauroid [0]; Clueless [-10]; G-Intolerance [-20]; Hidebound [-5]; Illiteracy [-10]; Increased Life Support ¥ 4 (vacuum-and-microgravity organism with exotic silicon biochemistry) [-40]; Mute [-25]; No Sense of

Humor [-10]; Odious Racial Habit: Treats Other Sentients as Animals and Raw Materials -3 [-15]; Reclusive [-10]; Reputation -4 (Dangerous, unpredictable monsters, known throughout galactic civilization, all the time) [-20]; Staid [-1]; Sterile [-3]; Stubbornness [-5]; Weakness: Cold, 1d/30 minutes [-10]; Weakness: Free Oxygen, 1d/minute [-40].

@TEXT-CSTATS:*Skills*: Survival (deep space) at IQ+1 [4]; Engineer/TL1 (Mining) at IQ+2 [8].

"Pre-adapted" larvae (see p. 00) use the absolute minimum number of points necessary to adjust to their birth environment. Any points left over are retained as a smaller Once-Only Shapeshift of proportionally lower utility.

Rover Form 9 points

As larva, but with following changes:

@TEXT-CSTATS:*Attributes*: Apply -40% "No Fine Manipulators" limitation to ST [-72].

@TEXT-CSTATS:*Advantages*: Remove Placeholder for change to Rover form [-1, doesn't count against Rover total]; Six Legs [-10]; Tunnel [-40]. Add Damage Resistance +5 [15]; Doesn't Eat or Drink [10]; Hyperflight [50]; Passive Defense +2 [50]; Super Flight ¥ 2 [40]; 3D Spatial Sense [10].

@TEXT-CSTATS:*Disadvantages*: Remove Bad Grip [+10]; Centauroid [0]. Add No Manipulators [-50]; Short Arms [-10].

@TEXT-CSTATS:*Skills*: Add Astrogation (Hyperflight) at IQ+2 [6].

Like larvae, rovers may be "pre-adapted."

Factory/Mother Form 8 points

As rover, but with the following changes:

@TEXT-CSTATS:*Attributes*: Although DX becomes meaningless, points spent on it do not change and are not reallocated. Extra Hit Points +20 (Sessile, -75%) [25].

@TEXT-CSTATS:*Advantages*: Remove Doesn't Eat or Drink [-10]; Claws [-40]; Flight [-40]; Hyperflight [-50]; Placeholder for change to Factory form [-1, doesn't count against Factory total]; Super Flight [-40]; 3D Spatial Sense [-10]. Add Damage Resistance +15 [45]; Extra Arms (4, +2 hex length, plus +2 hex length on default arms) [160]; Fangs [10]; Passive Defense +1 [25].

@TEXT-CSTATS:*Disadvantages*: Remove No Manipulators [+50]; Short Arms [+10]; Sterile [+3]. Add No Fine Manipulators [-30]; Sessile [-50]; Terminally Ill [-50].

If the GM allows player character bioprobes, they are always *rogues* -- see p. 00.

Rogue Larva. . . . 285 points

As larva, but with following differences:

@TEXT-CSTATS:*Advantages*: Remove Mindshare [-95] and the Predefined Once-Only Shapeshift to Factory/Mother form plus its "placeholder" [-10]. Add Psionic Resistance +10 [20].

@TEXT-CSTATS:*Disadvantages*: Add Enemy: Other Bioprobes, 6 or less [-20]; Total Amnesia [-25].

@TEXT-CSTATS:*Skills*: Remove Engineer/TL1 (Mining) [-8].

Rogue Rover. . . . 284 points

As rover, but with following differences:

@TEXT-CSTATS:*Advantages*: Remove Mindshare [-95]; Predefined Once-Only Shapeshift to Factory/Mother form plus "placeholder" [-10]. Add Psionic Resistance +10 [20].

@TEXT-CSTATS:*Disadvantages*: Add Enemy: Other Bioprobes, 6 or less [-20]; Total Amnesia [-25].

@TEXT-CSTATS:*Skills*: Remove Engineer/TL1 (Mining) [-8].

There have been as yet no known cases of rogue factory/mothers; rogues appear to lose the ability to metamorphose into the final stage of the bioprobe lifecycle. Some experts believe that this is because they have been cut off from a theoretical "meta-hivemind" that presumably approves and triggers colony formation.

Rogues' Psionic Resistance represents the last vestiges of the lost hive mind's impenetrability to telepathy. The Enemy is because ordinary bioprobes treat rogues as cancerous "cells" to be ruthlessly exterminated.

((START BOX))

@C-BOXHEAD:Names

@TEXT-BOX:The bioprobes are a race of hiveminds. Individual larvae and rovers have no need of personal names, unless they are rogues. Each colony may well have a unique personal designation, but as they do not communicate with other species, this is unknown. Galactic civilization refers to individual colonies by the name of the system they have infested. What, if any, racial name the entire species of bioprobes calls itself is unknown.

@TEXT-BOX:Rogues tend to be eclectic and somewhat random in their choices once they understand the need for names. "Fred," "Licorice Mauve," "Watering Can," and "Puppy 39" are examples of self-selected rogue names.

((END BOX))

Psychology

If normal bioprobes have any kind of sophisticated psychology, it isn't apparent to any of the trained observers who have attempted to deduce it. That they are indeed some variety of hivemind has been determined through a long series of field experiments. Direct observation has revealed behaviors that seem indicative of human-level intelligence, but experience warns that one sentient's "intelligence" is frequently another sentient's "instinct."

One thing they certainly possess is a well-defined sense of property and ownership. Unlike animals such as the jackdaw and the packrat, which gather collections of shiny items, bioprobes are apparently able to

enumerate and distinguish between individual objects. Evidence suggests they "inventory" the materials they acquire for the mother/factory's use, especially if those materials are stockpiled instead of fed directly into its consuming maw. They understand theft (at least theft from themselves), and will unflinchingly pursue thieves to the best of their ability (which can be substantial, since the hivemind allows all bioprobes of a colony to identify the stolen items and those who took them). There are accounts of larvae bioprobes attacking starships whose owners had managed to recover "scavenged" equipment and remount it.

Unfortunately for many asteroid miners and the inhabitants of several O'Neill colonies, sentient beings of all kinds -- and their dwellings -- are occasionally considered "raw materials."

Ecology

While almost nothing is known about their psychology, the biology of the bioprobes is at least partially understood. They are a silicon-based lifeform with a body temperature close to 100° Celsius. Unlike most silicon species, though, their bodies are not constructed around the stonelike oxides of silicon, but rather from many varieties of silicone polymers. They do possess a rocky outer skin, but it is analagous to the armor of an armadillo rather than indicative of their internal structure. The combination gives them extraordinary flexibility and speed for a species not based on carbon, as well as remarkable durability; they are disturbingly hard to kill.

Their physical structure, as one noted researcher has commented, is "mostly coiled potential." Although analogies are at best fraught with inaccuracies, the best comparison to be made suggests that many, maybe even most, of a bioprobe's cell-like organelles ride constantly on a point equivalent to the threshold of cell specialization in a fetus. Any given organelle, at the proper electrochemical signal, can immediately specialize as needed, becoming connective tissue, bone, new organs -- literally anything that the organism needs. Even more importantly, the creature's physical organization on that level is such that drastic changes can be implemented in seconds without apparent harm. Several universities and biotech firms are studying bioprobes in the hopes of discovering a way to reproduce this startling ability in carbon-based creatures.

Secondly, as noted elsewhere, the bioprobes are clearly an *engineered* race, as evidenced by the self-destruct mechanism in the factory/mothers and a concise, efficient genetic structure that lacks introns -- the accumulated "garbage code" that naturally-evolved species possess in abundance. They were designed to spend their entire (rather substantial) lives in vacuum and microgravity -- in their default forms, bioprobes die when exposed to anything approaching "normal" (Earthlike) conditions: their internal organs collapse under their own weight in a gravitational field greater than .1G (their native flight abilities are inertialess and thus do not stress their bodies); they burst into flames when exposed to free atmospheric oxygen (a consequence of their silicon biochemistry); and they tend to "freeze" to death in any environment that allows them to radiate their excess body heat faster than they do in the insulation of vacuum.

However, because of the race's remarkable adaptability, individuals and groups have been encountered who have overcome one or more of these restrictions. Occasionally a rover manages to reach a planetary surface by adapting to oxygen and gravity even as it undergoes re-entry. Obviously, on many worlds they may not even have to deal with oxygen, making survival that much easier. And settlers on May's World have reported encountering a colony of bioprobes which had taken up residence in a tropical ocean basin.

Rogues

Occasionally, the bioprobes' adaptability works against them. Some very small fraction (biologists estimate approximately 1 in 100,000) of the creatures mutate into independent sentient beings. These rogues are normally killed and "recycled" by their compatriots, but occasionally one escapes. Those which have survived their initial contact with galactic civilization (they tend to be targets of opportunity in many locales) have unfortunately been unable to shed any further light on the workings of the hivemind; they are always *tabulae rasae*, devoid of pre-independence memories and lacking the ability to tap into the group mind network.

Player character bioprobes will always be rogues.

((START BOX))

@C-BOXHEAD:Bioprobes in the Campaign

@TEXT-BOX:As written, bioprobes can function as a combination villain/natural hazard. The exact proportion between the two is dependant, of course, on the needs of the campaign, but the GM can easily tune a colony's personality anywhere between mindless ants and malicious monsters.

@TEXT-BOX:Although intended for *GURPS Space*, with tweaking the bioprobes can be used in other settings. Both *Atomic Horror* and *X-Files*-style settings can exploit probes which have adapted themselves to planetary surfaces. It's recommended that larval Flight abilities be removed to provide a more traditional "ground war against the monsters" type of campaign; however, retaining their ability to fly and even leave the atmosphere makes for a greater challenge. *Cyberpunk* and other SF settings that do not normally deal with creatures from outer space would also be good targets for a probe infestation; "business as usual" it most certainly will *not* be.

@TEXT-BOX:On a completely different front, little needs to be changed to turn them into magical monsters suitable for anything from a standard *Fantasy* game through *GURPS Mage: The Ascension into Cthulhupunk*. The GM may wish to alter their nature and origin -- be it to a previously-unknown Umbral denizen or some variety of Elder spawn -- or decline to explain them at all, leaving them shrouded in mystery and paranoia.

@TEXT-BOX:In any case, GMs planning on using bioprobes as invaders or monsters may want to consult *GURPS War Against the Chtorr* for useful advice and inspiration.

((END BOX))

Lifecycle

Being adapted to deep space, bioprobes normally spend their entire life cycle in hard vacuum and microgravity. Their usual "habitat," to use the term loosely, is an asteroid or protocomet belt (Oort cloud). They show a general preference for rocky asteroids, but make frequent use of metallic asteroids as well, which frequently earns them the enmity of belters and miners.

Their primary "foodstuffs" are raw silicates and metallic ores. However, they appear to require a wide variety of trace compounds, based on the many unusual "harvests" that have been reported. Witnesses have seen larvae target and acquire starship and habitat parts, depleted radioisotopes, dead powercells,

discarded plastics, water contaminated with pesticides, fertile topsoil, and any number of organic compounds, including meat, blood and even entire animals.

There are three basic stages to the life of a bioprobe:

Larvae. Bioprobes start their lives as larvae spawned by a factory/mother. Larvae are insectoid creatures, vaguely centaur-like in structure, approximately 8 feet long and three high when on all sixes. Their front two legs are adapted for cutting and crushing, with bioceramic blades hard and sharp enough to slice through light body armor, but they also have rudimentary hands with which they can grasp and lift. Additionally, they have a vacuum-tight "pouch" capable of holding volumes up to one cubic yard; gasses held in the pouch can reach a maximum pressure of 60 PSI. Materials harvested are stored in the pouch until they can be returned to the factory/mother, where they are consumed.

The larval bioprobe is a combination warrior/worker, capable of both defending the colony and gathering its supplies with equal ease. Lightly armored and as strong as five men, it can survive both a mine cave-in and small arms fire, and cut its way out of both dangers. It also possesses a low-powered pseudo-organic inertialess drive, allowing it to travel across an entire solar system in search of the raw materials the colony needs. Sometimes these raw materials include samples from gas giants; larvae have been witnessed making long, skimming flights through the upper reaches of such planets' atmospheres.

In addition to defense and "harvesting," some larvae appear to be information gatherers. Dispatched throughout the host solar system, their behavior suggests that they are exploring and investigating. Some larvae have been known to orbit planets for weeks at a time, and to tag along with intrasystem space traffic. These have been apparently entirely passive save for their motive systems, and unlike other larvae prefer to flee rather than fight.

Rovers. Eventually, the factory/mother reaches what is thought to be a saturation point. What triggers this is unknown, but when it happens, the factory ceases to create new larvae, and recalls its spawn. All larvae abandon their current tasks and return to the mother one last time; exactly why this is done is unknown, as there is no contact or exchange between the two. There each one undergoes a transformation into the form commonly called a "rover." Rovers are roughly cigar-shaped, and measure about nine feet long by three across. They are completely enclosed by a thick, rocky shell. Their six legs remain in a vestigial form, with just enough strength to anchor a rover to a surface in zero-g. They retain any adaptations they may have undergone while in larval form. The primary feature of the rover, however, is its stardrive -- the bioprobe rover is one of the few creatures known to be capable of FTL speeds under its own power. As far as can be determined, their top speed is twice that of light.

Upon their transformation, the rovers all launch into deep space. One rover always returns back along the factory/mother's original arrival trajectory. (It is believed that this is a report to the probes' unknown creators, but tracing the full route back to them has never been attempted.)

The rovers have a tropism for starlight, and target a random star in their field of view when engaging their interstellar drive. Months or years later, they arrive at their destination. If no suitable raw materials are found, or if an existing factory/mother is detected, it surveys the system briefly. Then a new star is selected from the field of view and the rover continues onward. A rover which was "pre-adapted" by its factory/mother will tend to favor its birth environment, but will not reject a "standard" habitat outright.

This ability to adapt is the common feature of the larva and rover that makes them both so dangerous and so successful at their mission. In addition to the form changes they undergo as part of their lifecycle,

immature bioprobes are able to make drastic and dramatic changes to their biochemistry and physical structure in order to respond to danger or a hostile environment. They can only do this once before exhausting the potential of their ductile forms, but the changes are virtually instantaneous and always appropriate to the conditions.

((START BOX))

@C-BOXHEAD:Bioprobe Player Characters

@TEXT-BOX:As noted elsewhere, all PC bioprobes must be rogues. This is mainly because there is no such thing as an individual bioprobe when it is connected to the system mass-mind, and that mind is going to be far too alien to interact meaningfully with other characters.

@TEXT-BOX:The biggest challenge facing a bioprobe character is communication. Being both mute and resistant to psionic contact makes it hard to interact meaningfully with other species. Gesture or Sign Language is an option for larvae, and both larvae and rovers can easily use minicomps for text transmissions. Lacking these, some rovers have had to resort to slates and chalk. The latter two options, of course, require the PC to buy off the species' Illiteracy.

@TEXT-BOX:A second challenge is the automatic enmity from "normal" bioprobes that every rogue faces. Any time a rogue ventures into territory known to be the home of a bioprobe colony, it risks a mass attack.

@TEXT-BOX:Assuming a typical *Space* campaign, rogue bioprobe PCs would probably be best suited as part of the staff of an orbital outpost. Given their relatively slow FTL speed, they would not make good additions to a campaign based on any but the slowest starship, unless it were feasible to provide the life support mechanisms needed to carry them aboard the ship. (This of course assumes that they do not use their adaptive change to reduce their life support requirements.) As part of a survey ship, they'd be invaluable for their ability to travel quickly through a system under their own power while carrying a relatively large load of instrumentation.

@TEXT-BOX:In a campaign with relativistic star travel or very slow FTL, a rogue bioprobe could become a scout, searching out new systems for the colony ship with which it was affiliated. In an interstellar war, they can be spies, scouts and forward observers. And how better to approach an invasion plot than with a turncoat on your side?

@TEXT-BOX:Even in a setting without starflight like *Terradyne* or *Transhuman Space*, a bioprobe PC is possible. The most likely scenario would make the rogue a solitary visitor to an inhabited system unfamiliar with the race. For a GM intrigued by the possibilities of an invasion plot, however, the probe PC could be an escapee from an in-system infestation like that found in the opening vignette.

((END BOX))

Factory/Mother. If a suitable source of raw materials is found, be it in an asteroid or protocomet belt around the star, or in another environment (such as a planetary surface) to which the rover is already adapted, the cycle begins anew. The rover affixes itself firmly to the chosen object, and metamorphoses into a factory/mother. This is the final stage in the bioprobe lifecycle, a pseudo-organic manufacturing plant capable of churning out larvae as fast as it can be fed the raw materials needed to spawn them. It is also the hub of the system-wide bioprobe hivemind.

A factory/mother resembles nothing more than a dome of rock some thirty to forty feet across, permanently anchored into the substance of an asteroid or protocomet. At one end is a circular maw approximately five feet in diameter, lined with sharp teeth on jaws that can spiral shut like the iris of a camera. The six legs of the original larva reappear as tentacle-like limbs three yards long, spaced equidistantly around the mouth. Its stony shell provides armor that is proof against both attackers and the inevitable micrometeorites. It also retains any "wild card" adaptations it made in larval or rover state, which can conceivably allow it to base itself in otherwise hostile terrains.

Approximately 35 hours after transforming, the factory/mother spawns its first larva, spending a significant fraction of its own mass to do so. Once the larva starts feeding it, the factory consumes voraciously and produces continuously -- one larva every 35 hours for anywhere from one to two and a half standard years. (Larvae spawned by a factory/mother adapted to and living in an otherwise hostile environment -- such as the aquatic probes on May's World -- are "pre-adapted" for that environment by the factory/mother. If the factory/mother is operating in a "standard" vacuum/microgravity environment, its larvae receive no "pre-adaption".)

At the end of its productive period, the factory/mother issues a recall to its spawn as noted above, and begins a shutdown process. When all the larvae have changed to rovers and have launched, the factory/mother dies, usually within 2-4 weeks. At the moment of death, acid sacs strategically positioned within its body burst, destroying its internal structure.

Larvae and rovers are technically neuter; factory/mothers are effectively female.

((START BOX))

@C-BOXHEAD:Sample Character: "Worthington Blue Vanilla" 400 points

@TEXT-BOX:Age 12; 8'10" long; 700 lbs.; Rogue Bioprobe Rover, a bluish-black rocky ellipsoid with metallic highlights.

@TEXT-CSTATS:**ST** 44 [2]; **DX** 12 [20]; **IQ** 13 [30]; HT 12/22 [0]

@TEXT-CSTATS:Speed 6.00; Move 6.

@TEXT-CSTATS:Dodge 6.

@TEXT-CSTATS:**Damage:** *Punch:* 4d; *Kick:* n/a; *Thrust* 4d+2; *Swing* 7d

@TEXT-CSTATS:**Advantages:** Extra points in Once-Only Shapeshift plus "placeholder" [22]; Literate [10]; Patron (Galactic Survey Service), 6 or less [20]; Rank 4 [20]; Reputation +1 (Service members, all the time) [2]; Rogue Bioprobe Rover [284]; Status 1 [free from Rank].

@TEXT-CSTATS:**Disadvantages:** Curious [-10]; Duty to Survey Service, 15 or less [-15]; Gullibility [-10]; Sense of Duty to crewmates [-5].

@TEXT-CSTATS:**Quirks:** Enjoys human literature, particularly late 19th- to early 20th-century British; Affects 19th-century British "vocal" mannerisms; Aware of his Gullibility and is trying hard to learn enough to offset it; Wants to be a writer of great, universal literature; Endlessly debates using his Once-Only Shapeshift to adapt to normal atmosphere and gravity. [-5]

@TEXT-CSTATS:**Skills:** Area Knowledge (Known Space)-15 [4]; Astrogation (Hyperflight)-15 [0];

Brawling-12 [1]; Chess-17 [4, hobby skill]; Computer Operation/TL-15 [4]; Electronics Operation (Communications)/TL-15 [6]; Electronics Operation (Sensors)/TL-15 [6]; English-13 [2]; Literature-13 [4]; Planetology-14 [4]; Savoir-Faire (Survey Service)-13 [1]; Writing- 13 [2].

@TEXT-CSTATS:*Languages*: Galactic Standard-13 [2].

@TEXT-BOX:"Worthy," as his crewmates call "him," is the only rogue bioprobe in the Galactic Survey Service, and as such enjoys a certain amount of notoriety among his fellow Service members, not to mention a certain degree of latitude from his commanders. The Service as a whole clearly appreciates his worth, as it has repeatedly fitted the ships on which he has served with quarters and accessways designed for his exclusive use -- that is to say, in vacuum with no artificial gravity. Of necessity, he is physically isolated from his crewmates, but thanks to a keyboard-equipped com unit permanently affixed to his rocky shell he can keep up a steady stream of "conversation" from almost anywhere in the ship.

@TEXT-BOX:Worthington certainly earns his way in the Service. Being able to flit about a system under his own power and without the need for expensive life support means a substantial savings in the budget for any ship on which he serves. Able to carry hundreds of pounds of equipment, he frequently wears a custom-built scanner unit that feeds directly to the ship's main computer, letting him function as the equivalent to a one-man scoutship at a tiny fraction of its cost.

@TEXT-BOX:Personality-wise, Worthington is still coming to terms with both his own independence and the existence of other sentients. He is especially fascinated by humans and their literature; Kipling and his contemporaries have caught his imagination to the point that his "speech" has picked up many stereotypical British mannerisms from the period between the Raj and the First World War. This is not because of any desire to be humorous -- Worthington, like virtually all bioprobes, does not understand humor -- but because of an inexplicable feeling of kinship with and admiration for the British explorers, conquerors and settlers of that period.

@TEXT-BOX:His greatest weakness, in Worthington's own opinion, is his lack of experience and knowledge about the peoples and cultures of the Galaxy. Combined with his general trusting nature, this manifests as a Gullibility that he despises, and which he is working to eliminate with a thorough education.

((END BOX))

The Cinematic "Monster" Werewolf

Jack: Now, I'm really sorry to be upsetting you, but I have to warn you.

David: Warn me?

Jack: We were attacked by a werewolf.

David: I'm not listening to this!

Jack: On the moors, we were attacked by a lycanthrope, a werewolf. I was murdered, an unnatural death, and now I walk the earth in limbo until the werewolf's curse is lifted.

David: Shut up!

***Jack:** The wolf's bloodline must be severed; the last remaining werewolf must be destroyed. It's you, David.*

-- from *An American Werewolf in London*, 1981

As sympathetic as many recent portrayals have been, some weres are still monsters. This is one such. Inspired not as much by classic Universal horror films as by more recent movies like *Wolfen* and *An American Werewolf in London*, this is the original Werewolf From Hell: 200-plus pounds of snarling death and infectious curse, three or more feet high at the shoulder and splattered with the blood of its innocent victims. It would make an excellent villain in a *Horror* or *Supers* campaign.

A were this terrifying should probably not be inflicted upon a PC as a curse unless the characters are very tough, or the were-form manifests very seldom (once a month or less). The unfortunate soul who suffers from this were-form almost never will be in control of it. The -15-point level of Split Personality is the norm, and if the optional NPC were-form rule (see sidebar, p. 00) is used, the player will *never* have any control over it. The character will simply black out, then wake up the next morning in a cave or a cellar, soaked in someone else's blood.

The Werewolf From Hell

(PPT: +449, NPT: -152, to be adjusted for the character who suffers from this were-form before final point cost calculated.)

@TEXT-CSTATS:*Attributes:* **ST** 14 [0] **DX** 12 [0] **IQ** 8 [+45] **HT** 15 [0]

@TEXT-CSTATS:*Advantages:* Dire Wolf Template (see box, p. 00) [28]. Change Claws to 40-point level [+25]; Sharp Teeth to Fangs [+5]. Danger Sense [15]; Dark Vision [25]; High Pain Threshold [10]; Immunity to Poison [15]; Increased Speed ¥ 2 [50]; Magic Resistance +5 [10]; Recovery [10]; Regular Regeneration [25]; Silence +3 [15]; Vampiric Invulnerability (vulnerable to silver instead of fire) [150].

@TEXT-CSTATS:*Disadvantages:* Appearance: Monstrous [-25]; Bad Temper [-10]; Berserk [-15]; Bloodlust [-10]; Compulsive Behavior: Spread terror and bloodshed [-15]; Dread: Wolfsbane, 2-hex radius [-6]; Frightens Animals [-5]; Gigantism [-10]; Odious Racial Habit: eats humans [-15]; Overconfidence [-10]; Vulnerability: Silver/3 [-30].

@TEXT-CSTATS:*Quirks:* Prefers to focus on people and places known to its human form [-1].

@TEXT-CSTATS:*Skills:* Intimidation at IQ+3 [8]; Jumping at DX [1]; Shadowing at IQ+2 [6]; Tracking at IQ+2 [6].

((START BOX))

@D-BOXHEAD: Dire Wolf Template 28 points

@TEXT-CSTATS:*Attributes:* ST +4 [45]; DX +2 [20]; IQ -6 [-50]; HT +5 [60].

@TEXT-BOX:PPT: +300; NPT: -272.

@TEXT-BOX: In all other ways save size (approximately as big as a Shetland Pony) the dire wolf template is identical to the wolf template found in the box on p. 00.

((END BOX))

Required and Optional Traits

In keeping with the movie traditions, the cinematic werewolf's were-form is limited with a Cyclic Change on a Lunar schedule, for a -20% point cost modifier (but see the box on p. 00, if it's not being used in a campaign set on Earth). A temporary Cure/Cursebreak (p. 00) is commonly found in these weres, and in many cases, the Genetic Trait limitation (p. 00) will apply. Those without Genetic Trait will normally have an Infectious Attack (-5 points, p. CI97).

The Cinematic Werewolf is also a good candidate for the optional "NPC Were-form" rule found in the sidebar on p. 00. At the very least, it will likely have the Compulsive Behavior "Morally Opposed" or "Lifewrecker" (p. 00).

Requirements for the Base Form

As noted above, the character who suffers from this were-form should take Split Personality at the -15-point level. (Exception: a truly evil person who takes great pleasure in the damage he does to other might have complete conscious control over the were-form.) The Non-Reciprocal Damage and Reciprocal Rest advantages are highly recommended as being particularly in-genre, but they are not mandatory. If the intended flavor is more "classic monster movie" than "modern monster movie", do not use Non-Reciprocal Damage. And of course, a Secret is always appropriate.

The Classic Background

A good cinematic monster always needs a backstory. Surprisingly, the cinematic monster werewolf is just the latest incarnation of a proud tradition stretching back hundreds of years. In many cultures, were-creatures are at the best shy and harmless, and at the worse no more bloodthirsty than any other natural predator. However, the medieval French developed a truly despicable variety of were. Vicious, willfully evil, and gleefully cannibalistic, the French *loup-garou* became the yardstick by which the Inquisition measured *all* the shapeshifter traditions it encountered around the world. (See pp. 00-00.)

In its translation from folklore to film, the *loup-garou* became, if anything, even more monstrous. All but invulnerable and implacably murderous, it was usually a parasitic entity imposed as a curse upon an otherwise good man. Invariably, he who was forced to watch as it destroyed everyone and everything he loved, one moonlit night at a time.

(((START BOX)))

@C-BOXHEAD:The Cinematic Werewolf in the Campaign

@TEXT-BOX:The cinematic werewolf is probably best suited for use as a "monster" to be countered and ultimately defeated. Although hunting down and killing such a creature is certainly one option, the plot need not be quite so literal. Discovering that the beast's alter ego is a clueless innocent may transform the goal from a "bug-hunt" to a mad search for the ingredient or ingredients necessary to cure (or at the very least suppress) the change. Or perhaps an academic has become convinced that the monster is actually a "fossil" lifeform, a dire wolf inexplicably surviving into the modern age, and has contracted the party to recover it *alive*.

@TEXT-BOX:While it's likely that a cinematic werewolf is more likely to be a "one-off" opponent in most games, one whose human side is in complete accord with the bestial nature of his were-form could make for a good recurring villain for a *Horror*, *Atomic Horror*, *Weird Modern/X-Files* or even a *Black Ops* campaign.

(((END BOX)))

In keeping with the source material, this were-form usually appears in one of two modes. The first is the *ancestral curse*, identifiable by the Genetic Trait limitation (p. 00) applied to the were-form. Some remote ancestor of the character offended someone extremely powerful -- so powerful that they planted a small gift into the family's genetic code to make their lives miserable for generations to come. The second is the *infectious werewolf*, where the curse spreads like rabies to individuals who otherwise would have had no inclination towards shapeshifting. Appearing most rarely are those cases which combine the two -- a genetic predisposition that requires the bite of an active werewolf to "awaken".

Psychology

The monster werewolf usually has little in the way of psychology above and beyond a compulsion to inflict terror and death on everyone it encounters. It almost never shares any of its hosts' better qualities (although an evil host may well embrace it and vice versa). To the extent that it can think about itself at all, it sees itself as the top of the food chain, the rightful predator upon humans. Those who are an inflicted curse, especially when they possess the "Lifewrecker" Compulsive Behavior (p. 00), see the base form, his friends and his loved ones as toys to play with for their pleasure.

(((START BOX)))

Cinematic Monster PCs

@TEXT-BOX:In general, it would be a bad idea to allow a player character to suffer from this particular curse -- unless, of course, the point of the game is to kill all the other members of the party or turn them into werewolves, too. Even so, the resulting game might not be to the liking of most players, even with its supernatural overtones.

@TEXT-BOX:However, one possibility may be for the GM to conspire with a player to bring in an PC afflicted with this were-form *unknown to the other players*. This would work best if the "ringer" is or has been in the game for some time before the character's advent. A single adventure or an entire campaign could then flow from the undue attention the party members find focused upon themselves in the wake of the were-form's predations in their vicinity. Only, as their own investigations begin to bear fruit, they realize evidence points to one of their own number...

(((END BOX)))

Ecology

The cinematic werewolf doesn't truly have an ecological role in the world. As an unnatural beast, it is imposed upon the existing order without properly being part of it. (Certain abilities will reveal this to the observer: Awareness does so automatically, as will an Occultism or Weird Magic roll. A suitably

open-minded Naturalist might also detect something "wrong" about a cinematic werewolf on a roll -4.)

