

JAGS Weapons

Here's a list of modern day weapons in JAGS.

Damage: Penetrating damage done.

ROF (Rate Of Fire): number of rounds per second. An ROF of 2 means it fires when the trigger is pulled. Above that means it is full-auto.

Range: the distance at which attackers take a -1 range. Base range of 5y for pistols, 15y for Sub Machine guns, and 50y for Rifles.

Clip: How many shots in a magazine or belt.

Control: The negative to the next shot (in the same turn) after the first. For weapons with an ROF higher than 2 this uses the autofire rules.

Atchison Assault Gun	12 x 2	5y	+0	8	24 shells	-1

Weapon Notes:

The XM-124 6 Pac is that gun from Predator (a hand-held gatling gun). It requires a backpack power pack. It's experimental.

The KPV is a mounted anti-aircraft gun. Control is -1 when mounted. It can't be carried.

The Holland and Holland .600 Nitro Express is an antique Elephant gun. The -3 Control roll doesn't do it justice: if you have less than 12 STR make a STR roll or be knocked over. It's double barreled.

The M34 and S&W M36 are 'holdout' pistols. They're easy to conceal but not very deadly.

The WA2000 Rifle looks really weird. It's the British Sniper rifle from The Living Daylights (James Bond)
