>>>>>[What kind of stupid question is that? Wrack the walls, doors, lights, and lightly armored with the shot, and pound the heavies with the slug. You have a better chance of hitting with shot so why not use it when you can?]<<<<<<

>>>>>[The Coverfire chambers these itty bitty little bullets just a bit bigger than a air pistol pellet. This means A: They suck in the accuracy department, and B: They don't do much damage. But man can they come out quick.]<<<<<<

>>>>>[Ok, so this thing doesn't hurt or hit anything.....I still don't get it.]<<<<<<

-Mauser (01:32:14/11-07-58)

>>>>>[It's a psychological weapon, you moron. When somebody hammers you with one of these things you feel like the whole world is coming to an end. I was on the unfun end of one of these once and although logic told me it wouldn't even marr my vest, everything else told me to stay the frag put. The rounds come in like horizontal steel rain and ricochet all over the place, busting out windows and lights and filling your head with the roar of reflecting lead. To put it simply: It scares the hell out of you.]<<<<<<