That being said, it is first and foremost a predator of awesome power and appetite. Even more so than its closest natural counterpart, the now-extinct dire wolf, it is a formidable killing machine, and it regards almost every living creature as potential prey. Even were it not driven by its bloodthirstiness and antipathy toward life, it would be dangerous to encounter; as it is, the creature is absolutely deadly. Furthermore, these weres *do* need to eat, as their massive bodies consume far more energy than their hosts are able to provide, and their hunger drives them just as much as their inimical intent.

Being a creature of magical origins, it does not reproduce in the usual way and thus has no mating drive. Those varieties which possess an infectious bite do not normally seek victims for the purpose of spreading the infection; this is usually a side effect of an unsuccessful attack (i.e., one in which the victim escaped).

((START BOX))

Sample Character: David Henry Heresford 200 points

Male; Age 32; 5'7"; 145 lbs.; blonde and blue-eyed British male whose slightly roadworn appearance belies his cultured speech and behavior

@TEXT-CSTATS:ST 10 [0]; DX 11 [10]; IQ 13 [30]; HT 12 [20]

@TEXT-CSTATS:Speed 5.75; Move 6.

@TEXT-CSTATS:Dodge 5; Parry 7.

@TEXT-CSTATS:**Damage:** *Punch:* 1d-3; *Kick:* 1d-1; *Thrust* 1d-2; *Swing* 1d

@TEXT-CSTATS:*Advantages:* Cinematic "Monster" Werewolf [154] (Percent (Temporary Cure: Must perform an act of contrition at a Celtic holy site; relapse triggered by lying or oathbreaking): -15%; Percent (Cyclic Change, Exclusive, Lunar): -45%); Status 1 (Lawyer) [5]; Wealth (Comfortable) [10] (Starting Wealth: \$10,000).

@TEXT-CSTATS:*Disadvantages:* Enemy: Scotland Yard [-10] (Roll: 6 or less, ¥1/2); Guilt Complex [-5]; Secret (He's a werewolf) [-30]; Split Personality [-15].

@TEXT-CSTATS:*Quirks:* Cultured and polite in his speech; Determined to prove himself innocent of his fiancée's murder; Is developing a loathing for all things Celtic; Tries hard not to be an oathbreaker; Twitchy and nervous. [-5]

@TEXT-CSTATS:*Skills:* Acting-12 [1]; Area Knowledge (England)-14 [2]; Bicycling-11 [1]; Boxing-10 [1] (Parry: 6); Brawling-11 [1] (Parry: 7); Climbing-10 [1]; Detect Lies-11 [1]; Escape-8 [1/2]; Fast-Talk-13 [2]; Guns (Pistol)/TL6-14 [2]; Lifting-10 [4]; Law-15 [8]; Hidden Lore (Celtic curses)-12 [1]; Riding (Horse)-11 [2]; Running (Move: 6.875)-9 [1/2]; Savoir-Faire-14 [2]; Stealth-11 [2]; Streetwise-12 [1]; Survival (British Countryside)-12 [1]; Swimming-11 [1].

@TEXT-CSTATS:*Languages:* English (native)-13 [0]; French-11 [1/2]; Latin-11 [1/2].

@TEXT-BOX:Much to David Henry Heresford's despair, one of his distant ancestors was a Saxon thief,

an honorless rogue whose oathbreaking and lies offended a powerful Druid. The Druid, not one to waste an opportunity, cursed the thief and his descendants to become ravening wolfbeasts whenever their truthless nature came to the fore, then had him returned, drugged into unconsciousness, to the village of invaders from which he came. There, he hoped, one of the Saxons' own would be their undoing.

@TEXT-BOX:Centuries later, the thief's descendants had apparently either died out or learned their lesson -- until the latest (and only) scion of the clan, David Heresford, became a lawyer in 1925. Still, he was a reasonably honest man, and it took several years of working civil cases before he found himself tempted to take liberties with the truth -- and awoke the ancient curse buried in his genes.

@TEXT-BOX:At the next full moon, the beast emerged and ran rampant through London, ending its spree by slaying his fiancée, Amelia. Since then David has been on the run from Scotland Yard, which wants him for her murder (they believe the marks of the beast's attack on her were cleverly faked). For the last two years, he has roamed the length and breadth of England evading the police and searching for a permanent cure to his "condition". In discovering the misdeeds of his distant, unnamed ancestor, he has also found a temporary respite: performing a ritual of contrition at a Celtic holy spot will suppress the beast -- but only until he utters his next lie or false oath. Unfortunately, given the fugitive life he lives, that's never far away, and the surviving holy places are few and far between...

@TEXT-BOX:Although David is a 200-point character, most of that is the cost of his were-form, which is also responsible (through its actions) for most of his disadvantages. Without the were-form, David would not be out of place in a 100-point campaign. The were-form possesses the Compulsive Behavior: Lifewrecker disadvantage in addition to the others in its package, and delights in destroying utterly anything into which David has invested any affection. To minimize its depredations, he tries not to form any ties with people or places, and takes care to be in the open countryside at the full moon.

@TEXT-BOX:David is designed for a 1920s-30s era **Horror** campaign that focuses more on individual terrors than Lovecraftian Things From Beyond. With some stretching of the setting, he could be usable in a *Cliffhangers* game, and almost no changes are needed to relocate him to any post-Medieval European setting. It would take some alteration to fit him into a game set in any later period, but it *is* possible -- he is almost the prototypical *X-Files* monster-of-the-week, for example.

((END BOX))

Doppelgänger

Liordan nodded blandly as he apologized and wrenched her cart free from the other shopper's, but within she was a quivering mass of nerves. There were too many templates, too strong, surrounding her, and her control was fraying rapidly. She should have waited until midnight and gone to a convenience store, but her hunger had grown beyond her ability to ignore it.

Stifling her mounting agitation, Liordan waited patiently through the express checkout and then wheeled her purchase out to the van. With a studied casualness that belied the panic coursing through her veins, she carefully transferred the bags from the cart to the back of the vehicle, then climbed in after them. She shut the doors with a solid thud.

Inside, in the dark, she relaxed; the unassuming facade of the blonde suburban soccer mom melted away to reveal her true form. As she ripped open a bag of potato chips, Liordan gave silent thanks for the van's

heavily tinted windows.

They call themselves the Tsir'lech, but to those few humans who know of their existence, they are known by the names they acquired in myth and legend: Shapestealer. Skinwalker. Fetch.

Doppelgänger.

They haunt human society, living among us but not of us. Some are timid, living in terror of discovery by humans -- or by something else they fear so greatly that they never speak its name. Others are hunters, stalking the humans whose form they mimic and devouring their lifeforce at the moment of death. Sister species and interfertile, they are a culture hidden deep beneath the surface of our own.

Hider Doppelgänger -2 points

@TEXT-CSTATS:*Attributes*: IQ +2 [20]; HT -1 [-10].

@TEXT-CSTATS:*Advantages*: Cultural Adaptability [25]; Morph (Only humanoid forms -40%, Cannot copy another doppelgänger's "natural" form -5%, Template Susceptibility -20%) [14].

@TEXT-CSTATS:*Disadvantages*: Broadminded [-1]; Careful [-1]; Combat Paralysis [-15]; Edgy [-5]; Obsession: Hiding [-15]; Secret: doppelgänger [-20].

@TEXT-CSTATS:*Skills*: Acting at IQ+3 [6].

Hunter Doppelgänger 22 points

@TEXT-CSTATS:*Attributes*: ST +1 [10]; IQ +2 [20]; HT -1 [-10].

@TEXT-CSTATS:*Advantages*: Combat Reflexes [15]; Cultural Adaptability [25]; Morph (Only humanoid forms -40%, Cannot copy another doppelgänger's "natural" form -5%) [22].

@TEXT-CSTATS:*Skills*: Acting at IQ+2 [4]; Brawling at DX [1]; Shadowing at IQ [2]; Stealth at DX [2]; Any melee weapon at DX [2].

General Description

In their rarely-seen "natural" form, doppelgängers are humanoids similar in size and build to human beings, except that their skins are uniformly gray and hairless, with almost no variation between individuals. Their eyes are large and seem to be a muddy hue from a distance; at close range, though, it is clear that their eyes are surprisingly beautiful, with irises composed of every color of the rainbow scattered in glittering swirls.

Their internal structure is sufficiently close to human that most doctors won't realize that they are a different species unless they administer an extraordinarily thorough examination. Any variety of surgery, x-rays, MRI or other medical scanning will reveal small but telling differences almost immediately, although most doctors won't realize what they are seeing at first.

Psychology

Doppelgängers are completely geared, mentally and physically, toward camouflage and concealment. Although technically they hide "in plain sight" thanks to their morph abilities, mere physical disguise is not enough. They demonstrate a remarkable ability to adapt to any human society in which they find themselves. (Possibly *too* remarkable; anywhere they are actively hunted by the people among whom they hide, such as in the world of *GURPS Black Ops*, such ease of transition between cultures is often used as a flag to indicate -- not always successfully, of course -- those who might be other than they seem.)

Unlike their extraterrestrial counterparts, the Xenomorphs (see p. A126-7), doppelgängers don't actually deceive themselves into believing that they are the human beings they pretend to be. They are, however, consummate actors. Furthermore, they rarely attempt to impersonate specific individuals (although they can do so, when necessary). Instead, they become an entirely new person. Although this task has grown more and more difficult as time goes on and government (and corporate) records grow increasingly comprehensive and detailed, the doppelgängers have coped; it is believed that they have made a policy of insinuating themselves into jobs where they can falsify the records needed to establish identities.

As part of their disguise, doppelgängers take part in almost all aspects of human society. They hold jobs, they take hobbies, they socialize to a limited extent. They try to amass sufficient wealth and/or power to ensure their own safety and comfort. They even date, court and marry -- usually humans and not members of their own species -- become parents, and raise children. (Of course, those children will have to be adopted if the doppelgänger has taken on a male role...)

Beyond this point, though, the psychologies of the two varieties of doppelgänger diverge.

Hider doppelgängers are concerned with preserving their own safety and secrecy. They are more likely to throw themselves into relationships and activities that provide them with "protective coloration" while staying away from anything that could draw attention specifically to them. Because of cultural and social forces, they have historically taken female roles of middle class or above unless no other choices were open to them; up until the last few decades this has given them a reason to be relatively reclusive while still appearing a "proper" part of society as a whole. It also allowed them to reproduce unquestioned.

Central to the Hiders' psychology is the need to remain hidden. This appears to be a genetically-encoded imperative, as even doppelgängers raised by humans feel compelled to disguise themselves and blend in once they understand their abilities. In some individuals, this need is frequently magnified and accompanied by full-blown paranoia. In other cases, such as the famous "Human Chameleon" of the 1930s, the compulsion becomes an uncontrollable reflex, although usually in a less obvious manner than his.

Those who do not have a "steady" role, such as a human's spouse, often leap from identity to identity every few years. These Hiders more than any others make use of the informal network of co-racialists insinuated into record-keeping jobs.

Exactly *why* they feel compelled to hide is unclear. It's certainly not to avoid contact with their "cousins," the so-called "Hunter" doppelgängers (see below); the Hunters apparently cannot feed off of other doppelgängers, and do not seem to have any real antipathy towards the Hiders. Nor does humanity really

have any (known) history of persecuting them, even in the secret records to which Argus and The Company have access in the *Black Ops* world. What little has been learned from the Hiders themselves is tantalizing but sketchy: *Something* pursues them, and sometimes catches them. Just what, though, Argus has yet to learn.

(This unknown pursuer of the Hiders is left to the GM -- and any Hider players -- to define. It may be a racial Delusion, or it may be real. If real, however, it is powerful and itself hidden from both human and doppelgänger sight.)

Hunter doppelgängers are predators, plain and simple. Although for the most part they subsist on a diet similar to that of humans and Hider Dops, they must frequently supplement it with what can only be described as the death energies of human (or humanoid) beings (excluding other doppelgängers). Feeding in this manner leaves a corpse with psychic "marks" not unlike those found on a victim of a Soul-dog or other similar creature, leading some to suspect that the Hunters are actually eating souls.

They prefer to kill their prey themselves, but this is not a requirement -- several Hunters have been found working in emergency rooms and on ambulance teams. If they cannot make use of such opportunities, modern Hunters prefer to kill with weapons, especially in urban areas; however, it is believed that in more primitive times they used their retractable claws and then disguised their kills as victims of violent animal attacks.

They are less inclined to be paranoid, although they are equally compulsive about hiding themselves. They always know at least one and frequently several melee weapon skills, despite the fact that they can easily kill with their claws. They often have a wide variety of Thief/Spy skills in addition to their racial Shadowing and Stealth. Most will try to vary their kills to avoid easy detection, but in recent times some have taken pride in being serial killers, to the point of having Trademarks and other possibly self-destructive behaviors.

Hunter doppelgängers appear to have no preferences for their apparent gender and chosen social class.

Ecology

It is unclear whether doppelgängers are relatives of humanity or not. Doppelgänger physical structure is very close to the human norm. Their basic diet, regardless of subspecies, appears to be if not identical to then at least not incompatible with that of humans. They seem to need (or prefer) the same environmental conditions as well, which suggests that if they are not related to us, then they and humanity evolved under much the same conditions.

There are more differences than similarities, though. In particular, doppelgängers are all parthenogenic females. They do not need to exchange genetic material in order to reproduce, although they will do so as a matter of course when encountering another doppelgänger in an appropriately private setting. The "mating" process of the species is distinctly unlike that of humans, and is somewhat disturbing to witness. (A Fright Check is required for non-doppelgängers who stumble upon one in progress.)

Gestation is nine months, like humans, and all children are parthenogenetic females like their mother. Single births are the rule; twins and other multiple births are almost unheard of. Still, a doppelgänger can display remarkable fecundity, and large broods are not unknown. (In fact, families with three or more daughters and no sons are another indicator The Company uses to detect a suspected Dop.)

A doppelgänger's children are always born female, in a form matching that which the mother is holding at the time of birth. (Few dop children are actually born in the race's "natural" form.) They remain "locked" in that shape until puberty, usually ignorant of their true nature. Only when their morph abilities unlock does the mother inform and instruct them; if the mother has died before then, it is not unheard of for the young morphs to continue through their lives ignorant of both their own nature and doppelgänger society.

Culture

As far as can be determined, doppelgängers have no "native" culture of their own. (Whether it dwindled away in the face of their proclivities to hide, or it was abandoned, or if it never existed at all is a point of contention among those few academics who are aware of them and debate such issues.) Instead, they adopt -- necessarily, as part of their roles -- the culture of whatever species or individual they are imitating.

As mentioned above, they do maintain an informal network among themselves. This is more for the aid of those Dops who need documentation to support a new identity than for any kind of cultural continuity. If they have any coherent body of history or myth among themselves, it is unknown to Argus and other observers. Likewise, most pay at least lip service to human religions; if they have a religion of their own, it is even better hidden than they are. They retain some fragments of their original language -- including their racial name -- but they rarely use it, and only a dozen words in the tongue are known to The Company's Science division.

Politics

Doppelgängers mimic human politics along with everything else. If they have internal factions beyond the Hunters and the Hiders, they have not been discovered.

((START BOX))

Doppelgänger Names

Although they clearly have their own language, doppelgängers do not take names in it. Those born into roles bear the names given them at birth for human society; those who jump roles always do so into new human identities, and again take human names.

((END BOX))

Doppelgängers in the Campaign

Doppelgängers as described here are natives of the world of *GURPS Black Ops*. There, Argus learned of their existence only ten years ago, at which time it set a dedicated Science team to study them thoroughly. The information given in this description, plus a binder full of confusing medical data, is the sum total of Argus' information on the race.

Although some ops lump them in with the vampires and the so-called "werewolves," Argus officially considers them a separate category of creature. Hunter Dops are priority targets when they are discovered

-- which, unfortunately for the Hunters, is more frequently than they believe. Psi-ops with Psychometry or Sense Aura can, if they have seen a Hunter victim before or have been shown what to look for, determine if a dead body has had its soul eaten by a Hunter (and not, say, a Soul Dog) with a simple touch and a skill roll.

Hiders are a different story -- informal Argus policy is to observe but not to bother them. There are certain concerns that Hunters and Hiders may be the same species in two different stages of life, but Argus is more concerned about what the Hiders are afraid of. If it's something more than just humanity or one of the various other species of which Argus is already aware, if it's something new and nasty, Argus wants to know about it -- and as much about it as possible, as soon as possible.

As with other shapeshifters, the Science department is intensely interested in the mechanisms by which doppelgängers of either stripe perform their changes. However, unlike the "werewolves," the secret of whose shapeshifting still eludes them, Science thinks they have something of an idea how the Dops do it. Of course, they need more research, and more Dops, to test and refine their theories...

((START BOX))

@C-BOXHEAD:Other Settings

@TEXT-BOX:It goes without saying that doppelgängers fall easily into the "creature" slot in any given campaign. Hiders are good in the role of the "monster that isn't," being (usually) shy and inoffensive. Hunters are good for real "monsters," especially in campaigns where they would be unexpected. Either variety could spawn an exceptional representative suitable as a Patron or Enemy, as well, depending on the party.

@TEXT-BOX:**Horror:** The monster masquerading as human is a classic horror trope. Hunter Dops work best for the traditional implementation, leaving Hiders completely out of the picture to simplify the good-evil polarization. Then again, the GM may choose to use a Hider as a red herring in a complex plot -- clearly a non-human "monster," but a timid one innocent of any wrong-doing.

@TEXT-BOX:**Atomic Horror:** Two words: Pod People. Add the "Copies Personality" enhancement (p. 00) to their Morph for an effect closer to any number of classic B-movies.

@TEXT-BOX:**Fantasy:** Classic fantasy roleplaying games have long included creatures which could mimic human and humanoid forms. Both Hunter and Hider doppelgängers could be dropped into a **GURPS Fantasy** campaign unaltered to provide the same kind of experience and challenge.

@TEXT-BOX:**Illuminati:** As noted elsewhere, the doppelgängers can be a powerful conspiracy, especially if the other power blocs in the Illuminated world are unaware of them...

@TEXT-BOX:**Old West:** Hunter doppelgängers can be the malevolent skinchangers of Amerind myth, such as the skinwalkers of whom the Navajo tell tales. These creatures could take the form of *anything* -- up to and including teepees and wigwams. Stories are told of warriors who left their possessions in what they thought were their own tents, only to find the tent missing upon their return, and all their goods stolen by the shapeshifter who had deceived them. While inimical to man, they are not homicidal -- except to protect their secret existences. Remove the humanoid limitation on Morph, and the dependency on human death. Also, skinwalkers should use the leveled version of Morph from **GURPS Supers**, (p. SU63) with a Power of at least 15 and probably higher. Add "improvised forms" to Morph, and

Kleptomania to disadvantages. Add the racial quirk "Will kill to protect their secret." Finally, they are carnivores.

((END BOX))

Doppelgänger Characters

As NPCs, doppelgängers can be *anyone* -- even a character the PCs have known for years. And any "ordinary" NPC encounter can operate on two different levels with a doppelgänger hidden within the character.

Players wishing to design a doppelgänger PC have several options. The simplest is to play a Dop who is ignorant of his heritage, for whatever reason. Early death of the doppelgänger parent is usually the cause in such cases, but the GM may want to develop more interesting (or sinister!) reasons. Such a character may or may not be aware of his morph abilities. The Partial Amnesia disadvantage would be a useful tool for this kind of character; he's not actually amnesiac, just unaware of certain facts and implications about his life.

A particularly sneaky GM may turn this around -- and make a PC who has taken Partial Amnesia a Doppelgänger without the player knowing at all... Similarly, a character with a Secret Disadvantage (see p. CI75) may be a Doppelgänger -- the secret disadvantage being a combination of the racial cost and a complementing Secret.

Another option is to conspire with the GM. Doppelgängers will not normally be introduced into a campaign without some overarching reason -- being as they are almost an entire conspiracy in and of themselves, they likely will be serving some long-term plot goal, especially in an otherwise mundane campaign. A Dop character designed in conjunction with the GM can operate on both levels -- as a PC, and as part of the vast Doppelgänger Conspiracy. Carefully handled and subtly played, the Dop character can aid or hinder his companions as needed, and can even impersonate (or actually be!) some of the NPCs they encounter.

((START BOX))

@C-BOXHEAD:Sample Character: Sgt. Patricia MacNichol 100 Points

@D-BOXHEAD:Police/Hunter Doppelgänger

Age 27; 5'7"; 120 lbs.; Usual form: intense-seeming Anglo woman with auburn hair and hazel eyes, slender and tightly-strung.

@TEXT-CSTATS:**ST** 11 [0] **DX** 12 [20] **IQ** 12 [0] **HT** 10 [10]

@TEXT-CSTATS:Speed 5.5; Move 5.

@TEXT-CSTATS:Dodge 5; Parry 8.

@TEXT-CSTATS:**Damage:** *Punch:* 1d-3; *Kick:* 1d-1; *Thrust* 1d-1; *Swing* 1d+1

@TEXT-CSTATS:*Advantages:* Hunter Doppelgänger (see text) [22]; Legal Enforcement Powers [5]; Patron (Police Department, 9 or less) [10]; Rank/2 (Police Sergeant) [10]; Wealth (Comfortable) [-10].

@TEXT-CSTATS:*Disadvantages*: Hunter Doppelgänger (see text), plus: Cannot Harm Innocents [-10]; Duty to Police Department, 12 or less [-10]; Honesty [-10]; No Sense of Humor [-10].

@TEXT-CSTATS:*Quirks*: Turns down desk jobs and promotions that would take her off the street; Prefers to feed off the mortally wounded rather than hunt her own prey; Resents suggestions by other doppelgängers that she is a "carrion eater"; Honestly cares about the people in her precinct; Prefers to work night shifts. [-5]

@TEXT-CSTATS:*Skills*: Acting-14 [racial]; Area Knowledge (City)-14 [4]; Area Knowledge (Precinct)-14 [4]; Brawling-12 [racial]; Computer Operation/TL8-13 [2]; Criminology/TL8-15 [8]; Detect Lies-12 [4]; Driving-12 [2]; Forensics-13 [6]; Gun (.38 Revolver)-14 [1]; Judo-13 [8]; Knife-12 at DX [racial]; Law-13 [6]; Shadowing-12 [racial]; Shortsword (Baton)-12 [2]; Stealth-12 [racial]; Streetwise-14 [6]; Tonfa-12 [4].

@TEXT-CSTATS:*Languages*: English (native)-12 [0];

@TEXT-CSTATS:*Maneuvers*: Arm Lock (Judo)-15 [1].

@TEXT-BOX:Sgt. Patricia MacNichol is a decorated 10-year veteran in the police force of a major city some time during the early years of the 21st Century. Dedicated and concerned, she is a model police officer who has resisted all attempts to promote or transfer her off the street.

@TEXT-BOX:She is also a hunter doppelgänger who feeds off the dying victims of urban violence.

@TEXT-BOX:Unlike most of her fellow Hunters, Patricia sees the humans among whom she lives as more than just cattle. Still, she is realistic about her own needs. She reconciles the two by serving as a street-level police officer, protecting the masses while still coming into contact with enough dying humans to feed on as needed without having to kill. While this earns her the occasional accusation of "scavenger" and "carrion eater" from the other Hunters she has encountered, it allows her to sleep at night. If forced by circumstances to hunt, she will exclusively target violent criminals.

@TEXT-BOX:Her identity is solidly-anchored and, as far as she is concerned, permanent. However, she has no qualms about using her shapeshifting abilities to further her investigations -- she is, in effect, the ultimate undercover officer, even if her superiors don't know it.

@TEXT-BOX:Patricia is a 100-point character designed for any kind of contemporary, near-future or recent past campaign, and is suitable for use as a PC. As an NPC, she can serve as an Ally, Contact or even a Patron; if the PCs are on the other side of the law, she can be a formidable Enemy.

((END BOX))

The Enyn

Improvise. Adapt. Overcome.

--Sergeant Tom Highway (Clint Eastwood), in *Heartbreak Ridge* (1986)

Evolution, when presented with a difficulty which it must overcome, can take two routes: specialization or generalization. Specialization leaves a species uniquely suited to overcome the problem at hand. But

generalization leaves a species suited to overcome *anything*.

The Enynn are the absolute embodiment of that principle.

Their homeworld is Go'h'elaan -- a cold 2 G rockball a bit larger than Earth, with a methane/nitrogen atmosphere. It orbits a binary star whose whipsawing gravitational fields leave the planet a seething cradle of tidal-spawned volcanic activity. The blend of radiations from the mutually-orbiting red giant and white dwarf would have rendered any other world sterile, and make the planet's entire atmosphere glow with a permanent, world-wide *aurora borealis*. Sharp upthrust outcroppings of igneous rock form much of the landscape, and are constantly battered by violent storms. Shallow ocean basins with vast tide plains, filled with ammonia seas, make up the rest of the surface. The plants are difficult to distinguish from the rocks, and the animals are difficult to distinguish, period.

It is stark, beautiful, and deadly. And it is home to a race of peaceful philosophers.

Enynna 465 points

@TEXT-CSTATS:*Attributes*: IQ +3 [30]; DX +2 [20]; HT +4 [45]; Extra Hit Points +4 [20];

@TEXT-CSTATS:*Advantages*: Damage Resistance +50 [100]; Doesn't Breathe [20]; Extra Flexibility [10]; Immortality [140]; Injury Tolerances (No Brain, No Neck, No Vitals) [15]; Morph (Genetic Match, +50%; Improvised Forms, full, +100%) [100]; Radiation-Resistant [5]; Reputation +2 (philosophers and deep thinkers, galaxy-wide) [10]; Temperature Tolerance/5 [5]; 360-Degree Vision [25]; Unfazeable [15]; Universal Digestion [15].

@TEXT-CSTATS:*Disadvantages*: Appearance: Monstrous [-25]; Attentive [-1]; Broad-minded [-1]; Charitable [-15]; Chummy [-5]; Edgy [-5]; Staid [-1]; Invertebrate [-20]; Late Maturation ¥4 [-12]; Pacifism (Total Non-violence) [-30]; Reduced Move ¥3 [-15]; Undiscriminating [-1].

@TEXT-CSTATS:*Skills*: +2 to Philosophy (Any) [3]; +1 to Soft Science subgroup [6].

Enynn "sports" replace the racial Pacifism with Megalomania [-10] and Fanaticism (Self) [-15], for a racial cost of 470 points.

General Description

When completely relaxed, the Enynn (singular Enynna) resemble yard-wide hemispheres of brightly-colored jelly in which is embedded blobs and strands of contrasting colors and textures. However, they are almost never completely relaxed. Even in the depths of the most profound meditation, an Enynn's form is constantly shifting and flowing, responding unconsciously to environmental changes and stresses; unfortunately, the resulting changes in appearance and form are disturbing and in fact somewhat nauseating to most other races (effectively a Monstrous Appearance). They weigh an average of 160 pounds.

An Enynna will have a diameter of 3.5 inches for every point of ST (minimum diameter 2 feet), and will weigh 4.5 pounds for every inch of diameter.

Enynn who dwell among offworlders tend to pick an offworlder shape which they wear by default in their neighbors' presence.

((START BOX))

Names

The Enyyn language is a complex combination of sounds and quickly-varying skin colorations, and as such is not easily spoken or transcribed by offworlders (M/VH for non-Enyyn, with a maximum skill of 12). As a result, the names which Enyyn use among offworlders are either abbreviated "nicknames" which employ only those sounds easily vocalized by other races, or are "usernames" adopted from the language of another species. (The subset of the Enyyn language useable by other races is heavy on hard consonants and voiced sibilants, with short, punchy vowels.) "Native" Enyyn names are formed from a one- to three-syllable personal identifier (Narzhal, Vog, Ketelek) and the rough equivalent of a patronymic. The latter always begins with the particle "av'" and combines the first syllables from the names of each parent; given the species' mating habits, this produces a surname anywhere from two to six syllables long (av'Oronad, av'Kegaz, av'Paquatamacol).

Among themselves, true Enyyn names are long, complex, and uniquely identifying -- they are never repeated among members of subsequent generations.

((END BOX))

Psychology

Born and raised in an environment given to extreme shifts from hour to hour -- and unaffected by most of it -- the Enyyn are mellow almost to the point of anesthesia. If it's not an immediate threat, it's not worth worrying about. If it *is* an immediate threat, deal with it as quickly as possible and then get back to something more important, like formulating an internally-consistent system of ethical behavior for a hypothetical 5-dimensional lifeform that subsists solely on decayed quarks and stale donuts. Almost nothing bothers an Enyyna short of a planetary catastrophe or an apparently unsolvable philosophical conundrum.

Their basic biology rendering them at ease in the most dangerous of environments, the Enyyn expend almost all their efforts in intellectual pursuits. They tend to focus on philosophy, but no small number of Enyyn pursue the "soft" sciences such as psychology, history and the like; furthermore, they do not limit themselves to their own species, but include the efforts of other races in those disciplines. Some actively specialize in other races; most off-world cultures number several Enyyn among their most noted ethicists, legal scholars and psychoanalysts. Those few Enyyn who enter the hard sciences are almost equally exceptional.

For all their mental and physical adaptability, though, the Enyyn are not completely immune to insanity. The race produces extremely rare psychotic "sports" -- some believe them to be throwbacks to a more violent stage of their evolution -- who are incapable of cooperating with other Enyyn and often seek to gain power over their fellows. Most are successfully treated by Enyyn psychiatric professionals. The few remaining are not only incurable, but usually the most extreme cases. Forbidden by their own racial ethics to kill such dangerous individuals even in the face of their mounting violence and hostility, the Enyyn usually exile them -- with sufficient warning to Galactic civilization -- and allow other races to punish or try to cure or rehabilitate the outcast as appropriate. *Exile* for an Enyyna is a -5 point disadvantage similar in cost and application to Excommunicated (p. CI78).

