221mm Durandal: This is a runway cratering weapon. The weapon is dropped by an aircraft over a runway on a parachute, and when it slows to 90 kph and is nose-down, a rocket is fired. The weapon can penetrate 380mm of concrete before detonating the main charge, causing a crater 5 meters wide and 2 meters deep, and fracturing of the runway in an area of 275 square meters. This weapon is used by most of NATO and the US, as well as South Korea and Saudi Arabia. Weight: 219 kg; Price: \$2200 (S/-)
