

GENERIC DUNGEON GENERATOR

Original design by Neils Erickson; adapted for Tunnels & Trolls by Aaron Thorne

INSTRUCTIONS

To design your random dungeon, follow the tables below. Begin with Table I to determine the design of your dungeon. The end of Table I has a subtable to determine how your dungeon starts (either a room or a corridor). After you determine that, just follow the instructions at the end of each section to determine which table you should consult next. After a few minutes it should become self-explanatory.

As you design your dungeon, map it out. If you roll up something that doesn't fit the existing dungeon structure, you have two options. You can either ignore the new result or reroll, at your discretion. Some items within require judgement calls; just come up with whatever strikes your fancy at the time.

The creature encounters are based around an assumption that four first-level characters will be delving into the dungeon on the first level. If you have more or fewer characters, then you will want to adjust the creature encounters appropriately. For example, if you have six characters then you should multiply the number of creatures encountered by 1.5 (rounding down).

Most of the tables require percentile dice. A few also require other polyhedral dice (e.g., a d4).