Ecology

Like the rest of their ecosystem, the Enyyn are nominally carbon-based, although in this (as in just about everything else) they have been known to be surprisingly flexible. Their actual evolutionary precursors are uncertain; they share significant characteristics with both the coelenteroid and mollusc-like analogue lifeforms found in the seas of Go'h'elaan, but are almost exclusively land-bound. On the other hand, no less than one-quarter of their body mass is undifferentiated protoplasm, which makes them similar in structure to their world's analogues of amoebae. All of an Enyyna's physical functions, from digestion to cognition, are handled on a distributed basis throughout its entire body with no function permanently fixed in any one location or organ, making the comparison to an amoeba even more apt.

Even more remarkable than their unique structure is the degree of control they have over it. At will, Enyyn can change color and texture, extrude limbs of remarkable dexterity and strength or incredible delicacy and fineness, create sensory organs, and even turn into any variety of creature, real or imaginary. When imitating a specific race, they are frighteningly accurate and cannot always be told from the genuine article; with sufficient knowledge they can even form proper (if not necessarily functional) internal organs and bodily fluids as needed. Their sole limitation in this regard is that their total body mass is invariable and, of course, they are not genetically compatible with true members of the species in question. (There are persistent Galactic legends, though, that tell of Enyyn who *could* interbreed with other races. These, of course, have never been confirmed.)

They are omnivores in the truest sense, able to eat just about anything from any kind of carbon-based biosphere and thrive on it. Unlike most races, they have no manner of respiration and produce little to no wastes; some fringe xenobiologists have suggested that the Enyyn are actually biological total conversion reactors, possibly engineered by a long-gone Precursor race as living garbage disposals.

Like many other things about the Enyyn, their mating habits are unique. Although they are monosexual, they do exchange genetic material; anywhere from two to six Enyyn can join in an act of mating. Mating partners flow together to form a single mass of protoplasm, which then consumes almost its own weight in foodstuffs (usually brought by the participants). Anywhere from 24 to 72 hours later, the conjoined Enyyn split back apart into the original participants plus an equal number of half-sized "newborns." Each parent then raises one child, who possesses a random genetic heritage from all the participating parents.

Mating and offspring are rare, though. Xenobiologists note that nothing organic seems to prevent them from reproducing as often as possible. However, the Enyyn try to keep their population as close to a steady state as they can while still maintaining a positive growth; it is not uncommon for individuals to go centuries or even millenia between offspring. When asked about their abstinence, Enyyn simply note that carefully managing one's resources and living space is the only ethical choice as well as simple common sense. At the moment, the race is believed to number close to a million individuals on their homeworld, and approximately 10,000 more off-planet.

Perhaps as a side effect of the drastic environmental stresses the race lives through, no less than one in 20 Enyyn are psionically active. The vast majority of Enyyn psionics possess either telepathy or ESP or both; a fewer number are telekinetics. Even rarer still are all the other psionic gifts; occasional individuals may manifest them, but they are considered almost freakishly unusual.

((START BOX))

@C-BOXHEAD:Enyyn Characters

@TEXT-BOX:Enyyn characters are best built on a minimum of 500 points, but 1,000 points or even far more would not be uncommon for a particularly old Enyyna, some of whom might be well over a quarter of a million years in age. Add psionics to the mix, and the point budget can rise even higher. This obviously puts player character Enyyn out of the range of any but the most cinematic of campaigns. NPC Enyyn, on the other hand...

@TEXT-BOX:Also remember that even though they are immortal and adaptable, that doesn't mean Enyyn can't be quirky and odd. Unlike the Engai, who edit antisocial tendencies out of themselves, Enyyn *can* be bad-tempered, prejudiced (if such prejudice doesn't conflict with their particular philosophical specialization), and even bizarrely deluded without being one of the psychotics they exile. However, the GM should remember that no matter what, Enyyn are intellectual and logical, and any strangeness they exhibit should be supported by a chain of logical reasoning -- however spurious! -- drawn from their experiences and studies.

((END BOX))

Culture

Unlike some of the other immortal races such as the Engai (pp. A108-111), the Enyyn have not retreated to hedonism in order to cope with their endless existence. Instead, they have turned to a life of focused intellectual investigation. Primarily this is approached through the study of philosophy. In what approaches a racial obsession, each Enyyna chooses one branch or category of philosophy to pursue during the course of its life. This may be as general or as specialized as they care to make it. Alternately, individuals may also pursue any of the "soft" sciences -- theology, sociology, anthropology, psychology, and the like. By the time of their first contact with other races, the Enyyn had developed a sophisticated ethical system which had become the accepted foundation for not only all their dealings with each other, but for their relations with Galactic civilization.

First contact several thousand years ago proved to be intellectually profitable for the Enyyn, as they absorbed the myriad philosophies, ideologies, theologies and other organized systems of thought available in the galaxy and began to explore them. After a disastrous first attempt to offer their conclusions back to one of their offworld sources, though, the Enyyn no longer volunteer the fruits of their thoughts. They will, however, willingly and enthusiastically entertain questions brought to them.

Enyyn society appears to run, for the most part, on a system of ethical anarchy and enlightened self-interest. Some have likened it to the various communistic and socialistic systems proposed at one time or another by members of every civilization, with certain notable differences: one, it appears to have evolved organically as an outgrowth of the Enyyn's ethical pursuits rather than having been imposed; two, the Enyyn don't have anything approaching an economy as most races know it; and three, it works. It appears also to serve a further purpose in detecting the rare antisocial "sport" simply by making their maximally-selfish behavior extremely obvious after a reasonably short time (relative to the Enyyn lifespan, that is).

Outside of enough psi-tech to build a world-web (to repel both invaders and returning revenge-driven exiles), the Enyyn have shown no real interest in importing off-world technology. Most of it -- even most military field-grade equipment -- is simply too fragile to survive the conditions on Go'h'elaan; native

devices are both sturdier and rarely obvious, looking like opaque crystals or pieces of the landscape. Enyyn technologists do acquire and study individual devices produced by other races in order to reverse engineer them, recreating them using local materials and methods.

Additionally, archaeologists have discovered the remains of an earlier technological Enyyn civilization on Go'h'elaan, dating to no less than 350,000 years ago. Many experts believe that this civilization collapsed at approximately the same time the Enyyn immortality gene complex manifested in the species. (The Enyyn themselves have been uncharacteristically reticent on the subject of these remains.) Occasional caches of ancient Enyyn tech -- as durable and long-lived as its makers, and ranging anywhere from TL9 to TL12 -- are discovered every few decades.

Politics

The Enyyn have no national or planetary politics. The Enyyn have no appreciable political system. This being said, they tend to be cordial to almost all species, partly because their ethics require it, and partly because their ability to adapt and survive allows them to view even the most dangerous races with a sanguine equanimity. However, the Enyyn are not guileless naifs, exploited by the galaxy at large. They *understand* politics possibly better than any other race -- after all, they've been studying the subject, in both native and off-world varieties, with typical Enyyn singlemindedness for millenia.

As a result, the Enyyn frequently find themselves in the roles of advisers and consultants. More often than not this requires that the supplicant actually go to Go'h'elaan and find the right Enyyna to ask -- usually an adventure in itself. However, a growing number of Enyyn can be found in universities and capitols across the galaxy, acting as researchers, arbiters and teachers. Since they make little distinction between races, alliances and politics, they frequently raise the ire of nationalist and/or chauvinist groups.

The Enyyn are aware of the Markann's cloaked presence amid Galactic civilization. They have had their own encounters with this hidden race of mad scientists in the distant past, encounters that usually left the Markann involved enraged and frustrated -- the Enyyn are particularly well-suited to not only survive the Markann's brand of destructive testing, but then turn into a piece of innocuous lab equipment and escape behind their backs, all the while studying *them*. After several centuries of futile effort, the Markann could no longer tolerate the very concept of a race they could not break. They erased their own knowledge of the Enyyn and declared Enyyn space off-limits under pain of death. Of late, certain Enyyn have noticed patterns in their studies that suggest their old nemeses are at work in the galaxy at large, but have not done anything about it yet -- they've only just begun to gather the data, after all, and it will take a few decades of evaluation at least before they can produce any useful conclusions to share with the other races.

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:As designed, the Enyyn are intended for use with **GURPS Space** settings, but they can easily be adapted (or imported untouched) to other milieux.

@TEXT-BOX:**GURPS Lensmen**: A race of pacifist philosophers would fit in quite well in the civilized sectors of this Universe. While obviously unsuitable for the Patrol because of their nonviolence, they can still serve in their usual roles of sage and adviser.

@TEXT-BOX:*Fantasy*: The Enyyn can be imported with or without explanation as the GM sees fit. Thaumatology is added to the fields they include in their ruminations, making them some of the greatest experts on magical theory in the world, although few (if any) of them are active mages. Their psionic potential should probably be eliminated unless the game world mixes magic and psi.

@TEXT-BOX:*Atomic Horror, Black Ops*, and similar settings: The Enyyn make an excellent "good-guy" race, able to work among humans without setting off their prejudices (unless their true form is discovered...) and willing to share their expertise to help this primitive race in its fight against more powerful alien opponents. As pacifists they refuse to do any of the fighting themselves, leaving human characters in the forefront of any action, but they are more than capable of specializing in *military* philosophy and advising their allies on strategy and tactics. In a *Black Ops* game, Enyyn PCs are easily possible, but they will never be Ops themselves and may suffer some degree of mistrust or outright prejudice from all levels of The Company, despite their status as allies.

((END BOX))

Enyyn in the Campaign

Where any kind of "soft" science is concerned, especially matters of philosophy or ethics, the Enyyn are the people to see. They are sages, consultants, archivists and theoreticians; there's often at least one in the capitol city of every spacegoing culture, and any large organization concerned with law or ethics usually attracts an Enyyn employee or officer. Many universities boast an Enyyn on staff, frequently (but not exclusively) in the Philosophy department. They also make good librarians, and are as often found in this position as professor when encountered in a college environment.

Enyyn adventurers are rare but not unheard of; they frequently have a field of interest that cannot be adequately investigated using archival materials, or which by its nature -- such as xenology -- requires you to go to the subject matter rather than vice versa. For obvious reasons, the Survey Service, the Patrol, many militaries, and a number of intelligence agencies all actively seek to recruit Enyyn members; however, if the job does not offer an intellectual challenge to match the obvious physical challenges for which they are desired, they will pass. And no normal Enyyn will take a front-line military role.

The rare Enyyn psychotic can make a very good master villain. Their typical megalomania usually leads them into areas where they can gain power through the exercise of their personal abilities, be they physical or mental: white collar criminal, revolutionary, anarchist, mercenary. While not as obsessed with intellectual fulfillment as his brothers, the Enyyn sport is still a specialist in his chosen field, and often many others. He more than capable of planning hypercompetently for all contingencies. (The GM seeking a lighter touch may want to quantify the Enyyna's madness by letting his intellect go all the way *through* competency to come out the other side...)

Whether he is a classic "spider in a vast web" or a solo operator, he will not be brought down easily, and will always have a hidden exit through which to escape, be it literal or metaphorical. Unless he is an out-and-out revolutionary, he will usually be cloaked in respectability, often several layers; multiple IDs (and shapes) are common as well, to allow him to work at differing levels within his organization (if any). Some sports seek out pre-First Contact civilizations and seek to remake them in their own warped image.

((START BOX))

@C-BOXHEAD:Sample Character: Narzhal av'Oronad, aka "Conqueror" 875 points

@D-BOXHEAD:Exiled Enyyn Megalomaniac

Age 2270; 36" diameter; 158 lbs.; as "Richard Carey"/"Conqueror" he appears to be a robust middle-aged human male, 5'8", 140 lbs., with piercing blue eyes and black hair greying at the temples.

@TEXT-CSTATS:**ST** 12 [20] **DX** 14 [20] **IQ** 15 [20] **HT** 16/20 [20]

@TEXT-CSTATS:Speed 7.5; Move 7 (human form), 4 (natural form).

@TEXT-CSTATS:Dodge 8; Parry 12.

@TEXT-CSTATS:**Damage:** *Punch:* 1d-2; *Kick:* 1d; *Thrust* 1d-1; *Swing* 1d+2

@TEXT-CSTATS:*Advantages:* Charisma +3 [15] (Reaction: +3); ; Combat Reflexes [15]; Enyyn "Sport" (see text) [470]; Status 8 (Ruler of most of Earth) [40]; Strong Will +3 [12] (Will: 18).

@TEXT-CSTATS:*Disadvantages:* Exiled [-5]; Extravagance [-10]; Glory Hound [-15]; Guilt Complex [-5]; Jealousy [-10]; Obsession: Revenge himself on the Enyyn for his exile [-15]; Secret: He's an alien, not a mutated human [-5].

@TEXT-CSTATS:*Quirks:* Habitually wears the form of a human male of indeterminate middle European extraction; Sincerely cares about the welfare of the people he rules; Still suffers nightmares about the world accidentally destroyed by his research programs; Dotes on his wife and adopted daughter; Responsive. @TEXT-CSTATS:*Languages:* English-15 [2]; Enyyn (native)-15 [0].

@TEXT-BOX:Narzhal av'Oronad is an Enyyn psychotic exiled from Go'h'elaan in the early 1700s, and

who has sworn to return and decimate the world of his birth. In his native timeline (an alternate version of the *GURPS International Super Teams* setting), he has completely reshaped Earth into his chosen tool of vengeance.

@TEXT-BOX:After spending several decades planning and studying in the civilized sectors of the galaxy, Narzhal struck out into unexplored space to find a primitive planet to turn into a machine of vengeance upon his homeworld. Dinalvar, the first such world he conquered, was accidentally destroyed by a runaway doomsday weapon test. After a narrow escape in his dilapidated starship, Narzhal made his way to Earth, where he crashlanded in 1896.

@TEXT-BOX:Over the next 100 years, using a human form, the identity of "Richard Carey," and scavenged equipment from his wrecked starship, Narzhal became a driving force in American industry and politics. With the advent of the first supers in the 1930s, he used his ship's computer to develop a serum which activated latent powers, and bartered it at the start of the Second World War for a commission as a general in the US military. Leading the Allies' 10,000-man metahuman task force, he significantly altered the course of WWII. When London and Washington were simultaneously destroyed by Nazi atom bombs in 1943, he used the opportunity to orchestrate a takeover of both nations to form the British-American Hegemony.

@TEXT-BOX:From this merger of the British Empire and the United States, he slowly expanded his influence, absorbing nations either by military conquest (through which he gained the sobriquet by which he is now best known), or voluntary annexation. By the end of the 1980s the increasingly-repressive Hegemony, ruled by a metahuman elite and decidedly fascist in its politics, controlled over 80% of the globe -- and Narzhal controlled *it*, with an iron hand.

@TEXT-BOX:Narzhal/Carey himself is an intriguing mix of contradictions. Ruthless and sociopathic when it comes to the destruction of the Enyyn, he honestly cares about the beings he rules. (Of course, he sees them more as useful, intelligent *pets* than real people, but still...) Although he has drastically curtailed civil liberties in the Hegemony and his regional lieutenants often have bloody and violent domestic policies, he tries to ensure that no one is hungry, homeless or unhealthy, and not just because he plans to deploy almost every able-bodied human in a massive invasion force against Go'h'elaan; he unabashedly seeks the best for his subjects and wants them to love him. (And many do.) He is still haunted by the destruction of Dinalvar, and the billions of lives lost to the runaway hellbomb prototype which reduced the planet to slag.

((END BOX))

Ethomorph

Now the hand of Henry Jekyll (as you have often remarked) was professional in shape and size: it was large, firm, white, and comely. But the hand which I now saw, clearly enough, in the yellow light of a mid-London morning, lying half shut on the bed-clothes, was lean, corded, knuckly, of a dusky pallor and thickly shaded with a swart growth of hair. It was the hand of Edward Hyde.

I must have stared upon it for near half a minute, sunk as I was in the mere stupidity of wonder, before terror woke up in my breast as sudden and startling as the crash of cymbals; and bounding from my bed, I rushed to the mirror. At the sight that met my eyes, my blood was changed into something exquisitely

thin and icy. Yes, I had gone to bed Henry Jekyll, I had awakened Edward Hyde.

*-- from **The Strange Case of Dr. Jekyll and Mr. Hyde**, by Robert Louis Stevenson*

For those who believe the ancient rede that the form without reflects the spirit within, the Ethomorph is the defining example: one individual, who oscillates between two shapes with opposing personalities and appearances. One form, usually unattractive or even deformed, embodies all the individual's darker emotions and desires, manifesting as an almost demoniacal depravity; the other, handsome and noble, is home to a nearly saintly virtue.

Ethomorph variable

@TEXT-CSTATS:*Attributes*: Variable; ethomorphic alternate forms tend to be more physically powerful than their base form, as well as more resistant to the debilitating effects of their chosen vices -- ST and HT are often higher than those of the base form.

@TEXT-CSTATS:*Advantages*: Remove any Appearance, Empathy and Animal Empathy, and any Social advantages intimately linked to personal identity (for example, Reputation). Add Combat Reflexes [15]; Fearlessness +4 [8]; No Hangover [5]; Strong Will +2 [4]. Toughness and Extra Hit Points are common.

@TEXT-CSTATS:*Disadvantages*: Remove any "positive" disadvantages such as Code of Honor, Sense of Duty, Honesty and so on. Add Appearance (Unattractive) [-5] or worse; Bad Temper [-10]; Bully [-10]; Callous [-6]; Frightens Animals [-5/-10]; Gluttony [-5]; Lecherousness [-15]; Overconfidence [-10]; Sadism [-15]; Vicious Drunk [-1]. Odious Personal Habits, Compulsive Behaviors and Obsessions are also appropriate.

@TEXT-CSTATS:*Quirks*: Invert or replace any quirks that suggest polite, ethical or moral behavior. Dislikes may be elevated to loathings or even full-blown Intolerances. Behavioral quirks may be retained to provide acquaintances with a disturbing sense of familiarity, or may be exaggerated or removed entirely.

@TEXT-CSTATS:*Skills*: Brawling-DX [1], Sex Appeal-HT or 14, whichever is better, if the base form did not already have them, along with any other skills that may augment the were-form's favorite modes of debauchery.

This example is derived specifically from *Dr. Jekyll and Mr. Hyde*. It assumes a character of average or better morality/ethics, with a dark ethomorphic form. This is the most common variant. Alternately, a predominantly evil/immoral character may have a were-shape which lacks all his negative traits and possesses instead many positive ones.

(((START BOX)))

@C-BOXHEAD:Ethomorphs and Split Personality

@TEXT-BOX:In the case of an ethomorph, the -10-point level of the Split Personality disadvantage represents an individual still capable of enjoying both forms as separate vessels for his singular identity, no matter how variant their personalities. The -15-point level indicates that each form is its own person. In all cases, though, the alternate form is always aware of the base form, although its opinion of him is

rarely high.

@TEXT-BOX>Note, however, that those characters who start with the -10-point level of the disadvantage will inevitably escalate to the -15-point version. The GM should determine the point at which this occurs based upon the frequency with which the character changes and how different the two forms are (based on the advantages and disadvantages that are "abandoned" in the shift). The greater the difference between the two, and the more frequent the base form's "indulgence", the faster the escalation should be. The additional level of Split Personality, when it finally manifests, is treated as a disadvantage acquired in play and does not provide any additional character points.

((END BOX))

Also, as shown in many recent movies, such physical factors as body mass, height and gender need not remain constant between forms.

PPT and NPT must be determined individually for the specific character, as they will vary widely depending on the traits he possesses, loses and/or acquires. In addition, almost all ethomorphs will have the Unstable limitation (-25%) applied. Depending on the character concept, this may or may not take the form of the *War of Wills* option (see p. 00). Additionally, the were-form must possess the *Cannot Use Change Control* limitation (p. 00). Ethomorphism is a strictly binary form of shapeshifting -- neither form normally wants anything to do with the other.

The base form *must* take Split Personality, at either level. Ethomorphs are *not* required to take Compulsive Behavior: Morally Opposed, although it is appropriate. They sometimes possess the Delusion that they are entirely separate people.

Ethomorphs are usually limited to the base form and one alternate form, which embodies either moral/ethical extreme. However, it is possible (though rare) for an ethomorph to possess alternate forms and personalities for *both* extremes -- angel and devil both, with the base personality/form caught between them.

((START BOX))

@C-BOXHEAD:Ethomorphs in the Campaign

@TEXT-BOX:The obvious inspiration for ethomorphism is *The Strange Case of Dr. Jekyll and Mr. Hyde*, by Robert Louis Stevenson, a relentlessly Victorian work in its extremely polarized view of both morality and society. However, the ethomorph need not be permanently relegated to such a strict milieu.

@TEXT-BOX:*Atomic Horror, Lensman, Steampunk* and similar: A little Weird Science is all you need for a well-meaning scientist to accidentally time-share his body with a maniac, regardless of the native Tech Level.

@TEXT-BOX:*Black Ops*: An unusual variety of "werewolf", Argus may be more inclined to capture and study an ethomorph than the other kinds of shapeshifter it has encountered in the past.

@TEXT-BOX:*Horror, Weird Modern* and similar games: An ethomorph would work as both villain and/or McGuffin -- especially if the base form is someone the party trusts.

@TEXT-BOX:And finally, the ultimate possibility: the *GURPS Goblins* version of Mr. Hyde: A

celibate, teetotaling Biblethumper whose straitlaced morality and handsome features horrify all those who come in contact with him, even as he fascinates them with his inarguable charisma. Or maybe he's *worse* than any *ten* other goblins combined...

((END BOX))

A Polarized Persona

A uniquely Victorian variety of shapechanger, the ethomorph is usually a shifter who has relegated all his perceived "negative", "immoral" or "unhealthy" mental traits into a separate physical form, which often possesses its own mind and personality. This process can either be accidental (as in *The Strange Case of Dr. Jekyll and Mr. Hyde*) or intentional (the work of an evil genius seeking allies or servants of a like mind).

The mechanisms by which such a physical and mental polarization are accomplished can vary widely. For some, it is a result of meditation and careful self-control; for others, an application of magic; yet others make their way through a scientific path, either with a drug like Atavismine (see p. STM00 or sidebar, p. 00) or more exotic means. In almost all cases, though, the manifestation of the banished emotions and motivations as their own "person" is an error or unforeseen side-effect of the process employed. Most ethomorphs originally intended to suppress or expel those traits they found inconvenient or offensive, only to find them fighting back in a most distressingly physical manner.

((START BOX))

@C-BOXHEAD:Ethomorph PCs

@TEXT-BOX:Player characters suffering from ethomorphism are affordable at 100 points and even below, as long as the alternate form does not far outstrip the base form in power. The primary differences between the two sides of an ethomorph are, after all, matters of personality and appearance; few ethomorphs manifest an alter ego that is hugely more powerful than they are. As long as the GM can justify the ability to change between forms within the campaign's genre, or warp the campaign to suit, an ethomorph PC can probably be built to fit.

@TEXT-BOX:An ethomorph need not be created from scratch, though -- under the right conditions, the GM may be able to turn an existing PC into an ethomorph. (Obviously this will only work in a game with a fantasy or weird science element, or which can accommodate its inclusion.) It will require collaboration with the player in question, but if the character is already working towards a moral or ethical improvement in himself, the relegation of his darker drives to their own personality within a timeshared body can provide an excellent set of plot hooks -- as well as drive the other players crazy.

@TEXT-BOX:If the genre allows, this may be the best way to plant a traitor in the midst of a tightly-knit party. Of course, it requires cooperation on the part of the player, but as long as he can keep his transformation out of sight of the other characters. Even better would be leaving the base form ignorant of his new condition for as long as possible.

((END BOX))

Body...

The physical change that an ethomorph undergoes is far from extensive, although it can be dramatic. The base species does not change, although in the most extreme cases it can seem that way. Instead, the were appears to become a different person, usually with no resemblance whatsoever to his base form. The appearance of this "other person" corresponds to the ethical extreme which it embodies. A form born of the were's negative traits is usually unattractive -- deformed, bestial and often unhealthy in appearance; its opposite number is attractive, clean-limbed and charismatic. Both extremes often induce a fascination in the opposite sex, no matter what their appearance.

It is extremely rare, but not impossible, for an ethomorphic were-form to swap genders as part of its transformation. In such a case, a dark ethomorph will often take the appearance of the base form's ideal member of the opposite sex. Despite their often extreme beauty, these dark were-forms will still have a sinister and threatening air to them, and will be no less debauched and evil than their less-attractive cousins.

In any case, the alter ego is usually more powerful, physically, than the base form; in extreme cases they can demonstrate inhuman strength. They also tend to be remarkably resilient, enduring with equal ease both the debilitating effects of their vices as well as the attacks of those hostile to them. In the case of dark ethomorphs, this is usually explained as a result of their atavistic resemblance to some great beast; in bright ethomorphs, their proximity to an angelic ideal is usually credited.

Pre-existing physical traits from the base form, such as damaged limbs and missing eyes, are usually maintained. If so, their effect is exaggerated to match the form. For example, consider a missing eye. In a dark ethomorph, it will be a visible, disturbing deformity that only serves to increase the were-form's sinister appearance. In a bright ethomorph, it gives the were-form a rakish, romantic air that endears him to all he meets.

In either case, the ethomorph undergoes sufficient change that he appears to be a completely different person. Bright ethomorphs may bear a distinct resemblance to their other side, enough to be thought a relative, possibly a cousin or even a sibling (a misapprehension of which the were-form will often take advantage). Darklings tend to become too bestial to seem similar to their base form -- their snarling, animalistic visages often drive all thought of comparison from the minds of their viewers.

Subsequently, any and all traits that rely upon or modify personal identity -- Reputations, Social Stigmas, even Wealth -- are unavailable to the ethomorph. In those cases where the base form is to some degree aware of his alter ego's existence and activity, arrangements may be made for its use -- Henry Jeckyll, for instance, instructed his servants that Edward Hyde was a guest in his house, and saw to it that cash was available for his use. But beyond that, the ethomorph is unable to benefit -- or suffer -- from his base form's social and financial presence.

((START BOX))

Going To (Different) Extremes

@TEXT-BOX:Note that the exaggerated personality traits which ethomorphic were-forms embody are usually the result of a more-or-less normal person -- someone in the middle third or so of the moral-ethical bellcurve -- undergoing whatever triggering process the GM has defined for the campaign. The results would be somewhat different if an unabashedly diabolic or extremely saintly person were to experience the same process. A particularly debauched individual may manifest a were-form whose

moral values are barely above (but *are* above, nonetheless) average. Similarly, a nearly-angelic individual may manifest a "dark" side who might be able to manage being naughty every once in a while, but no more. In either case, though, the were-form may well be a severe embarrassment or even a fatal liability...

((END BOX))

...and Soul

The corresponding personality shifts are even more dramatic than the physical changes. In the case of a dark ethomorph, all of the character's positive traits are either buried or inverted. This can turn an average man into a debauched libertine, an extorting miser, or even a vicious serial killer, based both on his moral and ethical beliefs, and on the deepest secrets of his soul which he cannot admit even to himself. When it is not simply enjoying its excesses and debauches, a dark ethomorph will often take on the role of its base form's personal tempter and/or destroyer. In such a case, the were-form will do its best to leave its base form in situations designed to appeal to his remaining darker urges, in the hopes of dragging him down. If it fails to corrupt him (or simply chooses not to bother with that course of action), the were-form will sometimes try actively to destroy its host's reputation and life. In either case, it does this as much out of a desire for a "partner in crime" as out of malice for the base form.

At the other end of the spectrum, the bright ethomorph embodies all the lost or hidden nobility a fallen man may have thought lost to him. It is normally a far better person than its host. Depending on the attitude of the character's native culture to the redemption or rehabilitation of criminals and other debased individuals, a bright ethomorph may despise and ignore his base form, or do the best it can to improve his lot. The more altruism is seen as a virtue in the culture, the more energetically the were-form will toil on its host's behalf; some individuals may discover their lives, reputations and bankbooks improving for no apparent reason... At the same time, the were-form will not ignore itself entirely, but it will (of course) do no more for its own benefit than is proper.

((START BOX))

@C-BOXHEAD:Sample Character: James William Dennison . . . 125 Points

@TEXT-BOX:Male; Age 31; 5'10"; 155 lbs.; American with ash-blond hair and haunted blue eyes.

@TEXT-CSTATS:**ST** 11 [10]; **DX** 12 [20]; **IQ** 12 [20]; **HT** 10 [0]

The Hun

@TEXT-BOX:5'9"; 180 lbs.; shaggy black hair, piercing brown eyes, bulky and muscular with heavy brows and bad teeth.

@TEXT-CSTATS:**ST** 13 [20]; **DX** 12 [0]; **IQ** 10 [20]; **HT** 12/14 [20].

@TEXT-CSTATS:Speed 6.00; Move 6.

@TEXT-CSTATS:Dodge 7; Parry 9.

@TEXT-CSTATS:**Damage**: *Punch*: 1d-2; *Kick*: 1d; *Thrust* 1d; *Swing* 2d-1

@TEXT-CSTATS:*Advantages*: Remove Dennison's Appearance [-15], Reputation [-3], and Status [-10]. Add Charisma +2 [10]; Combat Reflexes [15]; Extra Hit Points +2 [8]; Fearlessness +4 [8]; No Hangover [5]; Strong Will +2 [4].

@TEXT-CSTATS:*Disadvantages*: Remove Dennison's Honesty [+10] and Nightmares [+5]. Add Appearance (Unattractive) [-5] (Reaction: -1); Bad Temper [-10]; Bloodlust [-10]; Bully [-10]; Callous [-6]; Frightens Animals [-5/-10]; Gluttony [-5]; Lecherousness [-15]; Murder Addiction [-60]; Overconfidence [-10]; Sadism [-15].

@TEXT-CSTATS:*Quirks*: Remove Congenial; Gallant with the ladies; Shamed and disgusted by his behavior in WWI; Subliminal air of sadness and fear around him. [+4] Add Affects a slow, painful limp; Speaks in a growling snarl except when trying to charm a victim; Trademark: private signals to Dennison; Vicious drunk. [-4]

@TEXT-CSTATS:*Skills*: As Dennison, except as follows: Improve Brawling-14 [+3] (Parry: 9); Knife-14 [+3] (Parry: 7); Sex Appeal-15 [+10]. Add Disguise-12 [2]; Fast-Talk-13 [4]; Shadowing-13 [4]; Stealth-13 [4].

@TEXT-CSTATS:*Languages*: As Dennison.

@TEXT-CSTATS:PPT: +150, NPT: -183. Basic cost: 38 points. Cannot use Change Control, -5%; Unstable/War of Wills, -25%. Final Cost: 27 points.

@TEXT-BOX:James William Dennison was a seeker of enlightenment. From the end of WWI to the middle of the 1920s, this well-to-do American spent much of his considerable inheritance roaming the world. Seeking out guru after master after mysterious teacher, he studied with every one in a desperate attempt to find peace for his tortured soul. Driving him was guilt over his participation in the Great War -- a war in which he served with wild and bloodthirsty abandon. With the end of the war came shame at the dark side he had unleashed in his nation's service, and a vow to expunge from his soul the gleeful delight he had taken in killing and rapine -- a delight that still tempted him to destroy his obstacles (human or otherwise) whenever he felt frustrated or angry.

@TEXT-BOX:After more than a decade of searching and studying, his efforts seemed to bear fruit; the teachings of a lama in the far reaches of Tibet seemed to bring him inner peace. Overjoyed and believing himself expunged of his dark urges, he returned to his native Chicago, leaving his instruction under the lama incomplete.

@TEXT-BOX:This was his undoing, though. Lacking its final step, the regimen of meditation and herbal potions he learned did not eliminate his darker impulses -- it merely *displaced* them to the far reaches of his subconscious mind, where they festered and sought release ... and revenge. Less than a year after his triumphant return to Chicago high society, Dennison began suffering from blackouts, ranging from hours to sometimes days in length. Soon, he began to suffer from nightmares that would wake him, screaming, in the middle of the night.

@TEXT-BOX:Not long after that, at the height of the Roaring Twenties, Chicago began to experience a series of unexplained murders, each more vicious and savage than the one before it. As the populace started to slide into a state of disbelieving terror and the newspapers blared the details of each new killing, even the city's notorious gangsters have offered to help the police find the fiend responsible for the deaths.

@TEXT-BOX:And James Dennison has begun to fear that it is he.

@TEXT-BOX:*The Hun* is Dennison's ethomorphic alter ego. Cast in the image of some of the worst of the German soldiers that Dennison faced in WWI France, it embodies all of his rage and bloodlust. By turns snarling and charming, it seeths and lusts and slinks through the night world of Roaring 20s Chicago looking for victims to feed its murderous psychosexual desires. With all of Dennison's military skills plus a few more of its own at its disposal, it stalks men and women alike, killing each in a unique, grisly fashion. It prefers women, often charming them into following it to a secluded location, but will not hesitate to kill a man if the need is strong. Whenever possible, it leaves a trademark behind at each killing: symbols from a code used by Dennison in his childhood. It's careful to leave nothing that by itself is a coherent message, but it knows that Dennison is beginning to suspect something is amiss, and is delighting in his growing horror, which it reinforces with horrific nightmares which it inflicts upon him.

@TEXT-BOX:James William Dennison/The Hun is a 125-point character designed for use in a **GURPS Cliffhangers** game. With fairly minor modifications (for instance, changing WWI to Vietnam), he can be inserted into just about any 20th-century setting.

((END BOX))

The Hawkshaw Bioroid

Unit Sif-7 reporting.

Confirmed arrival at operation point 01h25m local time as per mission plan. Observed guard cycle and revised mission parameters accordingly.

At 02h59m local time, one guard departed from established pattern for micturation in local foliage. Terminated guard and assumed his shape, then returned to patrol per his schedule. Now awaiting final "go".

Unit Sif-7 out.

In a certain TL9 world of corporate espionage and warfare, a biotech concern has developed the perfect tool with which to undermine the more mechanically-inclined of its competitors. Blending the latest in custom engineering for unique talents with a secret process for force-growing clones, the Alesandese Group has produced its own private corps of assassins and spies: the Hawkshaw Class Infiltration Bioroid.

Hawkshaw Class Infiltration Bioroid 52 points

@TEXT-CSTATS:*Attributes:* ST +1 [10]; DX +2 [20]; IQ +1 [10]; HT +1 [10].

@TEXT-CSTATS:*Advantages:* Appearance (Attractive) [5] (Reaction: +1); Combat Reflexes [15]; Increased Speed +2 [50]; Morph (Copies Personality +100%, Genetic Match +50%, Cannot Duplicate Clothing -5%, Cannot Reuse Forms -50%, Fatiguing Change -10%, Needs Sample -15%, Slow Change -10%) [24]; Night Vision [10]; Patron: the Alesandese Group (very powerful organization, supplies equipment, appears 9 or less) [30]; Silence ¥2 [10] (Stealth Bonus (Moving): 2; Stealth Bonus (Motionless): 4); Single-Minded [5]; Unfazeable [15]; Zeroed [10].

@TEXT-CSTATS:*Disadvantages:* Attentive [-1]; Callous [-6]; Careful [-1]; Clueless [-10]; Hidebound [-5]; Involuntary Duty to the Alesandese Group 15 or less, [-20]; Oblivious [-3]; Poverty [-25] (Starting Wealth: \$0) [-25]; Self-Destruct [-20]; Selfless [-10]; Social Stigma: Valuable Property [-10]; Short Lifespan ¥5 [-50]; Slave Mentality [-40]; Uncongenial [-1].

@TEXT-CSTATS:*Skills:* Acting-IQ+2 [6]; Stealth-DX+1 [4].

@TEXT-CSTATS:*Languages:* English-IQ (native) [0].

@TEXT-CSTATS:*Taboo Traits:* Hawkshaw bioroids cannot have any trait that suggests excitability or extreme emotion of any kind, nor can they have any mental or physical disadvantage that is caused or influenced by a genetic factor (for example. epilepsy or manic-depressive).

This is a base-model Hawkshaw, fresh out of the growth tank. Variations are possible, as with natural species, plus all Hawkshaws receive extensive special ops-style training before they are deployed on their first mission (see box, p. 00). It will be extremely unlikely for anyone outside of the Alesandese Group to encounter a Hawkshaw that possesses nothing but its racial abilities. Special models may have better attributes and higher levels of Appearance and Silence, as well as any other traits their designer may deem necessary.

Hawkshaws are always attractive women, apparently human in appearance. They tend to be Amazonian in size, though -- generate height as for a human male and add one inch, then determine weight normally for a female.

((START BOX))

@C-BOXHEAD:The Typical Hawkshaw Skill Set

@TEXT-BOX:The training a Hawkshaw bioroid undergoes after their decanting is brutal and extensive. The Alesandese Group employs some of the best teachers of military and espionage skills available in the world, and they drive the bioroids through an intense, sometimes deadly, one-year course of study that turns a fresh clone into a walking weapon. The following list of skills is the bare minimum a Hawkshaw can be expected to possess upon "graduating" to active agent status, and many are more skilled when they complete their training. It goes without saying that once they are active agents, they continue to improve and expand their skills.

@TEXT-BOX:*Hawkshaw "Basic Training:"* Acrobatics-DX [4]; Beam Weapons/TL9 (pistol)-DX+3 [4]; Camouflage-IQ+2 [4]; Computer Operation/TL9-IQ+2 [4]; Demolition/TL9-IQ+1 [4]; Garrote-DX+2 [4]; Guns/TL9 (Pistol)-DX+3 [4]; Guns/TL9 (Rifle)-DX+3 [4]; Holdout-IQ+1 [4]; Jumping-DX+1 [2]; Karate-DX [4]; Knife-DX+1 [2]; Knife Throwing-DX+1 [2]; Lip Reading-IQ [2]; Pickpocket-DX [4]; Poisons-IQ [4]; Running-HT [4]; Savoir-Faire-IQ+2 [4]; Sex Appeal-IQ+1 [4]; Shadowing-IQ+1 [4]; Survival (Urban)-IQ [2]; Swimming-DX+1 [2]; Tactics-IQ+1 [6]; Traps/TL9-IQ+1 [4].

@TEXT-BOX:The "basic training" package is worth 96 points; after undergoing it, an absolutely average Hawkshaw bioroid is usually one year old and a 158-point character.

((END BOX))

General Description

Uniformly female, the Hawkshaw-class bioroids (named after the corporate security officer on whom their core genotype was originally based) are designed to be infiltrators, spies and assassins. Their inherent gifts make them not only stealthy, but capable of assuming the shape of anyone from whom they can acquire a tiny genetic sample. To the delight of their engineers, they have an ability to copy a target's personality which seems almost psychic at times. It wasn't in the design specs, and no one seems to know where it came from, but every Hawkshaw so far has had it, and no one at Alesandese is complaining.

Although their primary purpose has always been as agents to be deployed in covert operations against rival corporations, Hawkshaws have found other roles within Alesandese. No small number are employed as bodyguards for various executive officers, and a number serve in the corporate Security department. The vast majority, however, remain part of the black program which spawned them.

There is no such thing as an average or unattractive Hawkshaw; they are designed to be pleasing to the eye, and many specialty models are stunningly gorgeous. This reflects more upon the aesthetics of the Alesandese Group's genetic engineers than any sexist tendencies in either them or society at large, although some have admitted to being influenced by the stories of *femmes fatales* of the past, like Mata Hari. All racial types, and variations therein, are found among their numbers, although given their shapeshifting abilities, it's not always certain that the appearance a Hawkshaw is wearing is necessarily her own. The only exception to this endless selection are the "elite" models, who are clones of

exceptionally successful predecessors. No variation is allowed in them; they are all identical to their distinguished "ancestor".

The first Hawkshaws were decanted almost three decades ago; only the executives in charge of the black division where they are made know exactly how many have been deployed in the years since. There are usually 20 or 30 undergoing "basic training" at any given time, but the exact number currently active in the field is a secret classified at the highest corporate levels.

Psychology

Being a race subject to a slave mentality, Hawkshaw bioroids need either constant supervision, or flexible long-term orders. (Typically, the latter might be something like, "Keep yourself in fighting trim through regular exercise and sparring, eat and sleep properly, and undertake new training whenever the opportunity is presented.") Unlike most so-called "slave races", though, the Hawkshaws are capable of considerable individual initiative -- but only when they are ordered to demonstrate it, which is almost always as part of a mission. This limited independence lasts only as long as the Hawkshaw's mission is considered incomplete. It continues even if a designated "master" is in her presence, unless that master terminates the mission, allowing her to operate at peak efficiency even in situations where other slave races would fall on their faces groveling at their masters' feet.

While they have been known to be devoted to their masters and trainers, Hawkshaws have a reputation within the company as "the Ice Maidens". Although not actively hostile to one another or humans, Hawkshaws are not communal beings, and prefer to be alone if given a choice. They are not subject to much in the way of emotion, as that was considered a liability during field operations. They are, in fact, untroubled by almost all extremes of emotion and present a phlegmatic, unmoved face to the world unless the needs of a mission require otherwise. They do have a tendency to focus on their tasks to the exclusion of anything else, and lack both a strong sense of self-identity and any real empathy for other beings. Only their slave mentality prevents them from being active sociopaths.

(((START BOX)))

@C-BOXHEAD:Hawkshaw Names

@TEXT-BOX:Hawkshaw bioroids are not so much named as designated. Basic Hawkshaws have inception numbers, made up of a two-letter prefix (the first indicates the production facility, the second the growth tank) separated by a hyphen by a four-digit number indicating the year and month the bioroid was decanted (for example, GT-0212).

@TEXT-BOX:Hawkshaws who get the attention and favor of their trainers are often given use-names and nicknames -- usually (but not limited to) common female first names. If a particular Hawkshaw proves to be exceptional, she may be used as the "seed" for a new, "elite" production line, whose members which will then be identified with her use-name plus a number indicating the order in which they were cloned: Alysse-12, Miranda-5.

@TEXT-BOX:Of course, when on a mission, a Hawkshaw uses whatever name is appropriate to the identity she has been assigned or which she has assumed with her morph powers.

(((END BOX)))

Ecology

Although they appear to be human, and in fact share in large part the same basic genetic structure, Hawkshaws and humans have less in common than humans and chimpanzees.

To make them more tractable, and to minimize long-term "disposal" problems, the Alesandese Group has had them built with both a slave mentality and a drastically-shortened lifespan that ends in a rapid breakdown of their systems. Even if their development were not accelerated using forced growth tanks, they would mature in a mere three years; their operating lifespan from the time they reach maturity is only eight years. After that, they die of old age... quickly.

Not surprisingly, they are consequently not interfertile with humans -- or any other known humanoid race -- again, by design. Given their short operating lifespan, allowing them to carry a child and give birth naturally (despite its savings in production costs) would be an unprofitable waste of time. Therefore, even though they are physically compatible with human males, they are sterile and completely lack anything in the way of a libido -- although, once again, they are expert at simulating one should a mission call for it.

When not out on assignment, most of the current Hawkshaw population lives in a comfortably-appointed complex hidden beneath one of the larger buildings on the Alesandese headquarters campus. In addition to the "barracks", this complex houses the production and growth facilities as well as the training areas. While the population fluctuates, what with production runs, basic training, individual lifecycles, and casualties on the outside, there are usually around 80 to 100 Hawkshaws present at all times.

Hawkshaws in the Campaign

The Hawkshaw-Class Infiltration Bioroid was designed for use in a TL9 campaign with a strong cyberpunk flavor. As is usual for this kind of world, powerful corporations are battling, both in the marketplace and in the dark of night, for dominance. Mechanical and electronic technologies, be they from a single monolithic megacorporation or from a large number of struggling competitors, currently enjoy the lion's share of the economy. And a single visionary biotech company is hoping to upset the status quo.

Hawkshaw bioroids are the Alesandese Group's answer to the challenge. Alesandese deploys the Hawkshaws on missions ranging from simple espionage, through seduction and blackmail, to the sabotage of corporate assets and the assassination and/or replacement of inconvenient executives and government officials.

Unless the party is a team in the employ of Alesandese, they are most likely to encounter one or more Hawkshaws while the latter are deployed on a mission. Whether they meet as enemies or not depends on the goals of both sides -- and whether or not the Hawkshaw thinks she can better accomplish her goals by masquerading as one of the party members...

A Hawkshaw could be anywhere. Anyone from a government official who recently changed his anti-biotech stance to the security guard who's in the wrong sector during his shift could be a Hawkshaw. She could be the cute college grad who wants a drunken executive to help her get a job, or who offers to be his mistress -- at least long enough to get him alone. If there is anything certain about Hawkshaws, it's that no one outside of Alesandese has any idea they exist, and (for the moment) they're leaving other

biotech firms alone.

((START BOX))

@C-BOXHEAD:Model Variations and Competitors' Knock-Offs

@TEXT-BOX:The Hawkshaw bioroid is a lifeform engineered and grown from scratch to serve as a corporate espionage agent. In addition to the "basic" model as described in the main text, custom bioroids built to a mission (or executive's) specifications are possible. The Alesandese Group's genetic engineers can add almost any trait that is not occult or supernatural in nature. Certain "super" traits are also possible, as evidenced by the Hawkshaw's morph abilities, but the GM should take care to limit exactly what is available, lest the campaign turn into a supers game.

@TEXT-BOX:Some organizations may want to have agents like the Hawkshaws but will not have quite Alesandese's level of technology available to them. Companies like this may have had to settle for rebuilding existing human beings (either "recruited" or kidnapped outright), especially if they're in a relative hurry.

@TEXT-BOX:Modified humans will not usually be as exceptional as an engineered lifeform unless the organization in question has access to such advanced means as a Metamorphosis Virus (see p. BT79-84). Attribute increases may be lower or fewer, the number of added Advantages may be smaller, and most importantly, the Self-Destruct/Short Lifespan/Slave Mentality combination will be replaced by the less complicated but almost as effective tactic of implanting a Cortex Bomb and subjecting the new agent to a barrage of powerful psychological conditioning. One advantage re-engineered humans hold over a Hawkshaw or its equivalent is that they tend to be noticeably more personable, and are able to function better on missions that require extensive social functions.

@TEXT-BOX:Above and beyond the differences in one's raw materials, individual agents can be customized for different mission profiles, especially if they are grown to order by an organization like the Alesandese Group.

((END BOX))

Other Settings

A lower tech level > something closer to the traditional cyberpunk world, perhaps -- can be accommodated if the GM wishes by the expedient of noting that the Alesandese Group is an innovative biotech firm which is reputed to be *in advance* of the cutting edge as the rest of the industry sees it. Why this is can be a campaign hook or an unsolved mystery...

If a cyberpunk or biopunk flavor is not preferred, the Hawkshaws could work in any post-human/heavy-bio-engineering setting, such as *GURPS Transhuman Space*. They would also not be out of place in a world like *Terradyne*.

Worlds with higher tech levels than 10, though, are problematic for these shifters. The Proteus Virus becomes available at TL11, with full Metamorphic Virii common at TL12; with the kind of changes either can impose on a pre-existing organism, there would be little need to specifically engineer a new one to do the Hawkshaw's job.

Of course, the GM need not feel constrained to technological worlds. In Yrth, or the earth of *GURPS*

Technomancer, Hawkshaws could be summoned beings, manifested spirits, or even truly ground-breaking golems. In a Lovecraft-style **Horror** game, they may be some kind of Elder Spawn, aiding a fine old New England firm for what are sure to be dark and disturbing reasons of their own. And finally, in **GURPS In Nomine**, they might actually be Lilim (possessing the Celestial Song of Form, of course), responding to rituals cast by would-be corporate sorcerers and playing along with the gag until they've racked up enough favors to make it worth all the effort.

((START BOX))

@C-BOXHEAD:Hawkshaw Characters

@TEXT-BOX:A typical bioroid fresh out of "basic training" and deployed on her first mission would be a 150-point character; assuming she spent the bare minimum on her "standard skills" (see box, p. 00), that would leave her player with a few points with which to customize the character -- more, if she took some disadvantages above and beyond those in the racial package.

@TEXT-BOX:More experienced Hawkshaws could reach 200 or even possibly 250 points in their brief lifespans, making them either opponents to be feared or allies to be coveted.

@TEXT-BOX:Despite the fact that they are engineered, variations are still common among Hawkshaw bioroids. Remember that the racial package is still just a template, a starting point, even though these beings are effectively mass-produced. Appearance, skill set, even attributes and leveled advantages can vary away from the racial norm.

@TEXT-BOX:For a Hawkshaw PC, the GM should note that the frequency of appearance for the Alesandese Group Patron represents not any inherent difficulty in reaching the company, but in the company's ability to get help to a highly secret, ultimately deniable agent.

@D-BOXHEAD:Free Hawkshaws

@TEXT-BOX:The GM should consider the following option if he wants to encourage Hawkshaw PCs, or wants to create a truly challenging Hawkshaw enemy. Instead of being specifically engineered into the Hawkshaw genotype, their slave mentality is instead a conditioned behavior imposed on the bioroids' developing minds during the forced growth process (which explains their limited ability to switch it "on and off"). Although it is extremely difficult, that conditioning *can* be broken. In other words, any Hawkshaw with enough available character points can buy off the Slave Mentality disadvantage outright.

@TEXT-BOX:Most Hawkshaws who do break their conditioning usually escape from the company's service by faking their deaths on a mission and slipping into the population at large, relying on their morphing abilities to hide them. They usually find work in the fields that they know well, such as mercenary or security, although some have become criminals, others business persons, and at least one became an artist of no small repute.

@TEXT-BOX:Those that choose not to escape (some stay, trying to help others achieve independence) must take a -30-point Secret to cover their free will. (A "rogue" Hawkshaw is an immediate target for termination.)

@TEXT-BOX:In a campaign employing this option, the highest echelons of Alesandese are aware of the deserter Hawkshaws, and is justifiably paranoid about them. Unless they buy off more of their disadvantages, they are effectively sociopaths -- very dangerous sociopaths who might well bear a

grudge against the company.

((END BOX))

((START BOX))

@C-BOXHEAD:Sample Character: Miranda-5 . . . 200 points

@TEXT-BOX:Female; Age 5; 5'11"; 150 lbs.; Black hair, grey eyes, porcelain complexion, sleekly muscled with a feline grace.

@TEXT-CSTATS:**ST** 11 [0]; **DX** 14 [20]; **IQ** 12 [10]; HT 11 [0]

@TEXT-CSTATS:Speed 6.25; Move 7.

@TEXT-CSTATS:Dodge 7; Parry 10.

@TEXT-CSTATS:**Damage:** *Punch:* 1d-1; *Kick:* 1d+2; *Thrust* 1d-1; *Swing* 1d+1

@TEXT-CSTATS:*Advantages:* Absolute Timing [5]; Alertness +2 [10]; Appearance (Beautiful) [10]; Combat Reflexes [15] (Fright Check: 14); Hawkshaw Racial Package [52]; Silence +2 [10] (Totl Stealth Bonus (Moving): 4; Stealth Bonus (Motionless): 8).

@TEXT-CSTATS:*Disadvantages:* No Sense of Humor [-10]; Stubbornness [-5]; Vow: Always complete her mission or die trying [-15].

@TEXT-CSTATS:*Quirks:* Doesn't like assuming male forms; Doesn't like the idea of being another "cookie cutter" clone product; Easily distracted by beauty and aesthetics; Non-conformist in her limited way; Quiet and thoughtful when not on a mission. [-5]

@TEXT-CSTATS:*Skills:* Acrobatics-14 [4]; Acting-14 [6]; Beam Weapons (Blaster pistol)/TL9-18 [4]; Camouflage-14 [4]; Climbing-13 [1]; Computer Operation/TL9-14 [4]; Demolition/TL9-13 [4]; Garrote-16 [4]; Guns (Pistol)/TL9-18 [4]; Guns (Rifle)/TL9-18 [4]; Holdout-13 [4]; Jumping-15 [2]; Karate-14 [4] (Parry: 10); Knife-15 [2] (Parry: 7); Knife Throwing-15 [2]; Lip Reading-13 [4]; Lockpicking/TL9-11 [1]; Mechanic/TL9-12 [2]; Pickpocket-14 [4]; Poisons-12 [4]; Running (Move: 7.625)-11 [4]; Savoir-Faire-14 [4]; Sex Appeal-11 [2]; Shadowing-13 [4]; Stealth-15 [4]; Streetwise-11 [1]; Survival (Urban)-13 [4]; Swimming-15 [2]; Tactics-13 [6]; Traps/TL9-13 [4].

@TEXT-CSTATS:*Languages:* English (native)-12 [0].

@TEXT-BOX:Miranda is the fifth clone spawned from the original Miranda, and like her forebear she is a skilled and deadly assassin. At five years old, Miranda has been serving Alesandese for four years, and has just entered "middle age" for a Hawkshaw. In that time, she has racked up an impressive record of kills, including five politicians, three consumer activists, a half-dozen assorted executives, and the entire board of directors for a robotics firm whose products were becoming too organic in appearance and construction for the peace of mind of several of Alesandese's upper executives.

@TEXT-BOX:She is silent, deadly and implacable when aimed at a target, displaying an inventiveness in her methods that is both playful and artistic without being in the least sadistic. She doesn't hesitate to stoop to cruder methods if their employment guarantees efficiency and comprehensive results, but if time and her orders allow, she will choose demises tailored for the individual targets. A case in point is the

aforementioned board of directors, who all died within 48 hours of each other, with causes ranging from a simple automobile accident to mis-prepared blowfish sushi. Her primary on-the-job quirk is a tendency to avoid taking on male shapes when she must use her morph abilities.

@TEXT-BOX:Outside of missions, she is quiet and thoughtful, and as non-conformist as her slave mentality allows, making her the "goth" of the Hawkshaws -- a trait which she shares with all her predecessors, ironically enough. She is attracted by objects which appeal to her (somewhat quirky) sense of beauty and aesthetics, and has had to restrain herself on more than one occasion when this attraction manifested during a mission.

@TEXT-BOX:Of late, Miranda's individualism has been running up hard against the walls of her slave mentality. In campaigns where this is a conditioned state and not a genetic one, Miranda has begun to wear away at her conditioning (in game terms, she has accumulated 20 or so character points toward buying off the disadvantage, above and beyond the 200 in her character total). If she were to break it down completely, she just might vanish into the night in the middle of her next mission.

@TEXT-BOX:Miranda-5 is a 200-point character suitable for use in a TL9 *GURPS Cyberpunk* game (or its *Biotech* equivalent). GMs looking to expand on her hand-to-hand fighting ability should feel free to upgrade her Karate to a full roster of *GURPS Martial Arts* maneuvers and skills.

((END BOX))

Jaguar Warrior

...and as we cantered up through the marsh we saw the jaguar high among the forked limbs of a taruman tree. It was a beautiful picture -- the spotted coat of the big, lithe, formidable cat fairly shone as it snarled defiance...

*-- Theodore Roosevelt, **Through the Brazilian Wilderness.***

The Jaguar Warrior knows nothing but violence. His only pastime is death, his only love war. The elite shock troops of an ancient and savage Bronze-Age empire, the Jaguar Warriors are bound by vows and magic to serve their emperor, and in doing so gain a divine power -- the ability to change into fierce jungle predators. By donning the skin of a jaguar that each wears as a cape (their only garment in battle, except for a weapons harness), they may take the shape of a jaguar in order to destroy their nation's enemies.

Not surprisingly, the nations bordering on the Empire (with whom it is constantly at war), as well as the many and varied enemies of both the Empire and its priesthood, look upon the Jaguar Warriors with a superstitious but not unjustified fear.

((START BOX))

@C-BOXHEAD:The Jaguar Warriors: Historical Origins

@TEXT-BOX:Although the main text is intentionally vague as to the home and ethnicity of the Jaguar Warriors, they are in fact based on material from the historical record. As the Spanish discovered when conquering the New World, the Aztec armies were liberally supplied with warriors from two rival orders of "knights": the Jaguars and the Eagles. (There is some evidence -- particularly the murals at the

monastery of Ixmiquilpan -- of a third warrior order, the Coyotes.)

@TEXT-BOX:Like their fantasy counterparts in the main text, the Jaguar and Eagle Knights were elite shock troops, fierce and savage in battle. Unlike their fantasy counterparts here, they were quite numerous, comprising entire armies at times. They were also, it should go without saying, *not* shapeshifters.

@TEXT-BOX:Although they were clearly respected and feared, there appears to be some confusion about the status of the Jaguar Knights within Aztec society. A number of sources (including *GURPS Aztecs*) describe them and their Eagle counterparts as the lowest orders of knighthood, and as such open to commoners. Other sources paint them as aristocratic elites to which only seasoned warriors or noblemen were offered membership.

@TEXT-BOX:The few surviving images and records suggest that they were a sight of fierce, colorful beauty to see. Over red loincloths, they wore tanned jaguar pelts, which, if the Ixmiquilpan murals are accurate, were tailored into something like bodysuits, with the tail hanging free behind them. Over this they wore red cloaks or layered robes. On their heads were plumed headresses and helmets, while arm-rings and other jewelry adorned them. Finally, they were armed with jade warclubs or obsidian swords (despite the name, little more than clubs themselves) and bore *chimalli* (small, round war shields).

@TEXT-BOX:Unfortunately, they were no match for the Spaniards, who slaughtered them to a man. By the time the Ixmiquilpan frescos were painted, a mere 50 years after the conquest of the former Aztec empire, the real Jaguar warriors and their fellows were a quietly fading memory.

@TEXT-BOX:GMs who would like to recreate the Spanish conquest using shapeshifting warriors, or who simply want to present the Empire with greater verisimilitude, should consult *GURPS Aztecs*. In particular, a sidebar on p. AZ49 covers both equipment and Troop Strength for both Jaguars and Eagles.

((END BOX))

Sons of the Empire

Every spring throughout the Empire, at a special ritual, the priests of the Empire's bloodthirsty gods inspect all the male children, both highborn and low, who celebrated their sixth birthday during the previous year. No one knows what the priests look for, but every parent hopes that their child possesses the mysterious quality which indicates the gods' favor -- the quality that signifies their son's destiny to become a Jaguar Warrior.

The priests select approximately one in every three hundred boys. These youths immediately become wards of the state and are referred to as "Sons of the Empire". Taken with much celebration from their proud families, they are sent to one of several temple-run training towns, hidden deep in the jungle hearland of the Empire. There they are raised by a mix of priests and veteran soldiers, their old lives and social status forgotten as they embrace their new family in the Imperial army.

Their new lives are harsh and overwhelming, with every waking moment unending preparation for their role as elite Imperial troops. Their young lives are filled with a combination of fierce exercise and combat training, and an even more punishing regimen of religious and ceremonial instruction. More than three-quarters die before they can receive their jaguar skin at age 17 -- victims of the brutal training or

their own teachers, who are more than eager to slay the recruits in their charge for any perceived weakness or soft-heartedness. The goal is to turn these boys into the ultimate human fighting machines, heartless, bloodthirsty and more than capable of striking fear into the hearts of the Empire's enemies.

Those who survive their training become all that and more.

In their seventeenth year, each surviving Son of the Empire swears dark and fearful oaths of loyalty to the Emperor and the gods, and having done so receives his jaguar skin. An item of great magic, it is made specifically for him; when wearing it, he may take on the shape of one of the great jungle cats.

((START BOX))

@C-BOXHEAD:The Psychology of a Jaguar Warrior

@TEXT-BOX:In addition to the physical conditioning his training imparts, a potential Jaguar Warrior undergoes no small amount of *mental* conditioning as well. The goal is to pair the peak of human perfection with a mind focused entirely on warfare, bloodshed and brutality. Friendships between boys any deeper than simple alliances are discouraged, often by publicly executing one of the friends and holding the other up to scorn in front of his peers. Violent resolutions to the smallest conflicts are encouraged and rewarded; bullies and those that fight dirty often become their instructors' favorites.

@TEXT-BOX:Any trace of empathy, compassion or affection is systematically ground out of the trainees by methods ranging from simple ridicule to near-fatal beatings. In extreme cases where a boy is otherwise promising, the priests may resort to various potions and spells to permanently alter his personality.

@TEXT-BOX:The ultimate result of this "training" is a soldier who is all but psychopath or sociopath, living and breathing only for violence and bloodshed. In some cases, only the fear of the gods and the power of their priests keeps a Jaguar Warrior from simply killing his way through the population at large -- that, and the Imperial policy of catering to the every need of the Jaguar Warriors.

@TEXT-BOX:It might be possible for a non-psychopath to survive the training and conditioning and emerge relatively sane, but he'd have to be both an extraordinary actor and anything but squeamish.

((END BOX))

My Life As A Jaguar

After a final month of training in the use of both their skins and their feline shapes, the new Jaguars leave the towns where they have lived for twelve years, and join the ranks of the Imperial Warrior Elite wherever they may be stationed. There they live lives of intense training alternating with sybaritic pleasure; they are pampered and indulged by the Empire which depends upon their ferocity and puissance in battle. Their days consist of constant training and contests of strength and skill against each other. Their nights are flush with the best food and wine the Empire can provide, with their every need sent to by comely, willing servants. All this and more is theirs for the asking for as long as they are able to fight in the Imperial service.

At the Front...

Although their numbers could form a small army, the Jaguar Warriors specialize instead in small-unit tactics. Armed with spears and wearing only their enchanted skins, they enter battles as skirmishers, supporting the main force of regulars by attacking the enemy's flank and rear, either alone or in small groups.

Not surprisingly given their training, the Jaguar Warriors attack with a single-minded viciousness, but they do not hesitate to flee when the battle is hopeless. A common tactic is for about a dozen Jaguar Warriors to attack in human form. Then, if the battle starts to go against them, they will throw their spears and transform, continuing the fight in were-form. Often the shock of witnessing the change is enough to completely demoralize the enemy. The Jaguar Warriors do not all change at once; rather one warrior will cover one or two of his comrades while they transform, then the jaguar will protect his former guardian while he changes.

...And Elsewhere

Formal battles are not the only venue in which Jaguar Warriors can be found. As almost every major settlement in the Empire houses at least a few Jaguars, they occasionally are seen supplementing (or completely supplanting) the regular forces who act as the Empire's "police". Such duties are almost never left entirely in their hands, though, as they have a tendency to lose interest if there is insufficient bloodshed.

The Jaguars are also the Emperor's counter-revolutionary forces. Whether it is a newly-conquered province or a rebellious village in the heart of the Empire, if there are challenges to Imperial control, the Jaguar Warriors are usually deployed to suppress it. Setting a dozen or so loose, especially after depriving them of their accustomed pleasures for a day or two, is guaranteed to "pacify" the most troublesome region.

((START BOX))

@C-BOXHEAD:Rivalries

@TEXT-BOX:The Jaguars are not the only shapeshifting warriors available to the Empire. Just like their real-world counterparts (see box, p. 00), they have a standing rivalry with the Eagle Warriors. This order, as their name implies, are were-eagles, and are selected, raised and trained in much the same manner as the Jaguars. As were-eagles, they have a less direct involvement in battles, acting mainly as lookouts and air support and only rarely dive-bombing a choice target.

@TEXT-BOX:Naturally, this prompts a great deal of insults; the Jaguars call the Eagles cowardly and useless in a fight, while the Eagles counter by calling the Jaguars thickheaded brawlers with no grace. At times the rivalry can grow violent or even deadly; no love is lost between the orders, and the Empire goes to great lengths to keep them separated, even up to the point when a battle is engaged.

@TEXT-BOX:In addition to the Eagles, there may also be a third faction, in an equal rivalry with the other two. The Coyote Warriors are, as their name indicates, were-coyotes. They can operate either as scouts or as front-line troops, and as such come under fire from both other sides, who additionally taunt them for indecisiveness. Their rivalries with the other two orders is somewhat less acrimonious than that

between the Jaguars and the Eagles, but it is just as vociferous.

((END BOX))

These impromptu twelve-man "squads" are the highest level of organization the Jaguars ever bother with, and they tend to form (and disband) spontaneously. Other than the wizard-priests who watch over them (not to mention the Emperor himself), they have no command structure to speak of. Among the Jaguars, Reputation substitutes for Rank, with the most violent and bloodthirsty of their number being the best known, the most respected, and the closest thing the order has to true officers.

Perhaps the greatest testament to their skill and power is their survival rate. Unlike many other weres, the Jaguars have no supernatural immunities to weaponry, nor are they any more resistant to damage and wounding than a natural jaguar. Yet even in the thick of battle they suffer fewer casualties than the regulars at whose sides they sometimes fight.

Building a Jaguar Warrior

All Jaguars are at least 175-point characters, heavily specialized in combat skills. They can be used as enemies, or as rather one-dimensional player characters.

((START BOX))

@C-BOXHEAD:Jaguar Template . . . 170 points

@TEXT-BOX:(PPT: +384, NPT: -268)

@TEXT-CSTATS:**Attributes:** Enhanced ST +13 (No Fine Manipulators) [78]; DX +4 [45]; IQ -6 [-50]; HT +5 [60]; Reduced Hit Points -1 [-5].

@TEXT-CSTATS:**Advantages:** Alertness +13 [65]; Appearance (Attractive) [5]; Catfall [10]; Claws [15]; Combat Reflexes [15]; Double-Jointed [5]; Fz Sense (3-hex range; -20%) [8]; Four Legs [5]; Night Vision [10]; Penetrating Call [5]; Sharp Teeth [5]; Silence ¥3 [15]; Thick Fur [29].

@TEXT-CSTATS:**Disadvantages:** Attentive [-1]; Bestial [-10]; Dull [-1]; Horizontal [-10]; Innumerate [-5]; Mute [-25]; No Fine Manipulators [-30]; Poverty (Dead Broke) [-25]; Presentient [-20]; Short Arms [-10]; Short Lifespan ¥5 [-50]; Sleepy (50%) [-10]; Social Stigma (Barbarian) [-15]; Staid [-1]; Stubbornness [-5].

@TEXT-CSTATS:**Skills:** Climbing at DX [2]; Jumping at DX [1]; Stealth at DX+1 [4]; and Survival (Desert, Jungle, Mountains, or Plains)-12 [2].

((END BOX))

Jaguar Warrior Template

Unlike the Arthurian werewolf (pp. 00-00), there is more to a Jaguar Warrior than a simple wereform. In the box on p. 00 can be found a basic package for building a Jaguar. It is not a full character in and of itself, but can be used as the foundation on which to build one.

Note that Jaguar Warriors do not lose their Status and other social advantages when they take jaguar

form. Imperial citizens assume that any jaguar found in settled areas is a Warrior on his business, and treat him with cautious respect and courtesy.

((START BOX))

@C-BOXHEAD:Jaguar Warrior Training

@TEXT-BOX:In addition to their skin-based change, Jaguar Warriors all have the following traits (at least) upon achieving their skins:

@D-BOXHEAD:Jaguar Warrior Training Package 38 points plus were-form

@TEXT-CSTATS:*Advantages:* Alertness +2 [10]; Combat Reflexes [15]; Legal Enforcement Powers [10]; Status 2 [10].

@TEXT-CSTATS:*Disadvantages:* Bloodlust [-10]; Callous [-6]; Duty to Empire and Emperor [-10]; Selfish [-5]; Vow to always serve the Empire and the gods faithfully, and to not to misuse jaguar form [-10]; Uncongenial [-1].

@TEXT-CSTATS:*Skills:* Axe/Mace-DX+1 [4]; Brawling-DX+2 [4]; Running-HT [4]; Shield-DX+1 [2]; Spear-DX+1 [4]; Spear Thrower-DX+1 [4]; Spear Throwing-DX+1 [4]; Survival (Jungle)-IQ+2 [6]; Tactics-IQ [4].

@TEXT-CSTATS:*Quirks:* Lives for fighting and bloodshed.

@TEXT-CSTATS:*Taboo Traits:* Empathy, Pacifism; Savoir-Faire and most other social skills.

@TEXT-BOX:*Notes:* Jaguar Warriors are not known for their intellectual agility, even in the limited theatre of strategy and tactics. It is not uncommon for Jaguars to have IQ 9 or lower, although at IQ 7 or less they become more trouble to the priests than they are worth.

@TEXT-BOX:The average TL for the Empire and the Jaguar Warriors is 1 (Bronze Age) and any TL skills will reflect this.

((END BOX))

Jaguar Skin

The enchanted pelt which gives a Jaguar Warrior his ability to shift is a item-based were-form (q.v., p. 00). It starts with the basic Jaguar template (see box, p. 00), but Jaguar Warriors must buy the were-form's IQ back up to their human form's level (usually +50 points).

To the basic animal form add the following limitations: Slow Change at -10% and a Cure/Cursebreak, which in this case represents a usage restriction. The Jaguar is "cured" (which is to say, his ability to change is rescinded) if he ever breaks the Vows listed in the character template. This is a fairly easy condition (-40%) which is commonly known (an additional -15%). However, the "cure" is temporary; the warrior can regain his shapechanging abilities by demonstrating sincere repentance and undergoing a reconsecration by a priest. This halves the value of the Cure/Cursebreak to -32%. Combined with the Slow Change, that discounts the were-form by -42%.

Finally, apply the modifiers for an item-based shift. The jaguar skin has the modifiers Awkward [-10%],

Breakable and Irreparable (DR 1, HP 10) [-30%], Can Be Hit at -2 [-20%], and Can Be Stolen by Stealth or Trickery (Not usable by others, absorbed in change) [-2%], for a total modifier of -62%. (Jaguar skins are *not* Unique; if a Warrior's skin is destroyed, the wizard-priests can make a new one for him.) The jaguar skin is absorbed in the change, and is only useable by the warrior for whom it was made.

((START BOX))

@C-BOXHEAD:Sample Character: IxokMun 175 Points

@TEXT-BOX:Age 25; 7'4"; 320 lbs.; A hulking brute with shaggy brown hair and brown eyes.

@TEXT-CSTATS:**ST** 14 [45]; **DX** 10 [0]; **IQ** 9 [-10]; **HT** 12 [20].

@TEXT-CSTATS:Speed 5.50; Move 7.

@TEXT-CSTATS:Dodge 6; Parry 9; Block 7.

@TEXT-CSTATS:*Advantages*: Combat Reflexes [15] (Fright Check: 11); Jaguar Warrior Training Package [38]; Patron: Villac Uma, Priest (9 or less) [15] (Equipment: Standard, +5); Reputation as a great warrior among the Jaguars +3 [5] (Reaction: +3; Recognized by: Small class, ¥1/3); Were-form: Jaguar [76].

@TEXT-CSTATS:*Disadvantages*: Appearance (Ugly) [-10] (Reaction: -2); Bully [-10]; Gigantism [-10]; Overconfidence [-10].

@TEXT-CSTATS:*Quirks*: Collects the severed ears of his opponents; Irritated by references to a play with a character who shares his name; Lives for fighting and bloodshed; Prefers to be called "Balám" ("Jaguar"). [-4]

@TEXT-CSTATS:*Skills*: Area Knowledge (Empire)-10 [2]; Axe/Mace-12 [4*] (Parry: 7); Brawling-13 [4*] (Parry: 9); Intimidation-10 [2]; Leadership-9 [0]; Running (Move: 7)-12 [*]; Shield-12 [*] (Block: 6); Spear-11 [*] (Parry: 6); Spear Thrower-11 [*]; Spear Throwing-12 [*]; Survival (Jungle)-11 [*]; Tactics-9 [*]. (*Included in Jaguar Warrior Training Package.)

@TEXT-CSTATS:*Languages*: Nahuatl (native)-9 [0].

@TEXT-BOX:IxokMun is a giant of a man who has survived 8 years of near-constant battle as one of the Jaguar Warriors. A giant of a man who is always eager to plunge into the thickest part of the battle, he has gained a substantial reputation among his fellow Jaguars, and never seems to have a problem organizing a warband. Even so, he has few close associates among the Jaguar Warriors, as he takes a positive delight in intimidating and bullying them. With his size and strength, there is rarely anyone who can stand up to him.

@TEXT-BOX:The only thing he has that is close to a friend is Villac Uma, a powerful priest who took the boy IxokMun under his wing, and who watches over him even to this day. While Villac Uma is frequently traveling among the temples of the Empire, and thus hard to contact, he is always willing to give aid to his protégé.

@TEXT-BOX:As a bully, he takes full advantage of his Gigantism to intimidate and overbear most of the other Jaguar Warriors with whom he associates. Surprisingly, this serves him in good stead when in battle, for his behavior is seen to be indicative of a great war leader, and many Warriors clamor to be part

of any band he decides to organize. Furthermore, his great size in human form translates directly over to his feline shape when he takes it, producing a jaguar easily the size of a lion. In either form he will always stop to take an ear from an opponent he has killed; he has gathered quite a collection -- not all of them enemy soldiers.

@TEXT-BOX:Off-duty, he takes full advantage of all the comforts and pleasures the Empire provides to the Jaguar Warriors. He rarely sees the same woman twice, though -- usually at the request of the women, whom he bullies and abuses even worse than he does fellow warriors.

@TEXT-BOX:IxokMun shares his name with a lesser character in a play that has long been popular in the Empire, although he is unaware of this fact -- theatrical presentations more sophisticated than crude physical comedy and suggestive dancing bore him. Attempts to make references and jokes to the play pass completely over his head; with the frequency with which it occurs, such jesting now angers him almost to violence, especially since he doesn't "get" the jokes. It has gotten to the point where he now wants people to refer to him simply as "Balám" ("Jaguar") instead of his real name.

((END BOX))

Kitsune

Kitsune is an animal supposed to be mysterious, fascinating, and mischievous. And he is believed to be very grateful for the kindness done to him, as seen in many tales, and is also affectionate as revealed in some dramas.... He is endowed with the subtle art of metamorphosis, and he is able to bewitch men in the guise of a charming girl. An exceedingly interesting and entertaining beast Kitsune is.

-- from *Kitsune: Japan's Fox of Mystery, Romance, and Humour*, by Kiyoshi Nozaki

The definitive hengeyokai, the *kitsune* (or fox-spirit) is a common figure in Japanese myth and folk tales. It is a shapeshifter with three forms: fox, hybrid fox-human, and human, although in the latter form there is always a detail that reveals its true nature. Mercurial and passionate, kitsune can range from mischievous practical jokers to incandescent beings of godlike power. Most are neutral, if not actually friendly, toward mankind, but there are some which are darker and far more fearsome.

Kitsune 262 points

@TEXT-CSTATS:*Attributes:* ST -7 [-60]; DX +4 [45]; IQ +2 [20]; HT +2 [20]; Extra Fatigue (Spellcasting only) +9 [18]; Reduced HP -6 [-30].

@TEXT-CSTATS:*Advantages:* Acute Hearing +2 [4]; Acute Taste and Smell +2 [4]; Appearance (Attractive) [5]; Combat Reflexes [15]; Decreased Life Support [10]; Discriminatory Smell (Sense emotional state. +50%) [23]; Early Maturation ¥1 [5]; Enhanced Move ¥1/2 [5]; Four Legs [5]; Fur [4]; Magery 1 [15]; Mana Enhancer [25]; Sharp Teeth [5]; Status 1 [5]; Ultrahearing [5]; Unaging [15]; Were-form: Fox-headed Humanoid Female (Absorptive Change to base form, Light Encumbrance +10%) [92]; Were-form: Human Female (Absorptive Change to base form, Light Encumbrance +10%) [120]

@TEXT-CSTATS:*Disadvantages:* Bad Temper [-10]; Code of Honor (Always return a favor or a good deed, punish those who deserve it, always keep one's word and promises) [-10]; Horizontal [-10];

Lecherousness [-15]; Mute [-25]; Odious Racial Habit: Prankster [-10]; No Fine Manipulators [-30]; Short Arms [-10]; Sleepy (50%) [-10].

Racial Quirks: Amoral [-1].

Skills: Running at DX [4]; Savoir-Faire (Kitsune society) at IQ+2 [default from Status]; Savoir-Faire (Mortal society) at IQ [default from Status]; Stealth at DX [2].

Innate Spells: Sound [2]; Simple Illusion [2]; Know Illusion [2]; Illusion Disguise [2]; Illusion Shell [2]; Complex Illusion [2].

Kitsune Humanoid Form (female) 83 points

(PPT: +165, NPT: -54)

@TEXT-CSTATS:*Attributes:* Change ST to 10 [60] and Extra Fatigue to +2 [-14]; remove Reduced Hit Points [+30].

@TEXT-CSTATS:*Advantages:* Remove Combat Reflexes [-15]; Decreased Life Support [-10]; Four Legs [-5].

@TEXT-CSTATS:*Disadvantages:* Add Unnatural Features (fox's head, fox tail) [-10]. Remove Horizontal [+10]; Mute [+25]; No Fine Manipulators [+30]; Short Arms [+10].

Kitsune Human Form (female) 109 points

@TEXT-CSTATS:(PPT: +175, NPT: -83)

@TEXT-CSTATS:*Attributes:* Change ST to 10 [60] and Extra Fatigue to +2 [-14]; remove Reduced Hit Points [+30].

@TEXT-CSTATS:*Advantages:* Add Appearance (Beautiful) [+10]. Remove Combat Reflexes [-15]; Decreased Life Support [-10]; Discriminatory Smell [-15]; Four Legs [-5]; Fur [-4]; Sharp Teeth [-5]; Ultrahearing [-5].

@TEXT-CSTATS:*Disadvantages:* Add Unnatural Feature (fox tail) [-10]. Remove Horizontal [+10]; Mute [+25]; No Fine Manipulators [+30]; Short Arms [+10].

This racial package defines the avatar of a one-tailed kitsune. More powerful kitsune are built by first adding additional tails (and the corresponding age), then by increasing Status, Magery, skills and spell selection. Appearance will also improve, and various protective and defensive advantages will be acquired. Ultimately, their magical abilities will expand to include almost everything involving illusion and creation, fire and light.

The prices for the above forms assume a character with average attributes for a kitsune. Different base form attributes -- or customized attributes in either or both bipedal forms -- can change the racial package cost.

Note that the Unnatural Feature possessed by the human form always indicates the kitsune's true nature. Traditionally this feature will be a fox-like tail as noted in the package, but others are possible, including pointed ears, eyes that are too much like those of a fox in color or reflectivity, unusual hair coloration

(red with a white stripe), and so on. This feature should be selected at the time of character creation and will not change.

General description

Sometimes called the "goblin fox" and the fox-spirit, as well as "Hu-Ching" in China, the kitsune (the word is both singular and plural) is probably the best-known creature of Japanese myth in the Western world. The name itself is built from two Japanese words: "kitsu", meaning either a fox or the yelps of a fox, and "ne", an affectionate feeling. Like the euphemistic "Good Folk" for the European faerie, this naming may well be a ploy to maintain the good graces of these powerful but amoral supernatural beings; Japanese mythology looks upon them with a confusing mixture of mild fear and outright affection.

Odd dichotomies and paradoxes abound when kitsune are concerned. Firstly, a kitsune is a fox -- a *natural* fox. In fact, *all* foxes are actually kitsune. However, even though a kitsune is a "natural" fox, it is also a spirit, with a non-corporeal aspect. While their spirit-nature is the source of their power, their natural state is fully physical. They are as much creatures of the corporeal world as humans. Even so, the kitsune is a being that in the original myths can range from a low-powered trickster to a being of nearly godlike puissance, depending on its age and nature.

The vast majority of kitsune are female or prefer female shapes; the default alternate forms above reflect this. There are male kitsune (or at least kitsune who take male forms), but even they are effeminate. The templates above are valid for either gender and need not be changed.

Native-form kitsune are identical to ordinary foxes in appearance and size. Determine height and weight as normal for their human and humanoid forms.

((START BOX))

@C-BOXHEAD:Kitsune Magic

@TEXT-BOX:As embodied spirits, Kitsune are quite naturally creatures of magic. Because of this, they can buy additional levels of both Magery and Mana Enhancer (p. CI40) as they grow older.

@TEXT-BOX:Furthermore, by dint of both basic nature and scholarship, they are all illusionists. Kitsune start with a basic grounding in the Illusion and Creation college, and most expand on that as they grow older; it is a rare kitsune who does not have full mastery of the college by their 200th year. Few bother to learn much magic beyond that, but it is possible (and indeed likely in the case of the eldest and most-tailed) for a kitsune to be a gifted and versatile mage.

@TEXT-BOX:Their skill with illusions is legendary. According to some of the legends about them, even the most basic of kitsune illusions are not *just* illusions -- they are in fact actually *real* for their duration, being more transformations than seemings.

@TEXT-BOX:Above and beyond illusions, kitsune are known to favor the Fire College and the Light and Darkness College.

@D-BOXHEAD:Resisting Magic

@TEXT-BOX:As if this weren't enough, kitsune are said to be resistant to magic used on *them* by others,

as well. This simply may be the result of high attributes (and corresponding resistance rolls), but the GM may want to consider allowing kitsune to purchase Magic Resistance despite also possessing Magery. In such a case, the Magic Resistance doesn't affect their spellcasting, and will not function against spells cast with the kitsune's True Name (see box, p. 00).

((END BOX))

Psychology

Perhaps the most definitive characteristic of the kitsune psychology is the overall feminine nature of the race. Even though the genders are equally represented in their population, most male kitsune are noticeably effeminate when compared to male humans, and prefer to take female shapes and roles when interacting with mortals. Even those males who prefer to assume male forms are still *bishonen* -- vaguely feminine in both appearance and behavior.

Like many other supernatural creatures, kitsune are first and foremost tricksters and pranksters. While it is a major component of their psychology, they are not necessarily compulsive about it; myth and legend describe no small number of kitsune who were tirelessly devoted to causes or friends, or who were willing to labor long, prankless hours for the good of their neighbors or villages. However, the majority of kitsune have nothing resembling human morals, and entertain themselves with practical jokes and elaborate deceptions upon unwary mortals.

((START BOX))

@C-BOXHEAD:Kitsune Names

@TEXT-BOX:While in Western mythology most non-human creatures drift namelessly through their appearances, individual kitsune are usually referred to by name in the tales where they appear. Not surprisingly, a kitsune's name is evocative of both its personality and the role it has chosen to play. It is also the legacy that they leave to posterity, whether that posterity is mortals or other kitsune. Often slyly descriptive of the kitsune's preferred form or favorite prank, or indicative of its usual role in the community in which it lives, these names are not unlike those that humans would take.

@TEXT-BOX:GMs looking to name kitsune characters should remember that in Japanese (unlike English) names have meanings, usually descriptive and often poetic, which are obvious to those who speak the language. GMs seeking proper verisimilitude may want to consult an online or paper Japanese-English dictionary in order to find or construct appropriate names.

@D-BOXHEAD:True Names

@TEXT-BOX:However, the name a kitsune gives to mortals is simply a use-name. Like so many other supernatural creatures, they have secret true names which, if discovered, can be used to bind, banish or manipulate them. While it's possible to magically coerce a kitsune without its true name, it is difficult and potentially deadly -- the stronger the kitsune, the more dangerous it is to make the attempt without the name handy.

@TEXT-BOX:Kitsune resist normally any spells cast upon them without the use of their true names. If a spell is cast using her true name, a kitsune has a penalty of -(10-number of tails) to any resistance rolls. If she successfully resists, or the spell fails to incapacitate her, the kitsune will be hostile to the caster and

his companions (if she wasn't already) and will immediately counterattack to the best of her ability.

((END BOX))

Testing and Tempting

This is not just random behavior, though. Like many other beings in myths around the globe, the kitsune can be said to test mortals, and mete out rewards or punishments accordingly. The "help" they provide to an immoral or unethical person is usually to urge them along a path of self-destruction; there is no element of compulsion in these urgings, and if their target resists, there may be hope for him yet. Lesser flaws are aggravated and enhanced, until they become visible to the target's friends and neighbors, at which point mortal mechanisms take over. In some cases, the kitsune will take a direct hand in punishing an individual, as in those tales where the kitsune "steals" the woman of an ignoble samurai.

To those they judge to be good or moral, kitsune are far better. They offer friendship and aid to good persons, helping them through adversity and difficulty. But since no mortal is perfect, a kitsune will seek to improve her friend by various means, usually by offering a lesson in humility by way of pranks or revealing a hidden flaw in the person.

In all these tests, the kitsune judges by *her* ethics, not the human's. Although the kitsune ethical system is amoral and borderline alien to humans, it is not incompatible with most Eastern religions, and the results are generally not discordant. Still, where the views of kitsune and human diverge, there may well be a failure by each side to comprehend what the other thinks it's doing.

A Semi-Divine Viewpoint

Not surprisingly, kitsune are considered lesser *kami* -- divine spirits similar to the Western concept of the *genius loci*. Being such, they are expected to serve and help the people near whom they live, in exchange for prayers and gifts. In such cases they reserve their worst pranks and tricks for oathbreakers, the impious, and unwary invaders of their domains. Also, as *kami*, they are bound by their nature and cannot cause serious or permanent harm to any human, as long as that human follows tradition and properly propitiates them.

Honor is one of the strongest bonds restricting the kitsune. In particular, promises have a special hold on them. If they make a promise or give their word on any matter, they *must* follow through, overturning heaven and earth in order to adhere not just to the word but to the spirit of the agreement. Furthermore, they expect the same behavior from those with whom they deal. A kitsune who breaks her word or fails to keep a promise, no matter how trivial, becomes virtually suicidal; and someone who breaks a promise made to a kitsune gains an implacable enemy.

Emotional Rollercoasters

These excessive responses are not unusual; kitsune are vulnerable to other extremes of emotion, as well. They are notorious for their bad temper, flashing into anger at the slightest provocation. They hold grudges against those whom they consider enemies, nursing them over years and often planning (and executing) extreme acts of revenge in retaliation for whatever slight first caused the bad blood. Along similar lines, regret or despair can kill a kitsune who gives herself over to it.

On the other hand, amoral as they are, kitsune are good and loyal friends to those who have earned their

trust. They will go through all manner of difficulties to aid someone whom they have befriended without thought of recompense. Be aware, though, that it is a difficult task to gain the friendship of a kitsune.

Kitsune are very proud in one regard; they will rarely ask for help, no matter how much they need it. Beyond that, they will not accept help from someone compelled or persuaded against their will to offer it. The offer must be sincere and truly what the one offering wishes to do, of their free will.

Ecology

((START BOX))

@C-BOXHEAD:Fox-Spirit Possession

@TEXT-BOX:Potential kitsune who do not have a corporeal body are known as "fox-spirits", and are almost as plentiful as the physical kitsune themselves. Fox-spirits can remain purely ethereal beings for as long as they like, and they have options other than incarnating into a fox body and becoming a kitsune. Some have been known to possess humans instead.

@TEXT-BOX:These spirits tend to be more malevolent than the kitsune, carelessly driving their mortal hosts mad with their alien outlooks and priorities. Fox-spirit possession is not always a state of complete control -- the spirit may simply lurk in the back of the victim's mind as it slowly comes apart, instead of seizing complete control of the body. In either case, though, a proper exorcism will drive the spirit out.

@TEXT-BOX:If the process of incarnating into a fox, gaining physical and magical power, and dying is indeed a vital subset of some unknown spiritual life-cycle, then the fox-spirits may well represent an immature, larval form of the kitsune.

((END BOX))

Kitsune are unusual (at least when compared to Western shifters) in that they have a proper niche in both the spiritual and the corporeal ecosystems. As foxes, they take the role of small predators. As spirits, they are charged with testing and rewarding (or punishing) mortals (see p. 00)

Kitsune usually live anywhere from 900 to 1,000 years. This is purchased as the Unaging advantage (p. CI69), but kitsune do age and develop throughout their lifespans, and lack the ability to select their apparent age (other than through their illusions). They mature at an early age compared to humans, but do not begin making aging rolls until they are 750 years old. However, kitsune do not cease to exist when their physical forms die; evidence suggests that incarnation into a fox-body is a necessary part of a larger lifecycle which continues when the deceased kitsune-spirit advances into the celestial realms.

Kitsune start their lives with one tail. Every hundred years of life, they usually gain an additional tail -- and with it status and other benefits as noted on p. 00.

((START BOX))

@C-BOXHEAD:Earning and Granting Tails

@TEXT-BOX:It is possible for a kitsune to gain a new tail as a reward or gift from another, more exalted kitsune. In such a case the newly-entailed kitsune must dedicate his subsequently-earned character points toward improving his various traits to match his new position in kitsune society.

@TEXT-BOX:The exact mechanism of granting a new tail is left up to the GM, but if a kitsune PC wants to reward a kitsune NPC in this manner, there's no reason not to let it happen simply by fiat. Of course, a kitsune cannot give *itself* a new tail. Additionally, an especially strict GM may require that the gift come from among the giver's own tails -- and may bring along with it any number of traits (and, of course, their character points).

((END BOX))

Culture

Kitsune possess a heavily-organized, stratified culture which is mostly invisible to human eyes. Since most humans deal with one kitsune, or at most a small family, at any given time, this is not too surprising.

There are nine levels of political and supernatural power within the kitsune social structure, based upon the age of the kitsune. These levels are equivalent to Status, with even the lowest kitsune possessing Status 1. (This is within kitsune society; knowledgeable humans of any Status will act respectfully to *any* kitsune they meet.) Furthermore, a kitsune's status is immediately visible to all who see him -- he possesses a number of tails equal to his Status. The very oldest kitsune are 1,000 years old and are called *Tenko*; they have 9 tails, but their fur has a golden rather than reddish hue. They are also devastatingly powerful -- easily the equal of a demigod or godling.

Also, as kitsune gain in power and age, they also tend to polarize morally. Their outlook remains technically amoral, but their tendencies when making ethical choices diverge strongly. Nominally "good" kitsune retain their racial name and serve as messengers from Inari, the Japanese fox deity. "Evil" kitsune become *nogitsune*, their prankish nature expanded into cruelty and torment. Select appropriate advantages and disadvantages to reflect this differentiation.

Politics

Kitsune do not involve themselves with human governments or organizations larger than a family or clan. They prefer to interact with individual humans, and rarely (if ever) categorize larger groups in any meaningful way. In this regard, they are effectively apolitical.

On the spiritual plane, things may well be different, but not much information is available. Kitsune are godlike spirits and garner a great deal of power and respect from both mortal and immortal alike, but beyond that, how they interact and deal with other *kami* is virtually unknown.

((START BOX))

@C-BOXHEAD:Kitsune Characters

@TEXT-BOX:Unless the campaign is one of supernatural creatures and mythic heroes, a kitsune PC, even one of the weakest variety, is probably out of the question. A one-tailed kitsune will be built on no less than 250 points, and most will probably be in the 400 to 500 point range, with the majority of those points being invested in magical abilities and other advantages. Nine-tailed kitsune are all but gods, and may as well be, for all their playability. A good rule of thumb for the GM who absolutely *must* point-budget the more powerful kitsune would be to give them 200 points plus 250 points per tail. (To

fully quantify the near-godlike abilities of the oldest kitsune, the GM may wish to consult *GURPS Mage: The Ascension* or Wizards of the Coast's *The Primal Order*.)

@TEXT-BOX: Assuming a kitsune PC is possible, their role in the party is quite simple: trickster mage. The more tails the kitsune has, the more certain it is that their racial Odious Racial Habit will be supplemented by the Trickster disadvantage (p. CI94); a clever party will make that work for them. Beyond that stereotype, kitsune are excellent spies and infiltrators, although they must often stifle their racial compulsions and habits in order to succeed. They also make good femmes fatales, *especially if their Unnatural Feature is relatively minor or inconspicuous -- or can be cloaked effectively with an illusion.*

((END BOX))

Kitsune in the Campaign

Kitsune are designed for use in a GURPS Japan campaign, particularly one with a strong "mythic" flavor. They can also be employed in other medieval fantasy games, either as-is or suitably changed to fit the preferred campaign flavor. Kitsune could only be PCs in a heroic-level campaign, and even then might overpower it, but they can easily serve as Patrons, Enemies and/or Allies at almost any power level.

Don't rule out a non-medieval setting, though -- a kitsune on the loose in modern Japan (or better, modern Europe or America) would make an excellent hook for either a single game or a whole campaign, as long as the players are capable of dealing with her. Depending on the tone the GM sets for the campaign, maybe even if they aren't -- kitsune can be played for humor value as easily as for darker purposes.

((START BOX))

@C-BOXHEAD: Variations

@TEXT-BOX: *The kitsune package can be used almost as-is for the other definitive hengeyokai, the tanuki. A raccoon-like creature in its animal form, the tanuki is not the trickster the kitsune is, but otherwise is much the same, at least on the game mechanics level.*

((END BOX))

Other Settings

Kitsune can be easily transplanted into a number of other settings.

Urban Fantasy/Weird Modern/Technomancer: Kitsune can be dropped into a modern setting with no changes whatsoever, and should be able to function just fine. Ancient ones unfamiliar with modern ways might need the Primitive disadvantage, but younger ones are almost certain to be fully versed in the ways of the 21st Century. Technomancer kitsune are probably a variety of Seelie, although some witnesses say they claim otherwise. Either way, they continue as they always have -- teasing and tempting their human neighbors.

Yrth: The Banestorm scooped up some kitsune along with everything else it dropped in Sahud. They are

now a fact of life in that strange land despite their rarity, and are placated eagerly. However, the Sahudese being who they are, they have bolstered the original simple respects with a baroque encrustation of irrelevant and incomprehensible rituals and ceremonies -- and only the kitsune know for sure any more exactly what is really necessary and what is not. And when kitsune start showing up in Megalos...

Black Ops: The Company has records of kitsune encounters going back almost fifty years, and after several disastrous confrontations in the 1960s, the official policy became "hands off". In recent years, several ops teams have found unexpected allies in kitsune (particularly near Chinatowns and Little Tokyos). And in an incident so highly classified that some senior commanders don't know about it, a seven-tailed kitsune once appeared before Argus, where she requested (and received) an ops team to help her deal with a nogitsune that had allied itself with the Greys.

Illuminati University: The Metaphysics Department suspects that several kitsune live on the campus grounds, given the "punishments" that have been inflicted on some of the frat boys in recent months. But it's hard to tell the difference between them and the import dates from other colleges. Something's been eating the CIAgulls, though, and there's a big chunk of woods that even the Archdean's cats won't enter...

((START BOX))

@TEXT-BOX:(The attributes, height and weight given above are for Mitzuki's human female form, in which she spends most of her time. They also apply to her fox-woman form, which she has rarely used since moving to L.A. Her fox form is ST 3/11 DX 14 IQ 15 HT 12/6, about two feet long plus tail and 20 pounds in weight.)

@TEXT-BOX:Mitzuki Gizensha is a two-tailed Kitsune based in Los Angeles' Little Tokyo district, sometime in the late 1990s. Her human form is a familiar sight to her neighbors, with her fox-pelt hair, her revealing outfits, her late hours and her ready smile. Most of the older residents know or suspect she's a kitsune, and some of the younger ones can tell there's something special about her. Everyone likes her and seems to know her by name, and she returns the favor as she wends her way through the neighborhood with a ready smile and wave for all. Imagine a Japanese version of Marlo Thomas as "That Girl", only with a punk hair-do. Her family name means "a fox in a lamb's skin", which describes her perfectly.

@TEXT-BOX:Most of her neighbors -- especially those who know kitsune and their ways -- think she's a high-priced call girl, or maybe a nightclub entertainer. They're wrong. She's not only the resident kitsune, but the neighborhood's biggest landlord and its general protector. She actually owns many of the residential and commerical properties in the district and keeps the rents affordable as part of her duty to

help the people there. She uses a variety of illusions and front companies to appear to be several different landlords, both men and female.

@TEXT-BOX:To the best of her knowledge, she is the only kitsune in all of Southern California. She originally came to Los Angeles in the 1930s to escape the growing militarization of her homeland. Once settled in, she established her "territory" then began protecting (and punishing) its inhabitants. She escaped the WWII internment of Japanese-Americans by masquerading as an Anglo woman, but then relocated to a small town near the camp in Owens Valley, California so as to help her people during their imprisonment. When they were finally released, she saw to it that they got their homes and businesses back.

@TEXT-BOX:In the years since, she has built a good-sized financial empire while treating the people in Little Tokyo with respect and dignity. Having few physical needs above the minimum required to maintain her masquerade, she reinvests most of her profits back into the properties she owns, continuously improving them while still keeping the rents affordable. She also endows a number of scholarships for Japanese-American students.

@TEXT-BOX:On occasion she also takes the time to make Yakuza and other organized crime operations in Little Tokyo unprofitable. Not because it's against the law, but because her people would ultimately suffer while the criminals got rich. She considers herself their enemy for that reason, although she will not usually pursue criminals beyond Little Tokyo.

@TEXT-BOX:Occasionally she disguises her fox form with the illusion of a stray dog and checks up on "her people" incognito. When she needs to shed her human guise and relax, Mitzuki spends her time roaming the Hollywood Hills as a fox. When for some reason the Hills are a bad idea, she amuses herself by hanging out in the fox displays at the L.A. Zoo. And when she needs to let off a little steam with some pranks and tricks, she goes clubbing in Hollywood and targets the hypocrites and unethical among the crowds.

@TEXT-BOX:Her human form's Unnatural Feature is fox-colored hair -- brick red with a black streak and white tips. She used to keep it hidden with an illusion, but not any more; in 1990s L.A., no one thinks it is at all unusual.

*@TEXT-BOX:Mitzuki Gizensha is a 700-point character suitable for use as a patron or a very dangerous enemy in a campaign set in the late 20th Century. She also makes for a very interesting surprise in a **GURPS Werewolf: The Apocalypse** game. With some minor changes, she could be found in many near-future or recent-past settings -- anything from **GURPS WWII** to **GURPS Terradyne**. If the campaign is a generally non-magical setting (as is the case here), her patronage is worth an extra 5 points.*

((END BOX))

Medieval European Werewolf

(FIND GOOD QUOTE)

There were almost as many kinds of werewolf as there were people talking about them during the Middle Ages, and the Inquisition gleefully hunted all of them. One of the most insidious, at least as far as the

Inquisition was concerned, was the shifter who appeared to sleep peacefully while his soul left his body and wreaked havoc on the countryside in wolf form. Invulnerable to all harm save by silver and blessed weapons, this hell-born monster indulged its sadistic desires upon his neighbors every night.

((START BOX))

@C-BOXHEAD:Werewolves and the Inquisition

@TEXT-BOX:From the Middle Ages all the way into the beginnings the Enlightenment, the Catholic Church -- and by extension the Inquisition -- were as obsessed with the subject of werewolves as they were with witches. In fact, as far as Catholic doctrine was concerned, the two were virtually interchangeable; being able to change into an animal was a standard ability of the witch. It should come as no surprise, then, that the Inquisition's standards of proof for lycanthropy were just as lax as those for witchcraft.

@TEXT-BOX:The type of werewolf described here was perhaps the most convenient variety found in the Inquisition's lexicon of shapeshifters, especially when it came to heretics, dissenters and other inconvenient persons. All that was required was a few nocturnal animal attacks and an accusation -- and officially-sanctioned torture would produce the confession that proved the case.

@TEXT-BOX:As distasteful as such proceedings were to modern sensibilities, and as ignorant as the dogma involved appears to modern eyes, the main text assumes the literal truth of the matter. This is an expressly *evil* were, and unlike such beasts as the Cinematic "Monster" Werewolf (see pp. 00-00), it is directly powered by whatever embodied force of supernatural Evil is present in the campaign.

((END BOX))

Building the Sleeping Werewolf

Start with the Wolf template (PPT: 235, NPT: -272, p. 00). Like all classic Western European werewolves, the wolf form is -- more or less -- a normal wolf, save for its intelligence, its invulnerability to normal weapons, and its implacable desire to inflict death and destruction upon its neighbors. In keeping with the usual traditions, it will also be able to harm anyone protected by their faith in the Church, and can be cured by an exorcism -- if the were cooperates..

((START BOX))

@C-BOXHEAD:Other Templates

@TEXT-BOX:While wolves were the most common shifter type in European folklore, especially in regards to Church dogma, they were far from the only one. The construction guidelines in the main text can be applied to a number of different of other animal templates to produce "historically" accurate were-creatures. Cats (p. BE108) were the second-most-likely choice for the Hell-aligned were's animal shape, but dogs (also p. BE108) and virtually any other predator species might also serve.

((END BOX))

Raise the wolf form's IQ until it matches that of the base form, and add adjustments for other attributes as necessary. Buy back Bestial, Innumerate, Presentient and Short Lifespan. Add Vampiric Invulnerability [150] (p. CI70) to its advantages. To its disadvantages, add one level each of Vulnerability to Silver [-10]

and "holy/blessed" objects [-15]. Also add "Dread: Persons with True Faith" [-10].

Furthermore, in keeping with the usual behavior of Western European werewolves, add Odious Personal Habit: Eats Humans [-15], along with any other traits desired to round out the were-form.

Finally, calculate the point value for the wereform per the rules on p. 00. Then apply the following limitations: Projected Were-form limitation (p. 00) at the -50% level, and the Cure/Cursebreak limitation (p. 00) -- the cure is exorcism (a simple process in medieval Europe) and the were must cooperate, for a final limitation value of -40%. Since the total limitation value is over the usual maximum, the latter is used for a -75% final discount on the were-form.

Other Traits

The classic medieval werewolf, at least as painted by the Roman Catholic Church, was always a person who had willingly given himself over to the forces of Hell. Assuming this to be accurate, such an individual is likely to have any number of "evil" disadvantages, Sadism and Megalomania among them. At the very least Callous and/or Solipsist are appropriate, although a simple desire to harm a perceived enemy or set of enemies (as expressed in a Vow, Obsession or even a Higher Purpose) is acceptable. (This latter opens up the possibility of someone who has bargained with Hell for lycanthropic powers in order to ultimately do Good -- or at least what he perceives to be Good.) He will *not* have a Split Personality, however; he *is* the wolf, and the wolf is *him*, and he delights in all the evil done in and by that shape.

On the other hand, he cannot be so evil and twisted that he cannot function in society. Such werewolves can be considered as "sleeper agents" (no pun intended) buried in the fabric of medieval society. Intended for long-term operations, they must be able to successfully masquerade as innocent bystanders or even victims; the ability to be in two places at the same time certainly helps here. Acting skill is paramount, as well as Fast-Talk and Diplomacy.

This variety of werewolf will almost always have a Patron -- a demon or some other such being -- who is the were's contact with Hell and, effectively, his commanding officer. Similarly, he will have either an Enemy or a Secret, depending on whether or not the locals have figured out that they are the prey of a werewolf. The Enemy will be the Church and/or the Inquisition -- a large, overwhelmingly powerful organization with vast resources; its level of appearance will depend on how flamboyant or careless the werewolf has been. Secrets will almost always be of the "Possible Death" variety -- the Church was *not* forgiving of werewolves -- and will turn into an Enemy as above, plus bad Reputations and more as needed.

Obviously, such a character will not have Empathy or any other advantage or disadvantage that requires him to in any way feel for his victims.

Finally, in addition to his various mental and social problems, the base form will usually have Reciprocal Rest (p. CI43).

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:The "sleeping werewolf" was just the most convenient version of the beast, as far as the

Inquisition was concerned, but as is described elsewhere, there were other varieties. Here are two of the most common. Like the werewolf in the main text, both are built on the standard wolf template, to which has been added Vampiric Invulnerability (p. CI70), the Vulnerabilities to Silver and "holy/blessed" objects, and an IQ boost to bring it back to the base form's level.

@D-BOXHEAD:Alchemical

@TEXT-BOX:This werewolf may have an inherent ability to change, but it requires a trigger -- smearing upon his body a foul ointment composed of a number of unpleasant ingredients, some of which are guaranteed to earn the user a death sentence or worse, excommunication. Once changed, the user cannot remain in wolf form beyond the next sunrise or sunset, although he can change back to human at any time he cares to before then.

@TEXT-BOX:*Creating the "alchemical" werewolf.* To the basic package described above, add an External Trigger: the ointment (rare, exclusive, from human to wolf only) -15%, and Maximum Duration (Sun to sun) -7%.

Alchemical weres may have an Addiction to the ointment, if only because of the effects of the psychoactive plants usually cited in authentic medieval recipes.

@D-BOXHEAD:Skinchanger

@TEXT-BOX:This version covers a wide selection of werewolves, all of whom must don some item of clothing made from wolf skin in order to change. This can range from a pair of gloves, to a broad belt to an entire skin worn as a cloak. (See p. 00 for some other examples.) Upon donning the item, he changes; he can change back at any time.

@TEXT-BOX:*Creating the skinchanger.* Turn the basic werewolf package above with an item-based change (see box, p. 00) with the following modifiers: Can be stolen with stealth or trickery, only usable by owner, -5%; Unique -25%. Breakable and Can Be Hit are appropriate, but the values will vary depending on what form the item takes. Finally, if the item is large enough, add Awkward (-10%).

((END BOX))

Motivations and Psychology

As an active agent of Evil, the werewolf is usually charged with sowing fear among the people of a village or town. This it does by random property destruction and the slaughter of the occasional unwary person. The overall goal is not simple terror, although that is an important side-effect. It is, rather, the sowing of anger and despair, both of which serve Hell's purposes admirably.

Then, too, the werewolf need not be serving Hell from any devotion or dedication to its agenda. He could as easily be an individual with a Murder Addiction (p. CI98) or pure simple Sadism, or possessing an unslakeable thirst for revenge upon his neighbors for some slight imagined or real. By agreeing to further the plans of Hell he receives a means towards his own personal goals -- a good deal by any measure, if the recipient is of the right mind.

Settings

While this particular werewolf archetype is lifted directly from medieval Catholic dogma, and is designed for use in a campaign set in medieval Europe, there's no reason it can't be used in other milieux. It is most easily transplanted into settings which bear a close resemblance to its origin, but nothing about it is fundamentally incompatible with anything but the most rationalist of worlds.

In particular, this werewolf type is appropriate not only to standard fantasy campaigns, but also non-cinematic modern horror, urban fantasy or *X-files* type games. While they are a trifle underpowered for *Black Ops*, they could be counted among the "werewolves" that Company ops must occasionally face, and may make for interesting flunkies for demons. Cosmetic alterations (such as changing species from wolf to, say, dingo or hyena) would allow them to enter non-European milieux but don't forget to change the Power backing them accordingly.

Even in campaigns with no active supernatural presence it is possible to employ this variety of shifter. The projected were-form may be the result of weird science (or weird magic), possibly cloaked in the trappings of devil worship to confuse and deceive a gullible recipient. The Patron would not be the Devil (although the werewolf might think it was), but someone who has his own reasons for letting loose a raging, murderous beast upon the land.

Yrth. Arguably the closest setting to medieval Europe without actually being a part of it, Yrth is a natural home for these Hell-powered shifters -- and includes their natural enemy in the form of the Yrth branch of the Catholic Church. The confusion between these werewolves and the more morally-neutral weres "native" to Yrth (see pp. 00-00) no doubt led to much of the bad press from which the latter suffer...

(((START BOX)))

@C-BOXHEAD:Abban Galdemar 200 points

Male; Age 37; 5'5"; 135 lbs.; Middle-aged Frenchman, salt-and-pepper hair, blue eyes, Van Dyke beard/mustache

@TEXT-CSTATS:ST 9 [-10]; DX 10 [0]; IQ 13 [30]; HT 12 [20]

@TEXT-CSTATS:Speed 5.50; Move 5.

@TEXT-CSTATS:Dodge 5; Parry 8.

@TEXT-CSTATS:Damage: *Punch: 0d; Kick: 0d; Thrust 0d; Swing 0d*

@TEXT-CSTATS:*Advantages:* Literacy [10]; Patron (Hell) (9 or less) [35] (Special Qualities: Very Unusual, +10); Reciprocal Rest [15]; Status 2 [5]; Wealth (Wealthy) [20] (Starting Wealth: \$5,000); Werewolf [71] (Projected Were-form: -50%; Cure/Cursebreak: Exorcism, werewolf must cooperate: -40%).

@TEXT-CSTATS:*Disadvantages:* Bloodlust [-10]; Secret (Apostate Werewolf) [-30]; Selfish [-5]; Vow: Revenge himself on people of Mende and the Church [-15].

@TEXT-CSTATS:*Quirks:* Careful never to manifest or vanish his wolf-form near his home; Dresses

only in black; Pretends to be a good Catholic; Still mourns for his wife and sons; Unsatisfied with the revenge he has so far taken. [-5]

@TEXT-CSTATS:*Skills*: Acting-16 [8]; Animal Handling-11 [1]; Area Knowledge (Mende and environs)-14 [2]; Bard-13 [2]; Brawling-12 [4] (Parry: 8); Cooking-13 [1]; Cyphering-16 [6]; Detect Lies-14 [6]; Diplomacy-12 [2]; Economics-12 [2]; Fast-Talk-14 [4]; Gambling-12 [1]; Intimidation-13 [2]; Knife-12 [4] (Parry: 5); Merchant-16 [8]; Metallurgy/TL3-12 [2]; Riding (Horse)-10 [2]; Savoir-Faire (Medieval France)-15 [0]; Shadowing-15 [6]; Tracking-15 [6].

@TEXT-CSTATS:*Languages*: French (native)-13 [0].

@TEXT-BOX:Once upon a time, in 12th-century France, there was a prosperous merchant with a large, loving family, who lived in a fine house just outside of the town of Mende. Abban Galdemar was his name, and the town council of Mende despised him because they envied his good fortune, and because he did not bribe them as much as they thought was their due. But because Galdemar technically lived outside the town, they could not exert any more pressure on him than they already did -- not and lose his trade to another town. They would sooner see him dead.

@TEXT-BOX:Then one day, that became a real option. A large party of bandits came upon Mende. The town fathers, having no stomach for a fight, paid off the bandits from the treasury rather than have the understaffed town guard engage them. Laying an extra bag of coins in the bandit chieftain's hand, they pointed him in the direction of "rich pickings" -- Galdemar's home.

@TEXT-BOX:The bandits besieged his fine house and took it over. They beat Galdemar mercilessly until he revealed the location of his money box. They raped his wife Marie. After they finished sacking the estate, the bandits put the beautiful building to the torch. Then they rode off with his sons Luc and Marc, the chieftain laughing a ransom demand over his shoulder.

@TEXT-BOX:The tragedy only compounded. Marie, in shame, hanged herself, and was refused last rites and Christian burial by the Church. Unable to pay his creditors, he was bankrupted, and was unable to pay the ransom on his sons; their bodies were dumped unceremoniously upon the ashes of his home. He was finally reduced to begging on the streets of Mende, where the elders who had once envied him now delighted in spitting on him as they passed.

@TEXT-BOX:When the beggar Galdemar overheard the elders laughing about how they had arranged his fall, his despair and anger and new-born hatred crystallized in his chest. He cursed the name of God for subjecting him to the conspiracy and ill-fortune that had taken away all that he had ever loved, and swore he would take his revenge not only on the bandits, but on the Church, and on the townsfolk who caused it all.

@TEXT-BOX:No sooner had he uttered this oath than a dark man in fine clothes of black silk offered him the power to get his revenge, and more. Galdemar agreed instantly.

@TEXT-BOX:Today, Abban Galdemar is once more a prosperous merchant, fortune having smiled upon him again. He lives in Mende now, where he has been taking an active role in the council ever since several of the elders were killed by a wild animal attack, one of many this bleak winter. He refuses to remarry, and dresses only in black, in memory of his wife. Yes, Abban Galdemar is a successful man...

@TEXT-BOX:...and he is a werewolf. Since making his bargain with the Devil, Galdemar has hunted

down and slaughtered the bandits who destroyed his life. He used their ill-gotten gains to rebuild his business and buy a home in Mende. In the months since, he has killed several of the elders, and has begun preying upon the children of the town even as he has taken up a role in its governance. He keeps up the appearance of a devout man in permanent mourning, and has gained much respect in Mende for the dignity and strength with which he survived his adversity. No one knows he is also the ravenous beast who has killed so many over the past two seasons...

@TEXT-BOX:Abban Galdemar is a 200-point character suitable for use as a "secret mastermind" type of opponent in a medieval setting, be it standard fantasy or ostensibly historical. He will usually ignore strangers to Mende unless they seem to be allying themselves with the remaining town elders, or if they are in the service of the Church. He is clever enough to simply lie low if Inquisitors or their agents appear in the town, but may be willing to attack secular werewolf hunters.

@TEXT-BOX:Galdemar's were form is a normal-sized wolf with ST 9, DX 14, IQ 13, HT 12. It takes no permanent damage from anything but silver and/or consecrated items. Galdemar has developed a liking for human flesh when in wolf-form, and never fails to indulge that liking when he kills; unfortunately, the wolf template's Gluttony has almost led to his discovery on several occasions. He is otherwise cautious, though; when he sends his soul roaming in wolf-form, he never manifests (or dismisses) it near his home.

((END BOX))

The Metamorphic Invader

I know I'm human. And if you were all these things, then you'd just attack me right now, so some of you are still human. This thing doesn't want to show itself, it wants to hide inside an imitation. It'll fight if it has to, but it's vulnerable out in the open. If it takes us over, then it has no more enemies, nobody left to kill it. And then it's won.

-- MacReady (Kurt Russell), in *The Thing* (1982)

No one knows where they come from. No one knows how many of them there are.

And no one knows how many of us are actually *them*.

@TEXTThe scientists have a name for them, twenty syllables in Latin and five more in Ancient Greek, that no one uses. Everyone else who knows about them simply calls them ... the Invaders.

Metamorphic Invader 350 points

@TEXT-CSTATS:*Attributes:* **ST** +10 (Natural ST -40%) [66]; **HT** +2; Extra Hit Points +2 [10].

@TEXT-CSTATS:*Advantages:* Fangs [10] (Impaling damage; see p. B140); Hard to Kill ¥5 [25] (Note: +5 to HT for Survival Rolls); Injury Tolerances (No Brain, No Impaling Bonus, No Neck, No Vitals) [35]; Stretching ¥3 [60].

@TEXT-CSTATS:*Disadvantages:* Appearance (Horrific) [-30] (Reaction: -6); Bad Sight (Nearsightedness) [-25]; Invertebrate [-20]; No Sense of Humor [-10]; Obsession: Hunt, kill, reproduce [-15]; Odious Racial Habit (Eats sentients) [-15] (Reaction: -3); Reduced Move ¥2 [-10] (Speed

(running): 3 1/2); Solipsist [-10]; Undiscriminating [-1]; Unusual Biochemistry [-5]; Vulnerability: Alcohol ¥4 (Occasional) [-40].

@TEXT-CSTATS:*Racial Quirk*: Uncongenial. [-1]

@TEXT-CSTATS:*Taboo Traits*: Immune to the Riders [0] (see pp. A119-21).

@TEXT-CSTATS:*Powers*: Morph-19 (10) [306] (Max. Mass: +100%; Min. Mass: -90%; Genetic match: +100%; Improvised Forms: +75%; Horrifying Change ¥5: -25%; Needs Sample: -50%; Copies Personality: +100%; Slow Change (1d+4 minutes): -10%; Doesn't Need Morph Memory: +100%).

Because the Invaders use the leveled super-power version of Morph found in *GURPS Supers* (p. SU63), they use their Morph skill level in place of Change Control for blending of forms or other shifting tasks.

General description

In their natural form -- which has been seen from time to time by shaken witnesses -- the Metamorphic Invaders have been likened to "latex sacks filled with gelatin". Roughly man-sized in height, they are horrific greenish-black ellipsoids whose upper ends are marked by two large eyes and an enormous fanged mouth. Most individuals who see this much rarely live to report it, as the Invaders use that maw to attack, and to swallow prey whole. They normally take a shape with legs in order to move quickly; when in natural form they must move either inchworm-style or by repeatedly stretching and contracting their bodies.

If the Invaders have a name for themselves -- indeed, if they even have a native language -- it is unknown.

Use one-half of a Metamorphic Invader's ST to determine its height, which is both the length of its body's long axis and the base height against which is different-sized morphs are measured. Weight is 75 pounds more than a human of equivalent "height".

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:As described, the Invader is a creature not unlike the Thing from the 1982 John Carpenter movie, with a liberal lacing of the Alien from the film of the same name. With alterations ranging from minor to major, though, it can take on a number of alternate roles.

@TEXT-BOX:*The Lernaen Metamorph*. Not only do the Invaders reproduce as described in the main text, cutting damage just turns them into smaller versions of themselves! To the Metamorphic Invader template add Duplication (p. SU00), with the modifiers HT and ST are split (-00%), Duplication is Permanent (??%), and Only When Subjected To Cutting Damage (-00%). Whenever an Invader takes cutting damage, instead of suffering a wound the Invader becomes *two* Invaders -- one with at many HT as the attack inflicted, the other with whatever HT remains. (Treat cutting damage equal to or greater than the Invader's HT as HT/2 -- effectively dividing the creature into two equal halves.)

@TEXT-BOX:Recalculate ST for each new Invader based on the distribution of HT. For example, a ST 20, HT 10 Invader has been cut into a HT 4 and a HT 6 Invader. The former would have a ST of 4/10 ¥ 20, or 8; the other would have the balance, or 12.

@TEXT-BOX:This option is not recommended in the unlikely event of Metamorphic Invader PCs.

@TEXT-BOX:*Rakshasa*. A carnivorous, shape-shifting demon from the mythology of the Indian subcontinent, rakshasa resemble tiger-human hybrids when in what is believed to be their "natural" form. They are fiendishly intelligent, frightfully strong, and prone to all manner of vices, though they hide them well. They delight in obstructing the good works of others, and work to undermine individuals, communities, organizations and even entire governments with rumor, innuendo, direct corruption and outright murder. This latter they enjoy greatly, as they love the taste of human flesh. They are often very subtle, sowing distrust and fear and letting humanity's own worse nature do most of the work for them. They often spur groups of humans to slaughter each other, and then feast upon the bodies of the slain.

@TEXT-BOX:To turn the Invader template into a Rakshasa package, make the following changes:

@TEXT-BOX:Set IQ to +4, and add DX +3 [30] and HT +5 [60]. Remove Stretching and Injury Tolerances from Advantages, and add Talons [40].

@TEXT-BOX:Replace Disadvantages with Appearance (Monstrous) [-25] (Reaction: -5); Bad Temper [-10]; Bloodlust [-10]; Bully [-10]; Callous [-6]; Compulsive Lying [-15]; Greed [-15]; Inconvenient Size (Over 8 feet tall) [-10]; Lecherousness [-15] (Roll: Will: -5/Beautiful, -10/Very Beautiful); Odious Racial Habit (Eats sentients) [-15] (Reaction: -3); Sadism [-15]. The Rakshasa Compulsive Lying disadvantage represents their willingness to spread lies about other people, not about themselves

@TEXT-BOX:Remove the Copies Personality, Genetic Match, Needs Sample, and Slow Change modifiers from Morph, reducing its cost to 196 points.

@TEXT-BOX:To skills, add Acting-IQ [6], Fast-Talk-IQ [6], Intimidation-IQ [2], and Sex Appeal-HT [6].

@TEXT-BOX:Lastly, replace the racial quirk with "Prefers to appear as a very beautiful/very handsome human".

@TEXT-BOX:Final racial cost for Rakshasa is 345 points. In addition to this basic racial package, Rakshasa can also have Magery and a wide variety of spells, often specializing in the Illusion and Creation and the Mind Control colleges.

((END BOX))

Psychology

Move. Kill. Feed. Reproduce.

The Metamorphic Invaders are to their remote cousins the Xenomorphs as smilodons are to housecats. Where the Xenomorph makes himself one with the community, the Metamorphic Invader seeks to make the community one with himself.

Although they appear to be as intelligent as humans, it is believed that their minds work in a dramatically different way. Attempts to communicate with them have all failed, even when the Invader was in a form demonstrated to be capable of intelligible speech and social interaction; they either maintain their roles or ignore their interrogators. They will not "break character" unless they lose the shape, either due to environmental pressures or because of excessive damage.

It appears from their behavior that they are solipsists to the point of psychopathy -- *no one* matters to an Invader other than himself; everyone and everything else, even other Invaders, exist solely as either tools or food, or both, in that order. Groups of Invaders *can* cooperate when working for a common goal, and can do so even for extended periods, but in the final analysis each one is using the others, and intends to consume them. Not surprisingly, they have no parenting instinct, nor any consistent shared culture.

Even though they are such a cipher to investigators and researchers, some of their racial imperatives can be deduced from their behavior. First and foremost, they are predators -- fearsome, cunning and most of all *intelligent* predators. They study their prey extensively. They will lay traps and plan ahead for contingencies, and know when to abandon a hopeless cause. They can be subtle and inhumanly patient. They know what technology is, and use it adeptly (as evidenced by their ability to pilot between systems), although what little of their own native technology has been found has proven to be impenetrable to researchers.

They are also *colonizers*. By virtue of their biology, they have a constantly expanding population. Wherever they have had the technology to do so, Invaders (individually or in groups) have continued on to adjacent stars to seek out more fertile hunting grounds. Where they have not, Invaders have contrived to catch rides with unwary visitors, usually by impersonating one or more of them.

Whether it is something they are consciously aware of or not, it is clear that their ultimate goal is the conversion of all the organic matter they can reach into Metamorphic Invaders, resulting in a universe of constant cannibalistic struggle that must inevitably taper off into a dwindling death at the hands of the laws of thermodynamics.

((START BOX))

@C-BOXHEAD:Metamorphic Invaders in the Campaign

@TEXT-BOX:Invaders are probably best used as a "monster" race, in the tradition of any number of horror films. Like the Riders, they can be subtle when infiltrating a population base; unlike the Riders, once they determine they have reached some critical threshold, they abandon subtlety and explode into an orgy of consumption and reproduction. Discovering a world just about to reach that threshold can make for a terrifying adventure for a *Space* campaign, although players would probably prefer a discovery somewhat earlier in the infiltration, so that they have a chance to stop it.

@TEXT-BOX:Invader PCs are a bad idea, unless the GM actually *wants* all the other PCs to eventually become Invaders and fight among themselves to the death.

((END BOX))

Ecology

Metamorphic Invaders are predators, capable of surviving on the flesh of nearly any carbon-based creature. They are cautious and cunning, preferring to hunt more like a trap-door spider than a lion. They live about the same span as humans, but because of their reproductive cycle, they spend almost all of it as active adults. Essentially a macro-scale version of cellular division, the process self-triggers every six to eight weeks, and rarely takes more than 24 hours. An Invader about to reproduce consumes its own weight in meat (creatures so consumed cannot be used as a shape template), and then finds a secluded lair. When the division process completes, there are two competent (if somewhat smaller) adults where

before there was one -- Metamorphic Invaders waste no time on childhood. (Both "offspring" inherit the "parent"'s memorized forms, as well.)

The exact source of their morphing abilities is unknown. What is known is that it is unpleasant to see -- the Invaders' shapechange is slow and disturbing. Those few witnesses who have dared to stay for the entire process have likened it to "wet, rotting meat sculpting itself, one paper-thin layer at a time."

A Living Domsday Weapon

Because the combination of their physical powers and psychological attitudes seems unlikely to have evolved naturally (the very existence of a cannibalistic, solipsistic race sends some xenobiologists and xenologists into fits), many experts believe that the Invaders were genetically engineered. The commonly-accepted theory is that they are a biological doomsday weapon which was either used or accidentally released, and which turned out to be much better at long-term survival than its creators intended.

There is a great deal of evidence to support this view. Firstly, for an ostensibly sentient race, they are driven by a number of hard-wired biological imperatives that prevent them from developing anything approaching a civilization. Among these is reproduction -- unlike virtually all other sentient races, Invader reproduction is completely involuntary, and extraordinarily rapid, and is clearly geared toward producing more Invaders *fast*.

Secondly, they are (despite their large eyes) near-sighted, unable to see clearly anything farther away than 30 feet or so, effectively forcing them to focus on their next victim or their next task. Finally, while Invaders are carbon-based (and capable of consuming almost any carbon-based flesh), they react badly to alcohol; this may have been an attempt at a control mechanism in case the Invaders ran wild.

Another odd vulnerability is that other shapeshifters don't agree with them. If a Metamorphic Invader consumes a Xenomorph, Enyyn or other shapechanger, the Invader will almost immediately go into spasms lasting 2d+10 minutes, during which it loses control of its own Morph power and shifts randomly every 1d seconds.

Fortunately for the already rattled peace-of-mind of those who are aware of them, Metamorphic Invaders are immune to the Riders.

Culture

The Invaders have no native culture; they are unable to cooperate long enough to create one, and appear to have no interest in doing so even if they could.

((START BOX))

@C-BOXHEAD:Names

@TEXT-BOX:Like their pseudo-cousins the Xenomorphs, the Invaders don't seem to take any personal names other than those of the individuals whose shape they've adopted. Indeed, it's unknown if they have a language at all.

((END BOX))

Politics

Metamorphic Invaders have no political relations with any other race in the galaxy. They don't even acknowledge other members of their own race as sentients, let alone other races. For all practical purposes, there is a permanent state of war between the Invaders and every other species in the Galaxy.

It is a highly-classified secret, but the Galactic Survey Service has discovered *entire planets* populated by nothing but Metamorphic Invaders, endlessly stalking and devouring each other; every such world has been sterilized for the sake of galactic civilization.

Selkies

[Ursilla] went at early morning and sat on a rock at high-tide mark, and when it was high tide she shed seven tears in the sea. People said they were the only tears she ever shed. But you know this is what one must do if she wants speech with the selkie folk. Well, as the first glimpse of dawn made the waters grey, she saw a big selkie swimming for the rock.

He raised his head, and says he to her, "What's your will with me, fair lady?"

She likely told him what was in her mind; and he told her he would visit her at the seventh stream (spring tide), for that was the time he could come in human form.

So, when the time was come, he came; and they met over and over again. And, doubtless, it was not for good that they met so often. Anyway, when Ursilla's bairns were born every one of them had web hands and webbed feet, like the paws of a selkie.

And did not that tell a tale?

-- Orcadian folkore, recounted by Walter Traill Dennison, in the Scottish Antiquary (1893)

Selkies (also called "Selchies"; the word means "seal" in the Orcadian dialect) are a European variety of *hengeyokai* -- intelligent animals who can take on a human form. In the folklore of the Orkney Islands at the extreme northern end of Scotland, all seals are selkies, and vice versa. In their dealings with humans they are neutral leaning towards benevolent, and will appear to do favors for those who know the right summoning ritual (see the vignette above).

Their native form is that of a seal, but they can remove their sealskin and become human. This they do rarely, usually only in the most secluded inlets, or at the behest of a human who has summoned them with tears. Like all such skinchangers, they need their sealskin to return to their native form (and the sea). Their human forms are always exceptionally attractive.

@TEXT-BOX:While Selkies are built based on the Seal template, they don't actually use it directly. They are *similar* to "ordinary" mundane seals, but they are not identical.

((END BOX))

General description

In their base form, selkies are indistinguishable from "normal" seals; in fact, in some milieux, they *are* the "normal" seals and there are *no* non-intelligent, non-shapechanging seals! In human form, they invariably possess stunningly good looks; the attraction their human forms hold for land-dwellers is legendary.

Selkies are approximately as long in seal form as they are tall in human form -- generate a height normally for the character's ST and use it for both forms. Generate weight from height for the human form as normal; multiply that figure by 2.25 to get the weight of the seal form. They may have virtually any eye, hair or skin color available to humans, although they will almost always match the coloration of the ethnic group nearest to them. They have their own tongue, a Mental Average language.

Psychology

The most obvious aspect of selkie psychology, at least to outsiders, is that they are hedonists. Account after account makes this clear: In human form, they dance on beaches in the moonlight, they sun themselves during the day, they engage humans in both romantic and casual liaisons. In the water, they are as playful as otters or porpoises. The selkie mindset seems to lack the concepts of work, toil and all that is related.

There is some kind of long-standing bond between selkies and humans, although its precise origins have been lost in the mists of time. While in general the two races leave each other alone, they are not averse to each other's company. Selkie men have been known to court and/or seduce human women -- but generally only those women who make it clear that such attentions are welcome.

@TEXT-BOX:Selkie women are seldom as casual about human males, as there is a long history of the latter acquiring brides by stealing their skins.

((START BOX)))

@C-BOXHEAD:Summoning a Selkie

@TEXT-BOX:As mentioned in the vignette, there is a simple ritual, handed down in folklore, with

which one may summon a selkie. It appears that only human women may invoke this ritual, but that may well be because human men tend to acquire the attentions of selkie women through somewhat more confrontational means...

@TEXT-BOX:If a woman should desire to meet with a selkie male, she need only stand at the edge of the ocean at high tide and shed seven tears into the water. If there is a male selkie within a mile, he will immediately respond by swimming directly to the woman. (If more than one selkie is within range, the closest one responds; in the case of ties, the faster/stronger swimmer wins.) Upon his arrival, the selkie will inquire what the woman would ask of him, and will attempt to fulfil the request to the best of his ability. Since most such requests are for sexual congress, granting them is usually quite easy for the selkie.

((END BOX))

Although adapted to both, selkies prefer the sea, when given a choice. This preference can become an overwhelming drive, particularly in selkie women tricked into marriage; invariably, upon regaining their ability to take seal form, they will abandon husband, home, children -- everything -- in their haste to return to the sea. Some of this may well be a desire to be among others of their own kind again, though -- selkies are a communal people, and the females especially are extremely social.

Ecology

Selkies (at least in their were-forms) are close enough to humans that the two races can interbreed. The offspring of a human and a selkie are almost always landbound, taking after the human parent, but they often demonstrate selkie characteristics -- webbed hands and feet, most frequently -- for generations afterward. This interfertility has led to speculation that the selkies are actually a magical sub-race of humanity who have learned how to change into seals.

While an attractive theory, it is belied by the fact that selkies grow their own skins instead of acquiring them from slaughtered "real" seals. A selkie child whose skin is taken away from him while he is young, so that he is not allowed to change, will eventually outgrow his skin and lose forever the ability to shift!

Like seals, selkies are mostly carnivorous, with fish making up the majority of their diet. In human form they are omnivorous, and can survive quite well on whatever the local humans eat.

Most selkies are native to salt water, but a freshwater variety is known to exist, preferring large lakes and deep waterways for their homes.

((START BOX))

@C-BOXHEAD:Variations

@TEXT-BOX:"*When angels fell, some fell on the land, some on the sea. The former are the faeries and the latter were often said to be the seals.*" -- Anonymous Orcadian

@TEXT-BOX:As usual, while a theoretical "typical" selkie can be derived from the legends of the Orkney Isles, there are a number of different interpretations. GMs may wish to consider these as options with which to tweak his selkies, the better to keep players on their toes.

@TEXT-BOX:*Intolerance.* In almost every tale, selkies are described as friendly towards humans. This

need not always be the case. Selkies as described in *GURPS Bestiary, Second Edition* were far more antagonistic than friendly, and harbored a general Intolerance of land-dwellers. If a band of selkies have been the target of seal hunters, general human animosity (or just mistreatment based on ignorance), they may well grow hostile and no longer honor whatever ancient agreement originally bound them and humans together.

@TEXT-BOX:*Seasonal Changes*. In the tale of Ursilla, quoted above, the selkie she summons says he cannot take human form until "the seventh stream" (spring tide). In other tales it was once a year, usually on Midsummer's Eve (referred to as Johnsmas Eve). This is a special case of Cyclic Change, where the cycle doesn't trigger the change, but instead simply makes it available for use -- select a period for the cycle, as usual, but halve its discount value.

@TEXT-BOX:*Faerie Folk*. Selkies are sometimes reputed to be a branch of the Sidhe. Faerie selkies will have Immortality and Mana Enhancer, and will probably be mages of some variety as well.

@TEXT-BOX:*"Tripped" Angels*. Some Orcadian folklore says that selkies are angels cast out of Heaven during Satan's revolt. Unlike demons, they didn't do anything bad enough to merit Hell, so they were trapped in the mortal world instead. Their benevolent attitude towards humans comes from their angelic nature, and the knowledge that they may yet be forgiven by God and return to Heaven. Like faerie selkies, angelic selkie are Immortal; they also have an Obsession: Get forgiven and go back to Heaven.

((END BOX))

Selkie Skins

It should come as no surprise that selkie skins are extraordinarily magical; they bind up the essence of the selkie's true shape and hold it in abeyance against the need of the selkie to return to the sea. Each one is unique, and can only be used by its owner -- it is, after all, a part of his body. There is no fatigue cost to either doff or don one's skin, but the process is not instantaneous; the Slow Change limitation on the selkie were-form represents the time needed to unfold a skin and put it on properly (or vice versa).

According to some sources, there is one further magick bound into a selkie skin. According to these tales, a skin is enchanted such that, if lost, it will always find its way back to its owner. It may take a hundred years, but it will do so. Such a skin does not travel under its own power, but by gently "nudging" probability in its favor, influencing who carries it and where. Skins deliberately hidden cannot use this trick.

If a selkie dies while separated from his skin, the skin loses all its magic, and is rendered nothing more than a "mundane" sealskin. (A clever wizard may still be able to make use of such a skin, though...)

There is some confusion over what happens to a selkie if his skin is destroyed. Some say the selkie will die; others claim he or she is forever locked as a human, unable to return to the sea and miserable for the rest of his life..

Culture

Selkies possess a communal society, living and traveling in large social groups. While individual males might be found out and about on their own, it is far more likely for someone to discover a dozen or more

selkies making merry on some isolated beach.

In general they are nomadic, cycling through several different underwater, coastal "camps" in a year. In general, they survive as undersea hunter-gatherers, living mostly off of fish which they trap or hunt, depending on the season and the location. Tribes living in shallow waters have begun some efforts toward a simple agriculture both in the sea and on land, mostly in response to seeing its success among humans, but these gardens (they are generally too small to be called "farms") are usually seasonal, and are abandoned for several months at a time when the tribe moves on in its circuit. Even when they are more continuously maintained, selkies seldom have legal title to suitably arable land an hour's travel or less from the sea shore.

Selkies are functionally TL 0. Even though they can operate out of the water as well as humans, they have not developed their own metallurgy yet. Instead, they trade with humans for the few items they need that can be made from gold, silver, and other metals that will not corrode or rust in seawater. Failing that, they fall back on tried and true methods -- stone spear and axe heads attached to wooden shafts scavenged from dry land.

(((START BOX)))

@C-BOXHEAD:Selkie Names

@TEXT-BOX:Selkies names are composed of a personal identifier and either a patronymic ("child of White Gull", for example) or a descriptive epithet (like "Shark-teaser" or "Crooked-fin"). Personal identifiers tend to be descriptive or imitative terms relating to their environment ("White Gull", "Coral"). Sometimes an epithet can displace a personal name entirely, becoming a new one in the process.

@TEXT-BOX:When dealing with land-dwellers, these are usually translated into the local dialect, producing an often poetically primitive effect.

(((END BOX)))

Politics

Selkies lack any kind of centralized organization larger than a tribe, and as such are rarely on any kind of terms with human organizations much larger than a town. They sometimes make trading agreements with human settlements, but that is usually the extent of their group-level interactions. Since the selkies want to spend as little time as possible on the unentertaining business of trade and diplomacy, they frequently don't bother even contacting the humans on the land near their camps.

This can cause problems, especially if the selkie group is one that is trying its hand at dry-land agriculture. Such efforts are often made on land already owned by a human, and if discovered, the selkies are frequently viewed as squatters. Depending on how local officials approach the matter, this can cause undue tension between the humans and the selkies.

Selkies infamously have little patience for humans who hunt seals, and if there are no non-selkie seals in the campaign, then it will reach actual hostility. Male selkies are more inclined to "police" the local waters than the females, and they are known to damage the boats of hunters. (Some folklore even assigns them the power to summon storms against hunters.) It goes without saying that actions along these lines will also strain human-selkie relations in the region.

That being said, though, the truth is that most selkie-human relations take place on the individual level.

Selkies in the Campaign

Unless the campaign is sea-going or even undersea, selkies as a whole will generally be limited to providing background "fantasy flavor". Their almost compulsive need to return to the sea makes it unlikely that they will be seen more than an hour inland unless they are of the freshwater variety, in which case they will be found nearly anywhere close to a sufficiently deep river or large lake.

The role they play depends largely on the variation(s) and situation the GM has chosen. If they lack any kind of threat, such as seal-hunters or angry land-owners, selkies will be generally well-disposed towards humans, and may turn out to be allies if dealt with fairly and openly. On the other hand, the proper tensions can cause matters to escalate all the way up to outright warfare between land and sea.

It's also possible that PCs might have selkie spouses, especially if the GM presents them with one of the classic opportunities!

(((START BOX)))

@C-BOXHEAD:Selkie Characters

@TEXT-BOX:Selkies can be built on 100 points and still provide a competent character, despite their relatively high cost. Remember that the gender-based traits are *not* part of the racial template, and the disadvantages therein do count against the character's allotted total. Heroic selkies -- tribal leaders, most adventurers in the dry world -- start at 125 points, with a few truly exceptional individuals reaching 150 points.

@TEXT-BOX:Although they best adapted to the water, their amphibious nature allows them to operate nearly anywhere humans can -- although they might not always be happy about it.

(((END BOX)))

(((START BOX)))

@TEXT-CSTATS:*Languages*: Gaelic-IQ [2]; Selkie-IQ (native) [0].

@TEXT-BOX:In the middle of the sixteenth century, a woman of Scotland seeks what has been taken from her -- not to avenge herself for its theft, but so that she can return to the sea she loves. The woman now known as "Moira Seabourne" was originally a selkie bride, "courted" and married in the traditional manner (that is to say, her skin was stolen while she was sunning herself on a beach), by her late husband, one Angus Macheath.

@TEXT-BOX:Macheath, aware of all the old stories, hid her skin well. She took a human name, and for ten years she was his wife, obedient in most things and bearing him two healthy children. Moira had a reputation as a bit of a shrew, but she and Angus seemed happy enough...

@TEXT-BOX:Until the day she came back from market-day to find her home ransacked, her children huddled in the stable, and her husband dying of a gunshot wound. As he bled to death, Angus told her of the band of thieves who had shot him and taken everything of value that they had owned.

@TEXT-BOX:Including her seal-skin.

@TEXT-BOX:Angus died in her arms, and although she could never truly say she had loved the man, she was still the dutiful wife. She saw to his wake and burial. She gathered her few possessions. She gave her son and her daughter into the keeping of her husband's family.

@TEXT-BOX:Then she went a-hunting for the thieves who had stolen her life. She vowed to retrieve her skin or die trying.

@TEXT-BOX:In the year since then, she has learned a great deal -- weapons, riding, tracking. She has become a force to be reckoned with as she tracks down highwaymen, bandits, thugs and thieves, each time hoping that *this* band of cutthroats is the right one. Unbeknownst to her, stories of her activities are starting to be told, and she is starting to gain a reputation as "The Selkie Widow", a figure of supernatural vengeance hunting the murderers of her husband.

@TEXT-BOX:She knows her seal-skin hasn't been destroyed -- she'd feel it if it were. And she knows she's finally close to finding the unprintable scum that are holding on to it. She just hopes that none of them make the connection between her and it, or she'll end up an unwilling bride *again*.

@TEXT-BOX:Once she recovers the skin, her intent is to return to the sea, but of late she's had her doubts about that goal; she has found that she enjoys the adventuring life, and is wondering if she'd be happy for very long if she were to return to the ocean.

@TEXT-BOX:If Moira ever recovers her skin, her seal form will be 63 inches long and will weigh 270 pounds, with dark glossy fur which is almost black in color.

@TEXT-BOX:Moira Seabourne is a 150-point character suitable for use in a *Swashbucklers* campaign, particularly one with a strong fantasy flavor. With some minor changes to her background, she can be used in Yrth or any other medieval fantasy world.

((END BOX))

Shamanic Shifter

Joseph: I turned him into a raven and he flew out the window.

Sheriff: Why didn't you go with him?

Joseph: I can only turn into a wolf. I'd be too big to fit through the bars.

-- *Quantum Leap*, "Freedom" (Episode 2.16, broadcast 14 February 1990)

There is a remarkable uniformity of belief among peoples who follow shamanic practices, regardless of their geographic locations. One of the beliefs frequently shared across so many cultures is that the shaman is gifted with the ability to enter the spirit world in the form of an animal. Here is how one such shaman could be built.

Swan May

After the swan maidens had bathed and sported to their heart's delight, they came back to the bank wishing to put on their feather robes again; and the six eldest found theirs, but the youngest could not find hers. They searched and they searched until at last the dawn began to appear, and the six sisters called out to her, "We must away; 'tis the dawn; you meet your fate whatever it be." And with that they donned their robes and flew away, and away, and away.

When the hunter saw them fly away he came forward with the feather robe in his hand; and the swan maiden begged and begged that he would give her back her robe. He gave her his cloak but would not give her her robe, feeling that she would fly away. And he made her promise to marry him, and took her home, and hid her feather robe where she could not find it.

*-- from **The Swan Maidens**, as recounted by Joseph Jacobs*

INCOMPLETE -- TO BE FINISHED

(Australian aboriginal swan mays have black feathers)

(Following text is from Bestiary 2nd article and is outdated)

The Swan Mays are an ancient sisterhood of humans with the ability to turn into swans by donning feathered cloaks. They are dedicated to the preservation and defense of the wild places of the world and the innocent folk who live there. Many Swan Mays are warriors, mages or both.

(Variations on this myth are found in Persian, Indian, Japanese, Indonesian, Australian and Zulu folk tales.)

The power of the Swan May is threefold. There is a genetic component -- a Swan May must be the daughter of a Swan May. Next, she must be wearing her cloak of feathers. Many of the cloaks are very ancient, passed down from mother to daughter for countless generations. The secret of maintaining, repairing and (presumably) creating the cloaks is a closely-guarded secret of the oldest and most powerful Swan Mays. Finally, there is a moral and cultural part to the Swan May's power. Each Swan May is raised to honor nature and defend the innocent, and if they fail in this duty through cowardice, greed or carelessness, they will lose their powers. (Repentance might be possible, at the GM's option, but

it would certainly require a long and dangerous service to regain a lost transformation power.)

Though deadly when their charges are threatened, most of the time Swan Mays are beautiful and merry. It is part of a Swan May's duty to her kind to eventually marry an honorable man and produce a daughter to carry on the legacy. They are greatly sought after as wives, and many of the noblest houses have Swan May blood. But they cannot be bought or coerced to wed. A Swan May marries only at her pleasure, and only for love.

Even in war, Swan Mays usually go unarmored. Their usual gear includes a plain, light shift, a bow and a few arrows or a light spear, and a knife. They do not like to be encumbered with more than can be absorbed in their change.

Swan May Characters

Human Form: All Swan Mays have a gadget-based Were Form advantage, with the enhancement Absorptive Change (No Encumbrance), for a base cost of 11 points. The gadget modifiers for their cloaks of feathers are Awkward, Can Be Stolen by Stealth or Trickery and Unique, for a final modifier of -40%. This makes the final cost of the cloak 7 points. Swan May cloaks are usable only by their owners, but may be transferred from mother to daughter.

((END BOX))

The Were-Creatures of Yrth

I'm the moon's indentured servant.

-- from *Thor*, by Wayne Smith

INCOMPLETE -- TO BE FINISHED

Redefinition of the six basic Yrth were types in this system.

All Yrth weres have as part of their were-forms the following: Slow Regeneration (Presence of silver deactivates, -30%) [7]; and Vulnerability to Silver (Occasional) ¥2 [-20]. At the GM's option, some also have Infectious Attack [-5]. Evil persons with a Yrth were-form also have Compulsive Behavior: Commit Atrocities [-15].

The basic Yrth were-form has a Cyclic Change: Monthly, Exclusive, for -40% and Minimum Duration: One Night, -10%, for a total discount of -50%. Some weres can change at will in addition to their monthly change; this eliminates the Minimum Duration limitation and the Exclusive option, reducing the limitation value to -15%.

((START BOX))

Backwards Compatibility

@TEXT-BOX:It should be obvious that the costs for these six were-types do not match those found in *GURPS Fantasy* and *Compendium I*. The simple truth is that these ore-existing costs were assigned arbitrarily, long before *GURPS* had anything approaching a consistent were-creature system. They were also assigned with the express intent of allowing a standard 100-point character to be a were.

@TEXT-BOX:Yes, we're aware that these revised were-forms will break many long-time characters. But it should be pointed out that the were-forms for all six Yrth types were really not fully fleshed out, being more idealized images of their particular animals than actual examples thereof. Also, these were-forms were great bargains, giving the player by implication and for no points a number of advantages that later weres had to pay for -- Sharp Teeth, just to cite one rather inexpensive example. It's long past time that they were brought into compatibility with the rest of *GURPS*.

@TEXT-BOX:That doesn't mean you, as GM, have to use them. You can always stay with the earlier versions. That's your privilege as GM. But if you do, you should avoid mixing them with weres built with the rules in this book, if only to let the players all remain on the same point basis.

The Xigana

Lemme tell ya one thing, kid, don't **ever** come on to a Xigana woman.

Nah, their men ain't jealous. Hell, the men pay hardly any attention to the women as women, if'n y'know what I mean. Now, Xigana women, they're real easy to look at, if you're not a Pure Earther fanatic, but you make one move on'em, and they'll spear you, like, with their eyes. It's like you stop bein' people to them, that you've sunk **below** animal and down to dirt.

Coldest damned thing I ever seen.

-- Overheard in Rohvin's Place, Eridani Free Port

Cool, Collected, Sophisticated...

Among the races of the civilized galaxy, the Xigana are known for their sophistication, their fashionable aloofness, and their taste for tropical resorts and homes. Natives of a planet with a large axial tilt, they escape the fierce, frigid winters of their homeworld by moving to the warmest locales they can find, where they invariably find their way into the *ne plus ultra* of society. This isn't always the upper classes -- but it *is* always somewhere both low-key and intense. Xigana are frequently patrons of the arts; those who aren't are often the artists themselves, or at least their agents and promoters. A poor Xigana is a rare sight, which many feel is some small recompense for the fact that their race is dying out.

What the Xigana go to great pains to hide from the rest of the galaxy is that they are a metamorphic race. Much as earthly creatures like the weasel/ermine change color with the onset of winter, the Xigana change *form* in response to sustained cold weather -- from humanoid omnivore to great, shaggy carnivorous quadrupeds. This (to them) betrayal of their exalted status as sentients is more than an embarrassment, it is an obscenity, for humanoid Xigana are sterile and virtually non-sexual -- only their beast forms are capable of reproduction. Their entire culture is based around denying this aspect of themselves, and as a result, the Xigana are a dying race.

@TEXT-CSTATS:*Taboo Traits*: Ignore.

General description

Xigana (the word is both plural and singular) are a race on the far end of the humanoid scale. Slender and smooth-skinned, they are deceptively fragile in appearance. Their skin color tends ranges between ivory and a pale blue, and their eyes are generally blue, green or golden. Xigana are completely hairless, without even eyebrows or eyelashes.

Their long, delicate fingers are tipped with thick, almost horn-like nails which both males and females carve and paint. Their mouths and noses protrude into something close to, but not quite, a snout. They have broad, flat (some say an herbivore's) teeth, but rarely smile.

Xigana are mammalian, the females possessing breasts similar to a human's.

Determine a Xigana's humanoid height normally for his ST; their weight is 20 pounds less than human normal for their height. In their four-legged "wintershape," their body weight remains the same as their humanoid form, and they measure about 40% of their humanoid height at the shoulder. The Xigana wintershape has thick, shaggy fur, a more prominent snout and ears, and distinct claws. Fur color will match the "summershape" skin color, or, less frequently, be a shade or two lighter; eye color remains the same.

Ecology

The Xigana are native to Gyrris, an earthlike planet fourth from its yellow G-Type star, with a gravity of .9 G. Gyrris has a 27-hour day, and orbits its sun every 510 of its days. Its surface is split equally between land ocean, but the shorelines vary wildly with the seasons.

Gyrris has an axial tilt almost double that of Earth, which results in extreme seasons that seesaw between conditions almost unimaginable to humans, despite the fact that the planetary average temperature is almost exactly the same as Earth's. Its weather patterns are wild and chaotic, and a large percentage of the planet's water is caught up in its endless storm cycles. Winters on Gyrris are bitterly cold and wracked by almost constant blizzards; summers combine the temperature of Death Valley and the humidity of a swamp with daily thunderstorms, punctuated by frequent monsoons and hurricanes. Its polar icecaps expand and recede visibly over the course of the year.

The Xigana's niche in their world's ecology is roughly equivalent to humanity's on Earth, even excluding the obvious parallels between intelligent species. Their shapechanging biology is not unique <\#028> more than a dozen other species on their homeworld (most of them unrelated to the Xigana) shapechange in response to the cycle of seasons. As might be guessed, Gyrris attracts a large number of xenobiologists and other researchers.

The Xigana's change, like that of the other shifters on Gyrris, is environmentally triggered. If a humanoid Xigana is exposed to temperatures below 40° Fahrenheit for at least two hours, a change to wintershape begins; if there is a potential mate present at the same time, the individual will also feel a compulsion to begin a mating ritual (see below). Predator-form Xigana have an opposite trigger: two or more hours' exposure to a temperature of 70° F or higher returns a Xigana to his humanoid form. The shift between forms takes about one Gyrrisan day, during most of which the individual remains active (though sluggish). The final four hours of change, though, completely incapacitate him.

Because of subtle nutritional and hormonal requirements, a Xigana should go through at least one pair of changes per year. Failure to do so has no immediate ill effects, although apostate Xigana medical researchers (whose work has long since been suppressed) believed that regular changes could prevent certain varieties of cancers and several other diseases that operate by systemic disruption.

Reproduction

Wintershape females are always fertile; couples mate for life and do not stray when in predator form. Gestation lasts 200 days, during which the female's body produces hormones that prevent reversion to summershape should the weather change; the production of these hormones tapers off approximately six weeks after giving birth.

Xigana offspring are born exclusively in wintershape, in litters of two to four. "Pups" are able to walk and function within three weeks of their birth, although this precocity does not carry over into summershape; in fact, Xigana children take longer to learn to walk on two legs than most biped species, possibly because of their ingrained quadruped instincts. They do not gain the ability to take biped form until they are six weeks old.

Xigana are mammalian and can nurse their young in either form.

Psychology

Although to the galaxy in general Xigana seem well-adjusted if somewhat effete and snobbish, they are in fact a mire of repression and denial. Inordinately proud of their position at the top of their world's evolutionary ladder, they deny to themselves (and hide from the galaxy at large) the fact that they shapechange into what they see as an inferior animal form.

Worse yet, from their point of view, is that their humanoid forms are sterile; they can only reproduce in wintershape. Combine this fact with an almost universal Xigana disgust with their "animal" alter egos, and the result is a race with deep-seated neuroses and sexual repression. To the average Xigana, the fact that they are required to turn into an animal in order to reproduce is an unspeakable obscenity; subsequently they have tarred *all* romantic and sexual behavior -- up to and including the most innocent flirting -- with their disgust at their wintershapes. Other aspects of life are likewise affected; for example, while technically omnivorous, nearly all humanoid Xigana follow a vegetarian diet, looking down upon the consumption of meat as "unclean" and "animalistic."

Many Xigana take this to another extreme, looking upon the world that bore them and which requires of them the change as something to escape. As soon as they are able, these Xigana leave their homeworld, migrating and resettling somewhere -- *anywhere* -- where the local temperature never drops below 70° F. Those that can't resettle in warmer climes, or who for reason of employment or other obligation must make do with locations that suffer cold weather, are known for the remarkable extremes to which they go to remain warm during the winter: anything from the simple expedient of never leaving their homes, to the latest in temperature-maintaining arctic gear. The only option of which they do not make use is fur clothing, be it real or artificial -- the very idea disgusts them.

Culture

Attitudes like these have been cemented into Xigana culture over millennia by their inclusion in all the major Xigana religions. Even more significantly, the Xigana language itself attempts to deny and obfuscate their dual nature. The language (a M/H skill for non-Xigana) uses complicated tenses, pronouns and euphemisms to refer to their two forms, with the wintershape invariably treated (if it must be discussed at all) as an utterly different creature with which one has an unfortunate and reprehensible connection. One who has succumbed to wintershape is always "away" or "unavailable"; and offworlders who know better never, *ever* inquire about childbearing and offspring -- the only words for pregnancy and sex in the Xigana language are either obscenities, euphemisms or (rarely) obscure medical terminology.

Complicating matters is the fact that the Xigana possess a long, complex and heavily stylized mating ritual, at least partially instinctive in nature. As noted above, it is triggered by dropping temperatures, combined with the proximity of an individual of the opposite sex. An hours-long dance, equal parts touching intimacy and astounding savagery, it is strongly reminiscent of similar behaviors in earthly animals. Initiated while in humanoid form, the ritual ends with the act of mating anywhere from 24 to 48 hours later in predator form. While the change can occur without the ritual, the ritual *includes* the change and cannot complete without it.

Not surprisingly, the mating ritual is perhaps the greatest taboo in Xigana culture. It is never spoken of, even between a mated/mating pair. Native medical and psychological texts are maddeningly elliptical in

their oblique attempts to refer to it without actually talking about it. And in every Xigana culture, any hint of its performance in a settled area is enough to have the offending couple arrested and executed -- if they aren't dragged off by a howling mob and lynched first.

Childrearing is another delicate matter. "Pups" remain with their parents until their first transformation, which is usually some time in their first six months. After that, though, parents will hand over children to be raised in government- or church-run institutions, then go their separate ways, as often as not. The "nuclear family," as it is understood by humans, is an entirely alien concept to the Xigana.

Outside observers have noted that, as far as the cultural treatment of sexuality is concerned, the Xigana combine the worst aspects of Calvinism, Victorian prudery, and the most oppressive, reactionary branches of Islam. Even so, there are small, quiet rebel factions, trying to change the dominant social paradigm and shatter the racial denial. It will not come as a surprise to learn that these groups are almost universally outlawed on Gyrris, with execution the most common penalty for membership and activism. Additionally, rebels and social activists who attempt to operate off-planet and thus threaten the racial secret are often the targets of assassination squads dispatched by churches, government or even groups of "civic-minded" private citizens.

Politics

Although snobbish and standoffish, the Xigana freely mix in Galactic society. They do tend to treat reptilian races and races possessing significant amounts of hair or fur with substantially more disdain than they offer other races, and they will ignore non-bipeds entirely as being "animals" and thus beneath them. They similarly categorize tiny races like the Cidi. They can be at a bit of a loss upon first encountering races that do not fit easily into their pat worldview (the Traders, Liook Sujan), but usually accord them "non-animal" status. *Any* race with no discernable romantic or sexual behaviors, such as (again) the Liook Sujan, often become objects of great respect.

Their government has no particularly special allies or enemies among the Galactic civilizations save for the usual suspects. Even so, they are happy to engage in commerce with any civilization -- even those they consider "animals", if a willing middleman can be found -- and have parlayed their world's mineral riches and their own skills into a vast wealth.

((START BOX))

Xigana Names

Adult Xigana names are usually composed of a personal name followed by an occupational surname. Personal names are two to five syllables long, each syllable being a consonant-vowel pair, plus an optional terminal consonant; sounds which are diphthongs and digraphs in English ("ae," "th," and so on) are common in the various dialects. Tegore, Kurathal, Rawonam and Namapra are all common Xigana given names. There is no distinction between male and female names.

Occupational surnames may be as generic as "Baker," "Astrogator" and "Engineer," or they can become so complex that they are almost titles: "Chief Partner in Trade with Erapis IV," "Senior Regional Administrator for Evet Continent." As one might expect, such epithets can change many times in an individual's life.

There are no family or clan names. Immature Xigana are known by a given name and use the name of the institution in which they were raised as their surname. An adult Xigana with an institutional surname or no surname at all is regarded as shiftless and lazy. There are no honorifics or surnames indicating marriage/mating status, in the manner of the English "Miss"/"Mrs."

((END BOX))

Xigana in the Campaign

As a race, the Xigana can be great fun for the GM: supercilious, obnoxious and snobbish, without being at all evil. Many Xigana hold positions of power or influence throughout the galaxy, either because of wealth or because they are often good at imposing and/or managing hierarchies. A Xigana would make a good "manager you love to hate" for a group of player characters who share a Patron. Similarly, Xigana make good "shades of grey" opposition -- evil-seeming though not evil, simply unconcerned with what "lesser races" think is legal and illegal.

On the other hand, a renegade or insane Xigana can provide a sudden and unexpected plunge into a *Horror* scenario for players expecting a more conventional *Space* encounter: the mysterious, murderous beast that stalks an unsuspecting town or city in the depths of winter. Although their long shift times don't allow the kind of instant disappearance that makes a traditional werewolf story all the more creepy, the presence of a large, shaggy, and most importantly *intelligent* carnivore where one ought not to be can make for an adventure interesting not just for its combats with the beast, but for the investigation done to find out just what it is and where it is from. To add an extra fillip to such a scenario, have a team dispatched from Gyrris to hunt down the "dangerous animal" that they claim was illegally exported from their world.

Other Settings

While obviously designed for use in a *GURPS Space* campaign, the Xigana can be used as-is in a number of other settings. As always, *Atomic Horror*, *Black Ops*, and similar settings can make use of an apparent werewolf, especially if the more obnoxious aspects of the Xigana racial personality are tuned down a bit; the "monster-that-isn't" is an useful device, especially if players need to learn that shooting first isn't always the best tactic.

With a little modification, the Xigana can become a *Fantasy* race. The "scientific" justification for their shifting abilities must be discarded, of course, unless the game world is extremely un-Earthlike. Alternatively, it would not be hard to make them a magical race from the distant Northern or Southern sub-arctic regions of the world. For further complications, they could be mistaken for more conventional were-creatures. If such weres are evil, that may well be why the Xigana are hiding their nature.

Xigana Characters

Because their shifting abilities are so slow and are all but involuntary, shapechanging will probably not be the primary reason one would choose to play a Xigana. Their complex suite of motivations, behaviors and beliefs, though, make them a intriguing roleplaying challenge.

Xigana characters can fit easily into a standard 100-point campaign, but the GM should be aware that unless there is a reason (or repeated reasons) to threaten the racial secret, much of the point cost of this

race is wasted on a player character in an exploration/survey or interstellar war campaign. And after the third or fourth time, threats to the secret will not only grow old or repetitive, but will increasingly appear engineered.

Player character Xigana are probably better off as rebels and social activists in a more political campaign. Working quietly with a few trusted friends on several goals including liberalizing their repressed homeworld, they can reveal or conceal their shifting abilities as they see fit. Such characters often have an Enemy in the rest of the Xigana; their frequency of appearance is entirely dependant upon how vocal an activist the character is..

The GM may find Xigana NPCs easier to work with. They function well as patrons for any sort of treasure hunter, particularly those specializing in fine artworks. Others may support assassin teams aimed at off-world activists. Away from Patrons, the lone Xigana immigrant who seemingly has nothing to do with a mysterious "Werewolf" serial killer is a good campaign seed, if the GM can justify the necessary temperature extremes.

((START BOX))

@C-BOXHEAD:Sample Character: Tegore Inquisitor 100 points

Xigana male, age 00; 0'00"; 000 lbs.; brief description.

@TEXT-CSTATS:**ST** 9 [0] **DX** 13 [20] **IQ** 14 [20] **HT** 10 [0]

@TEXT-CSTATS:*Advantages:* Clerical Investment/5 [25]; Xigana [21]; Patron: Genevarian Church, 12 or less [30]; Reputation +2 as Defender of the Faith, Genevarian Church [4]; Status +2 [10].

@TEXT-CSTATS:*Disadvantages:* Duty to Church [-10]; Fanaticism: Genevarian Church [-15]; *Lame:* Crippled Leg [-15].

@TEXT-CSTATS:*Quirks:* Dislikes offworlders [-1]; Intensely devout [-1]; Only uses stainless-steel canes [-1]; Peppers his speech with "near-miss" almost-swearing [-1]; Prides himself on organizing the best "Orthodoxy Teams" in the church [-1].

@TEXT-CSTATS:*Skills:* Administration-14 [2]; Bard-14 [2]; Beam Weapons/TL-16 [2]; Computer Operation/TL-14 [1]; Detect Lies-14 [4]; Diplomacy-14 [4]; Flower Arranging-15 [2]; Guns/TL-16 [2]; Intelligence Analysis-14 [4]; Interrogation-14 [2]; Intimidation-14 [2]; Karate-14 [8]; Knife-14 [2]; Performance (Instinctive Xigana Mating Ritual)-14 [0]; Performance/Ritual (Xigana/Genevarian)-16 [4]; Professional Skill (Genevarian Cleric)-16 [6]; Psychology (Xigana)-14 [4]; Savoir-Faire (Xigana)-16 [1]; Strategy-14 [4]; Streetwise-14 [2]; Tactics-14 [4]; Theology (Xigana/Genevarian)-16 [6].

@TEXT-CSTATS:*Languages:* Standard-14 [2]; Xigana-14 [0].

@TEXT-BOX:Tegore Inquisitor is one of several "enforcers of orthodoxy" in the largest Xigana denomination, the Genevarians. While he administers to a local "diocese" as part of his duties, his primary job is the creation, dispatch and coordination of so-called "Orthodoxy Teams." These small "special forces"-like groups are assigned the task of capturing or assassinating those heretics who wish to drag the Xigana's secret shame into the sight of the debased Galactic culture.

@TEXT-BOX:A one-time officer in the Xigana planetary military retired with pay due to injury, Tegore

entered a Genevarian seminary, and now uses his skills to build the well-trained bands of troopers which protect the Xigana secret. He also makes frequent use of offworlder mercenary teams, who know little (and care less) about his reasons and their targets.

@TEXT-BOX:In person he is charming and friendly, with an endearing habit of starting to swear, catching himself, and instead saying something else innocuous and inoffensive. If forced into his "military" persona he suddenly becomes cold and intimidating -- although he still catches and corrects his swearing.

@TEXT-BOX:Tegore is not an adventuring character, and would not make a good PC unless the campaign is both political and based on Gyrris. As a frequent employer of off-worlders for shady operations, he would be better used as a Contact or even a Patron (as a representative of the Genevarian Church). For characters less than sympathetic to the orthodox cause, Tegore is also a prime candidate for the "mastermind" behind their opposition; the fact that he is quite likeable and not even particularly evil can add an extra level of complication to an adventure/campaign resolution.

((END BOX))

@A-HEAD:Glossary

@TEXT:

@TEXT:<I>agriogoiruno:<I> Modern Greek, "were-boar."

@TEXT:<I>aswang:<I> Philippines. A were with two alternate forms: a nocturnal generic canine, and a vampire-like monstrosity.

@TEXT:<I>babu:<I> A generic term for a variety of werebeasts in the cosmology of the Banyang people of modern West Cameroon.

@TEXT:<I>bisclavret:<I> Breton, "werewolf."

@TEXT:<I>bodark:<I> Russian, "werewolf."

@TEXT:<I>boto:<I> Brazilian Indian. A hengeyokai (q.v.) which can transform from a river dolphin into a handsome boy.

@TEXT:<I>boudas:<I> Ethiopia, Morocco and Tanzania. A sorcerer/blacksmith who can turn into a were-jackal.

@TEXT:<I>brouch:<I> Also seen as <I>borouch.<I> Medieval French. A sorcerous werewolf; someone who changes shape via a spell.

@TEXT:<I>bruxsa:<I> Also called <I>cucubuth.<I> Portuguese; a variety of vampire-werewolf that consumes flesh and blood.

@TEXT:<I>chonchon:<I> Chilean. A witch who becomes a were-vulture.

@TEXT:<I>cucubuth:<I> See <I>bruxsa.<I>

@TEXT:<I>eigi einhamir:<I> Norwegian/Icelandic: "not of one form" <\#208> used to describe those who could assume a different shape.

@TEXT:<I>f<\#135>elad:<I> Gaelic, "wolf-shapes." Found in the <I>C<\#151>ir Anmann (Fitness of Names)<I> referring to those Celtic families in whom lycanthropic traits were believed to run.

@TEXT:<I>furry:<I> A common term used for anthropomorphic animals such as those found in cartoons and comic books, and the forthcoming <BI>GURPS Furries<BI>. The strong self-identification with such animal images found in certain Internet communities has been likened to and linked with traditions of shamanic totems and skinchanging.

@TEXT:<I>Garou:<I> Best known as the werewolf racial name in the game <I>Werewolf: The Apocalypse</I>, this is simply a truncation of the French "loup-garou" (q.v.).

@TEXT:<I>garwaf:<I> Norman French, "werewolf." It is a cognate of the modern "werewolf;" <I>gar-<I> is related to <I>vir-, wer-, were-<I> and other similar morphemes in a number of European languages.

@TEXT:<I>hamrammir:<I> Also <I>hamrammr.<I> Medieval Scandinavian/Germanic term for people who could take animal form. Best known of the <I>hamrammir<I> are the <I>berserkrs<I> <\#208> the bear-men, from whom we get the modern term "berserker." Another variety is a morphing beast which takes the form of the last animal it has eaten, and grows in strength with each shift.

@TEXT:<I>hengeyokai:<I> A class of shapeshifters from Japanese myth, intelligent animals who can take human and semi-human forms. Used in this volume to refer generically to all varieties of animal-to-human shapeshifter, regardless of origin.

@TEXT:<I>ilimu:<I> Kenya. A generic term for a variety of man-eating hengeyokai (q.v.).

@TEXT:<I>kitsune:<I> Japanese. A fox hengeyokai (q.v.), profoundly magical and usually female.

@TEXT:<I>layak:<I> Indonesia (Bali). A morph which inflicts bad luck, illness, accidents and death on people.

@TEXT:<I>limikkin:<I> The Mohawk name for <I>skinwalkers<I> (q.v.).

@TEXT:<I>lobis<\#151>n:<I> Argentinian Portuguese, "werewolf." Variation on <I>lobis-homem<I> and more like the Brazilian <I>lobisomem<I> than its European ancestor.

@TEXT:<I>lobis-homem:<I> Portuguese, a timid variety of ensorcelled werewolf. Also seen as <I>"Lupis-homem."<I>

@TEXT:<I>lobisomem<I> Brazilian Portuguese, "werewolf." Variation on the <I>lobis-homem,<I> but more bloodthirsty and aggressive. Seventh male child of a couple, he first turns into a wolf when he is 13. He only takes wolf form between midnight and 2 AM on the Friday before Lent.

@TEXT:<I>lobis<\#151>n:<I> Argentine werewolf, who is the seventh son of a seventh son (with no intervening daughters). Mostly a carrion eater, but will attack humans on sight; exposure to its saliva will turn a person into another lobis<\#151>n.

@TEXT:<I>lobombre:<I> Spanish, "werewolf." (Its usage is extremely rare.)

@TEXT:<I>lubin:<I> Also <I>lupin.<I> Norman French. A shy wolf capable of human speech.

@TEXT:<I>loup-garou:<I> French, "werewolf." <I>Loup<I> is "wolf"; "garou" is actually a

corruption of the archaic <I>garwaf<I> (q.v.). The Haitian variety of <I>loup-garou<I> is not a were but a morph.

@TEXT:<I>lupo mannaro:<I> Italian/Sicilian, "werewolf." Also <I>Lu l<\#151>pe menare.<I>

@TEXT:<I>lycanthrope:<I> Through Latin from the Greek <I>lykos<I> (wolf) + <I>anthropos<I> (man) <\#208> simply, wolfman.

@TEXT:<I>lycanthropy:<I> The condition of being a werewolf. Also, in some paradigms, a communicable disease that turns its victims into werewolves. In the real world, a psychiatric term for the delusion that one has or can become a wolf or other animal.

@TEXT:<I>mactire:<I> Pronounced "mactira", this is the Irish word for "werewolf".

@TEXT:<I>mai-coh:<I> The Navajo name for <I>skinwalkers<I> (q.v.).

@TEXT:<I>mijina:<I> Japanese. See <I>tanuki.<I>

@TEXT:<I>mormolyce:<I> Greek, archaic alternate term for "werewolf."

@TEXT:<I>morph:<I> When used as a noun in this volume, refers to a being able to copy or steal shapes, but having only one predefined form otherwise.

@TEXT:<I>nahual:<I> Mexican Spanish, "werewolf." From the Aztec word <I>nuahualli,<I> "warlock."

@TEXT:<I>oberrotten:<I> Also <I>oberoten.<I> Russian, "werewolf".

@TEXT:<I>okami-otoko:<I> Japanese, literally "wolf-man" <\#208> but this is a back-formation created for the imported Hollywood werewolf; there is no analagous creature in Japanese mythology. See <I>hengeyokai.<I>

@TEXT:<I>piccolitish:<I> Wallachian, "were-dog."

@TEXT:<I>rakshasa:<I> Also <I>raghosh.<I> India. A morphing monster characterized by its huge size and red/blonde hair. Often depicted as a tiger-like demon, this is probably not its "true" form.

@TEXT:<I>runa-uturungu:<I> Argentina; a variety of were-jaguar.

@TEXT:<I>ruvanush:<I> Romany (Gypsy), "wolf-man." In Gypsy lore, the living victims of a vampiric witch, who are forced to become bloodthirsty wolves at night.

@TEXT:<I>skinchanger:<I> Usually considered synonymous with "werereature", it can also mean a being who uses an actual animal skin as part of the shapechanging process.

@TEXT:<I>skinwalker:<I> Similar to "skinchanger;" in Native American cultures, it usually refers to a cunning and malevolent shapechanging creature of surreptitious habits.

@TEXT:<I>shungmanitu wicasa:<I> Native American (Lakota), "wolf-spirit man."

@TEXT:<I>tanuki:<I> Also known as <I>mijina.<I> Japanese. A badger hengeyokai (q.v.), usually male, which frequently takes the form of priests or inanimate objects in order to play tricks on people.

@TEXT:<I>theriomorph:<I> From the Greek, <I>therion<I> (beast) + <I>morphe<I> (form): having an animal form. Usually refers to a property of divine beings, but also serves as a good generic term for mortals.

@TEXT:<I>tlahuelpuchi:<I> Mexican Spanish. Witches who turn themselves into vampiric coyotes, according to folk belief in the Mexican state of Tlaxcala.

@TEXT:<I>uirapuru:<I> Brazil. A hengeyokai (q.v.) native to the Amazon basin, it is a small brown bird which can take the form of a beautiful human boy.

@TEXT:<I>varulfur:<I> Icelandic, "werewolf."

@TEXT:<I>varulv:<I> Also <I>varulf.<I> Swedish werewolf which prefers beer to flesh.

@TEXT:<I>versipellis:<I> Also <I>verto-pellis.<I> Latin, "turnskin" <\#208> someone who changes his skin, shape or form. Colloquially used for werewolves, but refers to shapechangers of all varieties.

@TEXT:<I>vilkacis:<I> Latvian. A werewolf that, while evil, occasionally offers treasures.

@TEXT:<I>vilkatas:<I> Lithuanian, "werewolf". See <I>vryk<\#151>lakas.<I>

@TEXT:<I>vlkodlak:<I> Slovakia. A shy werewolf who is the victim of sorcery.

@TEXT:<I>vrkolak:<I> Bulgarian, "werewolf." See <I>vryk<\#151>lakas.<I>

@TEXT:<I>vryk<\#151>lakas:<I> In almost all Slavic languages except Serbian, this word and its relatives means "werewolf." In Serbian and (curiously enough) Greek, it means "vampire," pointing at a common root for both myths.

@TEXT:<I>wawkalak:<I> Russian. A werewolf whose animal form is an inflicted punishment, and which is not considered dangerous.

@TEXT:<I>weerwolf:<I> Dutch, "werewolf."

@TEXT:<I>wehrwolf:<I> German, "werewolf." Also seen in Old High German as "werwolf." Additionally, the name of two different fascist terrorist organizations in Germany, first during the 1920s and then at the end of World War II, both of which embraced a werewolf

motif and conceit.

@TEXT:<I>wendigo:<I> Canadian/Native American. Also called the <I>witiko,<I> a shapeshifting cannibalistic beast vaguely similar to the yeti.

@TEXT:<I>were:<I> Backformed as an abbreviation from various werereatures in gaming, it in fact is an Old English word meaning "man." Because the usage is so prevalent <\#208> and intuitive <\#208> among gamers, it is used in this volume to refer to any being with two or more predefined shapes between which it alternates.

@TEXT:<I>wurdalak:<I> Serbian. A werewolf which has died and come back as a vampire.

@TEXT:<I>yaguaret<\#142>-ab<\#135>:<I> Argentina, a variety of were-jaguar.

@TEXT:<I>zapotec:<I> Mexican Spanish. Shapeshifting warlocks in the folklore of the Oaxaca state of Mexico.

Glossary

agriogairuno: Modern Greek, "were-boar."

aswang: Philippines. A were with two alternate forms: a nocturnal generic canine, and a vampire-like monstrosity.

babu: A generic term for a variety of werebeasts in the cosmology of the Banyang people of modern West Cameroon.

bisclavret: Breton, "werewolf."

bodark: Russian, "werewolf."

boto: Brazilian Indian. A hengeyokai (q.v.) which can transform from a river dolphin into a handsome boy.

boudas: Ethiopia, Morocco and Tanzania. A sorcerer/blacksmith who can turn into a were-jackal.

brouch: Also seen as *borouch*. Medieval French. A sorcerous werewolf; someone who changes shape via a spell.

bruxsa: Also called *cucubuth*. Portuguese; a variety of vampire-werewolf that consumes flesh and blood.

chonchon: Chilean. A witch who becomes a were-vulture.

cucubuth: See *bruxsa*.

eigi einhamir: Norwegian/Icelandic: "not of one form" -- used to describe those who could assume a different shape.

fáelad: Gaelic, "wolf-shapes." Found in the *Cóir Anmann (Fitness of Names)* referring to those Celtic families in whom lycanthropic traits were believed to run.

furry: A common term used for anthropomorphic animals such as those found in cartoons and comic books, and the forthcoming *GURPS Furies*. The strong self-identification with such animal images found in certain Internet communities has been likened to and linked with traditions of shamanic totems and skinchanging.

Garou: Best known as the werewolf racial name in the game *Werewolf: The Apocalypse*, this is simply a truncation of the French "loup-garou" (q.v.).

garwaf: Norman French, "werewolf." It is a cognate of the modern "werewolf;" *gar-* is related to *vir-*, *wer-*, *were-* and other similar morphemes in a number of European languages.

hamrammir: Also *hamrammr*. Medieval Scandinavian/Germanic term for people who could take animal form. Best known of the *hamrammir* are the *berserkrs* -- the bear-men, from whom we get the modern term "berserker." Another variety is a morphing beast which takes the form of the last animal it has eaten, and grows in strength with each shift.

hengeyokai: A class of shapeshifters from Japanese myth, intelligent animals who can take human and

semi-human forms. Used in this volume to refer generically to all varieties of animal-to-human shapeshifter, regardless of origin.

ilimu: Kenya. A generic term for a variety of man-eating hengeyokai (q.v.).

kitsune: Japanese. A fox hengeyokai (q.v.), profoundly magical and usually female.

layak: Indonesia (Bali). A morph which inflicts bad luck, illness, accidents and death on people.

limikkin: The Mohawk name for *skinwalkers* (q.v.).

lobisón: Argentinian Portuguese, "werewolf." Variation on *lobis-homem* and more like the Brazilian *lobisomem* than its European ancestor.

lobis-homem: Portuguese, a timid variety of ensorcelled werewolf. Also seen as "*Lupis-homem*."

lobisomem Brazilian Portuguese, "werewolf." Variation on the *lobis-homem*, but more bloodthirsty and aggressive. Seventh male child of a couple, he first turns into a wolf when he is 13. He only takes wolf form between midnight and 2 AM on the Friday before Lent.

lobisón: Argentine werewolf, who is the seventh son of a seventh son (with no intervening daughters). Mostly a carrion eater, but will attack humans on sight; exposure to its saliva will turn a person into another *lobisón*.

lobombre: Spanish, "werewolf." (Its usage is extremely rare.)

lubin: Also *lupin*. Norman French. A shy wolf capable of human speech.

loup-garou: French, "werewolf." *Loup* is "wolf"; "garou" is actually a corruption of the archaic *garwaf* (q.v.). The Haitian variety of *loup-garou* is not a were but a morph.

lupo mannaro: Italian/Sicilian, "werewolf." Also *Lu lópe menare*.

lycanthrope: Through Latin from the Greek *lykos* (wolf) + *anthropos* (man) -- simply, wolfman.

lycanthropy: The condition of being a werewolf. Also, in some paradigms, a communicable disease that turns its victims into werewolves. In the real world, a psychiatric term for the delusion that one has or can become a wolf or other animal.

mactire: Pronounced "mactira", this is the Irish word for "werewolf".

mai-coh: The Navajo name for *skinwalkers* (q.v.).

mijina: Japanese. See *tanuki*.

mormolyce: Greek, archaic alternate term for "werewolf."

morph: When used as a noun in this volume, refers to a being able to copy or steal shapes, but having only one predefined form otherwise.

nahual: Mexican Spanish, "werewolf." From the Aztec word *nuahualli*, "warlock."

oberrotten: Also *oberoten*. Russian, "werewolf".

okami-otoko: Japanese, literally "wolf-man" -- but this is a back-formation created for the imported Hollywood werewolf; there is no analagous creature in Japanese mythology. See *hengeyokai*.

piccolitish: Wallachian, "were-dog."

rakshasa: Also *raghosh*. India. A morphing monster characterized by its huge size and red/blonde hair. Often depicted as a tiger-like demon, this is probably not its "true" form.

runa-uturungu: Argentina; a variety of were-jaguar.

ruvanush: Romany (Gypsy), "wolf-man." In Gypsy lore, the living victims of a vampiric witch, who are forced to become bloodthirsty wolves at night.

skinchanger: Usually considered synonymous with "werecreature", it can also mean a being who uses an actual animal skin as part of the shapechanging process.

skinwalker: Similar to "skinchanger;" in Native American cultures, it usually refers to a cunning and malevolent shapechanging creature of surreptitious habits.

shungmanitu wicasa: Native American (Lakota), "wolf-spirit man."

tanuki: Also known as *mijina*. Japanese. A badger *hengeyokai* (q.v.), usually male, which frequently takes the form of priests or inanimate objects in order to play tricks on people.

theriomorph: From the Greek, *therion* (beast) + *morphe* (form): having an animal form. Usually refers to a property of divine beings, but also serves as a good generic term for mortals.

tlahuelpuchi: Mexican Spanish. Witches who turn themselves into vampiric coyotes, according to folk belief in the Mexican state of Tlaxcala.

uirapuru: Brazil. A *hengeyokai* (q.v.) native to the Amazon basin, it is a small brown bird which can take the form of a beautiful human boy.

varulfur: Icelandic, "werewolf."

varulv: Also *varulf*. Swedish werewolf which prefers beer to flesh.

versipellis: Also *verto-pellis*. Latin, "turnskin" -- someone who changes his skin, shape or form. Colloquially used for werewolves, but refers to shapechangers of all varieties.

vilkacis: Latvian. A werewolf that, while evil, occasionally offers treasures.

vilkatas: Lithuanian, "werewolf". See *vrykólakas*.

vlkodlak: Slovakia. A shy werewolf who is the victim of sorcery.

vrkolak: Bulgarian, "werewolf." See *vrykólakas*.

vrykólakas: In almost all Slavic languages except Serbian, this word and its relatives means "werewolf." In Serbian and (curiously enough) Greek, it means "vampire," pointing at a common root for both myths.

wawkalak: Russian. A werewolf whose animal form is an inflicted punishment, and which is not considered dangerous.

weerwolf: Dutch, "werewolf."

wehrwolf: German, "werewolf." Also seen in Old High German as "werwolf." Additionally, the name of two different fascist terrorist organizations in Germany, first during the 1920s and then at the end of World War II, both of which embraced a werewolf motif and conceit.

wendigo: Canadian/Native American. Also called the *witiko*, a shapeshifting cannibalistic beast vaguely similar to the yeti.

were: Backformed as an abbreviation from various werecreatures in gaming, it in fact is an Old English word meaning "man." Because the usage is so prevalent -- and intuitive -- among gamers, it is used in this volume to refer to any being with two or more predefined shapes between which it alternates.

wurdalak: Serbian. A werewolf which has died and come back as a vampire.

yaguareté-abá: Argentina, a variety of were-jaguar.

zapotec: Mexican Spanish. Shapeshifting warlocks in the folklore of the Oaxaca state of Mexico.
